

End of draft, war will effect ROTC

By MARY SOCHINSKY Argonaut Feature Writer

The Vietnam war is over and the draft is dead, but according to Navy, Air Force and Army officers, ROTC on the University of Idaho campus is alive and

"I'm sure that the draft motivated some men to join the ROTC," said Operations Sgt. William Adams, University of Idaho Army ROTC. "Sure, a few men that had a good possibility of being drafted entered the program and a few came in because of scholarships. A majority of our men in Army ROTC are not on scholarships, so apparently they joined for other reasons.

Adams added that the ending of the draft probably will affect the numbers of men entering the ROTC program, but just

how much he could not say. Like the Army, the Air Force has a minority of the ROTC members on

scholarships. Navy scholarships

"We have 94 cadets in the Air Force program," said Lt. Col. J. MaGee. "Only 35 of these 94 are on scholarships. As you can see, there are a lot of men joining for reasons other scholarships.

While the majority of members of Air Force and Army ROTC are not on scholarships, about 72 per cent of those in

"We have a total of 134 midshipmen and 108 of these are on scholarship," said Navy Capt. J.R. Voorhees. "We are able to provide such a large percentage of scholarships because there are only 54 Navy ROTC units on colleges throughout the U.S.-many less than the Army and Air Force. I believe. For this reason we can give more scholarships.

Required courses

All of the scholarships include books. fees. tuition and \$100 a month spending

While in college, the cadets are required to take courses related to the military. The Navy requires courses in seapower and the importance of a Navy. The Army's courses include leadership and management while the Air Force classes include the history of aviation, defense policy and international relations. Voorhees added that besides these

courses, a member of ROTC can take any course or major he chooses. Commitments

"Besides taking these required military courses." Voorhees said, "there are certain commitments the ROTC members have when they graduate from college-like spending a little time in the

The tour of duty varies among the services. For non-flying cadets in the Air Force, the requirement is four years; with flying school it is five years. Navy ROTC scholarship holders must spend four years duty and non-scholarship holders are obligated for three years.

"Once they get out of college and have their degree." Voorhees said, "they are commissioned officers. Their pay is better than those men coming in without

There is over \$352,000 in Navy ROTC scholarships alone. According to Voorhees, this is larger than what the University as a whole has in academic

scholarships-around \$320,000. None of the scholarship money for the University. It all comes from the Department of Defense and the

respective branch of the military.
According to the officers, the University provides the buildings and rooms that are used by the ROTC.

University facilities % we're in now along with the Satellite SUB rhees said, "Then they were turned over to the University. Now the University supplies us with the building and gives us around \$1,200 that is matched by the Navy for maintenance and supplies. Since the money goes back into the University for maintenance. we do not really get any money from it.

MaGee said that the University of Idaho also provides the Air Force with its

Up until a few years ago, all land grant colleges such as Idaho had to have ROTC units, Voorhees said. He added that the ruling has been changed and that ROTC programs are now optional.

-- Dr. Donald Adams

aspects

measure.

injury or death.

What can a Moscow woman do if she needs an abortion? Who can help? Or, should she even be permitted to end her pregnancy this way? With the recent decision by the Su-preme Court to permit each state to decide its own policy on the subject and with a recent bill sponsored by Idaho state senator Leon H. Swenson, now coming before the legislature, this is presently a highly controversial question. In fact it's such a difficult and sensitive subject right now, that doctors don't feel that they can give any part of enjoyen and that they can give any sort of opinion on it.

One place a woman might contact for help is Nightline. Since it is presently still illegal to even give information on where an abortion can be performed in Idaho, this service

will refer the person to the infirmary, to see a doctor there. They will ask if the woman is sure that she is pregnant, suggest-that she see a minister and offer to have her call back at anytime to talk about the situation or suggest further help.

"There are no rules regulating the practice of medicine in the Student Health Service. A doctor and nurse are considered competent and ethical until proven otherwise." --reads the U of I Student Health Service Regulations.

Still illegal However, abortion is still

illegal as of this printing. Dr. Robert Leonard, university physician will counsel pregnant girls and refer them for further counseling or care as is appropriate considering her circumstances. attitudes. and desires. The girl will be informed that abortions are easily obtained in Washington and the Family Planning

Center in Pullman is often cited as a possible

If the abortion is performed early in the pregnancy in the proper place under sterile conditions, and is done by a competent doc-

for the woman involved. Leonard said Leonard believes abortion is a very poor form of birth control. since no matter what the

conditions may be, there is always a chance of injury or death. Therefore. Leonard will counsel and give birth control pills, methods and devices to those who need them.

Ruling pends Ruling pends

Dr. William Fitzgerald, head of the Student Health Services did not feel that he could give any personal views on the subject. He said the Supreme Court has strongly upheld the right of the state to determine what shall be law in this instance and any future policy of the Student Health Center will have to await this ruling. He also said that very few women have come to the Health that very few women have come to the Health Center seeking abortions or even advice on what they can do.

According to Dr. Donald Adams of Moscow, the bill being considered by Idaho's legislature states that an abortion can be done at the request of a woman up until six months after conception. If she is married, she must have the consent of her husband. After six months the operation must be done in a hospital and only in cases of danger to the health of the mother.

> Adams said if this bill has not yet passed it probably will quite soon. Under this new law most abortions will be done in a hospital, although a small percentage may be done in a clinic, so that the woman would be an out-patient. These clinics would have to have

> special facilities however. From reading he has done, he said, the woman very seldom has any psychological problems after the procedure. Usually a doctor will not

perform an abortion if there is any doubt in his mind that the woman cannot handle the mental aspects of this measure.

The question of abortion in Idaho is still very unstable. Since states as close as Washington and California have liberalized their laws it would be reasonable to assume that Idaho will be likely to do the same. In the next few days Idaho citizens will know the decision of the legislators.

lose conflict opens up

By DAVE WARNICK Argonaut Political Writer

"How important is a Ph.D.?" asked Mark Switzer at a meeting attended by members of the Foreign Language faculty, and students and other people interested in Rose's pending dismissal.

The Foreign Language Department recommended in January that Alan Rose, an instructor in French, be terminated at the end of this academic year. According to University regulations, this would mean he could stay until the end of 1973-74 school year.

Students for Rose have been protesting the decision, and billed the meeting Monday as a "last chance."

Verbal confrontation At times the meeting seemed on the verge of becoming a verbal confrontation between the students and some members of the faculty. Dr. Elizabeth Stevenson, of the French department chaired the meeting and repeatedly reminded the students that she had just come to listen. and not to respond.

Switzer denounced this attitude and pleaded for "Communication between the faculty who have all the power in this decision, and the students who have none but a great deal of interest in the decision.

Switzer presented the primary argument of the Students for Rose. First,

he pointed out that "Mainly what we're trying to do here is correct an oversight." No student input

He regarded it as a shame that just as Ken Marcy's proposal for students on faculty review committees is getting favorable consideration, that Rose should be fired without any student input.

Turning to the reasons for his retention. Switzer said. "College is no longer a

magic carpet to success. People my age are questioning it." Switzer listed the two reasons for attending college as being to gain a job, and for "self-actualization, or self-realization." He viewed the latter as much more important.

Two qualities needed

Switzer went on to argue that Rose was best at bringing about self-realization. He felt two qualities were needed to bring it about: the "avoidance of authoritarianism" and "dding people to productivity.

"Alan," said Switzer, h. 4 of Students for Rose. "provided these two conditions for self-actualization." In concluding this portion of his argument he stated. "Alan prodded and barbed students out of their apathy.

Over 65 students and other interested people jammed into the Galena room to listen to the arguments presented by the students. Switzer went on to defend Alan's political activities on the grounds that anyone who considers themselves a responsible citizen should be involved in

politics Exceptional competence He concluded asking. "Is having a

Ph.D. more valuable, than losing a teacher whose competence is exceptional? Dr. John Fiske asked about the

involvement of Rose in the attempt of the

Presidents:

What are the presidents doing with our lives and money? See comments on Nixon and Wurster on pages 2 and 3.

Pictures:

Photography is the forte of Mike Lundstrom, Idaho photographer. A photo essay and article features the man on page 5.

Misconceptions about food additives and pesticides are cleaned up in an article on page 6.

Pesticides:

Power:

Energy problems abound as fuel shortages increase. Dr. Soots discusses this problem on page 6.

The wisest man in the world

Many people have wondered whether or not man has evolved to a highly moral degree where he can promote the betterment of life rather than perpetuate life's decay and destruction.

In this reasoning one wonders if man has finally realized that premeditated murder and certain acts of violence cannot be deterred by use of the threat of death.

This week President Nixon has indicated to Congress that he would desire to incorporate the death penalty for certain crimes and reverse the decision of the U.S. Supreme Court on

Statistical analysis by experts has shown again and again that the death penalty has not discouraged acts of violence.

Even Richard Kleindienst, U.S. Attorney General has remarked, "I don't believe...that the death penalty acts as a deterrent."

Though in light of the experts knowledge, the U.S. Supreme Court decision, and his own Attorney General's opinion. President Nixon can claim "to be convinced" (of course, based on his own expert knowledge) that the death penalty will stop

Reasoning and past statistics show that if a man is going to betray his country in war or throw a firebomb, he will on most occasions follow through with his act in spite of the threat of

In cases such as these one can assume by the past history of such crimes that the person's desire to commit such social offenses was probably weighed against the threat of death and the first won out in the criminal's mind.

Nixon's approach is completely illogical. It has been overused by past criminal experts who thought by the threat of death, violent crimes could be stopped.

Perhaps it is time for Nixon to stop playing the expert on all matters from social welfare to criminology.

The experts say the death penalty hasn't worked, doesn't work, and won't work in the future.

Does Mr. Nixon claim to wear the knowledgeable cap on matters he is little more than an opinionist on? Yes. Should he? No! His wisdom on such issues does not merit his expressing such powerful opinions regarding such subjects as the death penalty. - GRAMER

Booked for the year

16 you call up to talk to Financial Vice President Sherman Carter and tell the receptionist your are from the Argonaut she'll tell you the man is not available. Forever.

Spokesmen for Dr. William Fitzgerald at the University health center will probably do likewise. And in the athletic department, not only will they withhold public information, but they will refuse to disclose their identity.

Why should University officials deny the student newspaper? As either Ed Knecht or Lee Nelson (according to the secretary. both were in the office and one was on the other end of the phone) explains it, the Argonaut has not presented the facts correctly in the past. As an authority in his department. Knecht (or Nelson) isn't about to produce a fact now for Argonaut publication. A reminder that accurate newspaper reporting can only be accomplished when authorities make statements brought only silence from Nelson (Knecht).

The past also haunts Sherman Carter. Publicly embarrassed by an Argonaut edition three years ago, he has since refused to cooperate even though the staff has changed over completely. to the point where the present editor was not even in school on that fateful day in 1971. Also Fitzgerald, a doctor paranoid of misquotes, now will grant nothing else since he declines all interviews.

Finances. Health services. Athletics. Three important areas of the University and three very influential men - public employees - and yet they refuse to speak through one of the only student means of communication. Probably a little defensive and insecure, these officials are overreacting, either sneering at those who should come first in their administrative occupations. They are horrified or angry at misquote and misinterpretation in a school publication run by students — yet representatives of the Outside, professional newspapers such as the Lewiston Tribune and the local Idahonian are allowed mistakes and treated respectfully.

It is time the Argonaut was recognized and handled as a legitimate information medium, not a juvenile toy press. If anything, this newspaper should gain more attention since it is effective not only on campus. it carries student thought through Idaho and touches Alumni everywhere.

In the world at large, a student publication should hold it's own and be treated as such. on the level with its fellow journals. In the scheme of a university, administrators should hold the student in high priority and by turning down the student newspaper. they are turning down the students themselves.

Freely translated from past Argonaut experience. if you're a student legitimately looking for information - you'll be kicked out of the University Vice President's office and the athletic department, giving you a pain you can't take to the infirmary. —JAY

Dave Warnick

Who counts with tenure?

Today is the day-Faculty Council will take up the tenure question, and even if they have to miss supper(members were warned to bring a sandwich) they will have a statement to send to the next General Faculty meeting, so they in turn will have a statement to send to the Board of Regents.

In looking at the entire question of faculty competency it's interesting to note the one really independent evaluation which was taken of their performance, back in 1971

This was the Performance Audit, taken by the Legislative Auditor. Looking at the audit of the College of Letters and Science one is certainly impressed by the very favorable attitude taken by the auditor.

In evaluating the faculty, the auditor went over 10,000 student survey forms. To quote the report:

'The students assigned a numerical score on 23 different characteristics of each faculty member with whom he was associated. The following summary represents our analysis of approximately

SMELLING LIKE A ROSE . . .

10,000 survey forms which we tabulated on each professor and for each class taught in the college of letters and Science:

Rated between 4 and 5 (good to excellent) 55 per cent Rated between 3 and 4 (average to good) 44 per cent

Rated between 2 and 3 (below average to average I per cent Rated beween 1 and 2 (poor to below average) per cent.

Now this really reflects credit on the college, and hopefully our high performance insured a few more dollars from the legislature. (Maybe what we really need is another legislative audit?)

No longer employed But in even better news, it goes on to say, "The average rating for all faculty in the College was 3.95 out of a possible 5.0. The four individuals receiving a rating of below average by the students are no longer employed by the college. On the other hand, three professors obtained a score of a perfect 5.0 from the students."

Certainly from this it would appear that the present system works-that no student input is needed into either insuring faculty competency, or deciding who and when tenure is granted.

But in my opinion, the only guarantee students have that their evaluations are going to be listened to, is for them to sit and decide both-the competency of tenured faculty, and who gets tenure. Although the above audit is naturally good news, one is not certain that some of the faculty in the upper ratings were not also

members who were below average.

terminated along with the faculty

Not always open
And what do the student evaluations show now? The legislative audit is one of the few places it's possible to get any information on the results. And certainly these are not always open to the students. (After talking to a couple of deans and assistant deans. I've found that to be the case, although certainly the College of

cooperative.)

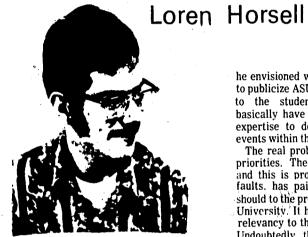

But the recommendations in the audit suggested another possibility which has not to my knowledge been investigated extensively at the U of I in regards to the competency of faculty, and the determination of their competency.

The report suggested that departments should keep much better track of their graduates and use their input to improve the department. Slowly, the college is moving in this direction.

Alums included? But why not go much farther and include alumni on any committee which decides either whether to grand tenure or end employment at the University?

Alumni are probably both more objective than students and teachers at looking at and evaluating faculty. As Dr. Frank Cannizzaro, a professor at Fairleigh Dickinson University said. "It is my firm belief than any evaluation procedure must at least have evaluations from a teacher's peers, chairman, students, and alumni who have been out of the field for a minimum of three years. We should always keep in mind that really pragmatic evaluation cannot come until years later. After all, a teacher is not producing cans of beans and sardines.

Of course, they should not only include their evaluations, but also, those people hould be included in decision-making. What more can be said? Not much.

In the past week we've seen the latest example of the present ASUI government going off one tangent, solving everybody's

problems, but their own. New ASUI president Carl Wurster. apparently, began the problem unwittingly of appointing senator Greg Casey (who will be leaving office at the end of this month) to the vacant Community Relations post. However his idea was to make it for the moment, just limited to visiting with the Chamber of Commerce and others in the community with the possibility of making it a public relations post eventually.

However. Casey grabbed this and decided to follow in the footsteps of people like Roy Eiguren and make it a elaborate plans to recurit high scholars to the University and sent out a lot of press releases about the ASUI to high

Unfortunately, for Casey, this wasn't exactly what Wurster had in mind. What

he envisioned was a public relations area to publicize ASUI activities and programs to the students. Organization heads basically have neither the time nor the expertise to do a good job publicizing

PR in the ASUI

events within the ASUI. The real problem appears to be one of priorities. The Eiguren administration. and this is probably one of its primary faults. has paid more attention than it should to the problems of the state and the University. It has done this at the cost of relevancy to the students who pay \$14.25. Undoubtedly, things like the recruitment concern students, but not with such high priority. Interfraternity Council and Panhellenic Council, with some help from Residence Hall association, are putting together a visitation program for early next month and the Senior Visitation program is sponsored through the programs office. Both of these are fine. But to put out a department head's salary and a departmental budget to recruit

is already a University department to do this seems unwise. More time and money

potential university students when there

If anything, the past election, especially after the BS and T concert, tells the student leaders to spend more time and money serving students.

However, the PR area sounds good. Since we spend thousands and thousands of dollars annually on programs and services and concerts, it would seem wise to let people know what we're doing with that money. If a student who likes mountaineering doesn't know there's such a thing as the Vandal Mountaineers-not to mention what they're doing-he isn't making good use of the \$14.25. Proper publicity for concerts

Another area that needs publicity drastically is entertainment. I have yet to see a concert with proper publicity. However, to turn the PR office into a

recruitment relations office would be wrong. It would be duplication of existing University programs and it would be the wrong priority. I think the ASUI has got better things to do than play University

Viewpoints

Voxman corrects UFW strike story

I would like to wholeheartedly join with Mr. Smith in taking issue with a number of Mr. Voxman's statements concerning the lettuce boycott which appeared in last Tuesday's Arg. Actually, however, I must confess that I find myself in complete agreement with Voxman's lucid and sometimes brilliant original statements given to the Arg reporter - it is only the 'direct quotes'' which subsequently appeared in the Argonaut that I find most disturbing. During the interview, an attempt was made to patiently explain to the reporter that it is indeed the Taft-Hartley Act which expressly forbids secondary boycotts; however, since the Farm Workers Union represents only the farm workers, it was ruled in May, 1972 that the National Labor Relations Board does not have jurisdiction over the UFW boycott, and, hence, federal law is not applicable in this instance

An additional statement attributed to me was to the effect that Chicanos consider Chavez as "a 'cop out' to the This is, of course, patently absurd since it is precisely members of the Chicano population which Chavez is attempting 'successfully) to galvanize into a united and effective force. I did mention, in trying to underscore the

essential moderateness of Chavez, that it is ironic that despite the growers' references to Chavez as a revolutionary. Communist, radical, etc. a few of the most militant Chicanos have accused Chavez of selling out to the Anglo establishment - in part due to his noticeable lack of enthusiasm for such emotion-charged tenets as La Raza. However, I would venture to say that the overwhelming majority of the Chicanos regard him (and rightly so) as one of their most inspirational, dedicated, and selfless leaders.

Thus we see that alchemy is not dead. It is alive, well, and apparently running rampant in the offices of the Argonaut. The mutation of many of my original statements into unrelated and completely erroneous "direct quotes" is no trivial feat, although I would question whether the pages of the Argonaut constitute an appropriate setting for this type of

I am certainly appreciative of the Arg's recent concern for Chicano problems on this campus and elsewhere, but I would hope that in the future this interest will be characterized by increased depth and substantially more accuracy

Sincerely, Bill Voxman

Women slam Argonaut writer

To the Editor — Regarding the article on Campus Women by Mary Sochinsky in the March 9 Argonaut, we would like to make several corrections about the Women's Center.

1. The Women's Center is universitysponsored and open to everyone on campus and in the community. There is no membership!

Prison letters

To the Editor:

At present I'm incarcerated at the Southern Ohio Correctional Institution at Lucasville, Ohio. I am writing to you with the hope you might know someone who would be interested in corresponding with someone who is at present incarcerated. We have unlimited and uncensored writing privileges. But as it is, I have no one to correspond with. I would most gladly welcome any and all letters that I might receive and will answer all. I'm doing 2-20 for breaking and entering and have been here since April of '71.

Any help that you can give me in finding, someone to correspond with would be most appreciative. It's very gray an dull here as it is, but gets especially gray and lonely when you don't hear your number called at mail time.

Thank you for at least listening to me. Sincerely in Peace, Frank Stone

2. The Women's Center is staffed with volunteers to answer questions, talk with people who come in, etc. In addition to the three women mentioned in the article (as members, which they are not) Kay Finley, Sarah McDaniel, Jolene Ramaker and Jeannie Wood also help. We would appreciate more help from other interested WOMEN.

3. We DO have information on the Women's Liberation Movement

4. MS magazine is not published by a women's lib group but by a magazine publisher similar to that which puts out Time, Newsweek, etc.

5. Despite possible shortage of funds we do plan to continue operation. We are working on arrangements for space. furniture, etc.

We hope the misquotes in this article have not given too many false impressions and that this letter will correct them.

Also, we want to add that anyone who would like to receive our newsletter or

who have suggestions for the Women's Center please drop in or call 885-6616. Louise Dressen

Micki McGrane Women's Center Editor's Note: The Argonaut and reporter

Mary Sochinsky stand completely behind the original March 9 article. From now on all complaints and criticism should be directed to the Argonaut office and not carried to the University journalism department since the newspaper and its writers are completely independent of the

Thirteen new people will be sitting in the Senate for the next two and a half semesters. Not one of the past members of the Senate chose to run again.

Why did none of the previous thirteen seek re-election? Reasons range from interest in other areas to total disillusionment of the system.

Mark Falconer is one who did not get disillusioned, although he feels the duties were too time-consuming.

"I got awfully wrapped up in it, and learned an awful lot," he commented. He plans to work through the "back-door of the Wurster administration helping with research projects.'

"I'm doing things I want to," said the outgoing chairman of Finance Committee who hopes to spend next year as an exchange student in Florida. "An elective office is not for me.

Phyllis Lord, another outgoing senator, thinks the senate needs more direction in what areas to go into. "It's ridiculous," she states. "The Code of Conduct took two years to pass. There are so many channels to go through. It's dismal," she

Other old senators are getting involved in other fields. Clive Strong feels he can do the best job as a member of Faculty Council. Greg Casey, defeated for the vicepresidency, has joined the Wurster ranks as an administrative assistant.

"...I want to help if I can." Mike Roach

bag is working with the Athletic Board of

"I'm not really sure what is needed," the wildlife-forestry major says," but I want to help if I can.

"Athletics is a big deal, and school is getting to be more tough," he commented as to the reasons for not running for re

According to Mike Kreig, the reason that no one ran again is simply that being a senator is one of the most

"The people I respected went away..." David Gittens

thankless and hard-working jobs on the university.

A perfect example of total withdrawal from ASUI is David Gittens, senior from

"I was really involved as a freshman . when (Jim) McFarland was president and the Senate was somewhat representative of the student body. I was involved in the committee structure and got talked into

"Then with Mary Ruth Mann, the Senate began to alienate itself from ASUI proper. All the lobbying of that year (71-72) got us nowhere and started to bother

me.
"The election of Roy Eiguren and his high-handed policies made the situation worse. The ASUI was isolating itself, and senators, like, so what if they went against the students wishes?'

Gittens cited several reasons for abandoning the ASUI completely. "The people I respected went away, and with Eiguren's. failure to reappoint a Communications Board, it was the last

straw."
For the past couple of years it's been largely a good way for 13 individuals to collect a nominal salary for attending a senate meeting Tuesday night at 7 (occasionally) and maybe an even more occasional subcommittee meeting.

But as I asked before, have you ever thought about what the ASUI Senate COULD be?

The most important service it could be is a two-way arm between the ASUI and the student government. Possibly the foremost lesson of the past campaign is that the government and the ASUI have to be in accord. The government can't exist while ignoring the students who provide the finances and cast the ballots.

"I'd rather be involved in something that would help me find a job than fool around with the trivia of ASUI."

Mel Fisher, defeated for the presidency of ASUI doesn't have any plans for further involvement in student politics right now.

"I'm going through a process of re-evaluation," he said. "There are lots of other areas besides student government to become involved in. There's so much to do within my own field, political science and economics," he enthusiastically

Roy Eiguren, outgoing president, has no plans whatsoever as far as running for any elective office.

"I will continue my involvement in any way that I can be beneficial to Carl Wurster." he said. "I will be available at any time for assistance.

"An elective office is not for me." Mark Falconer

ASUI transition goes smoothly

The new sign on the door reads, "ASUI President, Carl Wurster."

It is only one example of the speed which the new administration is replacing the old. So far, according to all reports, the transition has been smooth, and "cooperative."

Carl Wurster, ASUI President-elect, assumes office March 27 along with the new ASUI Senate and Vice-Presidentelect Mike Mitchell. (Students elected to Faculty Council take office Sept. 1)

Everyone cooperative Wurster said that everyone in the present ASUI. "Especially Roy (Eiguren. outgoing ASUI President) has been very

'The main thing I was worried about was that there would be hard feelings among the different camps after the election, but that hasn't happened. The orientation has been very smooth," said Wurster.

The orientation has consisted of three meetings of the new officers and Senators. Topics covered so far include ASUI Senate operations. (the procedure of the Senate, and how to write a bill); ASUI Administrative Operations (the jobs of ASUI department heads and ASUI General Manager), and University Academic operations (the explanation of faculty and university government.)

Pleased with transition Roy Eiguren has been very pleased with the transition and orientation so far. "Admittedly," he said, "for the most part, most of them haven't been involved - only one or two senators have been involved in the past."

The out-going president commented that the most important part of the transition was communicating background to these new officers, and giving them the benefits of the present administration's experience.

Eiguren is "pleased with my relationship with Carl." The two have set up office hours so that each can use the President's office.

Involvement continues His involvement in student government

By Maryjude Woiwode

With meat prices skyrocketing, it's time to take a look at some other sources of protein. The federal government's "recommended dietary allowance" (RDA) per day is 65 grams for a man, 59 grams for a woman and 70 grams for teenagers. These figures are for the average person. They will change with weight and amount of daily activity. If your daily diet includes the number of servings suggested in the basic four food groups plan, then you should have no problems getting the protein that is required.

With a little help from my friends, I compiled the following table. All costs are an average taken from prices in Moscow's Safeway, Modern Way, IGA and Rosauer's. When there was a choice, the lower priced product was chosen.

Item	Store price	Usual cooked serving		Approx cost/serv
Dried Lima Beans (1 lb.)	33¢∕lb.	1 cup	16	16¢
Jiffy Peanut Butter (18 oz.)	68¢/lb.	4 Tbs.	16	9¢
Chicken Fryer, cut up	63¢/lb.	3 oz.	20	12¢
1 doz. lg. Grade AA eggs	65¢/doz.	2 eggs	12	10¢
1 pt. sm. curd cottage cheese	36¢/pt.	½ cup	16	8¢
Velveeta Amer, processed cheese	80¢/lb.	2 oz.	14	10¢
Starkist tuna (6½ oz. can)	48¢/can	3 oz.	9	21 c
1 Gallon Milk				
whole	\$1.15/gal.	8 oz.	9	7 c
2 per cent	\$1.13/gal.	8 oz.	. 9	7€
1 per cent	\$1.00/gal.	8 oz.	9	6¢
Frozen Ocean perch fillet	98¢∕lb.	3 oz.	16	18¢
Well, there it is. By no means	is it suppose	d to be a comp	olete list.	There are

other protein sources besides these but I'd never be able to get them all in. If your budget won't allow meat each day, try one of these recipes using a substitute. Happy Eating!

Baked Cheese Fondue Serves 6 about 23¢ serving

11/4 cups milk eggs, separated

T. butter or margarine tsp. salt cups small fresh bread crumbs 1/8 tsp. pepper

cup grated American cheese

cup cottage cheese

½ tsp. prepared mustard tsp. Worcestershire sauce

Scald milk. Stir in butter. Remove from heat; add crumbs and cheese; mix Beat egg yolks slightly; add first mixture gradually, stirring constantly. Add salt, pepper, mustard and Worcestershire. Fold in stiffly beaten egg whites.

Pour into buttered shallow 2 qt. baking dish. Bake in a pan of hot water in moderate oven, 325°, 1 hour or until a knife

inserted in the center of the fondue comes out clean. Note: To save, use non-fat dry milk. Egg whites whip best when at room remp.

Puffy Omelet Wedges

11/2 T. butter

Serves 4 or 5 about 9¢/serving 1 cup cottage cheese

eggs, separated

to ½ tsp. salt

1/8 tsp. pepper

Beat egg whites with egg beater until stiff but not dry. Beat yolks with the same beater until thick and lemon-colored. Add salt, pepper and cheese. Continue beating with beater until smooth and blended. Add egg whites; fold in gently

Heat butter slowly in a 9" skillet until just moderately hot, not brown. Add egg mixture; cook over low heat about three minutes or until puffed up and delicately browned on the bottom. Bake in a moderate oven. 350°. for 15 minutes or until top is dry. Cut in wedges, serve at once.

Study Abroad Office **Graduate Center Building 110** (on the north-south mall at the University Museum Sign) is not ended yet though, as Eiguren intends to serve out his term on Faculty Council which he was appointed to by U of I President Ernest Hartung.

Asked about the transition, Mike Mitchell. ASUI Vice-President-elect. commented. "I'm fully transcended, if you know what I mean." In a more serious vein he said that the pace has been extremely fast. "I'll need that week of spring break to study up on my office."

Right now. Mitchell's main concern is going through back files to insure that the new administration doesn't duplicate the research of past administrations. "I want to sit down and compare notes with the past administration" he said. "so we don't waste any time, since we only have

Immediate concern

Wurster is immediately concerned with preparing next year's budget. "Hopefully," he said. "we'll get it done by April 1st. but I doubt it." Eiguren has been working with Marv Williams, ASUI Budget Director, in preparing some raw figures for the new administration. "It should save Carl a couple of weeks in preparing the budget." Eiguren said.

Mitchell sees the budget as the most important issue to come before the new Senate. Other important areas will include representation of the student body by the Senate, reorganization, election rules, and the selling of class notes. The last is a proposal by Senator-elect. George Inverso, which has been discussed at the orientation.

The proposal would provide that in certain courses with a wide coverage, the ASUI would hire graduate students and a very qualified undergraduate to take notes, and they would sell an outline at no

Orientation helps

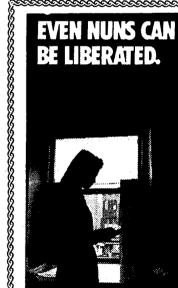

One new senator. Darrel Perry, was asked about the change between administrations, and with the typical caution of the new Senate answered. "I'll have to think on that for a moment. After a moment he replied that the orientation program has been most beneficial, "I think the three weeks between the election and taking office has given us an opportunity to at least learn the basics.

Senator-elect Perry also commented that the files had been kept well by this year's Senate and the President and Vice President. But the most important part of the

transition and the orientation is not contained in the files. As Roy Eiguren put it. "I remember when I went through the orientation last it was really important to get the perspective that Mary Ruth Mann (ASUI President 1971-72) and Tom Slayton (ASUI Vice-President 1971-72) could give me."

Officials met

Eiguren will be introducing Wurster to various officials around the University. and the pair will meet in Boise over ispring break to meet state officials such as the Covernor

students to save him, and Switzer explained that any involvement was purely having his permission asked on various tactics the group planned, and explanations of the situation in the Foreign Language Department.

Fiske went on to ask specifically, "Did he suggest that tactic of a boycott?" (Students have threatened a boycott of foreign language classes if Rose is During the course of the meeting.

Orwick mentioned, that it is rumored that certain members of the faculty were not able to vote their conscience because of outside pressure from someone other than. the chairman. Contradicting Dr. Stevenson's denial. Dr. Fiske admitted there was evidence of coercion.

John Fiske turned to Stevenson and said, "I have to disagree with you. While there was no pressure on your part, there has been from other members of the department.

Martin's idea

Bill Martin, a student active in the "Save Rose" effort, stated that it was in fact his idea alone. Any involvement of Rose in suggesting it was emphatically

Martin then went on to turn the meeting into a near confrontation. He asked why the Foreign Language department had promoted people to professorial rank without the Ph.D. while they were not going to promote Rose.

He especially referred to the allegation that Dr. Stevenson did not have a Ph.D. in foreign language, but rather in biochemistry. After some fierce discussion. Dr. Audredy Aaron explained that some consideration was given by the department to the difference between an English Ph.D. and American Ph.D.

Ability to teach

In quieter parts of the meeting various students presented testimony regarding Alan's excellence as a teacher. Karl Petrick, a recent gratuate of the U of I, stated "no matter how many Ph.D.s you have, it does not necessarily give you the

ability to teach." John Orwick, a student in philosophy, said in line with this, "All the knowledge in the world is not worth a tinker's damn unless it can be

communicated.'

Mrs. Anna-Maria Weisel, a French native pointed out that in her opinion. Rose was "very fluent in the language.

By MARSHALL HALL Argonaut Sports Editor

The forecast is clear, and sunny skies are expected for this year's great escape. Undergraduate inmates and faculty guards will both be on the lookout for an early spring break.

The University of Idaho escape committee has planned the annual spring break for March 17, but reliable sources have informed Warden Hartung that lone individuals will be crossing the deadline before hand.

Members of the warden's staff can expect an increase in doctors appointments, important meetings and funerals, by student inmates in the coming days. "I think I left the right rear burner of the stove on the last time I was at home," said Gregg Campbell, trustee. "I feel I can neglect this oversight no longer, so I'll make a run, I mean I'll be forced to make a special trip back home to alleviate this problem."

Authorities are warned to be on the lookout for inmates disguised as typical long-haired freaky college kids. Most of the inmates can be recognized by an irregular walking pace, caused by a continual state of drunkenness. University of Idaho prisoners also shy away from buildings which house books and educational materials.

Faculty guards are encouraged to take preventive measures against escapes. The administration advises all requests for early absenses to be revoked by staff members. Tenture can be threatened for staff members showing pity. Other measures which have proven to be effective are those of giving late exams and additional assignments due upon recapture.

The administration warns the inmates that capital punishment has not been outlawed in the Big Sky region. Prisoners caught while trying to escape early are subject to death in the electric chair or by eating their last meal in the SUB, which ever comes first.

$\mathbf{WR}A$ news

On March 1,2, and 3, the womens extramural bowling team traveled to Provo, Utah to compéte in the Regional Invitational tournament at B.Y.U. Thev bowled against teams from Arizona, Utah, Washington, and Oregon. The team placed 4th in the tournament. This tournament wraps it up for the team. This year was one of the best of the U. of I. has had and most of the team members will be back next year. The team is coached by

Also, last week on March 2, and 3, the womens extramural basketball team traveled to Walla Walla to the "B" tournament. They played three games, winning one and losing two. High scorer for tournament play was Karen Stanek. The team was coached by Jan Onuska.

Women's intramural basketball came to a close this last Wednesday, March 7, with a championship playoff game between Off CampusClub and Houston hall. O.C.C. won with a score of 15 to 4. Karen Stanek was high score with 8 points. Extramural softball starts Thursday, March 8. They will compete with other colleges and attend a tournament in Boise later this spring! no that is interested in playing should contact Barnes WHEB.

Friday, March 9 thru the 10th, there will be a Northwest AP.H.E.R. Convention.

Wild vibes detect presence of zinc in rocks

When the first Apollo astronauts went to the moon in 1969 they were tracked by NASA's sophisticated complex of telemetry in Houston, Texas. Also following their progress, from Florida, was one T. Galen Hieronymus using a small gadget he had invented in the fifties. He wrote a 22-page report describing physical changes in the astronauts from lift-off to splash down and through their quarantine period.

According to Joseph Goodavage, writing in ANALOG, December 1972, Hieronymus's "vitality intensity values" for the Apollo 15 astronauts correlated closely with the findings of the medical telemetry system used by NASA's chief flight surgeon. But, concludes Goodavage, "for finely detailed, in-depth dramatic impact, the Hieronymus machine seems to have a clear advantage over the most sophisticated communications system in the arsenal of space technology.'

The Hieronymus gadget is a psionics machine, a device that amplifies psi power, that is, extra-sensory perception. Several such devices are currently being researched and developed in the Soviet Union (see Psychic Discoveries Behind the Iron Curtain, by Ostrander and Schroeder, Prentic Hall, 1970.) Bell-Telephone and ITT are quietly researching psionics.

Get the Zinc

The Hieronymus machine consists of a scanning tray attached to a flat copper coil sandwiched between two quarter-inch thick sheets of plastic. The coil is also attached through an electrical circuit to a vernier dial. To detect, say zinc in a rock

the zinc. Eventually you will find a setting that associates with a particular feeling of the hand on the plastic-for example, a furry feeling. If the feeling is strong, presumably there is a fair quantity of zinc in the sample. Others may find zinc associated with the same setting though not necessarily with the same feeling. The machine apparently, amplifies your natural psychic ability to detect zinc.

However, when ANALOG's editor, John Campbell, investigated Hieronymus's machine in the fifties, he found, quite by accident that the machine worked just as well without its power source turned on. Then he took a step into the wild-blue yonder: he substituted a drawing of the circuit, in India ink in paper, for the circuit itself. He described the result in a letter to Hieronymus:

machine works beautifully ...We're working with magic - and magic doesn't depend on matter, but on form — on pattern rather than substance. Your electronic circuit represents a pattern of relationships. The electical characteristics are unimportant and can be dropped completely. The machine fails when a tube is burnt out because that alters the pattern. My symbolic diagram works when there is no power because the relationship of

closer we look into a particle of matter the more pattern we see and the less substance there is. It appears to be all pattern. Ask a physicist what the pattern is made of and he is likely to say: "waves

of probabilities.' Trouble is, this magic stuff can be dangerous. Hieronymus is reported to have used his machine for ridding a cherry tree of caterpillars-from several hundred miles away. He had sent to him some of the caterpillars, some leaves of the tree and a photographic negative of the tree. Whatever he did, the caterpillars dropped off the tree and fled.

I have heard that you have to be in an ethically "good" state of mind to use such devices effectively. The American government, apparently feels that the machine is harmless enough; the diagram and instructions are available for 50 cents from the U.S. Patent Office, Washington D.C. 20025-patent no. 2,482,773.

Soccer coach lauds team

"I'm pretty satisfied with the team. It's gradually built up to be if not the best. one of the best teams in the northwest." said Nicos Rossides, coach and captain of the University of Idaho soccer team.

Rossides gained the position from Alan Rose, former coach of the soccer team. "He felt I had the experience, so I became the coach," said Rossides. Rossides is a former member of the National Soccer Team of Cyprus, and has coached other teams before.

"The team lost a few experienced people this year," said Rossides, "We've gradually built up the team and everyone is pretty enthusiastic." he added

The U of I soccer team has played two scrimmage games with Washington State University, defeating them both times 3-1 and 4-1. There are 34 members on the team. including returning starters Sony Lynn, Arnfinn Rusten, Rossides and Sam The U of I is host to the University of

Montana on March 31. The team travels to Missoula Montana on April 7 for a rematch. The season includes competition against WSU. Montana. Gonzaga, Whitman and combined teams in Spokane. The Northwest Soccer Tournament will be at Washington State University in May.

"B" basketball intramurals begin

Because not everyone has the ability, or the inspiration, to become a great basketball player, and some people don't even care if they're proficient at the game, intramural "B" basketball is going

To many, the game of basketball is simply a great way to leave week-day tensions behind, to get out and do what comes natural to the human spirit compete. But no one wants to compete in a situation where they are obviously inferior to their competitors; everyone wants to be able to show their skills in a favorable light. "B" basketball is for those who want excellent, but low-key, competition.

"B" ball is for those who aren't quite good enough for intramural A basketball or for those who are good enough for "A" ball, but really don't like the pressure and over-emphasis that is put on it.

Each men's living group on campus may enter as many teams in the "B" league as it wants, which means that anyone, no matter how good or bad, can play. This also means that friends can get together and form their own teams, which helps to create a looser atmosphere on the court, and encourages a friendly type of game, a sort of "stone basketball", to coin a phrase.

The games are reffereed just like "A" ball to insure that they don't get too far out of hand, and each living group can earn intramural points for finishing high in the final standings.

Many living groups like to "sandbag" their good basketball players, meaning they hold their good players off the "A" team, and play them on the "B" team hoping to take the campus championship.

But to most teams in the "B" league, it's all fun and games. Players say the teams that try the hardest are really the ones that are missing the most. In "B" basketball, it's the team that has the most fun that really wins the biggest prize. and the team that worries and sweats about the next game is the real loser. regardless of the final score.

Co-rec water polo coming soon

Co-recreational water polo is a new form of competition being initiated into the University of Idaho Intramural Program, according to Clem Parberry, intramural director.

It will begin experimentally sometime after spring break, and, as is the policy with all sports involving both men and women, there will be no intramural points awarded. Neither will it be necessary for a team to consist of members from the same living group. However

The structure of the competition will entries should be turned in at room 109 in

then can get the team together is accep-

table, according to Parberry.

Memorial Gym before the Intramural Managers meeting at 7:15 p.m. on March

All the players are given an inner tube that they must be inside when touching the soccer-style ball. Except for this the rules are very similar to regular water polo, Parberry said. There are four men and three men (and a goalie) on each team. The games consist of four sevenminute quarters and will be played in the University's new swimming facility.

"Most of us are not in good enough shape to swim through a game like this," said Parberry, "but most can use the both men and women can play.

Lundstrom captures moment with free-style photography

Back in a little room of the middle section of the UCC is the cluttered but cozy office of Mike Lundstrom, Supervisor of Photographic Services. An ex-Los Angeles photographer. Lundstrom now likes_the mountains, the Palouse, and taking pictures.

This is his second year at Idaho, and his job entails "making photos of things that happen on campus."

Lundstrom is also called on to do documentary work. This includes photographing research projects and experi

'For example, if someone finds a way to breed a 17-leg caterpillar, I'll take pictures of the process," Lundstrom said.

Lundstrom also helps with public relations for the University. He is on the public relations committee that is working on ways and ideas for new public relations films.

Lundstrom describes his photography in two perspectives. First of all, his pictures can be "totally contrite" in discipline and involve a fantasy that "just falls into my head.'

"It's like finding a telephone pole that just happens to be growing out of an ice cream cone."

The other perspective of his style is an exact opposite. It is photography that captures the happening in the street that only occurs once in time and space. Such an image is lost forever if not caught by the

"It's like finding a telephone pole that just happens to be growing out of an icecream cone." Mike Lundstrom camera. That, according to Lundstrom, is the ultimate in photography.

Lundstrom said that the art of photography uses these two extremes of fantasy and occurance, whereas other arts cannot. Photography can take a picture out of context and

visually literate people can understand it, he said. But people can't as easily tell if the written word is taken out of context or not. Even music and poetry suffer from subjectivity as they are passed on and

valued, interpreted, and changed by many different people.

"A photographer has the choice whether to be totally subjective or not." he said. "thus, photography can be better understood and appreciated than the

journalist's written word." Besides doing photographic assignments and services and developing pictures. Lundstrom also teaches a photography class on campus. Meanwhile, he's out taking pictures of "things 'that happen.

Pete 'N Tillie: tragi-comedy

By LIZ WESTON and MIKE MORRISON

I came away from seeing Pete 'N Tillie more than slightly embarrased: the movie was actually quite enjoyable, and I'm not sure exactly why. Oh, Walter Matthau (as Pete) is very good as usual, and in spite of any preconceived notions you may have about Carol Burnett as a serious actress, she is also exceedingly convincing (strangely enough, as Tillie).

But there surely must be more to it than this. The plot of the film, such as it is, involves the "meeting-courtship-marriage-separation-reconciliation" type motif of which anonymity is the result. On reflection, however, several factors stand out as contributing to the total positive effect of the movie.

Pete's lines are the type that ring true to any of us, and there must be many. who have ever known the clown with the hidden, but highly emotional interior (to Tillie: "How about coming up to my apartment for an exercise in heavy breathing" or "I'd rather not discuss things with you than anyone I

to whom most guys seem to end up married, and often glad of it (to Pete: ''I feel like you're stripping me for an operation" and later "... it (the operation) was a success" or "The honeymoon's over; it's time to get married"). Even the blasphemies here are memorable.

One cannot overlook the par-for-the-course entertaining performance of Geraldine Page who portrays Tillie's supposedly best friend. Her antics and facial expressions plus her distinctive vocal inflections should be of interest

The tragedy that enters Pete and Tillie's lives when their only child dies of leukemia does not inject an overly melodramatic smudge to the

indeed life itself tends to be, is tragi-comic, with the emphasis on the former. The pervasive light-heartedness and despair accompanying infidelity and the death of an only child are intermingled well here, whereas anywhere else, a similar handling would probably be contrived. corny and/or contradictory. In this, as in the dialogue, naturalness is the key (there are some taxing scenes: those with the token homosexual, and that

On closer inspection, the viewer realizes he has been manipulated subtly by the director, but the initial response is a spontaneous and generally accurate one. It is this coincidence that recommends the film.

Night on the town

The dialogue is generally natural and given to memorable witticisms. know" or "Love without irritation is just lust"). Similarly, Tillie is all too identifiable as the rather strait-laced, plain girl

to those who earnestly observe the art of acting. nematic picture; rather, it deepens the emotional response of the viewer.

The film appeals to us because of its mundane nature, and the action, as of the "girl"-fight between Tillie and her best friend).

Reveen entertains student audience

Peter Reveen. internationally renowned Australian hypnotist, entertained a large crowd in the Student Union Ballroom last night. Tickets are available at the SUB Information Desk for the second production at 8 p.m. Wednesday in the Ballroom. Cost is \$2.50 per person.

Reveen has been a professional hypnotist for over eighteen years. He said he has done shows mainly in Canada, but is interested in doing more shows in the United States.

"People have many misconceptions about what is involved in the art of hypnotism," said Reveen. "This is partially due to the sensationalism of many magazine articles and low grade

For instance, I explain everything that is going on during the act so there is no mystery to what I am doing. Hypnotism is done through the power of suggestion; it does not involve the supernatural.'

Extroverts-introverts The person being hypnotized is very relaxed and often finds that he can be very entertaining professionally. he added. He has found that the quiet person becomes the extrovert on the stage and the converse is true for a person who is

normally an extrovert; he becomes very quiet on stage.

Reveen said he never makes a fool of the person under hypnosis. He merely puts the subject in a funny situation that is entertaining to an adult audience.

Hypnosis is being used in other fields besides entertainment. "It is really gaining ground in the medicine and education fields," said Reveen. In education, hypnosis has been used to remove the fear of failure that causes many students to fail an exam. Reveen will be working with doctors in

Salt Lake City this summer to conduct tests for uses of hypnosis in medicine. Reveen said the use of hypnosis has made its biggest gain in the therapeutic field in the last four to five years.

Reveen learned most of the art from reading all the material he could find on the subject. He first hypnotized a friend when he was twelve and one-half years old and has been perfecting his skill since

Department of Agriculture).

Food purity concerns consumers food products at will, Montoure

By KENTON BIRD

The public needs to know that there are two sides to the current controversy concerning food additives, says Dr. John Montoure, head of the department of food

"The problem concerns us in the food industry because we're directly involved with it," Montoure said. "But we're often on the defensive, not because we're hiding anything but because we're taken out of

There are no safe chemicals, Montoure pointed out, "only safe ways to use them." All foods are chemicals, he said, citing that it's possible to kill a person with sugar or salt.

"An additive is anything normally foreign to a food," Montoure explained. "So even sugar and salt can be considered additives when they're used as preservatives in foods they're not normally found in.

No chemical additives are used in any food processing done by the University, Montoure said. "Of course our processing is limited to dairy products, and additives aren't permitted in the dairy industry.' University methods

As far as dairy processing is concerned, the only things used are heat for pasteurization and pressure for homogenization. "We could however, fortify the products with vitamins or minerals, but we don't," Montoure said.

The food science department also has a research program based on food quality and food safety. Montoure said. One of the current projects deals with the effect of pesticides on dairy products.

"In progress is a carefully controlled experiment to determine the amount of pesticide residues retained in dairy products, and to learn whether the chemical could be removed without harming the product." he explained.

Undue concern Other research projects have dealt with product development, processing improvements, and reducing waste material from food processing.

Preservatives are permitted in foods ecause they serve a purpose, said Montoure. "The public is the concern of those who set up the regulations." Undue public concern over food additives is based in part on several common misconceptions.

One fallacy is that the "tolerance level" for a chemical is the maximum amount a person can tolerate without becoming ill. 'this conception is totally incorrect."

ROTC enrollment

 Voorhees said that most of the armed services are being updated, mostly to attract more men and to make life more fun for those already in the military.

"We do not spend all our time in drills." he said. "We have drills until that squad can perform them—which usually does not take long. After that, we do fun things like discuss different career opportunities you can find in the services that can help you find a job after your duty is up. We

"We are updating the aservices to fit with today." Capt. J. R. Vorrhees

(the Navy) and most other branches of the service, have liberalized the regulations regarding hair length, beards, mustaches and so on. We are updating the services to fit with today.

Recently, women have been allowed to join the ROTC program. The Air Force ROTC has eight women cadets. Ten colleges allow females to join the Army ROTC program. Though the University of Idaho ROTC does not allow women at the present time. Adams says they are currently working on getting them in:

Exotic solutions to energy crisis Will man ever harness the wind for power? Can he manipulate the sun for solar energy on earth? What must man do to satisfy the alarming drain of earthly resources that once provided sufficient

energy?

Dr. P. M. Soot, a chemical engineering professor at U of I, will talk Tuesday night in the SUB about the relevant energy crisis that is affecting our world. He will discuss the exotic methods that

have been proposed to get energy power.

"These proposals include using tidal waves, wind and heat, said Soot. "I will discuss these in perspective and how they can be practical answers to the energy

Energy reviewed

Soot will review the total energy picture on earth as well as the national and regional outlooks. He will discuss the projections on US energy demands by the year 2000 and the alarming statistics that represents. He will also relate how the U. S. uses its energy right now, where it's from and where it's going.

Soot's main interest is in snythetic tuels. These are tuels that are synthetically generated. Oils and natural gas, for example, could be produced from coal.

Coal not needed

"The United States has enough fossil fuels in total to supply energy needs, but it's mostly coal," said Soot. "Demands are for more oils and natural gas, which there are much less of.

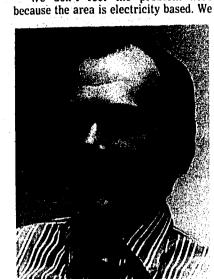

Part of the problem with natural gas shortage involves politics, according to Soot. The national government fixes prices on natural gas and doesn't allow it to float in the open market.

Synthetic gas

Research is going on across the nation to produce synthetic natural gas from

coal, but there are no commercial plants to process it. There is also research underway to use garbage to produce fuel. Presently, national shortages have caused 25 per cent of our crude oil to be imported.

Soot said that the Northwest doesn't face the energy crisis problem yet. "We don't feel the problem here

"The United States has enough fossil fuels in total to supply energy needs..." Dr. P. M. Soot

get our power through the dams, so there is no major energy problem-yet. Energy problem grows

The mid-west has the fastest growing energy problem, and last year marked a

crucial fuel oil shortage for the entire

The first indications of power shortage in the Northwest was last year when we

experienced "interrupted power." According to Soot, some industries need more electricity, and to get it at a lower cost they will agree to certain "in power" retriictions. If there is a shortage, these industries are the first to get cut off. This happened last year for the first time in the history of the Northwest.

Shortage soon

Soot said that the Northwest may experience a power shortage in the next 3. 4 years, but that it won't be as serious as other regions.

don't have as much energy need per capita." Soot said. "So, we don't face as big a problem. A safe procedure for industries is to

"This isn't a high industrial area, so we

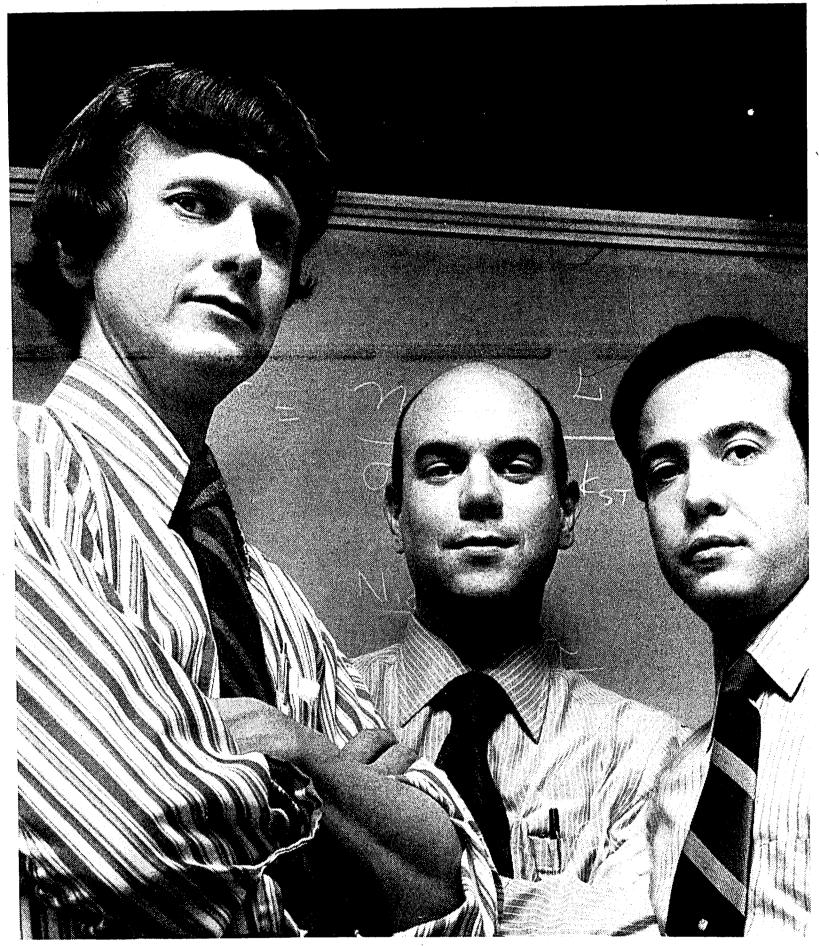

have "base load power" which isn't interrupted.

Nuclear power great

Soot said that nuclear power is great because it allows us to broaden our resource base, but that we don't need it for another 30 years.

The shortage of energy is to the customer. We have energy in the ground but we don't have enough in forms. We're used to using oils and natural gas and may now have to resort to other fuels and

The energy crisis is a major problem and a serious one. When the natural resources are depleted, synthetics must take over. But, said Soot, Synthetics are not infinite either

These three young men just made the discovery of a lifetime. The oldest is 34.

Remember when young people could get ahead in business simply by growing old? It was a good system for those with a little talent and a lot of patience, but today's technology moves too fast to wait for seniority.

At Kodak, our extensive involvement in basic research has made the need for fresh, young thinking more pressing than ever. So we hire the best new talent we possibly can. Then we do both of us a favor by turning them loose on real problems, and giving them the freedom and responsibility they need to solve them.

That's how three Kodak scientists in their early thirties just made a breakthrough in liquid lasers, developing an organic dye laser with a continuous beam. Their

discovery means more than just a new kind of laser. It means a whole range of new laser applications, in fields from medicine to communications.

It was the kind of discovery most men and women work a lifetime for. Yet these young men still have most of their lifetimes ahead of them.

Why do we give young men and women so much freedom and responsibility? Because it's good business, and we're in business to make a profit. But in furthering our own business interests, we also further society's interests. And that's good.

After all, our business depends on society. So we care what happens to it.

Kodak More than a business.
