Dear Davey:

Glad to hear that Science has returned the galley prints. This is real service. I have quite a mailing list and think it would take about 100 copies if you can get them for me. Hope we get a good review on the article. Francois and I also have one we plan to publish jointly in Tebiwa on the Corbiac bladmaking. Have finished my part and he now has it for inserting his data.

Hope that your site of the fluted point was somewhere near that beautiful quartz Clovis point I saw in your Museum. This sounds like a very exciting find and I do wish that I could see it. We really did enjoy your Christmas letter and it sounds like you had a very busy year. So far, the only plans we have for this year are to be at the meetings in Santa Fe in May. Do hope that you too will be there and will bring the fluted point.

Sorry about the cancellation of the lithic conference in Calgary, but poor Francois and Denise are beside themselves about the illness and expected death of their only grandson and am afraid that he would not have been up to it after this blow. They and the parents, George and Marie, certainly have our deep sympathy.

Recently we assumed some heavy financial obligations which will keep us home until we can see daylight again, so I cannot plan on any trip to Southern California, much as I would like to. Hope by next Fall I can get down to Tempe to visit with Marie.

Do hope you had a real happy Holiday - and keep up the good work.

Sincerely,

Don
