Dear Don,

I have received your parcel with the blades, the points and the antler. Thank you very much.

I did some pressure work on some g flakes of Indiana gray flint, and got some good results. I have also made a laurel leaf (by percussion) which is, I think, good. This material works like a dream! Now I shall try cooking some flint, but probably not before October, for now the excavating season is close, and I will have to dig flints instead of making them!

I enjoyed very much working with you. I have seen the last of the film, looks good. I hope to be able to come to Kimbeley next year, but...

It so happens that the point (in Grand Pressigny flint) that you sent me is a copy of a true one!

With all best wishes for you and Mrs Crabtree, and thanks!

F. Bordes
