Mr D E Crabtree
Idaho State University Museum
Pocatello, Idaho

Dear Mr Crabtree:

Thanks for your article in Science (10 July). It's a pleasure to read about facts and realities. From work such as yours, and that of some of the Danes, one gains great respect for the Stone Age and its artisans.

Could you recommend a source from which I might get some flint or other suitable stone to mess around with in a mild way? Or would I be better off with glass -- and if so, what thickness would be handy for a beginner to work on?

Sincerely yours,

Richard S. Hartenberg
