Dr. Junius B. Bird  
American Museum of Natural History  
Central Park West at 79th St.,  
New York, N.Y. 10024

Dear Junius:

I am home so seldom any more that I am afraid I am very tardy in answering your nice letter of Oct. 16th. Swanson is in the process of making four films on pressure work, the cone, and blades which keeps me pretty much in Pocatello and late in picking up my mail. Thank you and Peggy so very much for the Lowie reprint article. You were right - this is the part I was interested in and it is not necessary to have the full report. Plan to do a thermal paper and want all the references I can get.

I do wish you could have been at the obsidian quarry in Oregon with us - what a delightful place. We took 35 broken pieces to the university and Swanson is excited about the project so we plan to take some students there in the spring and recon and perhaps put down a test hole. Am sure at that time that either Swanson or myself will do a short report for Tebiwa on the quarry.

Am still selecting some materials for the demonstration in New York. Hope everything go off well at that time for I am certainly looking forward to seeing everyone again.

Please give my regards to Dr. Shapiro and my praise of his film "The Time of Man". What a perfectly wonderful film. One of the greatest contributions in this field. Do hope we get to see a re-run one day.

Greece sounds wonderful and am so glad you had such a good time there. I guess it is one of the beauty spots of this world.

Had a nice letter from Rosa and she seems happy at Peabody. Do hope everything has worked out well for her.

Again thanks for the report and for the numerous favors you have done for me and will be looking forward to seeing you next year. Give my regardsto Dick when you next write to him.

Sincerely,

Don E. Crabtree
