Dr. Keith E. Campbell
Department of Sociology
Fort Hays State University
Hays, Kansas 67601

Dear Doctor Campbell:

From your letter it sounds like you are teaching a very interesting and exciting course. It should give the students a lot of first-hand information on the function of stone tools and survival.

You may be acquainted with Larry Olsen's book on survival Outdoor Survival Skills that you may find of interest.

I only wish that it was possible that you could take a course from Jeff Flenniken on primitive technology at Washington State University in Pullman, Washington. Each spring he has a course that lasts for approximately a month - usually from around June 15th to July 15th. All aspects of primitive technology and techniques of stone working are taught. There is an interesting interchange of information from all participants. Last year he had a very exciting group of people from different geographical areas and each brought study collections for informational discussions. You may like to contact him. I have had the good fortune to be able to participate for a week at each one of his courses.

I am enclosing a brochure covering four films which are self-explanatory. Also, any of the writings on lithic technology are published by Idaho State University. You may write c/o Dr. Wright, The Museum, Idaho State University, Pocatello, Idaho.

I wish you every success in your program. It should be exciting to all of those concerned.

Sincerely,

Don Crabtree, D. Sc.
Research Associate in
Prehistoric Technology
