Dear Friends

Know you won't be with us in person, but
wanted you to know we move ahead.

I am in the hectic last days of laying out all
our material for Dr. Healy to examine next week.
Then I go on vacation. I may move through Idaho
early in September - How about a day of sits?
You might drop me a line about this either at
home - 840 Fairfield Circle, Paradise at once, or
about Sept. 1-3 at West Yellowstone, General
Delivery.

When I come back, it will be to start final
planning for our 3rd season at Calico. National
Geographic Society will be with us again. I judge the
Symposium commentaries were officially or well as
unofficially very favorable. We were told there was
only one unfavorable letter. We plan to reopen
November / we hope to reopen with a double crew
and a double project as suggested at the symposium
(2 master pits). Come and see us! Your
interest and enthusiasm are a real help. and we
shall always be grateful that, as the first
technician to visit us, you stood in defence of the
man-made status of our flake - and what a help
you were to our artist Perry Penner in his
first days with us. It is easy to climb on the

ce-20-4-16

band wagon when all is rolling along. We expect you
for joining our thin dusty line in these early months.
You and Alex Briege with real courage.

Vesitors late in the season were dear old M. R.
Harrington. Crippled though he is, he made it twice
into our pit and spent hours going over our tools and
flakes - He had no doubt of their man-made origin.

Then came Dr. Harry Butty from Australia
who also visited the pit and saw the "A" group of tools.
He had no question of its man-made origin of our
material.

That brings me up to date. Hope you have a
fine summer!

Sincerely
Lee Simpson
