Dear Don -

We are back on the same old hull and hoping you will visit us this winter.

Dr. Sealey plans to meet with us the 15<sup>th</sup> of November and outline plans for the season's work.

Don, we hear a report that relatives of your passing through this area reported you do not think much of our findings anymore. I doubt that this is true in light of your enthusiasm last Spring, but if you do have questions let me hear them so we can try to find answers.

When I show you material, I know you are interested so I value your comments for or against it.

The site is becoming a warm topic of conversation and probably this is one of the many approaches by the academic folk, but I must know as I value your technical opinion. So let me hear from you - and know you are always welcome here no matter what your opinion is!

We have a good crew, most of whom met you and all hope you will come. We have a regular village here now with a new lab building, a cook, eight diggers & the same lab technician.

Hope Summer was good to you and you have new data.

As always  
Sleepy Simpson
