POSTE 334

Dear Don,

Sorry, I cannot make it this fall. Too many things to do with the INQUA, and then a symposium in London about Sept 15. But I really am sure of coming in 1970, since I have money in the States to support me even if I have no job that time. By the way, I am invited in the fall of 70 by the University of Montreal, Canada. So may be I will join the two trips and come first to Idaho.

I have an idea: why not ask the NSF money for a "Cro-Magnon project": You, Tixier, Gene, me and some students: purpose: fabrication of flint tools, their utilisation to different tasks, then examination under the microscope, etc. That could be done may be with the support of the University of Arizona and of Idaho? What do you think of it. It would be at least a two month project. Of course there is a lot yet to think about, but why not? With big money, if we can get it, films, photos, etc. I am sure we could get the support of many people.

Well, next tuzrday the goddam INQUA begins. I will be very busy for a while!

By the way, I got a letter and a point (pressure) from a man named Errett Callahan Jr, who lives in Virginia. His technique seems different from yours or mine, more like the australians, but not bad. Rather ~~see~~ wide flakes (collateral flaking). As he was about to move, I cannot give you his adress. Hope he writes again.

With all best wishes for Evelyn and you, and Idaho Jim if he is still there! Not forgetting little Feller!
