

Feb. 4, 1974

TO WHOM IT MAY CONCERN:

I wish to take this opportunity to recommend Jeff Flenniken as a highly qualified and dedicated student of anthropology. Jeff attended the 1972 summer field school in lithic technology held in Idaho and sponsored by the National Science Foundation. Out of thirty applicants who applied for the school, Jeff was selected as one of five to attend which, in itself, reflects his qualifications.

I found Mr. Flenniken to be a very dedicated and self-disciplined student and highly qualified in the field of lithic technology. He is very adept and skillful at replicating many types of prehistoric tools of various types and of diverse materials. He spent much time relating his replicas to typeology and experimented with the thermal alteration of lithic material prior to flaking. As my student, I appreciated his ambition and inquiring mind and the manner in which he researched a given problem until he had arrived at an acceptable conclusion.

I would not hesitate to recommend Jeff to any University and feel that he would be as asset to the department.

Sincerely yours,

Don E. Crabtree
Research Associate in Prehistoric Technology
