8 "Detalle de collar (QUIMBAYA)"
Colección Museo de oro del Banco
de la República. Bogotá, Colombia.

Dear Don & Evelyn;

Our trip is going well but we
continue to have delays. You would
be most interested in the points made
on blades from Panama - they look like
Aterian points. Also the whole
El Jobo sequence from Venezuela,
of which we have a type collection.
El Jobo points are now dated 14,000 B.P.
in direct association with mastodons,
glyptodon & sloth. There are no fluted
points in Venezuela so these were
a separate development of big game
hunters.

Hope you had an enjoyable vacation
in Mexico. We are going to Lima but not Mexico meetings
