To this quarry production

In its widest sense ^{the word} quarry includes mines or sources of raw mineral matter, ~~also~~ also in modern times a quarry is a source of Granite, Marble, limestone, slate, sandstone and scoriae used in the Building trade.

However this text is primarily interested in Aboriginal quarrying, ~~and~~ its procurement and ~~and~~ primitive technologies. The selection of minerals that best suit their particular environment ^{and} culture ^{Many Methods of quarrying + Quarry Stone} numerous developments of techniques, ^{and} technologies, from the cumbersome to the most sophisticated, ^{things} evolved through ~~the~~ ^{Time & Space} ~~the world~~ to supplement the fragile human with dull teeth & weak finger nails.

At some very early points in time it was found that flinty rocks had very sharp edges when freshly broken, this discovery was to provide cutting, perforating, scraping & digging tools.

Quarry production or relationship
of Raw material to the end product
or the finished products. Core technique
and the Blade technique. The Core
technique is the removal of all ^{plant like} material
from a mass, leaving only the pre-concreted
as a fact

Orange Peel of color Blade

Blades were made there Pressure Blade made there
got a lot of pieces of ^{mineral specimen} of ^{spines} only one
showed signs of pressure flaking. ~~There may~~
There is no doubt others will be in

evidence as ~~is contained~~ ~~containing~~, too
associated with pressure flaking of this type
of flint is the necessity of heat treatment
at this time there ~~is~~ also
no evidence of ~~heat~~ intentional ~~heat~~
thermal alteration. Unintentional heating
did occur when Milpi was cleared
by burning.

The sequence of Macro Blade production
from raw material to the finished product
is still to be resolved as no core
material can be associated with the
highly complex Macro Blades.
