Dear Don,

It was good to hear from you!

-Yes, Qatar is a most exciting place, where, 7000 years ago, guys used to cremate their dead people!...

I will send you publication on that Emirat and the "French Archaeological Expedition".

-Sure I'll get in touch with Dr. Misra and try to have fun with my eyes on his micro-core technique...

-I have not been able to do a lot of stone "cracking" last months but a friend of mine sent me a new raw material : SANUKITE (a kind of andesite) from Japan. I'll send you a sample...

I am looking forward to go to the States... I really would like to... and see my old friend "still cracking"!...

Yours,
Jacques
