Mr. William Hammond
Columbia University
Department of Anthropology
New York, New York 10027

Dear Mr. Hammond:

I am pleased to learn of your approach to lithic technology by examination of the somatic patterns involved. Your study would be an important contribution to the manufacturing process from its inception to completion.

I am glad that you wrote to Dr. Swanson about attending the session of stone working this coming summer, as he is the one who makes the final decision. I hope to see him this week and give my recommendations.

Also, I want to thank Lucy for telling you about our school. She was a real asset and we hope to have her back one of these summers to teach.

Do hope that Lucy had an exciting summer and found many interesting things.

We will give you every consideration and look forward to seeing you later this season.

Sincerely yours,

Don E. Crabtree
