

NEWSLETTER OF LITHIC TECHNOLOGY: manuscript evaluation

AUTHOR: Rovner, Irwin

Please return by A.S.A.P.

TITLE: An application of Bordes' Paleolithic handaxe typology to the study of classic Maya lithics

COMMENTS:

(a) organization and writing

It is very well written and organized.

(b) significance

It should be an important contribution for the study of Mayan lithics.

I am pleased to now have the address and know the whereabouts of Dr. Irwin Rovner. Anything that pertains to the lithic study of Meso-America and the Mayas is of great significance to the archaeological profession and this is indeed an important contribution. I personally know of Rovner's dedication and study of that particular area. I send my congratulations and personal regards to Irwin.

RECOMMENDATION:

Excellent and exciting, merits rapid publication in NLT

Above average, publish in NLT if space available

Above average or excellent, belongs in journal such as _____ because:

Mediocre or poor, should not be published

REVIEWER *Don E. Crabtree* DATE 9-10-79

Instructions. We wish to publish brief technical communications of high scholarly value; a paper should have news value, or be of broad significance to lithic studies. The short length of the NLT requires that we be selective in accepting manuscripts, but we would like to make available papers too specialized for rapid publication elsewhere. At the same time, these articles should not be so loaded with jargon or trivia that their significance is lost.

Comments on the manuscript should be brief and substantive; comments to be sent to the author should appear above the dashed line, confidential remarks below. Please retain one copy of this evaluation for your files, and submit 2 copies with the paper under review before the date specified.
