

Rt. 1, Box 39
Kimberly, Idaho 83341

Sept. 25, 1972

Mr. Floyd L. Fike
24722 President Avenue
Harbor City, Calif. 90701

Dear Floyd:

It was so good to hear from you as a reminder of a most pleasant visit. I have hopes that next Spring I will have an opportunity to visit the obsidian site which you told me about near Goose Lake. It sounds most interesting.

I find it difficult to make an estimate of the weight of my rock collection but would estimate it to be somewhere in the neighborhood of fifteen tons - which will not include obsidian and assorted flints. The flint and obsidian I will keep for my research and annual school in lithic technology. These aren't gemstone and would not be of interest to gemstone collectors. I think that 25¢ per pound for uncut material would be a reasonable price as - for the most part - none of this material can be replaced and the sources have long been depleted. I realize that it would be hard for a prospective buyer to make any commitments without seeing the material and would suggest that you both make a trip here in order to personally examine the collection. Timewise it is only a days drive from Harbor City on U.S. Highway 93 to Kimberly. I live on U.S. 30 just east of Twin Falls, Idaho. Exact directions are: 2 and 3/4 miles east of Twin Falls cemetery corner on South side of U.S. 30. The rocks can be removed at your convenience. Most have been here at least twenty years and another year should make little difference.

I do hope you can get a break in your school work to pay us a visit and do a little rock hunting in my back yard. The weather here is good but starting to be cool in the evenings. We haven't any frost yet.

After we left Bend we drove home and did not get a chance to do any rock hunting. Hope next summer will not be so busy and we can do a little gathering of obsidian.

Am enclosing a list of material varieties.

With kindest personal regards,

Don E. Crabtree

14107-20

Fortification agates, shadow, pinks, blues, etc. - East Fork of Salmon River, Idaho

Dinosaur bone - Utah

Petrified woods, including the rare red - Thompson, Utah

Petrified wood - Charleston, Nevada

Petrified wood - Gullien Mountain, Nev.

Petrified limb sections - Texas Springs, Nev.

Colored Jasper - Bruneau, Ida.
