Dear Don:

I was talking with Phil Shelly about wedge-shaped cores from the Arctic. Phil said that our ideas were very similar. I examined a number of cores this summer & this rough paper is the result. I would appreciate any comments you might have on the subject.

Also, Gerald Holley and myself are trying to put a session on lithic technology together for the S.A.A. meetings in Vancouver. If you do not have a paper you'd like to deliver we'd be honored if you would act as a panel discussant. Ruthann has said she'd be a panel discussant. I was hoping Everett could make it but he's tied up. In any case it looks like there will be some interesting papers and this will be a good opportunity for folks to get to see each other again. If you have any suggestions about people who might like to be discussants please let me know. I hope you can make it to Vancouver.

Sincerely,

Jerry Del Bene
