Dear Gary:

It is so nice to hear from you and your interest in Mr. Sollberger, he is a most dedicated man with an inquiring mind, I am very fortunate to have known Solly since I was in Dallas many years ago and did a demonstration for the T. A. S. in conjunction with S. M. U. .

Solly has never lost interest and enthusiasm and is not one that has just an interest in making an artifact, but has evaluated all phases of fracture mechanics. His inquiring mind is not satisfied with the simple removal of a flake or blade, he must know all of the conditions that caused the fracture to happen and then evaluates the character of the flake or blade. Too he has pioneered numerous approaches in order to resolve many diverse technologies. His contributions have been enormous, it is only that his many ideas and approaches have not recieved a wider circulation among the professional s interested in primitive technology.

J. B. Sollberger has freely given his time , information and contagious enthusiasm to every one . Solly is a kind and personable man with much compassion and he has and is making a great contribution to the profession and Society. Any honor to solly is greatly desired.

Gary please excuse the typeing and I am glad to be able to make a few comments about solly and they are all good.

I hope to see you in Vancouver and by the way
I saw Glenn Goode in Belize last month at the Colha Site.

With Kindest personal regards,

Don Crabtree
