Dr. Anders Fisher:

I am most greatful for your very excelent publication of the ornamented flint cores from Denmark. I am sending you a paperon some aspects of pressure flaking, choosing the Snaketown Site in Arizona as representing the most examples of diverse techniques. Too there is an article on the Obtuse angle as a functional cutting edge that is often overlooked as an artifact.

I am sorry that I havent more offprints to send you, but you may be able to obtain a series taken from the Museum Journal published by the dept. of Anthropology, Idaho State University, Pocatello, Idaho 83201. Also they can give you informationon on the late Dr. Swansons two new Books The New World and Lithic Technology Making and Using Stone Tools. Do hope that this will help.

I am delighted to learn of your interest in lithic technology as Denmark has such a variety of unsolved techniques, only recently have I been able to replicate the Danish blades having very small platforms by using a hammerstone, unfortunately havent written the details of the technique. I will send you a copy when it is finished.

Please excuse the typeing as this is the first I have done for many months because of lung surgery and a bout with the flu.

Sincerely yours,

DonCrabtree
