

THE AMERICAN MUSEUM OF NATURAL HISTORY
NEW YORK, NEW YORK 10024

Dear Don.

This is the sample
I forgot to bring with me to Norman.
It is from a quarry site near
Madden Lake Panama &
I broke it to reduce the size but
it does retain an old fracture surface.
When you are cooking some other
rock slip this in with them. If it is improved
by heating I will send samples of it with your
compliments to the Acad. Soc. in Panama so they
can be on the look out for such evidence. As
there was no pressure work associated with
the things made of this material probably none of
it has been treated.

It was certainly great seeing & being with
both of you. as always,

James
