Subject: Inventory of CCC Constructions

To: Forest Supervisors

For the second time in recent months, the issue of CCC buildings on National Forest land has come up. Most recently, we were contacted by the Montana SHPO concerning a CCC building slated for demolition on the Helena National Forest.

It is clear that there needs to be a theme study of CCC constructions in Region 1 in order to know the extent of the resource and to make informed evaluations of the significance of individual structures.

As a first step toward a theme study, we are asking the Forest to provide an inventory of CCC campsites with and without original improvements; that is, facilities or sites that were used to support the CCC program, rather than its output. The due date for this is May 1, 1983. The inventory should list the facility, its location, and as much information on description, purpose, and use as is available in Forest Service records or can be learned from people who remember the activities.

Your building inventory is a place to start on this project. Also, each District may know which facilities were used by the CCC's.

At one time, Building History Records, Form 7300-2, were required by FSM 7317.4. A Building Inventory was made for the recent facility energy conservation effort and is a data base which is accessed by computer. These sources of information are a good starting point for this project. We will use your inventory to include the CCC relationships in the Regional Building Inventory.

The RO will complete the theme study of CCC facilities and sites, of which the inventory is the first step.

Secondly, we are asking each Forest to do a theme study on improvements built by the CCC's. There is no due date on this, but we would like to know your plans and schedule for completing it.

Until the inventory and the theme study of CCC constructions are complete, please don't impact any more CCC facilities. The CCC constructions; e.g., bridges, roads, and other improvements, should be evaluated in the Environmental Analysis document.

Inventory of CCC Construction

Forest Supervisors

The enclosed building inventory is for your use in the requested inventory of CCC use of facilities. The building data base has the year each building was constructed. We used the years 1931 through 1942 to cover the CCC construction period.

Please report any errors in the inventory to your Forest facility personnel so the data base can be changed.

There is a similar inventory for roads, bridges, and trails. Contact the engineering personnel who use these inventories and they might be able to provide the year of construction of these facilities.
