Dear Don,

Your letter probably crossed mine over the Atlantic. I would be very interested to come to Calgary. However, my old friend Philip Smith wants me to come to Montreal. Perhaps the two could be combined, but to be frank I don't know now when I could come. I will know better about Xmas. Mac Neish knows Smith if I remember well. Anyway, one of my conditions (the only one, to be true) would be that I have at least a week to work with you, without any interference.

Your Apache must wonder now why they ever left the Stone Age! It certainly was a very interesting and important experiment, and we should be grateful to the poor bear who devoted himself for science! I appreciated very much the slide, and will certainly use it in my lectures.

One question. What is this Grasshopper Field school? Do they teach to grasshoppers how to hop grasses? Should be interesting.

I certainly hope that Longacre will publish the ovens!

Bien amicalement aux Crabtrees!

F. Bordes

P.S. Enclosed a picture of the tool made after pre-polishing it. I really got the "feeling" of it after working one side and one edge. The last one worked is the left side, and that is what I hope to do for the whole piece the next time! I tried to work again the right edge, and spoiled ~~it~~ it.
