Dear Dick:

Just a note to say how very much we enjoyed your brief visit to our home. I am still impressed with how quickly you learned the pressure technique. Keep up the practice.

I do hope that Junius will agree with our selection of materials for the exhibit. If not, please let me know what is wanted and I will send it. I think we got a pretty good cross-section, but we may have overlooked some type that he or Shapiro would like to have. Will be glad to cooperate in any way I can.

Am busy preparing for the flintknapping school. We have decided to have it from July 4th to August 4th at Shoshone falls, the beautiful park just two miles from home. I think this will be better for both the students and myself. Lucy Lewis from Columbia has applied and seems to be very worthwhile. I forwarded the letter to Swanson, but do not know who he will choose.

Please give our regards to Betsy and we both hope you have an enjoyable and profitable year in Australia. Again thanks for the fine editing job on the little paper. Swanson is very happy to have this for Tebiwa. Will hold it in abeyance until I receive the data we discussed.

The welcome mat is out so when you return from Australia we hope you can pay us another visit.

Yours very truly,

Don E. Crabtree
