

Elimination of water friction, natural example , Porpoise and fish.

Recycle of waste glass , Natural example , Pearlite gaseous obsidian.

Boring of tunnels by using batteries of Lassar beams.

Energy crisis alleviated by electrolysis of water producing
hydrogen and Oxygen

Food shortage alleviated by geothermal by pass through twelve month
Arboreums.

Jet propelled boats steered by non piston internal combustion
engine

Prevent nitrogenation of water by air recovery to be used for energy.

Molecular bonding of mineral products for use as structural media.

Industrial diamond manufacture by high energy explosive technique
atom bomb or industrial explosives.

Reduce emission and increase energy of internal combustion
engines by using electrical preheating of platinum grids to
vaporize liquid fuels and then the vapor will be blended with
the exact amount of water vapor and oxygen. The improved carburation
would be applicable to all internal combustion engines

Ventura wind machine, using rotor instead of fans and ventura
to increase velocity of air currents.

Dating surface finds of heated flintlike materials that have
been intentionally or unintentionally altered by thermal treatment
by using crystallographical changes in structure or by thermoluminescence
emissions that can be measured. Has nothing to do with energy crisis.
