

Dear Don,

10 Dec. '71

Your demonstration at the U. of C. last Sat. was excellent. The TV-monitors were a great help. I waited in line to speak with you, but there were so many people!

I have been re-assigned to St. Louis to work on the F-15, so if you want any material from this area just holler. Any pointers you might be able to give on parallel flaking would be greatly appreciated. The process is O.K. but am having trouble setting up a good platform to remove the hooked flakes. Mr. Sollberger uses a fork with good results, but don't remember this was used by the aborigines.

Would you like a couple of non-provenient Deltans for replication?

Hope to see you again in the near future. If you plan to be in the Midwest any time, you are welcome to visit. I have some fine collections for you to see, too.

Sincerely,  
Ron C. Cloud
