Paints and varnishes of various kinds in which oil or shellac will not be required as a mixing body, or medium, may now be made by a recently discovered process. The new paints and varnishes can be produced at approximately half the cost of those now on the market, according to the inventor. In addition, the product is said to present the same appearance as oil paint, to have no noticeable odor, and not to blister in the hottest sun, nor crack at low temperatures.

An Old Friend's History.

Have you ever stopped to wonder when women first began to use sewing machines, and what those first ones were like? You remember what funny things the first bicycles and automobiles were. Well, the first sewing machine was just as odd. In the middle of the 18th century inventors in England and America began to try to copy the motives of a woman's fingers in sewing, but it was a hundred years before they got anything practicable because they were feeding the cloth in by hand, and putting the whole needle through. Then they got the idea of putting the eye down near the point, and locking the stitch under the cloth. Elias Howe of Massachusetts patented such a machine in 1846. It was made with a needle working horizontally, instead of up and down as the present ones do. By collecting royalties on every machine used he lifted himself from poverty to extreme wealth. He was, in fact, one of our first millionaires, as he amassed more than $2,000,000 from his invention. About the same time John Bachelder made one with a continuous feeding device that would sew any length seam. It had a leather belt set with steel points to carry the cloth along. The greatest improvement, however, was made by Allen B. Winslow in Michigan. In 1854 he patented the feed which is used in practically all machines today. Meanwhile Isaac M. Singer invented the first rigid-arm machine, and added other important improvements. It was James Gibbs who invented the chain-stitch machine which was later improved by J. Wilcox, another American. By slight alterations the original machines have been made to sew almost every form of clothing, leather, upholstery, embroidery, and other needle work. Some of them run 4000 stitches a minute. Think how many hours of slow toil that saves the women of today. There are machines for making buttonholes for sewing on buttons, for quilting, basting, tucking, pleating, ruffling, smocking, hemstitching; machines with single needles and those with two, four, six, and even eight needles for glove work. One of the most important is the shoe-sewing machine. The household machine has been so improved and modified that it can now do practically any kind of work a woman wants it to.

SEEDLESS APPLES FOUND IN SPOKANE

Ben Hofer Produces Fruit Which May Revolutionize Industry.

The long-sought, seedless apple, which it is claimed will revolutionize the apple-growing industry, is claimed to be found in Spokane county. A tree bearing seedless apples has been revealed on the farm of Ben Hofer, about eight miles southeast of Spokane.

Two of the apples, apparently a cross between a Wagener and a Winter Banana, were brought to the city recently by W. A. McKay.

Considerable discussion has been involved, and the apple growers of the community are endeavoring to secure all the information possible regarding this variety. O. M. Morris of the Washington State college, recently remarked that the seedless apple, to be of great commercial value, would necessarily have to be as high grade as the Delicious. However, this does not mean that there are not possibilities in the development of the variety found in Spokane county.

The apple found on Mr. Hofer's farm is slightly pear shaped, with flat ends. The core fibers are lacking altogether in som especimens of the fruit.

SPOKANE INTERMEDIATE CREDIT BANK CENTER

Organization of the federal intermediate credit bank of Spokane, with $5,000,000 capital and a short-term loan maximum limit of $50,000,000 was effected in Spokane recently. President D. G. O'Shea, of the federal land bank of Spokane on his return from a conference in Washington, D. C., issued a call for a special meeting of the land bank directors to take action on this matter.

The new home of the federal land bank will be in readiness by May 1, and the bank together with the new intermediate credit bank will establish quarters there. Business of the new bank will be transacted as a separate organization, but with the same officers and a somewhat enlarged staff.

The federal intermediate credit bank will be operated under the general supervision and direction of the federal farm loan board, and the board is now preparing methods of procedure and on general policies and regulations which will govern the work.

A waiter in Chicago nearly died of shock when eight-year-old Stanley Gust left a $10 tip after a 35c meal. Before a policeman could nab him, he disappeared. His father says Stanley ran away from home and has six more "tips" left.

Radio Received From Porto Rico.

F. A. Cote, of Dayton, has broken all state radio receiving records. Saturday night about ten o'clock he tuned into W. K. Q. Y., the station operated at San Juan, Porto Rico by the Porto Rico Radio corporation. He heard three pieces of music and a talk by a prominent resident of that city, holding the station for eighteen minutes. Porto Rico is 3,650 miles air line from Dayton and about 600 miles southwest of Havana, Cuba.

Mr. Cote of late has been receiving messages from far eastern and southern cities and they have all been just as clear as though the entertainers were in an adjoining room. The message received Saturday came in just as distinctly as from any station in the United States.

What IS *Genuine* Orange Pekoe?

"ORANGE PEKOE" is simply an Oriental term to denote one of three distinct gradings of tea:
Flowery Orange Pekoe (tea of the very finest quality)
Broken Orange Pekoe (tea of very choice quality)
Orange Pekoe (tea of average quality)

The first two grades are very much superior to ordinary Orange Pekoe. Ridgways *Genuine* Orange Pekoe is the finest tea procurable, because it is composed *only of the Flowery and Broken Orange Pekoe.*

Some teas marked "Orange Pekoe" have a very small proportion of Orange Pekoe. Right there is the value of getting *Genuine* Orange Pekoe.

The way to make sure of *Genuine* Orange Pekoe, without any doubt about it, is to insist firmly upon Ridgways *Genuine* Orange Pekoe. Then you are certain to enjoy the superb flavor, the exquisite bouquet you should rightfully expect in this superior tea. Order definitely by name and insist on getting it. Ridgways GOLD LABEL *Genuine* Orange Pekoe.

"The Finest Tea the World Produces"

GROWING SWEET CLOVER IN LATAH COUNTY

By O. S. Fletcher, County Agent
(Delayed)

Lack of a satisfactory crop for summer pasture has been one of the chief obstacles in the way of profitable raising of livestock in Latah county for a number of years. While this has been true in general, each year a few farmers have had good summer pasture as a result of planting sweet clover. In order to get information as to the practices followed and results secured by these farmers, so that this information might be given to other farmers of the county, the writer prepared a questionaire to send to growers of the crop. In preparing this survey form, he was assisted by H. W. Hulbert, associate professor of agronomy of the University of Idaho.

The questionaire was sent to 47 farmers in Latah county and four farmers in Whitman county, Washington, who live near the Latah county line. Twenty-seven replies were received. Of these, 22 gave information that could be tabulated and summarized. Nineteen of the 22 were from Latah county and three were from Whitman county. Of the 22 reporting, ten had grown sweet clover at least two full years. The other 12 reported on one year only. The 22 growers reported a total of 367 acres or an average of 16½ acres per grower. The largest acreage reported was 168 acres, by J. Houston McCroskey of Garfield, and the smallest reported was one-half acre.

Twenty-one fields were on clay loam or silt loam soil, while one was on a rocky, granite soil. Ten fields were on cut-over land, while 12 were on Palouse soil. Twenty fields were on well drained land; one field was partly drained and partly wet, and one field was on low, wet ground.

Twenty farmers grew the biennial white blossom variety, while two used biennial yellow blossom sweet clover. Mr. McCroskey reported on 140 acres of biennial white blossom and 18 acres biennial yellow blossom.

Fifteen of the sweet clover crops were preceded by oats or wheat. Alfalfa, timothy, red clover, wild grass and blue grass, each preceded one crop.

Growing the Crop

Fifteen farmers plowed in preparing a seed bed. Of these, 11 plowed in the fall or winter, while four plowed in the spring. Six disked the ground in the spring without plowing, while one seeded in a burn and made no effort to prepare a seed bed. The depth of plowing ranged from four to eight inches, with an average of six inches.

Of the 15 who plowed, 10 disked this ground in the further preparation of the seed bed. Others harrowed several times until the seed bed was fine. In this connection, it is worthy to note that 14 growers report a firm seed bed; seven report a loose seed bed; while one did not report on the condition of the seed bed. Of the 14 growers reporting a firm seed bed, all reported a uniform stand and all but two reported that the stand was thick enough. These two growers planted seven pounds of seed per acre and recommended a heavier seeding. Of the seven who reported a loose seed bed, two reported a poor stand and that the stand was not thick enough, although they used plenty of seed.

J. B. Kitch of Troy sowed 10 pounds of non-scarified seed per acre in the ashes where he had burned a slashing and secured a uniform stand which he reported was thick enough and which gave excellent pasture.

H. H. Reames of Potlatch sowed his sweet clover on a field that was joined on one side by a patch of cut-over land that was broken first in the spring of 1922, the year in which he seeded the sweet clover crop, and disked and harrowed once before the sweet clover was sowed. In seeding part of the sweet clover seed of the outside row was thrown onto the new ground. Mr. Reames reports that the seed on the new ground came up as well as on the old ground and then made a better growth throughout the season.

Dates of seeding ranged from March 28 to June 1, with 12 seeding before April 25, which would be counted early. With the exception of one grower, those who planted later than April 25, were in sections of the county where spring is always late so that their seeding was really early. The exception noted was on low ground that could not be worked to advantage until late in May. J. H. Burns & Sons, who farm on the northern end of Fix ridge, sowed 35 acres of sweet clover in October, 1921. This started in fine shape that fall and went through the winter all right but was killed the following March by freezing.

The rate of seeding ranged from seven to 15 pounds, with an average of 11 pounds per acre. Practically all growers who used less than 10 pounds of seed per acre reported that the stand was not thick enough. Eighteen farmers used scarified seed.

Ten fields were sowed with a drill and 11 were sowed broadcast. Part of one field was sowed broadcast and part drilled. Those farmers who drilled, sowed from one to two and one-half inches deep. The average depth was one and three-fourths inches. Those who drilled report that great care must be taken to prevent the seed being planted too deep.

The usual cultivation after seeding consisted of two harrowings with a light harrow. Seven farmers used a packing roller after seeding, while one used a clod-smashing float. All who commented on the matter stated that one should use a roller after seeding if possible. Thomas Pugh of Viola, stated: "I believe that if I had rolled the ground after seeding it, it would have been better, as I noticed in a path across the field and where the horses' tracks were left on the ground in harrowing the seed came up in a very few days after planting.

Eight growers inoculated the seed with pure culture, prepared by the experiment station. All of these reported that the inoculation "took" and that nodules grew on the roots of the plants. L. A. Sheldon of Princeton gave an interesting report on the effect of inoculation. He stated that the first three acres he sowed he inoculated the seed on one acre only and left the other two acres not inoculated. The seed that was inoculated produced an excellent stand and the plants grew very rank the first season, while the other was a poor stand and seemed to be very delicate. The plants did not get to be more than a foot high the first year and the second year they did not do much better, while the inoculated part of the field showed a very heavy growth the second year.

Eight growers used a nurse crop, while 14 planted sweet clover alone. Of those using a nurse crop, three used oats; two used peas; two used wheat, and one used a mixture of barley and oats. Three of the eight cut the nurse crop for hay; one hogged off the peas, and four cut a grain crop. Nordby Brothers of Genesee, secured an excellent stand of sweet clover in 1921 with oats that were cut off for grain and yielded better than 50 bushels per acre; while in 1922 they secured a fair stand of sweet clover with beardless barley and peas as a nurse crop. The oats and barley were cut fairly early and used as ensilage.

L. A. Sheldon reports that in starting one field of 22 acres he used a nurse crop of wheat. In seeding the drill missed in a few strips so that part of the field had wheat as a nurse crop, while some were really without such a crop. The following winter all of the sweet clover was killed by freezing excepting that in the strips where the drill did not seed wheat. Here the sweet clover came through the winter in perfect condition. Mr. Sheldon states that he would not recommend the use of a nurse crop with sweet clover. The majority of those reporting state that as a rule it is best to plant a nurse crop if one is anxious to get a good stand of sweet clover as soon as possible.

Utilizing the Crop

Those farmers who planted sweet clover, planted it primarily as a pasture crop and in general followed a system that would get the greatest amount of pasture from the land. Twenty of the 22 growers pastured the crop the first year of its growth. The time of starting to pasture the first season ranged from June 15 to October 1, with the majority starting by August 1. Eight began pasturing July 15. The earliest date of pasturing the first season's growth reported was June 15. Cattle, horses, sheep and hogs were pastured the first season by various farmers and the average number of stock used the first year was equivalent to one cow per acre after July 15. The 10 farmers reporting on the second year's growth pastured the crop. The average amount of stock pastured the second year was a little more than the equivalent of two cows per acre. All but two report that they could have pastured more stock.

Six farmers report that they had no trouble in getting stock to pasture sweet clover at first, while four report that they had some difficulty in getting the stock started to pasture the crop. None of those reporting had any animals bloat on sweet clover. Two of the 22 reporting state that sweet clover pasture tainted the milk of cows pastured on the crop. The others said it did not.

Four farmers cut a hay crop the first year. The dates of cuting of these four fields were July 10, July 15, August 15 and September 15. The farmer who cut on August 15 said that he should have cut one month earlier. The average yield of hay the first year was three-fourths of a ton.

Seven of the 10 growers reporting on the second year of sweet clover cut one hay crop the second year. The height of the plants at cuting ranged from 14 to 48 inches, with an average of 36 inches. In cutting, all left a stubble higher than is left in cutting alfalfa hay. The height of stubble ranged from four to 18 inches. Leaving out the figures of the man who left 18 inches of stubble, the average height was five inches. None report that any of the plants died after cuting on account of the cutting. Dates of cutting the second year ranged from June 2 to July 15, with an average of June 20. The yield of hay the second year ranged from one to two and one-half tons, with an average of 1.8 tons per acre.

Twelve farmers answering the question, reported that they had no difficulty in getting stock to eat sweet clover hay. The hay was fed to cows, horses and mules. All report sweet clover hay as coarse and opinions vary as to its value compared with alfalfa hay, but most of those who made statements figured it almost as good. Eleven reporting on feeding sweet clover hay, stated that it does not taint milk when fed to milk cows.

Effect on Following Crops

J. Houston McCroskey and L. A. Sheldon were the only growers who reported on the effect of sweet clover on following crops. Mr. Sheldon states that oats following sweet clover yielded fully twice as much as oats from other ground adjoining the sweet clover land. This was on cut-over land. Mr. McCroskey had grain on 18 acres following sweet clover. He states that he had about three times the foliage that there was on stubble ground and the peas yielded 20 per cent more. He states that these peas were sown late or would have almost doubled those on the stubble ground.

No one had any trouble in getting rid of sweet clover and all state that it does not act as a weed in this section. Several stated that they wished it was as much of a weed here as it is reported to be in some other sections.

Seven of the 22 reporting have grown more than one field of sweet clover. Three have grown four; one, two, and two, three fields.

A wide range of soil and drainage conditions is covered by those reporting. R. J. Bell, who has sweet clover on land in Latah county just east of Farmington, reported on a crop that was planted on a rocky hillside where there are out-croppings of rock and where it was impossible to do a good job preparing a seed bed. The land had never been farmed, but was plowed in the fall and winter, and then disked and seeded in spring. A good stand was secured and a lot of pasture was taken from land that ordinarily gave a little pasture early in the year but was dried out by the first of July. Harry Bowers, who lives in Whitman county just west of Moscow, planted sweet clover on ground that was described as "swampy" and secured a good stand and plenty of pasture. W. A. Fiscus and H. H. Reames of Potlatch; L. A. Sheldon of Princeton, J. B. Kitch and C. B. Carney of Troy, all secured good success with the crop on cut-over land.

Remarks made by farmers of different localities show that sweet clover is regarded by them. Following are quotations from representative farmers:

Dr. J. S. Thompson, Moscow: "I have had quite a little experience with sweet clover the last several years. About six years ago I seeded a mixture of sweet clover and alfalfa on a seepy piece of land. Not knowing much about the crop, I let it blossom before cutting it and got coarse stalks for hay. That winter the sweet clover was fed to fattening cattle. After they learned to like it they devoured it as readily as alfalfa. Sweet clover apparently aided the drainage of the land for it is not seepy now. The alfalfa grew better than any new seeding I have sown since. Do not know whether it was the sweet clover or just the season.

"In the spring of 1921, I seeded 12 acres of sweet clover without a nurse crop. A good stand came and it was pastured with sheep that fall. Being pastured also by the sheep caused it to winter-kill and in the 1922 season little pasture was available. About 35 sheep were pastured on it, alternating it with about seven acres of cut-over land. Last spring (1922) a 14-acre field was seeded with a nurse crop of oats. It is standing the winter in good shape and better results with more pasture are expected this year. In my estimation sweet clover is the only pasture crop for the Palouse. Expect to grow some each year. It stands to remain green throughout the year is its asset."

Ward Gano, Moscow: "Sweet clover is a very good pasture for cows and sheep as it will not bloat. I will seed 30 acres this spring."

Harry Bowers, Moscow: "I like sweet clover fine for low wet bottoms and believe it fine to plow under on clay points. I expect to use sweet clover as long as I farm in the Palouse country."

W. A. Fiscus, Potlatch: "Sweet clover, so far as my experience is concerned, is fine for pasture and especially in the hot, dry weather of August and September. But as a hay crop, it can not in any way be compared with alfalfa."

J. Houston McCroskey of Garfield, who grew a seeding of 168 acres of sweet clover the past two years, says: "I am very well pleased with sweet clover for cattle and am going to sow 170 acres in the spring. It is very poor pasture for horses. They did not do at all well on it, while at the same time my cattle were hog fat."

L. A. Sheldon, Princeton: "I think sweet clover has anything I ever saw beat for pasture, and if I could get it to re-seed itself and do well I would use it for pasture altogether."

J. E. Nordby, of Nordby Brothers, Genesee: "With more general and liberal introduction of sweet clover and its judicious disposition through efficient channels we shall be grasping an opportunity that lies well within our reach, and promptly we shall begin to appreciate the possibilities of Idaho's potential agricultural wealth in the combined production of crops and livestock."

Any one desiring additional information on sweet clover should read the following bulletins: Idaho Station Circular 22, "Sweet Clover"; Farmers' Bulletin 797, "Sweet Clover; Growing the Crop"; aFrmers' Bulletin 820, "Sweet Clover; Utilization"; and Farmers' Bulletin 836, "Sweet Clover; Harvesting and Threshing the Seed Crop." Copies of these bulletins may be secured from your county agent or from the University of Idaho.

It's fortunate that knockers can't take their manners to the grave with them. They might break out.

The guest who departs speedily is thrice welcome.

Clean-Up Day

At the last meeting of the city council "clean-up" day was designated as April 25th.

Have all cans in sacks and boxes at the alley end of your lot and they will be removed by the dump ground free of all cost to you.

By Order of the City Council.
By W. W. Burr, City Clerk.

NOTICE OF GENERAL CITY ELECTION

Proclamation by the Mayor of the City of Genesee, Idaho

Notice is hereby given that on Tuesday, the 24th day of April, 1923, there will be held in the City of Genesee, Idaho, a general city election for the purpose of electing:

A mayor, a city clerk, who is ex-officio police judge, a city treasurer, and two cuncilmen from each ward; all of said officers to be elected for a term of two years.

The polls will be open at 9 o'clock a. m. and continue open until 7 o'clock p. m. of said day, at the following places:

First ward at the office of W. W. Burr; second ward at the Community house.

The following named voters have been appointed judges and clerks of election:

First Ward—Judges: Mrs. Eliza Gray, Henry Rees and Mrs. Susie Hickman. Clerks: G. A. Bumpass and Mrs. Charles Ingle.

Second Ward—Judges: Mrs. E. Linehan, James Montague and Arthur Springer. Clerks: Maggie Bottjer and Mrs. Reisemer.

Dated April 2, 1923, at Genesee, Idaho.
(Seal) F. S. CASEBOLT, Mayor.
Attest:
W. W. BURR, City Clerk. 48-3

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the the County of Latah.

Izora M. Sides, Plaintiff, vs. Wayne Sides, Defendant.

The State of Idaho sends greetings, to the above named defendant, Wayne Sides.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the county of Latah, by the above-named plaintiff of the nature in general terms as follows:

The said action is brought to obtain a decree of divorce dissolving the bonds of matrimony heretofore and now existing between plaintiff and defendant, as will more fully appear in the complaint on file herein and to which reference is here made and for the care, custody and control of Elvin Edward Sides, the minor child of the parties, and

You are hereby directed to appear and answer said complaint within 20 days of the service of this summons if served within the judicial district and within forty (40) days if served elsewhere. And you are further notified that unless you so appear and answer said complaints within the time specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in the count yof Latah, this 7th day of March, 1923.

HARRY A. THATCHER, Clerk.
By ADRIAN NELSON, Deputy.
THOMAS A. FEENEY,
Attorney for Plaintiff.
Residence and Postoffice Genesee, Idaho. 36-6

Notice of Registration for City Election

To All Voters of the City of Genesee:

1st. All voters must be registered in order to vote at the city election on April 24, 1923.

2nd. If you voted at the general city election in April, 1921, you do **not** have to register for the coming election, but if you have moved into another ward it will be necessary for you to transfer to said ward or you will not be registered.

The place of registration is at the office of W. W. Burr, register, any day during business hours, until the Saturday before election at 9 o'clock p. m.
W. W. BURR,
City Clerk.
40-3

There Was Applause

"The train pulled out before you had finished your speech."

"Yes," replied Senator Sorghum. "As I heard the shouts of the crowd fading in the distance, I couldn't be sure whether they were applauding me or the engineer."

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend the things we need and save money reasonably, we display the right sort of faith. We put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, APRIL 13, 1923. — NO. 41

BATTLE SHIP IOWA SUNK IN NAVY TARGET PRACTICE

Mr. and Mrs. Chas. F. Ebel have received the following letter from their son, W. C. Ebel, who is a gunner on the battleship Mississippi, which is self-explanatory and will undoubtedly be of interest to all:

Well, here I am again; this time to tell you that the practice is over and the Iowa peacefully resting on the bottom of the Pacific. She sank at 4:17 p. m., March 22.

Oh, Boy! it was some practice, and I sure am glad it is all over with. Last night I was so tired I nearly dropped in my tracks. It was hard work, a lot of it, and awfully hot and during the firing in the turret every door is closed, no air, and in fact very uncomfortable. But all in all, I rather enjoyed it. It was a great experience to fire at a ship. But the poor old Iowa surely took a lot of abuse and punishment; in fact, if there had been a crew on her not many men would have been alive after the smoke of battle cleared away, for she was so badly damaged in yesterday's firing that as soon as she started down they stopped firing and let all the turre crews go outside to watch her sink. But before I got out of the turret she had gone down and all that was left in the place where she was but a few seconds before. All of the ships gathered around her, giving her a grand farewell, and she made me feel a little sad when I got out of the turret and seen the ships of the fleet lying near the spot where the Iowa sank. It was a grand sight to see—and it was on my birthday.

The practice started on Monday morning when the fleet went out for maneuvers. The destroyers had gone out ahead and laid a smoke screen. When the larger ships came near enough the destroyers fired torpedoes at the fleet through the smoke screen. A great many ships were hit in the afternoon; then the ships returned to Panama.

On Tuesday, March 20, the fleet again went out. Before leaving Panama observers from the Arizona and Pennsylvania came on board (the Iowa left early in the morning) and at 9 a. m. the Mississippi made her preliminary run preparatory to firing that night. Starting at 8 o'clock the 5-inch fired star shells, the shells bursting over the Iowa making the sky as bright as day for miles around. The star shells gave light for about 30 seconds. Before they went out, more star shells were fired. While the 5-inch fired star shells the anti-aircraft guns fired 3-inch shells at the Iowa, but as far as I know no hits were made. After the firing we returned to Panama, arriving there at midnight.

On Wednesday, March 21, the fleet left early (the Iowa stayed on the range all night). The Mississippi sent all her boats ashore. Captains and officials from all ships of the fleet came on board and at daylight we were on our way to find the Iowa. Congressman and Mrs. Denby went out on the Maryland. At 10:30 the 5-inch started firing. I watched the shells hit the Iowa through the gun sights and every time a shell would hit and explode the flash of the shell explosion could be seen. Firing started at 12,000 yards and stopped when 7,000 yards was reached. During the firing the Iowa changed and changed course many times.

We had sandwiches at 1:30 p. m. (dinner). As soon as the 5-inch finished a tug went alongside the Iowa and the salvage party went on board, making note of damage done to the ship, injuries to personnel, if any had been on board, etc. After the inspection was finished another run was started. This time the turrents fired, each turret firing only one gun at a time for 12 salvos and two guns at a time on the last four salvos, making 80 shots for the turrets. During the second salvo one of the smokestacks was shot off and four holes were in her side under the firing, while great damage was done to the decks. The wood caught fire and when the salvage party went on board her they sent out the report that she was slowly settling and her fire and engine rooms had 13 inches of water in them. The party started all her pumps going and said she could be kept afloat until the next day. At night the 5-inch fired star shells and sunrise ammunition. After the firing we returned to Panama, arriving there after midnight.

On Tuesday, March 22, we left real early, with the decks cleared for action. All the life lines were taken down, all light bulbs and globes on the decks were taken down—for this was to be our busy day. The Mississippi was mad; she had fire in her eyes. But it was so hazy we had to wait until nearly 2 o'clock before we could make out the Iowa at 28,000 yards. The run was started when we reached the range of 10,000 yards and the turrets started firing. Each turret fired their three guns at a time. Turrets No.s 1 and 3 started the firing; after they had fired for a while turrets 2 and 4 picked up the firing, and then turrets 1 and 3 again, and towards the last the order came for "rapid fire," so while two turrets were loading two turrets were firing. This was kept up until all the special

(Continued on Local Page)

PUBLIC SCHOOL NOTES— GRADE TEACHERS ELECTED

At the school board meeting for April, held at the school house last Monday evening, the following changes in the personnel of the board were made: John Weber was elected to fill the unexpired term of W. D. Woodward, resigned, and D. L. Bressler was chosen to fill the unexpired term of G. E. Taber, resigned.

Teachers for the grades—one to eight, inclusive—have been chosen for the school year 1923-1924, and it is generally felt that an unusually strong corps of instructors will be in charge of the elementary work in our schools during the term. Miss Frances Vaughn will take charge of the first grade and Miss Edith Winegardner will have the second and third. For the fourth and fifth the administration has retained Miss Lillian Collins. The sixth and seventh grades are to be in the hands of Miss Hazel Ouse, who is now teaching in the Spirit Lake schools, and the eighth grade will be taken by Miss Mellie Black of Craigmont. The last two teachers will be new to our schools and as both have had several years of very successful experience in the teaching profession they come highly recommended to us and we are looking for an especially good year in our schools during the next term.

The entire corps of high school teachers have been asked to remain, but at the present time contracts remain unsigned by them. It is to be hoped that these two teachers will remain with us for at least another year.

Monday, April 16, has been designated as Mothers' Day at the Genesee public schools. Open house will be kept all day and many of the exhibits will be on display in the evening during the meeting of the Parent-Teachers' association.

Much misunderstanding is broadcast in the district as to the nature of the work and the results being accomplished in some of the departments. The school wishes to take this opportunity to place before the public some evidence of the abilities of the students. Poor, mediocre, and good work will be shown in order that a general understanding of the average work may be had. Of course you are welcome to visit the school at any time, but we urge you to make a special effort to call on us on Monday, April 16, at any time during the day. Get acquainted with our schools; there may be something there you will like!

Howard and Edith Brakebill have left school to go to Portland, where they will make their home. They are missed by many of their little schoolmates.

The state examination in history and physiology was given Wednesday in the high school. Practically all of the seventh grade took the physiology exam.

The high school students have started practice on the play, "Clarence," which will be given at the opera house the first of May.

Wilma Cash was operated on for appendicitis at St. Luke's hospital, Spokane, Tuesday afternoon. She is getting along as well as can be expected.

Another Big "Cackleberry"

Another big "cackleberry" has been brought to the News office, this time by Harry Emerson, who imported one of his old biddies to town and break the record, but it happened to be the same size and weight as the others brought to this office recently. The egg measures 6¾x7¾ inches and weighed 3½ ounces. When asked what particular brand of egg it was Harry said he didn't to know, but thought it to be a rooster egg as he said his old biddies could beat that. He also brought with it the large one a small one that measured 4½x4 inches and weighed just one ounce. That, he explained, must be a rabbit's egg as he found it soon after Easter.

And now comes Colin Wilson with what he calls an "egg," stating that he read in the great moral and religious weekly that eggs were being brought in for competition. The one brought in by Mr. Wilson measured 3⅞x4¼ inches and weighed a little less than one ounce.

Linger Longers Meet

The Linger Longer club was very pleasantly entertained at the home of Mrs. Gus Fickens on Wednesday afternoon. The time was spent with needlework and social converse and at 5 o'clock a dainty luncheon was served by the hostess.

The invited guests were Mrs. F. H. Hoorman, Mrs. Colin Wilson, Mrs. C. P. Erickson, Mrs. Arthur Mayer, Mrs. Henry Lorang, Mrs. R. S. Sullivan, Mrs. Dave Garrett, Mrs. A. H. Potsch, Mrs. Jack Barnes and Mrs. A. Murphy.

The next meeting will be with Mrs. Jas. Magee on Wednesday, April 25.

Will Deliver Address

Prof. J. M. O'Gorman of the school of education, University of Idaho, has been secured to deliver the graduation address at Genesee on Friday evening, May 18.

Baseball Meeting

All who are interested in a baseball club for Genesee this summer are asked to meet at the ball park Sunday afternoon at 2 o'clock.

WHAT HAPPENED HERE TWENTY YEARS AGO

It snowed Monday—and some more Thursday.

Peter Johann is making a new addition to his residence.

Harry Thatcher mourns the loss of a valuable bird dog. It died.

About $10,000 is collected annually for saloon licenses in Latah county.

Leon Follett is setting a good example by putting in a regulation sidewalk fronting his residence.

A large portion of the new sidewalks are now in on Walnut street and when the entire work is completed Genesee can boast of the best looking business street of any town in the Palouse country.

Friday of last week A. Murphy and Chas. Swenson purchased the three vacant lots east of the Genesee House from Ralston Vollmer. Mr. Murphy getting the two on the corner on which in a short time he will begin the erection of a new blacksmith shop 24x100 feet.

The city election Tuesday was a quiet event. In the first ward 73 votes were cast and in the second 46, the following candidates being elected: Mayor, Dr. J. L. Conant; clerk, C. F. Burr; engineer, G. W. Daggett; for councilmen, first ward, J. K. Bell, second ward, H. Scharnhorst; for treasurer P. W. McRoberts. The ticket run against Fred Bressler, the former receiving 31 votes and the latter. 84.

The gun club had its first "shoot" Friday afternoon of last week and D. Scharnhorst carried off first honors. A complete organization has not as yet been effected but the following have signed the roll: F. C. Marquess, W. J. Herman, W. E. Smith, P. W. McRoberts, R. Vollmer, R. Pickering, C. F. Burr, T. Driscoll, Chas. Power, Dr. H. J. Smith, Rev. C. W. Fowler, C. H. Stancliff and D. Scharnhorst.

Postmaster Owen has received information from the department that Rural Route No. 2 will be established out of Genesee July 1. This will be good news to people living west and northwest of town. The route was recommended last October. The length of the route will be 22 miles and the population served 325. By a blue print map received at the post office the route will be about as follows:

Starting at Genesee will go north past the Hasfurther and Lorang places, thence east to the Kambitsch place, north to Ben Sather's, thence east to Moscow road; thence north to Detlif Smith's, thence west to John Hove's, and back to the Naylor farm, thence southwest past the places of John Broemeling, Frank Griesser, Chris. Adamson, H. Manderfeld, Adolf Griesser, and others to the Thorncreek road to a point a mile and a half east of Uniontown, thence east to Genesee on the Uniontown-Genesee telephone road.

Will Graduate from U. of I.

In the list of graduates from the University of Idaho this spring appear the names of two Genesee boys

John J. Hasfurther, who graduates with the degree of Bachelor of Arts, and Alfred Curtis Brigham, who will receive the title of Bachelor of Science in Agriculture.

Genesee should be, and is, justly proud of these boys who have realized the importance of a college education to their life work. It is a notable fact that more and more young people are coming to this realization. And this is especially true since the World war, for many a young man realized that he could never attain a rank higher than a buck private and others who only non-commission offices simply because they did not have the necessary education to attain a high official standing in the army.

There are 165 students in this spring's graduating class from the University of Idaho, divided as follows: Fifty-five will receive the degree of bachelor of arts, 15 bachelor of science, four bachelor of science in home economics, 16 in agriculture, five in forestry, seven in mining and geology, 11 in engineering, 11 in law, and 24 bachelor of science in education.

Wheat Prospects Bright

Recent rains in the Palouse district brought out the fall wheat in very excellent shape, according to A. P. Murray, cashier of the Farmers' National bank of Palouse, Washington. Reports from the Ephrata district indicate that Grant county received a total of 1.11 inches during the recent rain. This insures the winter wheat crop and prospects of a bumper crop of fall-sown grain were never brighter in the past 12 years, according to prominent wheat growers of Grant county.

Meyer & Son, Local Agents

In making mention last week of the new Overland sedan purchased by F. E. Lambert, the News neglected to say that the car was bought through Meyer & Son, local agents for the Willys Knights and Overland line of cars.

Entertainment at Thorn Creek

A hame talent play will be given at Thorn Creek school house on Friday night, April 20, to which the general public is cordially invited. A small admission fee will be charged to defray expenses.

NIGHT HAWKS AND COUGARS LEAD IN BOWLING CONTEST

The City Bowling league will officially end next Monday night, April 16. On that evening there will be a preliminary game between the Coyotes and the Owls at 7 p. m., followed by the main event between the Night Hawks and Cougars at 8:30.

The first game will settle the cellar championship, while the main event will decide which team shall receive championship honors. The Night Hawks and Cougars have won and lost an equal number of games and the final "setto" promises to be a whirlwind.

On April 14, the Cougars maintained their standing at the top by defeating the Owls in three straight games.

The score follows:

Cougars—			
Follett	180	146	185
Barnes	102		112
Loncosty	121	118	143
Coverdale	134	149	158
Currin		118	
	537	531	598
Owls—	1	2	3
Ilberg	104	108	109
Edwards	112	177	170
Smith	142	104	94
Burr	171	118	143
	535	507	516

The Coyotes lost two out of three to the Night Hawks on April 5.

Night Hawks—	1	2	3
Geltz	118	165	126
Morscheck, H.	148	162	137
Post	110	141	121
Bressler	155	178	135
	531	646	519
Coyotes—	1	2	3
Rader	156	138	125
Morscheck, F.	121	116	105
Morscheck, G.	125	93	141
Sampson	111		
Wilson		134	201
	513	481	572

Standing of Teams:

	W	L	Pct.
Night Hawks	15	9	625
Cougars	15	9	625
Coyotes	10	14	416
Owls	8	16	333

"And Home Came Ted"

A home talent play will be given at the opera house on Friday night, April 13, under the auspices of the Ladies' aid of the Federated church, entitled "And Home Came Ted." It is a comedy drama in three acts and the several parts are being taken by some of the best local talent. As a rule, talent plays are far superior to those of traveling troupes that make towns of this size, and this one will be no exception. You are assured of a good evening's entertainment.

Following is the cast of characters: Skeet Kelly, the clerk....D. L. Bressler
Diana Garwood, the heiress .....
..... Gertrude Sampson
Miss Loganberry, the spinster .....
..... Mrs. Coleman
Ira Stone, the villain ..... Geo. Post
Aunt Jubilee, the cook ..... Marion Mayer
Mr. Man, the mystery.....Mike Earls
Jim Ryker, the lawyer .....
..... Jas. Winegardner
Mollie Macklin, the housekeeper .....
..... Margaret Sampson
Henrietta Darby, the widow .....
..... Olive Jain
Ted, the groom ..... Louis Bershaw
Elsie, the bride ..... Lindy Collins
Senator McCorkle, the father .....
..... W. E. English

There will be specialties between acts and an eight-piece orchestra will furnish music during the evening.

Two solos will be rendered during the evening—"An Open Secret" by Mrs. W. W. Burr, and "By the Waters of Minnetonka," by Mrs. Fred K. Bressler.

The Rinkeydinks

Mrs. John G. Meyer entertained the Rinkeydinks at her home on Friday afternoon, April 6. Refreshments were served by the hostess and an enjoyable time is reported.

Those present were Mrs. Frank Qualey, Mrs. Chas. Herman, Mrs. Henry Rees, Mrs. John Lawson, Mrs. Henry Hanson, Mrs. Ira Hanson and daughter, Rowena, Mrs. H. B. Jones, Mrs. Al Mayer, Mrs. Joe Reil, Mrs. Ingel Halverson, Mrs. Chas. Ingle, and Madeline Herman.

The next meeting will be with Mrs. Joe Reil on April 20.

Stricken With Appoplexy

Word has been received by Mrs. F. S. Casebolt that her mother, Mrs. S. M. Chase, of Post Falls was on Sunday stricken with appoplexy and is in a very serious condition. Mrs. Casebolt is unable to be with her mother on account of being with her daughter, Wilma, who underwent an operation for appendicitis at St. Luke's hospital, Spokane.

Progressives Meet

The Progressives held a business meeting at the home of Mrs. Fred Perkins on Thursday of last week. The members took well-filled baskets and what might very appropriately be called a banquet was served and a very pleasant time was spent.

The next meeting will be with Mrs. Ira Hanson on Thursday, April 19.

GROWING OF CERTIFIED SEED POTATOES IN IDAHO

As the time for planting potatoes draws near, farmers in the various parts of Latah county are considering whether or not to undertake to grow potatoes to be certified as seed. County Agent O. S. Fletcher states that he has received numerous inquiries as to the plan that will be followed this year in handling the certification work. E. R. Bennett of the extension division of the University of Idaho, who has charge of the work of certification of potatoes, has just issued the following statement in regard to plans that should be followed in producing certified seed potatoes in 1923:

We advise—

1. The use of only such stock for seed as is known to be reasonably free from disease.

2. Seen that is known to be of a desirable type and a high yielding strain.

3. That all seed be sorted to size and type.

4. That all seed be treated 90 minutes with the standard bichloride of mercury treatment.

5. That treatment be given at least two weeks previous to planting time.

6. The use of whole tubers for seed where expedient.

7. That pieces be cut large (3 or 4 ounces) if cut seed is used.

8. That the distance apart of planting on unirrigated land be 30 inches each way or from 18 to 24 inches in the row on irrigated land.

9. That planting be delayed until the latter part of June or early July for early potatoes and Idaho Rurals and not much earlier for Netted Gems.

10. That seed be planted at least five inches deep on unirrigated land and 2½ to 3 inches on irrigated land.

11. That thorough and merciless roguing begin as soon as plants are up and continue throughout the season.

We require—

1. That the seed plot be at least 100 yards from any other growing potatoes.

2. That the potatoes be planted on land that was not in potatoes for at least two previous years.

The certification of seed potato phase of this project has reached a stage of development where it is deemed expedient to make the work of field inspection partly slf-supporting by charging an inspection fee of $4 per unit of five acres, or fraction thereof, and 50 cents for each additional acre.

Parent-Teachers' Meeting

The regular monthly meeting of the Parent-Teachers' association will be held in the assembly room of the high school on Monday night, April 16, at 7:30 o'clock. This will probably be the last meeting of the school year and all parents and those interested in the welfare of our school are asked to be present.

The following program will be given:

Instrumental duet by Edith and Frances Smylie.

Glee club—high school girls.

Paper—"How Genesee May Become a Better Rural Community"—Read by Victor Casebolt.

Vocal solo by Mrs. W. W. Burr.

Address by Prof. Dale of the University of Idaho.

Double quartet—Mrs. W. W. Burr, Mrs. F. J. Niemann, Mrs. F. K. Bressler, Miss Esther Martinson, Mrs. R. E. Simmels, Mrs. Fred Hampton, Mrs. Arthur Springer, Miss Edith Winegardner.

As will be noted by the above program this is sure to be one of the best and most interesting meetings yet held, so be on hand at 7:30. You can be at home by 9 o'clock.

That "Million-Dollar" Rain

The Gen

THE DANGEROUS AGE

FICTIONIZED BY CONRAD GIBSON

From John M. Stahl's Photoplay of Frances Irene Reels' Screen Story Released by Louis B. Mayer through Associated First National Pictures Inc.

INSTALLMENT NO. 4.

And by eight o'clock one more of the riotous whirlings of pleasure on which he had gone regularly since his arrival was under way. In an exclusive little retreat in the Roaring Forties, guarded at its doors by huge policemen, and operated only for private and highly taxed gatherings, the music began, the wine flowed, the pretty girls in scant attire danced. John Emerson felt a thrill of irresponsibility as he turned first to Gloria, then to her pretty chum beside him. A waiting servant at his side seemed never to allow the champagne glasses to become empty.

Gloria, in her spontaneous way, caught his hands and dragged him to the floor. There they swayed and "trotted" to the syncopated rythm of the jazztime orchestra high up in the gallery whining out its tune of blues. What a night!

As the noise increased servants lowered windows and drew blinds. The smoke-filled air became difficult to breathe. Huge balls of tape of various color were being thrown about the room, and men were going from table to table, drinking to the pretty young things who sat giggling and smoking and raising the glistening glasses to their painted lips. It was a picture such as John Emerson had never seen before. The dance over, he moved his chair nearer to Gloria. He did not know that all about him the crowds were keeping a secret watch upon him. He did not realize that every move made by Miss Tuyl would be the subject of many after dinner conversations thereafter. She was one of the most popular of the younger set, and her constant attendance by John had attracted attention.

John Emerson was happy. Overwhelmingly happy. He could scarcely resist the temptation to move even closer to the lovely Gloria, clasp her in his arms and say to her, what he felt he would so like to say.

"I won't you dance with me again, Gloria?" he said at last

"Why, of course, John," she said.

And they stepped to the shiny floor, and as they glided away to the music of a fox trot, those who watched most closely smiled knowingly. He had hugged her closely to him for an instant before they glided gracefully away.

Women rolled their eyes at one another.

"Gloria's got him," said one.

"He's handsome and nice," replied another. "And I say she's right fortunate. From the west, too, where they're healthy and—and—wealthy."

Presently the dance ended and, despite the plea of the dancers, who stood long and clapped their hands enthusiastically for another trot, the orchestra took time out for rest and refreshment.

John and Gloria made their way between zig-zag rows of gilt chairs to their own table. As they resumed their light lunch, and as John raised his long stemmed glass to his lips with one hand, the other, beneath the table, sought for and finally found the slender, warm hand of Gloria. And when these hands met the larger closed tremendously over the smaller.

And those who had been watching did not fail to see.

CAPTER III.

In the rambling Southern California home of the Emersons there was a matter of love coming rapidly to its crisis. Ruth, in the weeks since the departure of her father, had come to the conclusion that of all the young men in the world, Bob was the one of her choice. In the garden of the Emerson home she and her ardent young wooer were engaged in the age-old game of determining just how best the matter could be placed before the proper parties for acceptance and approval.

"Ruth, dear," the boy was saying, timidly placing an arm about the waist of the girl, "there isn't any use going on any longer with our hearts just dying to be made into one, is there?"

Ruth, young though she was, realized this was a pretty silly way of putting it, but then she recalled that she, in her late moments of affection for her Bob, had also said some use-

Sure Sign.

Teacher—Who can tell me if spring is here?

Little Tony—Me, teacher. Papa found a fly in his soup.

Boss (to office boy)—Get a little spring in your step, Frank.

Office boy—Can't, boss, I've got spring fever.

Boss—Do as I say or you'll be a Spring leaver.

less and silly things, so she just looked into his eyes and said:

"No, Bobbie, there isn't."

"Tell mother, then," he suggested, anxiously.

"But father isn't here, and what would he say about it?"

"My dad says never to cross bridges beforehand or something like that," returned the boy. "You go right in and tell mother that it's all set, and all we need is an o.k. and we're off to the preacher's. Dad has given me an assignment to his London office, you know. We'll have a glorious time. Don't you think so?"

"Anywhere with you," she replied, weakly, as they walked arm in arm toward the big white stone house.

Once more the inevitable embarrassment of prospective son-in-law facing prospective mother-in-law. Once more the twisting of cap and the stammering. And then Ruth laid the entire situation clearly before Mary, and there were tears and a display of devotion, and a great deal of rapid thinking by the mother.

"But your father isn't here," she said. "Think of it. You want to be married and go away from your poor mother when he isn't here. I don't know what to say—what to do."

Ruth was prepared for that.

"Wire him immed iately, mama," she said, caressing her mother's tired face and drying a tear from her cheek.

And over the wire that afternoon neers went a telegram which read:

"Dear John—Ruth will be married as soon as you can come home. Will you come at once? Lovingly—Mary."

That evening John Emerson stood in all his splendor before the entrance of the brownstone house of the Tuyls. It had seemed to him as he had assisted the dainty young Gloria from the limousine that she was more than ever possessed of all those particular charms which were so dear and so necessary to him if life were to be worth living. Her dancing eyes gazed into his own with feeling, understanding; her shining pink nails and trim silver-buckled slippers added to her general beauty more, he thought, than they had added before. He stood before her, silent, still holding her hand in his own, and a wave of happiness came over him. He was not too old for this girl, the dearest playfellow he had ever met! No, not too old! Just the proper age. Dignity and beauty, he thought to himself, walk hand in hand with just the correct balance. He was proud of her. Proud of himself.

She was saying:

"John, you'll not care if I ask you a very personal question, will you? It's quite personal, now. Will you?"

"Why, of course not," he replied, drawing more closely, until their faces almost met. "Of course not. Gloria, what is it?"

She blushed, then she told him again she hoped sincerely he would not resent.

"Go ahead, my dear girl," he urged.

"Are you married?" she asked.

And after he had put down a thousand suddenly arising fears which came rushing through his brain, he deliberately lied:

"Why, no. What made you ask?"

She did not wait to hear the question. She wrung his hands once more, and flew away through the marble foyer leading to the wide stairway, her shimmering silken gown streaming out behind her, transforming her, he thought, into a sort of angel scurrying from danger.

"I'm so glad!" she trilled back to him as her form was lost behind a heavy portiere.

NORTHWEST NEWS

Copies of the advertising folders for the Sportsmen's and Tourists' Fair, which will be held in Spokane, May 22-25, are now off the press and are being distributed. The management committee is having 50,000 copies printed and have made arrangements with eastern railroad officers and with all the commercial organizations in the Pacific Northwest for their distribution. A special rate of a fare and one-half has been granted from all points in the northwest, and it is expected that at least 100,000 people will attend the 1923 fair.

Invitations have been mailed to all the chambers of commerce, city officials and those interested in tourist camp parks for the second annual Pacific-Rocky Mountain Tourist Camp conference, which will be held in Spokane, April 14. Delegates authorized to speak for their communities on the success of the 50 cents chargo plan, desired for future operating plans, are expected from all communities. The invitations request the detailed data regarding camp operations, improvements and methods to be compiled for presentation at this meeting.

Dr. J. S. Kloeber of Yakima recently opened discussion at a meeting held in Yakima, on the advisability of asking railroads for a bulk rate on apple shipments, calling the attention of the 200 present to action of recent meeting and evidences of on the part of the growers listed by a committee. Many members of the Yakima Valley Fruit Growers' association, the horticultural union and the Washington Fruit & Produce company, whose directors oppose bulk rate shipments were present. No definite action was taken at this session.

WHITE-COLLAR JOBS NOT SOUGHT NOWADAYS

The trend of ambitious young Americans to turn from the white-collar job to the overall job in the country for advancement is indicated in latest applications for courses in the Knights of Columbus free correspondence school for ex-service men conducted at K. of C. national headquarters in New Haven, Conn.

Of several thousand applicants from all parts of the country, approximately 60 per cent applied for courses in technical subjects, such as automechanics, gasoline and electric engines and steam boilers. Less than 25 per cent applied for courses commonly designated as clerical, bookkeeping, commercial English, stenography, etc. Many of the men in their applications stated that they held clerical jobs, but desired to change employment to enter the technical and industrial field. A feature of the analysis of recent applications to the K. of C. school is the interest in business courses shown by ex-service men in agricultural districts.

High Speed.

An Irishman was handling dynamite in a quarry. He let a stick drop, and the whole box went up taking Mike with it. The quarry boss came around later and said to another Irishman:

"Whore is Mike?" "He's gone," replied Pat. "When will he be back?" asked the boss. "Well," replied Pat, "if he comes back as fast as he went he'll be back yesterday."

Sweet Birdie.

Overhead an aeroplane was flying across the sky writing a message in smoke.

Mike—'Ow would yez loike to be up thar in one of thim things?

Pat—Sure, an' Ol'd hate to be up thar without me wings.

Bernhardt's Farewell to America

Just one hour and a quarter before she died in her son's arms at her Paris home, aged seventy-eight, Sarah Bernhardt, the "Divine Sarah," the world's greatest actress, sent this message to America, the land of her many triumphs "I am deeply touched with the sympathetic interest of my beloved American friends." So ended a great life.

POULTRY

Make the roof of your poultry house high. It will make the shed cooler for the birds in summer.

Never make yards within yards, but build them in rows like streets if you wish to save time and trouble. It is a mistake to have to open two gates to enter one yard.

See that there are no cracks in the side of fowl house, especially on a level with the perches. Such cracks are veritable deathtraps and an invitation to roup to enter.

The perches should not be made more than 18 inches from the ground and should not be fixtures. In fact, there should be no fixtures at all in the shed if it is to be kept vermin-free.

A hard floor of cement and sand mixed, is serviceable, and the shed can then easily be made rat-proof. The hard floor is not too severe on the feet of the birds, provided a good deep litter of straw or other scratching material is always upon it.

A box of moist earth in the brooder is a good thing. If the litter is too scanty and the floor of the brooder constantly under the little legs, the chicks are apt to injure their legs and become sprawly. Litter should be abundant and absorbent, but not heavy.

Incubator lamps should be filled as far away from the time of turning the eggs as possible, in order to have a good strong flame when the turning is being done. With a hot flame, the incubator will quickly come back to the required temperature after the turning has been completed.

When a poor hatch is experienced, the cause generally can be traced to the breeding stock, the method of keeping eggs prior to putting them in the incubator, or else to the machine itself. The chicks that are raised from a poor hatch usually must be hatched with the greatest care if they are to be brought to maturity. On the other hand, if the fertility and hatchability both are good, no fears need be entertained over the birds that are hatched.

Most people believe that if an egg is reasonably fresh it will be perfectly satisfactory. Although freshness is a cardinal virtue in an egg, the quality of taste is almost equally important.

Fowls that are fed upon clean, wholesome food will seldom lay ill-flavored eggs.

Eggs from hens that are compelled to forage over the farm and are supplied with very little grain are likely to be flat in flavor, except during the time of year when there is an abundance of green stuff. It is different when hens are kept in yards and have their feed supplied to them.

Eggs become tainted when hens get their feed from manure heaps, or their drinking water from cow yards. Odors and flavors in an egg may even be caused by dirt that has gotten on the shell. For this reason, cleanliness in the nest and houses is essential.

Flavoring comes from feeds that contain volatile oils, such as onions, garlic, leeks, turnips, rape, etc. Onions, for instance, are a healthful feed for fowls, but if fed regularly and in large quantities they give the eggs an onion flavor.

Prime, clean food and an abundance of pure, fresh water will almost always insure eggs of good flavor, if the fowls are healthy.

Little by Little.

Pat (on shipboard)—And phat are yez goin' ter do whin yez git to America?

Mike—Take up land.

Pat—Indade, an' 'ow much?

Mike—Oh, a shovelful at a time.

IDAHO

"The World Should Know North Idaho" is the slogan of the North Idaho Chamber of Commerce as originated by R. T. Spaulding, its ex-secretary.

The northern navigation boat, "Northern," recently began making regular trips from the Sandpoint dock after being shut out by the ice since January. The regular summer trips will be started in the near future.

At the annual stockholders' meeting of the Idaho Pire and Brick company of Troy, Idaho, checks for an 8 per cent dividend were distributed. The good business of last year and the prospects for this year prompted action of this kind.

Berry growers of Twin Falls county met recently on call of County Agent R. E. Brossard, and at the request of several berrymen. The growing of crop, future of the industry, varieties, marketing, etc., were discussed. Organization and promotion of the industry were decided upon.

The Camas Unit Grazing association expects to herd 2800 cattle this season, according to County Agent P. M. Jeaness, in whose office the advisory board of the association recently met. A herder's contract for $2500 has been signed, making the average cost 89.3 cents per head with additional cost for salt.

Plans for a new steamer, "Lewiston," to be built by the O.-W. R. & N. company, for service on the Snake river out of Lewiston, is now under way in the company's offices. The craft will cost $50,000 and will be ready for service July 1. It will be 160 feet long and 35-foot beam, having a carying capacity of 300 tons.

The fact that during the five-year period from 1918 to 1923 the records show that there were 289 deaths and only 130 births among the Nez Perce Indian tribe ,has excited fears that the tribe will in time become extinct unless some means is devised to remedy the existing condition. The trouble seems to be a lack of vitality and resistance to disease among the members of the tribe.

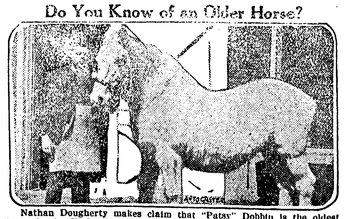
Articles of incorporation of the Cook Cedar company were recently filed in St. Maries. The company acquires the interests of Cook and company and will carry on the business of the old concern, handling cedar poles, cedar timber and other forest products. The new company is capitalized for $50,000, and about $40,000 of the stock has already been subscribed. The company is composed of St. Maries men.

As an addition to its program to serve the educational interests of Idaho in the most efficient and desirable way the University of Idaho will offer a junior extension short course June 17 to 23. The course will be open to every regularly enrolled junior club member in the state and will give an opportunity for a week's practical instruction and training in the fundamentals of applied agriculture and home economics under the supervision of the University of Idaho faculty and extension division specialists. A plan similar to this has been tried in several other states and found very satisfactory and it is the intention of the university to make it an annual event.

WATERVILLE MAN PLANS TO SAVE GOLD

A. H. Murdock of Waterville has invented a machine which he claims will save the flour gold and pin head nuggets that may be washed from the bars along the Columbia. One of the machines has been operated on one of the bars near Orondo, and the men in charge claim to have made wages. If Mr. Murdock has a machine that will do the work, he has a good thing. There have been scores of all kinds of contraptions made in a vain effort to garner the gold of the Columbia, which is so fine, it is claimed that five dollars worth will cover half an acre. The gold is there, however, and is free to the man who can make some device to gather it.

Do You Know of an Older Horse?



Nathan Dougherty makes claim that "Patsy" Dobbin is the oldest horse in the U. S. For thirty-two years Patsy has hauled lumber at Philadelphia, although pensioned now than Patsy? Do you know of a horse older

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

The U. S. Bureau of Agriculture estimated the last year's output of honey in this country to be more than 250,000,000 pounds.

The United States postoffice department states that at present there is a postoffice for every 58 square miles of area in this country.

Both national committees, republican and democrat, are contemplating the erection of large radio-broadcasting stations at Washington, to be used in the coming campaign for president.

A Danish commission is investigating colonization conditions in Nicaragua, Costa Rica and Colombia. Four hundred Danish farmers and their families are ready to emigrate to the country offering them the most advantages.

Barbet, French ace, whose exploits with small-powdered airplanes and gliders have attracted world-wide attention, recently flew over Toulouse for 25 minutes at a height of 1500 feet without using the motor of his plane.

Owing to protests made by the Medford, Ore., American Legion and by residents of that city, the lease to Jops o the "401" ranch, owned by the Sacramento Improvement corporation there, has been rescinded and will be run by white men.

The German Krupps, once the world's greatest manufacturers of guns and war materials, are starting experimental agricultural stations throughout Russia to teach the natives how to use the power farm machinery that the concern is now making.

The municipality of Hyerets, France, recently petitioned the ministry of public instruction to build a boys' high school for the town. The reply came that the fathers of the town put in a like petition 59 years previously, and as that had not been acted upon, the investigation not being yet completed, the bureau could not entertain this new petition.

One of the strangest political parties in Europe recently came into prominence in the Republic of Andorra, in the Pyrenees. It is known as the "One Cheese Party," and is formed of people who are trying to change an old law so that in the future the Bishop of Urgel shall be given only one cheese every six months, instead of two, as called for by the law of 1288.

Oil Spray for Scale.

On the basis of 1922 results, the use of a lubricating oil emulsion seems to be a highly satisfactory method of controlling San Jose scale on fruit trees, according to W. P. Flint, Illinois state entomologist. The emulsion is made from one gallon of high-grade paraffin oil, the one-fourth gallon of water and two pounds of potash fish-oil soap. The water, soap and oil are placed in a kettle or other receptacle and heated to boiling. The mixture is boiled for about five minutes, care being taken not to burn it. Then it is removed from the fire and pumped thoroughly twice at a pressure of 50 to 100 pounds, before it cools. It is used in a two per cent solution of water. The use of this emulsion is advised where lime-sulphur has not been satisfactory. Further work will be done with the oil, however, before it is recommended unqualifiedly as a substitute for lime-sulphur.

ADD TO FORCE AT BREMERTON YARD

Navy Department Plans Resumption of Operations on Big Scale About July 1.

"There is to be a marked increase of activities at the navy yard, Bremerton, Washington, beginning about July 1 of this year. Congress has been generous to this important yard and there is a large amount of work to be done. The construction of the U. S. S. Holland is to be resumed and extension to the naval hospital and three living quarters are to be built. Besides this, there are a number of other minor activities. This means an increase in the demand for labor in that vicinity and affords prospects of at least a year's steady work for expert workers in many lines such as bricklayers, sheet metal workers, painters, machinists, shipfitters, riveters, etc. There will also be opportunities for draftsmen. This is good news, as up to date the tendency has been entirely towards reducing the force of workmen at the navy yard, but now, for the first time in some years, the force is to be increased.

All the above activities are to be carried on by the navy yard itself and men employed will receive all the benefits of leave and pay of regular navy yard employes."

Natural Curiosity.

Pat and Mike, two Irishmen, wandere dalong the waterfront. Mike stopped and stood staring at a very large anchor lying by a dock.

Pat—Come on Moike, ye' av' stood thar long enough.

Mike—Yis, Pat, an' niver a foot do Oi shift 'till Oi've seen the man wot uses that pick.

Melon-Cholly.

"Sambo, how do dey get de water in de watermelon?"

"Dat's easy; dey plants it in de spring."

Piggly Wiggly Whips Wall Street Gamblers

Clarence Saunders, twelve years ago a day laborer in Alabama, gave Wall Street gamblers a trimming last week. As president of the 1200 Piggly-Wiggly chain grocery stores he bought up stock, forcing it up from $40 to $124, catching the gamblers short.

Oil Farm Machinery For the Spring Work

"Do you know that your farm machinery is ready for its season's work or are you going on the assumption that the machines seemed to be doing all right last year, and therefore will probably do well enough this season? Think it over," said L. J. Smith, agricultural engineer at the State College of Washington, talking to farmer radio fans over the college radio broadcaster recently.

"Every machine needs oiling. Wherever one surface moves over another with any degree of pressure, oil is necessary. Carelessness in supplying the bearings with a good lubricant may easily reduce the life of the machine one-fourth, or even to half of what it should be. If anything goes wrong with a machine, the chances are that it is for lack of lubricant.

"A perfect lubricant is one that forms a film of oil between the bearing surfaces. In new machines these surfaces are not worn smooth, and a film of oil can not be maintained; but with proper use and ample oiling the bearing surfaces become polished, and finally the oil film keeps the metallic surfaces apart. When this is accomplished the surfaces should operate indefinitely without wear.

"Why, then, do bearings and boxes wear out? Often it is because the bearing is not 'taken up' after the surfaces get smooth enough to hold a film of oil. Then, too, sometimes the bearing is not designed sufficiently large to stand the heavy strain. The pressure per square inch is too great to allow a film of oil to keep the surfaces apart. A poor grade of oil might have been used, or perhaps the wrong kind of oil.

"Often the frame of the machine gets loose and twists out of shape, bringing heavy strains and pressures on the bearings because they are 'out of line.' This also increases the friction of the machine immensely, and the power required to run the machine may be doubled or even trebled. It pays to watch the farm machines for loose or bent frames.

"Poor lubrication is often due to dirty oil. The tin of hard oil lies around the shop or machine shed without a cover, accumulating dirt and grit, or dirt gets in the oil in the fields. A film of oil can not be maintained when the oil is full of grit and dust.

"The bearings should be thoroughly washed out with kerosene each season, and fresh oil put in the bearings. It is better to buy fresh hard oil each season. Never use old oil that has been lying around exposed to the air.

"A little fine graphite in hard oil often helps out with a trouble-some bearing. The graphite tends to fill the low spots and is in itself a form of lubricant. Its continued use, however, may cause the graphite to gather in large flakes, and hinder rather than aid lubrication.

"Be sure to keep the hard oilers screwed down so that the oil squeezes out both ends of the boxing. Then you will know that the whole bearing is oiled, and the dust and dirt can not get in. Keep the oil grooves and holes clean. Buy hard oil cups of a type that will not unscrew and get lost."

Began With Hubby.

"Has your wife started spring cleaning yet?"

"Yes, she's cleaned me out buying her spring clothes."

Campaign to Reduce Range Cattle Costs

A campaign calculated to reduce the high mortality of ranching enterprises in the west is now under way by the United States department of agriculture. A study of the cost of producing range cattle on 75 cattle ranches in Colorado is being made to develop facts that may be applicable to the entire range cattle industry. This cost study is based on the calf as a unit and includes the cost of handling the cow herd for one year. The cattle are wintered in mountain parks which furnish large yields o fnative hay, in irrigated districts on alfalfa, or out on the prairie where the common practice is to feed cottonseed cake or rough feed produced under semi-arid conditions.

Most of the cattle raisers in this region are endeavoring to reduce production costs and to increase their income by greater diversification of their business. A few cattlemen have added a flock of sheep, others have added dairy cows and hogs in a small way to help increase incomes. There is also a marked tendency to form associations for the standardization of cattle in regard to uniform ages, breeding and market classes. The aim is to have a standard cattle for market and to sell the animals direct to feeders at other points, insuring a high standard of quality and large scale deliveries. In pursuance of these problems several trainloads of cattle have recently been sold to feeder buyers in the corn belt at an average advance of $2.50 a head over prices which other buyers were willing to pay.

The general program being initiated by the department of agriculture in addition to its cost of production studies includes the following:

A study and analysis of each phase of the cattle business.

Ranchmen are being urged to reduce their general overhead by economizing in cost of ranch equipment maintenance and cost of supervision and to operate with the lowest possible direct and indirect total labor cost consistent with sound economic conditions.

The raising of a sufficiently large number of offspring to minimize overhead and yield a relatively higher profit through the fullest ultization of carrying capacity of land and equipment is also important, the department states. To obtain a reasonable cost of production, ranchmen are being advised to produce cattle on the ranch in the shortest possible time by producing animals that develop a comparatively large weight for age, and which possess early maturity and fatten quickly.

Purchase of high quality feed without waste at the lowest available prices is given as another factor of importance. Marketing of the cattle at the smallest possible total selling cost to buyers who pay their bills promptly is also urged, as well as the advisability of planning herds to meet conditons of grass and market demands.

A properly managed ranch will set up and maintain an adequate reserve for depreciation and business depression, make provisions for growth, and spend sufficient money necessary to provide dependable statistical and other data, the department says. Systematic reading of the best business and trade publications obtainable is also urged.

PULSE OF THE WEST

Real Economy in State Capitals.

Have you heard a swishing sound lately, followed by a dull thud and distant groans? The noises are caused by the legislative ax which in every far western state capital has been used to trim expenses and pay rolls, to lop off commissions and boards or to cut their appropriations in half.

The decrease in state revenues raised by direct taxation will probably total 14 to 16 million dollars for the far west, which means a saving of a maximum of $10 a year for the average family. If city and county taxes can be diminished in the same ratio, the per capita saving for the average far western family will reach $30, an amount that will give decided relief on the farm, where cash is exceedinly scarce these days.

But the bulk of the city population, owners of real estate excepted, will scarcely feel the reduction in the tax burden. Rents and prices won't be reduced because taxes are lower; local taxation is of great direct importance to business, but the average man feels its effect only indirectly. That's why it is so difficult to put through a real economy program in the face of growing population, increasing wealth and expanding public activities.

Shifting the Burden of Highway Costs.

Ways and means of financing highway construction puzzled many of the western state legislatures. It is gradually being recognized that future construction must be financed largely by the users of the highways, the motor owners, and this recognition is speedily followed by action. Both Washington and Oregon have increased the gasoline tax, though the increase is offset in part by relieving from taxation those purchasers of gasoline who use it in tractors, motor boats, cleaning establishments and other industrial plants. The California legislature is about to follow suit and levy a tax on gasoline consumed by motor vehicles, while the state of Washington accompanied the doubling of the gasoline tax with a reduction in the property levy for state road purposes.

Almost every western legislature wrestled with the problem of financing the construction of motor roads and regulating the traffic thereon. Gradually the size of this problem is being seen in its full dimensions.

Montana Soldier Bonus Comes to Grief.

The people of Montana last fall voted to borrow four and a half million dollars and to distribute this money among the ex-soldiers of the state. Now comes the Montana supreme court and says it can't be done, thereby preventing the sale of the bonds voted for the benefit of the veterans.

In its opinion the supreme court asserts that there exists no legal duty on the part of the state to reward those who fought for the nation in time of war; on the contrary, the court says it is everybody's legal duty to defend the imperiled nation, even without any compensation whatsoever.

Also, the court finds that the contemplated gratuity violates Article 12 of the Montana constitution, said article prohibiting state donations and grants to individuals. Sound law, but why this sudden solicitude for the constitution? During and after the war the letter and spirit of the constitutional provisions guaranteeing free speech, a free press and other non-essentials were ravished a dozen times by the state and federal acts, but the courts had no difficulty so to twist the plain meaning of the provisions that the acts became constitutional. Why not give the constitution another little twist when the fighters are to be rewarded?

Circumstances may even alter the tenor of constitutional interpretation.

Japers—Which of the four seasons is the best for engagements and weddings?

Bubbs—Spring—because it has a ring in it.

A groceryman says that some people who buy on time don't seem to know when time leaves off and eternity starts.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER XIII.

Risky Business.

As the train whizzed by, Lucy Durant pulled herself up slowly and stood again on the edge of the bridge. Looking down, she saw "Speed" Stanbury swimming in the swift current and making for the bank. Edwin Stanbury, "Speed's" unscrupulous cousin, and Jim Sprague watched breathless below the bridge. Their first thought was to apprehend Lucy but as they saw "Speed" swimming toward the opposite bank they ordered their henchmen to overtake him and bring him back.

But "Speed" eluded his pursuers without much difficulty and was picking his way through the woods looking for Lucy. He had doubled around with the hope of finding the girl he loved, but as yet his efforts were not rewarded. He did not believe she had fallen into the hands of her enemies, but he was anxious just the same.

Soon he came to a clearing, and hearing a whirring sound overhead he looked up. It was Gaston, his faithful friend and valet, in "Speed's" plane. The little Frenchman was as skilled a pilot as "Speed" himself and probably realized that in the plane he could assist his master. At that very moment young Stanbury fancied he could see Gaston looking over the side of the cockpit and waving down reassuringly. Then the plane began to drop. In a few more minutes Gaston made a landing in the clearing and "Speed" clambered in.

"You're a jewel, Gaston," he said. "Now we can circle over the country and see if we can pick up Miss Lucy anywhere. Edwin and Sprague were after me, but I'll bet a hat that they are after her now that I slipped out of their clutches."

With that they began the upward ascent. "Speed" looking anxiously over the side of the cockpit with the hope of seeing Lucy.

Lucy Durant was, indeed, being pursued by Edwin Stanbury and Jim Sprague. The latter was taking up the chase reluctantly as "Speed's" presence in the locality was extremely distasteful to him. He had no desire to be captured by young Stanbury and taken back to prove his alibi—a deed that would show his own guilt if the young man were cleared of the charge against him.

"See here, Edwin," Sprague protested, "I want to get out of this part of the country. With 'Speed' free, I don't know what minute he's going to jump out and land me in the hands of the police. I'm going back to the city—I want to see my wife and child."

The rebellious spirit of the man made Edwin flare with anger. "You do as I say," he said, "and I'll see you through in this matter. There's no use worrying over something that can't be helped. We'll get out of this mess all right."

"Oh, I'm sick of it all," Sprague whimpered. "I'd rather go back and make a confession of the whole thing than have it hanging over my head continually."

Meanwhile Edwin's men had found the trail of the girl and were also taking up the pursuit. In the aeroplane, "Speed" looked down and saw Lucy being chased by them over the sand cliffs. She suddenly jumped on a trail of small ore cars that were passing and the pursuers took a short cut to endeavor to head the girl off.

"Speed" shouted instructions to Gaston as to their next move and ordered him to fly low. Then "Speed" crawled out of the cockpit of the aeroplane, crawled along on one of the wings and clung to the truck underneath. Gaston was guiding the plane toward a large water tank near the trestle where Lucy was being surrounded. As they flew low over the tank, "Speed" dropped into the water with a mighty splash, while the plane whizzed on.

Crawling out of than tank, "Speed" climbed down the ladder and made his way to the ground. A car was standing on the grade nearby, and the young man hesitated for a moment, seeing that the men were running out on the trestle toward the spot where Lucy stood. Getting in the car, young Stanbury cut it loose and started down the grade with terrific force. The men who were pursuing Lucy on the trestle turned in time to see the car rushing along toward them. Without hesitating they all leaped from the trestle to the sand banks on either side.

"Speed" swung himself down on the step of the car and hung out as far as possible. He yelled to Lucy to stand as far out on the side of the trestle as she could. Then, as he whizzed passed, he picked her up in his arms in much the same way as a cowboy on horseback would pick up a girl on the run.

The car rushed on down the grade and up the other side. When it reached the top of the incline, Lucy and "Speed" jumped off and started to beat a hasty retreat. Seeing their pursuers had recovered their surprise and were already taking up the chase once more, they hurried to a high incline that ran from the side of the mountain, mountain to the sheds on the river bank below.

At that moment, Edwin Stanbury appeared on the scene and gave his henchmen new orders.

"They're making for that car to take them down the side of the mountain," he shouted, "cut the control cable, Lem, so they can't use it."

The sturdy mountaineer hastened to obey the orders. Scrambling up the side of the mountain, he hurried to the spot where the control shed stood. One blow with an axe would be sufficient to cut the cable and render the car useless. But Lem did not know that the two young people were already climbing in the car and were about to make their journey down the side of the mountain.

"Speed" and Lucy were in the car congratulating themselves upon their escape when it suddenly gave a mighty jerk forward and started down the mountain side at a breakneck rate of speed. The mountaineer had done his duty, but a look of horror passed over his face as he saw the runaway car racing down toward the bottom of the incline and the river.

(To Be Continued.)

Modern Mechanical Progress

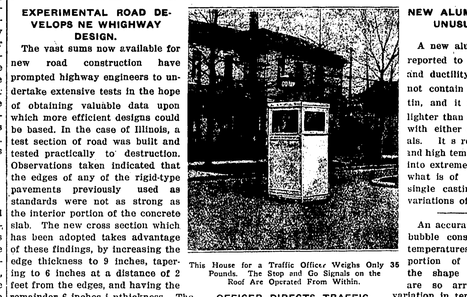
This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

EXPERIMENTAL ROAD DEVELOPS NE WHIGHWAY DESIGN.

The vast sums now available for new road construction have prompted highway engineers to undertake extensive tests in the hope of obtaining valuable data upon which more efficient designs could be based. In the case of Illinois, a test section of road was built and tested practically to destruction. Observations taken indicated that the edges of any of the rigid-type pavements previously used as standards were not as strong as the interior portion of the concrete slab. The new cross section which has been adopted takes advantage of these findings, by increasing the edge thickness to 9 inches, tapering to 6 inches at a distance of 2 feet from the edges, and having the remainder 6 inches thickness. The new design will result in a saving of 195 1-2 cubic yards of concrete per mile of pavement.

WORLD'S LARGEST AIRPLANE BEING ASSEMBLED.

The world's largest airplane, the Briling bomber, now being assembled at Wilbur Wright field for the United tSates army, is expected to be ready for trial some time in April. The ship is a triplane of 120-foot wing spread, a length of 65 feet, a height of 28 feet, and the fuselage is 10 feet in dimmeter. It will be driven by six 400-horsepower Liberty motors and will have a ful capacity of 1500 gallons, which wil give it a cruising radius of 1,300 miles at a speed of over 100 miles an hour. The completed ship will weigh about 40,000 pounds and will carry 10,000 pounds of bombs. Two pilots working together can fly the ship ordinarily, but in bombing flight the crew will consist of eight men.



This House for a Traffic Officer Weighs Only 35 Pounds. The Stop and Go Signals on the Roof Are Operated From Within.

OFFICER DIRECTS TRAFFIC FROM SMALL HOUSE.

Standing in a little house which he built himself, Traffic Policeman Curtiss Vanosdal gives the stop and go signals comfortably in cold weather at Thirteenth and Ohio streets, Terre Haute, Ind. The sides of the house are made of wallboard and glass, and each side swings on spring hinges, so that he may make a quick exit if need be. The house is 3 1-2 feet square. Mirrors in the top give him a view in four directions. A kerosene stove keeps the house warm.

PUMP PINCREASES CIRCULATION OF WATER IN BOILERS.

Circulation of water in a boiler has been stimulated by means of a screw pump. The driving spindle of the pump passes through the boiler shell and is arranged so that it can be packed while the boiler is under pressure, there being no part inside the boiler subject to wear. The pump revolves in an open-top casing connected to the cooler part of the boiler, and from which it takes the water, discharging it at the point of greatest heat. Drier steam, increased evaporation, and a fuel saving of 8 to 12 per cent have been noted.

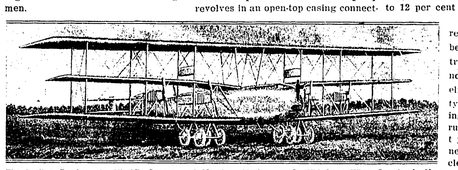
NEW ALUMINUM ALLOW HAS UNUSUAL QUALITIES.

A new aluminum-silicon alloy is reported to possess the strength and ductility of gunmetal. It does not contain a trace of copper or tin, and it is about 10 per cent lighter than aluminum alloys made with either or both of these metals. It is resistant to corrosion and high temperatures, can be made into extremely thin castings, and—what is of greater importance—single castings with considerable variations of thickness.

An accurate spirit level with the bubble constant at all ordinary temperatures, in which the proportion of air and liquid and the shape of the bubble tube are so arranged that a slight variation in temperature affects only the cross-sectional area and not the length of the bubble, has just appeared.

BALOON HANGARS KEPT COOL BY CORRECT PAINTING.

In order to keep the interior of balloon hangars at a low temperature as possible, it has been suggested that the outside be painted with a highly reflecting coating like white paint, while the inside should be covered with aluminum paint. By this means the radiation into the interior may be reduced 78 to 81 per cent. White paint reflects the sun's rays, while aluminum paint is a poor radiator of heat rays. The effect at night is reversed.



The Starling Bomber, the World's Largest and Heaviest Airplane, as It Will Look When Completed: Note the Three Sets of Wings Which Carry the Weight of 40,000 Pounds. The Plane Will Mount Six Machine Guns and Have a Crew of Eight Men.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, minister
(Study at the Parsonage)

Last week Rev. Pendleton was in Spokane attending the association meeting at Vera and improved the opportunity to attend the Bible lectures being given by the noted Englishman, Dr. J. Campbell Morgan. Hundreds of people were in attendance at these lectures, both in the afternoon and evening. At the First Methodist church Dr. Sheldon, the efficiency expert brought to Spokane by the chamber of commerce, was preaching the same gospel to even larger audiences and at the Lewis Clark High school, where the Inland Empire teachers were in connvention, the big speakers from the East were also telling their audiences that unless the spiritual nature was developed our cherished education was a failure.

The Christian gospel and its program of service is becoming recognized as the fundamental solution of society's needs by the thinkers of the day. Every little country church is preaching and teaching this gospel and is deserving of your support whether you are in sympathy with its theology or not.

The Federated churches of Genesee desire to be of service to the surrounding country, as well as to the village, and will be glad to conduct services during week nights or on Sunday afternoons and evenings.

On Sunday, April 22, the pastor and members of the choir will hold services at the Shafer school house at 3 o'clock.

Church School at 9.45 A. M.

Morning Worship and reception of members at 11 o'clock.

Junior C. E. at 2:30 P. M.

PERSONAL MENTION

Mrs. J. H. Jackson was a Lewiston visitor on Wednesday.

Mrs. Henry Craft was a Tuesday passenger for Pullman.

Chas. W. Smith spent the week-end with friends in Pullman.

Miss Irma Russell spent the week-end with friends in Lewiston.

Sister Matilda was a Saturday passenger for Colton for a short stay.

Elmer Stovall returned Wednesday afternoon from a short stay at Colfax.

Charles Geseltchen was a Tuesday morning passenger for Bonners Ferry.

Cletus Gustafson left Saturday for a short visit with relatives at Spokane.

Mr. and Mrs. F. H. Meader were Tuesday visitors in town from Lewiston.

Ed. Peterson of Clarkston was a Genesee visitor Tuesday and Wednesday.

Robert Post returned to Kellogg Saturday after a visit with home folks.

David Hickman was a Sunday passenger for Spokane, returning Wednesday.

Miss Josephine Kambitsch of Lewiston was a Genesee visitor for a short time on Tuesday.

Ray Willoughby returned to his home Saturday after a visit with friends at Johnson.

Clara Lillyrose was a Saturday morning passenger for Johnson for a visit with relatives.

E. C. Swenson left Friday morning for Shelby, Montana, where he will spend the summer.

Mrs. Chas. W. Smith left Saturday morning for Spokane where she will visit her mother, Mrs. Norenberg.

Henry Odberg was a Saturday morning passenger for Spokane for a short visit with his brother, Ellis Odberg.

Miss Spuler was a Saturday morning passenger for her home at Pelouse after spending several months at the Christenson home.

W. F. Buchhols of Spokane was a Genesee visitor Tuesday afternoon. Mr. Buchholz was bookkeeper for the First Bank of Genesee some ten years ago and is now with the Spokane Eastern Trust company.

A. E. Elver, local agent for the N. P. railway, left last Friday morning for Missoula, Montana, where he entered the railroad hospital for treatment. Mrs. Elver joined her husband there on Monday of this week.

Notice to Stock Owners

Notice is hereby given that all stock must be kept off the highways in the Rimrock Highway district. All stock found running at large on the highways will be taken up and impounded and the owner fined according to law covering such offense.

Rimrock Highway Commissioners. 41-3

BATTLE SHIP IOWA SUNK IN NAVY TARGET PRACTICE

(Continued from first page)

shells were gone. The Iowa was still afloat after the firing ceased and while the salvage party made an inspection of her all the turrets brought the service shells (war ammunition) up to the guns and on the next run turrets 2 and 4 started firing service shells while turrets 1 and 3 were ready to pick up the fire in case any turret went out of order. Thus turrets 2 and 4 fired 27 service shells each and before the last salvo was out the Iowa keeled over on her side and before I could get outside she had gone. All I could see was the place where a few seconds before she went down with the fleet lying around the spot where she sank. To me it looked like a funeral, only here the ships were paying their last respects to a grand old ship. I wanted to take a picture of the place where she went down but the Mississippi was more than 12,000 yards away a the time and it being so hazy I could never have made a picture at that distance. But there will be a lot of pictures and I am going to get a few of them if I can.

In all, turret No. 4 fired 74 shots, and only two miss-fires in two days of firing. The first day the left gun missed fire because, as the plug was closed the primer fell out unknown to the gun crew, and on the second day the same thing happened to the center gun. But the entire turret performed 100 per cent and as soon as the last shot went out the D. O. congratulated me on the splendid work I done in leaving the turret in such a good condition. He patted me on the back and told me how much he appreciated the long and extra hours I put in on the turret. This was the best the turret has ever done since the Missisippi was built and the most she ever fired at one time. The guns did well and held up in good shape.

Tuesday night I made my last test of everything for the next day's firing and found one air valve on the flooding system refused to work. But by midnight I had it working. After firing Wednesday the turret crew worked until after midnight getting the service shells ready for the next day's firing. There was no word that we were to fire service shells, but the captain wanted to be ready to fire service shells on a moment's notice and so Wednesday night all was ready for the next day and it was no surprise us when the order came to fire service shells until the Iowa sank. Wednesday alone I fired 57 shots out of my turret. After the firing we returned to Panama, arriving there about 8:30. So you can see how I celebrated my birthday. Even the captain helped me celebrate by firing all the guns as a salute. And since the guns all worked so well there will be no navy yard in sight until next fall. I am going ashore Saturday and drink that extra stein to the success and for my birthday, too. I am enclosing a beer label from Panama. This, I believe, should be an excellent souvenir of the days gone by.

The Use of Dynamite in Drainage Projects

By W. B. ALFORD, Agricultural Representative E. I. du Pont de Nemours & Co., Inc.

In planning any drainage project it should be borne in mind that there are certain parts of the work which can be done with dynamite with a decided saving over all other methods. When floating dredging machines, the smaller washing dredge machines, team work and hand labor alike reach their limit of usefulness, dynamite offers itself as both an efficient and economical ditching agent. It takes up the work of ditching where the dredge leaves off, for it can be used for digging the small lateral ditches as outlets into the main canals where the use of dredging machinery is often impracticable and always expensive; where the ground may be too wet for team work, and where hand labor is too costly.

For the purpose of defining more accurately the field of usefulness of dynamite in digging lateral ditches, let us compare the cost of these several methods. We may assume that the cost of setting up the smaller type of walking dredge is not less than $1200. At least a mile of ditch would be blasted with dynamite for this sum, and further, two miles could be so dug before the contractor using the dredge would have a chance to come out from under his overhead cost and start to make his profit. Whereas the cost of dredge work on large jobs is only approximately 15 to 20 cents per cubic yard, on small jobs it rises to approximately 30 to 40 cents per cubic yard. Lateral ditches at least two miles long had therefore better be eliminated from dredge or machine work if conditions are suitable for the use of dynamite.

Where the ditch is to be made through dry soil, good results can be secured by team work, but the cost again exceeds that of blasting. The cost of team work would be approximately 25 to 30 cents per cubic yard, plus the additional cost of blasting out stumps through timbered land; whereas blasting by the electric method with dynamite would cost less.

If the soil is too wet for team work, hand labor still remains as a possible method of ditching to be compared with blasting. In wet soil where stumps are frequently encountered, hand digging would cost at least 80 cents to $1.00 per cubic yard. Under such conditions dynamite can be used to decided advantage, for by the propagation method with 50 per cent nitroglycerin dynamite, stumps may be blasted out and the ditch dug in the same operation. The cost of blasting by this method would be approximately 20 to 25 cents per cubic yard, and the resulting ditch as good or better than a ditch made by any other method. Blasting cuts a clear channel and scatters the soil removed over the surrounding area, leaving no spoil banks to wash or cave back into the ditch.

Dynamite has also a definite place in straightening crooked channels of streams of widely varying characteristics. Ditches for this purpose are usually too short or too small to make the use of machinery practical. When the stream has but little grade the soil is likely to be too wet for team work or hand digging, as the ground water will be near the surface and will forestall the digging of a ditch of the depth which is essential for the purpose. The moisture in the soil will be an aid, however, to blasting the ditch by the propagation method. As a small ditch having a grade of two feet per mile or less will silt up quickly if pot holes are formed, certain loading practices should be observed in blasting such a ditch. Wherever the grade is less than three feet per

> Experience qualifies Mr. Alford to discuss this subject. Prior to about five years ago he was agricultural agent for the Central of Georgia railroad. Since the nhe has specialized on land development problems and explosives practice in stumping and drainage operations. He is one of the inventors of the Cowan-Alford Boring Machine, an efficient power boring unit that cuts land-clearing costs to a minimum, and he is well known as an expert on ditching with dynamite.
>
> Two years ago his drainage work to promote malaria control in the south so impressed the surgeon general of the United States that he was asked to exhibit photographs of blasted ditches and to deliver an address before the U. S. Public Service convention at Little Rock, Arkansas. Last year, by request, he demonstrated ditching with dynamite and read the accompanying paper before the National Drainage Congress at Kansas City, Missouri.

mile the dynamite charges should be heavy enough and close enough together to remove all the earth from the ditch, leaving a clean uniform channel and banks; for no erosion can be depended upon.

Streams running through soil dry enough to make conditions suitable for team work are likely to have a grade of six to 12 feet per mile. On such a grade erosion takes place rapidly, so that if a straight channel is once started flood waters will scour out the ditch automatically. The shorter and more direct descent continually increases the velocity of flow. Where there is a grade of 100 feet or more per mile, heavy charges of dynamite should be placed three or four feet apart and five or six feet deep and fired by the electric method. The result of the shot will be a series of pot holes with loosened earth between them and the ditch five or six feet to each side. The shot will not give a finished ditch, nor will it look at first like a good piece of work, but it will in reality do all that is necessary for under favorable soil conditions, the flood waters will scour out the channel and scatters the soil removed over the surrounding area, leaving no spoil banks to wash or cave back into the ditch.

The main consideration in ditching to straighten a stream is to secure a deep narrow ditch. Wide shallow ditches slow down the velocity of the current, while deep narrow ones increase the velocity, and the object is to get maximum velocity in order to erode the ditch until it is large enough to take care of ordinary flood conditions. The depth of the charges for ditches to straighten streams should be governered by the drainage area of the stream, the rate of fall of the water draining into the stream and the grade of the stream itself, as these factors chiefly control the volume and velocity of the current and hence its power to carry eroded materials in suspension.

Clearing the right-of-way for dredges and other machinery is another purpose for which dynamite may be effectively used in ditching operations. In clearing, preparatory to the use of the floating dredge, all that is necessary is to split the large stumps i nfrom four to six pieces. The machine will then remove the pieces one by one as it dips up the dirt, and will likewise scoop out the smaller stumps without their being split. In splitting a large stump the first and most difficult step is to make a hole in it at the place where the dynamite will have the greatest effect. The hole should be bored through the crown to a point just below the stump. If the stump is 40 inches in diameter, let us say, it is necessary to bore 40 to 50 inches deep; that is, just a little deeper than the diameter of the stump is just above the crown. The hole should then be sprung with a small piece of dynamite that will spring it in proportion to the quantity of powder to be used, loaded according to the size of the stump, and fired by either the cap and fuse or the electric method.

If the right-of-way is to be cleared for drag-lines or other machinery for which the stumps must be removed outright, roots and all, this, too, can be done best with dynamite. The stumps should be loaded and shot by the same method as described for splitting them except that the hole should be bored a little deeper and loaded a little more heavily.

When the ditch is to be blasted with dynamite some preparatory clearing is necessary, but not the removal of stumps. The right-of-way should be cleared to a width a little greater than is desired for the top of the ditch. Trees should be cut down and cut into lengths, say about 10 feet long, and the tops and branches removed from the ditch line. The dynamite blast will remove the logs. Small growth, such as cattails and tall, heavy grass, should be cut back from the right-of-way for, if left standing, it will allow the gases from the explosion to pass through, but screen some of the dirt back into the ditch, partly filling it. Any debris or logs that may lie under water along the ditch line will be easily removed by the dynamite.

No ditch should be allowed to raft up with logs as the logs will catch all small debris and will hold the washing soil so that the ditch will soon fill in at that point, and bushes will begin to grow, thus further hastening the filling in. If ditches are left standing a few years without care, they are apt to grow up in small trees, especially where lateral ditches empty into them. They usually fill up to a depth of about four feet in a few years in stretches of from 100 to 500 feet in length. The cost of keeping a ditch clear is very small when the work is done each year. The farmer who is looking after his small ditches himself should keep the ditch banks free from growing bushes and weeds and remove logs as soon as they begin to collect. This would mean a saving in the end.

If, however, ditches have been allowed to fill up they can be cleaned out with dynamite. They are usually wet in the bottom and can therefore be shot by the propagation method. One line of holes heavily loaded will ordinarily make a ditch of sufficient size in the bottom of the old canal to carry the water. As the dynamite removes stumps, log jams and dirt at the same time, three men can clean out at least 500 feet of ditch in a day at a cost of about 20 cents a cubic yard.

The use of dynamite in these various ways—for blasting lateral ditches in large drainage projects, for straightening stream channels, for clearing the right-of-way for ditching machinery, and for cleaning out old ditches—so expedites and cheapens the digging and maintenance of ditches that a knowledge of what it can do is of importance to all those who are interested in drainage, and in sanitation through drainage.

Fights White Man All Alone

Chief "Old Posey," of the Piute Indians, is making his last stand all alone against the white man in the hills of Utah. His small band of twenty-seven warriors was captured, but he escaped. J. Ray Ward, shown below, is in charge of Uncle Sam's men who captured the followers and will bring in the old warrior.

DAIRY

The dairyman who produces and sells a low grade of cream is nipping profits in the bud.

High quality butter is in the greatest demand and it is natural that creamerymen should be willing to pay more for the better grades of cream.

The 1922 leaders in the seven classes of different ages of purebred Holstein cows produced an average of 29.55 pounds of milk and 1250 pounds of butter in one year. In the full age and senior four-year class previous records were broken, according to a report of the national headquarters of the Holstein-Friesian association.

During the year 18,000 cows were tested for production and since the establishment of the official test 95,000 cows have passed the production required for their age, the report stated. All tests are supervised by state colleges of agriculture. Last year 113,772 Holsteins were registered with the association.

In the full age class, May Walker Dille Homstead, owned by the Minneapolis Holstein company at Austin, displaced Dutchess Skylark Ormsby, a Washington state cow, with a production of 31,10 pounds of milk and 1523 pounds butter. Grahamholm Colantha Pauline Segis, a Minnesota cow, displaced another Minnesota cow in the senior four-year class with a record of 34,291 pounds milk and 1426 pounds butter.

In the junior four-year class, Mamsell Johanna, owned by C. L. Spaulding of Warren, Minn., stood highest for the year with a record of 31,515 pounds milk and 1317 pounds butter. Countess Matador Segis, the senior three-year champion from Washington, produced 25,817 pounds milk and 1159 pounds butter. Junior three-year champion, Princess Maida Veeman, owned by Earl Graham of Compton, Cal., produced 29,624 pounds milk and 1154 pounds butter. Colony Grebegga Valdessa, senior two-year champion, produced 28,371 pounds milk and 1095 pounds butter. She is owned by Colonly farm, Essondale, B. C. In the junior two-year class, Daisy Aggie Ormsby, owned by John Erickson of Waupaca, Wis., was high cow for the year. She produced 22,151 pounds of milk and 1098 pounds butter.

NATIONAL BUREAU AIDS STATE APPLE GROWERS

At the request of the apple growers of Washington the transportation department of the American Farm Bureau Federation is preparing to support the recently granted reduction on freight rates on vinegar from the Yakima valley to Chicago and east.

Immediately after the Interstate Commerce Commission issued the order granting a 25 per cent rate reduction, the Chicago vinegar interests filed a protest. The Farm Bureau will support the reduction on the ground that the marketing of this byproduct is essential to the welfare of the Washington apple growers and the lower rate is essential if the vinegar reaches the market.

Hurry Call.

Policeman (to messenger boy with hat box)—What's your hurry, sonny?

Messenger boy—I've got to deliver this lady's spring hat before the style changes.

SPRING MANAGEMENT of BEES

B. A. SLOCUM. Extension Specialist in Bees

Spring is with us again. Do you realize that the amount of honey you will receive is determined by the way you handle the bees this early in the year? Spring is the period in which one obtains the large working force of bees which spells success or failure at the time of the honey-flow. Five to six weeks are required to produce a field bee from the time of the egg is laid. It is important to keep this in mind for the harvest hands are obtained at least five weeks before the flow. The bees produced later than this become boarders and do not assist in bringing in the nectar unless the flow continues for six weeks or more. The purpose of spring management then is to so manipulate the colonies that the largest possible working force is obtained at the beginning of the period when the most important honey plants, in your locality, begin to yield nectar.

There are a number of factors influencing the production of this enormous working force of sixteen to twenty pounds of bees, representing 80,000 to 100,000 bees. The more important of these factors are adequate stores, a young laying queen, sufficient room for brood rearing and spring protection.

Bees should have at least twenty-five pounds of honey within the hive at all times. If the stores should fall below fifteen pounds the queen will not only reduce the number of eggs laid but the bees will carry out the young brood, thereby reducing the number of mouths to be fed later. A full depth Hoffman frame well filled with honey will weigh about five or six pounds.

A large number of beekeepers in the past have failed to furnish sufficient room for brood rearing. A good queen will fill twelve frames with brood by the beginning of the honey-flow, consequently she should be given the run of at least two hive bodies.

Most farm poultry keepers do not know the value of dry mash as a food for getting eggs. One of the best dry mashes we have ever used is simply oats crushed by running them through a roller chopper. They are then fed dry in a self-feeding hopper with about one pound of granulated charcoal to every hundred pounds of the crushed oats. Equal parts of oat chop and shorts or bran will also make a very good dry mash, where the crushed oats can not be secured.

Miss Spann—Joe, what will your father say about your low average?

Joe—When he sees I'm down to zero, he'll 'warm me up' I guess.

HOMEMAKERS' CORNER

Conducted by
Mrs. Sidney Webb, News Editor, and
Alice Lindsey Webb, Agricultural Extension Editor.
Lincoln R. Lounsbury, Agricultural Extension Editor.
State College of Washington.

SYSTEM IN THE HOME.

The old fashioned housekeeper devoted all her time and energy to her family and felt she was doing her Christian duty. Many fine examples may be taken from the experienced housekeeper, and the present generation will never be as self-sacrificing and as willing workers. But the homemaker of the American family today can not hope to meet the demands upon her time if she runs her home in a haphazard way or lacks system in her work.

The proper kind of system means less money spent, less work, and more time for the manager. "System" to many usually means a lot of "red tape," hard and fast routine which takes away the pleasure of the home. If properly managed, system need not mean disagreeable things, but a working order which reduces much of the friction caused by haphazard methods.

Every housekeeper must establish her own system of work to meet the needs of her family. For this reason it is hard to give any special directions to individuals. In general, the main purpose of any system is to reduce the amount of energy and money spent and lessen the time used in performing certain duties.

The first step in considering system in the home is the arrangement of household equipment. Are the kitchen and its utensils arranged to save time and steps? Do you have proper storage space for needed articles? Is the laundry equipment arranged to save steps and labor? Isn't it worth while to look into the labor saving devices which help to make wash-day less like a "Blue Monday?" Have you seen the closets made for storage of cleaning implements? Is your daily routine work done in a systematic manner? Can you save time in any of your household operations by planning your day's work in advance?

A definite system for buying food and clothing should be started. For this a budget system in apportioning the family income is necessary. If one intends to save, as everyone should, a definite system should be adopted. A certain amount should be laid aside at definite intervals; but and miss saving fund. never provide an old age fund.

The time element in housework may be reduced by careful planning of a day's work. The elimination of useless motions and the saving of steps and time should be studied. It is estimated that a woman walks 181 miles in a year while setting the table for three meals per day. It is possible to save 165 1-2 miles of travel and 182 hours of working time in each year by the use of a utility table. There are 501 farm women in the state of Washington who, during the past year, saved seven years' time in their daily housework by using labor saving devices. This is a saving of 5 1-2 days or nearly a week out of each year for every woman. Much energy and backache may be saved by having working surfaces the correct height. Experiments have shown that it takes about 12 per cent more energy to do work at a table too high and from 15 per cent to 25 per cent more energy to work at a table too low. Why not have working surfaces the correct height to comfort and saving of energy? Sinks and stationary wash tubs are usually too law.

"A place for everything and everything in its place," is an old saying that sums up the problems of system in the home. Ask yourself how you may shorten every operation necessary in the home; how you may lessen the amount of work, avoid friction, and increase leisure time if there is such a thing. Most women do not want less to do, but health and strength to do more.

Setting Hens Should Be Given Well Built Nests As First Step in Helping Them to Beat Results

When a poultry raiser decides to employ natural incubation he must assist nature and the hen to a certain extent.

For example, the nest for sitting hens must be large enough to prevent the eggs from being crowded or piled upon one another. It must be deep enough to protect the eggs from below and to help the hen by holding the warm about the eggs.

Comfort is a thing that must be carefully considered. The hen must

COMB NATION NEST

be kept from other hens that might disturb her while setting. After the hens are disturbed they become nervous and are likely to break the eggs.

Nests for sitting hens can be made in a variety of ways. They should be at least 14 inches square. Soap boxes answer the purpose very well. A box nine inches to 15 inches wide and 18 inches long provides ample room. The entire box should be lined with hay, and there should be a cover over it.

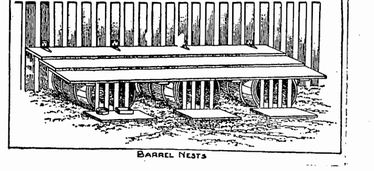
Barrel Nests.

Nests made of barrels (shown in the accompanying illustration) laid on the side against a post and sheltered from the weather make useful nests for sitting hens and may be used as brooding coops for the hen and her chicks. When not needed for hatching they may be used as coops for the broody hens.

Sitting hens should be laid in the rear part of the barrel and the food and water placed on the outside at the front. When nests are prepared in this way the eggs are saved from danger and are confined to the nests.

A somewhat more elaborate nest called the combination nest is also shown. It is economical of space and is suitable both for the sitting hen and for her chicks after they are hatched. The boxes may be made singly or in pairs, as shown in the illustration. In the latter nest two hens can be set at the same time, one on each side. The whole front of this coop should be fastened with hinges at the top to serve as a door. The slats in the front are sliding doors that push up when the doors are closed, and through these doors the chicks can pass in and out of the coop.

Each single coop should be 24 inches square and at least two feet high in front is made of wire cloth. Such coops should be placed under shelter.



BARREL NESTS

Cherry Growing Will be Important in the Future

Cherry gowing on a more extensive scale is in sight for the territory immediately tributary to Moscow within the next few years, according to present plans. The result will be increased incomes for many persons owning land in this district, and the development of a really profitable industry ,which will, in turn, have a tendency to attract more people to small tracts near Moscow.

W. M. Crapo, Lewiston manager for the Oregon Packing company, a branch of the California Packing corporation, spent Thursday in Moscow, in conference with Fred Veatch and others, looking to the contracting of one hundred acres of Royal Anne cherries in the teritoy close to Moscow. The contracts, several of which were signed up Thursday, cal for new planting, and cover a period of 5 years, or about 10 years after the trees come into full bearing. The trees will begin to bear at from five to six years. The minimum price provided in the contract is five cents per pound, and where the price is above five cents, 85 per cent of the Lewiston valley price.

Mr. Crapo stated that the company would keep men on the ground during the picking season, rent a building here and prepare the cherries for shipment to Lewiston, where they will be canned. The company has 230 acres of Royal Anne cherries under contract in the Lewiston district, and could contract more, but can not handle more during the short season. In this district the cherles will ripen just after the close of the Lewiston season, and the company can transfer its crews to Moscow, which will be a considerable advantage.

One hundred acres will accommodate about 4,500 trees and the average yield per tree will be at least 300 pounds, many trees running as high as 600 pounds. The income from the land planted to cherles will be about $900 per acre, after the trees come into full bearing. The contracts cover from one to 10 acres, and Mr. Crapo is of the opinion that little difficulty will be experienced n securing the desred acreage.

Later the company will probably contract for other products which can be grown successfully in the Palouse district.

Two hundred Umatilla Indians, 100 horsemen, 300 dancers, 1,000 actors and 400 singers, besides members of 32 various committees working in different capacities, will be used in staging Walla Walla's historical pageant, "The Winning of the West," which will be held in Walla Walla, June 6 and 7. The story of the pageant was written by Dr. S. B. Penrose, president of Whitman college, and it is expected that the assignment of rolls will be decided upon within the next few weeks .

HAMPSHIRES 1-2-3-4-5

FOR 5 YEARS IN SUCCESSION Hampshires have won grand championship over all breeds, all ages, and all weights of hogs in the carload lots, at the International Livestock Show, 1918-1919-1920-1921-1922.
FOR 5 YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this Show.
HAMPSHIRES ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their early maturity—their grazing qualities—their activity, health and vigor—their highly developed thrifty meat type—their grazing qualities—their early maturity and economical gains—AND BECAUSE THEY ARE RECOGNIZED MARKET TOPPERS.
FOR information about Hampshires or for names and addresses of breeders near you address,

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

Handling Young Pigs.

"Give us little pigs a real chance and then from 30 to 35 per cent of our number will not pass on to the 'Happy Hunting Grounds' before weaning time arrives." If the recently farrowed pigs could talk most of them might say something similar to the above.

Experiment station work conducted in 1921 indicated that litters averaging 3.3 pigs saved cost over twice as much per pig as litters averaging 6.5 pigs. This is so because the feed furnished the sow, the boar service, labor, interest on the investment and depreciation each year must be prorated over the litter of pigs raised. Mr. Farmer, the little pigs ask, among other questions, the following:

1. Did you and are you now feeding my mama a balanced ration, one containing something besides wheat, corn or barley, both before and since farrowing? If you did not and are not now, you can not expect strong vigorous pigs, the kind that "jump" from the start.

2. Are you giving us all available sunshine or are we shut up in a dark pen which the rays of sunlight do not enter? If so, several of us will soon look sickly, fall behind and die.

3. Are you failing to give us exercise and are you feeding a fattening ration? Then we will have indigestion.

4. Does a draft blow over us, or up through the cracks in the floor? Is the bedding damp? If so, rheumatism and other troubles soon overtake us.

5. Are you expecting to arrange a pig creep for us to eat by ourselves, when we are about 15 days old? If you do not you are missing your opportunity. We use less feed per hundred pounds gain while we are young than we ever will again.

6. Are you arranging for pasture or a legume or grain mixture? If you do not it will cost you that much more for each pound of gain we put on. Besides, we will not be as healthy nor make as rapid growth.

7. Are you figuring on altering us boar pigs at six weeks and weaning at eight? Should you do both at once we may suffer a serious set-back.

8. If skim milk is not available are you furnishing us tankage or fishmeal to the extent of 8 or 10 per cent of the ration, by weight? If you are we will make a more economical growth into longer bodied, bigger hogs, the kind that will make you money.

9. Are you compelling us to root up the whole hog lot for minerals? We should have a simple mineral mixture kept in front of us, consisting of: Bone meal or slaked lime, salt, and charcoal, wood ashes or soft coal. Then we will grow faster and do better.

10. Are we allowed to run in the same old hog lot in order to pick up the internal parasites left by former hogs? Our resulting lack of growth and inability to become "good doers" will be your loss.

Big Turn Over in Farm Occupants Last Year

Nearly 1,250,000 farms, or approximately one out of every five farms in the United tates, changed occupants in 1922, according to a survey made by the United States department of agriculture.

This is the first survey of the kind made by the department, and "while the charges give evidence of considerable mobility among American farmers, until comparative figures for other years are available it will not be possible to determine whether the extent o fthe movement in 1922 was greater or less than usual," says Dr. C. L. tewart, economist preparing the report.

In nine southern states one farm in every four changed occupants; in six states in the New England group the turn-over was one farm in every ten, and in most of the corn belt and western states between 10 and 15 per cent of the farms changed occupants.

Charges in ownership of farms took place on nearly 400,000 farms, or approximately one farm in every 16 in the United States. In general, more farms changed owners in the west and south than in the New England, middle Atlantic and corn belt states.

Of the 2,300,000 or more farm tenants in the United States more than 625,000 changed the scene of their operations during the year. More than 75 per cent of these tenant changes occurred in the 15 southern states. In both Georgia and Texas more than 70,000 tenant farms changed tenants in 1922.

The percentage of tenant farms changing tenants during the year ranges from 3 per cent in Maine to 38 per cent in Oklahoma. Seven southern states show a change of more than 30 per cent. In corn belt states the range is from 14 per cent in Illinois to 22 per cent in Missouri, and in Mountain and Pacific states from 12 per cent in California to 26 per cent in Colorado.

Although the number of tenant farms in the United States shows a net increase of 27,000 for the year, more than 230,000 tenants either discontinued farming for some other occupation or left their communities for parts unknown to the department correspondents. A percentage decrease in tenant farms is shown in only 10 states, in two states the percentage was unchanged. In general, the largest exodus of tenants occurred in the south and west.

WASHINGTON NEWS

Movement of farm products from eastern Washington to Seattle for transfer to steamers for California is growing. Recently large tonnage of Yakima potatoes went to this market by the water route.

Seattle markets are showing a preference to Washington garden products over the California goods and considerable Walla Walla spinach and other Eastern Washington products are forcing the California offerings off the market here.

May 4 has been announced as Campus Day by the Washington State College at Pullman. On this day the students assist in the general cleanup of the campus. This is an annual occurrence and is looked forward to by not only the student body, but by the alumni as well.

A three-manual Kimball pipe organ for the auditorium of the State Normal College at Cheney, has recently been ordered. The cost will be approximately $15,000. The organ will be installed by the opening of the fall quarter. A large part of the purchase price has been contributed by the alumni of the school.

At the eighth annual convention of the Okanogan County Livestock association, which was held recently in Okanogan, it was voted to continue offering a $500 reward for conviction of cattle thieves and to assist in the prosecution of the cases. At the same meeting a resolution was adopted, endorsing the proposition of the Wenatchee Southern railroad.

Extensive improvements to operating equipment and yard facilities are now under way at the plant of the Inland Empire Paper company, at Millwood. Development of fire protection equipment and yard trackage are among the enterprises undertaken, together with a project whereby the company will finance the building of 10 modern homes for employes. The total cost of improvement work is expected to exceed $100,000.

Formation of the Washington State Agricultural conference in Seattle is announced. The organization participating in the meeting were the Washington Farm Bureau Federation, Washington State Grange, United Dairy Association of Washington and the Washington Cooperative Egg and Poultry Association. At a meeting to be called soon other farm organizations in the state, including the wheat growers, wool growers, fruit growers and the Farmers' Union, will be asked to come into the conference.

Ray Banks of Yakima has entered college for the second semester. Ray won the Union Pacific scholarship which entitled him to $75 and transportation. He was a representative from Yakima during the Short Course week and has been noted for his breeding of Duroc Jersey hogs.

Colt Raised by Washington Man Is Entered in Kentucky Derby

The Kentucky derby is the classic of American sporting events, and only the finest of the races of the country are entered in this great race. It is said that no horse that is valued at less than $10,000 can get into the event. For this reason, Richard Allman of Coulee City, feels a just pride that a colt of his raising has been entered for the derby, which will be run the 19th of May. It is the first time that a colt foaled in the state of Washington, has ever been entered in the derby, which adds to Mr. Allman's gratification.

The colt in question, Wise Guy, sired by ager, was sold by Mr. Allman at the Spokane fair in September, 1921, to J. B. McGinn who later took the colt to California, where it has been developed into a real racer. The colt is probably in Kentucky at the present time, in training for the great event. Needless to say that the outcome of the derby will be watched for with a great deal of interest by Mr. Allman and others of this state who are interested in thoroughbred horses.

Christian Endeavor Notes

By Ted Parks

The Junior topic, "Happy Sundays," was interestingly presented by Bertha Gash. The Juniors took a lively part in telling of their happy Sundays. In the Bible contest Harriet Evans won for the girls.

Ethel Nelson led the Senior meeting on the topic "The Lord's Day." Some important debates and discussions on the right use of the Lord's day and the difference between the Lord's Day and other days helped to clear up points of difference and started some friends of thought. Special music in the form of a piano solo by Grace Wil-

loughby was rendered.

The Christian Endeavor social last Friday night was a complete success, including the games and the "eats."

A short business meeting was held in which the programs of the committees and officers were gone over.

Birthday Party

A birthday party was given at the home of Mr. and Mrs. Frank Green on Sunday, April 8, in honor of Mr. Green's father, Joe Green, who celebrated his seventy-second anniversary. A large birthday cake was the main attraction of the "eats" and was decorated with 72 candles.

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too — bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend for the things we need and save money reasonably, we display the right sort of faith. We put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

F. J. NIEMANN, Cashier

SPRINGTIME AND STUDENTS

Owing to the fact that several typographical errors and one omission made in this article, as published last week, we herewith reproduce it in order that the writer may be exonerated from the "credit" of such errors:

After the autumn enthusiasm in new work, and the long winter months, spent by those studiously inclined in shaping their various physical beings to the mould of school seats and desks, the reaction of the spring term is inevitable. Lessons and queries are being summarized and clinched in the mind of the embryonic citizen while his body is pleading for the freedom of the great outdoors. He is in tune with the long sealed lines of the willow and poplar and pine, and like them, is about to break the bonds of the winter's hibernation and exult in the ever appealing forces of sunshine and wind and rain, of trees and flowers—of life.

We, their teachers, and you, their parents and guardians, have an additional duty to perform at this season of the year. It is our duty to guard closely these fledglings lest they escape their encasements too soon and be, like the birds, severely checked by those seasonal hindrances to growth, the frosts—the final temperatures for the testing of the qualities of growth. Of those who emerge from their protective coverings too early we know that very few survive.

And so it is with students. The bark of the first ground squirrel, the first bit of colored petal on the sunny bank of earth, the beckoning curves of a winding pathway, or the silent murmur of growing things may all be challenges for the tread of a student's foot, or a call for the sound of his voice. But stern duty has marked a different course and the erstwhile wanderer must pause awhile to glean a few more pages from the experiences of mankind. And while they stop let us call their attention to a few things that perhaps may have been forgotten.

The courses of study of the Genesee High school require an average of at least four hours of daily preparation of lessons from the student of ordinary ability. Usually the student will be able to make one-half of the necessary preparation in the school room. This means that they should devote not less than two hours to intonsive study at home. Are our spring inventories showing this much work spent in honest effort? Pupils who are not in good health, those who engage in outside occupations and those who participate extensively in social functions, will be disappointed in the attempt to complete the course of study in four years. Parents should bear in mind that the demands of the school upon the pupils' activities make it impossible for them to devote attention to matters foreign to serious study on all evenings coming before school days. These times should be free for home study.

Parents are asked to cooperate with the school in securing the prompt and regular attendance of their children. It should be remembered that the school is a place of business, and that proper reasons for absence or tardiness are few. Much of the discouragement and most of the failures of the unsuccessful student are the results of irregular attendance upon the sessions of the school.

A recent ruling makes it necessary for a student to receive at least two credits in any semester to be permitted to re-enter school the following semester. Allowable excuse for a failure must be ill health or some other cause beyond the control of the student.

Bielenberg-Schooler Post
The American Legion
Meets Each
First and Third
Wednesday of the Month

Decoration of Overseas Graves

Bielenberg-Schooler post is in receipt of a bulletin from departmental headquarters, as follows:

Each and every year the American Legion—our organization—decorates the final resting places of the heroes who remain on foreign soil. During the past this has been done by donations from the posts, which necessitated a call being made each year. The annual hundred dollars were raised by this method and it is to be recorded that the posts in Idaho responded with the same spirit which won the war.

However, this method has proven more or less unsatisfactory in that national headquarters could not determine the amount on which they could depend. Acting with his usual progressive spirit, Commander Owsley formulated the plans for a permanent endowment fund. The plan follows:

A fund of $100,000 is to be raised from donations received from the 11,000 posts in the United States. Each post to assume its own responsibility for the ways and means of raising its share of the amount thereof and forward same to R. H. Tyndall, national treasurer, The American Legion, Indianapolis, Indiana. The proceeds are to be made into a permanent endowment fund, the earnings for which are to be used for the annual decoration of overseas graves. Thus will this problem be disposed of for all time—no annual donations being necessary.

The plans also include the receiving of donations in any amount from friends, relatives and members of the immediate family of the deceased veterans. Donations may also be solicited and received from the public.

The plan is for Idaho to underwrite at least $1,500. Each post must raise an average of $20, the larger posts raising more than the smaller.

National Commander Owsley in a recent issue of The American Legion Weekly, stated:

It is the high honor of The American Legion to represent the American people in the fulfilment of the sacred national obligation of decorating the graves of our soldiers abroad on each Memorial Day. We gladly assume this responsibility and ask every American to share with us the performance of the patriotic duty it involves. The Legion pledges itself always to remember and honor our dead on foreign soil on the day when the heart of all America is thrilling with reverence for them. Let us all—every Legionnaire, every post—contribute this year to the Graves Endowment fund, which will insure that each year our respect and honor shall be fittingly bestowed upon those who sleep in perpetuity in the cemeteries of Europe. Let us call upon our fellow-citizens to join their contributions with ours so that the world may know we all remember those who died for us.

Notice to Creditors

Estate of Dennis Sweeney, Deceased.

Notice is hereby given by the undersigned, executrix of the estate of Dennis Sweeney, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said executrix at the Genesee Exchange Bank, the same being the place for the transaction of the business of said state, in Latah county, state of Idaho.

MARY SWEENEY,
Executrix of the Estate of Dennis Sweeney, Deceased.
Dated at Genesee, Idaho, March 27, 1923.

Two hundred Umatilla Indians, 100 horsemen, 300 dancers, 1,000 actors and 400 singers, besides members of 32 various committees working in different capacities, will be used in staging Walla Walla's historical pageant, "The Winning of the West," which will be held in that city June 6 and 7.

NOTICE OF GENERAL CITY ELECTION

Proclamation by the Mayor of the City of Genesee, Idaho

Notice is hereby given that on Tuesday, the 24th day of April, 1923, there will be held in the City of Genesee, Idaho, a general city election for the purpose of electing:

A mayor, a city clerk, who is ex-officio police judges, a city treasurer, and two cuncilmen from each ward; all of said officers to be elected for a term of two years.

The polls will be open at 9 o'clock a. m. and continue open until 7 o'clock p. m. of said day, at the following places:

First ward at the office of W. W. Burr; second ward at the Community house.

The following named voters have been appointed judges and clerks of election:

First Ward—Judges: Mrs. Eliza Gray, Henry Rees and Mrs. Susie Hickman. Clerks: G. A. Bumpass and Mrs. Charles Ingle.

Second Ward—Judges: Mrs. E. Linehan, James Montague and Arthur Springer. Clerks: Maggie Bottler and Mrs. Reisenen.

Dated April 2, 1923, at Genesee, Idaho.

(Seal) F. S. CASEBOLT, Mayor.
Attest:
W. W. BURR, City Clerk. 48-3

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the the County of Latah.

Iona M. Sides, Plaintiff, vs. Wayne Sides, Defendant.

The State of Idaho sends greetings, to the above named defendant, Wayne Sides.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the county of Latah, by the above named plaintiff of the nature in general terms as follows:

The said action is brought to obtain a decree of divorce dissolving the bonds of matrimony heretofore and now existing between plaintiff and defendant, as will more fully appear in the complaint on file herein and to which reference is here made and for the care, custody and control of Elvin Edward Sides, the minor child of the parties, and

You are hereby directed to appear and answer said complaint within 20 days of the service of this summons if served within the judicial district and within forty (40) days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idano, in the count yof Latah, this 7th day of March, 1923.

HARRY A. THATCHER, Clerk.
By ADRIAN NELSON, Deputy.
THOMAS A. FEENEY,
Attorney for Plaintiff.
Residence and Postoffice Genesee, Idaho. 36-6

Notice of Registration for City Election

To All Voters of the City of Genesee:

1st. All voters must be registered in order to vote at the city election on April 24, 1923.

2nd. If you voted at the general city election in April, 1921, you do not have to register for the coming election, but if you have moved into another ward it will be necessary for you to transfer to said ward or you will not be registered.

The place of registration is at the office of W. W. Burr, register, any day during business hours, until the Saturday before election at 9 o'clock p. m. W. W. BURR,
40-3 City Clerk.

There Was Applause

"The train pulled out before you had finished your speech."

"Yes," replied Senator Sorghum. "As I heard the shouts of the crowd fading in the distance, I couldn't be sure whether they were applauding me or the engineer."

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, APRIL 20, 1923. — NO. 42

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Moscow Gas Prices Drop

Gasoline prices in Moscow will take a drop of one cent beginning Tuesday morning, according to an announcement from J. W. Parkhurst, of the Moscow Service Station this afternoon. The price in the future will be 27 cents a gallon, instead of 28 cents. The price drop in motor fuel has been made generally throughout the northwest, and it is stated will be permanent. Whether further drops could be looked for could not be learned.—Star-Mirror.

Repairing Road

A limited amount of money is available for maintenance of the north and south highway between Grangeville and White Bird, and a crew is dragging and grading on the White Bird side of the hill. The macadam on the Grangeville end is in good condition.

The highway will be closed to traffic at a point three miles south of White Bird, and will remain closed for at least three weeks, necessitated by construction, according to an announcement by Dan Johnson, the contractor.—Cottonwood Chronical.

A Peculiar Accident

W. A. Carr suffered injuries to his face and nose Sunday due to a rather peculiar accident which occured while he and James Langdon were shooting squirrels with a 22-calibre rifle on the W. W. Bowker place which Mr. Carr has rented. It seems that Mr. Carr had some of the cartridges in his pocket with his pipe and after hunting for a while he took his pipe and filled it to smoke. Evidently a cartridge got into the pipe and was not noticed by Mr. Carr and shortly after he lit his pipe an explosion occured, blowing the pipe to pieces and injuring his face and nose. Fortunately he was not seriously hurt.—Julietta Record.

First Wobbly Out of Luck

John Warner, an I. W. W., was arrested at Camp 6 last Sunday, while making his way into the upper lumber camps with a grip full of wobbly literature. Depnty Sheffiff Pat Malone made the arrest having been notified at Bonville by officials of the company that the man was beginning to spread wobbly propaganda in the camps. Warner was brought to Deary and lodged in the village jail while Deputy Malone, C. N. Nogle, woods foreman, and others went to the camps west of here to look for another member of the organization who were reported to be in that vicinity. The man was not found, however having no doubt departed hence rather than meet the officers. Warner was taken to Moscow Monday.

This was quick work on the part of Deputy Malone, and Warner himself expressed astonishment at being apprehended so soon. The wobblies seem to be aware that this section is not friendly toward them and the purpose of their agents seems to be to drop in without any noise, get in a day or so agitation, scatter what literature they can and then get away before an alarm can be sent out. In this case their agent didn't get a chance to contaminate anybody.

In response to a request for protection against the I. W. W. of the lumber companies of northern Idaho Governor Moore has appointed Col. Foster, who was the head of the state constabulary before that department was abolished, to take full control of the matter. There seems to be grounds to believe that the wobblies will be active in the northwest this year and early measures should be taken to protect our industries from their operations.—Deary Press.

A BIG CONVENTION IN A LITTLE TOWN

The following communication regarding the Sunday school convention to be held at Deary next Monday has been received by the News from that thriving little town:

The Latah County Sunday school convention will meet at Deary April 23, 1923, at 2 and 7:30 o'clock p. m.

The local committee is leaving no effort undone to make this convention in Deary one of the best that has been held for a long time. This is the first time that a Sunday school convention has been held as far east in this county as Deary, and there are many small, earnest, struggling Sunday schools up in this territory that have never had a delegation to one of these conventions of inspiration and help. Therefore the committee is looking for help and support from everybody who can possibly get here. From all advance reports we are anticipating a capacity crowd.

Mr. and Mrs. E. C. Knapp, Dean Eldredge and several other "big guns" are going to have charge of the program. Special music by the Potlatch choir and other attractions are scheduled. We cannot publish the program, for it is to be a "surprise program." This means that you will never know what is coming next and you won't dare to miss any of it—as Mr. Knapp is noted for his lively and interesting programs. He is ranked as one of the very best in the whole United States in his line of work.

The Ladies' Needlework guild will serve dinner and supper at reasonable prices.

The roads are good from every direction and we are promised good attendance from every section of the county.

All will be welcomed.

Lawson-Butetfield

A very pretty home wedding occurred on Wednesday when Miss Mildred Lawson became the bride of Alma A. Butterfield of Pocatello, Idaho, at the home of her parents, Mr. and Mrs. J. W. Lawson, well-known Genesee residents. The wedding was attended only by immediate relatives and friends of the bride, the ceremony being performed by Rev. James N. Pendleton, pastor of the Federated church, the beautiful Episcopal ring service being used.

The bride was attired in a traveling suit of navy blue and carried a bouquet of sweet peas. She was unattended.

After the ceremony a delicious wedding dinner was served, the table decorations being pink carnations.

Mrs. Butetfield is well and favorably known here and has a host of friends among the younger people.

The groom is a vocational student in the agricultural department of W. S. C. and the newly-weds will reside at Pullman until May, when they will go to southern Idaho where the groom owns a farm.

The News joins in wishing Mr. and Mrs. Butterfield much happiness through life.

Real Spring Weather

The Genesee section has been blessed with real April weaher during the past two weeks, although there have ben been many beautiful days. Tuesday was the warmest day thus far. Many cases of spring fever were reported and some of them were said to be quite serious. However there were no cases of fisheritis as the season is closed, which was the only thing that prevented an epidemic of that very "catching" disease.

The roads are fine and the smell of burned gasoline—or what is sold for gasoline—is in the air from early morning till late at night. Squirrels are "ripe" and the great national sport is on.

MANY FARMERS ATTEND PEST CONTROL MEETINGS

Twenty-four pest control meetings have been held in Latah county this spring by County Agent O. S. Fletcher. A total of 491 farmers attended the 24 meetings. At these meetings poisoning supplies were distributed to farmers of the various communities and plans completed for concerted community attacks on the ground squirrels. A total of 1486 ounces of strychnine had been distributed through the county agent's office at the close of April 14.

Farmers of 23 communities voted to have the board of county commissioners enforce the rodent control law in those communities and nominated a total of 94 committeemen for the county commissioners to appoint to act as local inspectors, or supervisors, to enforce the rodent control law in their respective communities. At their regular April meeting the county commissioners voted to enforce the rodent control law in the petitioning communities and appointed the nominated committeemen to enforce the law in the various communities. Practically all sections of the county are covered by the communities that voted to enforce the rodent control law.

The Idaho rodent control law provides that the county commissioners, or persons authorized and appointed by them, may enter upon any farm, railroad right of way, grounds, or premises where there are ground squirrels, or other injurious rodents, to ascertain conditions and to poison, kill, and exterminate these pests when the owner, or occupant, shall neglect or refuse to do so. The expenses of this work are charged against the land as taxes and collected with the taxes.

Parent-Teachers Meeting

A very interesting and profitable session of the Parent-Teachers association was held in the assembly room of the high school last Monday night. A very interesting program was rendered, chief of which was an address by Prof. Dale of the University of Idaho on "Intelligence." Prof. Dale brought out many salient points in his discussion of the subject, the whole of which was very much enjoyed by the large crowd in attendance.

After the program had been given a short business meeting was held at which time it was decided to hold at least one more session of the association. Much interest has been manifested in these meetings and it was felt that it should not be allowed to die at this time.

The next meeting will be held at the school house on Monday night, May 21.

Practically every one present went to the manual training room, the domestic art room and the agricultural room, where they viewed with much pleasure many things on exhibit.

The manual training room and the domestic art room was a revelation to all who visited them. There are few patrons of the school that have ever had a small idea of what is being accomplished in the line of vocational education and it will be well worth their while to make a visit to these departments at least once or twice during the year.

"Three Live Ghosts"

"Three Live Ghosts" is the title of one of the funniest picture-plays that it has been the good fortune of Genesee people to witnes for a long time. There is a laugh in every moment of the film and there is approximately 1,000 feet to each reel—and there are plenty of reels to let you know you have laughed several hundred times before the end is over.

Here is a synopsis of the headliner in a nut shell: Pals in the war—reported lost—and now they breezed back home! A ne'er-do-well who, fearing the law, was perfectly willing to stay "dead." A blue-blood shell, shocked out of his name and passed into a habit of stealing everything in sight! A roaring bucko whose "resurection" spoiled step-mama's plans for collecting life insurance. Add a wife, a baby, two interrupted loves and 57 complications! mix with constant surprises and laugh for a solid hour.

Anna Q. Nilsson and Norman Kerry play the stellar roles and they are both seen to the best advantage. Miss Nilsson is rated as one of the most beautiful women on the silver screen.

Baseball Here April 29

A meeting of baseball fans was held at the ball park Sunday afternoon and a temporary organization formed. Ray Edwards was chosen as manager and Cody Reder, assitant.

A game with Uniontown has been scheduled for Sunday, April 29, at the local ball park and a return game will be played at Uniontown on the Sunday following.

Julietta Prospects Good

T. O. Green, field representative for the Lewiston Tribune, was a Genesee visitor Tuesday, coming from his home at Julietta. Mr. Green says things look very good in his section of the county and that they have promise of a bumper crop if a late frost does not damage it. Generally grain is looking very good over the country, Mr. Green says, and a good crops seems to be assured.

REASONABLE SAVING HELPS US ALL

DEATH OF MRS. WM. CUNNINGHAM AT SPOKANE

Mary Clemens was born at Shokopee, Minnesota, Sept. 29, 1876, where she was reared and received her education. After finishing school she went into the millinery business at Wadena, Minnesota, remaining there for several years. From there she went to St. Paul where she lived until she came west 18 years ago. In 1911 she came to Genesee and engaged in business here until her marriage to William Cunningham November 19, 1915. Since that time she has resided continuously on their farm northeast of Genesee.

Four years ago her health began to fail. The best of specialists were consulted but her malady was such that only temporary relief was promised. The following year she had a severe attack of influenza from which she never fully recovered and since that time she had gradually declined. The immediate cause of death was atrophy of the liver.

In February, accompanied by her husband, she went to Spokane for further treatment but little relief was obtained and the end came on April 15.

Besides her husband she is survived by her father, Jacob Clemens, of St. Paul and a brother, John Clemens, of Edwall, North Dakota.

Deceased was a faithful member of St. Mary's Catholic church and was a devoted wife and patient sufferer. She had a pleasing personality and her memory will be cherished by her host of friends here.

Funeral services were held from St. Mary's Catholic church Tuesday morning at 9 o'clock, Rev. Fr. L. C. Godschalx, pastor of the church, officiating. Burial was in St. Mary's cemetery.

The pallbearers were Joe Hasfurther, C. P. Whalen, Wm. Smolt, Emery Vandenburg, Walter Jain and Felix Mulalley. The Alter society of the church acted as honorary pallbearers.

Special music was furnished by the church choir and a solo, "Face to Face," was sung by Mrs. W. W. Burr.

The undersigned wishes to express his sincere thanks to the host of kind friends who so willingly aided him in his hour of bereavement. Also sincere thanks are extended for the many beautiful floral offerings.

Wm. Cunningham.

Norwegian Ladies Aid Meets

The ladies' aid of the Genesee Valley Lutheran church met at the home of Mrs. Norman Nelson on Thursday afternoon, April 12. The work part of the afternoon was spent in piecing quilt blocks. During the afternoon a very interesting article on "The Home" was read by Mrs. Oscar Nordby and Mrs. Jesse Borgen and Mrs. Arthur Hove favored with a duet.

It was decided at this meeting to do something beautifuy the cemetery at the church north of town and it was unanimously voted that the fence be repaired and trees planted in front of the church—and suiting the action to the word, the work has already been accomplished.

Refreshments were served by the hostess and a very enjoyable time was reported by those in attendance.

Mrs. Chas. Ingle and Mrs. Ira Hanson, though not members of the aid, veary kindly invited the ladies to hold their next regular meeting at the home of Mrs. Hanson.

Blue Bird Club Entertained

The Blue Bird club was very pleasantly entertained Tuesday afternoon by Mrs. Henry Hanson at her home in the northeastern part of town, and a very profitable meeting is reported. After a short business session, the following program was given by Division No. 1 of the club:

Reading by Mrs. J. Anderson.
Reading by Mrs. C. Odenborg.
Vocal duet by Mrs. A. Hove and Mrs. O. Woodley.
Reading by Mrs. C. Wood.
Reading by Mrs. W. Borgen.

The invited guests were Mrs. R. E. Nordby, Mrs. O. Nordby, Mrs. Lillie Larson and Mrs. J. H. Jackson.

Needlework was indulged in and a splendid two-course luncheon was served by the hostess.

Band Concert On Genesee Streets

Citizens of Genesee and this community will have an opportunity of hearing a real band concert on the streets next Monday evening, April 23, when the D. O. K. K. band and patrol team of Omar Alkyami Temple No. 124, of Lewiston will be in Genesee and give a band concert on the streets between 5:30 and 6 o'ccock.

There are no strings tied to the concert in any way and everybody is cordially invited to come out and hear them. The Dokkey band is one of the very best to be found in the Northwest and you will miss a rare treat if you do not hear them. It's absolutely free and will be given for your benefit.

Broadcast Road Condition

Starting this week the Inland Roads association, with headquarters at Spokane, will broadcast general road information twice weekly from radio station K. F. Z.

When a fellow swears off from a bad habit he immediately spoils it all by patting himself on the back.

NIGHT HAWKS WIN CITY BOWLING CHAMPIONSHIP

The 1923 season of the City Bowling league passed into history last Monday evening. A double header with the Owls pitted against the Coyotes in the first set and the Night Hawks against the Cougars in the finals, ended the tournament.

In the preliminaries the Owls took two out of three from the Coyotes. The finals resulted in a two-to-one victory for the Night Hawks, giving them the championship. Henry Morscheck, for the Hawks, dashed the hopes of the fighting cougars by tearing off a 229 score in the second game. This was the highest individual score of the tournament. The score follows:

	1	2	3
Owls	1	2	3
Burr	131	146	127
Liberg	182	143	113
Barnes	102	145	
Edwards	143	168	119
Gump			191
	558	602	540
Coyotes—	1	2	3
Peeney	127	143	122
Wilson	163	139	150
Morscheck, G.	134	117	111
Rader	142	128	126
	566	527	509
Night Hawks—	1	2	3
Bressler	189	147	159
Post	127	134	135
Morscheck, H.	129	129	123
Geltz	142	136	115
	586	646	582
Cougars—	1	2	3
Loncosty	136	117	176
Coverdale	150	117	160
Barnes	136	146	166
Follett	130	116	127
	552	497	629

Following is the individual standing of each bowler who took part in the tournament:

Peeney, Coyotes	154		
Morscheck, H., Night Hawks	153		
Bressler, Night Hawks	150		
Edwards, Ray, Owls	149		
Burr, Owls	144		
Coverdale, Cougars	136		
Loncosty, Cougars	138		
Wilson, Coyotes	136		
Geltz, Night Hawks	134		
Follett, Cougars	132		
Rader, Coyotes	129		
Barnes, Cougars	127		
Liberg, Owls	123		
Morscheck, G., Coyotes	122		
Post, Night Hawks	121		
Smith, Owls	119		
Winegardner, Owls	113		
Morscheck, F., Coyotes	112		
Morrin, Cougars	107		
Sampson, Coyotes	107		

Standing of the teams:

	W	L	Pct.
Night Hawks	17	10	621
Cougars	16	11	590
Coyotes	11	16	407
Owls	10	17	370

The Moscow Elks have challenged a picked team of the league bowlers to a post season game on the Elks' alleys at Moscow. The five high men of the league will journey over to try their luck at some date to be arranged. The team will be made up of Feeney, H. Morscheck, Bressler, Edwards and Burr.

"Harry's Jazzopaters"

There will be a social dance in the American Legion hall on Saturday night, April 21, when the gathering of the "clans" is anticipated for the purpose of tripping the light fantastic. "Harry's Jazzopaters" will furnish the music and you are assured of something good.

High School Play

Bills are out for "Clarence," the highschool play which will be given at the opera house on Friday night, May 4. The full program will be published later.

WHAT HAPPENED HERE TWENTY YEARS AGO

George Follett and John Klapp have purchased the Henry Stracker chop mill and are now in possession.

Harry Thatcher got one of his hands tangled up in the machinery at the mill yesterday, making a little business for a doctor.

The firm of Nagel & Bomberg has been dissolved and Mr. Nagel will continue the business. Mr. and Mrs. Bomberg left Friday morning for Montana.

Wm. Smolt has been making some noticeable changes about the interior of his place this week. He has increased the shelving and show case room and will add a stock of confectionery.

Herman Nebelsieck has completed the school census and finds that the increase of children of school age in the district during the school year has been 40, there now being 376, against 336 in 1903.

Fred Nagel this week, while locking over some telegrams, found one dated from Tacoma some time in 1896 quoting him a price of "3 cents f. o. b. for nice fat hogs." Think of it! This means a price to the producer of about two cents per pound. Today fat hogs in Genesee are worth 7 cents and hard to get at that.

The graduating class are actively engaged in preparing for the coming commencement exercises which will take place May 22. The class this year will number 16, the largest in the history of the school. They are Cora Hodgins, Ilena Wood, Edith Mervyn, Inger Liane, Rollin Shurbeck, Roy Hibbs, Matt Toming, Ormand Patterson, May Herman, Rosa Walby, Rachel Biram, Nellie Brant, Emma Christenson, Ethel Spurbeck, Edna Driscoll and Madge Fowler.

County Auditor Ramstedt reports that during the first quarter of the present year ending April 11, there were received for record in his office, over 1,000 instruments, the auditor's office receiving in fees $1415.30. The sheriffs fees during the same time amounted to $151.55. During the fiscal year ending April 11, 1903, warrents were issued aggregating $120,-080.80. Warrents were redeemed during the same time to the amount of $107,008.17. At the end of the year there was cash on hand in the treasury to the amount of $50,741.36. Of this amount $25,782.62 was credited to the school fund.

Bananas Concealed Snake

A bunch of bananas ripening in an Iowa store suddenly gave up a three-foot snake. The snake was captured and was identified as the "bush master," most deadly of South American snakes. Its body slender, pinkish yellow in color, with a row of large diamond-shaped patches from head to tail. It is related to the deadly fer-de-lance but grows even larger than that snake. The reptile is believed to have been imported with the fruit.

A snake of like kind are proportions was found in a bunch of bananas at the Follett store a few years ago by George Boliou. The reptile measured 32 inches in length. It was taken and skinned by Grant Clark, who still has the hide.

"And Home Came Ted"

The home talent play given at the opera house last Friday night under the auspices of the ladies aid of the Federated church, was one of the best that has been put on here for a long time, although there is not as yet been a "bum" one staged in Genesee. Each and every one in the cast did themselves proud and many expressions of appreciation were heard. The program, as published, was carried out in its entirety and those taking part have the thanks of the ladies for their untiring efforts in making it the success it was.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account.

Many of the richest men in this country began their careers with nothing but energy and a determination to succeed.

They saved their money until it could be turned to good account.

Why not you, young man? A savings account is the first step.

First Bank of Genesee

THE DANGEROUS AGE

Fictioned by
CONRAD GIBSON

INSTALLMENT NO. 5.

John Emerson stood there thinking. Presently he realized he must be off. He found the chauffeur waiting. John hesitated a moment, then said:

"You can go, Henry, I'll walk."

Swinging along Fifth avenue, John Emerson thought many things. If she did not really care for him why had she asked him such a question? This was the life he had always wanted to lead. Here he was, a real, live human being, romance within his grasp. Love, he felt, was there, too. The quick, pulsating events of the day, the strange, weird sensations of the night. Life! Life all about! What a girl. How beautiful! How sympathetic! The theaters! How he loved to sit beside her. This was what he wanted. A little brightness. A fling at youth again He was supremely happy.

These thoughts filled his mind even as he turned the corner of Forty-third street and neared the Biltmore. They were still flaming, when he reclined in an easy chair and heard the tinkle of his telephone.

"Mees Gilra, eet ees," the valet announced.

And when John took his telephone he heard again the voice of the wonderful girl.

"All right," he said at last, "at the races tomorrow. I can't think of anything I'd rather do than go along with you. Surely, I'll be with you. Goodnight."

But as he uttered the last word his glance fell upon a picture of a wistful-eyed woman of thirty-eight set in a small frame on a table across the room.

"Mary!" he gasped, in a hoarse whisper. He sat there long, gazing in the picture. As his eyes rested on her own he seemed to see in them welling tears, questions, fear. Not once could he find resentment, although he searched with all his might for this. Finally he dropped his gaze. Then his hands went to his forehead, and he sat there more than an hour, thinking over all the strange happenings of his visit in New York, of Gloria and of Mary.

After a while he straightened, looked solemnly into the picture and said in tones so audible that the valet came peeping from behind the doorway.

"Oh, Mary, my dear—just one more day. Just tomorow at the races, and then I'll come home."

The following day the sun shone brightly, and as John and Gloria took their places in the great grandstand surrounded by the elegance which New York alone can supply to the sport of kings all the world seemed gay.

As the prancing, restless horses took their places at the post, roars of applause went up from the throngs, and Gloria, in her excitement, tugged away at her escort's arm until John Emerson felt he would be forced to respond. He did not know how he would do it. He only turned to her and said:

"Gloria, you are wonderful!"

She seemed not to hear him, and he again took up his glasses, the while turning about to have a view of the great crowd. Not more than twenty feet away from him, he beheld an interesting scene. An elderly couple sat there. As the get-away approached, he saw the little old man rise excitely from his seat and emit one great hurrah for his chosen horse. As he did this his wife chagrined, embarrassed, reached up and caught her husband's coat, dragged him back into his chair. John saw by the look on the face of the two that a wife was scolding a husband.

There were John and Mary again, he thought. The husband filled with the desire to see life and appreciate it; the wife bent upon destroying every illusion, every hope, every spark of real enjoyment which might come his way. He resented this. He wanted to tell her so. He pitied the poor little old man who had been so rudely suppressed.

Turning now to Gloria John saw her rise like a frail, wonderful bird, stretch her arms wide and cry out in her enthusiasm as the riders raced for the last plunge across the wire.

"It's great to see you enjoy yourself," he whispered at the end of the races as they made their way through the crowds to John's automobile. "Wonderful to have imagination and enthusiasm like that."

They were whirling away down the smooth turnpike leading back to the city, while great touring cars swung around them, past them and alongside them. John, his attention divided between the girl at his side and the stream of traffic, failed to notice that a crippled bird had flown against the radiator and had been thrown to the side of the roadbed. But Gloria had seen it. She asked him to stop. And when he learned the reason the desire to make known to her his warm admiration surged through him. Here was a wonderful, indescribably clever girl, at whose feet a city of society would bow. Yet she had the tender heart of the true woman. She would stop on a busy turnpike to care for a wounded bird. This was a pretty thought, sentiment of John Emerson's kind. How could he tell her?

But when the two had backed the low slung racing car to the spot at which the bird had been struck, Gloria failed to find it, and in their search for it they were led away from the road into a wooded thicket.

As the girl approached the base of an old tree, she gave a startled cry of fright as a small snake came winding its way along the lower branches. John raced to her side. As he reached her, the girl fell forward. John Emerson was there to receive her. She was in his arms and before either seemed to realize the situation, the man had turned her about so that he gazed directly into her eyes. Then he gathered her closely to him and kissed her.

A party of friends, who had swung along the boulevard, noticing the abandoned car, had stopped to investigate, fearing an accident had befallen the passengers. The honking of the horn of their machine brought the two quickly apart, and they stood looking upon one another in a strange, embarrassed manner. Gloria gasped and stepped backward, extending an arm toward him, palm outward, as if to guard herself from further advance. But John Emerson knew that in her eyes there was not resentment. He knew the look of bitterness that comes into women's eyes when they are not pleased. He could not find it here. He did not want to find it here.

On the journey into the city few remarks passed between the two and then only on subjects of general interest. But all the way John watched the girl out of the corner of his eye. He was very conscious of the aristocratic tilt of her pretty nose, the loveliness of her slender, white throat, hidden partly behind costly furs and lace.

Whn they had passed over East River Bridge and had headed into the heavier traffic, John found himself in some distress. Before two blocks had been traversed he had been the recipient of at least three sharp rebukes from crossing policemen. At the intersection of one of the cross streets, he had driven too closely to the curb, and Gloria had placed a trembling hand upon his own as he tugged desperately at the wheel. At the touch of her fingers he settled back into his seat in utter contentment.

"That was all I needed," he whispered boyishly. "A little attention, Gloria. Now we'll go buzzing through it." And they did.

At the girl's home he assisted her to the doorway, and he clasped her hand in his own as they stood ready to say goodbye.

"You'll come tonight?" she asked, smiling upon him.

"Of course, I will," he returned gallantly. And having promised, he left her. He hurried across the sidewalk, leaped behind the wheel, and sped rapidly away.

There was an unnatural light in his brooding eyes as a half hour later he sat in his dressing gown in an easy chair in his own apartment. His valet, fussing with his master's clothing, saw his fingers twitch repeatedly, and also saw him clutch his forehead as if in pain.

John Emerson was forming coolly, calmly, in his own mind, the course which he proposed to follow. He was making an important decision, a vastly important decision. He loved Gloria Tuyl. Of that he was positive. She was the girl of his dreams. She personified all that he had hoped for in those dreary days at home. She was the fulfillment of his long-felt need. No more drudgery. No more thought of long underwear. No more sulphur and molasses. No more nagging. No more thought of age. Ah! That was the happiest thought of all. He'd never return to that old fogey way of living. That was gone forever. He smiled, and arose. He walked to his writing desk, extracted paper and began to write.

Into that letter he poured out to Mary his final resolve. She had grown old before he had wished it. She no longer wished romance. She no longer cared to watch the birds mating and the moonlight and the babbling brook. She no longer cared to hear the happy voices of youngsters. She was old. He held it was only honorable that he should let her know all. He did not feel that he ought to say he no longer cared for her. He merely would have to confess that he had found the things which to him meant more than the colorless experience of the weary days through which he had passed during the last few years of their life together. He was writing fast. He wished to include all—all in his one letter and have it over.

He finished it and signed it. Then he placed it in a large envelope and laid it before him. He called his valet and told him to place a special delivery stamp on it. Then he took it and made ready to mail it downstairs in order that it might be on its way at the earliest possible moment.

John Emerson hesitated, then sat down heavily in his big, easy chair and reflected. Instinctively his eyes turned slowly and found their way around to the framed picture of Mary on the table across the room. He rose to go to it, and his telephone rang. Answering it, he found it was Gloria calling to ask him to come early so they might join a theater party later.

"You dear girl," he said as he finally hung up his receiver.

And then he gathered his dinner suit, hurriedly put it on, allowed the valet to rearrange his tie and brush hit hat, then, with the letter to Mary in his hand he made his way down to the street.

At the first corner a mail box was waiting to receive this important document between a husband and wife. John approached it slowly, pulled down the little lid and placed the letted on it. But he failed to release it. Instead he drew it back a moment, looked at it carefully, gazed into the distance and stood quite silent and still. Then, with a slight nervous movement of his head, he once more opened the box. A passerby, his hands filled with evening mail to be deposited, pushed John's letter through the aperture, and it was gone. He turned, whistled lightly, and directed his steps toward the home of the Tuyls where a gay and brilliant dinner party already had assembled.

(To Be Continued.)

NORTHWEST NEWS

The secretary of the interior, Hubert Work, is showing keen interest in the development of the Columbia Basin project and contemplates visiting the northwest personally early in June. The federal investigation of the project has been authorized by Secretary Work, and engineers are already assembling data. Congress recently appropriated $100,000 for the purpose of making a preliminary survey of this project. Homer J. Davis, government engineer recently appointed to conduct the survey, is now in the west making the necessary arrangements for the survey.

The Columbia Basin project, embracing approximately 2,000,000 acres of land in central Washington is the greatest single irrigation poject ever investigated by the federal government.

The Columbia Basin Irrigation league, whose energies have been directed in securing this survey, held its first annual meeting in Pasco, Saturday, April 21, on the anniversary of the league's organization. Approximately 1000 delegates were present.

The second annual Pacific-Rocky Mountain Tourist Camp association conference will be held in Spokane, April 14. This conference is designed to be a round-table discussion on the tourist camps and their problems in the Pacific northwest. At the association's first meeting, held in Spokane in the early part of last year, a charge system for tourist camps was inaugurated, and the second meeting has been called for the purpose of discussing this matter.

Many chamber of commerce and park commissioners have signified their intention of being at this conference.

J. M. Hamilton, of Bozeman, Mont., was elected president of the Inland Empire Teachers' association, that held a convention in Spokane April 4-6. W. G. Hummell, state director of vocational education, of Olympia, was elected vice president and J. A. Burke of Spokane was reelected secretary to serve his tenth term. Members of the executive committee elected were C. D. Brock of Wallace, Idaho, and Mrs. L. O. Anderson of Wenatchee.

Only a woman is capable of transforming a yawn into a smile.

The earth wabbles a little about its axis.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Henry Ford has sold nearly a million and a half Fords since April 1 last year. Retail deliveries during March broke the record. Cars and trucks totaling 170,763 were sold.

The national automobile chamber of commerce reported that the production of motor cars and trucks during March broke all previous month-by records. It totalled 346,383 vehicles, 57,000 over previous record. The chamber expects production to reach 3,000,000 this year.

On April 18 San Francisco will observe the 17th anniversary of the great fire. Fire prevention will be stressed in public speeches in schools and theaters, and motion pictures will be shown depicting scenes during the great conflagration.

Possible efforts of the treasury department to cut the surtax rates of the income tax was predicted by Secretary Mellon following the March collection of income and profits tax aggregating $463,000,000.

A French economist figures the total cost of the French occupation of the Ruhr for January alone was 500,000,000 francs. This includes the loss caused by the fall of the mark, the shutting down of industries, the cessation of reparation payments and all other causes.

Plague is raging throughout India. In spite of precautions 9000 new cases were reported last week, of which 8000 were fatal.

Quick use of adrenalin brought back the life of a babe in Detroit which had apparently passed away. The babe died later. The new use of the drug is engaging the attention of the entire medical world.

The United States Steel corporation announced an increase of 11 to 16 per cent to all day laborers. More than 150,000 employes are affected. About $500,000 is added to the company's weekly payroll.

A body of copper-bearing ore or undeterminable size, with a 5 or 6 per cent copper content, was struck by the Copper Trust syndicate at Homestead, Ore., according to reports received at the Spokane office.

Assistance to the students and professors of Russian colleges is to be given this year by the Y. M. C. A. A nation-wide campaign to collect funds and clothing for the destitute intelligenzia of Russia is to be conducted through the colleges and Y. M. C. A. branches.

Domestic issues largely will form the basis of President Harding's western speech-making tour and campaign for reelection with international affairs being kept in the background, he indicated in an address in Augusta, Ga., last week, just before returning to Washington.

CLIMATE NOT CHANGING SAYS WEATHER BUREAU

The fact that the past two years have been unusually mild in most parts of the United States has led to considerable discusion as to whether this portion of the earth is undergoing a general change of climate. The weather bureau, United States department of agriculture, says, however, that records can be furnished which disprove this idea. Periods have occured in the past and will occur again, when for a few years, the weather has seemed or will seem to be noticeably warmer or colder than the average.

While there are well-recognized alternations in climatic codnitions, as of wet and dry, hot and cold, etc., little is known with regard to definite laws of sequence of weather conditions over extended periods of years. Within ordinary historic times there is practically no evidence that there has been a definite and progressive change in the climate in one direction or the other, but rather that the same sort of alternations are now succeeding each other indefinitely, as in earlier historic times. It is also believed that the amount of change, if any, is too small and the extent of territory involved too indefinite to be of economic interest. Until definite knowledge is available concerning the law of sequence of weather conditions, and possible periodic cycles affecting the weather are quantitatively established, scientific long-range forecasting is impracticable.

America is the land of the free, where one must pay for everything worth having.

Why Accredited Hatcheries?

By B. C. YOUNG,
Secretary Whatcom Co. Accredited Hatcheries.

The basis of the poultry industry is the baby chick. On the quality of the chick depends the size of next winter's weekly check.

A strong, healthy, well-bred chick is a joy to the poultryman, and the Whatcom county accredited hatchery is handing its efforts to produce the best chick obtainable.

In order to accomplish this result, a supervisor under the direction of the state extension service visits each member and points out the hens with off color, weak constitutions, and other cull marks. Later, he sees that his recommendations are carried out or the member is dropped.

At this time he inspects cockerels as to trapnest pedigree, vigor, shape and color. The third inspection is made during the hatching season and at that time he passes on the color and shape of eggs, and sanitary conditions of incubators and brooders. At all these inspections he is instructed to question regarding green feed and mashes, instructing as to approved breeding rations.

The breeder who, after passing these inspections, wishes to ship chicks from the county, asks the supervisor to inspect the chicks before shipment. According to his instructions, all shipments are to be rejected which contain chicks off color, deformed, heavy behind, underweight, weak, wet or those not properly fluffed.

Too many chicks with weak constitutions, brought on by improper breeding and feeding methods, are thrown on the market without regard to quality. The extension department of the State College of Washington is cooperating with poultrymen to improve the quality of chicks by better breeding and feeding methods.

The poultrymen of Whatcom county have started the organization, and its success so far is phenomenal. The quality of chicks, the percentage of hatches, the mutual confidence of poultrymen engendered by the fact that all are working under the same rules, have given great impetus to the better chick movement, and the poultrymen of the state have started a movement to make the accredited hatcheries plan state-wide, which is of vast importance to the poultry industry, and would still increase the lead of the Washington poultryman. In the meantime Whatcom county goes ahead and produces good chicks.

IDAHO

Farm land values in Idaho are gradually approaching their pre-war level, according to a bulletin issued Wednesday by Julius H. Jacobson, Idaho statistician for the United States department of agriculture. A survey made March 1 indicates a state average value ofr good ploy land of $93 per acre, or $5 less than in 1919, the report states. The average for all grades of ploy land was $76 per acre, which exactly equals that of 1919.

Governor C. C. Moore has announced in a letter to Dr. A. H. Upham, president of the university, his intention to accept the invitation to be present at the annual commencement exercises of the institution June 11. The graduating class this year will be the largest in the history of the university. One hundred and sixty-five degrees will be granted, of which 17 will be masters.

Plans to proceed at once with $65,000 in betterments, including a $50,000 girls' dormitory at the Idaho Normal school at Lewiston, were completed by the executive committee of the Idaho state board of education, while in Spokane attending the Inland Empire Teachers' association convention. At present the institution which has 400 students, has one girls' dormitory, which will take care of 60 students. The new dormitory will care for 77 students and a house mother. The building will be of brick 162 feet long and 38 feet wide an dwill be three stories high.

A resolution asking that the Latah county commissioners place the statue "The Spirit of the American Doughboy," which arrived in Moscow recently in the Moscow city park, was passed by the Dudley Loomis post of the American legion. The statue is to be erected in some prominent place in the county, and will be unveiled as part of the Memorial day services.

The Spokane International Railroad company is starting work this week on the season's improvement and maintenance program. The work calls for the expenditure, roughly estimated, of $150,000, from Spokane to Eastport, Idaho, a distance of 150 miles. The largest single item of improvement this year, according to E. S. McPherson, vice president, will be the rebuilding and lining of the tunnels in Idaho near Bonners Ferry, to cost around $75,000. New ballasting on stretches over the system will cost around $25,000, and in general track maintenance $50,000 will be spent. A portion of the telegraph line will have to be rebuilt at an estimated cost of $10,000.

Forest rangers will receive weather forecasts twice a day by radio this year in northern Idaho, according to R. B. Adams, telephone engineer of districts No. 1 and No. 4. The radio broadcasting plant is to be established at the station seven miles north of Priest River. Forecasts have been found valuable in warning rangers of coming weather conditions that have bearings on forest fires, Mr. Adams said.

Mark A. Means, prominent north Idaho farmer and seed-man has been appointed by Governor C. C. Moore as state commissioner of agriculture to succeed Miles Cannon. Mr. Means who served as senator from Nez Pierce county in the past session of the legislature is a practical farmer from the famous agricultural section in the Lewiston country. He has givtn special study to development of the seed industry and marketing methods. Announcement of his appointment has met with wide-spread approval because of his practical experience with the problems of the Idaho farmer.

DAIRY

Good cream is clean cream, kept cool.

All officials of the World's Dairy Congress association were re-elected at the annual meeting of the association in Washington recently. At the meeting the officials considered plans for the World's Dairy congress, to be held at Syracuse, New York, October 2 to 5, 1923. The officials of the congress associations are: President, H. E. Van Norman; senior vice president, Robert Scoville, Taconic, Conn.; treasurer, H. N. Brawner Jr., Washington, D. C.; honorary president, Secretary of Agriculture Henry C. Wallace; honorary vice president, C. W. Larson and B. H. Rawl.

American consignees bought gold and platinum on the Paris market in January to the extent of more than $540,000.

A tight man and a loose dog are equally dangerous.

Always sweep rugs the way the nap runs.

MENTION THIS PAPER WHEN WRITING

Proclamation Issued By President Harding

Whereas, the preservation of our forests, federal, state, and private, is essential to our industrial and commercial life, to our strength as a nation, and to our individual well-being, and

Whereas, forest fires, which are largely the result of carelessness or thoughtlessness, continue to do great damage, threatening to deplete and reduce our forests to the point at which they can not longer serve the nation adequately as a source of timber supply or for watershed protection and recreation, and

Whereas, the annual observance of Arbor day in the states, and the interest in fire prevention which has resulted from forest protection week heretofore, have done much to awaken the people to the importance both of planting trees and of perpetuating the forests that are already established.

Therefore, I, Warren G. Harding, president of the United States, do urge upon the governors of the various states to designate and set apart the week of April 22-28, 1923, as forest protection week, and wherever practicabe and not in conflict with state law or accepted custom to make Arbor day fall within the same week, and to urge citizens, teachers, officers of public instruction, commercial and other associations, and the press to unite in thought and effort for the preservation of the nation's forest resources by conducting appropriate exercises and programs and by publishing information pertaining to the waste from forest fires and ways of preventing or reducing such losses, in order that our forests may be conserved for the inestimable service of mankind.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 5th day of March in the year of our Lord, 1923, and of the Independence of the United tSates of America the one hundred and forty-seventh.

By the president:
WARREN G. HARDING.
CHARLES E .HUGHES,
Secretary of State.

Start a Hedge This Spring

It Will Improve the Appearance of Your Place 100 Per Cent the First Season

The grounds about the home—either in the suburbs or in the country—which are not "finished off" with a hedge of some sort, always present the appearance of a picture without any frame.

There used to be a time when half the homes one saw were surrounded by a fence of some sort; and ugly enough they were, even when they were kept in good condition. But fortunately, the ugly fence—with its unsuggestion of un-American exclusiveness—is now a thing of the past; and as a result, many of our suburbs, village streets, and even town blocks, have been transformed into attractive gardens separated by beautiful green living "fences," which afford as much protection as the now obsolete board or picket fences ever did, and at the same time add greatly to the beauty of each individual place.

When You Buy a Hedge You Buy Permanent Protection

Another advantage of the "living fenc" is that it never needs the expensive attention of the carpenter or painter! Some kinds of hedge plants require trimming once or twice a year, if you want a formal "hedge," but you can easily do the work yourself. If you don't care to bother with any trimming, there are plenty of good hedge plants, such as Japanese Barberry, "Box" barberry, Spiraea, and Rosa Rugosa. Even Privet, which is usually kept trimmed, will make a beautiful tall informal hedge if it is left to grow according to its own sweet will.

And year after year, your hedge will become more beautiful. Looked at even from the business point of view, it will prove a mighty good investment; it will "set off" your place in a way that will make both the house, and whatever other planting there may be, look twice as attractive as they would otherwise, and for that reason add greatly to the actual cash value of your home.

How to Make the Hedge a Success From the Start

There are two "secrets" in getting a successful hedge. The first is to select the kind of plants for your hedge that will fit your own local conditions, the second is to start the plants right when you set them out.

Let's consider the second item first.

In planting the hedge, dig out a good sized trench and enrich the soil with well rotted manure or bone meal. Set the pants a little deeper than they were before, and about six inches to one foot apart in the row. Cut them back most severely at first, almost to the ground, so that they will throw out new branches close to the ground.

The hedge should be set out as early in the spring as posible; as soon as all frost is out of the ground and the soil is in workable condition. Setting the plants thus early, enables them to make a good strong root growth before real hot weather, in planting, be very careful not to crowd the roots together, spread them out naturally, and pack the soil very firmly about them.

Very little care in the matter of cultivation is necessary afterwards to keep a hedge in good shape; mulch with manure or grass clippings, and give an occasional thorough soaking in very dry weather. Then all there is to do is keep out the weeds and give a little top dressing of bone meal or manure every fall.

If the hedge is to be kept to straight lines, it should be clipped early in the summer, every year, to keep it in neat condition. There is a hedge clipper which comes for this purpose, which is easy to operate, and with which one can trim a good sized hedge in an hour.

Pick Out the Kind of Hedge to Suit Your Own Conditions

The most universally used hedge plant is California Privet. It succeeds under the most trying conditions, and is satisfactory wherever the winters are not too severe. In the more northern states, it is better to use one of the newer, hardier varieties, such as Amoor River North; Ibota, or Regals. A new type of hedge, which is extremely hardy and especially satisfactory in the northwestern states, is Cotoneaster Acutifolia.

Another most pleasing tall hedge plant is Spiraea Van Houttei. The long, graceful drooping sprays are attractive even after the flowers are gone, and it grows just about the right height to give privacy without "shutting in" the place; it is especially good for the back or side lines of the place, under most conditions, although a little too tall for the front.

For a low growing, informal hedge nothing is lovelier than the Japan Barberry (Barberry Thunbergii). It is absolutely hardy, thorny enough to make an effective hedge against small animals, and requires no pruning, as it does not grow tall. The small light green leaves are beautiful all summer, and in the fall turn a brilliant scarlet; and stay on until quite late. Even after the leaves are gone, the scarlet berries give a striking touch of color through the winter months.

For a real dwarf hedge, such as is wanted around gardens and walls, there is, of course, nothing to equal the old fashioned dwarf box. A new dwarf hedge plant which may be used in place of box, especially in cold climates, is the new "Box" barberry, a dwarf compact growing form of Japan Barberry.

If you desire a tall, stiff hedge you will probably like the Arbor Vitae. This has the advantage of keeping green and fresh looking all through the winter months.

For another tall, heavy hedge, either the Bush Honeysuckle or Japan Quince is very appropriate and satisfactory. They are very hardy, and grow quickly and large, but can be kept sheared back if preferred.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

Growing Tomatoes.

Tomatoes are one of the most popular of our garden fruits and every home garden should include in its plan a liberal allowance of time and space for this healthful fruit. Miss Mary Sutherand, food and nutrition specialist, of the State College Extension service, states that tomatoes should be served at least twice a week in every home for the necessary vitamines which they contain. Vitamines in fresh, uncooked foods are generally best, but in tomatoes a part of the vitamines are not changed at all by cooking. This makes this fruit particularly valuable as a canned food.

Tomatoes are grown successfully in neary every part of the state of Washington, with just a little extra care. The following points or factors enumerated below are quite essential to successful results.

VARIETIES—There are many good varieties of tomatoes, but the earlier varieties are the best for most localities, particularly about Puget sound and in the higher elevations where the summers are cool. The Karliana, John Baer, Benny Best, Chalks Early Jewel and Stone, preferred in the order named are among the best varieties. The Stone is a later variety than the others, but is firm and in good demand in the fresh markets as well as with cannery men.

PLANTS—Vigorous, healthy plants are very important. Where you are raising plants they will need transplanting twice before being placed in the garden. The last time, if the plants are set in berry hallocks or individual cans or boxes, they can finally me moved to the garden with very little root disturbance and growth will not be checked. Three or four thicknesses of newspaper can be rolled and folded into a cup which makes a very cheap pot for these plants. The best plants will be the large ones, 10 and 12 inches high, which should be stocky and of a good green color. In many places plants are grown by greenhouses for sale and if the firm is reliable it is sometimes cheaper to buy them ready for placing in the garden. For a few days before setting, the plants should be carefully hardened off by withholding water and submitting to outdoor temperatures.

SOIL PREPARATION AND FERTILIZERS—To get the earliest and best tomatoes they must grow rapidly after being set out. The ground should be carefully gone over several times, stirred to a depth of 10 or 12 inches and then thoroughly fined and smoothed down. In western Washington better results will be obtained if the tomatoes are set on a south slope or in a warm, sunny location.

If the soil is very poor a moderate amount of well-rotted manure can be added. However, an excess of this or nitrogen fertilizers will make too much leaf growth and may cause the blossoms to drop. In western Washington acid phosphate has proven very beneficial, increasing the crop four and five hundred per cent in some cases. It applied it should be used at the rate of about 300 pounds per acre.

TRANSPLANTING TO GARDEN—It is a bad practice to set the plants in the open before warm weather has settled. This will vary in the different sections of the state. Plants set set 2 1-2 to 3 feet apart in the row with the rows about 3 1-2 feet apart.

CULTIVATION—Careful cultivation and hoeing about the plants will hold the moisture and increase the yields. Once every 10 days till the plants cover the ground is not too often and will be paid for in more and better tomatoes.

PRUNING AND STAING—Tomatoes trained to a single stalk, and tied to a stake, or wire or pole treilise will be most satisfactory for the home garden. Tomatoes ripen earlier when trained in this way, the fruit will be better colored and is not as liable to rot. The plants shoud be gone over several times and all lateral shoots pinched off close to the main stem.

BLOSSOM DROPPING— Shedding of the blossoms is generally due to poor pollination, but very hot dry weather will often produce the same results. Thorough watering and sprinkling sometimes helps to overcome this trouble. The blossoms will also fail to set when a very rank growth is made as a resut of too much manure. Ordinarily it is better not to irrigate when the tomato begins to bloom as this stimulates growth too much.

Dry rot at the blossom end is generally a result of insufficient soil moisture and a liberal suppyy of water will overcome this.

Fresh ripe tomatoes can be produced in nearly every garden. Plan now to pick tomatoes in your own garden.

LICENSE LIVE STOCK LOAN INSPECTORS

Plans for licensing live stock loan inspectors in accordance with the terms of the new Agricultural Credit act of 1923 are being prepared in the United States department of agriculture. A special temporary committee has been organized, composed of representatives of the bureau of agricultural economics, the bureau of animal industry, and the packers and stockyards administration. Representatives of the Farm Loan board, the War Finance corporation and the Federal Reserve board have been asked to cooperate. Chester Morrill, assistant to the secretary, will act as chairman, for the purpose of working out these plans.

As soon as forms of applications and rules governing the licensing and supervision of livestock loan inspectors have been prepared in tentative shape, they will be submitted to producers' organizations, banks, cattle loan companies, livestock exchanges, and others interested for advice and assistance as to the best manner of putting them into practical operation.

The new law provides that the secretary of agriculture may issue a license upon presentation of satisfactory evidence that the applicant is competent to inspect live stock as a basis for loans. These licenses may be suspended or revoked for misconduct. The licensees are not to be employed or compensated by the department of agriculture, but may be used by national agricultural credit corporations and others for making inspections of live stock offered as security for loans.

Prime, clean food and an abundance of pure, fresh water will almost always insure eggs of good flavor, if the fowls are healthy.

Coffee grounds should be emptied in the sink as a cleanser for the drain pipe.

Don't clean or wash garments with gasoline indoors.

Pitches Horseshoes

Mrs. C. A. Lanham, of Bloomington, Ill., pitching 2½ pound horseshoes, has a record of thirty-five ringers in winning the state championship at Aurora. She challenges the world.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

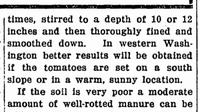
ASTONISHING GLIDING RECORD SET IN ORDINARY AIRPLANE.

An aerial gliding record, recently set by a French military airman, is remarkable not only for the length of time he remained in the air—7 hours 3 minutes—but also by reason of the fact that he accomplished the feat in an ordinary army plane. The performance took place in Algeria, northern Africa, and the plane was in no way altered except that the propeller was immobilized by means of wedges. Besides, the plane carried 500 pounds of extra weight in addition to its normal fuel and oil supply.

PERMANENT POISONING FROM GASOLINE FUMES.

Symptoms all the way from drowsiness to a state of talkativeness and foolishness, commonly called a "jag," have been found to result from working where gasoline fumes arise and the ventilation is not adequate. Inhaling the fumes, according to the United States public health service, brings about sooner or later what is termed "gasoline poisoning." This disease results in blurred vision, constant dryness of the throat, insomnia, constipation, loss of appetite, extreme nervouses, and other conditions, depending upon the temperament of the individual and whether or not the poisoning is in a mild, acute, or chronic form.

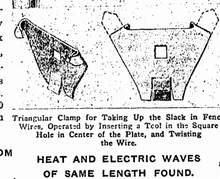
A race track to be used in trying out new types of cars is to be built by motor-car builders and the Automobile club of France in a wooded district north of Paris. It is planned to acquire 900 acres and make the track from four to six miles long.



Combination Painting and Model, Skillfully Blended, Which Serves as the Exhibit of the Bureau of Public Roads at the Brazilian Centennial Exposition: It Is 25 Feet Long and 10 Feet High, and the Model Is 8 Feet in Depth

HEAT AND ELECTRIC WAVES OF SAME LENGTH FOUND.

According to the ether-wave theory of energy radiation, heat, electricity, and light are essentially of the same nature, differing in their manifestations only by reason of their different wave lengths. Thus heat waves; so far as investigators have hitherto been able to ascertain, are much shorter than electric waves, and between the longest heat wave and the shortest electric wave there has been a break or gap in continuity, which scientists have been anxious to fill, because the intermediate wave lengths might represent some unknown form of energy. Success has now come to the searchers in this field, and it is announced that two scientists of the Nela Research laboratories, Cleveland, Ohio, have been able to generate, receive, and measure electric waves of only half a millimeter, or about 1-50 of an inch long, that is, of practically the same length as the longest heat wave.



Triangular Clamp for Taking Up the Slack in Fence Wires, Operated by Inserting a Tool in the Square Hole in Center of the Plate, and Twisting the Wires.

TRIANGULAR METAL CLAMP FOR TIGHTENING WIRES

A metal clamp for taking up the slack in fence wires, and thus tightening them, has recently been patented. The clamp is in the form of a small triangular plate with fingers at one corner for engaging the wires and extensions at the other corners. In the center of the plate is a square hole for the insertion of a tool by means of which the wire is twisted, until the two extensions can be bent over it, clamping the wire in a triangular loop.

The use of gold monograms on automobile headlights, said to have been encouraged by auto manufacturers, is one of the latest fads of car owners.

COMBINE MODEL AND PICTURE IN HIGHWAY EXHIBIT .

Combining a model of road-building work and an oil painting so skillfully that an observer is unable to detect where the two join, is the result achieved recently by a model maker and an artist who were employed by the U. S. bureau of roads to prepare an exhibit for the Brazilian Centennial Exposition now being held at Rio de Janeiro. The model, which is 25 feet in length and 8 feet in depth, displays a gravel-type road, suitable for Brazilian conditions, with a concrete bridge in the foreground and a gravel pit in the background. Behind this, the painting, which is 10 feet in height and as long as the model, presents an appropriate farmland and hill view. Semblance of reality is produced by the operation of tiny gravel-digging and screening machines and a road roller, these being driven by a concealed motor.

Another realistic feature is a stream, painted in the far background, but as it winds its way forward, a real stream of water is introduced at one of the turns and flows down under the bridge in the foreground, the whole presenting, in addition to a practical working model, an artistic scene of beauty.

Federal Rye Grades Announced

Federal grades for rye effective July 1, 1923, have been established by Secretary of Agricuture Wallace under the authority of the United States Grain Standards act. According to these regulations rye is any grain which before the removal of dockage consists of 50 per cent or more of rye, and when free from dockage contains not more than 10 per cent of cereal grain of a kind or kinds other than rye.

Five grades are provided for as follows:

Grade No. 1 is rye of cool and natural odor, having a test weight per bushel of at least 56 pounds. It may contain not more than 13 per cent of moisture, not more than 2 per cent of damaged kernels and no heat-damaged kernels; and may contain not more than 3 per cent of foreign material other than dockage, which 3 per cent may include not more than 1 per cent of foreign matter other than wheat.

Grade No. 2 is rye of cool and natural odor, having a test weight per bushel of at least 54 pounds. It may contain not more than 14 per cent of moisture, not more than 4 per cent of damaged kernes and no heat-damaged kernels; and may contain not more than 6 per cent of foreign material other than dockage, which 6 per cent may include not more than 2 per cent of matter other than wheat.

Grade No. 3 is rye of cool and natural odor, having a test weight per bushel of at least 52 pounds. It may contain not more than 15 per cent of moisture, not more than 7 per cent of damaged kernels, which may include not more than .5 per cent of heat-damaged kernels; and may contain not more than 10 per cent of foreign material other than dockage, which 10 per cent may include not more than 4 per cent of matter other than wheat.

Grade No. 4 is rye that shall be cool and may be musty or slightly sour and shall have a test weight per bushel of at least 40 pounds. It may contain not more than 16 per cent of moisture, not more than 15 per cent of damaged kernels, which may include not more than 3 per cent of heat-damaged kernels; and may contain nto more than 10 per cent of foreign matter other than dockage, which 10 per cent may include not more than 6 per cent of matter other than wheat.

Sample grade rye shall be all rye which does not come within any of the grades from Nos. 1 to 4, inclusive, or which has any commercially objectionable foreign odor except of smut, garlic, or wild onions, or is very sour, or is heating, hot, or otherwise, distinctly low quality, or contains small, inseparable stones or cinders.

Complete copy of the standards may be obtained free upon request to the United States department of agriculture, Washington, D. C., or to any government licensed grain inspector or supervisor.

Wash your hands in vinegar after washing dishes and they will not chap.

Eggs may be poached and served on rice.

Ganna's Practice

Mme. Ganna Walska McCormick, new bride of the Harvestor king's son, sailed suddenly for Europe still practicing singing. This photo was taken aboard boat as she practiced at the piano one morning.

School Notes

By Helen Casebolt

The Hickman children have been absent from school this week on account of the quarantine for diphtheria at their home.

William Kerr, state supervisor of vocational agriculture, visited our school Tuesday.

Last Friday and Saturday W. W. Palmer, a student from the U. of I., attended the agricultural classes for the purpose of getting a method of teaching that subject.

Saturday evening the sophomore class was invited out to the Kraut country home to a weiner roast and dance. A truck load of boys and girls left at 5 o'clock and as soon as they reached their destination the fun started. Games were played and later a bonfire was made and the weiner roast and supper ensued. After supper the group went to the house where the floor was cleared for dancing. Later in the evening oyster soup, punch, wafers and cake were served. After dancing a while longer the happy crowd came back to town. Songs were sung, stories told and jokes sprung, thus a very pleasant evening was spent.

Monday was set aside as visitors' day at school. Attractive displays were arranged in the domestic art, agriculture and manual training rooms. A few town people and a few country people visited classes during the day and many came to the parent-teachers' meeting that evening and viewed the exhibitions of work their children had been doing during the past season.

Christian Endeavor Notes

By Ted Parks

The Junior Endeavor was led Sunday evening by Oma Castle, the topic being "What gains come from hard work." The special music was a vocal duet by Harriet and Dorothy Evans, accompanied by Wilma English on the piano. The Bible contest was won by the girls, with Harriet Evans in the lead.

A song service, just before the senior meeting, was conducted by Miss Mathews. It was heartily entered into by the members and is to be a regular thing now.

Charles Bottjer presented the senior topic, "Education," in a very commendable manner. The discussion centered on the thought "What are we getting an education for—to make a living or to make a life." Helen Casebolt rendered a piano solo as special music.

It was announced that there is to be a Christian Endeavor rally held at Moscow on April 18, which several of the members decided to attend.

It may be true that this country needs a spiritual awakening, but it is a certainty that most of us are sound sleepers.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Church school at 9:45 a. m.

Morning worship at 11.

Junior C. E. at 2:30 p. m. Angie Castle, leader.

Young Peoples meeting at 7:30.

Rev. Pendleton will conduct a service in the Shafer school Sunday afternoon at 3 o'clock.

Wednesday evening Rev. Pendleton accompanied a delegation of Endeavorers to Moscow to attend the Christian Endeavor rally where Mr. Clarence Hamilton of Boston, Mass., one of the national secretaries, gave an inspiring address on C. E. work.

At the quarterly meeting of the church in the Social house last Sunday afternoon reports from the heads of the different departments of the church gave good statements of the work being done. We begin our third quarters work assured of the loyal and self-sacrificing support of those who are willing to put the Lord's work before their own pleasure.

Rev. Pendleton in his report urged that some kind of a car be added to our equippment thot he might do more work in the communities where work is needed and help would be appreciated. Where could you put your money to pay bigger dividends to the kingdom of God? When you think of getting a new car give your old one to the church.

The church voted to fill the vacancies on the board, and Mrs. R. E. Emmett and W. E. English were elected.

Seven new members were added to the church last Sunday and there are as many more to come in the first Sunday in May and again in June.

We invite you to make your church home with us if you have not already affilated with a church here.

PERSONAL MENTION

John Lawen returned Saturday from Kellogg.

T. Driscoll returned Saturday from California where he spent the winter months.

Mrs. F. S. Lamb returned to Genesee Monday after a visit at Colton and Johnson.

Mrs. Van Matre returned home to Lewiston Tuesday after a short visit here with friends.

Mr. and Mrs. A. E. Elver and Mr. and Mrs. F. E. Lambert were Moscow visitors on Monday.

Mr. and Mrs. Joe Reil were Saturday morning passengers for Uniontown for a short stay.

Mrs. C. P. Clark was a Saturday passenger for Moscow to visit her mother, Mrs. J. E. Hall.

Miss Katherine Dwyer was a Monday morning passenger for Lewiston to enter the state normal.

Mrs. J. W. Heaslet returned to her home in Colton after a visit with her mother, Mrs. W. A. Ingle.

John Broemmeling returned Saturday from Orofino at which place he had been visiting relatives.

Mrs. Johanna Christenson was a Saturday morning passenger for Palouse for a visit with relatives.

Wendell Palmer was a Genesee visitor on Friday and Saturday from the agricultural department of the U. of I.

Mrs. Harry Bockman returned to her home at Libby, Montana, after a visit with her mother, Mrs. A. Marcks.

Jack Hayden was a Saturday morning passenger for Lewiston where he went to take part in the spelling contest.

Mrs. Emma Wolff returned to her home in Seattle Wednesday, after a week's visit with her sister Mrs. Fred Nagel.

Mrs. A. E. Elver and Mr. and Mrs. Joe Reil went to Lewiston Monday, at which place Mr. Reil will receive medical care.

Mrs. E. L. Phipps was a Spokane passenger Wednesday morning for a short visit with relatives before going to Wenatchee where she will spend the summer.

Henry Martinson, accompanied by Dr. W. H. Ehlen, left Monday for Portland where Mr. Martinson entered the Surgical hospital to receive medical care.

Mrs. Frank Newman and children of Clarkston spent Sunday with Mrs. Newman's cousin, Mrs. Chas. Geltz, and family. A family dinner was given in her honor.

Millinery Course Completed

The three-days course in millinery instruction given by Miss Cowgill of the extension division of the University of Idaho has proved very successful. Ten women, both from town and country, enjoyed the course, and each succeeded in finishing a good-looking hat.

The women were so well satisfied with the instruction given that each expressed a desire to have Miss Cowgill return in the fall for further instruction.

This work is under the supervision of O. S. Fletcher, county agent, and the ladies are very grateful to Mr. Fletcher for giving them the privilege of Miss Cowgill's instruction.

Special Notice

I take orders for things you wear. To my other lines from reliable factories I have added the Fergus Falls woolen goods. I will call at every home at least once during this spring and summer. "From factory to consumer" is my motto.

City Election April 24

Your attention is again called to the fact that the general city election will be held on Tuesday, April 24. It is your duty to go to the voting place and cast your ballot on that day.

In another part of this paper you will find a complete copy of the city ticket, for which petitions have been filed.

Dr. R. I. Witty is the only candidate for mayor. A petition was also gotten out for George Follett as mayor, which was liberally signed, but he refused to allow his name to go on the ticket.

All the candidates on the ticket are good men and you cannot miss it by voting for any of them—but go to the polls and vote for your choice. But also remember that you must be registered in order to vote. See to that first.

On the Job Again

Mr. and Mrs. A. E. Elver returned last Sunday from Missoula, Mont., where Mr. Elver had gone a week or so before to the railroad hospital for medical treatment. He said by the time he got over there he was feeling pretty good so after a few days he retraced his "steps" homeward. He was checked in at the depot Monday afternon.

He said he had to hurry back to watch Johnie Roberts.

Gave Surprise

The ladies aid of the Genesee Valley Lutheran church motered to Moscow last Saturday afternoon and gave Mrs. J. E. Lee, wife of Rev. Lee, a very delightful surprise shower and party. The afternon was spent socially and delicious refreshments were served by the self-invited guests.

Clean-Up Day

At the last meeting of the city council "clean-up" day was designated as April 25th.

Have all cans in sacks and boxes at the alley end of your lot and they will be removed to the dump ground free of all cost to you.

By Order of the City Council.

40-2 By W. W. Burr, City Clerk.

ADVISE FARMERS TO GRADE CREAM

Dairy Expert Says Practice Would Bring Better Quality and Increased Business.

Grading of cream, as the first step in the standardization of the dairy industry, is being urged by the United States department of agriculture. Numerous farmers and dairymen are already developing grading methods, the department reports.

"There is great need for improvement in the quality of cream if consumer demands for a high grade product are to be met," says Roy C. Potts, in charge of the department's division of dairy and poultry products. "Argument should not be required to convince the farmer that his cream should be marketed on a graded basis. It is wrong to pay the same price for low quality cream as for high quality. It is unjust to the producer of No. 1 cream to get no more for a good quality, and the production of the better quality is discouraged. The practice of paying a flat price for all qualities offers no inducement for improvement, and places a premium on poor quality or penalizes good quality.

"In every field of marketing, progress is being made through the practice of standardization. Those who are taking the lead in the move to standardize dairy products are to be commended for their good work. The markets for manufactured dairy products, especially butter, have always placed a higher value on the product of high quality. Similar rewards will come from improvement in the quality of cream. The entire dairy industry is urged to get back of the movement."

LIVESTOCK

North Pacific Livestock Show association has been formed in Snohomish county to take the place of the breeders' association, which held the first stock show last fall. Dr. H. K. Stockwel, Monroe, has been re-elected president, and T. C. Semmons, 3001 Colby avenue, Everett, secretary. It is the expectation of the new organization to incorporate for $50,000, to purchase 50 acres of land upon which to erect buildings, and be ready by October 8th to open the doors of the second annual Livestock Show. These Snohomish county men made a good start last fall with their show, and the determination to increase, grow and do better, bespeaks a better exhibition for 1923. Let's all boost for the 1923 North Pacific Livestock show.

Farrowing time is a crucial period in the pork producing operations of the farm. Methods of feeding the sow and litter, preventive measures against worms and little pig diseases and the management of orphan pigs are some of the responsibilities related to the farrowing season.

To prepare for farrowing, the sow's feed should be cut down one-third in volume a few days before the pigs come. After farrowing, it is best to allow but little feed for forty-eight hours, giving the sow plenty of water. A thin slop of middlings with a very limited amount of corn may be used. These precautions are necessary to prevent a milk flow in excess of the young pigs' requirements.

The sow's daily feed may be increased gradually until she is back on full feed by the time the litter is 10 days old, from then on until the pigs are weaned the sow should know about all the corn she will cean up, provided she also receives a good daily allowance of muscle-building feed.

Good prices were realized at the first annual sale of registered Duroc-Jersey hogs, held at Garfield, under the auspices of the Whitman County Duroc-Jersey association. O. D. McKeechen, of Tekoa, topped the sale, paying $127.50 for one animal. Fifty-four females averaged $45. Members of Rock Creek and Garfield Boys' clubs were among the largest purchasers and paid some of the highest prices. In spite of bad weather more than 200 attended the sale.

DIRT FARMER MEMBER OF RESERVE BOARD DIES

Milo D. Campbell, of Michigan, dropped dead on March 22nd on the Columbia Country club golf course, Washington, D. C., just one week after he took the oath of office as the "dirt farmer" member of the Federal Reserve board.

Mr. Campbell's demise will be mourned by all the farmers of the nation. His successor on the Federal Reserve board will be appointed by President aHrding at an early date.

He who serves his employer well serves himself best.

BIG DROP IN EARLY POTATO ACREAGE

Smallest Acreage Planted Since 1919 Is Forecast for the Coming Season.

Acreage planted to early potatoes this year is forecast at 260,350 acres in 20 early and intermediate-producing states by the United States department of agriculture. This is the smallest acreage planted since 1919. The acreage in 1922 was 340,870 acres. The largest cut is shown in New Jersey, for which an acreage of 29,800 acres is forecast as compared with 46,560 acres last year.

In the early producing states the acreage is forecast at 172,830 acres, which is 23 per cent less than the 1922 acreage. Nearly one-half this acreage is in Virginia where 75,560 acres have been planted. California has 22,960 acres, Florida 18,990 acres, South Carolina 14,760 acres, and North Carolina 14,060 acres.

In the nine intermediate producing states the acreage is forecast at 87,550 acres, or 24 per cent, smaller than the 1923 acres. New Jersey leads with 29,800 acres, Kansas next with 12,850 acres, nd Maryland 12,710 acres.

Tomato acreage in six early producing states is forecast at 68,600 acres, as compared with 66,770 acres last year. Increased tomato acreage occurs in all of the six states except Tennessee and Texas.

Cantaloupe acreage in early shipping districts of California, Florida, and Texas is forecast at 31,570 acres, compared with 32,910 acres in 1922.

Strawberry acreage in early and intermediate producing states is forecast at 103,400 acres as compared with 96,890 acres last year. The area of this crop shows an increase of 7 per cent over 1921, an increase of 75 per cent over 1920, and 91 per cent over 1919.

Year in Food. The index figure of farm prices of six items is 107 for February, compared with 106 in January. The average for the year, 1922, was 111, as compared with an average of 107 in 1921.

The index of commodity prices is placed at 172 as compared with 170 in January. The average for 1922 was 163 as compared with 161 in 1921.

IDAHO GAS TAX WILL NET STATE HUGE SUM

The 2-cent per gallon gasoline tax enacted into law by the legislature at its session which goes into effect soon after April 1, and thereafter auto owners will have the additional 2 cents per gallon tacked onto their gas bill. The proceeds from the gas tax will go into the state highway fund for the construction or maintenance of roads in the state. The commissioner of public works has charge of the distribution of the fund and may use the money in any part of the state he deems advisable. Many members of the legislature thought the new law should provide for a percentage of the funds thus raised to revert to the county from which raised, but efforts to amend the original bill including this provision failed to pass.

Idaho has approximately 50,000 autos in use. From a compilation of information furnishing by five other western states using the gas tax, showing total revenues, and number of cars registered, it was shown that the average car in each of the five states consumed 391 gallons of gasoline per year. This would mean a yearly revenue from each car of $7.82 for a 2-cent tax. From the 50,000 car in use in Idaho, exclusive of the tourist cars, the gas tax would yield a total yearly revenue of $391,000.

As the law loses the first three months of the present year, the estimated revenue for 1923 is placed at approximately $235,000 and 1923 at $391,000, or a total of $626,000 for the two-year period.

SUMMER STUDY COURSES AT WASHINGTON COLLEGE

Seventy-nine courses of study are to be offered during the summer session at the State College of Washington, June 18 to July 22, for teachers who wish to improve their professional equipment by work toward a college degree, and students who want to shorten their college course by gaining additional credits during the summer.

Even a stingy man opens up when it comes to giving advice.

PURCHASING POWER OF FARMER RISING

Farmers' purchasing power continued its slow upward climb during February being placed at 69 as an index figure as compared with 68 in January, the United States department of agriculture announces. Although prices of commodities other than food that farmers buy jumped 2 points during the month, prices of

Minimum Thermometers Boon To Orchardist or Gardener

By E. M. KEYSER, Meteorologist, Spokane, Wash.

As a thermograph will show at what hour the lowest temperature occurred, so will the minimum thermometer show just what that minimum was. Since some orchardists are possibly not familiar with the mechanism of these self registering theronometers we have had a cut made to accompany this article.

Minimum thermometers use alcohol or some other spirit and as a rule are placed in a horizontal position, although there are a number combination maximum and minimum that are vertically mounted. In addition to the spirits there is within the tube of the thermometer a small piece of steel or other metal known as the "index." The index is a pointer, which if the instrument is properly mounted, will point to the lowest temperature since last setting.

It does it in this way: As the alcohol recedes into the thermometer bulb with falling temperature the upper end of the alcohol column, by its tension, acting like a thin invisible film over the end of the column, draws the index downward with it to the lowest point to which it recedes, but no further.

Here the index stays and "points" till the farmer or his wife sets the instrument again for the next night. Yes, the temperature may rise, and the alcoholic column will rise with it, but as the bulb end of the thermometer is slightly lower, and as there is no surface tension, to move the index backward, the index remains absolutely still, submerged in the alcohol.

ONE SOURCE OF DEFECT.

The details of thermometer manufacture need not be gone into here. Suffice it to say that some manufacturers sacrifice accuracy to beauty. The "bore" and the "scale" are very essential features in a thermometer. The accompanying cut of a "poor" thermometer shows at a glance how the bore influences accuracy. If the bore is narrow at places and wide or irregular at other places, a given temperature rise will be indicated differently at different points along the thermometer scale.

For instance a rise or a fall of 10 degrees at a narrow place might show as 12 or 13 degrees whereas at a wide place it might not show as more than 7 or 8 degrees. Likewise, it is better to have the thermometer scale stamped in the glass tube rather than on the metal or wooden frame upon which the tube is mounted. Some thermometers have the scale on both the tube and back. This is occasionally puzzling because the tube may get loose and slip down a degree or more and cause confusion in reading the top of the alcohol column.

COST OF MINIMUM THERMOMETER.

Several instrument manufacturers put out reliable minimum thermometers, Julien P. Friez, Baltimore, Md., H. J. Green, Brooklyn, N. Y., the Taylor Instrument companies of Rochester, N. Y., all have good instruments for minimum temperature work. The Weather Bureau has in use instruments from each of these manufacturers.

The standard price of these instruments is in the neighborhood of $6.00 apiece, a rather high figure it might seem for a thermometer. But where could the same amount be placed to yield more returns than may come from a reliable temperature record? A high grade orchard minimum thermometer with range from zero degrees to about 80, well adapted to spring frost work or storercom work, was designed last year by H. J. Green for the California Fruit Growers Exchange for use of its members at a cost of $2.85 to $3.00. The exchange sold several hundred of these to the southern California growers.

They have informed the local office that they are not in a position to supply them to eastern Washington growers. The manufacturer can furnish them at a cost of $3.00 plus transportation charge. One of these newly designed minimums is on display at the Spokane Weather Bureau office, 033 Empire State Bldg. Anyone desiring to secure one of these instruments can obtain the manufacturer's address from the weather bureau office at Spokane.

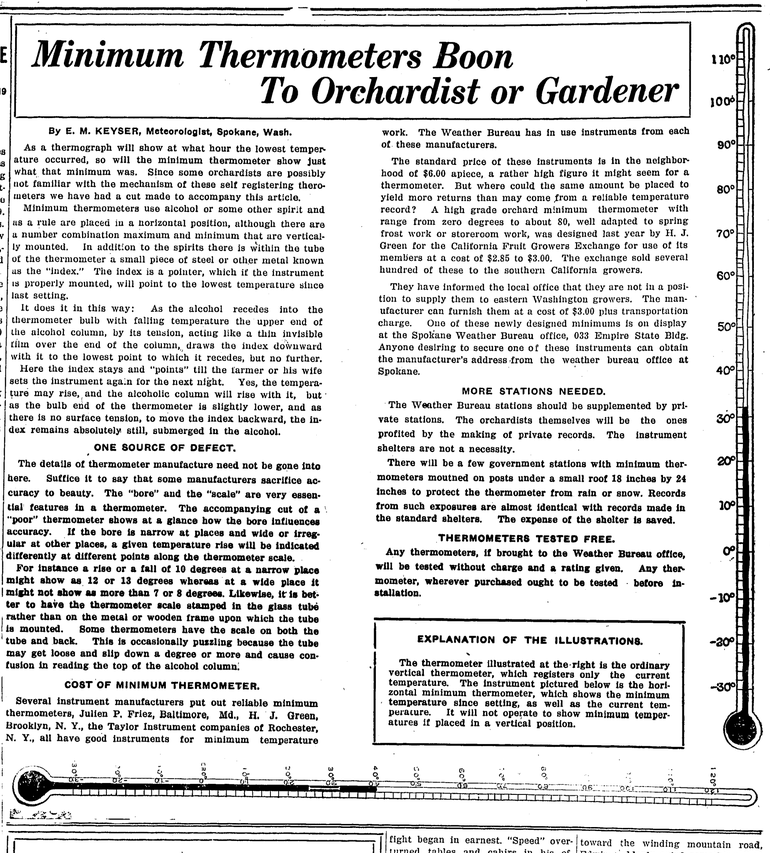
MORE STATIONS NEEDED.

The Weather Bureau stations should be supplemented by private stations. The orchardists themselves will be the ones profited by the making of private records. The instrument shelters are not a necessity.

There will be a few government stations with minimum thermometers mounted on posts under a small roof 18 inches by 24 inches to protect the thermometer from rain or snow. Records from such exposures are almost identical with records made in the standard shelters. The expense of the shelter is saved.

THERMOMETERS TESTED FREE.

Any thermometers, if brought to the Weather Bureau office, will be tested without charge and a rating given. Any thermometer, wherever purchased ought to be tested before installation.



EXPLANATION OF THE ILLUSTRATIONS.

The thermometer illustrated at the right is the ordinary vertical thermometer, which registers only the current temperature. The instrument pictured below is the horizontal minimum thermometer, which shows the minimum temperature since setting, as well as the current temperature. It will not operate to show minimum temperatures if placed in a vertical position.

"SPEED"

By Herbert Crooker

Copyright by Pathe Exchange, Inc.

CHAPTER XIV.

The Peril Rider.

Young Stanbury was terrified for the safety of the girl he loved and himself. There was no brake on the car—nothing to stop it. Down, down they plunged. Then the shed loomed like a shelf from a 12-inch gun the tiny car bearing the two occupants shot through the shed—out the other side, fairly sailed through space and then disappeared into the water with a mighty splash.

Edwin Stanbury was certain that his young friend, "Speed" had been carried to his death with Lucy Durant when the ore car had plunged down the mountainside and into the river. He hastened to his hunting lodge in the woods to bring the news to Vera Harper and Jim Sprague. Sprague would be delighted, he was sure, as now he would be free from the pursuit of "Speed" Stanbury in his efforts to make him prove the alibi. Vera would be delighted because she intended to be Mrs. Edwin Stanbury, and the welcome "tragedy" would give Edwin a clear title to the Stanbury wealth.

But "Speed" Stanbury and Lucy Durant were by no means the subject for a tragedy. Both of them were good swimmers and both had managed to extricate themselves from the runaway car. After resting for a few moments to catch their breath, "Speed" suddenly exclaimed:

"Lucy, this perpetual chase is getting on my nerves! I've got to land Jim Sprague today or figure on becoming an outlaw for life. He's probably at the hunting lodge now with my cousin, Edwin. Are you game to come along?"

For an answer, Lucy Durant kissed her sweetheart full on the lips. Isn't that a rather silly question, 'Speed'" she smiled. "Haven't I considered all dangers trifles as long as I have been with you." And so with happy hearts they started for the hunting lodge.

Edwin Stanbury had arrived and greeted Vera affectionately. Jim Sprague looked up anxiously, troubled.

"Look here, Edwin," he said, "I'm absolutely through. I've got a wife and kiddie that I haven't seen for four months and I'm going back and see them and give myself up. I tell you, I've got nothing to fear. So far as that bank shortage is concerned, it's you who have been keeping me on the hop to make me think that I did it. Well, I'm sick of it all, and I'm going home."

Edwin answered in his usual suave manner, attempting to pacify his ally. But Sprague would not listen. Then Vera decided to enter the argument. She smiled cynically at the two men and after a knowing glance at Edwin walked up to Sprague, a smile of sympathy playing over her face.

"There's a lot to be said for Jim's viewpoint," she said. "I suggest that we take him to the city with us. The car is outside the lodge now. He can see his family and then—"

"Jim Sprague, I want you!"

The three conspirators turned in their tracks and beheld "Speed" Stanbury and Lucy Durant. Jim Sprague was terrified. Lucy watched Vera closely, determining that she would take care of the woman, should a struggle ensue.

"What are you doing here?" Edwin demanded.

"You know what I'm doing here," "Speed" answered coolly. "I want Sprague and I'm going to get him."

And then a surprising thing happened. Before anyone realized it, Jim Sprague forgot his cowardice and sprung for "Speed's" throat. The young man quickly wrenched himself from Sprague's grasp and sprung out of the way just in time to escape a blow from Edwin, his cousin. Then the fight began in earnest. "Speed" overturned tables and cahirs in his efforts to keep both men separated and divide blows between them. At one time, Vera attempted to enter the fray, but Lucy held her off.

"Speed" realized that he had no time to waste. He crashed a blow over Sprague's head, sending him reeling to the earth and then bent his efforts against Edwin. The latter was more of a problem to "Speed," but he determined to make short work of him. A terrific blow on the chin awakened "Speed" to the fact that he had a worthy adversary. Then, he returned the blow with a fierce right, following it with a speedy left lunge, and Edwin sank to the floor with a groan.

"Come on, Lucy!" "Speed" shouted. "Help me pick up Sprague and get out of here." And pushing Vera out of the way, they carried Jim Sprague out to Edwin's car, threw him in the back seat and bound his hands with "Speed's" belt. Then they were off, speeding down the road, happy and laughing over what they had done and that they were about to accomplish their plans. The future, indeed, looked extremely bright.

In the lodge, Vera Harper was bending over Edwin Stanbury and attempting to revive him. "Come, dear," she said, "we must get to the village quick." Edwin managed to stagger to his feet, and the two hurried toward the stables to get horses.

When they arrived at the small hotel, they saw two of the men from the mines—the same two who had helped in the pursuit after "Speed." The situation was quickly explained.

"Then they've taken the road that goes around the mountain," one of the men said. "We could cut across and get to Payne's bridge ahead of them. I suppose a little thing like burning down the bridge to stop them wouldn't worry you much, would it?"

Edwin smiled agreeably. Anything would do—anything to stop "Speed" and enable him to get Sprague away from his cousin. The two men secured horses and the little cavalcade galloped off toward the bridge. By means of the short cut they easily reached the spot ahead of "Speed." The small bridge led across a deep gully, and was the only means of crossing without turning back and taking another road.

"We'll make sure they don't get past this point, anyway," one of the men assured Edwin, as he gathered small bits of dry wood and prepared to light a fire. More bits of brush were thrown on, and soon the bridge was crackling and smoking as the flames ate hungrily. Looking up toward the winding mountain road, Edwin suddenly spied something that caused him to urge the men on.

"Here they come!" he shouted. "Hurry that thing up! We can't let them cross this gully." But the fire was devouring the dry wood and it looked as though the center of the structure would drop almost any moment.

Nearer and nearer speeded the car driven by "Speed" with Lucy by his side. In the back seat lay their captive, utterly in ignorance as to what was going on.

"They've set the bridge on fire!" "Speed" exclaimed looking ahead. "Never mind, Lucy," he added, "I guess they can't stop us by a little thing like that." And putting on full speed, he gripped the wheel tighter and prepared to make a dash through the flames. Fortunate, there was a small up-grade just ahead of the burning structure, and the high speed of the car almost hurtled them through the air, landing them safely on the other side.

"Whew!" "Speed" muttered. "That was a close one, Lucy."

"Look ahead, 'Speed'!" the girl shouted. "There's a man in the road waving a red flag. Maybe they're doing some blasting!"

"Blasting—nothing!" he returned. "That's another gag of my imaginative cousins. He's using every means he can think of to stop us!"

But "Speed" was wrong. The little Italian laborer sprung out of the way of the speeding car as it whizzed past, almost dropping the warning flag. He shouted and waved his arms, but the occupants of the car paid no heed.

Then suddenly there was a terrific explosion—a series of explosions—and the whole side of the mountain seemed to rise into the air. With it came a huge avalanche of debris, boulders, and trees torn up by the roots. "Speed" gave the car more gas, endeavoring to get out of the way, but it was too late. Like a landslide, the debris rushed downward and swamped them, taking the car along with it and sweeping it toward the edge of the cliff on the side of the road.

(To Be Continued)

Electric lights and lanterns are turning the night into day for the chickens. If the hens are expected to put in a longer working day, they must have more food than the eight-hour hen needs on the short winter day. Lighting can be overdone. If lights are used on the breeders, keep buttermilk before them, and give them plenty of green food. Oyster-shell, grit and ground bone will also be needed.

IDAHO UNIVERSITY MEN PLAN BUSY TIME

Members of Faculty Already Have 26 Engagements to Speak at Graduations.

Twenty-six engagements already have been made for University of Idaho faculty members to deliver commencement addresses at Idaho high schools this spring.

President A. H. Upham will visit the southeastern part of the state, speaking in towns in which he has not delivered commencement addresses in the two former years of his presidency. Dr. J. F. Messenger, dean of the school of education, will visit the southwest.

Speakers in north Idaho will be Prof. C. W. Chenoweth, head of the department of philosophy; Dean E. J. Iddings, of the college of agriculture; Prof. J. M. O'Gorman of the school of education; Dr. G. M. Miller, head of the department of English; Dr. J. G. Eldridge, dean of the university faculty; and Prof. Ph. Soulen, professor of school administration.

The most of the engagements are for Thursday and Friday, May 17 and 18, and for the corresponding days of the following week, May 24 and 25.

President Upham's itinerary follows: May 11, Shoshono; 15, Roberts; 18, Salmon; 20, probably a baccalaureate service at Challis; 21, Arco; 24, St. Anthony; May 31 or June 1, Potlatch, with several other engagements probably to be scheduled.

Dean Messenger, May 16, Gooding, 17, Fruitland; 18, Hazelton 19, Soda Springs; 24, Nampa; 25, probably Glenns Ferry.

Professor Chenoweth: May 17, Rathdrum; 18, Spirit Lake ;23, Winchester; 24, Kendrick.

Dean Iddings: May 17, Weippe; 18, Orofino.

Professor O'Gorman: May 18, Genesee, 24, Juliaetta.

Dean Eldridge: May 18, Plummer.

Professor Miller: May 24, Nez Perce.

Professor Coulen: May 24, Troy; 31, Craigmont.

A movement to establish a Pioneer Memorial park is being backed by the North Idaho Pioneer association, of which A. F. Parker of Grangeville, is president. The two men were in conference with former Governor W. J. McConnell, one o fthe early pioneers. Governor McConnel assured them of his interest in the project and promised his support. It is probable that the park will be loctaed at either Mosco wor Lewiston.

This spring's graduating class at the University of Idaho will number 165, being nearly twice as large as the largest class in the past. When commencement exercises are held, June 11, 148 baccalaureate degrees and 17 masters' degrees will be granted. For the first time, women will graduate from the college of agriculture and from the law school. Fifty-five students will receive the degree bachelor of arts and 15 the degree bachelor of science. Graduates from the home economics course will number 4; agriculture, 16; forestry, 5; mining and geology, 7; engineering, 11; law, 11, and education 24.

"If I eat a large supper it results in dreams."

"Same here. I had a late supper with the boys the other night and now my wife has a dream of a hat."

Citizens Training Camp to Be Repeated This Year

The Citizens Training camp for Washington and Oregon, conducted by the war department under the National Defense act, will be held again this year at Camp Lewis, Wash., and at Fort Warden, Wash., from July 26 to August 24. Eight hundred young men will be received at Camp Lewis for instructions in infantry, field artillery, cavalry, engineers and signal corps branches; and 50 will be sent to Ft. Worden for coast artillery instruction. There will be no course in aviation.

The object of these camps, three being held yearly for each of the nine corps areas in the United States are to bring together young Americans of high type from all sections of the country, thereby developing closer national and social unity, to teach the privileges, duties and responsibilities of American citizenship; to stimulate patriotism; to interest young men in the importance of military training; to teach self discipline; to learn the importance of proper physical and mental hygiene and to develop the physical standard of the American youth through participation in military exercises, athletic games and sports, (conducted under expert directions).

The benefits derived by attending the camp are secured without expense to the students, as the war department provides transportation to camp and return, board, lodging and expert medical attention, uniforms, equipment, arms, laundry (for anything issued at the camp), and amusements in the form of athletics, games and musical entertainments.

Last year nearly 600 enthusiastic young Americans "weighed in" at Camp Lewis for the Citizens Military Training camp, and were found on "weighing out" to have gained 3.87 pounds per man, a good general indication of the benefits of their training during the four weeks' period.

Four courses of instructions will be given; a basic red course, age limits from 17 to 24 years; a white course, 18 to 24 years, and a blue course, 19 to 24 years. Applicants for the basic red course need have had no previous coure at a Citizens' Military Training camp and no previous military training of any kind. They must possess average and general intelligence, be able to read and write English and to be of good moral character.

This course covers the simple fundamentals of military training and sanitation and hygiene and qualifies the student to take the next higher course or advanced red course. The advanced red course qualifies for the next higher or white course and includes advanced instruction in subjects included to the basic red course. For the white course applicants must have a grammar school education or its equivalent.

Selected enlisted men of the regular army, national guard and organized reserves and sected citizens who completed a red course in 1921 or 1922, and who were recommended for the next higher or white course are eligible for enrollment in this summer's white courses.

Educational requirements for the blue course are those prescribed for appointment as second lieutenant in the officers' reserve corps, the minimum being a high school education or its equivalent. This course provides training with the object of qualifying selected warrant officers and enlisted men of the regular army, national guard and enlisted reserve corps, who have completed the white course or who have had military training recognized as equivalent thereto, for service as second lieutenants.

The age limits shown above do not apply to those who attended a Citizens' Military Training camp in 1921 or 1922.

All applications for detailed information concerning the corps, should be made at any early date to the chief of staff, 9th division, 223 New Post Office Building, Portland, Ore. Information pamphlets and application blanks will be forwarded promptly to those interested.

WALLA WALLA HAS MANY TELEPHONES AS GREECE

According to reports, Greece has had enough of state operation of telephones. The service has been so poor both as regards development and financial return that the ministry has decided to place it entirely in the hands of a private company.

There are at present only about 5000 telephones in the entire country, about one for every 1000 people, and about equal to the total number of telephones in Walla Walla.

Athens has less than 2,200 telephones and the circuits between it and Piraeus, a few miles away, are so inadequate that it is often quicker to write or send a messenger than to do business over the telephone.

HOMEMAKERS' CORNER

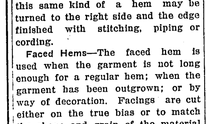
Conducted by
Alice Lindsey Allen, News Editor, and Lincoln R. Lounsbury, Agricultural Extension Editor, State College of Washington.

GARMENT FINISHES.

It is almost impossible to formulate definite rules for the finishing of dresses and garments, because of the changes required by fashion and the purposes of the finish. However, Miss Helen K. Robson, instructor in home economics has prepared some helpful suggestions for the housewife who is doing her own sewing. These will be given by this paper in a series of six articles.

One of the first things to consider is how to make different kinds of hems.

Plain Hem—Trim the raw edge evenly, fold to the wrong side about 1-8 inch of material, covering this flat, then fold again the entire depth desired. The finish may be done by hand using hemming stitch or it may be done on the machine, or a fancy embroidery stitch may be used.

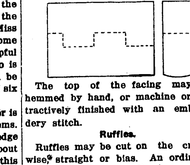


If the material is alike on both sides this same kind of a hem may be turned to the right side and the edge finished with stitching, piping or cording.

Faced Hems—The faced hem is used when the garment is not long enough for a regular hem. Sometimes a garment has been outgrown; or by way of decoration. Facings are cut either on the true bias or to match the shape and grain of the material to which they are to be applied.

Plain Facing—The right side of facing is placed to the right side of the garment, basted and stitched. Remove basitings and turn the facing to the wrong side so that a thread or two of the garment shows below (this is so that there is no danger of the seam line showing on the right side). Then proceed as for a plain hem.

Shaped Hems—This hem is used as decoration. The lower edge of garment is marked in points or scallops and the facing cut to match; care being taken to keep the true shape and grain of the material. The facing is then applied in the same manner as for a plain facing. The seams should be slashed around the curves and at points between scallops in order to keep the facing flat, when turned right side out.

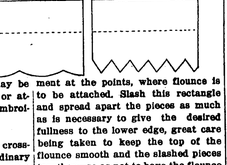


The top of the facing may be hemmed by hand, or machine or attractively finished with an embroidery stitch.

Ruffles.

Ruffles may be cut on the crosswise, straight or bias. An ordinary straight ruffle is usually cut 1 1-2 times the length of desired space, while a bias ruffle usually is not cut quite so full.

The Circular Flounce—The circular flounce may be cut in one piece or it may be made in sections and these joined with insertion, fagotting, etc. easy way to make such a flounce is to cut a rectangular piece of paper the measurement for two sides of which are the same as the desired depth of flounce, the other two sides measure the same as the width of garment at the points, where flounce is to be attached. Slash this rectangle and spread apart the pieces as much as is necessary to give the desired fullness to the lower edge, great care being taken to keep the top of the flounce smooth and the slashed pieces together—so as not to have the flounce too small or too large to fit garment.



"Attaching Ruffles Will Appear Next Week."

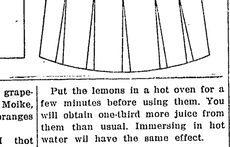
Home Run Hitter.

"I was sorry to 'ear about your old man, Mrs. Miggs. Still I s'pose by now 'e'll be bangin' on 'is 'arp with the angels!"

"My 'Arry! Not on ye life! 'E's more likely bangin' the angels with 'is 'arp."

Wife—So you expect to get into heaven by hanging onto my skirts?

Hub—No, but I might by showing St. Peter the bills for them.



Pat (looking at some large grapefruit on street stand)—Indade, Moike, it wouldn't take many of thim oranges to make a dozen.

Mike—Oranges Sure, Pat, I thot they wuz lemons.

Put the lemons in a hot oven for a few minutes before using them. You will obtain one-third more juice from them than usual. Immersing in hot water will have the same effect.

The leading German plants for the production of dyes and other coal tar products, fertilizers and the fixation of atmospheric nitrogen are located in the Ruhr district now occupied by French troops.

A good salad is made of canned peaches, chopped nuts, cottage cheese and mayonnaise.

POULTRY

It has been shown that it is impossible to judge the value of a hen as a layer unless she has been fed a ration that would give her an opportunity to demonstrate her capacity. Pullets that have not yielded profitably because of a ration lacking in animal matter have been made profitable layers when the defect in the ration was corrected.

Brown eggs require more moisture than white eggs. When the chicks begin to cheep in the eggs, a flannel cloth, wrung out of boiling water and placed quickly over the eggs will help them. The door of the machine should be closed promptly and kept closed. The chicks will hatch under the cloth without damage. There must be no raveling of either the cloth or burlap on the tray.

If the birds are shedded a good plan is to suspend a few cabbages from the roof out of reach of the fowls, but so as they can just managed to peck at the leaves by jumping up. In this way the birds are getting good exercise, at the same time as they are enjoying their green feed. See that your vegetable garden is kept stocked with various greens that will be available to the fowls at all seasons of the year. Without it the egg supply will soon dwindle.

Apricots already are in bloom, to early pink variety, in the Lewiston district, according to E. M. Ehrhardt, president of the Empire National bank of Lewiston. Mr. Ehrhardt reports cherries adjacent to Lewiston have survived the hard winter and that little damage has been done to any fruit barring some cherries south along the Snake river.

A Modiste's Spring Song.

Oh, Poets, let your lyrics ring,
Where e'er the warm breeze blows;
Oh, far and wide your verses fling,
But try and make your message bring
A call for women's clothes!

Mrs. Elizabeth Barnard, who has been appointed postmaster at Tampa, Fla., is the first woman of the $6000-a-year grade in the United States posta lservice.

A new development in the poultry industry is the production of a fowl that is a cross between a turkey and a chicken.

A woman realizes that she is getting the worst of an argument with her husband when he refuses to become excited.

Rub the eather furniture occasionally with sweet oil to prevent it from dry and cracking.

COME IN AND LOOK OVER THE

International Field Cultivator

Three Tools In One

As a Weeder...

MOST weeds can be killed by cutting them off under the ground. There are some, however, that must be pulled up—root and branch. The International field cultivator will do both. If your fields are infested with milkweed, Russian thistle, the sow thistle, and other long, single-rooted weeds, equip your International field cultivator with broad share shovels mounted on stiff shanks. These shovels cover all the ground because they overlap. Not a weed can escape nor dodge out of the way. On the other hand, if you are troubled with quack grass, and other weeds that spread their root systems near the surface by sending up new shoots from each root joint, you must equip your International field cultivator with spring-tooth gangs and special tooth points. These spring teeth hook under the root systems of the weeds and lift the whole thing out of the ground, where it withers and dies. The International field cultivator is an enemy of all weeds.

For Summer Fallowing...

ON a hot day tons of soil moisture will evaporate from a field if the top surface is left in a packed condition. If the surface is kept well pulverized, it acts as a blanket, sealing up the moisture beneath and holding it in storage for the crop to follow. This condition may be maintained by summer fallowing. To be successful, summer fallow cultivation must be done effectively and often. The International field cultivator is an ideal tool for summer fallowing because of its wide sweep and thorough stirring of the soil. It covers a big acreage in a day and does the work well. Even though the soil condition is adverse and the ground exceptionally hard, good work can be done, because the entire weight of the machine and driver can be thrown on the shovels if necessary.

For Seedbed Preparation...

EVEN the best soil on your farm will not produce maximum crops unless the seedbed has been prepared well. The fields should be worked down in order to fill up the air spaces above the subsoil. By pulverizing the surface soil thoroughly with an International field cultivator, excessive evaporation of valuable moisture is prevented. If the spring is late, the soil should be stirred deeply, so that the warm air can circulate through it and liven it up. The International field cultivator is well adapted to all of these tasks. It is built strong enough to stand up under the roughest kind of treatment. The depth of cultivation is under full control at all times. Each gang has its own pressure spring, insuring thorough cultivation where the surface is uneven. When equipped with a power lift attachment, it is adapted equally well to horse or tractor power. All cultivators can be equipped with stiff tooth or spring tooth gangs as ordered. A wide range of shovel equipment to choose from.

Kendrick Votes 20,000 Bond Issue

The result of the bond election in Kendrick Highway district, Tuesday, was highly satisfactory to the good road boosters of the Potlatch. The substantial majority of 306 to 87 indicates in a most emphatic manner that the $20,000 bond issue is a popular move. It also demonstrates that this community is still in possession of the booster spirit that has done so much for it in the past. One of the outstanding features of the election was the good feeling displayed by both those in favor of the bonds and those against them. It was one of the heaviest votes ever cast here and the interest in the outcome was intense, yet there was little demonstration made by the voters.—Kendrick Gazette.

CHESLEY BOY SPELLED ALL WORDS CORRECTLY

Nes Perce and Clearwater teams lead in the inter-county spelling contest at the court house, Harold Kirkpatrick of Chesley missing no word for first in the first division, and Orval Chapman of Orfino ranking high in the second division with only one word missed, says the Lewiston Tribune. The first section is made up of the third, fourth and fifth grades and the second division includes the sixth, seventh and eigth grades.

Second place in the first division was won by Latah county, Lawerence Baker of Deary, and Lewis took third in the same class, Eupha Webb of Rheubens spelling.

Second in the second division went to Nes Perce county, Anna Dau of Lower Tammany, and Clearwater, Milton Plank of Orofino spelling, took third. Gold and silver medals were awarded as prizes.

Each section wrote 100 words and spelled orally 500.

The county superintendants, Misses Ellen Peterson, Latah, Moscow; Lillian Harbke, Nesperce, Lewis; Evelyn Morwin, Orofino, Clearwater, last night treated their contestants with a visit to Lewiston moving picture theaters.

The inter-county contest closes the most sucessful of these annual spelling events. Unusual enthusiasm was manifested at the various county contests, largely because of the excellent showing of the lower grades, which have maintained their leadership throughout.

The next event in the schedule of the schools of Nes Perce county is the fair, declamation contest and track meet to be held in Lewiston, April 27 and 18. This event originally was scheduled for May 25 but was set ahead because of a conflict with the commencement exercises at Lapwai.

The fellow who looks for trouble generally dodges it when it comes.

NOTICE TO ELECTORS

F. C. Shork ..... ( )
G. E. Sampson ..... ( )

Statement of Ownership, Management, Etc., Required by the Act of Congress of Aug. 24, 1912

Of the Genesee News, publisched weekly at Genesee, Idaho, for April, 1, 1923.

State of Idaho, County of Latah.

Before me, a notary public, in and for the state and county aforesaid, personally appeared P. C. McCreary, who, having been duly sworn according to law, deposes and says that he is the owner and publisher of the Genesee News, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the act of congress of August 24, 1912, embodied in section 443, Postal Laws and Regulations.

That the name and address of the publisher, editor, etc., is P. C. McCreary, Genesee, Idaho.

That the owner is P. C. McCreary, Genesee, Idaho.

That the known bondholders, mortgagees, and other security holders owning or holding one per cent or more of total amount of bonds, mortgages, or other securities are: None.

P. C. McCreary,
Owner and Publisher.

Sworn to and subscribed before me this 5th day of April, 1923.

C. P. Whalen,
Notary Public.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, APRIL 27, 1923. NO. 43

WHAT HAPPENED HERE TWENTY YEARS AGO

Will Herman and Will Platt returned home Sunday from a tour of the coast cities.

The ball park has been completed and it is safe has to say it has no equal in the Inland Empire.

Fred Nagel and J. C. Nordby left Sunday for La Grande, Oregon, to make proofs on timber claims.

F. C. Marquedson and Ed. Vanouck left Sunday for Boise to make proof on timber claims. Mr. Vanouck expects to remain in that section until about the first of August.

The local lodge of Odd Fellows has finished the work of initiating another class of 10. They now have a membership of over 60 and their exchequer is in good condition.

A meeting of the Genesee Driving club association will be held at Hans Bugge's office May 6, 1903, to elect seven directors and transact any other business that may come before the meeting. F. E. Dicus, secreary.

Our ball team went to Kendrick Saturday to play with the team at that place. By the score on one side it must have been in the nature of a foot race. The Genesee boys scored 66 times while eKndrick scored but once.

Mr. and Mrs. Wm. Hickman's little son narrowly escaped drowning Tuesday while playing on the bank of the creek near their home. It is not known exactly how the accident happened but it is presumed he fell in while playing with other children. He was in vior is head in muddy water and it took considerable time to resusitate him.

At the meeting of the school board held last Thursday evening, the present corps of teachers was retained for the coming year. They are Hartzell Cobbs, Bessie Wilson, Marie Cool, Lulu French, Mrs. D. Spurbeck and Maude Nadic. Paul Cann was appointed to fill the vacancy in the school board caused by the resignation of John S. Larrabee.

John McMartin is in receipt of a letter from the John Larrabee family from Sacramento, California, saying they would leave that place for Genesee on the 20th inst. Counting four days for the trip they would be due to reach here last evening. Their many Genesee friends will be pleased to know that they will again be numbered among the town's residents.

A Farewell Surprise

Tuesday evening a very pleasant surprise party was given at the home of Mrs. Con. Steltz in honor of Mrs. F. E. Lambert who left Wednesday morning for Crabtree, Oregon, where the family will make their home.

The perpetrators of the surprise—members of the Rebekah lodge—gathered at the home of Mrs. Con. Steltz and Mrs. Lambert was persuaded by some of the ladies to take a walk, which ended at the Steltz home where a very pleasant evening was spent by the ladies. Mrs. Lambert was presented a very pretty piece of cut glass as a remembrance from the lodge, of which organization she has been a faithful member. A dainty luncheon was served and all wished Mrs. Lambert much happiness in her new home.

Signs to Be Placed

It seems that at last the road signs authorized made by the commercial club last year—when that organization was still alive—will be put up. Rev. James N. Pendleton, accompanied by Boy Scouts, will undertake the task.

Meyer & Son have agreed to furnish a truck to haul the signs and the start will be made from the Meyer garage Saturday morning at 9 o'clock.

Rev. Pendleton and the Boy Scouts will not only receive the thanks of Genesee people, but the traveling public as well.

A Business Change

One of the most important business changes that has taken place in Genesee for a long time was consummated last Saturday afternoon when F. E. Lambert traded his hotel property, hardware store and other holdings to George Schlerth of Crabtree, Oregon, for a dairy farm in that section of the country, Mr. and Mrs. Lambert and their two younger children leaving for their new home Wednesday morning. Mr. Schlerth will arrive in a few days to take charge of the business. Arthur Mayer will be in charge of the cafe.

Mr. Schlerth is no stranger in Genesee having resided on the home farm near Leon until a few years ago when the home place was sold and he took up the dairy business, where he remained until the trade was made with Mr. Lambert.

Mr. Lambert, while new to the dairy business, has had much ranch experience and will soon be able to fall into step. The dairy ranch is said to be fully equipped and electrically equipped throughout and is stocked with fine Jerseys.

Mr. and Mrs. Lambert have resided in and near Genesee for many years, Mr. Lambert having been born on his father's homestead, near Pine Grove, some "several" years ago, and with the exception of a few years spent in California, has made this his home all his life and Mrs. Lambert has lived here ever since she became his "better half" some 15 years ago. Their many old-time friends here wish them much happiness and contentment in their new home.

The City Election

The city election in Genesee last Tuesday proved to be rather interesting before it was over. However little animosity was shown and those who were defeated, for the most part, said they were lucky.

When the final count was made it was found that John Meyer, sr., had been elected mayor over Dr. R. I. Witty, and that Leon Follett and Glenn Sampson had been chosen councilmen in the west ward and R. S. Sullivan and Walter Jain in the east ward. W. W. Burr for city clerk, and D. L. Bressler for city treasurer, had no opposition.

So far as utility is concerned, not a name was placed before the voters that was not a good one, and it was only a question of personal preference on the part of voters. There is no question but that with the men elected our little city will still move along in the even tenor of its way.

New Girls' Dormitory, Lewiston

Plans to proceed at once with $65,000 in betterments, including a $50,000 girls' dormitory at the Idaho State Normal school at Lewiston were completed by the executive committee of the Idaho State Board of Education, while in Spokane attending the Inland Empire Teachers' association convention.

At present the institution, which has 40 students, has one girls' dormitory, which will take care of 60 students. The new dormitory will care for 77 students and a house mother. The building will be of brick 162 feet long and 38 feet wide and will be three stories high.

Wheat In Good Condition

Winter wheat in Washington is in better condition than the country-wide average, according to the monthly report issued by G. S. Ray, statistician for the bureau of economics of the United States department of agriculture.

"Winter wheat in Washington on April 1, averaged 84 per cent of normal, an increase of 7 points over the December 1, 1922 report." The average of winter wheat for the United States on April 1 was 75.2 per cent of normal.

FOREST PROTECTION WEEK APRIL 22 TO 28

By proclamation of President Harding and Governor C. C. Moore, the week of April 22-28 has been designated Forest Protection Week. It is the object of all educational agencies to give instruction to the public on the very urgent need of conserving and using wisely one of the greatest of all of our natural resources.

The lumber industry ranks second only to agriculture as the chief source of prosperity to the state of Idaho. It offers employment to 60 per cent of the entire industrial population. The lumber industry represents an invested capital of $50,000,000 and pays more than $900,000 taxes each year. The lumber produced in this state was approximately 1,000,000,000 board feet in 1920, or enough to pave a road 100 feet wide with planking four inches thick across Idaho from the Canadian boundary to the state of Utah. In addition to this the forests are supplying large quantities of other material such as poles, posts, pulp and fuel wood. The value of the products produced each year is more than $30,000,000. For each thousand feet of lumber produced, approximately $18 are paid to the people of the state in wages and salaries and $4 paid for supplies. More than one-half of all the remaining timber in the United States is found in the Northwest.

For those who enjoy the out-of-door life, our national forests offer a great opportunity. There one finds all that the nature lover could desire. He has good water and plenty of wood for his camp fire. There are fish and game, an abundance of plants of many kinds, untold numbers of undeveloped and unspoiled areas in the mountains for the more venturesome and easily accessible camping places for those who are not so strenuous. The forest service welcomes the public and aids the forest visitors in many ways. The privilege of using the forests can be enjoyed with but few restrictions and these the person of common sense would observe without being asked to do so. The point of great importance is to be careful with fire. Let us consider that recreation is a legitimate forest use and let us not hesitate to put them to that use if the inclination arises.

Since forest fires destroy the timber of today and the future, ruin our best fishing, hunting and camping grounds, deteriorate the range for cattle and sheep, interfere with the supply of water needed for rainfall and irrigation, increase the menace of floods during the periods of moisture precipitation and droughts during the dry season, and in general increase the cost of living for each one of us, we must do our best to observe and induce others to observe the following rules:

1. Making Camp—We will build our camp fire in the open, not near a tree or against an old log, and always keep fire away from small and fine brush. After scraping away all of the trash from around the spot we will build only a small fire.

2. Leaving Camp—We will never leave our camp fire, even for a short time, without putting it thoroughly out with water and digging a trench free from all trash around it.

3. Be Prepared—Whenever we go into the forest we will find out at once where the nearest United States forest ranger or state fire warden is located.

4. Reporting Fires—If we find a fire, no matter how small, we will try to put it out. When the fire is out, or if we cannot put it out, we will get word of it to the nearest forest ranger or state fire warden at once, even if this will inconvenience us.

5. Smokers—We will try to keep our friends from smoking in the woods. (This is a regulation enforced by the U. S. forest service and many of the large lumber companies among their employes.) We will warn smokers around camp not to throw pipe or cigar ashes or stumps of cigars or cigarettes into brush, leaves, needles, or rotten wood, and to be sure their matches are out by pinching them before throwing them away.

The Story of Two Matches

"Here is a pretty state of things," said the traveler. "Dying for a smoke, and only one match left, and that certain to be a fizzle! Was there ever a creature so unfortunate? And yet," thought the traveler, "suppose I light this match, and smoke my pipe and shake out the dottle here in the grass—the grass might catch on fire, for it is dry like tinder; while I beat out the flames in front, they might evade and run behind me, and seize upon that bush of poison oak; before I could reach it, that would have blazed up. Over the bush I see a pine tree hung with moss; that, too, would fly in fire upon the instant to its topmost bough. And the flames of that long torch—how the wind would take and brandish that through the inflammable forest! I hear this valley roar in a moment with the joint voice of the winds and the fire. I see myself flee for my life, and the flying conflagration chase and outflank me through the hills. I see this pleasant forest burn for days, the cattle roasted, the springs dried up, the farmer ruined and his children cast upon the

CLEAN YOUR LAWNS OF THE PESTEFEROUS DANDELION

By Chas. W. Smith, teacher of vocational agriculture, G. H. S.

The old back-breaking methods of pulling and cutting dandelions out of the lawn is a very effective method but it is a very slow and tiresome process. If a very small part of the root remains in the ground it will grow and the work will all have been in vain. Experiments have proven that iron sulphate will control this pest and this is the time to begin the treatment.

Theart your lawn with a solution of iron sulphate. Dissolve one and one-half pounds of iron sulphate in a gallon o fwater for each 375 square feet of lawn. The solution may be applied with a spray pump, or if a spray pump is not available, fairly good results may be obtained by the use of a common sprinkler. Saturate the leaves and roots of the dandelions with as fine a spray as possible.

Make the first application within the next week—before the blossom buds open. Make the second and third application at intervals of three or four weeks, and if necessary, the fourth application may be made. Spray once or twice in the late fall to prevent any late growth. Select a quiet day when there is no danger of rain for several hours to make your applications. Seed may be blown in from adjacent lawns but persistent spraying every year or two will keep the dandelions in control.

If your lawn contains white clover this will not aid you any as iron sulphate destroys the white clover as well as the dandelions. A lawn should should not be sprayed during hot, dry weather, when the ground is dry and hard, for in this case more harm than good will result. The lawn should be mowed two or three days before spraying and again two or three days after spraying. Use particular care to keep the iron sulphate from coming in contact with walks, bricks, etc., as it will leave large ugly blotches. And bear in mind that this spray must not be used on lawns that contain white clover.

If you intend to try this spray, do not wait until it is too late. It has given very good results when applied at the proper time and very poor results when applied during hot, dry weather. There is no danger of your injuring your blue grass lawn if you follow directions.

"South of Suva"

Phyllis Latimer and Pauline Leonard are bound to Suva in the Fiji islands. On shipboard Pauline decides to continue with a man she falls in love with—and not to join John Webster, the guardian to whom she was going.

Phyllis is on her way to join her husband who left for the Fijis after her marriage three years before. On reaching his plantation she finds him drunk and degenerate, a prey to the insidious influences of the tropics. He blames his three years of loneliness—and she agrees to help him towards regeneration but not as his wife until he proves himself worthy to be her husband.

But he continues his dissipations with the natives and she flees to Suva, where she uses the letters of Pauline Leonard to pose as the ward of John Webster, a successful plantation owner. Webster employs imported Hindoo labor in preference to the lazy natives—and Latimer uses this as an argument to incite the islanders against him. Webster repels the attack by dynamiting the lagoon, killing a number of the natives.

Webster goes to Suva for authority to have Latimer deported. While he is away the latter sneaks in to burn and destroy—and finds his wife. He forces her to reveal her identity to Webster's assistant, Marmaduke Grubb, and takes her back to his island. Failing to break her spirit, he turns her over to the natives, who are about to hold cannibalistic rites to appease the wrath of the gods, visited on them during the dynamite incident.

Phyllis has taken money from Webster's safe to wire the real ward, and Webster misunderstands her flight until the real Pauline arrives. Then he embarks for the Latimer island in a time to save Phyllis from the cannibalistic fate in store for her. Latimer is killed during the rescue. Phyllis and Webster acknowledge their love for each other.

Opera house Saturday night, April 28.

Tuesday Club Entertained

Mrs. R. S. Sullivan on Tuesday afternoon entertained the Tuesday club and a few invited guests. The afternoon was spent playing pinochle and a very enjoyable time is reported. Mrs. Frank H. Thomas won the honors. The invited guests were Mrs. F. J. Niemann, Mrs. Jack Barnes, Mrs. A. E. Elver, Mrs. Henry Morscheck, Mrs. Ray Edwards, Mrs. T. H. Herman, Mrs. Nell Haymond, Mrs. Frank H. Thomas, Mrs. Frank Hoorman, Mrs. A. H. Potsch, Mrs. F. E. Lambert, Mrs. Fred Morscheck.

The next meeting will be at the home of Mrs. J. J. Tupker.

Try to make yourself better than your neighbor, and we will tip him off to do the same. That would help some.

About Squirrel Poison

Quite a number have asked the News for a copy of the government formula for mixing squirrel poison and we herewith give it for the benefit of all who may want to mix their own poison:

Mix together dry, one ounce of powdered strychnine (alkaloid), one heaping tablespoon of baking soda, one scant teaspoon of saccharine and three heaping tablespoons of flour. Add a half cupful of cold water and work into a smooth batter. When all lumps have been worked out of the batter, add more cold water and dilute to a smooth, creamy paste. Apply this paste to 8 or 10 quarts of good, heavy, re-cleaned oats and mix thoroughly. Work until there are no dry kernels. An old tub or tight box will serve for mixing. Each quart of poisoned grain is sufficient for 40 to 60 baits. This quantity scattered (one teaspoon to a place) along squirrel trails, or on clean, hard surfaces near the holes, will not endanger stock.

Strychnine in any form other than the commercial powdered alkaloid is not effective in the above formula.

Poisoned oats, all poison containers and all utensils used in the preparation of poisons should be kept plainly labeled and out of reach of children, irresponsible persons, and livestock.

This is the formula developed for the Columbian ground squirrel by the bureau of biological survey of the United States department of agriculture, and is commonly referred to as "the government formula.

Strychnine and saccharine may be obtained from either R. E. Nordby, John Lorang, or Wm. Schlueter.

Some Are Still Optimistic

"As spring approaches, the old hope that I can work out my salvation here on the farm arises anew. If a man and his family be healthy and active, with a home to live in, and plenty of food, they can bide their time, confident that better days are sure to come. If our expectations be reasonable, if we do not deceive our own inclinations and the exaggerated doctrines which some of our most fervent champions are preaching, we will come into our own again. Organizations and improved marketing methods which enlist the support of conservative, substantial stock farmers will help those of us who try to help ourselves. Some changes in our farming systems and habits must be made, however, before any kind of cooperative work can be of much use to us."—From a North Dakota Stockman's Letter.

It is refreshing to receive this expression of hope and of reviving self-confidence. Both are we returning to distressed men and women on hundreds of farms and ranches. Better days have already dawned for those whose outlook and mlook are a little brighter than they were a year ago.

Farmers who are best qualified to farm have not lost faith in their profession. Still hopeful and busy, and reasonable in their expectations, they confidently face the present and the future. Men of this heroic breed have always been discovered but never conquered by adversity. Having kept the faith, and sown and planted in hope, they shall reap. This reasonable expectation is based on the human experience, which is every man's most trustworthy guide and light.—Breeder's Gazette.

To Discuss Farming

Discussion of a campaign for diversified farming will probably take a major part in the conference of commercial organization presidents and secretaries to be held in Spokane May 22.

This plan was originally suggested by Mayor Ben Hill of Walla Walla, and the date accepted by the Spokane Chamber of Commerce.

MISS GLADYS STOVALL IS DOKKIE-SHRINE CANDIDATE

The Dokkie band and patrol team of Lewiston and a number of Shriners came through Genesee Monday evening and gave a band concert and an exhibition drill which was much appreciated by a large crowd that had gathered to give the contingent a hearty reception. The music was a-bout the best that has been dispensed on the streets of Genese for many a day, although only a small portion of the regular Dokkie band was present.

The demonstration was for the purpose of advertising the Dokkie-Shrine "Circus" which is to be given at Lewiston May 10, 11 and 12 under the auspices of the D. O. K. K. and Shrine organizations. At this entertainment, which is said to be the biggest thing that has ever been pulled off in Lewiston in the line of amusement, a 1923 Buick automobile will be given away absolutely free of charge. Each purchaser of a ticket will be given a chance on the car, which is valued at more than $2,600, and they will also be allowed 100 votes for their favorite for queen of the circus. The first prize is $100 in cash and the second is $50 in cash. The lady receiving the highest number of votes will be declared the winner of the first prize and the one who shall receive the greatest number of votes in the community having the largest combined vote as compared to the combined vote of any other community shall be awarded the second prize, receiving $50 in gold and all traveling and other expenses during the three days of the Circus and will be installed as maid of honor to the queen.

Miss Gladys Stovall has been nominated as the representative from Genesee and all who buy tickets are asked to bear her in mind. Each ticket is good for 100 votes. You can buy tickets from Miss Stovall or from any member of theDokkie or Shrine—or if you can't get them any place else, come to The News office and we will supply your wants. We have all you want—and more, too. Who knows, you may get that fine big touring car and three day's entertainment all for $1.

Remember, Genesee doesn't have to have more votes than Moscow, or Pullman, or any other town of larger size, but will be rated according to the number of tickets sold in proportion to the population.

Missionary Meeting

The missionary society of the Federated church met April 25 at the home of Mrs. B. J. Pleiman. Those who were present expressed it as being a "great meeting." Much interest was shown and information gained by the discussion of the topics on the Near East situation.

Mrs. F. B. Evans told of a sister and her husband who were serving as medical missionaries in Asia Minor. Their work at the present time consists of teaching, feeding and clothing 500 orphans. This is their entire work. Do we wonder that they were appalled at the indifference of the Americans when visiting here two years ago? One hundred and seventy-five orphanages and hospitals are maintained for the Armenians.

To Hold Dress Form Class

Miss Clara Cowgill, district home demonstration agent of the extension division of the University of Idaho, who held a very successful millinery class in Genesee last week, will hold a dress form class at Pine Grove at a date to be announced later.

These classes were arranged for by and are being conducted under tho supervision of County Agent O. S. Fletcher, as part of the regular extension program for Latah county.

Got anything to sell? Tray a want ad. if you have.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account.

Many of the richest men in this country began their careers with nothing but energy and a determination to succeed. They saved their money until it could be turned to good account.

Why not you, young man? A savings account is the first step.

THE DANGEROUS AGE

Fictioned by
CONRAD GIBSON

INSTALLMENT NO. 6.

CHAPTER IV.

At this time uneasiness had penetrated the Emerson home. Mary, now quite upset because of her failure to hear from John regularly, feared many things. Of course, she had no knowledge of what really was transpiring. But on this particular night, after seeing carefully to closing the house and mending stockings and arranging the laundry, Mary chanced to choose from John's great row of books a novel entitled "The Dangerous Age," which caused her to conjure up frightful visions that she had never before dreamed could enter her mind.

The story, as she remembered its most important incidents, had to do with the affairs of a middle aged man and woman and happiness and a home. She remembered distinctly, so distinctly that she could almost repeat its very words, that it had stated that the dangerous age for men is forty! That was her first shock. John—yes, John was just forty! And the book had said that at the "dangerous age" men sometimes sought out new fields—searched for romance because it was so often denied them in their homes. It told of a man who went to New York on business ostensibly, but who while there met and fell in love with a beautiful girl. It said that his poor wife at home had sighed day after day for letters from her loved one, but they did not come. Until at last one did come. And it was—not a letter of love. It was a letter telling her that he had fallen in love and would never return. And the book said, too, that the wife, stricken with grief, rushed to her room. Even while her husband knocked at the door to return and beg her forgiveness the woman in the story had sent a bullet into her brain and had fallen in death.

Cold, limp, frightened, Mary Emerson sat long, thinking of that awful climax. And it came suddenly to her realization that after all John, too, had fretted recently about things—little things, she thought—but many little things. Rushing in upon her mind also came the words of Ruth of that very afternoon. Ruth had innocently enough repeated the expression of her father. He had said to her that a woman ought to always be young, ought to always be a fellow's sweetheart, ought never to grow old fashioned and grumpy. And as Mary remembered all these things the first definite feeling of fear, of sickness, of foreboding of ill came over her. She left her chair and stood before the open window, listening to the sounds o fthe night. An owl hooted. Mary shivered.

"Oh," she sobbed at last, as she turned away, "if he would only come back, I would show him. I'd not be cross and fault-finding any more, nor old fashioned. Oh, I'm so miserable!" And she fell weeping into the lounge and lay there quite still.

In her mind she went back to the time when she and John together were as light-hearted and as filled with the joyous spirit of children as her own daughter of today. She remembered him in those days, vigorous, young, handsome, chivalrous. And she a dainty little Miss who blushed in his presence and felt her heart go sailing when he placed his hand upon her shoulder.

"If he would only come back now I'm sure I could be the same as we were then," she kept saying over and over to herself. "I'd really like so to be. I'll be young again, and happy, and—and romantic."

But the man of her thoughts stood impatiently now on the threshold of the Tuyl apartment. He did not know that a few minutes previous to his arrival an athletic young fellow with inky black hair and almost fierce brown eyes had passed over the same threshold. He did not know that this instant, just beyond the closed door, this young man, to whom Gloria's hand in marriage had been promised months before, stood clasping her in his arms and implanting upon her pink lips many kisses—kisses which bespoke the hearts of a lass and a lad in love.

John could not understand why the servant had refused to allow him to enter as usual without ceremony. He determined not to be so mistreated by a common butler. And he advanced turned the knob, pushed back the great door and looked in upon a flood of light and a picture before him which set his head reeling ward—shocked. There, beneath the huge candelabra of the drawing room, stood Gloria Tuyl and a ruddy faced youth who now held her tightly to him and gazed menacingly over her shoulder into the eyes of the man whom he very apparently considered to be an unwelcome intruder.

Gloria spoke first. She drew away from the young man, and gestured to John to enter.

"Come in, Mr. Emerson," she said; her voice ringing with a clearness which John had not heard before. "I want awfully to have you meet Mr. Tilson—Mr. Fred Tilson, my fiance."

John had expected to demand an explanation, but now he was not required even to do this. He stared into the eyes of the boy, then turned sharply toward Gloria. In his eyes certainly stamping themselves upon the mind and soul of John Emerson. He felt sick. He became faint. He stumbled dumbly and awkwardly through the doorway.

Once in the open air he regained control of his stunned senses. His first thought was of Mary. Her kind, sad face came before him as in a vision. A mail truck passed. He recalled the letter. He must reach the letter box where he had posted it, reclaim it and rush home to Mary. He raced down the crowded street madly and reached the mail box finally, after what seemed ages to him. He fumbled nervously at the lock. A policeman came leisurely toward him, swinging a night stick.

"Say, Bud, it looks like I'll have to run you in for tamperin' with the mail," the policeman waned.

"Can't I get it, officer?" John cried. "Can't I get it?"

"Get what?"

"My letter. I mailed it just a few —Oh, I suppose an hour ago. Can I get it back?"

And then he confided to the police-

Gloria Tuyl at the Races as Portrayed by Ruth Clifford on the Screen

man, in sketchy, half delirious style, what he had done. The officer, a warm-hearted Irishman, took compassion upon the frantic man, and promised to do what he could to help. But they were assisted ever more by the arrival at that moment of a postman, who threw open the box to gather the letters, and began pouring them into his bag.

John Emerson pleaded with him to look through the scores of letters for the one he had mailed, but the postman refused to be persuaded.

"It's against the rules," he said. "Can't do it, old man."

But after a somewhat lengthy explanation of the situation from both John and the policeman, the postman relented, and the three went carefully through the contents of the large bag.

(To Be Continued)

To Be Different

"Do you always leave cards when you call?"

"No, sometimes I leave a pair of overshoes or an umbrella."

America's Need of Men for Foreign Trade

"The time for nation-wide interest in foreign trade is here." This is the opening sentence in the official bulletin of the Federal Board for Vocational Education in its co-operation with the Bureau of Foreign and Domestic Commerce in its presentation of the "Present Importance of Education for Foreign Trade."

Speaking on this subject, O. E. Erdman, district representative of the American Commerce association at Spokane, says:

"Our foreign trade is the problem of the hour. It is a subject that is dealt with in the magazines and the daily newspapers, discussed and argued in the councils of the nation, and thought about by millions of people daily. That there should be cross-current of thought in such a vast and world-wide discussion of any subject is inevitable. Some there are who believe this country can live alone in peace and plenty, that other nations can buy our products if they want them, and if they do not want them, this country, with its immense domestic market, can fit itself to the changed conditions and prosper."

While the exponents of this thought are entitled to their opinion, it is of itself an absurdity. The world is industrial today, not agricultural. No nation is self-contained, although the United States comes nearer to self-containment than any other country.

America's foreign trade ranges from 6 to 16 per cent of the total trade of the nation. It now is low, but inevitably it must increase as the world becomes composed. To check our foreign trade would mean international disaster. The South today disposes of more than one-third of its principal crop—cotton—to foreign buyers. That cotton clothes countless millions.

It would bring prices of grains down to a point that would bankrupt farmers of the wheat and grain belt, for it would take from them the market to which their surplus goes. Our surplus grain feeds countless millions.

It would close down many steel mills, copper mines and smelters, for we sell large quantities of our steel and copper abroad. Our automobile industry would be wrecked, for we grow no rubber, but draw our main supply from the far East. The foreign market would be taken from the automobile industry, a market which has high potential possibilities.

While the United States could exist alone, it could not live as it does today. There are thousands of products, major and minor, which it does not possess but for which it depends upon foreign lands.

Foreign trade has made the world what it is today. It was through seeking a shorter trade route to the Indies that Columbus discovered the Western world.

Men who talk about America prospering without foreign trade are confused in their reasoning. Disarrangement of foreign trade is like the disarrangement of delicate machinery upon which a great plant depends for operation.

Foreign trade never was of more consequence than today.

—And Their Mother is Only 35

Mrs. O. D. Dalton, of Valdosta, Ga., age 35, is the mother of these ten beautiful children, the eldest 15 years and the youngest 14 months. Only one pair of twins is included. Mrs. Dalton is believed to be the youngest mother of ten.

IDAHO

Children found the body of George Savage, 45, poolroom proprietor, who has been missing since last November, in the limbs of a tree a block south of the Kellogg hotel. The man had been shot in the left eye.

Captain George Mayo, Lieutenant B. H. Bowley and Engineer F. C. Schubert of the United States engineers will examine the Snake River from her to Pittsburg landing, 85 miles distant. The survey heralds possible improvement of navigation between these points.

Advertising agencies, civic organizations or other interested persons may place within the right-of-way of state highways signs directing the traveling public provided they do not conflict with government regulations and are in accord with the regulations made by the state. This announcement was made recently by W. J. Hall, state commissioner of public works, to meet a need for which the legislature failed to provide. The state has no funds with which to properly mark the highways and to encourage the placing of signs along the roads the commissioner made the announcement.

Dr. M. F. Angell, dean of the college of letters and science at the University of Idaho, has been elected president of the newly-formed Northwest Scientific association, which is an outgrowth of the Inland Empire association. Dr. Angell, who is professor of physics at the University of Idaho, is one of the foremost physicists in the northwest and is actively engaged in research work. The organization meeting was held at Spokane in conjunction with the annual convention of the Inland Empire Teachers' association.

The graduation of 23 girls and 13 boys from the high school at Sandpoint will take place May 25. The commencement program will be given in the new high school building, which will be completed and ready for occupancy in a few days.

Plummer will organize the only boys and girls' club in Benewah county this year. Plummer was selected because of the excellent showing at the potato show last year, when one of the pupils of the public schools won the $75 scholarship.

The chamber of commerce, at St. Maries, cooperating with the St. Maries Colonization association and Coeur d'Alene Canning company, has inaugurated a campaign to have 1000 acres in the St. Joe valley, near St. Maries, planted to fruits for canning purposes. I. H. Scott, representing the Coeur d'Alene Canning company, has guaranteed the chamber of commerce directors that his company will provide a market for the entire yield; or the surplus from 1000 acres, for a minimum period of five years and that growers shall receive the going price paid by canners elsewhere upon delivery of the fruit. The guarantee covers a pound minimum rate with protection to the growers, assuring that the cannery will meet any rise in price established by reputable fruit canners in other districts.

Walter Ottevanger, Sunnyside, reports a net profit on the eggs, produced during 1922, by 500 White Leghorn pullets. His flock produced 7,333 1-4 dozen eggs which he sold for an average of 28.7 cents per dozen, making a gross return of $1,737.98, from which he deducted $917.98 to cover expense for feed, light, straw, etc. Mr. Ottevanger got his start in the poultry business by the purchase of 1100 day old chicks, in the spring of 1921, from which he raised 500 pullets, whose work is here reported. His purchase of chicks was made from Bridgman and Son, and Hollywood farm. He expects to increase his flock through the purchase of an additional order of 1600 chicks to be delivered this month.

Man (in drug store)—I want some consecration lye.

Druggist—You mean concentrated lye.

Man—It does nutmeg any difference. That's what I camphor. What does it sulphur?

Druggist—Fifteen scents. I never cinnamon with so much wit.

Man—Well, I myrrh, myrrh! Yet I ammonia a novice at it.—American Mutual Magazine.

HOMEMAKERS' CORNER

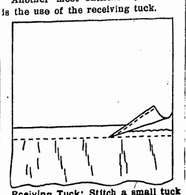
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

GARMENT FINISHES.
Attaching Ruffles.

There are various ways of attaching ruffles to a garment. Bias tape is convenient or a narrow bias strip of the same material as the garment may be used to cover the raw edge.

Another most satisfactory method is the use of the receiving tuck.



Receiving Tuck: Stitch a small tuck in the bottom of the skirt to which the ruffle is to be attached. The lower edge of this tuck, when creased down should come about 1-4 inch above the raw edge of the skirt. The ruffle which has been seamed up and gathered, is then stitched to the bottom of the skirt. This seam should come up on the right side of the skirt. It is made partly from the ruffle and partly from that 1-4 inch of material left below the tuck. Fold the tuck down over the seam, crease flat, baste and stitch. This makes a very flat, neat finish.

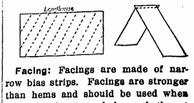
Finishes for Neck Lines and Armholes

Good finishes for the neck and armholes of undergarments are narrow hems or bias facings.

Hems.

Plain Hems must be narrow in order to keep them even in going around the curved edges. They may be hemmed down by hand or on the machine or they may be held down with feather stitching. The trimming is then overhanded to the edge of the garment.

French Hems: A French hem may be used. This makes an attractive finish and has the advantage, that the hem may be put in and the trimming applied with one row of sewing. Turn a narro whem to the right side of garment, then fold this hem back to the wrong side of garment and baste flat. The trimming is then overhanded to the double fold thus made, catching both the hem and the trimming with each stitch.



Facing: Facings are made of narrow bias strips. Facings are stronger than hems and should be used when either neck or armhole or both get much strain. A facing may be used around the armholes and a narrow hem around the neck if desired, as often the armhole gets more strain.

Attaching Collars: (a) A collar may be attached with a bias facing. This makes a good flat finish and by using this method there is little danger of stretching either neck of waist or collar. This facing should be made of material like the waist itself. This way of sewing on collars may be used on single or double collars.

(b) If a collar is made of a double thickness of material, it may be applied as follows: Sew the right side of the collar to the wrong side of the waist—this will throw the seam to the right side of waist. Then hem the under side of collar down over the raw edge of the seam.

(c) A collar, whether single or double, may be machine hemstitched to the waist. This makes an attractive finish if there is other machine hemstitching on the waist. Baste the right side of the collar to wrong side of waist—thus throwing the seam upon right side of waist. Then baste this raw edged seam flat down to the waist. The machine hemstitching is then done along the seam line. Later take the scissors and trim the raw edges close to the hemstitching line. If the hemstitching has been done exactly on the seam line there is no danger of the seam pulling out. This method is used mostly on cotton or waists of thin material.

(Finishing Sleeve Seam at Armhole, will appear next week.)

The A.B.C. of Good Tea

THIS diagram shows clearly one reason for the superior flavor, strength and aroma of RIDGWAYS TEA.

In order to get the very choicest pickings, only those leaves marked "A," "B" and "C" are gathered for Ridgways. These tender, young tip-leaves give to Ridgways Tea that rare quality of flavor which distinguishes the famous Ridgway blends.

The leaves marked "D," "E," "F" and "G" are coarser and less flavory and therefore *are never used by Ridgways.*

This carefully guarded Ridgway quality also assures more cups to the pound. When you buy Ridgways Tea you not only get the best tea, but actually more of it than is possible from inferior tea. As an example of rare good tea we suggest that you order Ridgways (GOLD LABEL) the *Genuine* Orange Pekoe.

"The Finest Tea the World Produces"

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

Hygiene of the Eyes

The need for special care of the eyes starts at the very beginning of life. It is the duty of both the nurse and the doctor to watch the baby's eyes carefully during the first few days or weeks, as the most serious disease of the eye, one of the most common causes of blindness is liable to make its appearance about the second or third day and requires immediate medical attention. This disease, ophthalmia neonatorium (meaning inflamation of the eyes of the new born) is a purulent disease of great virulency. If neglected it is sure to lead to blindness, however, it is both a curable and a preventable disease.

The infection occurs by contamination at the time of birth. If immediately after birth the eyes are carefully cleansed and the proper drops placed upon the eyeball the disease will not develop even tho' the child may have been infected at the time of birth. Inasmuch as such drops, properly used, can do no harm and are a preventive of such a serious condition their use should be a universal routine practice of physicians and midwives.

During infancy the child should be protected against the direct glare of electric lights and sunlight and the parents and friends should realize that altho the baby is small it can, nevertheless, see at a distance as well as an adult and they should avoid holding toys and other objects closely before the baby's eyes, or as is the habit hang them from the baby carriage or wall closely in front of the baby. In this connection I would like to warn mothers against the use of veils on infants and small children.

The inflammatory diseases of the eye are usually quickly noticed and treated, but the need for glasses often goes unrecognized for a long time and many children are handicapped by poor vision or headaches from eyestrain through their entire school age, however with adequate medical inspection of school children this type of trouble is rapidly being discovered and cared for early.

In connection with the school life of children proper hygiene of the eyes in school is important. Sufficient light from a proper direction should be fundamental. The desk should be of a type that will permit adjustment of the height both of the seat and the writing bed to insure proper posture. And as has been recently instituted in Seattle there should be special rooms for children who have poor vision or marked eye defects.

Cross eyes are an indication of serious eye trouble and the parents of a child with cross eyes should immediately consult an oculist.

In adult life, outside of inflamation, the commonest causes of eye trouble are the presence of a foreign body, cinder or the like, on the eyeball; the need of glasses and misuse of the eyes.

The symptoms which should attract attention to probable eye trouble are headaches, which may have no characteristic location or character, eye pain, pain in the eye especially when accompanied by dread of light or tearing, calls for early investigation. Flushes of light or rainbows often indicate a condition in which early treatment may be of decided benefit while later efforts would be of no avail.

Foreign bodies should be removed by someone competent to do so and in a cleanly manner as any infection of even a small scratch of the eye may lead to an ulcer and even to loss of vision. The need for glasses can only be remedied by the proper lenses. Misuse of the eyes consists principally of too much reading; reading in poor light; too much light poorly directed or shaded is as bad or worse than too little. Reading in abnormal position, such as for instance when lying down, tires the eyes and causes needless eye strain, producing headaches and all the other attendant symptoms.

Boys' and Girls' Farm Club Work

A hot school lunch is being served daily to 175 school children at Opportunity, Mrs. H. Raymond is the local nutrition leader and in charge. An additional to the school was built last summer which included a dumb waiter for carrying food and dishes from the home economics room to the upper floors. The hot lunch is financed through the sale of meal tickets and a woman is hired to prepare the food. This work was started last year through the efforts of the county home demonstration agent.

Boys' and Girls' club achievement day programs were given during the week at Little Rock, Aldergrove, Collins, Rainier, Lacey, McKinley, Hays and Yelm. The purpose of the meetings was to present achievement pins to those members who had finished the year's work. County Club Agent William Dunham reported a large attendance.

Walter Motley of Roxboro, a p'g club boy, is the first in Adams county to qualify for the ton litter contest. The idea of the ton litter contest, according to N. C. Donaldson, county agent, is that a sow should raise a large enough litter, that by proper feeding and care they will develop into a ton of pork within six months. It is expected there will be more of the 36 pig club boys qualify for the contest before April 10.

Traveling 35 miles to attend a millinery project leaders training school is the record of some of the Snohomish county women who attended the school recently. Out of the 18 communities in the county where women have formed groups to make hats 10 of these places were represented by leaders. These leaders were trained in the fundamentals of millinery by extension service workers. The work in Snohomish county is under the supervision of Mrs. Harriet D. Stow, home demonstration agent.

Music hath charm to soothe the savage beast—and even a judge, says Oscar Taylor, colored, of New York City. He was arrested on a charge of disorderly conduct, and in his cell whiled away the hours by singing and strumming his banjo. When he appeared in court, Magistrate Weil, complimented on his singing and suspended sentence.

ASK PREFERENCE FOR DISABLED VETERANS

Employers of Northwest Requested to Give Them First Chance at Jobs.

With the opening of spring industrial activities, employers of Washington, Oregon and Idaho are being urged by the United States Veterans' Bureau to give preference when positions are filled to rehabilitated ex-service men of this district. The government is spending millions of dollars having war veterans trained for new occupations to replace those which they were unable to resume because of war disabilities. Actual rehabilitation does not occur, however, until the ex-service man is employed. The Veterans' Bureau seeks the cooperation of employers and the public generally as well as every ex-service men's organization in the carrying out of this program.

Ex-service men are being rehabilitated throughout the country in approximately 160 different lines including agriculture, professions, commercial lines, trades and industries. There are more than 2900 in training in the Pacific Northwest and approximately 13000 have completed their vocational preparation in this district.

The outstanding feature of the whole thing is that rehabilitated war veterans are making good, bureau officials assert. In many instances their salaries are higher than those of their pre-war occupations. The appeal for employment is made on the ground that these men are capable workers. Length of training averages 18 months. The nearest office of the Veterans' Bureau is ready to take orders for men.

Although the war was ended more than four years ago, the biggest load of rehabilitated war veterans seeking employment must be taken care of between now and January 1, 1924. These men, on being declared rehabilitated, are deemed capable of taking regular positions at the prevailing rate of pay and to carry out their duties in their respective capacities as efficiently as any other man. They are not cripples or pensioners.

Every employer should make it a point to give these able bodied, capable, efficient men preference when vacancies occur in their working force or new positions are created. The government may spend hundreds of dollars to train a war veteran along a particular trade or profession, but

WINTER WHEAT BELOW AVERAGE

April Crop Report Shows Both Wheat and Rye Falling Off.

LABOR SHORTAGE LOOMING

Supply 88 Per Cent, Demand 95 Per Cent of Normal—Brood Sow Increases in Numbers

The April 1 crop report for Washington indicates that winter wheat and rye are both somewhat below the average for this time of the year, while the winter wheat crop of the United States shows slightly more than the average decline from December 1st to April 1st. The report, as issued by G. S. Ray of the Department of Agriculture, further states that breeding sows show a marked increase in numbers both in Washington and in the United States as a whole.

Winter wheat in Washington on April 1 averaged 84 per cent of normal, an increase of 7 points over the December 1, 1922, condition or 77. The condition of winter wheat one year ago, on April 1st, was 85, while the ten-year average condition for April 1st is 89. The area of winter wheat abandoned together with the area remaining for harvest and the forecast of production will be given in our May 1 report.

The average condition of winter wheat for the United States on April 1 was 75.2 per cent of normal against 78.4 one year ago, 91.0 two years ago, and 84.1, the average condition for the past ten years on April 1. There was a decrease in condition from December 1, 1922, to April 1, 1923, of 4.3 points as compared with an average decline in the past ten years of 3.8 points between these dates. Upon the assumption of average abandonment of acreage and average influences on the crop to harvest, the condition April 1 forecasts a production of about 572,317,000 bushels, which compares with 580,204,000 bushels, the estimated production of winter wheat in 1922, 600,516,000 bushels in 1921, and 565,905,000 bushels, the average of the preceding five years.

Washington rye on April 1 averaged 88 percent of normal as compared with 90 per cent one year ago and 94, the average condition on April 1 for the past ten years. The condition of rye for the United States as a whole on April 1 was 81.8 per cent of normal against 89.0 one year ago, 90.3 two years ago, and 88.6 the average condition for the past ten years on April 1. The condition of 81.8, on April 1, forecasts a production of approximately 75,784,000 bushels of rye, as compared with 95,457,000 bushels in 1922, the 1921 crop of 61,675,000 bushels, and the average of the preceding five years of 67,762,000 bushels.

Breeding sows in Washington increased 8 per cent during the past year and are now estimated at 40,000 as compared with 37,000 one year ago and 39,000 two years ago, on April 1st.

The total number of breeding sows in the United States on April 1 was estimated to be 13,206,000 or an increase of 6.7 per cent over the 12,424,000 on April 1, 1922, while the number on April 1, 1921 was 11,187,000.

The supply of hired farm labor in Washington on April 1 was but 88 per cent of normal, while the demand for farm labor was 95 per cent of normal. The ration of supply to demand this year is but 93 per cent, indicating quite a scarcity of farm labor. The ratio of supply to demand on April 1, 1922, was 116 per cent, while on April 1, 1921, it was 113 per cent.

For the United States on April 1 the supply of farm labor was 82.8 per cent of normal, while the demand was 94.6 per cent of normal, making the ratio of supply to demand 87.5 per cent this year against 111.4 per cent one year ago and 108.8 per cent two years ago.

Student (looking at frogs in jar)—"There never was or never will be."

Instructor—"Never was and never will be what?"

Student—"Frogs with eyebrows."—Ex.

If the public does not cooperate in seeing to it that he is employed this expenditure will avail but little.

These men left the war service bearing the scars of the conflict. Now they have completed their training in occupations of peace. They are ready and in need of employment. Give them a chance to make good, bureau officials urge.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

ODORLESS MANUFACTURING OF CHEMICAL WOOD PULP.

Cellulose industries in Sweden have succeeded in solving a most vexing problem, which has hitherto defied solution, by making cellulose without the vile odors that accompanied earlier processes. Sulphur-free lye is used in the new method, as distinguished from the sulphate method which uses sulphur-bearing lyes. Incidentally, chemical products of high value are produced from the organic substances dissolved by the waste lye. These by-products, resulting from what was hitherto waste, and comprising from 50 to 65 per cent of the volume of the wood, are said to effect an enormous change in the economics of the cellulose industry.

NEW MACHINE AUTOMATICALLY FILLS ICE-CREAM CARTONS.

A recently developed machine that automatically fills cartons with a measured amount of ice cream, is now being used by some of the larger ice cream manufacturers. All that is necessary to do is to keep ice cream in the hopper, place empty cartons on one side of the revolving table, and remove the filled cartons from the other side. As the carton approaches close to the filling spout, it strikes a triggor that actuates the filling mechanism, consisting of three plungers and a valve. Bricks of one, two, or three flavors can be made. With this machine, it is claimed, four girls are able to do in two hours, in a more sanitary way, what formerly required nearly four hours' work by eight.

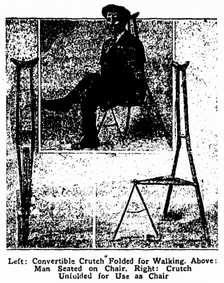
Automatic Ice Cream Packaging Machine, Which Requires the Attention of Only Two Girls; the One at the Left Putting On Empty Cartons and the One at the Right Removing the Filled Ones: Bricks of One, Two, or Three Flavors Can Be Made.

COMBINED CRUTCH AND CHAIR HANDY FOR INVALIDS.

A novel crutch which may be converted almost instantly into a chair is the product of an Iowa inventor. When the user of the crutch wants to rest, he need only spread the divided crutch leg, pull out a folding seat, and set a short leg in place. The weight of the whole is 2 1-2 pounds, and the change from crutch to chair or back again is made in about 10 seconds.

An acid-resisting enamel which has satisfactorily withstood more exacting tests than would be encountered in actual use, has recently been developed.

Some men keep their religion locked in a safe-deposit vault six days of the week.



Left: Convertible Crutch Folded for Walking. Above: Man Seated on Chair. Right: Crutch Unfolded for Use as Chair

COMBINED UNION AND VALVE SIMPLIFIES PIPING.

A valve-containing union has just been developed which has a variety of applications in steam or liquid-piping layouts. In place of two union tailpieces, a valve and a union tailpiece are provided, with a wrench-operated valve body mounted between them. This arrangement is of particular benefit when the unit is used as a cap on dead ends, as the line may be extended at any time without shutdown. It may also be used as an auxiliary valve for cutting out parts of a line without rendering the whole line dead by the closing of a main valve. The valve-union is furnished in all usual sizes, and is of all-bronze construction, in accordance with standard practice.

IMPROVED PRESS IS ADAPTED FOR PRINTING ON WOOD.

An improved press is now available for printing a variety of work on wood, and it can also be used for printing on paper and heavy cardboard. The platen is cut down to take boards three-fourths of an inch thick, and to print on boards of less thickness, a piece of wood of a thickness equal to the difference between three-fourths of an inch and the thickness of the board to be printed on, is glued to the platen, the gauge being set for a 3-4-inch board. Printing with metal-type forms, such as type-metal type, iron type, or brass type, may be done on this press, which will also use hard-rubber dies containing lettering and illustrations.

The press is equipped with automatic ink font and rollers, and can be used for three-color work. When "making ready," a rubber sheet is laid on the platen. It is adapted for such work as printing illustrations and lettering on various kinds of advertising matter, such as wooden coat hangers, rulers, backs for thermometers, and cigar boxes, and for marking shipping containers, wooden signs, game boards, toys, and the like.

DAIRY

J. P. Graves, of Waikiki farm, Spokane, has determined to repeat his offer of gifts of registered bull calves again this year. He is now receiving applications from community clubs in Northern Idaho and Northeastern Washington for young Jersey sires. To procure one of these calves, Mr. Graves requires that at least three farmers in one community, owning not less than 20 females of breeding age, cooperate in the care and use of the young bull. These bulls are placed when quite young, and a part of the agreement is that the youngster be properly fed and grown to become a useful sire.

Roy N. West, secretary of the Yakima Valley Guernsey Breeders' association, reports that the Yakima breeders will consign 10 to 15 head to the proposed state sale to be held in or near Seattle on May 31. Fifty entries are wanted to fill this sale, and if received, Secretary L. J. Clark believes that an extra good sale will result. Guernsey sales held in the past in Washington have been well patronized and ruling prices have been good, so there is little doubt but that satisfactory returns will be made to consignors for their cattle, should the sale become an actuality.

President H. E. Van Norman of the world dairy congress, which holds its first meeting in Washington, D. C., in October this year, gives interesting figures in the announcement of the congress. These figures clearly indicate that the average American citizen is not using as much milk and milk products as he should, which, in turn, means a legitimate market that should be developed at home. Mr. Van Norman says:

"The world's dairy congress represents the first united effort of the vast dairy industry of the United States—an industry that has its roots in $47,000,000,000 worth of farms and handles per annum more than 44,000,000,000 quarts of milk, for which in its various forms the consumers pay upward of $4,000,000,000. Out of every $5 spent by American families for food $1 goes for milk and milk products. Scarcely a person exists in the land who does not use milk or some of its products. Milk is absolutely essential to the growth of children, physical and mental. At this congress scientists, health officials, government officials, social welfare workers and producers, manufacturers and distributers of milk and milk products will compare notes and exchange the newer knowledge from many lands as to raising, the quality and reducing the production and handling costs of dairy products and improving national health through their wiser use.

"The introduction of an economic element into an international dairy meeting will be a big innovation; but the dairy industry has become a world industry. What occurs in the industry in one part of the globe affects prices in every other part. Our producers, manufacturers and distributors are coming to think in international terms. The movement of surplus dairy products from Australia New Zealand, Argentine republic and South Africa northward profoundly affects the United States, Canada and —Sweden, Holland, Denmark, etc.

"The international aspects of the congress and the proximity of the government departments were the determining factors in deciding the location for the congress sessions. From Washington the delegates will go by special train to the National Dairy show at Syracuse, N. Y., October 6 to 13, 1923. Unusual facilities are available there for the display of the American dairy industry—its cattle, its remarkable mechanical equipment, its products, its influence on national health—as well as of that of foreign countries."

Fancy Potato to Local Trade

As a result of a meeting of potato growers in the county, the leading merchants of Chewelah and Colville have agreed to sell graded and sized table potatoes to their trade put up in 25, 50 and 100 pound crates. All crates will be labeled and the grade guaranteed. County Agent Henry Plumb helped secure the cooperation of the local produce men to assist in grading the potatoes and furnishing warehouse facilities.

Four highly exhilarated chauffeurs in an exhilarated taxicab chased a lone frightened policeman all around New York City. Finally he escaped by running into a vestibule, from where he fired several shots, forcing the taxi to a stop. The four prisoners were intoxicated, and held in $500 bail each.

TIMELY HINTS TO FARMERS

By EXTENSION SERVICE SPECIALISTS

Apiculture.—Unite weak colonies with a medium strong colony in those sections where the main honey comes early in the season.

Farm Crops—Don't be in too big a hurry in planting your squash and cucumber seed. Be sure the weather has warmed up.

Farm Management—Start the enterprise cost records on the principal cash crops. Begin at the beginning of the costs.

Horticulture—Be ready for the cluster bud or pink spray. This is most important for scab control.

Livestock—The nursing sow with a big litter requires all she can eat of a balanced ration. Use ground oats, ground barley, shorts and tankage, 30-30-30-10 parts by weight.

Poultry—Swat the cockerel. His room is better than his presence.

WORLD NEWS NOTES.

Solitary confinement for life in the state prison at Marquette was the sentence imposed upon the Rev. Father Charles Dillon, Catholic priest, of Kalamazoo, Mich., who confessed to slaying the Rev. Henry O'Neill, his superior, last week.

Announcement is maed of the opening of 436 acres of homestead and desert land to ex-service men of the world war. The land is in Converse county, Wyoming, in the Douglas land district. It is open to entry for a period of 91 days, beginning May 3, 1923.

Unrest among workers in England was manifest in increasing proportions last week as the all-important budget was placed before parliament. Conferences between employers and employes were scheduled this week in builders, railway shopmen, pottery workers, cotton millers, chemical workers, shipyard and coal trimmers trades. There has been a strike or lockout threatened in each of these industries and hundreds of thousands of men are involved.

Are Improving

Mrs. Sim Currin, who is in a Moscow hospital, is getting along nicely.

Word received from Henry Martinson, who is recovering from an operation in a Portland hospital, is to the effect that he is getting along nicely and will soon be able to be around.

Entertain Husbands

On Monday evening members of the Tuesday club entertained their husbands at the home of Mr. and Mrs. Fred K. Bressler and one of those good old-fashioned times is reported. Pinochle was the game of the evening. The ladies' honors were won by Mrs. Ira Hanson and Dr. R. I. Witty carried off the honors for the gentlemen.

The hostesses were Mrs. Glenn Sampson, Mrs. Ira Hanson, Mrs. F. K. Bressler, Mrs. C. P. Whalen, Mrs. J. J. Tupker, Mrs. G E Taber and Mrs W. E. English and the invited guests were Mrs. Nell Haymond, Chas. W. Smith and D. L. Bressler.

We do all kinds of printing.

Linger Longers Entertained

Mrs. Ben Jain entertained the Linger Longer club at her country home on Wednesday afternoon. The time was spent with needlework, after which a delicious luncheon was served by the hostess. The invited guests were Mrs. Frank Hoorman, Mrs. Henry Morscheck, Mrs. C. W. Wilson, Mrs. Henry Halverson, Mrs. Joe McLaughlin, Mrs. Ray Kennedy, Mrs. Isaac Isaksen, Mrs. August Johnson, Mrs. Walter Jain, Miss Ethel Johnson, Miss Pauline Reich, Miss Grace Crossett and Miss Mary Haymond.

The next meeting will be with Mrs. Thomas A. Feeney.

If you have anything to sell, try a "Classy-fied" adlet.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. P. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

The young people's choir led the music at the service last Sunday morning and Jesse Gray and Alfreda Hampton rendered a very pleasing duet.

Rev. Pendleton held service at the Shafer school house last Sunday afternoon and will have another the first Sunday in May. He will be accompanied by the young people's choir.

Next Sunday will be the beginning of the nationally celebrated "Boy Week." The morning sermon will be in keeping with the week's program.

Regular services will be held, to which all are cordially invited.

Christian Endeavor Notes
By Ted Parks

The Junior Christian Endeavor was led Sunday afternoon, April 22, by Angie Castle. The topic was "The Secret of Strength."

The senior meeting was led by Mary Mulalley. The topic was "Training for Leadership," in which an important point was that obedience was one of the first essentials in training to be a leader.

Miss Adda Mathews led the pre-song service, which was helped very materially by Miss Olive Jain at the piano and Cecil Gray on the saxophone. A very pretty vocal solo was rendered by Irene Hall.

Reports were given by those who attended the Christian Endeavor rally at Moscow. From their report they had a very good time and heard some really good speeches. Those who attended the rally were Alfreda Hampton, Hope Michelsen, Grace Jain, Oma Castle, Fred Dicus, Jesse Gray, Elvin Hampton, Marion Mayer, Conrad Caldwell, Irene Hall and Ida Evans. Rev. Pendleton attended as supervisor of the Genesee delegation.

Ladies Aid to Meet

The ladies' aid of the Federated church will meet at the Social house on Wednesday afternoon, May 2. The hostesse will be Mrs. A Springer, Mrs. Con. Steltz and Mrs. W. J. Herman.

Notice to Stock Owners

Notice is hereby given that all stock must be kept off the highways in the Rimrock Highway district. All stock found running at large on the highways will be taken up and impounded and the owner fined according to law covering such offense.

PERSONAL MENTION

Roy Lucas was a Thursday morning passenger for Spokane.

Miss Edna Rach was a Genesee visitor from Moscow on Sunday.

Mrs. Amanda Johnson left Saturday morning for her home at Kamiah.

Ethel Nelson was a Friday morning passenger for Spokane for a short visit with friends.

Miss Elsie Marcks returned to Spokane after a visit with her mother, Mrs. A. Marcks.

Mr. and Mrs. Wm. Hordemann were were Tuesday morning pasengers for Uniontown for a short stay.

Esther Clark returned to her school duties at Colton Monday morning after a visit with her parents.

Mrs. E. McMahon returned to her home at Spokane Friday after a visit here with relatives and friends.

Amand Kern came over from Moscow and spent the week-end with his parents, Mr. and Mrs. Amand Kern, sr.

Walter Casebolt came over from Moscow and spent the week-end with his parents, Mr. and Mrs. F. S. Casebolt.

Dr. F. B. Evans returned Thursday from an overland trip to Spokane. He was accompenied home by Helen Casebolt.

Mrs. J. L. Keiser returned to her home at Colfax Monday morning after a visit with her daughter, Mrs. Grant Clark, and husband.

Mrs. Frank Hudson came down from Spokane Monday for a short visit with her mother, Mrs. Mary Isaksen, who is in very poor health.

Mrs. John Alber and daughters returned Tuesday afternoon from Coeur d'Alene near where Miss Susie had been teaching school during the past winter.

Miss Ruth Martinson left Friday evening for Portland for a visit with her father, H. Martinson, who is in a hospital there recovering from an operation.

Mrs. John Maldegen and daughter, Mrs. Geo. Van Buskirk arrived Thursday of last week from Pullman and will look after the Van Buskirk gardens this summer.

Mr. and Mrs. Martin Foster returned Wednesday from Pollock, where they had been employed by the Rapid River Mining & Milling company for the past few weeks.

Mrs. F. S. Casebolt and daughter, Wilma, returned Sunday from Spokane where Wilma recently underwent an operation for appendicitis. They were brought to Genesee by Dr. McCoy, a brother-in-law of Mrs. Casebolt. Helen Casebolt returned to Spokane with Dr. McCoy for a few days' visit.

The New Raymond Hotel, Lewiston

In addition to other hotels, Lewiston has one that is known as the "homey hotel"—The New Raymond. While in one way the Raymond is one of the oldest hotels in the Inland Empire, yet in another way it is one of the newest and best appointed to be found anywhere. As nearly every one in this section knows, the old Raymond was practically destroyed by fire last year and in its stead, upon the self-same site a new and strictly modern Raymond has been erected.

Manager McGrane says "the lobby is everybody's stopping place, the accommodations of which are open to the public at any hour of the twenty-four. It is still the old Raymond in the atmosphere of pleasing informality, yet it is brand new. One will find, in fact, every appointment to satisfy the traveling public and the rates are the lowest for like service to be found in the entire Inland Empire."

You are invited to make this hotel your stopping place while in Lewiston.

Special Notice

I take orders for things you wear. To my other lines from reliable factories I have added the Fergus Falls woolen goods. I will call at every home at least once during this spring and summer. "From factory to consumer" is my motto.
41-3 ANTON W. BIELENBERG.

A Farmer Cured of Rheumatism

"A man living on a farm near here came in a short time ago completely doubled up with rheumatism. I handed him a bottle of Chamberlain's Liniment and told him to use it freely," says C. P. Rayder, Putter Mills, N. Y. "A few days later he walked into the store as straight as a string and handed me a dollar saying, "give me another bottle of Chamberlain's Liniment; I want it in the house all the time for it cured me."—Adv.

Entertained Progressives

Mrs. Ira Hanson entertained the Progressives at her home on Thursday of last week. The afternoon was spent with needlework and a general good time is reported. At 5 o'clock a delicious lunch was served by the hostess. The invited guests were Mrs. F. J. Niemann and son, Fritzie; Mrs. Ray Edwards, Mrs. Fred Morscheck, Mrs. Arthur Mayer and Mrs. C. P. Whalen.

In the evening a group went out and were entertained by Mr. and Mrs. Hanson. A delicious dinner was served after which pinochle was played. Those present were Mr. and Mrs. F. J. Niemann, Mr. and Mrs. F. E. Dicus, Mr. and Mrs. G. Sampson and daughters, Gertrude and Margaret, Misses Viola Lorang, Edith Winegardner, Lela Patch, Frances Vaughn, Mrs. Gerald Coleman, Mrs. Geo. Boliou, Jas. Winegardner and C. W. Smith. A very enjoyable time was had.

Moscow Elks Win Bowling Match

A team of bowlers from Genesee met defeat in a four-game series at the hands of an Elk team in the Moscow Elks' temple on Thursday night of last week. The Moscow Elks got a total of 3007 pins to 2746 for the visitors from Genesee. The Genesee players were handicapped in bowling on a strange alley. Baker of Moscow was high man with 700 pins. Don Bressler of Genesee was second high man with Charles Summerfield of Moscow a close third.

The scores made were: Genesee, Feeney, 525; Bressler, 601; Morscheck, 526; Edwards, 545; Burr, 549. Moscow—Smith, 556; Hoagland, 586; Summerfield, 599; Collins, 566; Baker, 700. A return game will be played at Genesee in the near future.

Parents of a Daughter

Mr. and Mrs. Chas. W. Smith are the proud parents of a daughter, born Monday, April 23. Weight, seven pounds. Mother and babe are reported as getting along nicely. Mrs. Smith is at the home of her parents in Spokane.

Preventative Medicine

The tendency of medical science is toward preventative measures. It is easier and better to prevent than to cure. Pneumonia, one of the most dangerous diseases that medical men have to contend with, often follows a cold or attack of the grip. The cold prepares the system for the reception and development of the pneumonia germ. The longer the cold hangs on the greater the danger. Take Chamberlain's Cough Remedy as soon as the first indication of a cold appears so as to get rid of it with the least possible delay. It is folly to risk an attack of pneumonia when this remedy may be obtained for a trifle.—Adv.

:-: Beautifying the Home Grounds :-:

Lincoln R. Lounsbury, Agricultural Extension Editor, State College.

Washington, a state filled with beautiful homes, can be a reality and not a myth. There are few districts in the state where flowers, vines, shrubs and trees cannot abound in plenty to help make beautiful homes.

No better time could be selected than in the spring to plant exterior decorations and with proper care plants may be transplanted to advantage.

In talking with Mr. A. M. Doerner, former landscape gardener of the State College of Washington, he outlined a plan for home beautification, and laid down a few simple rules for harmonizing the color scheme.

The first thing to do in making the home grounds beautiful, according to Mr. Doerner, is to make a list of plants, including a number of varieties of shade trees, shrubs, vines, and flowers, especially perennials. "This list," said Mr. Doerner, "may be obtained from nursery catalogues and books describing various plants."

After each name note the height of the plant, color of bloom, time of bloom; and any other characteristic worthy of mention, such as colored bark, colored leaves, very graceful form, colored fruits or berries, etc.

If the plants are numbered consecutively and the information put in tabular form, it will be very easy to check up on the effect produced at any desired season. For instance, the height column will show whether you have a representative list of plants of various heights; from the season column it can easily be determined how much color there will be in the garden at any month.

If there seems to be a lack of color at any time, try to find plants blooming at that period. Be sure no two plants blooming at the same time have colors that do not harmonize. Because of the impossibility of describing colors accurately, it is difficult to work out good color harmony, without actually growing the flowers a season or two and becoming acquainted with them.

A few simple rules, if observed, will lessen the possibility of securing colors that do not harmonize. Draw a circle on a piece of paper and divide it into eighteen equal parts. Beginning at the top, label each division of the circle from left to right; red, orange-red, orange, yellow-orange, orange-yellow, yellow, green-yellow, yellow-green, green, blue green, green-blue, blue, violet-blue, blue-violet, violet, red-violet, violet-red.

Use the chart to determine what effects various flowers will have in combination. Colors immediately adjacent to one another on the chart or those directly opposite or nearly so are apt to harmonize, and, therefore, can safely be used together. Those at right angles to one another are liable to be discordant and should not be used by those not familiar with color harmony and the possibilities of color combinations. Whites will, of course, combine readily with any other color.

The easiest way to obtain harmony is to arrange the plants listed into groups, according to the month in which they bloom. For instance, let us suppose that in April Nos. 2, 11, 16, and 21 are in bloom with the colors red, orange, white and violet-blue represented. The violet-blue is liable to clash with the red, therefore, it should be discarded and the color harmony for April would be red, orange, and white.

Continue this process throughout each month, eliminating the undesirable and adding where it seems necessary. By checking up the column of odd characteristics, such as colored bark, berries, etc., it can be easily determined whether or not there will be plenty of color and variation during the winter when bloom is, of course, impossible.

In making out a list, keep in mind soil or climatic conditions that are unusual since plants have their preferences. Better success may be had in using plants that do not require special attention on account of unusual environment; however, it is not difficult to make a good list of plants for any special soil, exposure, or climatic condition.

The care of nursery plants upon their arrival is important. Take them home as soon as possible and arrange to proctect them from the sun and wind. If you cannot plant them the day they are received, store them in a cellar or some other cool, moist place until you are ready to set them out. If they have not traveled too far the plants should keep several days without injury in the bales and boxes in which they have been shipped.

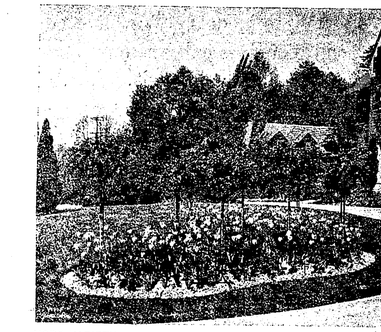
The containers should be opened enough to let the tops of the plants have plenty of air so as to prevent heating or moulding. This is especially important with evergreens and herbaceous plants. If the roots seem dry they should be moistened but not soaked. This can be done by pouring a cupful or two of water over the tree

MASSED TREES AND SHRUBS ARE MORE BEAUTIFUL THAN ISOLATED SPECIMENS

stems at the top of the bale, allowing it to trickle down into the packing. If, for any reason, it is impossible to plant soon after the shipment is received from the nursery, the material should be "heeled in." Heeling-in is a temporary planting. Select a protected location in good soil and dig a trench twelve or eighteen inches deep, depending upon the root system. One side of the trench should be at an angle of 30 to 45 degrees.

Where the plants are to be heeled in for only a few days it is not necessary to open the bundles; ordinarily, however, it is best to do so. Place the roots in the trench letting the stems of the plants rest against the gentler slope and cover the roots with earth, packing in so that all parts of the roots are in contact with the soil.

Where the plants are small a double



MORE VARIETY OF COLOR MAY BE ADDED TO THE LANDSCAPE BY USING FLOWERS

layer may be placed in the same trench; where several varieties are being heeled-in be sure to keep them separate. An easy way to do this is to alternate the direction in which the stems protrude from the trench. If possible, it is well to water at the time of heeling-in in order to wash the earth aroumw the roots and fill up any air space that may be there. It is not advisable to have plants heeled-in longer than necessary, but if carefully done the plants should keep in good shape indefinitely.

Planting Nursery Stock

Different classes of plants require different treatment in planting. There are certain principles, however, that should be observed with all plants. When a shrub or tree is dug up from the nursery row it loses a great number of its feeding roots. These are the little hairlike roots without which no plant can grow, and in determining root system of a plant one should observe the number of these fiber roots and not especially the large stubs.

The top part of the plant should be pruned back to correspond to the root system, except in the case of evergreens which are seldom pruned. In pruning back the top of a tree or shrub attention should be paid to the ultimate form it is desired to have the plant assume.

Any crotches in a shade or street tree should be cut out and the tree trained to a single leader. This will eliminate much of the danger of future injury to the tree by the wind. It is often advisable to leave a few branches along the trunk to shade it from the sun. These low branches should be removed as the tree grows.

Two methods are used in pruning shrubs: One is thinning-out the branches where they are injured or too numerous, the other is heading-back. The former method produces tall growth, while the latter increases the stockiness of the plants giving less height. The method to be used depends upon the variety and characteristics of the plant itself.

Because of the variation in climatic conditions in different parts of the State of Washington it is difficult to give detailed directions for the planting and care of shrubs and trees. On the east side of the Cascade Mountains it is advisable to spade up the entire shrubbery bed. Where this is not done the holes in which the plants are placed should be more than large enough to admit the roots without crowding or bending them out of the position they naturally assume. The plants should be set slightly deeper than they were in the nursery.

The chief essential in planting is to have every part of the root system in contact with the soil. This requires that the soil be fine and care be taken in compacting it around the roots. Haste in filling in the soil makes waste in planting. The addition of water at the time of planting aids in settling the earth around the roots.

It is usually best to cultivate newly planted nursery stock until it is well established; where subject to drought cultivation may be necessary for a number of years. It is better to water thoroughly and infrequently than to give too numerous and superficial waterings. However, it is well to water several times during the dry season.

Where the top of the plant is heavy enough to catch the wind, brace or stake the plants. In order to prevent chafing use a piece of rubber hose or burlap instead of rope or wire where the tie comes in contact with the bark.

Native Plants Make Valuable Ornamentals.

Many of the native plants of Washington make splendid ornamentals and can be transplanted from their native haunts. We will divide the plants into four sections, including shrubs, trees, vines and flowers.

Shrubs.

Arrowwood, Elderberry, Pyramidal Spiraea, Meadow Sweet, Yellow Currant, Snowberry, Mock Orange, (Syringa), Salmon Berry, Oregon Grape, Creeping Oregon Grape, Carymbose Spiraea, Honeysuckle, Evergreen Huckleberry, Huckleberry, St. Johnswort, Nine Bark, Douglas Spiraea, Ocean Spray, Red Osier, Shrub Dogwood, Kinnikinnick, Wild Roses and Sumac.

The following shrubs will be found only on the west side of the state: Scotch Broom, Red Currant, Rhododendron, Mountain Laurel, Flowering Cranberry and Salal.

Trees.

Alder, Cascara, Hazel Nut, Oak, Willow, Pines, Hackberry, Aspeh, June Berry, Beech, Fir in varieties, Chamaecyparus (Cedar), Tamarac, Birch, Hawthorn, Juniper and varieties of spruce.

The following trees are found only on the west side of the Cascades: Tree Dogwood, Oregon Maple, Madrone, Vine Maple and Yew.

Vines.

Vines include Bittersweet, Clematis in varieties and Honeysuckle.

Flowers (Mostly Perennial).

Alum Root, Foxglove, Hyacinth, Dogtooth Violet, Coral Root, Lupines, Hypericum, Mission Bells, Daisy, Solomen's Seal, Nightshade, Fritillaria, Columbine, Goldenrod, Larkspurs, Violets, Twny Blade, Phlox, Wintergreen, Gaillardia, Cannas, Ferns, Hellebore, Iris in varieties, Harebell, Lilies, Trillium, Lady's Slipper, Perennial Pea, Wallflower, Poppy, Sunflower and Peony.

All of these plants will not be found in one locality, many are found only in the mountains. There are, however, enough growing in any part of the state, except in a few of the lower valley districts, to make possible an ornamental planting without the addition of exotics. In such districts, it would be necessary to make a trip to the foothills to obtain the plants.

Politeness Plus

"Madam," said a man standing in the street car, "why do you persist in punching me with your umbrella?"

"I want to make you look around so I can thank you for giving me your seat. Now, sir, don't get off and say that women haven't any manners."

That's the Ticket

Japers—I gave Paul my rain-check.

Bubbs—To the baseball game?

Japers—No, I mean my umbrella.

A man arrested in Newark, N. J., at the police station said his name was Smith. Asked to spell it, he spelled S-t-e-e-k-e-r-t. Police remembered that an Edward Steckert was wanted for escaping from the New Jersey state prison. It was him.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER XV.

The Show-Down.

Shortly after the noise and disturbance caused by the explosion had quieted down, Edwin Stanbury, with Vera Harper and his two men, approached the spot where the car bearing "Speed" Stanbury, Lucy Durant and Jim Sprague had been swept over the ledge by the avalanche. The car itself was unhurt, for like a miracle, it so happened that a small tree jutting out had stopped it from falling down the cliff. There were no signs, however, of the occupants of the machine.

"I guess they're gonners, sir," one of Edwin's men commented.

"So much for that," he coolly replied. "Fate has played right into our hands. We'll rde down to the lake, take a ferry and get a train to New York. Let's go!"

But, strange to say, Edwin Stanbury's young cousin, "Speed," and his two companions were quite safe. The tree had, indeed, stopped their fall and had enabled them to get out of the automobile before being swept over the precipice by the avalanche. At this moment, "Speed" and Lucy, with their captive, were aboard the ferry and separating distance between themselves and their enem.es.

"Jim, why in blazes don't you be a regular fellow?" "Speed" finally said. "Why don't you let me unstrap you and come along and help me down my cases—and clear yourself?"

"I've been wanting to go with you since yesterday," the fugitive replied, "since I found that Edwin was double-crossing me. But I'm damned if I want to be dragged back like a crook! I want to go back like a man!"

About a word young Stanbury stopped forward and took off the strap that bound Jim Sprague. Then both men clasped hands and gazed steadily into one another's eyes. "Speed" had full confidence in Jim Sprague now. He knew that his former enemy was sincere at heart.

A short time later, a most interesting scene was taking place in the library of old J. J. Stanbury, the banker. Edwin had reached home and had determined to set the stage to suit himself before the final denouncement. With the old family butler, Fisher, Edwin was engaged in a deep conversation, but the son of J. J. Stanbury was not aware of the fact that the maid in the household had concealed herself behind the portieres and was taking in every bit of the conversation.

"I tell you," the butler was saying, "it's high time I told all that I know—which is that your cousin, Mr. "Speed" Stanbury is innocent, no matter who else may be guilty. I would have spoken immediately and cleared him, only you begged me to remain quiet and said you would clear him yourself. I trusted you would sir, only now—"

"I fully intended to clear 'Speed,'" Edwin interrupted, "but certain circumstances came up, you know. But I've made an arrangement to come to an understanding with him. We are to meet in half an hour at my old place in the Hargrave building. "I'm sure 'Speed' would like to see you. Why don't you come, too, and help us clear things up?" And Fisher, the butler, fell into Edwin's trap.

Meanwhile, at the Stanbury bank, Jim Sprague had given himself up and was in earnest conversation with old J. J. Stanbury.

"The fact that I was cashier of your bank," he explained, "at the time of the defalcation, and that I disappeared when it was discovered means nothing. I must tell you, Mr. Stanbury that your son, Edwin, is the thief. Out of loyalty to him I agreed to take the blame, and absconded. He promised me he would make it all right and that I should come back in a short time entirely exonerated."

Old J. J. Stanbury was in a rage. The fact that his son was a thief made him forget family and everything. "If what you say is true," he exclaimed, "I'll turn the scoundrel over to the police as I would an ordinary thief! Come with me up to the house!"

But "Speed" and Lucy arrived at the Stanbury mansion before Mr. Stanbury arrived with Sprague. The young man was astonished when the maid informed him of Edwin's conversation with the butler, and that they had gone to meet him at the Hargrave building. "Speed" scented duplicity and told Lucy to wait for him until he returned from an investigation.

Fisher was, indeed, a prisoner of Edwin's. The young man was taking desperate chances to keep out of trouble, but he did not realize the fact that every move he made got him in deeper and deeper. "Speed" jumped from the taxi-cab after telling the driver to wait, and ran into the Hargrave building. He reconnoitered carefully and then began the search to find the prisoner. It did not take long. Young Stanbury overcame the one man left on guard with very little difficulty. A few moments later the two men were in the taxi on their way back to the Stanbury mansion.

Here they found the banker, Lucy, Sprague and the maid anxiously awaiting their arrival. Fisher was the first person to be questioned by the elder Stanbury. The butler told his story quietly and simply, finishing up with:

"And furthermore, sir, Mr. 'Speed' could not have attacked you or robbed you on the night of the trouble because it was 11 o'clock when you told me to lock up, and he was out of the house a little after 10."

"Yes, sir," cut in Sprague. "That was the night Edwin forced me to run away to shield him. 'Speed' met me quite by accident on the road at 10:20 and gave me a lift to the station."

"Who was it then that struck me from behind and made off with my securities?" the old man asked.

"I don't know who struck you, sir," replied the butler, "but I was in the pantry when I heard a noise like someone falling. I sneaked in through the dining room and saw Mr. Edwin Stanbury in front of the open safe. The next morning I went to him to beg him to confess, and when he told me he would make everything all right if I only gave him a little time and kept quiet. I promised him I would."

While this was going on, Edwin Stanbury quietly entered the front of the house and made his way cautiously up the stairs. After hastily throwing some clothes in a small grip he sought the stairs and crept down quietly. He was about to slip out the front door when he came face to face with Vera Harper. She took in the situation with a glance—that Edwin was giving her the slip.

"Double-crossing me, too, eh?" she sneered. "You can't get away that easily. There's something coming to me—"

Edwin attempted to elude the woman, but a sharp cry passed her lips and caused the little gathering in the parlor to rush to the hall. Vera clung like a leech to Edwin and before he could throw off her grasp he was seized by "Speed" and Jim Sprague.

And that was the beginning of the end for Edwin Stanbury. All scores were settled and the stern old banker was insistent that his son would receive punishment.

But for "Speed" and Lucy it was the beginning of a splendid happiness—a realization of a love that would be everlasting. The two young people climbed into young Stanbury's roadster and were off and away, leaving only a cloud of dust in their wake. Reaching the country road the little car almost flew.

"At this rate, we'll never get anywhere," the girl shouted, attempting to be heard over the roar of the engines. "We'd make better time by getting out and walking."

"I know," "Speed" shouted back, "I know there's a minister in town but I thought it would be nicer to shoot out her and get married in a little country church."

"Stop!" Lucy shouted. "Stop the car immediately!"

"What's the matter?" asked the troubled young man, slowing down from his fast rate of speed.

"Oh, I just wanted you to give me a kiss, that's all," laughed the girl.

The deed was done and they were off—faster, faster and faster they went, both laughing like children, and sincerely trusting that their high rate of speed would not be interrupted by some too vigilant mision of the law.

(THE END)

A Rhode Island Red hen owned by L. A. Cathcart of Davenport has made a record during the past few months which Mr. Cathcart states is unusual. During the months of November, December, January, February and 20 days in March, 139 days in all, the hen laid 126 eggs, only missing four days during the entire period. Mr. Cathcart recently moved the hen into another pen, and the laying record has been interrupted as a result. The hen was kept in a separate pen all the time, so there could be no mistake in the number of eggs laid.

If brushing will not remove the mud stains from a garment, rub them with a raw potato. It will not fail.

Adept at Addition

When mother and her brood started for town the weather looked dubious, so they went well prepared. When they got off the crowded train at the terminal, she said: "Have you got all the umbrellas, Tony?" "Sure Mom," piped up the youngster. "I had three when we started and now I've got five."

Bacon—I see that old joke about a fellow's stolen umbrella is still going around.

Egbert—That's nothing. So is the umbrella.

MANY FIFTH LOAN BONDS UNREDEEMED

Treasury Department Says Eighty Million Dollars Worth Not Presented—Call Series G to L.

Eighty million dollars' worth of the 4 3-4 per cent Victory notes, which were called by the treasury department for redemption on December 15, 1922, are still outstanding, although they have ceased bearing interest after that date, according to a government bulletin. These particular notes are better known as Fifth Liberyt Loan bonds, and have the letters A, B, C, D, E, or F affixed to their serial numbers.

The treasury department states that the aggregate owners of the bonds are losing interest at the rate of about $10,000 per day, as no more interest will be paid on these bonds and the government wishes the owners would turn them in for payment at once. They may be converted into cash at any bank.

The department believes that perhaps many of the holders of the "Victory Notes" do not realize just what is meant by the term, and do not know that the bonds which they happen to hold are designated by that term. "Victory Notes" are bonds of the Fifth Liberty loan, issued in May, 1919.

The secretary of the treasury has also announced the treasury department's readiness to redeem before their maturity on May 20 next the outstanding "unc.lled" 3 4-4 Victory Liberty loan notes which bear the distinguishing letters G, H, I, J, K or L prefixed to their serial numbers.

Millions of dollars also still await all holders of the unpresented 1918 Five Dollar War Savings Stamps which matured on January 1, 1923, when they likewise ceased bearing interest.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

GARDEN PEST WRINKLES.

The real achievement in garden is to produce the crop after the seeds have been planted. Being able to control the pests which attack the plants is part of the sport. In this article we wish to consider briefly some of the pests upon which war must be waged by the Washington gardener.

Bean Aphis—This is a minute blackish plant-louse and is quite a pest on the beans. Spraying with nicotine sulphate is the best remedy and should be applied as soon as possible when the aphis appear. Repeat if necessary.

Cabbage Maggot—Tar paper works successfully. Take a piece of tar paper 3 to 4 inches in diameter, make a slit to the center. In the center of the paper slit with a knife, two or three times across a very small space, so the stem of the cabbage, slip one of these collars around the stem. The paper should then be spread out flat next to the ground.

Cabbage Worms—Spray with arsenate of lead. While this remains on the leaves the outer leaves are taken off before the cabbage is eaten and no harm comes from using the poison.

Onion Mildew—When onions are affected with mildew, the tops wither and die. A violet mildew may be seen on the plants. It detected in time, spray with Bordeaux mixture and rosin fish-oil soap.

Pea Aphis—These aphides are pea green in color. They attack the young vines and later the stems and sap the life of the plant. Nicotine sulphate and kerosene-soap emulsion are good remedies if applied when the insect first begins attack early in the spring.

Tomato Flea-Beetle—This little felnot trouble the west side gardener, but the eastside person has to be on the look out. Duck, guineas and other domestic fowls eat the beetles and larvae. Arsenate of lead is the best remedy. Sometimes a single application is sufficient, but two will do the work, although two or three applications are usually required.

Tomato Flea-Bettle—This little fellow frequently attacks tomatoes and does considerable damage. By dipping young plants in lead-arsenate solution at the rate of 1 pound to 50 gallons of water, before setting out, it will protect the tomato vines from injury. Bordeaux mixture will also do the work.

Turnip worm—Treat the turnip for this worm the same as recommended for cabbage, using an arsenate of lead spray.

Slugs—Slugs may be controlled by using lime in any form, quicklime being the most useful sprinkled over the plants and scattered about the haunts of the slugs. Soot, dust and sifted wood ashes are sometimes used to advantage.

How to Make the Sprays Used.

Bordeaux Mixture and Resin Fish-Oil—Resin fish-oil soap is added to the Bordeaux mixture by using two-thirds to 1 ounce of the fish oil to 1 gallon of the Bordeaux. Add the water to the oil a few drops at a time, stirring well until thoroughly mixed.

Kerosene-Soap Emulsion—This is made by combining 1 gallon of kerosene and one-fourth pound of laundry soap, or 1 pound of whale-oil (fish oil) or other soap, or 1 pint of soft soap with half a gallon of water. The laundry soap, if dry, is shaved and dissolved in boiling water and then poured (away from the fire) while still boiling into the kerosene. The mixture is then churned rapidly 8 to 10 minutes, by pumping the liquid back upon itself by means of a spray, or with a nozzle throwing a strong stream. It is necessary to have a sprayer in order to make this solution. In mixing ready for spraying, use 1 part of the emulsion to 15 parts of water. Spray in a dense fog or fine mist.

Arsenate of Lead—This is sold in both powder and paste forms. At the rate of 2 pounds of powder or 4 pounds of paste to 50 gallons of water it will destroy cabbage worms and adult potato beetles.

Nicotine Sulphate—For small garden plots, 1 teaspoonful of nicotine sulphate should be used to 1 gallon of water to which a 1-inch cube of hard soap is added. If a larger quantity is desired, use 1 fluid ounce to 8 gallons of water with the addition of one-half pound of soap.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Detroit.—Retail deliveries of Ford cars and trucks for the month of March reached the record-breaking total of 179,763, it was announced here by the Ford Motor company.

This marks the greatest selling month in the history of the company.

Better living conditions are being enjoyed by the peasants of southeastern Europe. They are eating bread for the first time in years—and meat, a former Sunday luxury. The peasant's wife is demand to be better clothed, even buying satins, which she calls "the cloth that goes swish-swish."

Twenty-eight miles of automobile highway are now where the city wall of Canton, China, used to be.

Four mice got inside a transformer at the municipal power house at Lincoln, England, and bit through the rubber of a cable, plunging the town into darkness. The mice were electrocuted.

Improved business conditions in the packing industry were given as the reason for the 11 per cent increase in wages of 200,000 workers, going into effect Monday. Unlike the advances during the wartime peak, the wage increase agreed upon between management and representatives of company unions is not based on higher living costs but on the proposition the industry can better sustain a larger pay envelope.

A family of six can live on $110.85 a month, Miss Florence Nesbit of United Charities declared in a budget made public recently. The budget provides for the mother, a working girl of sixteen, and four children, from four to ten years old. A total of $6.50 monthly is allowed for the working girl's clothes. It does not include rouge, permanent waves nor silk stockings. Rent is allowed $18, food $44.85, and fuel $9.75.

Canadian mounted police say an epidemic of violence has broken out among the usually kindly and docile Eskimos. Nine are under arrest for murder and other cases are being investigated.

Lower Costs in Producing Alfalfa Hay

By R. N. MILLER,
Extension Farm Management Specialist.

The best known means of farm work are usually practiced by the best farms, and when prices are lowered, farmers also plan to reduce production costs. The history of alfalfa growing differs but little from the general custom and when prices are high production costs are high and when prices drop every attempt is therefore made to reduce costs.

That the cost of harvesting alfalfa is high has been determined by farmers through the keeping of cost records. These cost records show that 2.9 hours of man labor and 2.9 hours horse labor are required to stack a ton of alfalfa hay. The usual custom of harvesting alfalfa hay is to cut it with a mower, rake it with a dump rake, cock by hand or with a dump rake, running across the windrows, and haul to the stack on sleds. The load is elevated upon the stack by means of hay slings and a large derrick. But when man labor is high the cost of loading and hauling to the stack on a sled is high.

In Colorado, Idaho, and the Kittitas Valley in Washington and in many other hay growing sections, many farmers put up hay almost entirely by horse labor. They use a mower of course, but a side delivery instead of a dump rake, using a dump rake or high wheel cocking rake for cocking. Then instead of the sleds and slings they use what are called bull rakes, horse rakes or push rakes to haul the hay to the stack, and instead of sling stacker, an overshot stacker is preferred. These stackers are of different designs. Some use sting straight over shot and others side shots.

During the war many Yakima farmers tried this system but they found that something was wrong for the method did not seem to work very well. While it seemed less expensive, the matter of the small rills used in irrigation made it difficult to haul the hay on the 8 to 10 foot teeth of the push rake to the stack.

Mr. L. C. Rossolo of Grandview figure out a system for preventing the wheels from dropping into the irrigation rills. Ho attached swinging wheels that are attached behind the regular wheels. When the push rake is crossing a rill those auxiliary wheels carry the load. He harvested 40 acres of hay in two days with two rakes and says that the system works like a charm.

His cost records show that he saves close to $1.00 a ton and his hay is as good, if not better, than the average harvested the old way.

Using his system the hay was not handled by men until it hits the stack. Horses do all the work and the amount of hay put up a day depends upon the work the horses can do. In other words, the operator drives the team and does but little manual labor.

Mr. Rossolo prefers this system to any other and says that he can stack hay in considerable wind which is a feature worth considering in the Yakima valley. With the system as developed by Mr. Rossolo, 8 man hours and 8 hours horse are required per ton of hay. This is an especially good record and the average man with push rakes requires one hour of man labor and 1.1 hours horse labor per ton.

When wages in the cities are so high and farm help is hard to get and none too efficient, such a system is well worth considering. A man will drive a horse when he might not work hard himself. His system installed cost him $285.00 during the war period and very little wear that can not be replaced on the farm has been experienced.

Yakima farmers might well think this matter over and visit Mr. Rossolo when he is putting up hay. Harvest moved smoothly there and the way hay piles on the stack is well worth seeing.

Mere Accident

Magistrate—So you broke an umbrella on your husband's head. What have you to say?

Defendant—It was a.n accident, sir.

Magistrate—How could it be an accident?

Defendant—Well, I had no intention of breaking the umbrella.

Ikey—"You got a nerve advertising a fire sale. Where was the fire?"

Izzy—"Right here. I fired two salesmen last week."—Ex.

Motor Engine Speeds for 600 Hours

Uncle Saul's Naval Air Service has a new engine which has speeded at a 75-mile per hour clip for 600 continuous hours—long enough to circle the world 2½ times without a stop!—a startling new record.

JAKE BURSHUR, Owner

RURAL ROUTE PATRONS MUST HAVE PROPER BOXES

The postal service is essentially a service of the people, by the people, for the people. From the smallest beginning it has grown into one of the most important functions of government. It is the one branch of public service which comes in daily contact with all the people, and in which all have a direct, personal interest.

From the beginning of the service down to the present time almost innumerable orders and regulations have been issued for its operation, practically every one of which has been for the guidance, instruction and control of the employes, and few, if any, have imposed any kind of duty upon the patrons of the service. The public has accepted highly efficient postal service as its due, and criticised inefficient service in unmeasured terms. Apparently the important fact that satisfactory service could only be produced by cooperation between the public and the post office department was ignored so long that it finally dropped out of sight, and the people came to demand everything without expecting to contribute anything.

But recently a very important and radical change occurred. Postmaster General Work came to realize that city delivery service, especially in residential districts, was greatly hampered by delays caused by carriers waiting at the doors to make personal delivery of the mail, and a request was made upon the householders to place mail receptables at the front doors. That request apparently was regarded more or less as a joke, and only slight attention was paid to it. A little later, the department issued peremptory orders that, beginning March 1, 1923, no mail should be delivered at residences which had not provided proper mail receptacles. When it became understood that the department was seriously in earnest about the matter, the public responded in a very gratifying way, with the net result that a great saving in the time of mail delivery has been effected.

The success of the department in that respect should encourage similar firm action in other diections, notably, in rural mail delivery. Rural carriers all too frequently are delayed on their routes by bad roads, which might easily and promptly be repaired by the patrons or road authorities. Washed-out bridges and other conditions frequently cause long and expensive detours to carriers, when they could be avoided by prompt action by the proper authorities. Mail boxes placed, some on one side of the road and some on the other, expose the carrier to risk of collisions or other accidents, and consequent law suits for damage, without possibility of protection by the department. Loose pennies placed in mail boxes entail unnecessary delay, and frequently loss of coins. Uniform mail boxes, uniformly mounted and kept in proper condition, would ornament the landscape and reflect credit upon the service, instead of being an eyesore and discredit as at present.

All these conditions might be remedied if the same firm stand were taken by the postmaster general as in the matter of mail receptacles for city delivery.

The people expect and are entitled to good mail service, but they should be required to do their full part in maintaining it.—R. F. D. News.

Bielenberg-Schooler Post The American Legion Meets Each First and Third Wednesday of the Month

Increased activity in Legion matters has been in evidence during the past several weeks, culminating in extensive plans for a membership drive to be followed by initiation of the new members.

Two opposing teams captained by Nels Liberg and D. L. Bressler, respectively, will present the Legions story to the prospective member. The drive will end on May 16th. On this date, at the regular Legion meeting, the candidates will be alloted and on May 19 the successful applicants will be given the ritualistic work, followed by an elaborate initiation program. This ceremony promises to mark a milestone in Legion history in Genesee.

With the return of Memorial day, the Bielenberg-Schooler Post is preparing for the most sacred of the ceremonial obligations of the Legion. The day is sacred to the memory of the dead of the wars. With the waning strength of the G. A. R., it develolves upon the Legion, largely, to render fitting observances to the memories of the fallen heroes.

Arrangements have been made for a supply of poppies, emblematic of the fallen, who gave their all on the fields of France.

The ceremonial committee, George Post, Chairman, is arranging a ceremonial befitting the occasion.

Please Pull Other Ear

world. What a world hangs upon this moment!"

With that he struck the match against his trousers and it missed fire, flamed up briefly and went out. He carried that match for several minutes, wached the faint film of smoke linger, and die away, then rubbed its burnt end between his thumb and forefinger. Its power to start a fire had gone forever, it was only a lifeless bit of wood, and yet he threw it upon a barren spot beside the trail.

"Thank God," said the traveler, and put his pipe in his pocket.

The Road to Happiness

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MAY 4, 1923. NO. 44

Bielenberg-Schooler Post The American Legion Meets Each First and Third Wednesday of the Month

Membership Drive

Among local legionaires interest in the membership drive is at fever heat. With the Idaho Department in second place in the national membership drive and with the Genesee post in thirty-sixth place, every effort is being made to improve the standing.

With the campaign just begun, the membership has already been increased approximately one-third. The original goal was set at double the membership prior to the drive, but the more enthusiastic ones are working on the possibility of a hundred per cent enrollment in the post.

The team captained by Nels Liberg has piled up a big lead, which Harry Schooler's assistants are working to whittle down.

Initiation Plans

On May 19th the new members will be received into the post. The evening promises to be interesting to both members and candidates.

Tentative plans call for a banquet at 6:30, at which will be featured the Lewiston 40 and 8 quartet. Many Legion officials have signified their willingness to attend. A short parade with a world of action, will be followed by the ritualistic work, giving the new-comers full instruction in the aims, object and spirit of the American Legion. After that will come—the post officials themselves can get no data on what is to follow, but with an enterprising team in charge, there is no liklihood of a dull moment.

Why I Belong

The great inspiring purpose of the last war was to end all wars forever. To this principal every Legion man can still subscribe. This is his opportunity for service to a weary world, his chance to band with his fellows to make war impossible. Even the elder statesmen are tangled in their own web. The young men of today can cut the knots—not by becoming pacifists, not by abandoning common sense, but by bringing to the problem something of the high courage and invincible energy that once before turned defeat into victory.

This, as I see it, is the reason why I belong to the Legion and why the average ex-service man should belong —this chance to do something, to take active part in the biggest tasks our country has ever had and that the world has ever had. We got in the game once before, you and I. Think of our disappointment now if we had been on the sidelines then. We resented the mud and weariness and danger at the time, but we are proud now that we went through. Today we may hesitate before we pin our Legion button on, for it means work and thought and service. In the tomorrows we shall be glad that we came in, glad that we had been active, not passive. We shall agree with Mark Twain that the man who doesn't do his bit "is better off under ground, inspiring the cabbages."—Major General Liggett, Ret.

Poppies

At this time of the year our thoughts are directed to the one day of the year—Memorial Day— when every true American shows reverance to the men who gave their lives for America, from the days of the revolution to the present day. And quite clearly comes to mind the strenuous days of 1917 and 1918, the blood shed on Flanders Fields, the rows of white crosses in France and the sadness that still prevails in the homes of the Gold Star mothers throughout the country.

The ceremonial committee has received a consignment of poppies for distribution on Decoration Day. The poppy, the official flower of the Legion, is emblematic of the hero dead.

These will be distributed to the general public at a cost barely covering the expenses involved.

Citizens Military Training Camps

The Bielenberg-Schooler Post is in receipt of the following letter from headquarters 104th Division, United States army, Salt Lake City, Utah:

Last year many of the posts of the American Legion were good enough to help us in our recruiting campaign for the Citizen's Military Training camp and as the war department has decided that these camps shall be an annual affair, we are again asking the members of your post to help us give publicity to the camp that is to be held next summer at Fort Douglas under the charge of the chief of staff of this division. We are anxious to have each community represented at this camp, and all future camps, according to population so that in time it will be considered a necessity for any young man of a locality to be selected for training at one of them.

At last year's camp quota was not proportioned according to population because, being the first camp, we had to accept candidates as they applied. This year we are allowed but eight thousand extra and hope that their distribution will be on basis of approximately one to 2200 inhabitants in each locality. The war department has appointed civilian aides for each state and those whose work it is to give publicity to these camps and help in recruiting for them. Any cooperation that you and the members of your post can give these civilian aides, as well as to any reserve officers in your city, who are also recruiting for this camp, will be greatly appreciated. It is hoped that eventually there will be a fixed committee in each city and town who will take the responsibility of selecting candidates and such a committee should have on it at least one member of the American Legion, because no one more fully realizes the necessity for preparedness than its members, and the good work these camps will do for preparedness.

I am enclosing a supply of folders and application cards which will give you more detail concerning the camps.

These circulars can be obtained from Chas. W. Smith, post adjutant.

High School Play

The high school play, "Clarence," will be given in the opera house tonight (Friday) commencing at 8 o'clock. The play is being given for the benefit of the whole school as well as the senior class and from all indications there will be a "full" house, as practically all the reserved seats have been sold out.

Following is the cast of characters:

Mrs. Martyn	Medeline Hasfurther
Mr. Wheeler	Virgil Klemm
Mrs. Wheeler	Olive Mulalley
Bobby Wheeler	Eugene Tupker
Cora Wheeler	Carrie Mae Hickman
Violet Pinney....	Bernadine Hasfurther
Clarence	Jesse Gray
Della	Gladys Stovall
Dinwiddie	Albert Anderson
Hubert Stem	Victor Casebolt

There will be specialties between acts by the grade pupils.

Extra seats have been provided and there will undoubtedly be room for all—but you had better get there early if you haven't a reserved seat.

Many Attend Dance

Mr. and Mrs. Mahlon Follett, Mr. and Mrs. Harry Schooler, Mr. and Mrs. Thos. A. Feeney, Dr. and Mrs. R. I. Witty, Mr. and Mrs. Ray Edwards, Mr. and Mrs. Fred Morscheck, Mr and Mrs. W. W Burr, Mr and Mrs. C. P. Whalen, Mr. and Mrs. F. H. Thomas of Genesee and Mr. and Mrs. Frank Girard of Thorncreek attended the dance at Moscow last Thursday night. A dandy time is reported.

Notice to Holders of Victory Bonds

HOLDERS of Victory Bonds uncalled are requested to turn same in for payment. These bonds do not bear intesest after May 20, 1923. If you will deliver your bonds to this bank we will be glad to handle them for you.

Soldier or sailor, the Legion is your bond of fellowship!

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Miss Brenner Has Appendicitus

Miss Alvera Brenner, daughter of J. K. Brenner who resides a few miles east of town, underwent an operation for appendicitus at St. Joseph's hospital in Lewiston yesterday morning. Dr. Burg is the attending physican.—Uniontown Press.

Start Drilling For Oil at Culdisac

Mr. Egluff, connected with the oil well drilling project at Culdisac, arrived in town today (Thursday) from Lewiston and brought up a truck load of well drilling equipment which has been unloaded at the site of the proposed well on the Lee Phinney place near town. Mr. Egluff announces that operations will be started at once and the work pushed as rapidly as possible. He believes the prospects are good for finding oil here and hopes to bring in a paying well in the near future.—Culdisac Enterprise.

Troy Lads Commit Roberies

Deputy Sheriff Grant Robbins came down from Moscow Monday forenoon and took Clyde Shoemaker and Clyde Payne and Many mothers back with him. The two youths had been committing numerous minor robberies in the village and were given a hearing Monday. After hearing the case, the judge sentenced them to the State Industrial School at St. Anthony, but were later turned loose on probation. The pilferings of the two youths have been many, but the articles stolen were recovered. The sentence imposed upon the boys should be a warning to others to not follow their tactics.—Troy News.

Leasing Oil Land

Ollie Maguire is still busy writing up oil leases and the past week secured leases on the farms of Fred Jay, P. M. Beers and others. While skirmishing around locating oil prospects, Ollie also found a deposit which is something akin to gypsum on O. J. Harvey's land near Harrisburg, on which he took a lease and later found a similar deposit on the Parr ranch in Lawyers canyon. In the Caribel section he found something that appears to be mineral paint, which he considers one of his best finds. The owner lives in Michigan and a lease has been forwarded to him for signing. With all the various things being brought to light, something of value to the community ought to result.—Kamiah Progress.

Let Contract for Surfacing

The state bureau of highways, Wednesday commenced advertising for bids for the construction of a section of the north and south highway in Idaho county from Cottonwood north of the Idaho county lines.

The project is known as federal aid project No. 68 and consists of surfacing with gravel 11.22 miles in the section named. The project will require more than 23,000 cubic yards of surfacing and the state estimates the cost will approximate $50,000.

Bids for the work will be opened by a representative of the highway bureau at Lewiston May 12.

The contract calls for eight inches of crushed rock over a 16-foot highway that was graded last year between Cottonwood and the Lewis county line in the Ferdinand and Cottonwood highway districts.—Cottonwood Chronical.

Preaching Service at Pine Grove

A good crowd gathered in the Pine Grove school house last Sunday afternoon for a preaching service conducted by Rev. James N. Pendleton, pastor of the Federated church of Genesee.

The Sunday school there has continued all the season and good interest is shown by the workers and attendance is good. When a Sunday school can be successfully maintained in a community it helps make for closer cooperation and good will in the district. Pine Grove is recognized as one of the liveliest and best districts in the Genesee country.

Genesee Valley Aid

The ladies' aid of the Genesee Valley Lutheran church met at the home of Mrs. Ira Hanson last Thursday afternoon. There was a large attendance and a very pleasant time is reported. A very pleasing program was given. There was a song by all present, a quartet consisting of Mrs. Jesse and Will Borgen. Mrs. Arthur Hove and Mrs. Arthur Tegland, and a song by little Marie Ingle. A delicious lunch was served by the hostess, who was assisted by Mrs. C. N. Herman and Mrs. Chas. Ingle.

Weyerhaeuser Visits Genesee

There are perhaps few people who knew that one of the richest men in America was a Genesee visitor Tuesday, passing through by stage on his way to Lewiston to inspect a proposed mill site in that city. Here's hopin' that Lewiston lands the big mill.

Dance and Pie Social

There will be a dance and pie social at the Jain school house Friday evening, May 11. Everybody welcome. The ladies are asked to please bring pies.

TOBACCO—A HABIT-FORMING DRUG

Tobacco, says a well-known authority, is a habit-forming drug quite as much so as opium and alcohol and even more so than cocaine. Even more than in the case of opium and alcohol, users of tobacco acquire a tolerance for the drug.

The boy who smokes his first cigar needs nothing to convince him that he has taken a drug. He is nauseated, perhaps vomits, is dizzy, breaks out in a cold sweat, feels uncomfortable, as well as unhappy and, in all probability, winds up with a headache. But if he tries it again and again, he presently arrives at a state of tolerance when the ordinary dose causes none of the symptoms so much in evidence after that first dose.

His degree of tolerance becomes so great that he has no difficulty in convincing himself that the drug no longer harms him, in fact is willing to maintain against any opponent that tobacco is beneficial rather than harmful. Hence, there has arisen two armies of combatants, one claiming that tobacco is harmful, the other, that it is not.

Some of the reasons for the uncertainty on this question are made plain in a recent editorial in the Journal of the American Medical association. The editorial quotes extensively from recent scientific literature. Bamberger says that tobacco smoke contains from 7.2 to 25 parts per 1,000 carbon monoxide. Carbon monoxide is a fatal poison in certain doses. Henderson says that air containing 7.2 to 25 per cent carbon monoxide for one hour is poisonous. If a person inhales tobacco smoke five times a minute for one hour, his blood will become 22 per cent saturated with carbon monoxide.

Cigarette smoke contains 14 to 33 per cent of the nicotine to tobacco. There is five milligrams of nicotine in each cigarette. Sixty-seven per cent of the nicotine of tobacco smoke is absorbed in ordinary smoking and 88 per cent when the smoke is inhaled.

One smoker, inhaling, will absorb 36 milligrams of nicotine in one hour. If he puffs without inhaling, he absorbs 27.5 milligrams.

I migb be well for many of the young men and boys of Genesee to read and reflect well before continuing the use of tobacco in any form. There is undoubtedly much room for improvement in their habits along this line

At the Opera House

"The Prince There Was" is Charles Edward Martin, a wealthy but discontented young man who has seen and had his fill of life's shallow pleasures. In a second-rate boarding house in the city is Katherine Woods, a young girl who had been thrown upon her own resources through the suicide of her father, who was ruined in a financial deal engineered by J. J. Stratton, Martin's broker with Martin's money, but without Martin's knowledge. Katherine is unable to sell her stories to the New York magazine and Comfort Brown, the little drudge of the boarding house, in seeking the magazine editor to plead Katherine's case, encounters Martin, the editor's friend, and tells him the situation, likening him to the prince she has read of in fairy tales, because of his luxurious surroundings and his genial manner. Under the name of Prince, Martin takes quarters at the boarding house, poses as an assistant magazine editor, falls in love with Katherine, buys her story, then buys his friend's magazine so that the story will be published. But Stratton, also in love with the girl, comes in with an expose of Martin's purchase of the magazine, and also tells Katherine it was Martin's money which ruined her father. The story ends with a delightful finish to this tragic complication which threatens to shatter romance and spread gloom over all.

George Nelson, Singer, Praised

The following, clipped from the Lewiston Tribune, will be of more than passing interest to the many friends of George Nelson and his parents, Mr. and Mrs. Jas. Nelson:

Has Lewiston found another Arthur Middleton? Judging from the round of applause that greeted George Nelson, of the Lewiston State Normal, upon his appearance at the Rex theater Sunday, Monday and Tuesday nights, we have here in Lewiston a young man who will become as famous as this great artist.

Mr. Nelson possesses a deep, full rich bass voice backed up by a splendid physique and a pleasing personality that wins his audience's heart and soul. His rendition of "I Go To Claim My Love," so enthused the audience that it stopped the show and called for more, to which he responded with "The Billowy Sea."

Mr. Nelson will appear again Wednesday night at 7:30 and 9:15. Every one who loves good singing should hear this young artist.

Still Quarantined

Esther Hickman has been released from quarantine for diphtheria and is again attending school. The rest of the family at home, however, are still quarantined.

We do all kinds of printing.

School Notes

By Helen Casebolt

Every pupil in the seventh grade passed the physiology examination, given April 16. They are now studying hard for the exams which will be given next week. The highest grade in physiology was received by Verona Wolff. The grades ranged from 86 to 99 per cent.

Last Wednesday evening the eighth grade girls each invited a girl friend and went out to the rock quarry to enjoy a weiner roast.

The high school track team will enter the district meet at Lewiston on May 5. The high point men at Lewiston will be entered in the state meet at Moscow the following Saturday.

The high school play, "Clarence," will be given on Friday night of this week. Everyone is expected to patronize the Genesee high school play. Bring the children, too. It is a play that all will enjoy.

F. H. Thomas, superintendent; Jas. Winegardner, principal; Miss Lela Patch, English instructor; Miss Esther Martinson, home economics and Chas. W. Smith, vocational agriculture, will be the high school faculty for 1923-24.

Miss Melie Black, who was to have taught the eighth grade, has resigned because of the ill health of her grandmother. This means that another teacher will have to be secured for that grade.

The baccalaureate services will be held in the Lutheran church on Sunday evening, May 13. Rev. Snoddy of Moscow will deliver the address.

Thursday, May 17, is set aside by the high school as Class Day. The following program will be given at the opera house that evening:

Girls' octette—"Kentucky Babe" by Adam Geibel.

Solo—Conrad Caldwell.

Pianologue—"Dreamin' In de Twilight—Estel Rogers.

Class history—Albert Anderson.

Vocal solo—Alfreda Hampton.

Salutatory—William McCreary.

Class prophecy—Ethel Nelson.

Solo—Wilma Casebolt.

Valedictory—Dwight Becker.

Class Will—Frank Wilson.

Solo—Jesse Gray.

Boys' chorus—"The Mermaids."

On May 18, the closing day of the term, the commencement exercises will be held at the opera house. The program arranged is as follows:

Opening march—Olive Jain.

Invocation—Rev. Pendleton.

Double quartet—"Nightengale and Rose"—Carl Lehrier—Mrs. W. W. Burr, Mrs. F. K. Bressler, Mrs. Fred Hampton, Mrs. R. I. Witty, Mrs. F. J. Niemann, Mrs. R. E. Emmett, Miss Esther Martinson, Miss Edith Winegardner.

Commencement address—Prof. Jas. O'Gorman of U. of I.

Vocal solo—"An Open Secret," by Nordman—Mrs. W. W. Burr.

Presentation of diplomas by Supt. F. H. Thomas.

Benediction by Rev. Fr. Godschalx.

Choir Will Go to Shafer School

The young people's choir of the Christian Endeavor Society of the Federated church will accompany Rev. Pendleton to the Shafer school house next Sunday afternoon, May 6, for a 3 o'clock service. Besides the choir, Jesse Gray and Alfreda Hampton will repeat the duet they sang at the Federated church in Genesee two weeks ago. Three cars have been secured for th trip—and we want to fill the school house.

Pine Grove Victor

The annual athletic meet between Pine Grove and the Gray Eagle school was held last Friday at the close of the school in the later district. The banner, which was wrested from Pine Grove last year, was proudly returned to Pine Grove where it will stay for at least another year.

BOYS' AND GIRLS' CLUB WORKERS TO ATTEND FAIR

H. A. Stone, leader of boys' and girls' clbs of north Idaho, was in Lewiston recently for the purpose of taking up the matter of representation by the clubs at the coming fall fair in Lewiston. It will be remembered that the clubs made a fine showing last year, and this year Mr. Stone gives assurance that as many as 100 of the boys and girls will be here with their exhibits.

The clubs, he says, have pigs worth $15,000; baby beef, $2,000, and crop projects of 200 acres. The girls have 75 members in the canning work, 100 in sewing and 30 in baking.

The fair management has set aside a fund of $500 for the boys' and girls' clubs, and arrangements have been made to have this matched by funds donated by the various livestock organizations which are to take part. The Duroc-Jersey association not only gives $50 to the club fund but allows the members to exhibit in the free-for-all futurity, and the Poland-China association is doing as much. The result will be that an aggregate fund of not less than $1,000 will be available for club premiums in the regular exhibits.

Mr. Stone called attention to the junior extension short course which has been arranged at the university at Moscow, for the benefit of the boys and girls of the club. This will be during the week of June 17 to 23. This is the first time that such a feature has been provided at the university, but it is hoped to make it an annual feature, and it is expected that at least 100 club workers will be in attendance this year. The course, which has been secured largely through the efforts of Mr. Stone, will include practical judging demonstrations and group instruction in both field and laboratory phases of the more significant junior projects in animal, dairy and poultry husbandry, crops and soils, horticulture, caning, baking and sewing. Those taking the work in feeding, fitting, carring and judging of various classes of livestock and poultry will have an excellent opportunity to work with the herds and flocks at the university farm. Departments will be provided to train judging and demonstration teams in corn, fare crops, preparing farm crop exhibits for shows and to give instruction in the approved methods for seed laboratories and experimental plots. Girl members will have work intended for fitting them for the judging and demonstration of canning, cooking and sewing, as well as other phases of the work which they may select.

The age limit for the club members is 10 to 21 years, and they may enroll on or before May 15, in order to be eligible to take the course at the university, which follows the closing of the schools.

Made Some Drive

George Schlerth arrived last Friday evening from Crabtree, Oregon, and is now in active charge of the business purchased from F. E. Lambert.

Mr. Schlerth said he left Portland at 6 o'clock in the morning and arrived in Genesee at 10 o'clock that evening, stopping at Lewiston to do some shopping en route. When questioned, he admitted having "stepped on it."

Mr. and Mrs. Lambert have been heard from. They arrived at their new home at Crabtree last Friday evening and think they are going to like their new home very much.

Chantauqua Dates Announced

Word has been received in Genesee that this season's chautauqua dates have been set for June 10-15, inclusive. It is also stated that a splendid program will be given.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account.

Many of the richest men in this country began their careers with nothing but energy and a determination to succeed. They saved their money until it could be turned to good account.

Why not you, young man? A savings account is the first step.

First Bank of Genesee

A. E. CLARKE, Pres. N. S. VOLLMER-HOPKINS, V.-P.

F. J. NIEMANN, Cashier

Ex-service man, yours is the privilege to join the Legion.

THE DANGEROUS AGE

Fictioned by
CONRAD GIBSON

INSTALLMENT NO. 7.

As the last letter was dropped back into the pouch, the postman said:

"No chance. Picked up half hour ago, I guess. When'd you mail it?"

"About an hour ago."

"Lord," grinned the mail man, "that letter's gone down town, and back up again by now. You'll find it on the mail car of the Diamond Express if it goes West."

The fear-stricken man waited for no further explanation. He dashed away toward his hotel, reached his room, and breathlessly directed the valet to pack his clothing.

"Here's your pay," he shot back as he flew through the door, "Good luck. Thanks." And he was off, stopping only long enough at the desk down stairs to pay his bill. As he started away, the clerk handed him a message which he slipped unthinkingly into his pocket, and he took up again his race down the street toward the garage in which he kept his new racing car. He headed for the Grand Central station, and bolted through the great arched doorway, making straight for the train sheds. As he reached the gates, a policeman asked him what train he wished to catch, and when he informed him, the policeman shoved him back with a gruff:

"Gone four minutes ago."

John Emerson, frantically realizing that it was necessary for him in some way to overtake that letter, do it how he might, thought deeply and quickly as he stood there. Lightning like, an idea came to his rescue.

"Can I catch the Diamond Express?" he asked feverishly.

"Don't know how, brother," replied a sleepy red-cap.

"Whassat?" inquired the chief of the red-caps, as he overheard the question.

"I'm desperate," John ejaculated. "Got to catch that train. Important. Life and death. Any chance?"

"She stops at Harmon to change to steam engine," the captain informed him. "Got a car?"

"Yes, and a fast one."

"Good read all the way up. Several miles up the Hudson. Might get it. I doubt it, though. Up the river road."

But the quaking John Emerson waited for no more. He slid into his seat, stepped on the accelerator, and his big engine snorted as the car leaped away.

Through the densest traffic he nosed his way north at double the speed allowed under the law. But he cared not, nor did he remember, about speed laws now. He must catch the Diamond Express. He did not even stop to consider what it might mean to him if he failed. As his low slung speedster spurted out of the traffic and into the country boulevard above New York City he opened the throttle, held tight to his emergency brake, and sailed through the cool night air like an aviator. His speed was sickening. He pressed his foot down upon the accelerator until that instrument would plunge no further, then he leaned forward in his seat until his chest lay heavily against his steering wheel.

The heavily traversed roadway was well supplied with motorcycle policemen and aready two had hailed the mad driver, but without avail. The road now began swerving to the left, then to the right, but it seemed to him he could detect a railroad track nearby when his car came furthest to the left. The minutes passed quickly, and finally, through the tears that now were filling his eyes, he thought he saw the dim red tail-light of a speeding train far ahead. Two minutes passed, and the red light grew more distinct. It was the train!

The car raced to the top of a hill and once over it it picked up speed with amazing rapidity, and presently John Emerson thrilled as he shoved alongside the plunging train. He gained a car at almost each turn of his head. Now he was alongside it, what would he do? Would he keep on beside it? His gasoline might give out. Suddenly, as if he had plunged headlong into a tunnel, he saw no more train, no more red and yellow lights flying through the air. Just the clear stretch of roadbed ahead of him. But a moment later this was explained. The automobile road had merely swung away from the railroad track for a space. Now he was back beside the huge, bellowing engine. He saw that it was a steam engine. Then it had already stopped at Harmon and changed. What could he do?

And then, as ideas seem always to come to men who are sinking, or failing, or frowning, an idea came. It stunned him. Would he do it? He would!

He found that he had gained greatly upon the train by now, and could ook over his shoulder and perceive a steady advance over the great locomotive which cast a blinding light over his dashboard and across the roadbed ahead. He saw a turn in the road a quarter of a mile ahead. It led directly across the tracks. He again plunged his foot upon the accelerator and themoaning engine jumped forward. He reached the crossing, threw in his emergency brake and halted the car directly in the path of the oncoming train. There was a blast of the engine's whiste. A screeching and grinding of brakes. A hissing of steam. John hurled himself into a ditch. A moment later he looked up and saw his speedster torn to kindling wood and junk as the great black engine ploughed through it. The train came to a stop.

As he lay there he saw heads pop out of car windows, and he heard the voices of trainmen examining the pieces of the demolished car. They spoke in hushed tones of the poor driver—wherever he was. He must waste no time. He slid carefully toward the rear of the train. Out of sight of the trainmen he raised himself to his knees, then stood upright. He ran to the last car and swung aboard as the train moved slowly away. And in the little passage leading into the Pullman car he wiped a hot, palpitating brow and stepped boldly into the unoccupied men's smoking room where he hurriedly washed his hands and bathed his faceln the cool water.

Five minutes after he inquired innocently enough of the porter what had caused the damnably rough and sudden stop, and at the same time handed the negro a five dollar bill, explaining that he had arrived too late at the station to buy a berth ticket and had forced his way through the gate. To the conductor he told a story that seemed plausible enough, if not quite in accord with that which he had told the porter. And at last he sat down in his green plush seat and listened to the old man and his wife in the seat behind discussing the terrible accident which had just befallen some poor motorist.

The succeeding two hours were hours of joy for John such as he had not experienced, he thought, since those days back yonder in his boyhood when he and Mary had first met and loved. The thought of his triumph against Fate, itself, he said to himself, was enough to make any man happy. He was on the train with the beastly letter. He knew that, and he would reach home at least as quickly as the letter would arrive there. He would be there to receive it and destroy it.

Five days later he arived in the little Southern California town and stepped off the train with only one small matter to attend to to make him completely happy. He must be at home himself to receive the letter and keep it from Mary. He had, of course, found in his pocket a night before the telegram which the hotel clerk had so hurriedly handed him, and which he had absent-mindedly forgotten. He knew now that he was arriving home in time to be there for the marriage that night of his dear little daughter.

At the door he met Mary, whose arms were stretched wide to receive him. And he shed a little tear as he looked down upon her loveliness. Her hair was fluffed about her face, and her evening gown was cut low, displaying her full, fresh neck and shoulders and more. She was a different Mary! Moist-eyed, he held here there in a strong embrace for many minutes. He kissed her tenderly.

John walked about the house, as in greeting an old friend. Only one matter now bothered him. The letter! Had it come? He looked through the small tray of mail that had arrived, but it was not there.

"Darling," he said finally, grasping Mary's hands, "have you received my letter?" In his eyes there was a strained, fearful expression.

"Letter?" Mary replied. "What letter, John?"

"Oh, I just seem to think I wrote you a letter about something that had to do with trivial matters of business here at home," he countered, "and I didn't want you to be bothered with it now that I'm at home."

In the doorway, poised like a dancing girl, Ruth stood waiting for her father to see her. And when he spied her he ran to her, picked her up in his arms, whirled her about him twice and kissed her many times.

"Dear, dear daddy! How happy your little married daughter is to see you," she giggled.

"Married?" he said, astonishment written on his face. "Married? Already?"

"Well, not exactly," Ruth said. "But soon. I've got to go this minute and get into my gown. You ought to see it, daddy. Oh, it's delightful." And she was off, skipping up the broad stairway, leaving father and mother alone again. They smiled into each other's eyes, and advanced toward one another. Mary clung closely to her husband. She whispered in his ear.

On her husband's face there were intermingled expressions of fear, happiness, contentment, apprehension, longing. Fear predominated. He dared not allow that letter to get to Mary now. He watched the doorway, as if afraid that even at this late hour there might be a delivery of mail.

At the first opportunity he went into the kitchen, led old Annie to one side, and said:

"Annie, if a letter comes for Mrs. Emerson, bring it directly to me. Do you understand? Direct to me."

"Yessah, I gits you, sah!" Annie replied. In her old eyes there was a spark of suspicion. Annie always preferred to be taken at least partly into any secret a member of the Emerson family might be withholding from another.

"Nothing more, Annie, that's all I wanted to say."

(To Be Continued.)

NORTHWEST NEWS

Permanent organization of the Pacific Northwest Tourists Camp association, supseseding the old Pacific-Rocky Mountain Tourists camp conference was effected recently in Spokane at the second annual meeting of the association. The Automobile club of western Washington will donate its services in sending out a bulletin to the various members of the association with an aim of bettering the service to the tourists while in the public camps.

In its resolutions the association ratified the charge of 50 cents per day per car in auto camps having standard camp equipment. This was defined as follows: Comfort stations, water, lights, bath, stoves and fuel, laundries, attendants with police power and other conveniences. Where less service is rendered a charge of 25 cents per car was recommended.

Confirmation of $2,500,000 of federal aid for road work in Montana and Idaho was the outstanding feature of the conference held recently in Spokane by the United States good roads' bureau and forestry department officials and Idaho and Montana highway officers. Southern Idaho work, aggregating more than $500,000 was approved and northern Idaho improvements amounting to $750,000 was also approved.

The federal works will be as follows:

Montana—Indian reservation roads, $1,500,000. Post roads, $1,000,000.

Southern Idaho—Norfolk-Fayette road, $220,000.

Salmon-Montana line road, $200,000.

Ketchum-Galina road, $55,000.

Waren road, north of Fayette, $30,000.

Sharon, southeastern Idaho road, $15,000.

Warm River-Yellowstone road, completion, $16,000.

The Pacific northwest united to push the Columbia basin project recently at Pasco where the second annual meeting of the Columbia Basin Irrigation league was held. After four years of work leading up to the investigation of the project, nearly 1,000 delegates from three states gathered to attend the league's meeting.

Meeting in Pasco, the community builders of the big centers and the farmers of the dry areas were linked together by the vision of big things from the Columbia basin and the northwest when water comes. They could see water turning 1,762,000 acres of dry land to cultivated areas supporting more than 500,000 persons and yielding $200,000,000 a year new wealth to the nation.

Telegrams from Dr. Hubert Work, secretary of the interior and General Goethals were read to the delegates. General Goethals said that he had come to view the project as a doubter, but after seeing the country, examining plans and estimates and visualizing what would result from the project when completed, he returned an ardent convert.

Following the meeting trustees from the various districts were elected by group meetings. The newly elected trustes will meet in Portland, May 3 to organize and elect officers.

Variable Values

May—I always purchase umbrellas in dry weather.

Ray—What's the idea, Kiddo?

May—Why, Buddy, they always go up when it rains.

IDAHO

The successful bidder for 890 million feet of government timber, 87 per cent of which is yellow pine, on the Malheur National Forest in central Oregon was Fred Herrick of St. Maries, Idaho, who offered $2.80 per thousand board feet for yellow pine stumpage, $1.05 for Douglas fir, and 50c per thousand for other species. The contract will allow about 17 years for the removal of the timber, provision being made for a revision of the stumpage rates in 5 years to take care of the increasing market value of the stumpage.

Coming in contact with a 11,000 volt power line that had been lowered for blasting of the construction company he was working for, Albin Nystrom, laborer, of Meacham, Eask., was severely burned across the back, shoulders, arms and heads at Sandpoint. One man was badly shocked tearing Nystrom away. The accident occured at a camp 10 miles from town. Nystrom is recuperating at the city hospital.

Members of the American Legion committee, the Latah county commissioners, and Mrs. Warren Truitt, superintendent of the Moscow city park, have agreed to place the statue of the American Doughboy in the Moscow city park. The statue in honor of the men who served from this county will be erected where the drinking fountain now stands in the east end of the park.

The Belgian croix de guerre with palm was to be presented to John W. Cramer of Kalley, senior law student, last week, by Colonel E. R. Crissman, commandant of the cadet corps. Cramer has been awarded the French croix de guerre; the American distinguished service cross, by General Pershing, and the Belgian war cross. Cramer was a corporal in the 361st infantry and was noted for his extraordinary bravery.

Indications point to a 9,600,000-bushels crop this year, according to the April 1 ouook forecasted in the April crop report issued by Julius H. Jacobson, Idaho statistician for the United States department of agriculture. This is on the assumption of average abandonment of acreage and average influences on the crop until harvest. The report states that the 1922 crop totaled 8,658,000 bushels and 10,152,000 bushels were harvested in 1921. Acreage abandonment due to winter killing is not estimated until May 1, each year. From 1915 to 1922, the annual average has been 5.8 per cent. It was lowest in 1919 when two per cent of the planted area was abandoned, and higest in 1917 and 1920, when 10 per cent of the acreage failed to survive winter conditions.

T. W. Norcross, chief engineer of the United States forestry service; and E. H. Sherman, another forestry official, are in the field investigating the feasibility of routes for that portion of the Lolo pass road lying between Kooskia and Missoula. A complete survey of the entire forest highway project is being made preparatory to construction work.

Idaho is destined to become a great cheese producing state and within a few years, the state will be sending out an output measured by the millions of pounds instead of by the thousands, as at present, in an opinion voiced by J. L. Kraft, in an address before a sales convention at Chicago recently. Announcement of his speech was made at the chamber of commerce. Mr. Kraft, with 25 dairymen and livestock breeders, last summer toured the state with a view to making a survey of the Gem state dairy possibilities and the address was based on the reports made as a result of the tour.

School at the University of Idaho will open June 12 and close August 10, according to bulletins which are being distributed in regards to the summer school. The university summer school is designed to meet the needs of teachers who are working for higher certificates or for a college degree and the course planned for the coming session are unusually attractive and varied. Dean J. F. Messenger of the school of education is again director of the school.

The university dormitories will be available for summer school students and the announcement has been made that those who wish to attend commencement exercises which begin with an historical pageant June 9 may secure their rooms in advance. The baccalaureate sermon will be preached June 10, with commencment exercises the next day. The change in the commencement dates this year makes it possible for the first time for summer school students to reach the campus in time to attend all of the commencement events.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Rebuilding of Smyrna is contemplated by an Ottoman company being organized in Paris. "Turkish style" will be required for the houses.

An area of 11,614,000 acres in Italy has been sown with wheat, according to a recent report of the International Agricultural institute. The number of acres sown a year ago was 11,491,000, and they yielded a record crop.

You can't sell a shovel in Argentina unless you put the word "Excelsior" on the label. Several dealers were not able to dispose of their stock until they had humored their customers in this way. Then the shovels found a ready sale.

Five million dollars' worth British liquor was sent into the Bahamas last year, practically all destined for United States, Colonial Under-Secretary Ormsbycore told the commons today, during a discussion of the liquor exportations problem.

Arrested because he attempted to disrobe in the court house at Nelson, B. C., as a protest against the arrest of a member of the Doukhobor group of Grand Forks, Bishop Alexis Maiswaoff, 75, has gone on a hunger strike. He is being examined as to his sanity.

The house of commons of England voted 236 to 14 rejecting a prohibition bill introduced by Edwin Scrymgeour of Dundee. It would have prohibited manufacture and sale of alcoholic liquors except for scientific purposes. Opponents tore the bill to shreds, pointing to the United States as "a horrible example of prohibition."

The latest thing in spring mother styles is Thomas, a large cat owned by Dr. Gustav Honno, owner of a dog and cat hospital in San Francisco. Thomas has taken to his bosom a brood of 13 little chickens, washes them, feeds 'em, and probably wonders why the heck the fur doesn't grow, instead of fuzzy feathers. Both cat and chickens seem content.

Adept at Addition

When mother and her brood started for town the weather looked dubious, so they went well prepared. When they got off the crowded train at the terminal, she said: "Have you got all the umbrellas, Tony?" "Sure Mom," piped up the youngster, "I had three when we started and now I've got five."

Why Not Plant Raspberries and Blackberries On the Home Place?

These Most Delicious of All Small Fruits Are the Easiest to Grow.

There is no more delicious dish in the summer time, at breakfast, dinner or supper, than a heaping saucer of gleaming blackberries or fragrant raspberries.

Where each berry is firm and sound, the treat is that much more delightful. There is just one way, however, by which we can be absolutely sure of having each berry perfectly firm, sweet and sound, and this is when they have been freshly picked right before the meal in our own garden.

No matter how carefully a box of berries may have been picked and packed, it is bound to lose some of its freshness by the time we have brought it from the market.

Since this is the case, why not use a few square feet of your yard to set out some raspberry and blackberry plants this year, in order to be able to bring a dishful of luscious fruit directly to your own table.

It takes very little space to grow a few raspberry or blackberry plants. They may be placed in some unused corner of the grounds, or along the wall of a building or even along near the hedge or back fence where they will prove to be really ornamental as well as useful.

Most Easily Grown of All Small Fruits

The cane fruits are extremely sturdy in their habits of growth and will thrive in almost any ordinarly good garden soil. Naturally, where they are started in hitherto unused soil or in sod, the bed must be given more attention before the bushes are planted.

The berry plants may be set out in any good garden soil. If the subsoil is hard, it should be broken up so as to permit the surplus water to drain and to enable the roots to go down readily.

Enrich the soil with old and very well rotted manure, or ground bone meal, part of which should be coarse bone or "inch bone." Pure bone is very good to use for fertilizing, as the plant-food it contains will become gradually available for years to come; add also a shovelful of wood-ashes, to each plant. Be careful to fork it very thoroughly, whatever fertilizer you may use with the dirt in the hole. The best soil and the fertilizer or manure should be placed about three or four inches below the top of the hole; then fill in with ordinary good soil, level with the grass plot. In thus keeping the richest soil towards the bottom, the roots are induced to strike downwards.

Set your plants as deep, or a little deeper than they have been growing in the nursery. The important point, however, in their planting is to set them firmly in the earth. First press the soil around the roots with the fingers as tightly as possible, and then tread upon the ground with the balls of the fet after the plant is set. If the weather is very hot when you are planting, apply water in tht bottom of each hole before placing the plants.

These Tried and True Varieties Will Give a Long Season of Fruit

In sending in your varieties of fruits order some early and some later varieties, so that your berries will continue to give you enjoyment throughout many weeks.

The "King" is rightly named, as it is one of the very best bright red raspberries we have. It is extemely hardy, and not affected by cold, bears early and freely, and is of splendid quality.

One of the best known and favorite varieties of raspberries is the Cuthbert. It is a very vigorous grower and is most hardy and sturdy in its habits. It has an abundant crop of large bright red berries which are easy to pick.

The St. Regis (sometimes called Ianoro) is deservedly popular, as it is one of the new "Everbearing" varieties and gives a crop of fruit the same year the bushes are planted, and two crops a year afterwrads, covering a period of four months! It surpasses most other berries in size, quantity and quality.

The Cumberland is an excellent variety of the black raspberry. It is very large, firm and splendid in quality and in productiveness.

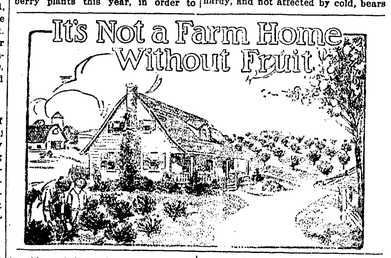
The Gregg also is another black variety which is good to have in any planting, as it combines fine quality, good size and productivity, and comes on just a little later than the Cumberland.

To produce the best fruit, the old canes of raspberries should be cut as soon as the crop has been gathered.

Of the blackberries, the Mersereau is a large producer of extra large fine berries. Their quality is extra sweet and delicious, and they have the advantage of being coreless. This variety ripens very early.

The Snyder is particularly hardy, and fruits very early. It is one of the most popular sorts for the west.

Elorado is a newer variety, and claimed by many to be "the best yet." The berries are large, sweet, and jet black, and the plants are extremely hardy, coming through without injury even in localities where most other varieties winter kill.



Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

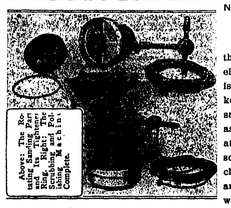
ZINC ROOF SHINGLES AFFORD LIGHTNING PROTECTION

A new type of shingle rapidly gaining favor is made of pure zinc for which watertightness is claimed on roofs of 4-inch or greater pitch. The shingles interlock with each other, and require but one nail apiece, greatly simplifying their laying. To improve their appearance, the zinc is oxidized at the plant, thereby producing a better color and surface texture. Of particular interest is the fact that, when grounded, this type of shingle affords protection against lightning. Provision is also made for ventilation to prevent the roof from "sweating."

READY-MADE BUILT-UP MICA FOR ELECTRICAL PURPOSES

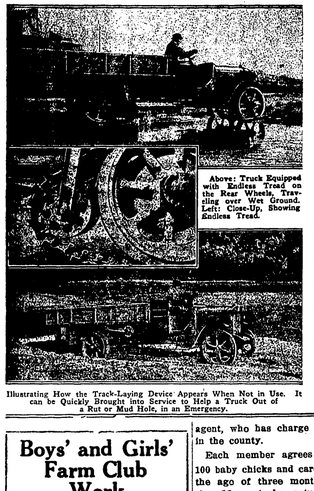
Built-up sheet mica, of various thicknesses from .01 inch up, is now commercially available for the making of insulators for flatirons, soldering irons, electric stoves, and other electrical heating devices. It can be set to any desired shape and may be split like ordinary mica. It possesses unusual strength and rigidity even at high temperatures, has a high electrical insulation value at high temperature, and does not react chemically with the resistor material that are generally used.

Iron alloyed with 15 per cent aluminum and heated to redness, acquires a surface that does not scale and is resistant to high temperatures.



NEW MACHINE OF BENCH TYPE SANDS, POLISHES, OR SCRUBS

Convenience and portability are the outstanding features of a small electrically driven sanding and polishing unit just placed on the market. The machine is adapted to sandpaper and refinish such work as marble surfaces, and a special attachment is also provided for scrubbing worktables, benches, or chopping blocks in butcher shops and candy or canning factories where sanitary conditions must be maintained. Of special interest is the fact that standard electrical connections facilitate attachment to a base plug or light socket. The motor for this combination unit is rated at 1-3 horsepower, and the entire weight complete is only about 50 pounds. Although it is claimed for this machine that it will do the handwork of 10 men, its cost of operation is said to be small, averaging only four cents per hour.



Illustrating How the Track-Laying Device Appears When Not in Use. It can be Quickly Brought into Service to Help a Truck Out of a Rut or Mud Hole, in an Emergency.

DEVICE PROVIDES TRACK FOR TRUCK WHEELS.

A modified form of track layer that can be attached to the wheel of any type of motor truck when approaching soft ground, and is readily detached when not needed, is among the late innovations in the automotive field. The device consists of an endless tread that passes around the rear wheel and an auxiliary roller suspended by a special arm from the truck frame. When not in use, the tread is coiled up on a spool hung under the rear platform.

NOVEL APPARATUS MAKES FAST MECHANISMS APPEAR SLOW.

Apparatus by means of which a rapidly moving mechanism can be made to appear slowed down or even at a standstill, while running at normal speed, is now being introduced. It is adaptable to the study of the rapidly moving parts of a sewing machine, the valve movements of gasoline engines, and the functioning of many other mechanisms, which have a revolving part from which the special gear box of the apparatus can be driven. This gear box contains cam-operated contact breakers that control the flashing of a light from lamps specially constructed to give an instantaneous flash such as can not be obtained with the ordinary filament. The gear box is provided with indicating gears, one giving the exact speed of the mechanism to be interrupter, and the other giving a speed one-hundredth or one-thousandth less. No auxiliary apparatus, through which to view the mechanism under test, is needed.

Re-Enlisting Pastures and Meadows

Roy O. Westley, in Charge Forage Work State College of Washington.

In this period of desired maximum production of all farm products the "spurring on" of meadows and old pastures which have "seen some service" may need some "supplies" and "reinforcements," and others which have been "on liberty," so to speak, for a few months may require "re-enlisting" into the "service."

The method of procedure in re-enlisting these fields varies with the crop and the age and condition of the sod. A few of the more common practices to increase the production will be outlined in the following paragraphs.

Liming Alfalfa.

Another means of increasing the yield of alfalfa and other legume pastures is the application of a top-dressing of manure. For such a treatment the less straw or bedding in the manure the quicker and greater will be the returns.

3. Clipping weeds, especially before they go to seed is to be recommended, particularly for pastures.

3. For fields, especially of alfalfa, which have a number of low places in them, good drainage is an essential for maximum production.

Patsuring Precautions.

In order to make the most out of our pastures a few suggestions concerning the actual pasturing of them will be noted.

1. Avoid pasturing when soil is very wet.
2. Avoid, as much as possible, pasturing early in the spring.
3. Avoid pasturing closely.
4. Avoid pasturing heavily—on account of the tramping out of the plants.
5. Next fall, allow the pastures to have a good growth for the winter; and avoid pasturing too late.
6. For a large pasture, running a cross-fence through it and pasturing a half at a time has the advantage of (a) furnishing more feed during the season, and (b) allowing a more uniform growth of the plants.

Be it known that every farmer is the judge of his own crops, animals, and farm resources, and so it remains for him to choose the particular method of treatment, which, under his conditions, will give the greatest net returns from his pastures and meadows. Let's help them to do their BEST.

Boys' and Girls' Farm Club Work

Boys and girls of Kitsap county will have an opportunity to get started in the poultry business this spring. F. L. Lewis, a well-known White Leghorn breeder of Charleston, has made an exceptional offer to the boys and girls' clubs of the county who will consent to a plan which has been drawn up between Mr. Lewis and G. N. Worden, the county agricultural agent, who has charge of club work in the county.

Each member agrees to take out 100 baby chicks and care for them to the ago of three months, at which time 18 are to be returned as payment for the remainder of the stock. Security is furnished by a promissory note for $52.50 for each 100 chicks. The note is indorsed by the boy's or girl's parents and made payable in 90 days in case of failure to deliver pullets as agreed. The pullets returned are to conform to a standard drawn up by the state college.

On the other hand, Mr. Lewis agrees to furnish good, healthy stock from trapnested breeders. Chicks from special mated stock can also be furnished providing for payment of 20 pullets and a note for $30.

The plan is a part of the county boys and girls' club program for the coming year, and Mr. Worden expects that many of the boys and girls who have already made exceptional showings of gardening, canning and sewing club work for the last two years, will take advantage of Mr. Lewis' offer to get started with a good strain of White Leghorns and carry on their own poultry project.

Shortage of Good Horses.

Figures based on the 1920 census show that about 200,000 fewer colts were produced in the United States in 1919 than were needed to supply replacement of horses and mules on farms alone. About 225,000 high class animals are needed for annual replacements in citie

The department of agriculture recommends that farmers produce replacements enough, in connection with general farming, to be able to sell off the older work animals each year. The market demands well-broken and trained horses that will last a long period of years. Therefore, if the colts are broken at about 3 years of age and used on the farm a few years, these young horses, together with the breeding stock, will furnish the power for the average farm and the young stock will be increasing in sale value. Horses reach their maximum sale value at about 6 years of age, and the surplus animals should be sold at this time. Well-bred horses and mules that have been properly fed and well broken are usually salable at a profitable figure and should increase the income of the general farmer.

$2,000,000 Shinplasters Out.

Remember that old "shinplaster" currency that your grandfather kept as a souvenir of the civil war days—paper money for which we now use dimes and quarters and the like? Well, it's just as valuable today as it ever was, because the U. S. treasury, which figures that there is still about $2,000,000,000 outstanding, is ready to redeem it upon presentation.

"The government has never yet defaulted on an obligation," says R. G. Hand, federal commissioner of finances, "and it is still ready to give face value for this fractional currency." Very, very seldom is any of it ever presented now.

Teacher—Neilson, your recitation reminds me of the city of Quebec.
Student—How come.
Teacher—It's built on a bluff.—Ex.

POULTRY

H. M. Brunegraff, of Blyn, Wash., received a shipment of three pullets and a cockerel of the E. B. Thompson's Ringlet Barred Rocks. The cockerel, reports County Agent W. A. Holland, won several prizes at a number of poultry shows and took third place at the Seattle Poultry show.

The poultrymen of Bainbridge Island met and after discussing ways and means of helping themselves improve the stock on the island, organized the Bainbridge Island Poultry association. The purpose of the organization is to promote the industry in an educational way.

The new accredited hatcheries in Whatcom county were given their second supervision, through County Agent Harry Carroll, during the month. The list to date shows that 25,036 breeders and a capacity for hatching 131,000 eggs are under the direct supervision of the extension office.

Intestinal Worms in Poultry.

Intestinal worms are of several types, but those most common to poultry are the small and large round worms and tape worms, according to Dr. W. T. Johnson, veterinarian of the western Washington experiment station at Puyallup.

The infection is generally spread through the droppings, drinking water, food and infected yards. One kind of round worm is found in the intestinal tract, another is found in the caeca or blind gut. Tape worms are found in the intestines, in most cases.

Birds affected with worms show an unthrifty condition, digestive disorders, loss of weight, and sometimes paralysis. Worms take nourishment from the birds and give off toxic poisons which are detrimental.

In treating birds for worms, first give epsom salts at the rate of one pound to 100 birds. Dissolve the salts in water and use solution for making moist mash. This should be given as an evening feed. Follow this the next day with five grains of powdered areca nut for each bird; dissolve in water and use solution for mixing a moist mash.

Birds should not have access to the poultry droppings, as this is one of the worst sources of infection. Following the above treatment, the droppings should be mixed with lime to destroy the worms and eggs. If the flock is infected the ground will be also. The infection is in the top two inches of soil. A good treatment is to clear any rubbish from the yards and sprinkle the ground with a solution of corrosive sublimate, one part to 1000 parts of water. Use it at the rate of one gallon of the solution for 10 square feet. A like amount of strong salt brine may be used instead. Do not let the birds have access to the yards until the solution has disappeared. Either solution is poisonous to the birds if they drink it.

84 SEPARATE EARTHQUAKES FELT IN U. S. DURING 1922

During the calendar year 1922, 84 seperate earthquakes strong enough to be felt by the unaided senses were reported from different parts of continental United States.

Thes occurred chiefly in California and in a section of the Central States, with scattered disturbances in various other States. Earthquakes of reported intensity of 5 or greater on the adapted Rossi-Forel scale, but not accompanied by appreciable damage, occurred in Arizona on June 15-17; in California, January 31, February 5, March 10 and 16, June 16, August 18, September 5; in Illinois, March 22-23; in Indiana, January 11; in Kentucky, March 22-23; in Missouri, March 22-23; in Oregon, January 31; in South Dakota, January 2; in New York, December 8; and in Tennessee on March 22, 23, 30.

The earthquake of January 31 was of marked intensity, but the epicenter was apparently in the Pacific Ocean, off the California coast. Widespread shocks occurred on March 22 in Arkansas, Illinois, Indiana, Kentucky, Missouri and Tennessee; on March 30 in Illinois, Kentuck, Missouri and Tennessee; and on November 26 in Kentucky, Tennessee, Illinois, Indiana; but all these were of slight intensity.

More Accident

Magistrate—So you broke an umbrella on your husband's head. What have you to say?

Defendant—It was a haccident, sir.

Magistrate—How could it be an accident?

Defendant—Well, I had no intention of breaking the umbrella.

Mary had a little lamb—
You've heard that tale before,
But have you heard she passed the plate
And had a little more?—Ex.

THE ORIGINAL "HOME, SWEET HOME"

Centenary Celebration of Introduction of Immortal Song Draws Attention to Author's Boyhood Home on Long Island

Pictured above is the original "Home, Sweet Home". As he himself admitted, it was this picturesque old house, in the sleepy little Long Island town of East Hampton, N. Y., which John Howard Payne had in his mind when, as an exile in Paris, he wrote the words of the world-famous song.

Payne was born in New York City, but was taken by his parents, at an early age, to East Hampton. Here he lived in the house reproduced above until he was 16. After his sixteenth year Payne never knew what it was to have a home. He went abroad when he was 21 and remained to considerable fame as a poet, librettist and actor.

The centenary of "Home, Sweet Home" is being celebrated by music-lovers in May this year. The song was introduced by Miss M. Tree in the second act of an opera, "Clari, the Maid of Milan", written by Payne, at the Royal Theatre, Covent Garden, London, in May, 1823. Its popularity swept London and today it is known the world over.

Considerable interest is being manifested in the fact that this house, the very soul and essence of "home", is an all-shingle house, shingles being the only genuinely North American covering material. Attention is being directed to this in striking 7th-page advertisements in such publications as "House and Garden" and "House Beautiful" by the Rite-Grade Shingle Association in June. Payne's boyhood home was built about 1650 and still is in good repair. It bears engraved on the shining knocker on the front door the words, "Home, Sweet Home".

Washington to Be Home of Good Cooks

Miss Maud Wilson, Assistant Director, Extension Service.

There is no place where the home-keeper has a better chance to be a good cook than in Washington, with its marvelous variety and quality in all living foods. There is no reason why the women of Washington cannot rival their grandmothers in the art of cooking.

The world needs more good cooks. It needs better cooks. Every mother should be a good cook, for the sake of her children. If she doesnt like cooking, she should cultivate a liking for it. That is easily done, if she appreciates the importance and goes about it with method, and determination. A good cook-book is an aid, but a minor one.

How to become a good cook? How make a better cook? How make a good winter-time cook as well as a good summer-time cook?

First of all, you need good materials—fresh, crisp vegetables, clean milk, sweet clean butter, fresh, prime meat. The best is the cheapest in food. Unless your bank account is larger than the average, you can't be a good cook and buy everything you eat.

The housewife who has the best chance at doing a good job of cooking has a good home garden, orchard and poultry flock. In many cases her demand for high quality necessitates depending on a home supply of milk and meat as well.

The good cook must know how to care for food. Clean milk won't stay sweet and clean very long. Eggs, vegetables and meat must be cared for properly or the housewife finds herself with strange flavors and poor textures. She must have a good cooler or cellar. She must understand sanitation. Spices from India gained their vogue during the middle ages because they concealed poor flavors, due to badly cared-for food.

All this makes for a good summer-time cook, but the test comes, not in the season of plenty, but in the late spring, when you feel as if you would like to eat the tender shoots on the trees, you are so hungry for green things.

A good cook, like a successful business manager, operates on a budget. She plans her garden, and her orchard so that she has an all-year round supply of as many fresh food as possible. That calls for knowing a lot about canning meat, fish, fruits and vegetables; for storing carrots, cabbage, potatoes, apples, squashes, so they are tender, crisp and good all winter long; for putting eggs in water glass when the price is low.

The garden plan has a lot to do with good cooking. It is amazing to see what can be done in Washington toward making the garden serve our needs all year long. To plan such a garden requires a knowledge of varieties and of garden culture far beyond the average. If you would be a good cook, study gardening more and cook books less.

We are apt to share the opinion that our grandmothers were better cooks than the present generation of housekeepers. It is true that they spent a lot of time over the stove and mixing table and things tasted awfully good. They incked variety in materials so they specialized in highly complex dishes, and delighted in serving a great many dishes at a meal. They were famous for puddings, with rich sauces, where we boast of our salads. They turned to tonics in the spring—the modern child does not know the taste of sassafras tea.

The Extension Service believes in the importance of good cooking. Food selection discussion meetings are held through the state, where the nutrition specialist preaches the gospel of simplicity and wide and varied diet. Food habits score cards and demonstrations in the improvement of health of underweight children are backed up by assistance in planning and caring for home orchards, garden and poultry, and inexpensive methods of caring for food.

We must not minimize the importance of knowing how to handle food materials in cookery. The basic principles of cookery are few in number, and every girl should know them by the time she is through high school. Every farm girl should belong to a girls' cooking club, if she has not had a good thorough course in cooking in school.

CAN RADIO MESSAGES BE HEARD IN A THUNDERSTORM?

The relation of weather conditions to wireless audibility is a point of interest to the Weather Bureau of the United States Department of Agriculture, which, although without facilities of its own for conducting investigations in this field, has cooperated in various ways with other agencies also interested in conditions affecting wireless telephony.

As a result of work done by Nebraska Wesleyan University, based on thunderstorm reports furnished by the Weather Bureau, the investigators reached the conclusion that there is no relation between barometric pressure and audibility, and that conditions at the sending station do not influence the audibility at a distant receiving station. High static frequency, high static audibility, and a nearby thunderstrom area, however, tend to reduce the audibility at the receiving station.

Henpecked Harry.

Fable: Once upon a night time a Mrs. Justwed declared, "I hope my honey boy is having a good time with the gang at the club. Why, poor dear, he hasn't been out since last night."

During the overhauling of the steamships "Aquitania" and "Mauretania" at Southampton, Eng., scores of men work on their turbine blades. The "Aquitania's" eight turbines have over 1,000,000 blades and the "Mauretania's" six, 750,000, each requiring careful individual scraping and cleaning.

Bacon—I see that old joke about a fellow's stolen umbrella is still going around.

Egbert—That's nothing. So is the umbrella.

Rebekahs Banquet

The Rebekah and Odd Fellow lodges gave their annual banquet on Monday evening, which was said to be one of the "best ever." After the banquet a program was given. Cards and dancing furnished entertainment for the rest of the evening.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Church school at 9:45 a. m.

Morning worship and reception of new members with the monthly communion at 11 o'clock.

Young People's meeting at 7:30 p. m., with the pre-prayer service at 7 in the study.

The Sunday school workers will have a 6 o'clock dinner at the home of the superintendent, Mrs. F. S. Casebolt, Monday evening, May 7.

When Sunday comes, a visit to God's house for communion and worship will strengthen you for the tasks of the week more than a visit from your dearest relative and friend or the day spent in a car burning up gas.

Adventists Visit Genesee

Last Saturday afternoon the Young People's Society of Missionary Volunteers, with some older members of the Seventh Day Adventist church of Lewiston, to the number of 60, came to pay a visit to the Genesee church. The young people's society furnished a program consisting of talks, recitations, songs and tableaux, which was greatly enjoyed. The subjec taken by the visitors was "Home, Mother."

A hearty invitation to come again was exended the visiting sociey.

Is In Critical Condition

The condition of Mrs. Mary Isaksen remains unchanged and she is in a critical condition. Her children have been summoned.

Public Sale

A public sale will be held Saturday, May 5, commencing at 10 o'clock, of the J. H. Kidwell chattels, at the Vollmer ranch formerly farmed by Kidwell.

Whooping Cough

This is a very dangerous disease, particularly to children under five years of age, but when no paregoric, codine or other opiate is given, is easily cured by giving Chamberlain's Cough Remedy. Most people believe that it must run its course, not knowing that the time is very much shortened, and that there is little danger from the disease when this remedy is given. It has been used in many epidemics of whooping cough, with pronounced success. It is safe and pleasant to take.—Adv.

WE ARE PAYING FOR TOP HOGS, $8.50 THIS WEEK

PERSONAL MENTION

Mr. and Mrs. Geo. Boliou and Leland Emmett spent spent Sunday in Lewiston.

John Cuningham was a Wednesday morning passenger for Moscow for a short stay.

Miss Neppa Naylor of Moscow is visiting her sister, Mrs. Fred Perkins, and family.

Mrs. Edna Williams of Thompson Falls, Montana, is visiting with her friends, Mr. and Mrs. A. E. Elver.

Nick and Frank Geselchen arrived from Spokane Friday to be in attendance at the Geselchen-Nibler wedding.

Miss Katherine Dwyer was a weekend visitor from Lewiston, visiting her parents, Mr. and Mrs. Thos. Dwyer.

Chas. W. Smith was a Friday morning passenger for Spokane for a short visit with his wife and little baby daughter.

Mrs. F. E. Dieus and sister, Mrs. C. J. Abrams of Hillyard, Mrs. Ira Hanson and Mrs. G. E. Sampson spent Friday in Lewiston.

Charles Geselchen returned to work at Colton Tuesday after having been here to attend the wedding of his sister, Miss Genevieve.

Miss Helen Geselchen returned to her school work at Bonners Ferry Tuesday after attending the wedding of her sister, Miss Genevieve.

Lee Allen and W. M. Ellsworth of Pullman were in Genesee the other day advertising their big horseshoe tournament which is to take place at Pullman on May 16.

Mr. and Mrs. John Bramlett and Mr. and Mrs. Messersmith of Lapwai were Genesee visitors last Friday, having brought Arthur Springer home from that place.

Mrs. Ed. McLean and daughter, Patricia, of East Auburn, California, are visiting at the home of Mrs. McLearn's mother, Mrs. F. E. Becker, who is in failing health.

Boy Scouts Put Up Road Signs

As a community good turn, Scoutmaster Pendleton and the Boy Scouts spent the day last Saturday setting posts and putting up the "Genesee" signs which were made last year, to direct the traveling public to our little city, a total of 30 signs being put up during the day. John Meyer loaned the big International truck, with "Fritz" as driver, and the highway from the foot of the Lewiston Hill to Moscow was posted. They also went to Uniontown and placed signs at the road intersections. The road over the mountain from Moscow was also covered. If transportation is obtainable, the Scouts will continue work every Saturday until the signs have all been placed.

Will the public of Genesee help to keep our sign posts clear of advertisements and report to the Scoutmaster where signs are broken down or defaced? We will also be glad to receive suggestions where it is thought signs can be placed to the best advantage in aiding the traveling public to find their way to Genesee.

A gallon of white paint for the posts would make the signs look neater and would keep the posts from weather wear. Who will donate this for the job?

Rev. Pendleton and the Boy Scouts will have the thanks of the entire traveling public for the splendid work they have done and expect to do.

Blue Bird Club

The Blue Bird club met at the home of Mrs. Albert Peterson on Tuesday afternoon. The time was spent in sewing garments for needy families, after which refreshments were served by the hostess. The invited guests were Mrs. A. Hillman, Mrs. Hunchby and Mrs. Kimberly of Moscow and Mrs. A. Johnson.

The members of the club and their husbands will enjoy a noodle supper at the home of Mr. and Mrs. Sam Lange of Moscow on Saturday night, May 5.

Has Received Diploma

Mrs. C. D. Hirselberger has received from the Franklin Institute of Rochester, New York, a diploma which says she has finished a course of study from that institution, with 100 per cent grade, in dress designing, dress and coat making and is qualified to teach plain and fashionable dress making and designing. Mrs. Hirselberger's many friends will be glad to learn of her success.

Christian Endeavor Notes

By Ted Parks

The Senior Endeavor held its first missionary meeting since the election of new officers last Sunday. Grace Jain presented the subject of foreign missions in China, in a new and interesting way. A box of Chinese fancy work, clothing and articles pertaining to their religion was among the group, while Grace told the use or superstition conected with each. She also told of the need of missionary work there and of the work of Miss Bertha Allen, a missionary who is doing a wonderful work there.

Irene Hall gave a reading entitled "Christianity, an Economic Disturber." She is to give the same reading at Sunday school next Sunday.

Miss Adda Mathews led the pre-song service, with Miss Olive Jain accompanying on the piano. This service is of inestimable value to the meetings. A vocal trio by the Evans sisters was much enjoyed.

Rural Carries Change Time

The rural route carriers are now covering their routes in the afternoon instead of morning as has been the case since last fall. The farmers will now receive their mail the same day it arrives.

Lumbago

This is a rheumatism of the muscles of the back. It comes on suddenly and is quite painful. Every movement aggravates the disease. Go to bed, keep quiet, and have Chamberlain's Liniment applied and a quick recovery may be expected. Mrs. J. F. Dann, Brockport, N. Y., writes: "I can honestly say that Chamberlain's Liniment cured me of lumbago a year ago last summer. When I began using it, I was flat on my back in bed and could not turn to the left or right. I had a bottle of Chamberlain's Liniment in the house and this was applied to my back. It promptly drove away the pains and aches."—Adv.

INCREASE SCOPE OF WORK WITH VETERANS

More Disabled Men Made Eligible for Compensation by New Relief Measure.

Numerous benefits, until now unavailable to disabled ex-service men, and granted through the passage of a new veteran relief measure, will be put into effect in this district immediately, L. C. Jossegh, Pacific Northwest manager of the United States Veterans' Bureau, has announced Many war veterans will be affected, he stated.

The benefits follow: That every World War veteran who was discharged prior to the establishment of the Veterans' Bureau on August 9, 1921, shall be conclusively held to have been in sound condition when entering the service, except as to such disabilities as were noted of record when or prior to the time he entered the service.

That an ex-service man who is shown by examination of a Veterans Bureau medical officer or other qualified physician to have a mental disease or an active tubercular disease of 10 per cent or more, within three years after separating from service, shall be considered to have acquired his disability in such service or to have suffered an aggravation of pre-existent tubercular and mental disability. In addition to extending this period from two to three years in mental and tubercular cases, this provision eliminates the qualification that the tubercular condition must be pulmonary to entitle one to the benefits of the presumption.

That a certificate of disability may be obtained prior to March 4, 1924, which in case of fraud, shall be incontestable evidence that the injury for which it is issued was suffered in or aggravated by the military service.

That where a veteran of any war dies after his discharge from the service and does not leave sufficient assets to meet the expense of burial and transportation of his body, the Veterans Bureau will pay for a flag to drape the casket andalso for burial expense it will pay a sum not exceeding $100. The flag after burial is to be given to the next of kin of deceased veteran. If death occurs while such person is receiving governmental medical, surgical or hospital treatment or vocational training, the Bureau shall pay, in addition to burial expenses, actual and necessary cost of transportation of the body, including the preparation of the body, to a place of burial within the continental limits of the United States.

That all hospital facilities under the jurisdiction of the Veterans' Bureau shall be available for veterans of the Spanish War, Boxer Rebellion and Philippine Insurrection suffering from neuro-psychiatric or tubercular ailments or diseases. This includes transportation, as granted to those World War veterans receiving compensation and hospitalization.

That payments of premiums on yearly renewable term insurance and converted insurance may be deemed not to have lapsed in the case of those persons who, while mentally incompetent and for whom no legal guardian had been appointed, have heretofore allowed or may hereafter allow their insurance to lapse while so suffering during the period for which they have been or may hereafter be so rated. Waiver in such cases may be made without application and retroactive where necessary in accordance with regulations which may be adopted by the director of the Bureau.

That the right to compensation for the period of service from which such discharge is given shall not be barred unless a person was discharged or dismissed by sentence of court-martial. The act prior to this amendment did not contain the proviso "by sentence of court-martial."

Fire broke out in the stockroom at Madison Square Garden, New York, recently, where the Ringling Brothers and Barnum & Bailey circus is being held. Although the blaze was confined to a storage room for popcorn, peanuts and other circus refreshments, great quantities of which were destroyed, a near-panic ensued among the animals when they became excited by smoke and the activity of their keepers. Shrieks and roars were deafening for a time until the keepers finally quieted them.

Four alien land cases have been reported for argument in the supreme court from Washington and California. Louis Marshall, who is counsel for those challenging the laws, held that the prohibition of ownership of land by those not permitted to be citizens was in violation of the 14th amendment, as discriminating against races or color. Attorney General Webb of California in his reply to Marshall said that the whites retreated before the Japanese settlements "until the people refuse to assimilate with the Japanese."

Russian Priests as They Faced Famous Death Court

This exclusive photo shows the fourteen Russian Priests who faced the death court in the trial of Archbishop Tcheplnjak. No. 1 is Archbishop Tcheplnjak, whose death sentence was commuted to 10 years' solitary confinement; No. 2 is Vicar-General Butchkaytch, executed by a Red firing squad.

FRUIT GROWERS FORM REAL CO-OPERATIVE

Associated Fruit Growers, Inc., Would Turn Warehouses Over to Farm Bureau as Trustee.

E. L. French, state director of agriculture, recently met at Yakima with officials of farm bureaus, horticultural leaders, and T. R. Slusher, organizer and president of the Associated Fruit Growers, Inc., which is making an effort to get the indorsement of the Farm Bureau, the state and federal departments as cooperative marketing concern.

The Associated Fruit Growers is capitalized at $300,000 preferred and common stock, of which $125,000 has been subscribed, 10 to 15 per cent of which is owned by non-growers. These owners, with Mr. Slusher, M. W. Pennington and R. M. Mitchell, who have a controlling interest in the investment, are willing to turn their holdings over to the farm bureau as trustee to apportion this stock and unsubscribed stock as fast as it is taken up by growers, making a bona fide cooperative organization. The concern owns warehouses in nearly every center in the valley from Tieton to Kennewick, and its equipment to handle 2000 cars of produce annually is said to be in excellent shape. Its grower membership is more than 250, and it is thought to be a good nucleus for further growth. The meeting selected Chester Miller, O. W. Melton and R. C. Randall, representatives of the Farm Bureau, to meet with directors of the Associated Growers and formulate plans to be referred to these two bodies and to the state department of agricultural for approval. It authorized Farm Bureau officials to go ahead and organize cooperative associations.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Agricultural Engineering—If you can not get on your fields to plow yet, they need under drainage. It will add four weeks to your growing season.

Agriculture—Have plenty of stores in the hive, for it insures rapid brood rearing. A large number of bees means more honey.

Clothing—The truely artistic costume is appropriate to the occasion on which it is worn.

Dairy—When the calf is two weeks old, teach him to eat a little ground oats and bran; when three weeks old, start feeding hay.

Farm Crops—Select the ground with great care when planting alfalfa, if it has not been grown as a regular crop. Use only well drained, fertile soil and work well before sewing.

Farm Management—(West Side). Arsenate of lead in the pink spray will do away with the fruit worm which injured so many apples last year. (East Side) Lime sulfur in the pink spray will be effective against mildew.

Plant Pathology—Rose mildew is controlled by spraying with liquid lime sulphur, 1-10 before spring growth starts and dry sulphur, sulphur paste or lime-sulphur 1-35 when disease first appears.

Livestock—A sheep shearing machine works quicker, better and easier than the hand shears. You will also secure half a pound more wool per head the first year.

Poultry—Keep the cockerel which you have saved for breeding on open range for he is more important than the pullet.

In Arkansas, it is reported, a woman wrote her husband a letter threatening him with dire punishment if he did not stay home at night; and signed it the Ku Klux Klan. It proved effectual.

A man may not say a word and still be a liar.

"KEEPING OUT BAD FOOD," NEW GOVERNMENT MOVIE

Protecting the great American appetite against unscrupulous foreign food exporters and preventing the dumping in this country of impure food and drug imports is the subject of a new United States Department of Agriculture one-reel film, "Keeping Out Bad Food."

The motion picture visualizes one of the important tasks of the Bureau of Chemistry in administering the Federal food and drugs act.

Scenes show inspectors selecting samples from newly arrived food and drug shipments, inspection of food cargoes at the wharves, on the floor of the customs appraiser's "store", and in the laboratories of the Bureau of Chemistr. Many of the common attempts at violation of the law and their detections are shown. Scenes showing the seizure and destruction of impure food are included.

The administration of the tea act, the only existing law which regulates the palatability of a food, is also visualized in the film. Expert tea tasters are shown at the work of judging the tea imports to make sure its quality is up to American standards.

"Keeping Out Bad Food" will be loaned to exhibitors, free, for short periods, and circulated through the department's film distribution system. Copies may be purchased at cost of printing.

DEACONESS HOSPITAL TO ORGANIZE ALUMNI

An original plan and one quite unique, for celebrating National Hospital day, May 12, has been inaugurated by the Deaconess hospital of Spokane. It is proposed on that day to institute a "Children's Alumni," to be composed of children born at the institution. "People have taken a great interest in the proposal everywhere it has been mentioned," said the Rev. Robt. Warner, secretary of the institution.

"Every community I have visited can be well represented in such an organization. A good deal of interest attaches to finding the oldest person whose birthplace was the Deaconess hospital, and it has been decided to offer a prize to the person claiming that distinction. Another suitable prize will be awarded to the family having the largest number of its members born at the hospital. It is estimated that more than 4000 children have been born at the institution in the 27 years since it was started."

The faculty requests that parents who have one or more children born there send name, date of birth, names of parents and present address. All members of the new alumni will be furnished with an attractive birth certificate, and from time to time will receive birthday greetings from the hospital.

DAIRY

Plan for Creamery.

Dairymen of the Walla Walla valley have decided to go ahead with plans for a cooperative creamery in Walla Walla. J. H. Compau and V. E. Brown will start in a few days to obtain six-year contracts from the dairymen. If 1000 cows can be signed, a creamery will be built or bought.

The contracts will call for paying $10 a cow, giving a capital of $10,000 as a nucleus. Chris Johnson of Salt Lake, dairy manufacturing expert of the United States department of agriculture, spent several days in Walla Walla discussing the matter with the dairymen.

Lewis County Passes Goal.

The modest goal of 20 purebred females adopted a year ago by Lewis county for her 1923 dairy project, was exceeded several times. Seventy-seven head of females and 22 purebred bulls were brought in during the year. Twenty-four demonstrations in live stock improvement were started, and 11 meetings were held in which methods of improvement were explained. Four tours of successful dairy farms were held and 14 judging demonstrations given. Perhaps one of the most valuable undertakings of the year was the formation of a cow-testing association last February, when 545 cows were signed up. Twelve or 15 cows were discarded as unprofitable, as a result of turning the searchlight on individual production, and the feeding and management practices of members toned up generally.

Holstein Fair Prizes.

An appropriation of $21,000 has been made for prizes at state fairs and dairy shows by the Holstein-Friesian association of America. This year an additional $2000 will be given for calf club prizes and $1000 for calf club ribbons, badges and other prizes. Approved judges of Holsteins are appointed by the association so that this money will get the best results. Twenty-five years ago the association started with an appropriation of $500 for this purpose.

Monkey and Cat.

Fable: Once there was a man who didn't think he would be more efficient than his wife as housekeeper.

Travelers Aid Branch Established in Seattle

In order to make Seattle a safe and helpful city for the traveler, young or old, who enters its gates, a branch of the National Travelers Aid Society has been established in the city.

Day in and day out, this organization maintains at the railways stations and docks, trained workers, wearing the shield shaped badge of the society, through whose discernment, helpfulness and protection, the right kind of service is given to those who are away from the natural safeguarding influences of home.

The first attention of the workers is given to the young innocent girl who is an easy prey for designing men and women, but all travelers are helped solely on the ground of their necessity.

Little children, forced by circumstances to travel alone, are cared for while in the station and sent on to destination. Young mothers with babies are directed to safe lodgings and guided in making connections with other trains and boats. Widows with little children, hoping to get a foothold in a new place, are advised about housing and employment. Aged or ill persons are given sympathetic attention. Families without sufficient money to tide them over until they find work are cared for temporarily. Stranded and runaway girls and boys are returned in safety to their homes. Immigrant girls and other foreigners unable to speak a word of English, are aided, and persons having lost tickets or money are cared for until relief comes from home.

By every train arrives some boy or girl, man or woman, unaccustomed to city life and its perils, with the earnings of hard work, seeking better and bigger opportunities. Travelers Aid helps them to find the right kind of lodging and employment, and puts them in touch with the best social and religious life of the city.

Travelers Aid work is being carried on in over six hundred cities and towns in the United Stntes, and the workers are in constant touch with each other by telephone or telegraph, passing on from one Society to another those who are traveling to other points.

This organization is non-sectarian and its service is free to all cravelers. Persons desiring to avail themselves of Travelers Aid service are requested to communicate with the Society, whose headquarters are at the Oregon-Washington station, Seattle.

Pollination of Apple Blossom

Everyone who has seen an apple tree bloom and mature its crop of fruit knows that the great majority of blossoms never develop into apples. Just how small the percentage of fruit to blossoms may be is shown by a count made on an eight-year-old Jonathan tree with a heavy bloom. It was estimated from counting a portion of the blossoms that if every bloom could have developed a medium sized apple the tree would have produced over six hundred boxes or nearly a carload of fruit.

The heavy drop of bloom and young fruit is ordinarily a wise provision of nature. However, it sometimes happens that our trees have a scarcity of bloom and the drop is too heavy. This is especially true of the Delicious variety in this district. It would seem advisable for us to determine the causes of the heavy drop and take steps to prevent it during a season when the bloom is light.

There are three main causes for a poor set of fruit: frost, lack of sufficient plant food, and poor pollination. The effect of frost on the bloom was discussed in these columns last week. The question of supplying plant food involves the use of fertilizers and immediately leads us into difficulties. In this connection, it is worth remembering that the fruit buds for this year were developed as early as last July and if the soil did not contain enough plant food for the development of fruit buds then it is too late to do anything about it this spring.

Cross Pollination Necessary.

Poor pollination is the chief cause for poor setting of fruit. Some knowledge of how pollination is effected is necessary before we can determine the cause for a failure of the blossom to become fertilized. The tiny pollen grains are contained in small cases or anthers, borne on the stamens which surround the central organ or pistil. When the blossom opens these pollen grains escape from the anthers and are transferred by some external agency to the tip of the pistil, called the stigma.

This transfer of the pollen grain to the stigma is the process that interests us now and is the step where the orchardist can lend his assistance. With a few exceptions apple blossoms are self-sterile, that is, the pollen from one blossom can not fertilize the pistil of the same flower. This condition makes it necessary for the pollen from another variety of apple to come in contact with the pistil we want fertilized, which complicates the process.

To insure cross-pollination it is necessary that different varieties that bloom at practically the same time be planted near each other and that some agency be provided to carry the pollen. In this district all the common varieties bloom at near enough the same date with the possible exception of the Wagener and Rome Beauty. The carriers of pollen include the air, birds and insects.

The Busy Bee Helps.

Contrary to common belief wind does not aid materially in pollination. This fact was established by experiments in which pieces of glass were covered with vaseline to catch the pollen and then suspended in the trees. It was found that only a very few grains of pollen were caught from the air. It is estimated that about 5 per cent of the pollination is accomplished by the aid of air currents. Birds are also of little help, leaving most of this important work to the insects.

It is surprising to find how many different kinds of insects visit the blossoms on one tree in a single day. These species included several kinds of flies, a few beetles, and a number of insects belonging to the same family as the common honey bee.

With so many different insects working in the blossoms it would seem that there should be no lack of pollen distributed, but many of the insect species are comparatively rare. During a spring following a severe winter there may be a distinct scarcity of insects in the orchard. Most of these insects hibernate as adults or in the pupil stage and are killed by the cold during the winter. About three years ago we observed that there were practically no insects working in the blossoms, probably due to the hard winter just passed. That condition may exist this spring.

Honey bees are by far the most active insects in the spreading of pollen. They visit many blossoms and on account of their comparatively large size they are more efficient in spreading the pollen. It is unfortunate that so few bees are raised in the orchards. Those who have tried to keep bees have for the most part given it up. The bees do not find enough bloom to keep them busy throughout the summer and they often do not have food enough to last through the winter.

Bee experts tell us that bees can be successfully raised here by planting small areas of the flowering plants that they like. The bees can be fed through the winter without difficulty. Large numbers of the insects are poisoned during the arsenate of lead spraying season. This can be avoided in part by using care not to apply the calyx spray until after the bees have quit working in the blossoms. Later in the summer the bees may drink the poison liquid standing on the apples and they would have to be confined to the hive until the spray had dried on the trees.

Hired Help.

Some growers prefer to rent bees during the blooming season, rather than try to keep them during the entire year. Renting bees is a common practice in the Yakima valley and is done to a less extent in other places. A. G. Craig, at East Farms, had 44 stands of bees placed in his orchard last spring. They were rented from a commercial bee keeper at Coeur d'Alene, Idaho, at $5 per hive. The owner delivered the bees, cared for them while they were in the orchard and removed them when their work was done.

In discussing his results with the writer, Mr. Craig stated that he could see no definite results from the use of bees in his orchard last year, probably because of the exceptionally heavy bloom. The set of fruit would have been sufficient in any case. However, he pointed out that the crop was very well distributed over the orchard, showing the effect of thorough pollination.

Each hive contains several thousand bees and will insure pollination for a number of trees. Four or five hives should be distributed in a 10-acre orchard. They will easily pay for the rental cost during a season when the bloom is light or when other insects are scarce. Under certain conditions pollination may not be satisfactory in spite of presence of large numbers of bees. The condition of the weather has a definite effect on the process. The pollen itself may remain viable for a long time; it has been stored for six months and still been able to germinate. The facts that limits the time that pollination can take place is the period of receptivity of the stigma. When the blossom opens the stigma secretes a sweet substance that attracts insects and catches the pollen grain. The stigma remains moist for just a few days and then dries. If the pollen grain is not placed on the stigma while the moisture is there the pollen can not germinate and make its way down the hollow center of the pistil.

Rain during the blooming period is detrimental in two ways. It discourages insect work so that the pollen is not scattered. The pollen is sometimes damaged by rain so that it will not germinate. The grains swell and burst from the absorption of an excess amount of moisture. It is generally considered that six days of rain is enough to prevent pollination.

Some orchards in the state show indications of a light bloom this spring. Furthermore, the severe winter has no doubt killed many of the insects that aid in pollination. For that reason it appears desirable that orchardists investigate the possibilities of supplying bees for their orchards, either through purchasing or renting.

Fashionable Fox.

Fable: Once there was a woman who, when she dropped in on a neighbor and was asked to take off her hat and coat, demurred, saying that she had but a minute to stay, and really did leave in forty-five seconds.

Girl Gets $30,000 and Wife $1

Frank J. Murphy, noted Pacific Coast attorney, left his estate of $30,000 to this girl, Miss Rose Helm of San Francisco, and to his widow, who is trying to break the will, only $1. Miss Helm is a nurse.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

WHAT ARE BOILS?

Boils are painful swelling in the skin due to infection by one of the varieties of germs that cause ordinary suppuration.

These germs gain access to the deeper structures of the skin through the hair follicles and start to multiply around the root of the hair. During their growth they give off toxins, which are chemical substances poisonous to the tissues of the body, and as a result of the presence of this poison the body cells and tissues in the immediate vicinity are killed.

When the infection starts the natural resistive processes of the economy are brought to bear on this invader and certain repair cells are carried by the blood to that particular area. These cells contain chemical substances antagonistic to the germs and their poisons, which they proceed to combat, and this warfare goes on until enough of the cells, which are being reinforced by fresh arrivals all the time, are on the spot for them to secure the upper hand, when the infection ceases to spread, and the invasion stops.

In this warfare many of the cells, as well as germs are killed, and these dead cells and germs, together with some of the juices of the tissues, form the pus which escapes when the boil opens.

The "core" of the boil is that part of the skin and the tissues beneath which has been killed by the toxins, and this being dead, finally sloughs away, and the place heals, the inflammation subsiding gradually.

The pus which runs from a boil, while it contains many dead germs, contains also, unfortunately, some live ones, which, being now away from the seat of conflict, are no longer attacked by their enemy, the defensive cells of the body and hence are in a position to start another invasion, which they are very apt to do if they get lodged in another hair follicle. This is the principal reason why the poor victim just well of a boil is quite likely to have another one soon.

The best way to guard against a reptition of the process is to see that the discharges from a boil are not allowed to spread over the skin, and that they are confronted by an enemy outside the body which will also kill them without doing any harm to the skin, as, for instance, an antiseptic lotion of an appropriate nature, which may be used to saturate the dressing into which the pus is being absorbed, and to wash the surrounding parts.

The most intelligent treatment of a boil may be outlined as follows: On the first appearance of a little tender spot, touch it with a little tincture of idone, which is quite penetrating, and will get down into the follicle and will kill part of the germs that are causing the trouble, enough perhaps so that the rest can be overcome by the natural phalanx of the defending cells, and the process be terminated before any appreciable slough has formed, and the products of the conflict will be absorbed and carried off into the circulation, to be eliminated as all waste is eliminated from the body.

This we term disappearance of resolution. Opening boils before they "come to a head" is, as a rule, an unwise procedure. If they have gone too far to accomplish resolution an antiseptic poultice may be applied. As long as it is moist and warm it stimulates the conflict to an earlier termination, relieves pain, and softens the cuticle, allowing it to give way soon to the pressure from beneath.

After the boil has become soft, if it does not rupture, a judicious incision will hasten recovery, and it is not then particularly painful.

Hearing the Pullets.

The intrinsic value of a chick is fixed when the egg is laid. If, under ideal conditions of rearing and feeding, a pullet will lay but 120 eggs she is not worth raising. The good pullet however, may be ruined before she goes into the laying house.

If pullets are raised on old ground, that is, on ground where other pullets have been raised in years past, they are likely to be infected with coccidiosis. This is especially true on heavy clay soil. If the infection is severe the chicks will die. If it is light, the birds may recover; but they will never be steady layers.

The first requisite, therefore, in rearing pullets, is clean soil. If you can not have a new yard, scrape two or three inches off the old yard, and replace it with an equal depth of new soil. If they are running on a large yard, and you can not scrape it all, scrape the bare portion close to the house. This is always the most heavily infested part of the lot.

Keep them growing from the start. This means not only that they be disease free and vermin free, but also that they be properly housed and fed. The ration should be balanced, without waste. The grain should be clean, wholesome and free from smut, mold or mildew. The mash should be bulky, without too much fiber. It should analyze about 15 per cent of protein. Where green feed, fresh air and exercise are present in unlimited quantities, the mash might run as high as 20 per cent protein, or 15 per cent in addition to milk. But rich protein feed without unlimited fresh air, exercise and green feed, is sure to stunt the chicks. Now your feed is therefore, just as important as what you feed.

Mash must of necessity be fed in hoppers, where the pullets can have what they want without much exertion. For that very reason grain should be fed in litter just as soon as the chicks show a tendency to scratch. This litter should be about an inch deep during the first week, or ten days, but, when the pullets are six months old, if it is dry and fluffy, it should be six inches deep.

Remember, an idle hen is a weak hen. Her muscles are soft, her vitality low and her production a myth.

Train up a pullet in the way she should go, and when she is old it will be easier to keep her going.

Young pullets need a little more afre each day, a little more feed each day, a little more room each day—in the house, on the roost and in the yard.

They must be free from lice, mites and filth. If they are worth rearing at all, they are worth rearing well.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

LIVESTOCK

A big increase in the quality of swine is reported from Adams county by County Agent N. C. Donaldson. So far 28 boys and girls have signed up for a sow and litter pig club. In recognition of the work that the former swine clubs have done for better stock in the county, the Adams County Fair association has placed the Ritzville Pig club in charge of the swine department at the fair. Will Buscher, president of the pig club, has just purchased the registered Poland China gilt, Miami Brice 3rd, from the state college. There were also three registered bred gilts and one registered boar brought into the county during the month.

Nearly $300 worth of high-class registered hogs were brought into Benton county during the month. Stock included four bred sows and two bred gilts purchased by the club members at the Walla Walla Purebred Breeders' association sale and the registered Berkshire sale held at Prosser. The swine club boys and girls were backed by the First National bank of Kennewick and the State Bank of Prosser in loans for their purchases.

All Feastwell, Pa., is eating chicken for breakfast, dinner, supper and in between meals these days. John East, a farmer, recently found a gold nugget in the craw of a chicken he killed.

Tune-in for "Home Sweet Home," May 8

Just 100 years ago, May 8, John Howard Payne, above, then age 13, wrote the poem, "Home Sweet Home," which later was put to music. To his memory, every radio broadcasting station in the U. S. will have sung the famous song on the evening of May 8. A million listeners will hear the song.

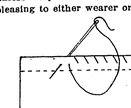
HOMEMAKERS' CORNER

Conducted by Alice Lindsey Webb, News Editor, and Lincoln R. Lounsbury, Agricultural Extension Editor, State College of Washington.

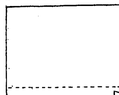
Finishing Sleeve Seam at Armhole.

Binding—A narrow bias binding is applied around the armhole of waist on inside; the sleeve is then basted in and stitched. Then the binding is turned in along raw edges and hemmed down to the seam. This gives the appearance of a French seam. This is a satisfactory method and may be used on all kinds of materials. If the waist material seems too heavy for binding, a lighter weight silk or cotton of the same color may be used.

French Seam—Sleeves may be attached by means of a French seam. This, however, is not a very satisfactory way as it must be done with exceeding care or else the set of the sleeve will be spoiled or the whole sleeve seam will have a stretched appearance. It is a quick method, but unless very carefully done it is not pleasing to either wearer or observer.



Overcasting—Many times with heavy material the sleeves are stitched in and then a fine overcasting stitch is used on the edge of the seam.



This will keep the raw edges from fraying and do away with any undue thickness of seam.

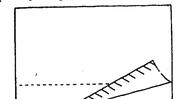
Machine Hemstitching—If other machine hemstitching is used on the waist the sleeves also may be finished in this way. Baste the sleeve in, turn seam toward waist and baste down flat. Then have hemstitching done along seamline. If the material is very thin and the seam shows through then it is best to trim seam close to hemstitching. This, however, is not overly strong. Otherwise trim off frayed edges of seam and overcast.

Plain Seam—The two right sides of the cloth are placed together with edges even, basted and stitched the desired distance from the edge. Press seam open. Now the edges of this seam are raw, so oen of the following finishes may be used to keep the seam from fraying.

Overcasting—This makes a flat finish and if carefully done makes a neat finish as well. The stitches should be even and deep enough to hold in well—the usual spacing is "Twice as far apart as they are deep."

Binding—Silk binding tape may be used. This comes in black, white and colors. A bound seam is apt to be thick and often does not press out very well. Fold the binding lengthwise—either crease this well with the fingers or else run a hot iron over it. The seam is slipped between the folded edges and sewed down with a fine running stitch.

Pinking—This is a quick, easy finish and is used on firm materials which do not fray when worn. This may be done with the scissors, notching each edge of the seam at regular intervals or it may be done on a regular pinking machine.



Turning Back Edges.—The seam is pressed and then the raw edges of the seam are turned back to wrong side about 1-8 inch and either stitched or run by hand. This makes a flat finish and is especially good when used on silks that do not fray badly. It is not very satisfactory on heavy materials nor for those that have to be frequently laundered.

"French Seams" will appear next week.

Women Save Thousands

Washington farm women report they saved $35,695 on clothes they made following instructions given by the clothing project work of the State College of Washington thru its Extension Service. Besides this there was an amount of $57,500 saved by Washington women thru the making of home made dress forms. It was reported that 5232 forms were made.

Over 3000 hats were made and remodeled during the year while 339 training schools were held with an attendance of 5310 farm women.

Six thousand, four hundred forty-two families were reported from 12 Washington counties as having adopted suggestions at to the improvement of home sewing methods which had been given by extension agents. Nearly 20,000 women attended all the clothing meetings held during the year.

"To foster and perpetuate a one hundred per cent Americanism"—Quoted from American Legion Constitution.

The Percheron Stallion, Mezidon,

Is recorded by the Percheron Society of America, and that his record number is 117312.

Sire: Moniteur 42667 (55584), by Florentin 27354 (46795), by Boule D'Or (19129), by Grevin 6846 (6892), by Lagrange 3065 (1334), by Brilliant 1271 (755) by Brilliant 1899 (756), by Coco II (714), by Vieux Chaslin (713), by Coco (712), by Mignon (715), by Jean Le Blanc (739).

Dam of Mezidon 117312: Adeline 53230, by Mezidon 27858 (45258), by Bambin 21263 (41034), by Rustique (28646), by Florent II (6950), by Philibert (760), by Superior 454 (730), by Favori I (711), by Vieux Chaslin (713), etc., as in breeding of above sire.

Mezidon will make the season of 1923 as follows: Monday nights at Clifford Olson's; Tuesday nights at old store building, Lenville; Wednesdays, traveling toward Genesee; Thursdays, at the Roy Evans ranch; Fridays, at Pine Grove; Saturdays and Sundays at old Thompson hay barn, Genesee.

The Mammoth Tennesee Jack, Don Hooper Register No. 8431

The Mammoth Jack, Don Hooper, will make the season of 1923 at the old stand, the Thompson hay barn, in Genesee.

TERMS FOR MEZIDON—$10 for the season; $16 to insure a colt to stand and suck; $8 for single service; $2 must be paid at time of service on insurance.

TERMS FOR DON HOOPER—$10 for the season; $14 to insure a colt to stand and suck; $8 for single service; $2 must be paid at time of service on insurance.

In either case, mares changing ownership or location, service fees become immediately due and payable. All due precautions will be taken to prevent accidents, but we will not be responsible should any occur.

For information, see Ed. Vanouck, or phone 99F21 or 36-1.

JAKE BURSHUR, Owner

Kendrick Farmer Accidentally Shot

Ira D. Bradshaw, pioneer farmer of the Kendrick section, accidentally killed himself with a doublebarreled shotgun Tuesday while hunting squirrels on his ranch. Dr. F. M. Leitch, county coroner, and Deputy Sheriff Grant Robbins returned from investigating the tragedy and said that an inquest would not be held as the circumstances pointed plainly to accident.

Mr. Bradshaw had left the house but a few minutes when his wife heard three shots in quick succession and became apprehensive that something was amiss. She summoned neighbors and they found Mr. Bradshaw with the top of his head blown off and the gun lying near by. The indications were that he had set the gun against a barrel and that it had been discharged when he picked it up.

Another Big and Little Egg

E. S. Sams, not to be outdone by other would-be big egg artists, brought to the News office the other day an egg that measured 5¾ inches by 8¼ inches and weighed three ounces, and one that measured 3⅞ by 4½ inches—and didn't weigh anything. The large one was produced by a Brown Leghorn hen.

Horseshoe Tournament at Pullman

Pullman is going to stage a big horseshoe tournament in that city on Wednesday, May 16, to which all who are familiar with the "barnyard golf" are asked to be present and take part in the tournament. A large list of prizes are offered ranging from a pair of "pitcher's" horseshoes to a piano lamp valued at $26.60.

New Frat Gets Charter

Sigma Gamma, honorary economics fraternity organized at the University of Idaho last spring, has been granted a chapter in Alpha Kappa Psi, national honorary, and will be installed as the Idaho branch in May. Other chapters in the northwest are located at the Universities of Montana, Oregon and Washington and Oregon Agricultural college. The installing officer will probably be from the University of Montana. The active membership of the body numbers thirteen. George M. Dean of Lewiston is president; John Hasfurther of Genesee, vice-president; George Gahan of Boise, secretary; and Eugene Zachman of Emmett, treasurer.

Commercial Club Meeting

There will be a meeting of the commercial club at the American Legion hall Wednesday night, May 9. Every business man of the town is requested to be present and as many country people as care to come are cordially invited to attend. There is much business to be taken up, so don't fail to attend.

Notice to Creditors

Estate of Dennis Sweeney, Deceased.

Notice is hereby given by the undersigned, executrix of the estate of Dennis Sweeney, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said executrix at the Genesee Exchange Bank, the same being the place for the transaction of the business of said state, in Latah county, state of Idaho. MARY SWEENEY,

Executrix of the Estate of Dennis Sweeney, Deceased.

Dated at Genesee, Idaho, March 27, 1923.

Thomas A. Feeney,
Attorney for Executrix. 41-4

Evils of Constipation

Perhaps the most serious of the diseases caused by constipation is appendicitis. If you would avoid this dangerous disease, keep your bowels regular. For this purpose Chamberlain's Tablets are excellent, easy to take and mild and gentle in effect.—Adv.

Chamberlain's Tablets Are Mild and Gentle in Effect

The laxative effect of Chamberlain's Tablets is so mild and gentle that you can hardly realize that it has been produced by a medicine.—Adv.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MAY 11, 1923. NO. 45

WHAT HAPPENED HERE TWENTY YEARS AGO

Last Week

Miss Pauline Steltz has assumed charge of the telephone office.

Dan Healy left Monday morning for the coast with a carload of fat hogs.

C. N. Hollister made proof on his timber claim the latter part of the week.

During the past week in the neighborhood of 15 cars of hay were sent out to Seattle markets by W. M. Thompson and a number of producers. A bale of hay is about as valuable as a gold brick, the market being $16.

With the building of two handsome business blocks on Main street this year, a new warehouse, several residences and a number of minor business buildings, our masons, carpenters and painters are insured a busy season.

During the week J. J. Owen circulated a paper asking for donations to apply on the erection of a grandstand in the city park. He was successful in raising $50. The object of the stand is for the use on al occasions and more especially for the use of the band for out-door concerts, which they will give during the summer months. W. J. Herman and H. A. Morgan

Monday a deal was closed between whereby the latter becomes the owner of the Herman hardware stock. During the week Mr. Herman has removed from the building a portion of the stock which he has reserved, consisting largely of furniture and dishes, and placed it in the Conant building, where he will continue to carry on business. By the change it means that Mr. Herman will, as soon as possible, begin the erection of a handsome brick business block adjoining the hardware store on the west, to be used by him for his furniture stock and other lines.

This Week

Keep in mind the fact that Genesee will hold a big race meeting July 3 and 4.

Mary Burr will entertain a party of young friends this afternoon at her home in honor her fourth birthday anniversary.

We are informed that a gentleman will be here soon to make a proposition for the establishing of a electric lighting system in Genesee.

Alonzo Murphy has the lumber ordered and the contract let for the erection of his new blacksmith shop. It will be 45x90 feet in size. Work of construction will begin in a few days.

At a meeting of the school board held Monday evening Professor Cobbs was granted an increase of $7.50 per month in salary for the coming year. He had been offered $100 a month to teach the Nezperce schools but will accept the increase and remain here.

Miss Gladys Stovall to Lewiston

In the Dokkie-Schreiner contest at Lewiston for queen of the "sircus," Miss Gladys Stovall won second place and is now at Lewiston being entertained by the sircus management and is one of the ladies of honor. In addition to the honor of winning out, Miss Stovall will receive $50 in gold.

In the final counting of ballots it was found that Miss Parsons of Moscow won first place with 70,000 votes, Miss Stovall coming second with 28,800 votes. Miss Anona Clarkston of Pullman also had 28,800 votes and she, too, will be entertained and given a like prize.

At the beginning of the contest Genesee had no idea of placing a candidate in the field as it was thought it would be useless—but this only goes to show what can be accomplished with a sufficient amount of "get-up-and-go." Let's put the same amount of pep into local affairs that Miss Stovall put into her canvass for votes and most anything can be put over.

GENESEE GETS SECOND PLACE IN TRACK MEET

In the district track meet at Lewiston last Saturday afternoon Genesee won second place with 29 points. Lewiston secured first place with 63 points. However, the Genesee boys had put in but little time practicing and are to be complimented on the splendid showing made.

The Lewiston Tribune has the following to say regarding the meet: Lewiston High school swept the field in the interscholastic track meet yesterday afternoon for a total of 63 points, winning the meet and the championship of this district. Genesee was second with 29 points, Culdesac a close third with 21 points, Moscow fourth with 14 points, and Lapwai finished with seven points. Lewiston also won the relays, with Moscow second and Culdesac third.

The track was in fine condition and fast time was made in all of the events. Calvert was high point man with three first places and two seconds for a total of 21 points. Casebolt of Genesee gave Calvert a real run for the honor and was a close second in all the events in which they were entered. Casebolt ran a splendid race in the 440, coming from behind and passing Jacobs of Lewiston in the final dash.

In the field events Weudt of Culdesac sprung the surprise of the day by heaving the javlin 158 feet and 8 inches for an easy first place. An especially good high school record was made in the pole vault with Gray of Genesee clearing the bar for first place at 10 feet and 6 inches.

In the mile Lambdin of Lewiston had an easy win with the real fight being between Tesch of Lewiston and Patterson of Moscow for second place. Tesch came from behind in the final sprint and took second place. The attendance at the meet was small and not up to what had been expected.

Results of the events:

50-yard dash—Calvert, Lewiston; Casebolt, Genesee; Cattermole, Lewiston. Time, 5:2.

Shotput—Parkins, Lapwai; Miles, Culdisac; Edwards, Moscow. Distance, 38.1 1-2.

120 high hurdles—Calvert, Lewiston; Dirks, Lewiston; Royce, Moscow. Time, 18:1.

Miles—Lamdin, Lewiston; Eesch, Lewiston; Patterson, Moscow. Time, 4:51.

100-yard dash—Calvert, Lewiston, Casebolt, Genesee; Cattermole, Lewiston. Time, 10:1.

Discus—Wiggins, Lewiston; Greene, Culdisac; Woodley, Moscow. Distance, 103.1.

440-yard dash—Casebolt, Genesee; Jacobs, Lewiston; Parks, Genesee. Time, 55.

220-yard dash—Miles, Culdisac; Cattermole, Lewiston. Time, 24. (Calvert of Lewiston finished first but was disqualified).

Pole vault—Gray, Genesee; Wendt, Culdisac; Nedros, Moscow. Height, 10.6.

880-yard dash—Parks, Genesee; Jacobs, Lewiston; Lamdin, Lewiston. Time, 2:12.

Javelin—Wendt, Culdisac; Wiggins, Lewiston, and Nedros, Moscow, tied for second. Distance, 158.6.

Broad jump—Gray, Genesee; Calvert, Lewiston; Dawald, Lapwai. Distance 17.4.

220 low hurdles—Cattermole, Lewiston; Calvert, Lewiston; Platt, Genesee. Time, 27.4.

High jump— Estbs, Moscow; Wellman, Lewiston; Dawald, Lapwai. Height, 5 feet 7 inches.

Relay—Lewiston, Moscow, Culdisac. Time, 1:38. Lewiston team composed of Cattermole, Jacobs, Lambdin and Calvert.

Some people never have to pay bills. Nobody will trust them.

"DOLLARS AND SENSE"

It costs money to run a government or a city, to maintain peace and to secure and maintain a fair and adequate degree of protection for both public and private property. It costs money for our schools and it would cost us more money to be without the schools than to have them. It costs more money than we spend for our schools in each county for such things as maintenance and operation of automobiles for purely pleasure purposes, gasoline, oil, repairs and replacements, for candy and tobacco and cosmetics—all luxuries. Examine your receipted bills for these items and place it beside your tax receipt. Which account represents the greatest value received?

An analysis of the United States appropriations for the year 1920 by Dr. Edward B. Ross of the United States Bureau of Standards is typical of the American's idea of dollars and s-e-n-s-e. Of a total appropriation of $5,686,005,706, 68 per cent went for past wars and 25 per cent for future wars—a studenpous total of 93 per cent! Of the remaining 7 per cent, three went to civil departments, three to public work, and one per cent to education and science combined! America's dollars and s-e-n-s-e.

Supposing you were trying to sell your property. A man with a family of four young children was the prospective purchaser. He has looked the proposition over and seems not altogether enthusiastic. You are quizzing him in a last agonizing effort to endeavor to locate the cause for his indifference and lack of enthusiasm. "Land look good?" "Yes." "Good people in the community?" "Yes." "Climate?" "Good." "Good small town; has lots of advantages over the larger when you are raising a family." "School?" You had feared to mention this to him because you knew that you had little to offer in this respect. Your schools had been ruthlessly attacked as too expensive and had been reduced to a poor excuse for a modern educational system. "Palouse has high priced land. The property around Troy is high; Moscow is still higher, but they have the schools. Guess it will be cheaper in the end to go there." And he departs. You have your property and find that there is no market for it—no one wants to come to a community with poor schools and you want to get away so as to give your children an education. Supposing, on the other hand, that you had good schools to offer to the prospective purchaser. Perhaps he was not the only man who was looking for a good small town with good schools and a little competition for your place was started. Land and property values would immediately raise and you would have no particular difficulty in disposing of your property. Perhaps you would not care to. This is the way this particular matter operates every place it has been tried. Dollars and s-e-n-s-e!

Modern competition is keen and relentless. We are being called upon more and more to make good or give way to the man who can. In a few more years our high school graduates will meet these situations and will find that the protection of the home and the class room has been removed—that they are up against the stern realities. They are forced to compete with young people of other communities and these other young people in all probability have been richly endowed with a good high school education. Our people are not prepared to meet the competition and are forced to give way, perhaps to become common laborers. I say this with all respect to the man who works at common labor. It is a noble, if not always a remunerative, occupation and the laborer is too often a man who has not had a chance to acquire an education and prepare for better things.) What will be the verdict of our sons and daughters when they are forced to the wall and reflect upon the opportunities which we have placed in their way or deprived them of? "Dollars and s-e-n-s-e!"

Let's be reasonable and look at this crisis in a sensible way. The only thing we can do is to make provision for our young people and to meet the bill. We cannot afford to do anything else. Unfortunately for the tax payer the price of teaching equipment and teachers' salaries have gone up. Educational departments of the various states are requiring more training of their teachers than they did a few years ago and it costs the teacher a lot of time and money to get the proper education, which is the only key to the certificates which is needed before he or she may become a teacher in our modern system. Are these teachers not entitled to a fair return for their investment? The true situation is that they are not getting enough. How many years does a carpenter train in schools before he may ply his trade; or a plumber; or an electrician; or a salesman? What wages do they get? Are the proportionate returns fair? They are quite unfair, and if you will examine the situation you will, perhaps, agree. Again, dollars and s-e-n-s-e!

Shall we keep Genesee on the map of Latah county, or shall we dig a hole out on the flat and bury the whole town? Shall we keep our school and keep people interested in the town, or shall we "let 'er go to smash?" How many families will move away if the high school goes? Who could we dupe to come in and take their places? Can we afford such a program? Let's think it over—"Dollars and S-e-n-s-e"!

SCHOOL NOTES

By Helen Casebolt

Scott Bar from Kendrick entered the second grade last Tuesday.

Miss Collins returned Tuesday from her home at Lewiston, after a siege of illness, to teach for the remainder of this school year.

The state exams in all eighth grade subjects were given Wednesday, Thursday and Friday of this week to determine how many of the present eighth grade pupils will be high school students next year.

The junior-senior banquet was given at Smolt's Wednesday evening at 6 o'clock. Those present were the seniors, juniors and the high school faculty. Old rose and grey, the senior class colors, were carried out in the color scheme.

The sophomore class gave a farewell party Thursday evening at the Casebolt home in honor of Maxine Lambert, who will leave Genesee when school is out. Each sophomore invited a partner outside the class. The evening was spent playing games and dancing.

Last Saturday at Lewiston Genesee won second place in the district track meet with 29 points. Fast time was made in all of the events. Calvert of Lewiston was high point man of the meet. Vic Casebolt gave Calvert a real run for his money," says the Lewiston Tribune, "and was a close second in all the events in which they were entered. Casebolt ran a splendid race in the 440, coming from behind and passing Jacobs of Lewiston in the fial dash. An especially good high school record was made in the pole vault with Gray of Genesee clearing the bar for first place at 10 feet and six inches."

Genesee captured the following:

50-yard dash—Vic Casebolt, second.

100-yard dash—Vic Casebolt second.

440-yard dash—Vic Casebolt first. Time, 55.

Pole Vault — Cecil Gray, first. Height, 10.6.

Broad Jump—Cecil Gray first. Distance, 17.4.

880-yard dash—Bob Parks first. Time, 2:12.

Last Friday afternoon the civics class arranged a short program for the rest of the high school. Brief papers were read on the forests of Idaho and the preservation of them. Three trees were dedicated—one to Lincoln, one to Irvin Schooler and one to Harry Bielenberg, who gave their lives for this nation.

Our high school is about to be taken from us! Do you realize it, people? Our high school is about to be closed! Over half of us will be compelled to stop our education when we finish the eighth grade. Several families will be forced to move to a town with better school accommodations. The board, room and tuition of those who are fortunate enough to be sent away will have to be paid. The money spent for our splendid equipment will be practically thrown away.

If the vocational branches are cut off the greatest source of knowledge which can be applied to our daily life will be checked. The school would not be accredited. If we wanted to go to college we would have to take preparatory work in order to enter. Time would be lost and money wasted! Cannot something be done?

The seniors of '23 sneaked from the good old G. H. S. early Tuesday morning. The cars used by the "sneakers" were decorated with the senior colors and pennants. They motored to Lewiston where they "outfitted" with eats and from there to Asotin, where breakfast was prepared and eaten with a relish. It was so early that very few people could be seen on the streets of Lewiston or Clarkston. Asotin seemed the only suitable place for the young people to go, especially on an occasion of this kind, so within a short time Asotin's population was increasing for many business men made an effort to see the cars that drove into the park. The Asotin marshal, a large, jolly young man, made them feel at home in the park.

One of the "sneakers" said—We were son eating heartily for you see we hadn't had breakfast. For our morning exercise we played catch, rode on the giant stride and played tennis.

After visiting the various places of interest we noticed a Ku Klux Klan cross at the top of the canyon. An hour later we seniors were up on the hill where the cross was. Later we motored to the mouth of George creek, another picnic ground, where we had lunch. On our way back to Asotin we stopped at what is known as the "sucker dam," where men were dipping the suckers out with nets and puting them in sacks to be used as fertilizer.

We later returned to the park and spent some time with the Asotin students and then returned to Lewiston. We filled our cars for the third time with things to eat and then started up the grade. We ate our evening lunch at the spring on the Hatwai and then drove homeward.

To our surprise all the juniors were waiting on the street with their hands outstretched, welcoming us back to the good old town of Genesee."

COMMUNITY MEETING HELD WEDNESDAY EVENING

There was a community meeting in the American Legion rooms Wednesday evening for the purpose of trying to inject a little more life into community affairs in Genesee and the object of the meeting was accomplished to a degree, there being between 20 and 25 men present.

Several things of interest to Genesee and the surrounding territory were talked over and a better understanding reached. However, there are a good many things yet to be taken up and in order that there may be a still better understanding regarding local conditions, a community dinner will be given at Smolt's on Wednesday, May 16, at noon—from 12 to 1:15 o'clock—to which everybody is invited. The price will be 50 cents a plate and you are asked to please notify Mahlon Pollett, Milton Rader or Rev. Pendleton, as soon as possible, of your intention to be present in order that you may be provided for at the dinner.

This is not a commercial club meeting, but a meeting for everybody in the community and all who are interested in the progress of our community—especially the Genesee High school—should be present and get better acquainted with existing conditions. Farmers are cordially invited to be present for the existence of the Genesee High school is of interest to the majority of them because of their children having access to it, which means more to the younger generation than most of us know.

Be at Smolt's next Wednesday at noon. You will be welcome.

Gesellchen-Nibler Nuptials

A very pretty church wedding occurred Monday morning, April 30, at 9:30 o'clock at St. Mary's Catholic church, when Miss Genevieve Gesellchen became the bride of Walter Nibler of Uniontown, Rev. Father Carey of Thorncreek officiating.

The bride was dressed in white bridal satin with veil and wreath in crown effect and carried a shower bouquet of roses and lilly-of-the-valley. She was attended by her sister, Miss Helen Gesellchen, Miss Mary Grieset and Miss Carmiletta Nibbler as bridesmaids, who were attired in organdy of different shades.

Mr. Nibbler was attended by his brother, George Nibbler. Little Miss Marie Whalen, dressed in blue crepe de chine, was ring bearer and carried the ring on a satin cushion trimmed with hand-made flowers.

Immediately after the wedding the newly-weds and invited guests went to the home of the bride where a breakfast was served to the bridal party. Only immediate relatives and close friends of the contracting parties were invited to the bounteous dinner which was served by the bride's mother, Mrs. John Gesellchen.

The bride is the daughter of Mr. and Mrs. John Gesellchen, pioneer farmers of this section, and is held in high esteem by her host of young friends. Mr. Nibbler is a young farmer of the Uniontown section, where the newly-married pair will make their home.

Those present from out of town were Frank and Nick Gesellchen of Spokane, Mrs. Lanterman of Portland, sister of the groom, Mrs. Wm. Jacobs of Moscow, Mr. Nibbler and family of Uniontown, father of the groom, and Mr. and Mrs. Eugene Nibler of Uniontown.

After the wedding dinner the newly-weds left for the coast for a short wedding trip.

Time to Duck

When a woman tells a fellow that her heart is broken it is time for him to duck. She is looking for a repair man.

SUDDEN DEATH OF MRS. JESSE E. MYERS

This community was shocked almost beyond belief last Friday morning when the news was spread that Mrs. Jesse E. Myers had passed away very suddenly from heart failure superinduced by asthma.

Mrs. Myers was taken suddenly ill early Friday morning and a physician was called and all possible was done to relieve her but she passed away about 3 o'clock, at the home of her mother, Mrs. Margareta Bottjer, in Genesee.

Mr. Myers had gone to Spokane on business on Sunday and had gone from there to Harrington, Washington, to accept a position and consequently was not at home at the time of the passing of his wife. He was notified at once and drove overland from Harrison, reaching Genesee shortly after noon on Saturday.

Henrietta A. Bottjer was born on the old Bottjer homestead, near Genesee, November 8, 1885, and passed away May 4, 1923, making her 37 years, five months and 26 days of age when the final summons came.

She had resided in and near Genesee all her life with the exception of one year spent at Harrington, Washington, where Mr. Myers was located at the time of their marriage.

She had a host of friends who had learned to love her for her beautiful Christian character and winning ways, the numerous and beautiful floral offerings attesting to the high esteem in which she was held. She was a faithful member of Golden Rule Rebekah lodge No. 11 of this city.

She was united in marriage to Jesse E. Myers at Harrington, Washington, December 2, 1919. To this union one daughter, Norma Maxine, was born, now 14 months of age, who, with her husband and mother, Mrs. Margareta Bottjer and four sisters, Mrs. Chas. Schuermyer of Clarkston, Washington, Mrs. Ed. Kempf of Sandpoint, Mrs. Sam Wood of Portland, Oregon, Miss Maggie C. Bottjer at home, and two brothers, Henry Bottjer of Joel and John Bottjer of Potlatch are left to mourn their loss, her father and one brother having preceded her to the great beyond.

The funeral was held from the home of her mother on Monday, May 7 at 10 o'clock, Rev. James N. Pendleton, pastor of the Federated churches officiating, with burial in the Lutheran cemetery. Special music was furnished by the Federated church choir.

The pallbearers were Leon Follett, G. E. Sampson, Virgil Sampson, Oscar Rader, Milton G. Rader and Dr. R. I. Witty.

We wish to express our sincere thanks to all who so kindly assisted us in our recent bereavement.

J. E. Myers,
Mrs. Margareta Bottjer
and Family.

Is Improving Home

Carpenters have been busy at the Wm. Hordemann home during the past two or more weeks making improvements that will make for more convenience and comfort. A modern bath room has been installed, a septic tank built, pantry, wardrobe, closets, cupboards, etc., which when completed will make the Hordemann home a real comfort to them.

Casebolt Sets New Record

In the track meet last Friday between W. S. C. and U. of I., held at Pullman, Walter Casebolt won first place in the 440-yard dash, the time being 50.6 seconds, beating his former record for the same distance. Walter was also one of the relay team that captured first place in that event, he being the fourth man.

Notice to Holders of Victory Bonds

HOLDERS of Victory Bonds uncalled are requested to turn same in for payment. These bonds do not bear intesest after May 20, 1923. If you will deliver your bonds to this bank we will be glad to handle them for you.

RAILROAD MEN ADOPT FARM BUREAU FEDERATION CAR SHORTAGE PROGRAM

American Railway Association Adopts Plan Submitted by Hutchings.

The American Farm Bureau Federation's program on car shortage has been adopted by the American Railway association. The Farm Bureau is the only shippers' organization in the United States which sensed the danger and urged the carriers to take action. The completeness with which the program submitted by C. B. Hutchings, director of transportation, has been adopted vindicates his judgment that constructive steps were imperatively needed.

The program adopted by the American Railway association is as follows:

"Resolved, First: That the report of the Car Service division reviewing transportation conditions and presented at this meeting be approved, and that, in order to further improve transportation conditions and to make the best practicable provision to meet transportation requirements as they develop, the following recommendations are adopted by the railroads as a definite policy and working program.

1. That by October 1, 1923, when the peak movement ordinarily begins, cars awaiting repairs be reduced to the normal basis of five per cent of the total equipment of the country.

2. That by October 1, 1923, locomotives awaiting heavy repairs be reduced to the normal basis for the entire country of 15 per cent.

3. That to the extent coal is stored for railroad use complete the storage requirements by September 1st so that after that date the equipment and other transportation facilities may be used to the greatest extent for commercial coal necessities.

4. That the use of power and equipment for railroad construction and maintenance purposes be restricted to the minimum after September 1st in order that a maximum of power and equipment may be available for commercial purposes.

5. That railroads in producing and consuming sections impress upon all interested necessity for essary and practicable and providing adequate siding capacity to facilitate loading and unloading, thereby increasing the number of available cars.

6. That every possible means be adopted to increase the mileage per car per day to an average of 30 for the entire country, particular attention being given to prompt movement through terminals and yards and to the issuance of embargoes when necessary to prevent congestion.

Cooperation of shippers and the public in the past has been most helpful in bringing about heavier loading, prompt unloading and increased mileage per car, and only by their continued cooperation and their full knowledge of what this means to their own transportation requirements can results be secured in these matters. It will be understood that each individual railroad will cooperate with its own shippers to this end and the car service division will take similar action with national and district associations to bring about the fullest measure of cooperative effort.

9. In the event of a car shortage, reports to the car service division should be carefully reviewed by each railroad organization so that the report will more nearly indicate the actual car shortage measured by the ability to load daily, rather than a cumulative shortage which does not reflect the daily existing condition.

10. The railroads have already established and have in active and effective operation a comprehensive organization in the car service division for the central control and distribution of freight cars which during recent periods of car shortage, has under difficult conditions, secured to the public the best possible use of available freight shipment. The car service division as a central agency, and through their district managers, together with the district shippers' committees, which have been and are being organized, will keep informed of traffic requirements with a view to the equitable and timely distribution and handling of equipment.

The railroads pledge themselves to renewed and effective compliance and cooperation with the directions of the car service division, asserting the belief that, with the new equipment on order and the program for rapid conditioning of equipment requiring repairs, the freight equipment of the railroads will be handled and used in moving the commerce of the country to the best possible advantage.

Revolved, second: That individual roads give to the general public and to the patrons of their respective lines information as to their program, and also keep them currently advised of the progress made hereunder, including, so far as the individual line is concerned, information as to the progress made in its locomotive and car repairs and other improvements in transportation facilities."

From Paris comes the parasol of the season, Chinese in shape with colorful designs.

"AIN'T I RIGHT?"

The English language is sadly in need of a new word or perhaps a new phrase, which should perform the enormous, varied, and specific work so easily and neatly accomplished in three other languages respectively by n'est-ce pas, nicht wahr, and non c'vero. And at the same time we must discover or invent a negative interrogatory for "I am." Suppose you are the last person to arrive at a dinner party, and you wish to make a remark equally compounded of inquiry and apology. All goes well with your sentence until you reach the ending inflection at its conclusion. "I am a little late, am I not, ain't I, am't I, aren't I?"—which shall it be? "Am I not" is absolutely correct, and looks well enough to print, but orally it sounds pedantic, rather stiff, as though somehow you were giving the others a gratuitous and unsolicited lesson in grammatical etiquette, and thus casts a slight chill over the pleasant company; it certainly would not go well with a cocktail. Today there are more persons who would rather be ungrammatical than stilted; and while I myself am not in the least afraid of using good grammer always and everywhere, there are informal gathers where "am I not" is a bit thick. Jane Austen would have gone over further, and said "am not I?" an expression which I have never heard. "Ain't I?" is both incorrect and vulgar, but unless something is done, and, as Macbeth remarked, done quickly, it will prevail, and we shall be forced to surrender to usage. It is already making rapid strides in England. Rather than yield to "ain't I?" I choose "am't I," which, as Ulu clid was fond of saying, is absurd. With these two ruled out, there remains "aren't I?" I hereby declare war on this expression. I hate it. I will not say "aren't I?" No, not if every other person in the world says it. I am not squeamish, but I cannot swallow the negative of "I are."—From "As I Like It," by William Lyon Phelps, in the May Scribner's.

HOLLAND TO GET IDAHO RATTLERS

Robert Limbert, taxidermist, of Boise, is preparing 47 Idaho rattlesnakes for shipment to Amsterdam, Holland, where a number will be placed in a zoological garden and others will be used by the Dutch government in experimental work.

The snakes were captured about 12 miles from Boise on the Mountain Home highway. It took less than one hour and a quarter to bag all, according to Mr. Limbert, and they were found in a space of 200 feet square. They range from 10 to nearly 30 inches in length.

The Dutch government is perfecting a serum which when combined with the poison from rattlesnakes and injected into a person's muscles, will cure rheumatism, Mr. Limbert said.

Mr. Limbert illustrated that the removal of the two fangs does not, as commonly believed, render a snake harmless, for other fangs will grow into place in a period of about three weeks.

Ursula called up the telephone operator and said "Hello, Central, give me Heaven," but that isn't what she gave him.—Ex.

The liar always begins by asserting his reliability.

A Siamese Execution-Festival

One day I heard so much talk of "execution" that I decided to stop work long enough to see it. The Siamese made a sort of holiday of it. This was to be a three days' festival. Thirty-six men in all were to be put to death, 12 a day. Squatting in an open pavilion, with all their relatives and friends squatting about them, they were given their last meal. All sorts of food and delicacies were brought, and every one concerned had a grand feed. At the appointed hour, the procession formed to walk through the town from the pavilion to the execution-grounds, which were about a mile away and near the palace.

Twelve banana leaves were laid in a line, equal distances apart, across the center of a clear space, which was three or four hundred feet each way. The 12 prisoners sat cross-legged on these. Behind each of them was a stake with a crosspiece to which their elbows were tied. They were handcuffed but their hands had some play. Back of the stake and crosspiece was a higher stake still. The use of this was to be put to I found out later. The prisoners were given cigarets and every one of them began to puff hard. When they were all well tied the executioners came up to each in turn and, stooping, picked up handfuls of mud from the ground. He plastered it first in one ear and then in the other. He did this, I was told, so they would not hear the executioner when he came up behind them. Then he pushed their heads over and put a small spot of mud on the backs of their necks. All the time, even with their heads bowed, they kept on smoking.

When all 12 men were mud-plastered and bent over, a signal was given and out came the executioners, 12 of them, dancing and brandishing long straight swords above their heads. They were dressed in bright red, their sarongs caught up to look like trousers and their faces painted in stripes and blobs of red and yellow. They took their places, one behind each prisoner. The crowd was gesticulating and laying bets as to which executioner would do the neatest job. Another signal was given. The swords made a fancy swirl in the air and all descended at once. They halved the blobs of mud, cut almost through the necks but did not quite sever the heads from the bodies. This was left for a second set of executioners, who finished the job and set the heads on the sharp high stakes behind. The audience was quite still while the blows were being struck. When the heads were set up, some of the women screamed and ran away. I looked at the head nearest me; a faint line of cigaret smoke was curling out of the nose. I had had enough.—From Wild Beasts on the Chin Sea, by Charles Mayer, in Asia Magazine for April.

GOVERNMENT NOW USES 50 W. S. C. AGGIE MEN

Fifty State College of Washington alumni and former faculty men of the college of agriculture are now working for Uncle Sam as members of the staff of the department of agriculture, according to Dr. W. J. Spillman, government plant breeding expert, who has just returned from Washington, D. C., for a visit to the campus, where he headed the agricultural instruction and investigations from 1894 to 1901.

On the platform with Dr. Spillman, when he addressed the student assembly, was Byron Hunter, the second student to graduate under Dr. Spillman. He is also with the U. S. department of agriculture and is in the agricultural course stationed at Moscow.

Dr. Spillman spoke on the law of heredity as he discovered it in its application to the wheats of the northwest, developing by cross-breeding, hardy, heavy yielding winter wheat with the strong straw and non-shattering head of the spring varieties.

SAYS WE JUST MISSED GREAT FIRE LAST YEAR

In speaking of the forest fire dangers of eastern Washington and northern Idaho, George C. Joy, a representative of the Washington Forest Fire association, is quoted as giving the following statement:

"I do not like to play the role of one foreboding evil events, but after having passed through the experience of this and other similar seasons, and taken in connection with great fires to be found chronicled in books, and in the forests themselves, I feel impelled to voice a warning and to point out the possibility and danger of this part of the United States being visited by a conflagration as great as any of the others. All that was lacking to bring this about this year (1922) was for the same kind of weather to have prevailed during the first week in August as did prevail the last week in May. Only the caprice of the weather saved us from such disaster."

Canada is nearly 20 times as large as Great Britain and Ireland.

COLORS LIKE FOLKS; QUIET OR STIMULATING

Proper Adaptation to Rooms of Home Makes for Harmony and Restfulness.

"Colors are like people; some are quiet, while others are stimulating," said Dean Flora Harrison of the home economics department at the State College of Washington, in a recent radio broadcast talk on "The Use of Color in Home Furnishing."

"The proper use of color produces harmony, which gives restfulness and repose to a room. One does not want to be always stimulated and living up to one's limit of excitement, nor does one care to live a monotonously quiet life. Red is a stimulating color, denoting activity and aggressiveness. It is hot and unmanageable, while green is restful, soothing, agreeable, cooling in effect.

"The use of color in the home should be guided by the purpose for which the room is to be used and its character, the amount of light it gets, the personal preferences of the dweller, the amount of money available for furnishings, and the atmosphere it is desired to create.

"A large, well-lighted room may have yellow, red and orange in delicate shades, or orange, violet and russet in light shades. In small, well-lighted rooms greyed shades are best —colors that have been greyed, as old rose, the soft olive greens, tans rather than the yellows, mulberry instead of red or purple.

"If the room is dark and small it is advisable to use light tints of the same tone, not to have contrasts, as for example: buff and a light tint of orange would be better than red and green. Contrasts of color such as orange and blue, orange and black, pink and green, yellow and blue, yellow and violet, make rooms look smaller than such combinations as orange and buff, yellow and yellowish green, blue and blue-green, yellow and russet. Color contrast makes a room less restful.

"The softer, neutralized tones should be used for backgrounds, such as walls, hangings, and large rugs. Decorative objects, such as pictures, lamp bases, sofa cushions, small rugs, and pottery, may be more colorful. One could wear a red necktie, but would hesitate to wear a red suit, you know.

"North rooms take warm colors, as shades, sofa cushions, small rugs, and pottery, may be more colorful. One could wear a red necktie, but would hesitate to wear a red suit, you know.

"North rooms take warm colors, as red and its modifications of rose, mulberry, raspberry, salmon and burgundy; brown, yellow and their modifications, as buff, tan, primrose, gold, orange.

"South rooms take cool colors such as blue and the purplish, greenish and greyish shades of blue; greens, and silver. The number and size of the windows will govern the intensity of the color you will use."

Federal Egg Grades Proposed.

Tentative grades for eggs are proposed by the United States department of agriculture. The grades are based upon quality factors indicated by condition of the shell, air cell, albumen and yolk, and by development of the germ. Size, color and weight are pointed out as not indicative of the edible quality of the eggs, but since they may have considerable influence upon the market value they should be considered in sorting and packing, the department says.

The grades as tentatively drawn up include 5 grades for eggs of sound clean shells as follows: U. S. specials, U. S. extras, U. S. No. 1, U. S. No. 2, and U. S. culls. Two grades are provided for eggs of sound dirty shells, namely, U. S. dirties No. 1, and U. S. dirties No. 2. Eggs with cracked shells are grades as U. S. checks. Full description of the grades may be obtained upon request to the bureau of agricultural economics, United States department of agriculture, Washington, D. C.

Efficiency and economy in marketing will result from the general adoption of standard grades for eggs, in the opinion of poultry marketing officials of the department. The department has given extensive study to the question of eggs standardization, and is offering the suggested grades to the egg industry for trial.

A bull calf was born last week to one of G. E. Tollard's cows on Grouse mountain, near Northport, that weighed 90 pounds, measured 45 inches from nose to root of tail, 31 inches high and 32 inches girt. The mother is a pure-bred Holstein and the sire a red Durham.

Sam (outside looking in): "Look heah, niggar, is you in fo' life?"

Rastus (inside looking out): "No, sah, I's just in here from now on."—Ex.

Jewel W.—Oh, dear, I've lost my green bow.

Mildred D.—How perfectly awful! What did he look like.—Ex.

It is not necessary to use a shoehorn to produce foot-notes.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

EGGS—HOW TO CAN THEM

At this time of the year, eggs are usually quite low in price and the markets wel filled, for that reason it is the time to preserve them for winter use. In saving eggs for winter use, you are availing yourself of one of nature's richest storehouses. They contain so much of fuel, energy and tissue building materials that they are almost a perfect food in themselves.

Rules to follow in preserving eggs in water-glass include the following:

Preserve only absolutely fresh, infertile eggs if you want them to keep well.

Do not preserve dirty eggs or eggs which have been washed, for washing removes the mucilaginous covering from the shell.

Use earthen vessels—Two eight-gallon jars hold 30 dozen eggs. Galvanized iron containers may be used, but are not recommended. All vessels used should be well sterilized by placing in boiling water.

Pour the well mixed water-glass over the eggs, so as to cover them at least two inches. Cover the jars tightly to prevent evaporation. Keep the jars containing the eggs in a cool place.

To mix the water-glass solution heat the amount of water to be used to the boiling point, and then allow to cool. When cool, measure out 10 parts of water to one part of the commercial water-glass (sodium silicate). Stir well so the solution will become thoroughly mixed.

Dangerous Characters at Large.

What would you do if you were to meet a bear or a hungry lion in your back yard? Would it frighten you to step into a nest of rattlesnakes in your garden? Such an experience would certainly be exciting, but not nearly as dangerous as hundreds of encounters that everyone will have during the coming summer.

Of all the natural enemies of man the common house fly is by far the most dangerous. With the mosquito, louse and tick the fly has been convicted of carrying and transmitting many diseases. The fly alone is often responsible for the spread of typhoid fever, diarrohea, cholera, dysentery, paratyphoid fever, and sleeping sickness.

Common Species.

The house fly is only one member of a great family. Entomologists know of about 5000 different kinds of flies. The great majority of the more harmless and some few are beneficial. The species that are most common and are the worst pests deserve some attention.

The blue bottle or blow fly is common around the house at this time of the year. Its large size and the droning noise it makes around the windows make it quite conspicuous. It is strongly attracted to exposed meats and is chiefly objectionable for that reason. The green bottle fly, a similar species, is of a green metallic color and slightly smaller than the blue bottle fly. It breeds in decaying flesh, and is especially objectionable and dangerous in the house.

A serious pest where horses or cows are kept is the biting stable fly. It is smaller than the house fly and its mouth parts are arranged for penetrating the skin and sucking blood. Its feeding habit makes it an active agent in spreading disease and it has been found involved in the spread of anthrax.

Next to the house fly the most common species found indoors is the lesser house fly. It is a small fly and active on the wing. It will often spend hours at a time flying back and forth under the chandelier or before a window. It spends little time in search of food and seldom alights making it less objectionable than the house fly.

How a Fly Eats.

A knowledge of how the fly gets its food is necessary before we can realize how serious and revolting its presence is in the house. It imposes on the fly to eat solid food, since its mouth is constructed only for sucking. It feeds entirely on liquids or material that can be dissolved by fluids supplied by the fly itself.

The fly is equipped with a storage tank or crop, the contents of which can be regurgitated and reabsorbed at will. When the fly finds a bit of sugar or the frosting on a cake he must dissolve the food by smearing it with the fluid from his crop which is emitted through his mouth, or proboscis. If the fly has just come from the stable or other filth where he may have filled his crop this process of feeding results in the contamination of everything the fly feeds upon.

Flies breed very rapidly. The entire life cycle requires only a few days, making it possible for many generations to be produced in a year. If the insects are not controlled in the early part of the season when they first appear they will soon become so numerous that control measures will be futile.

The female flies that have hibernated through the winter will begin laying their eggs early in May. Each fly deposits several hundred eggs during her lifetime. Since it only requires from eight to 10 days for these eggs to develop into mature flies it is apparent how rapidly they may increase during the summer.

Control Measures.

The pests may be controlled either by removing their breeding places or by destroying the mature flies. The first method is the most practical and easier to accomplish. It is only in the early part of the season when the flies are few in number that swatting campaigns and traps are of any avail.

The favorite breeding place for flies is the manure pile. If this one breeding ground can be removed a marked decrease in the fly population will result. This is especially true of farm homes and country places for the fly is not a long distance traveller and will not ordinarily wander far from the place of its birth.

The short time required for the life cycle of this pest makes it necessary to remove all refuse that might serve as breeding places frequently. The ideal arrangment would be a fly-proof container for the manure and other refuse. Such an arrangement is more or less expensive and will not ordinarily be provided.

Satisfactory results can be obtained with the use of a small can or pail to remove the barnyard manure at frequent intervals. The chief difficulty is that the container will be made so large that it will not need to be emptied often enough to prevent fly breeding. Not over four days accumulation should be allowed or the eggs will be deposited, larvae fully developed and pupae formed before the breeding place is removed. After the larvae have completed their growth they can develop into flies even though the manure is scattered in the field.

A number of chemicals have been suggested for treating manure piles to prevent fly breeding and some have been used quite successfully. Most of them destroy the fertilizing qualities of the manure or are injurious to the soil, in addition to being more or less expensive. Scattering the manure in the field before the flies have a chance to develop in it is the only practical way to prevent their reproduction.

Careful screening of all doors and windows as well as sleeping porches will keep out about 95 per cent of the flies that are attracted to the house by the odors of food and by the warmth afforded. The few flies that make their way into the house can best be caught with a small sized insect net. Swatting flies may be an amusing pastime for some, but it is highly unsanitary.

Fly poisons are sometimes effective, but often dangerous when there are children in the house. Any form of arsenical poisoning should never be used in the house. The most effective and useful poison is formalin. The commercial product diluted with 40 parts of water and placed in saucers will destroy all the flies that drink it. Its success depends on the absence of all other liquids in the room so that the flies will be forced to drink the poison.

Poisons and sticky fly paper are merely makeshifts and never effective in controlling flies. A vigorous campaign to clean up all breeding grounds and screen all entrances to the house is necessary to remove the very actual danger of disease carried by these pests. Such a campaign will be most satisfactory if begun early in the season and its chances of success diminish rapidly as the season advances.

WIFE CAN LISTEN IN WHILE WASHING DISHES

Nat McMillian, draryman for the State College of Washington, is an ardent radio fan, but is willing that "friend wife" should have the headphones while she is "clearing up" at night. The college broadcaster is in operation 7 to 8 p. m., so he hitches one end of his aerial wire to the stovepipe, the other to the water faucet at the sink, puts an extra long cord on the headpiece, and there she is! She washes her dishes to the strains of the Cougar Five orchestra, or listens to the sweet soprano of Miss Millicent Brown of Puyallup; or perhaps to Miss Edna Avery of Tacoma on the new styles. Then, when the last plate is wiped and the kettles scoured, Nat takes his turn and hears good advice on curing the ills of a family Ford, or making the vegetable garden.

By the way, his receiving set, copied from other college "home-mades," cost but $2.05.

SPRING WHEAT IN NATION DECREASES

95 Per Cent of Last Year's Acreage—Washington Increases.

That the farmers of the United States will have less acreage in spring wheat this year than last, is shown by a report from the department of agriculture in Washington, D. C., made on April 20. The report showed that spring wheat planted this year equals approximately 95 per cent of last year's acreage. Corn acreage was shown as 102 per cent, oats 103 per cent, potatoes 91 per cent, and tobacco 110 per cent of last year's acreage.

Contrary to the general rule for the country as a whole, Washington was shown to be planting or to have planted about 10 per cent more spring wheat than last year. The report did not mention the acreage in winter wheat.

In Nebraska the corn acreage will be materially increased being about the planting of corn to take the place of winter killed wheat. The report also showed that the decrease in the total acreage of potatoes resulted chiefly from heavy decreases in the states of Colorado, North Dakota, and Idaho. These decreases ranged from 20 to 35 per cent.

Boys' and Girls' Farm Club Work

Joining a Poultry Club.

First Step: Study yourself. If you hate chickens, do not join a poultry club. Don't join unless you want to make money and you are willing to do some real strenuous work to get it. Consider carefully how much time you have to give.

Second Step: Study your conditions. Decide whether you have land or buildings suitable for your work, or whether you can secure such land and buildings. You might obtain the use of some buildings now on the farm or you might induce your parents to build a suitable house and lease you the house and land at a fair rental, say 7 per cent on the money invested.

Third Step: Decide on the breed you want. Don't go in for something fancy; there is no money in that kind. If you want meat, get Brahmas, Langhans or Cochins. If you want eggs, chiefly, get Leghorns, Minorcas or Anconas. It would be an advantage if all members of a club could decide on the same breed.

Fourth Step: Secure stock. You can take over your father's flock as a part of it, if he has what suits you. You can buy hatching eggs, if you have som way of hatching thm. You can buy day old chicks, if you have anyway to raise them. You can buy hens or pullets, or if you want to start with hens, you can buy a good cockerel and produce your own hatching eggs. But never buy a cockerel without knowing how many eggs his mother laid, and never buy day old chicks without knowing the breeding back of them.

Fifth Step: Take inventory. Make a list of everything you have on hand and its value, the day you start your project: For example:

Land used, value	$ 27.00
Buildings used	43.00
Equipment (everything used to keep with the work)	7.50
12 hens at $1.50 each	18.00
1 cockerel	7.50
Total	$103.00

This list is merely suggestive. You might have nothing when you started, you may be renting land and buildings. In this case the charge will appear in your cost account as rent and must not be included in your inventory.

Sixth Step: Start your cost account. Enter everything you buy at the price you pay, the day you buy it.

Femininity is to be the keynote of the summer mode. The severe sports costume, which so long held undisputed sway over our daytime hours, is being forced into elaboration of design or trimming, in order to hold its own against an unprecedented onslaught of fluffiness.

It would appear that some daring hand has at last rocked the boat neck-line for some of the newest frocks are deserting the traditional bateau shape in favor of the square neck.

Reports from Paris say that fully $0 per cent of the clothes launched by the great French dressmaking houses for spring and summer were in white or colors, with the remaining 20 per cent black.

With old age comes the knowledge of lost opportunities.

NORTHWEST NEWS

The Pacific Northwest gets its share of the $56,589,000 appropriated by congress for rivers and harbors and of which Secretary Weeks has already allotted $40,000,000.

Purchase was announced at Portland, Ore., April 21, by the Portersrstens Logging company, the Union Lumber company's timber holdings in Clackamas county, containing a stand of approximately $1,400,000. The purchase is in the form of a logging contract running 10 years and the price paid is said to have been $3.50 a thousand feet stumpage.

State and United States road officials in Spokane, April 21 confirmed $2,500,000 of federal road work in Montana and $500,000 of southern Idaho work. The Montana work is for Indian reservation roads and post roads.

Officials of the United States bureau of public roads and of the forest service, conferring with Idaho highway officials in Spokane April 20, approved the construction for 1923 under the federal aid system, of the Fourth of July canyon, 22 miles, $100,000; Bonners Ferry road, 8 miles, $105,000; Mullan-Kellogg paving, 1 miles, not estimated; Kootenai-Clearwat road, 7 miles, $35,000; Wicks-ville-Thompson Falls road, $85,000; Lolo Pass-Missoula-Lewiston road, 39 miles, $482,000.

Actual construction of the Columbia basin project will be started within four years, C. B. Hurley, president of the Columbia Basin Irrigation league, predicted in an address at the annual meeting of the league held in Pasco sometime ago.

"It is my personal belief that construction work will be started within the next four years," he said. "I am a booster for the project for the rest of my life, and there is not a man in the state who can afford to refuse to assist in bringing the project to a successful completion."

Secretary of the Interior Work took an official step in determining the feasibility of the Columbia basin project recently when he appointed a commission to conduct the actual first survey work.

On this commission Secretary Work named Homer J. Gault, engineer of the reclamation service, Kirk Bryan, geologist, and Glen L. Parker, hydraulic engineer.

SEATTLE IS GREATEST HORSE SHIPPING PORT

Washington Port is Center of Horse Industry of Entire Pacific Coast.

Seattle is the greatest exporting point on the Pacific coast for horses and mules, according to G. W. Loveberry of Rainier stables, 2114 Western avenue, who shipped 100 head of mules to Honolulu, Februar 18, 1923. Alaska buys horess and mules from Seattle markets and shipments to the north will probably be made within the next 60 days in response to inquires from men in Alaska who need work animals. Many horses from Seattle also go into Canadian logging camps.

"Most of the horses sent from Seattle are brought in from other districts, because King county farmers raise very few horses and mules," Mr. Loveberry said in a recent interview with a representative of the Horse Association of America: "I estimate that only about three per cent of the horses needed this year by our farmers will be raised in King county. Farmers like a low, blocky, general purpose horse that weighs from 1200 to 1400 pounds. These horses can be bought from $75 to $175. Price depends entirely upon the quality of the individual animal.

"About 40 per cent of the horses used in Seattle for general hauling, drayage and delivery work are what may be termed good wagon horses and about 50 per cent are quality draft horses. Wagon horses weigh from 1200 to 1600 pounds and sell from $150 to $200, and draft horses, weighing 1600 pounds or more, can be bought at prices ranging from $200 to $300.

"Horses can be fed for a dollar a day and are more economical than any other form of power for short haul and frequent stop delivery. That they are more reliable was proved recently when a heavy snow storm stalled motor vehicles and horses had to be depended upon. Seattle could use more horses with profit especially for hauling along the water front."

Irate Father—I'll teach you to kiss my daughter.

Sassy Son—Thank you, sir, but I know how already.—Hx.

Don't forget that a flatterer always has an ax to grind.

A Real Rose Garden On the Side of Your House

With These New Long-Stemmed, Large-Flowered Climbing Roses, You Can Have Plenty of Blooms for Cutting

Would you like to have an abundance of roses for cutting, for table decoration, for boquets, to give your friends.

Of course you would. "But," you say, "I haven't the room for a rose garden," or "I haven't the time to take care of garden roses; all I can grow is the climbing kinds!"

Well, even so, you can have all the roses for cutting that you want. There are several new climbing roses that have been developed during recent years, which bear their flowers on long stiff stems, and are better for cutting than many of the regular garden roses!

A New Type of Rose Which Seems To Combine All Good Qualities.

This new type of rose, which has recently been developed, appears to combine all the rose charms available, and they can be grown wherever the old climbing roses, such as Crimson Rambler, could be grown.

While these new roses are climbing or semi-climbing in their habit of growth, they, nevertheless, produce plenty of large, single blossoms —or loose clusters of flowers—on long, stiff stems, the individual flower of which are two to four inches in diameter.

A basket full of fragrant roses for home decoration without a "rose garden" to look after, seems to be almost too good to be true! However, this new type of rose will give you just that.

You may grow them on the side of the piazza or the house, or along the fence in a comparatively small space and still have such roses as you have longed for to use for houses decoration to send to "sick folks," to grace the dinner party, or to complete the graduation or June wedding outfit.

These roses are, for the most part, of more healthy habit of growth than our old friend the Crimson Rambler, and free from the mildew and blight, which so often make the latter unsightly. No rose will give its best results if it is absolutely neglected; they must always receive a little attention and encouragement—but, like the Ramblers, these new roses respond quickly to a little care, and are just as easy to grow and attend to as are any of the Rambler variety. Like the ramblers, they need very little pruning, and do not require the skilled attention which the majority of garden roses demand.

By All Means Try Some of the "Pillar" Roses.

If you plan to train your new roses up the side of the house or around the windows, you may prefer the type known as the Pillar rose, rather than one of the most stalwart climbers which might climb too vigorously for such a location. These Pillar roses while not actually climbing, reach a height of six to 10 feet, and need some support to hold them upright.

The spring catalogues of reliable nurserymen, and the lists of trustworthy agents, contain many varieties of this new type of rose which is bound to become popular—particularly with the farm owner and the small suburban home owner. Among the many which might be mentioned may be found the following, which have given proof that they will succeed anywhere, under ordinary good growing conditions.

Try These Six and Have a Wealth of Bloom.

While the following half dozen varieties are entirely distinct from the old ramblers, and quite different from each other, they by no means make up a complete list of roses of this type. But these six will make it possible for you to have a wide range of beautiful roses for cutting, through a long season, without a rose garden.

American Pillar—Although this is a distinctly American rose, the vote of the National Rose Society of England in 1918, honored it as being "the most popular climbing rose in existence." Enormous flowers of a lovely cherry-pink shade, born in clusters of five to 10. Foliage dark glossy green, clean and attractive all season.

Climbing American Beauty—Rosy crimson flowers, three to four inches across, sweet scented, and born singly on long stems.

Christine Wright—Double flowers, three to four inches in diameter, of a clear wild-rose pink. The blooms are born singly and in small clusters; often blooms a second time in the fall with dark green leathery foliage.

Dr. W. Van Fleet—Looks like a rose garden growing against the house! Deep pink sweet-scented flowers, three inches and more across, when open, borne on single stiff stems, 12 to 18 inches long. The buds are long and pointed, and solid; ideal for cutting. A single plant will produce hundreds of flowers.

Paul's Scarlet Climber—The most vivid scarlet of all climbing roses. The medium-sized large double flowers are produced in clusters of three to six. In every way one of the most splendid of all climbing roses.

Silver Moon—Distinct from all others. The long pale yellow, scented buds open into semi-double flowers, often five inches in diameter. The center petals are white, and reveal the bright golden stamens.

POULTRY

How to Clip a Wing.

When fowls that wont stay inside the fence, wings have to be clipped, to protect the garden and flower beds. The Cornell experiment station recommends the following plant for clipping the wing so it will stay clipped without disfiguring the fowl.

Remove a few feathers around the second joint. Spread the wing out to its full width and you will see just beneath the skin on the outer edge of the second point a small white ligament or cartilege. Insert a small knife blade under the ligament and cut in two, pulling upward and outward on the knife. Then cut a piece from the end of the cartilage 1-16 of an inch long. This may be done with a pair of scissors or with a knife. The object in removing this section is so the cartilage will never grow together again. Since no major arteries are encountered, you will find this a very simple and practically bloodless operation.

The Chick's Front Door.

A stingy opening as the exit of the brooder house is not good policy. The chicks need a wide front door approached from outside by a comfortable grade with no corners. Chicks have to learn from experience the way back to the heat from which they came. They can all around a brooder and miss the door every time. If there are corners, they can teach one another more about piling up in five minutes than their owner can correct in five days. Once they make the wrong turn, they are insistent on continuing to make the wrong turn. The easiest way is to construct a runway to the brooder house floor from which they can't come to harm. If there is a space underneath, there is where they will get. Don't leave a space. Pile up some bricks or stones to make a mound which may be climbed on all sides, and cover this mound with loose dirt, or with upturned sods. Have the door low and six or eight inches wide. Let the chicks out of doors the first time in the late afternoon, and drive them back carefully. If there is an older chick that is brooder broke, use it for a leader to train the babies in the way they should go. If a yard is put around the lamp brooder, fit it close.

If a board runway is used, fill the space underneath with earth.

Canning Eggs in Lime.

Since the season of the year has arrived to save eggs for this winter, when they will probably be higher in price, W. D. Buchanan, extension poultry specialist, suggests the lime method.

Where lime is used, the way to do it is to slack two pounds of lime in one gallon of water. Stir this milk of lime into five gallons of water. Keep stirring the mixture frequently for three hours, then allow to settle. Put strictly fresh, infertile eggs in watertight vessel, and pour clear part of liquid over. Cover with air-tight covering.

DAIRY

A Water Supply for the Cow.

Every good dairyman appreciates the importance of assuring dairy cows of an ample supply of water at all times. In the winter a generous water supply in the dairy barn is a valuable aid to production. Commenting on this in the March report of Iowa cow testing associations, Oliver Constable, tester for the McGregor association, writes as follows:

"The recent severe storms have made more dairymen think seriously of putting drinking cups in their stables for the use of the cows. Practically all of the members who turned their cows out to drink at the tank report that most of their cows just stuck their heads around the corner, felt the blast of the storm and turned back to the barn thirsty.

"Whenever a cow was brave enough to go to the tank, she would take only a few swallows before hurying back to the stable. In a few cases cows had water carried to them, but that is, of course, a big job.

"In looking over one member's milk sheet I noticed a very marked decrease in the daily milk yield. I could see where the cows had lessened one or two pounds of milk daily throughout the storm period and for a few days afterwards. The owner of these cows said that on some days they did not drink at all.

"When one stops to think that milk is about 86 per cent water, the necessity for an abundant supply of clean water for the cows is readily seen."

Set New Records.

Three purebred Holsteins owned by H. S. Smith, of Prosser, have made good records of production and are listed in the latest bulletin of tests published by the Holtsein-Friesian Association of America.

Cornucopia Norman Fobes, a two years and seven months Holstein, produced 549.3 pounds of milk and 19.758 pounds of butterfat, equivalent to 24.7 pounds of butter in seven days. At the age of three years, Prosser Johanna Gluck 2d produced 458.5 pounds of milk and 15.685 pounds of butterfat in seven days. This fat production is equal to 22.5 pounds of butter. A record of 424.2 pounds of milk and 16.006 pounds of butterfat, the equivalent of 20 pounds of butter, was made in seven days by a three years and one month old Holstein by the name of Prosser Johanna Gluck 3.

These tests were supervised by a representative of the dairy division of the college of agriculture. The supervisors watch the milking, weigh it and take samples for testing. A duplicate sample is sent to the college to check figures. The figures are later checked by the Holstein association.

DAIRY COWS HELP TO SOLVE FREIGHT PROBLEM

More and better livestock in any community will assist in solving the freight problem. "While a majority of us appreciate the value of the added fertility obtained for our soils by growinf or feeding livestock", says A. E. Lovett, county agent of Yakima county. "the influence such farm practice may have on the freight bill paid by the farmer may prove of future interest."

In obtaining increased fertility of the soil no class of livestock, probably can compete with the dairy cow and in the matter of cutting out the freight bills the dairy cow far surpasses any other class.

A ton of butter fat, worth approximately $900, removes from the farm only around 50 cents worth of fertility. At present prices of potash, phosphoric acid and nitrogen, a ton of whole milk, worth $45 removes a little over $2.00 worth of these elements. The feed required to produce a ton of butter would remove $400 worth of soil fertility.

The cost of shipping to market the feed required to produce a ton of butterfat would be about 50 times that required for shipping one ton of butter. A car load of butter will bring approximately $10,000. It would require at least 50 loads of potatoes to give an equal amount. At least 100 cars of alfalfa hay would be required to net the same return.

"It is, of course, possible that the price of butterfat may be lower at times than today," continues Mr. Lovett, "but this is also true of the price of potatoes and hay."

Checked gingham loses all right to be prosaic when it is given an apron, cuffs and 'kerchief collar of white batiste.

Speaker at an assembly: "It gives me great pleasure to look into your shining faces." (rustling sound as every girl makes a grab for her vanity case.)—Hx.

WASHINGTON MAN BECOMES POWER

Influence of Geo. C. Jewett is Passage of Credits Act Acknowledged.

The influence of the "far west" in national legislation was never more clearly demonstrated than in the passage of the intermediate farm credits act, which was forced through congress in the closing days of its recent session by the sheer will power of its proponents. Chief among those who were instrumental in forcing the act onto the statute books of the nation was George C. Jewett, a former Spokane man, now head of the Northwest Wheat Growers Associated.

Mr. Jewett was formerly with the Federal Land bank in Spokane, and knows the financial needs of the agricultural interests perhaps better than any other man in the United States. Since taking up the cooperative marketing work he has become a power in the councils of the nation at Washington when matters of this sort are under discussion.

M. L. Corey, the new member of the Farm Loan board, writes Mr. Jewett as follows: "The farmers of this nation owe you a debt of gratitude for the great work you have done here in assisting in procuring this legislation. I hope you may have your reward in seeing the system meet the hopes and expectations of those who are interested in securing its passage."

Gray Silver, Washington representative of the Farm Bureau, writes Mr. Jewett: "I can not let this first opportunity I have had since the closing of congress to go by without writing you and letting you know the great help you were to me in the passage of the intermediate credits bill. And it not here for you, Ed Cunningham and Dr. Walker coming to my rescue here in the difficult days near the closing of congress I am sure I could not have gotten by with the intermediate credits bill. Your experience in matters pertaining to the need of this kind of credit and your experience in dealing with men made you invaluable as a witness before the committee and also in talking with the legislators in securing their support for the passage of this measure, so I am not only personally indebted to you, but so is the Federation and all the farmers whether members or not, for this measure will benefit all the farmers."

LIVESTOCK

Forty thousand sheep are being sheared in the Koona-Benton district this year. Electric shearing machines are being used, making it possible for one operator to shear upwards of one hundred sheep a day. Will E. Hudson, staff cameraman of Seattle for the Pathe News, has been here taking pictures of the shearing process for removing the fleeces from thousands of sheep daily.

John Kasper, who lives east of Moscow and near Joel, Idaho, has just purchased a richly bred, 15-months-old Jersey bull calf from R. I. Tanner of Sumas, Whatcom county, Washington. The calf is Washington Silver Chimes, No. 212208, and is of the popular St. Mawes breeding. His dam has a record of 317 pounds of butterfat in 305 days, as a two-year-old, and is now being retested on official tests. She is making as high as 70 pounds of fat per month, and is expected to make about 700 pounds of fat this lactation period. County Ag

FRIDAY, MAY 11, 1923

Senior Class Sneaks

The senior class of the Genesee High School chose Tuesday as their sneak day and, accordingly, accompanied by their class advisor, Miss Patch, left real early in the morning for Lewiston, where they got breakfast and later went to Asotin where they picnicked and had one of those times that comes but once in a lifetime. A splendid time is reported by the "sneakers."

The Biggest Yet

The largest egg that has yet been brought to the News office for comparison was brought in by Mrs. J. J. Hirselberger Wednesday evening. It was the product of a Rhode Island Red biddy and measured 6 3-8x8 3-16 inches and weighed just a very small fraction under a quarter of a pound.

If there are any more large ones in this community—just bring them in. The News man is always glad to measure and weigh them and later sample them for breakfast in order that he may pass upon the quality, flavor, etc. It seems that the female members of the Ku Kluxers don't believe in it—but we do.

Christian Endeavor Notes

By Ted Parks

Sunday afternoon the Senior Endeavor choir accompanied Rev. Pendleton to the Shafer school house where they assisted in the singing at the services held there.

The senior meeting was led by Katherine McMahon, the topic being "Prayer."

The regular meeting was cut short in order to allow Mrs. Sargent, teacher of Spanish at the University of Idaho to give an interesting talk on the "Passion Play," which is celebrated every 10 years at Oberammergau, a little town in Germany. Mrs. Sargent, who has seen this play four times, gave a very realistic and fascinating picture of the portrayal of this wonderful story.

The pre-song service was led by Miss Adda Mathews. Two number of special music were rendered—one a vocal duet by Alfreda Hampton and Conrad Caldwell, and the other a piano solo by Thelma Woodward.

There will be no senior meeting next Sunday evening on account of the baccalaureate service at the Lutheran church in the evening.

Mother's Day to Be Observed

Sunday, May 13, will be observed as Mother's Day in the Federated churches of Genesee. A special musical program including a solo by Miss Esther Martinson, is being arranged.

The pastor, Rev. James N. Pendleton, will preach an appropriate sermon for the occasion. Flowers will be largely used in decorating the church. A large bouquet will be presented to the oldest mother present and another to the youngest mother present with a baby. At the close of the service the flowers will be sent to the homes of mothers who could not attend.

Everybody is invited to attend and Rev. Pendleton will have cars sent to bring mothers who are not able to walk to the church. Please notify him if you want a car to call for you.

Sunday afternoon a service will be held in the Pine Grove school house at 3 o'clock. The Senior C. E. choir will sing.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Morning worship and reception of members at the 11 o'clock service. Special Mothers' Day program.

One new member united with the church last Sunday and others will be received next Sunday.

Church school at 9:45 a. m. We had a good increase last Sunday and we went to continue to increase our attendance these spring days.

There will be no Senior C. E. meeting this week on acount of the baccalaureate services in the Lutheran church Sunday evening. Rev. Snoddy is the pastor councillor of the Whitman-Latah district Christian Endeavor union and Genesee is fortunate to have an opportunity to hear him.

The big Inland Empire Sunday school convetion of the Inland Empire will be held in Spokane on Wednesday, Thursday and Friday of next week. Besides many local speakers of the Northwest there will be two frm New York and three from Chicago, including Dr. Henry F. Cope, eminent author and secretary of the National Religious Educational association.

The ladies will have a big meeting at the Social house on May 16 and the missionary society will hold a prayer service on Sunday afternoon at 4 o'clock.

Sunday is the day to charge your spiritual batteries.

Many were disappointed in not knowing of Mrs. Sargent's address on "The Passion Play" Sunday evening. Word was not received that she was to speak until after the close of the morning service. Those who heard her were united in their praise of the wonderful picture she gave us of the Passion Play. She has promised to come again next fall and bring her pictures.

Much Pleased With Choir

Sunday afternoon five cars of town folks went to the Shafer school for the afternoon service conducted by Rev. Pendleton of the Federated churches and the young people's choir to sing. The little school house was full, with all seats taken, and several had to stand during the service. Alfreda Hampton sang a solo that was much enjoyed by all and the people there have asked for a service again in two weeks.

Next Sunday a service will be held in the Pine Grove school house at 3 o'clock. The young people's choir will again sing.

Whooping Cough

This is a very dangerous disease, particularly to children under five years of age, but when no paregoric, codine or other opiate is given, is easily cured by giving Chamberlain's Cough Remedy. Most people believe that it must run its course, not knowing that the time is very much shortened, and that there is little danger from the disease when this remedy is given. It has been used in many epidemics of whooping cough, with pronounced success. It is safe and pleasant to take.—Adv.

"To preserve the memories and incidents of our association in the great war."... Quoted from the American Legion Constitution.

Will Have Silver Fox Farm

According to the Lewiston Banner, Lewiston Orchards is to have a silver fox farm in the not far distant future. Pete Orcut, who has been in the newspaper business for many years, thinks there is more money in the fox business and has decided to devote at least a part of his time to selling stock in the proposed enterprise. It is claimed that the climatic conditions of the Orchards will be ideal for the propagation of the animals and that a splendid quality of fur will be produced. Here's hopin' Pete makes a million.

Might Help a Little

This remark is sometimes heard: "Oh, there isn't anything in your old paper!" All right, we are doing the best we can. It is impossible to go out with a corkscrew and extract news. If those who know of social functions of various kinds, or know of visitors in the town, would kindly tell us about it, it would help very materially in giving the real news of the neighborhood.

We do not care for gossip—there's plenty of that going on without our assistance.

PERSONAL MENTION

Miss Helen Whitted of Lewiston is visiting friends here.

Mrs. Geo. Van Buskirk arrived Friday afternoon from Pullman.

Henry Schwenne of Spokane is visiting his brother-in-law, Geo. Schlerth.

D. C. Burr was a Genesee visitor from Moscow last Thursday afternoon.

Miss Florence Bielenberg was a Monday morning passenger for Lewiston for a short stay.

Miss Ethel McMillan was a Saturday passenger for Pullman for a short visit with her mother.

Miss Grace Willoughby was a Saturday morning passenger for Johnson for a visit with friends.

Miss Grace Jain was a Saturday morning passenger for Pullman for a week-end visit with friends.

Mr. and Mrs. Nick Hennen of Clarkston are visiting at the home of their daughter, Mrs. V. Hasfurther.

Mrs. Edna Williams returned to her home at Thompson Falls, Montana, after a visit at the home of Mr. and Mrs. A. E. Elver.

Miss Louise Donnelly of Spokane is visiting her friend, Mrs. Ben Jain, and husband. Miss Donnelly is a nurse at Sacred Heart hospital.

Miss Ruth Martinson returned home from Portland Monday, where she had been visiting her father, who is recovering from a recent operation.

Miss Esther Clark returned to her school duties at Colton Monday after spending the week-end with her parents, Mr. and Mrs. Grant Clark.

Mr. and Mrs. Wm. Heinrich, who have spent the past winter in California for the benefit of Mrs. Heinrich's health, returned home last Friday.

Mrs. E. F. Kempf returned to her home at Sadpoint Wednesday morning after having been called iere to attend the funeral of her sister, Mrs. Jesse Myers.

Mrs. J. R. Steffen and Mrs. George Heaser arrived Tuesday from Winona, Minnesota, for a visit with their mother, Mrs. F. E. Becker, who is quite ill at Clarkston.

M. McLean of Douglas county, Washington, and sister, Mrs. Gordon, of Alberta, Canada, left Wednesday for their homes after a visit with Mrs. Wood Gash and Ed. McLean.

Mr. and Mrs. Joe Knapps returned home from California last Friday, where they had spent the past few months. Mr. Knapps is looking more like his old self and says he is feeling fine. His many friends are more than glad to see him again.

Pete Steltz came out from the wilds of the Rapid river country last Thursday evening, going to his home at Moscow on Friday. Pete had been at the Rapid river mine during the past winter. He said there was plenty of game and fish in there and that he couldn't even look a trout in the face any more.

Max Sencenbaugh, formerly bookkeeper in the Genesee Exchange bank, was a Genesee visitor the latter part of last week and was renewing acquaintance with old-time friends and visiting his brother-in-law, Clarence Peterson. Mrs. Sencenbaugh is visiting her parents, Mr. and Mrs. Ed. Peterson, at Clarkston. Mr. Sencenbaugh has been employed by the Exchange National Bank at Spokane for the past several months, but has resigned his position and will go to the coast where he expects to locate.

Parent-Teachers Meeting

The regular monthly meeting of the Parent-Teachrs association will be held in the assembly room of the high school on Monday night, May 21. This will probably be the last meeting of the association this summer and every one interested in our schools should be present.

There are several important things that will probably be taken up at this time and one of the principal questions of today is—are we going to be able to continue the Genesee High school? Don't fail to attend; it may be that you can help answer this most important of all questions that is facing Genesee today.

The following program will be rendered:

Piano solo by Miss Olive Jain.

Recitation by little Miss Violet Rogers.

Address by Supt. Frank H. Thomas.

Piano solo by Wilma Ingle.

Soprano solo by Mrs. Eva Reisemer, accompanied by Mrs. J. F. Barnes.

"Clarence" Some Boy

The highschool play, "Clarence," given by the highschool students in the opera house last Friday night, was one of the best local talent plays that has ever been put on here. There was a large crowd in attendance and everyone enjoyed the entire time to the fullest. There isn't much chance of saying more of one than the other as all did themselves proud in the rendition of their parts. It might be said, in addition to the leading characters, the two Wheeler kids, portrayed by Carrie Mae Hickman and Eugene Tupker, who were always indulging in little brotherly and sisterly fracases, brought down the house. It was all good—with a big G.

Progressives Entertained

The Progressive club was entertained by Mrs. R. S. Sullivan on Thursday afternoon of last week. Needlework was the order of the afternoon and at the proper time a delicious luncheon was served by the hostess, assisted by Mrs. Martin Fester, Mrs. A. H. Potsch and Mrs. F. S. Casebolt.

The invited guests were Mrs. Martin Fster, Mrs. George Follett, Mrs. W. E. English, Mrs. R. I. Witty and Mrs. A. H. Potsch.

Don't Look Like Hard Times

According to an authentic statement recently given out it is said that automobile production during February totaled 276 thousand passenger cars and trucks compared with 243 thousand (revised figure) in January 1922. March production included 346 thousand passenger cars and trucks setting a new high record of production for any month and exceeding the previous high mark of June 1922 by 57 thousand cars. Production for the first three months of 1923 more than doubled the output for the corresponding months of last year. For the first time in the history of the industry, closed car production represents one-half of the total output of passenger cars.

Plenty of Sugar Produced

Sugar production for the world for this crop year, including beet and cane sugar, is now estimated at 20,450 thousand tons which will be 200 thousand tons more than the production of the previous year and about two million tons over the immediate prewar average. Both beet and cane sugar outputs are expected to show a gain over last year. While it is apparent that the sugar supply will be ample for the needs of this Country and the rest of the world, due consideration should be given to the constantly increasing consumption in America, which is now far above prewar average.

Lumbago

Having a mind of your own is not sufficient. You must know how to use it.

This is a rheumatism of the muscles of the back. It comes on suddenly and is quite painful. Every movement aggravates the disease. Go to bed, keep quiet, and have Chamberlain's Liniment applied and a quick recovery may be expected. Mrs. J. F. Dann, Brockport, N. Y., writes: "I can honestly say that Chamberlain's Liniment cured me of lumbago a year ago last summer. When I began using it, I was flat on my back in bed and could not turn to the left or right. I had a bottle of Chamberlain's Liniment in the house and this was applied to my back. It promptly drove away the pains and aches."—Adv.

INSTALLMENT NO. 8.

John sauntered back to where Mary—the rejuvenated, remade Mary—stood before a little hall mirror, adding a touch of lip rouge here, a bit of powder there.

"You haven't said a word about how pretty the house it," she chided, turning and smiling upon him.

"I think it's great! Great!" he replied enthusiastically.

"Then hurry upstairs, like a good boy, and get dressed. The guests will begin arriving any time now. Hurry."

He obeyed. With Mary so exuberant and lovely, with the house a fairy palace in flowers, with the moment arrived when his own dear little daughter was to be given over safely into the hands of a young man who was certain to be kind to her always, John Emerson was again a boy, himself, and he ran quickly to his room and prepared for the wedding.

As he adjusted his formal clothes and glanced here and there to see that his old things were in place and that nothing had been changed since he had gone away, he had moments of sudden fear, a devastating fear lest the letter might find its way to Mary's hands ahead of him.

Even as the dainty flower girls made their way down the stairs into the long living room he shuddered with the thought. And as he himself, with Ruth beside him, walked slowly into the happy crowd to the tune of the wedding march, he glanced now and again toward the hallway. His agitation was becoming almost too much to bear gracefully. The strain grew with the passing of minutes. He saw Mary standing far at the other side of the room, and he thought he saw her raise her handkerchief to her eyes. Over him there came a feeling of deep regret, of crushing self condemnation. He had been weak—terribly weak. He had not kept faith. How could he ever have thought of so impossible a thing as that he would never return to her. She, yes, his Mary, was the only girl in all the world he had ever really cared for. He hurried to her side.

The ceremony was over, and at last, through the shadows of the front porch John saw the blue-gray uniform of the special delivery messenger. He raced through the house and heard the man calling out the name of Mrs. Mary Emerson. Mary did not hear. Instead, old Annie received the letter.

"Here, Annie, give it to me, quick, it!" he grasped.

"Yassah!" came back the reply, but before she could comply, Mary had entered the room, had seen the letter was addressed to her, and laughingly snatched it from the servant's hands and placed it in the front of her low cut gown like a little girl hiding stolen sweets. She did this only as a joke. She simply meant to take it to her room and, when all the noise and fuss was over, read to herself a love letter from her boy.

Mary was flying up the stairway to assist her daughter in changing to her traveling togs. Her husband made a desperate effort to follow her. But the hands of well meaning friends, bent upon saying nice things to him about his daughter and new son-in-law, held him at bay. Vainly he tried to break through the line, but Mary was gone.

In her room, Mary remembered the letter, and innocently tore open the edge of the envelope, extracting the pages carefully, slowly. Her eyes shone brightly beneath long, delicate lashes; she was beautiful, ravishingly so on this night as a result of a week's labors with herself in a desperate effort to bring herself back to those great days of her young womanhood when John had been content to sit idly by and gaze upon her and tell her how much he loved her. So that as she stood there now, looking down at the as yet unread papers, she was a picture that was good to look upon.

She began to read. Not until she had read four lines did her countenance change. Then as it she had been confronted with a monster, she stepped backward, uttered a frightened cry, placed a hand at her heart and read on.

The world spun 'round. Her heart, she felt, must stop. A haze came over the room. She felt her cheek; it was icy cold. She gazed upward and her lips moved.

"But he has come back to me," she sobbed repeatedly in unsteady outburst. "He didn't stay away. But he says he wanted to stay away. But he's back. He loves me—surely he loves me. But after all, did he come back for the wedding only? I don't care! He's back. He has come to me. Oh, John! John! John!"

She slipped limly into a chair, her chin in a palm, her hair disarranged, her eyes wet with tears. Her gaze fell upon the opened book on the reading table. The big lamp shed its rays directly down upon the gilt letters of its title, "The Dangerous Age."

The words of warning which her husband had given to her daughter before he had gone away rushed into her memory. A wife should not allow romance to die. It was the most precious thing in all the world. Keep as young at forty as you are at twenty!

"Please, Mary!" he almost shouted at her. "Please don't read it."

And then the book. It had said that when a man reaches the age of forty he needs kindness and attention. Be the same with him then as you were at twenty. Remember his little wishes and his weaknesses. Love him so he will know he is being loved. The book had said so. It must be right.

Again the thought of the letter recured to her, and she felt weak and ill. She opened a drawer to place the book away, and the sinister gleam of a blue steel revolver caught her eye. She reached forward her hand, instinctively, and clutched the cold object. She withdrew it with a little gasp as the high, happy voice of Ruth came to her from below. Her husband should hear no more. Ruth was saying she was all ready to go.

"Mother dear, please come down at once!" she called.

Then came to Mary Emerson the instinctive determination that lurks deeply in the soul of every woman who loves. She would not give up her husband. She had won him in her own way, and she would keep him. She would fight for what belonged to her. Why should she be so weak as to allow her home to be disrupted by someone in far away New York whom she had never met? Was not she as clever as the others? Was she not capable of holding the interest of her own husband? She would show him.

She was talking to herself in short, interupted gasps, as she walked down the stairway to bid farewell to the now departing crowds, the while dashing pink powder here and there on her flushed face. "Yes," she was saying, "he's mine—my own John. I'll see what woman can take him."

It required no little amount of acting for her to cast aside the conflicting emotions that gripped her as John placed an arm about her waist and escorted her to the front doorway where Ruth and her happy young husband stood ready to receive the farewell kisses that would seal them away to their honeymoon. Friends crowded about grasping the hands of the parents and casting bantering jokes, ever present on the wedding day. John and Mary stood smiling, bowing to the thinning crowd, and finally they held their two children in their arms and wished them happiness and with slight gulps and stammerings, sped them on their way.

And now the moment which both had so dreaded was upon them. Husband and wife alone. John stood beside Mary, his lips moving convulsively, his eyes tired and sad. Mary said nothing, did nothing. There was silence. It seemed never to end.

In John's mind there was the continuous buzz of a question. Had Mary read the letter? Did she know? He thought he could not withstand the uncertainty of it all. He must tell her the whole miserable truth. He must bare his meanness. Yes, it was meanness—downright meanness.

But Mary was thinking too. She must not let him know she had read the miserable letter. She noted the flush of his face, the bead of perspiration on his gray temple. As he finally made as if to speak, spreading his hands out before her, she sensed what was coming, and she roughishly lifted a finger and placed it against his lips.

"No! No!" she warned, "not now —you are tired, my dear boy. Awfully tired. You don't have to talk or do anything at all tonight. Tomorrow, when we are rested, you may tell me all about your trip—everything. I know how you must feel. Such a long, tiresome, fatiguing trip." And she threw an arm about his neck and led him toward an easy chair. John avoided her eyes and submitted to her guidance. He sat down. Mary dropped beside him, closely, still clinging to him.

"This is just like our wedding night, dear," she said, caressing his forehead, holding his big hand warmly in her own."

Idaho Will Honor Thompson, Who Found Source of Columbia

When University of Idaho students present their great pageant of Idaho history, June 9, they will do honor in one scene to a man who, though he has been called "the greatest land geographer that the British race has ever produced," nevertheless died at the age of 87, a poor man, unrecognized by the public.

This was David Thompson, discoverer of the source of the Columbia river.

The pageant will show Thompson trading with the Indians at Kullyspell house on Lake Pend Oreille on the eve of Easter day, 1810, and later reading from the Bible:

In 1797 he entered the employ of the Hudson's Bay company, and there met a man whose name was to become a household word throughout the Northwest, Peter Fidler, a surveyor, who was sent out by the company to survey the territory drained by the Saskatchewan river. Fidler was a man of education, and he taught Thompson the rudiments of mathematics and surveying. Thompson was a quick student, and he soon became a skilled surveyor.

In 1798 he was sent to Manchester House, on the Saskatchewan river, to survey the land in the vicinity of the post. Here he met Philip Turnor, a surveyor, who was sent out by the company to survey the territory drained by the Saskatchewan river. Fidler was a man of education, and he taught Thompson the rudiments of mathematics and surveying. Thompson was a quick student, and he soon became a skilled surveyor.

In 1798 he was sent to Manchester House, on the Saskatchewan river, to survey the land in the vicinity of the post. In 1797 he entered the employ of the Hudson's Bay company, and there met a man whose name was to become a household word throughout the Northwest, Peter Fidler

The Doctor Was Right

When the good old family doctor was asked about baking powders, he said:

"Use Royal. It is made from Cream of Tartar and is absolutely pure. You could dissolve a couple of teaspoons of Royal in water and drink it with benefit. That's a health test mighty few baking powders can meet."

The doctor was right.

The American Legion
Meets Each
First and Third
Wednesday of the Month

Membership Drive at Top Speed

As the final stages of the Legion membership drive approach, every effort is being bent to put Genesee over with a record enrollment. On the basis of the departmental report of the standing of all the posts in Idaho, Genesee's added membership in the last 10 days has boosted its standing from 38th to sixth place.

This assures Bielenberg-Schooler post that it will be in the list of honor posts in the department. The departmental officers are already complimenting the post on its successful drive.

The final day of the drive is May 16.

District Convention

The district convention for the Legion posts of central Idaho is scheduled to convene May 8 at Moscow. A delegation of local legionaires will go to Moscow to take part in the meeting. Ray Edwards, past commander of Bielenberg-Schooler post was selected as the official delegate of the local post.

James Harris of Weiser, department commander of the Idaho Legion, is scheduled to be in attendance at the district convention.

Every effort is being made by local post officials to secure the department commander's presence at the Genesee ceremonial on May 19.

The Flag Is Still There

The A. E. F. has taken its place in the pages of history. The newspapers said that the last American flag had ceased to wave in Europe, when Old Glory was lowered from the flagstaff at Fort Ehrenbreitstein. But the flag is still there! Day in and day out it is flying from white staffs in France, in Belgium, and in England. In soldierly array, rank on rank, about these same staffs, 30,587 of America's soldier dead are camping for all eternity.

When "taps" has sounded for the last veteran of the World War, when the American Legion has closed its books forever, the flag will still be there. By purchase, or deed of gift, these plots have become as much American soil as Arlington cemetery.

The American Legion is raising an endowment fund of $200,000 for perpetual remembrance of these dead. The annual interest fro mthis fund will afford a sum sufficient to properly decorate these graves.

We owe these dead eternal gratitude and honor. Every American has a conscience. Legionaires and nonlegionaires must feel in their hearts the desire of duty above and beyond the mere reaction to pay a perfunctory tribute to the departed.

Bielenberg-Schooler post is pledged to remit a small sum to cover Genesee's portion of this fund. The children of France pick wild flowers and with their little hands place them on the graves of the "young Americans." The penny of the Genesee school child and the small contribution of the adult will help to assure that each grave shall have its flowers and its flag.

It is not fitting that any one should be unduly urged to contribute to this cause, but should anyone wish to make a voluntary contribution it will be received by Jack Barnes, post finance officer.

Ford Badly Wrecked

What might have proven a very disastrous wreck occurred Monday night about 9 o'clock when Pete Hall and George Bershaw were coming up from Lewiston. When near the top of the hill Pete says his lights went out, and that he might have stopped the car only he didn't want to "burn" the tires, so took a little more time—with the result that the car shot over the grade and rolled something like a block down the hill, performing various gyrations in the descent. Pete and George were lost out shortly after the machine started down the incline and neither one was very badly hurt. George received a bruised hip and other slight contusions, while Pete had a small gash on his forehead and various other identification marks, just to show that he had been in a wreck.

The car was badly battered. There was but one good wheel left and two were completely gone. Various other seemingly useless things on a Ford were minus when the car was picked up the next morning on the road below. It is now at the Morscheck hospital for repairs.

The one wonder of the whole affair is that both were not killed instantly.

The Junior-Senior Banquet

The junior class of the high school entertained the seniors at their annual banquet at Smolt's Wednesday evening. A delicious four-course dinner was served. The table decorations were snowballs, lilacs, pansies and fruit blossoms. Katherine McMahon acted as toastmaster. Grace Willoughby, president of the junior class, gave a toast which was responded to by Norris Sather, president of the senior class. Several members of the faculty also gave short talks.

After the banquet dancing and singing were indulged in and everyone present reported a splendid time.

Evils of Constipation

Perhaps the most serious of the diseases caused by constipation is appendicitis. If you would avoid this dangerous disease, keep your bowels regular. For this purpose Chamberlain's Tablets are excellent, easy to take and mild and gentle in effect.—Adv.

Wallace Reid Again

Genesee picture fans will again have an opportunity to see one of Wallace Reid'ssplendid pictures—"The World's Champion," at the opera house Saturday night. The story follows: William Barrow, son of John Burroughs, a prosperous Britisher who aspires to the society of noblemen, prefers fishing to studying theology and while indulging in that pastime meets Lady Elizabeth Galton, woos her and is thrashed by her cousin, Lord Brockington, who also loves her.

Denounced by Burroughs, William leaves that night and soon afterward is working his way aboard ship to America. Seven years later William returnes and finds Lady Elizabeth, her fortunes diminished, working as social secretary for his people. Borroughs is still clambering for a social rise and when he learns William has been a prizefighter in America, is greatly distressed. The reporters get wind of the story, and the next issues of the paper announce the home-coming of Sunbeat Williams, middleweight champion.

To Burrough's surprise, several of the nobility call to pay their respects to William, each seeking him as his guest. Relizing he had made a mistake, Burroughs changes his attitude and gives a banquet in honor of his famous son. William resumes his romatic acquaintance with Lady Elizabeth who turns cold, however, upon learning he has been a ring fighter.

You will want to know the rest of this fascinating story, with Wallace Reid as the hero—Saturday night.

City Council Meeting

The regular monthly meeting of the council was held Monday evening when members of the old council wound up the business of the fiscal year and turned the affairs of the city over to the new officers. All members of the old council were present with the exception of G. E. Taber, who was absent from the city. After the bills had been approved and allowed, the new mayor and members of the council were given the oath of office and they at once organized and proceeded to business. The new officers are: John Meyer, sr., mayor; councilmen, first ward, W. F. Jain and R. S. Sullivan; councilmen, second ward, Leon Follett and G. E. Sampson. Mr. Sampson and Mr. Sullivan were old members of the council.

Mayor Meyer appointed the following committees: Finance, Leon Follett; police and health, R. S. Sullivan; streets and public grounds, W. F. Jain; fire and water, G. E. Sampson. W. R. Hickman was appointed marshal and street commissioner; Ed Vanouck was appointed fire chief and Thos. A. Feeney, city attorney.

A committee consisting of Walter Jain and R. S. Sullivan was appointed to have the band stand in the city park repaired and painted, the same to be completed before Decoration Day.

The city marshall was instructed to make a strenuous effort to collect all dog taxes and to issue metal tags for the same, which tag must be placed on the dog's neck. In case the tax is not paid the marshal is instructed to kill the animal. The taxes are $5 for females and $2 for males.

The Smiths Heard From

Genesee friends have received word from Mr. and Mrs. John A. Smith, who left a short time ago for Canada to make their home. Extracts from the letter follow:

After a short visit with relatives at Pullman they went to Spokane, and on Wednesday, March 21, we secured the settler's rates and got our baggage checked and on Thursday, March 22, at 7 a. m. we boarded the train for the land of King George.

"Our trip the whole way was very pleasant and was marked by the nice people we met. We landed at our destination Saturday evening and were given a welcome reception by the people who stopped with the first night(the depot agent and his wife). They were very English, but such nice, courteous and congenial people that we felt at home at once. As we arrived a week ahead of time we went for a visit with my step-brother and wife, who like it fine here and they are getting to be real Canadians. After a week's visit we drove back to the town where we are located. Our town is called Superb, which means grand and stately. It is a very nice little town.

"We are living in the office at the present time as the folks who live in our house haven't left yet. Our house has five rooms—kitchen, dining room, front room and two bed rooms, one clothes closet, a pantry, etc.; is plastered and painted grey. I'm sure you can't make a mistake when you come to visit us.

It is a beautiful day and I can see for miles and miles. I can imagine seeing Genesee in the distance—or maybe it is Pullman."

Linger Longers Meet

The Linger Longer club met with Mrs. Thomas A. Feency on Wednesday afternoon. The time was spent in fancy work and having a social good time. A delicious luncheon was served by the hostess.

The invited guests were Mrs. Glen Sampson, Mrs. Chas. Whalen, Mrs. F. J. Niemann, Mrs. Frank Hoorman, Mrs. J. J. Tupker, Mrs. Frank Allen, Mrs. Sophia Ebel, Mrs. W. M. Herman, and Miss Louise Donnelly of Spokane.

The next meeting will be held with Mrs. Frank Hoorman.

Never despise the perspiring boy behind the soda fountain. He can give you an extra allowance of cream if he so wishes.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MAY 18, 1923. — NO. 46

PARENT-TEACHERS' ASSOCIATION MEETING HELD

On Monday evening of this week a very interesting meeting of the Parent-Teachers' association was held at the school house. This was the last meeting of the present school year and was better attended than any of the previous meetings held during the year. The high school assembly room was filled to capacity and even standing room was at a premium.

After some good musical numbers Supt. Thomas briefly addressed the assembly on the values of various types of education and responsibilities of our citizens and our schools. The training of the child in the elements of good citizenship was traced from the beginning at home, through the grades and high school. It was pointed out that the home shares a greater part than the schools in this training of responsibilities. The type of education advocated as being desirable was that in which neither the vocational nor the strictly academic, or "book learning" courses held sway, but rather a happy and judicious combination of the two. Either type alone does not complete the child's education and he permit him to compete on an equal basis with the children of other communities once he is through school.

In the same way the high school education is necessary. Can a man really help to manage a republic if he lacks the elements of a good training in citizenship?

The matter of depreciation of property values in and about Genesee was mentioned in connection with the loss of courses from the improved school and the entire school itself. No one wants to buy property where there are not good schools and a good many people would like to sell. A better spirit of friendliness and cooperation was urged. Some of the possible solutions for the problem were, voting additional bonded indebtedness; voting special tax levies, and consolidation of districts. Of the three the latter was recommended as the most desirable step for the insurance of a good school for the future. People were urged to inform themselves of all angles of the situation and to hesitate in passing unstudied and hasty judgment upon the matter. Careful study and examination of facts should be the rule.

The association passed a resolution favoring the consolidation of schools. Another resolution asked for the continuance of the high school.

The association decided not to back a lyceum course for Genesee for next winter.

Death of W. J. Jordan

W. J. Jordan, general agent for the Northern Pacific, with offices at Lewiston, passed away at a Portland hospital Monday at noon, after suffering for some two years and having undergone several operations, from what is said to have been concer of the stomach. Mr. Jordan was taken to orPtland last January and had been confined in a hospital there since that time.

He was well and favorably known throughout this entire section of the Northwest and was universally liked by all.

His family have the sympathy of this entire community in their hour of trouble.

Are Pleasantly Surprised

The Pythian Sisters gave a very pleasant surprise Tuesday evening in honor of Mrs. Chas. Jain and daughter, Miss Olive, who will leave shortly for California to make their home. Each were presented gifts as mementos from the lodge. After a social evening refreshments of sherbet and cake were served.

There were 18 members of the lodge present and all wished Mrs. and Miss Jain good luck and much enjoyment in their new home.

SCHOOL BOARD FORCED TO TAKE DRASTIC ACTION

At a called meeting of the Genesee school board last Wednesday evening every phase of the school situation was gone carefully over again, seeking some possible solution of the problem to save our school, but all in vain.

The action of the state legislature, coupled with the reduction in assessed valuation and the extra burden of educating the children who have been coming to us in increasing numbers from adjoining districts during the past 15 years, has imposed a burden too great for the district to bear.

The board voted to sacrifice first the agricultural and domestic science departments. The salary of the manual training instructor and janitor was cut, as was the salary of each of the teachers of the grades.

Every member of the board was reluctant to sacrifice so much of the future education of our school children but it had to be done in order to continue our school.

The board will be ready and glad to remedy the situation in the re-establishing of our high school when a solution through consolidation or any other method can be found.

It is now up to every voter of the Genesee country to get behind the issue and solve the situation which, unless saved, will cost every property owner many thousands of dollars in depreciation of property values. When our high school goes our churches and all our progressive people will go with it.

"The Call of the North"

Galen Albrat, a cruel factor in the employ of a great and powerful fur company of the Canadian northlands, sentences Graham Stewart to "La longue traverse," or the journey of death, after being led to believe by Andrew Levoy, a treacherous employe of the factor, that Stewart had carried on an intrigue with Albret's young wife, of whom he is insanely jealous.

Although innocent, Stewart makes the journey and is slain by Levoy, who thus destroys all evidence of his perfidy. Stewart's wife died of her young son, on learning of his father's fate, swears vengeance against Albret. When he becomes a man, he goes to the upper country under the name of Ted Trent and establishes a post where he trades with the Indians who are on their way to Conjuror's House, where Albret's post is still doing business. Albret sends Achille Picard and some Indians to capture Ned. He saves Picard from drowning but is captured and taken to the post where he meets Virginia, daughter of Albret by his wife who died many years before.

Virginia falls in love with Ned and provides him with a rifle so that he may escape from the post. He is captured again and Albret threatens to shoot him if he refuses to reveal the name of the person who had given him the rifle. Ned refuses, but Virginia tells her father that she had supplied the rifle.

The entire story is full of pep and interest and you will want to see it—at the opera house Saturday night.

Pleasant Birthday Surprise

The home of Mr. and Mrs. Ben Mochel on Sunday was the scene of a very pleasant family birthday surprise in honor of the sixty-first birthday anniversary of Mrs. Mochel, when their sons, Leonard, Henry and Chester, accompanied by their families, came up from Lewiston in the morning, bringing with them the necessary ingredients for a big birthday dinner, including the indispensible brthday cake, which was surmounted by sixty-one candles. The event was also in observance of Mother's Day.

A very enjoyable day indeed was spent.

WHAT HAPPENED HERE TWENTY YEARS AGO

Chris. Steltz, Henry Meyer, Mrs. P. S. Bell and Mrs. Donahue left Tuesday morning for La Grande, Oregon, to make final proof on their timber claims.

Mrs. W. E. Smith is in Spokane with her baby, who has undergone an operation at the hospital. It is reported as doing nicely and she will be home in a few days.

E. J. Bru made a purchase of the Peter Johann residence property the first of the week, paying $950 for the same. Mr. Johann will again take up a residence on his farm west of town.

F. E. Becker came up from Lewiston Tuesday to remain a few days. He will move his family up June 1, at which time he will get possession of the Hodgins property which he recently purchased.

Herman Nebelsieck last week let the contract for the erection of a $1200 barn on his ranch west of town. It will be a duplicate of the D. Scharnhorst barn in the western part of town except that it will be two feet higher in the center.

Herman Broemmeling met with a painful accident last Friday. While opening a jar of fruit, in twisting at the top, the jar was broken. On a jagged corner of the glass a deep cut nearly three inches in length was made, severing two arteries. Drs. Conant and Ehlen dressed the wound.

Work of moving the Follett Bros. store out into the street was commenced this week by Peter Steltz, preparatory to the erection of the handsome brick store building. The portion of the stock that has been kept in the annex will be moved into the new building and business will be carried on as usual in the new location.

The two-year-old son of Mr. and Mrs. Ed. Peterson got possession of a small bottle of aconite Tuesday and when discovered had emptied the contents. Fearing he had drank a portion of it they hastened to town with him for medical treatment. No signs of poison developed however, much to the delight of the parents.

Monday John Larrabee purchased from Jos. Alexander, J. H. Gaffney and Edwin London the building in Genesee familiarly known as the "iron building," and now occupied by Arthur Harris. As soon as Mr. Larrabee can get possession he will begin the remodeling of the structure and proposes among other things, to change the front. The present one will probably be replaced with a steel one which will give the building an un-to-date appearance. His object in making the purchase is to as soon as possible open up a store. A feature of the purchase is that Mr. Larrabee is again owner of the building erected by him in 1888, which was the first large building erected in the town.

Chautauqua Mill Grinding

The Genesee chautauqua will be opened here on Sunday, June 10, and will continue for six big days—afternoon and evening. P. N. Mitchell, advance man, was in the city Tuesday afternoon and evening and at a meeting of those interested in putting the affair across, stated that the program to be given this year is the very best that has been offered for three or four years.

While of course there are a few lecturers on the program the predominating feature will be music—and a play—"The Shepherd of the Hills." Mr. Mitchell stated that while there had probably been a picturization of this wonderful play, yet there was no semblance between the picture and the spoken drama.

The price for season tickets will be the same as heretofore and you will be called upon by ticket sellers in plenty of time to attend all of the entertainments—and get an oportunity to take advantage of buying a season ticket in advance.

The dates are June 10 to 15, inclusive—don't forget them. Just save a little gasoline money, if you can't think of any other way, and apply it on six days of wholesome entertainment and education.

The full program will be published next week. Watch for it.

Should be Represented

Expressions have come to Spokane Chamber of Commerce from a number of communities that they would like to participate in a general meeting devoted to the consideration of the various phrases of community relations and at their suggestion a plan has been arranged for such a meeting to be held in Spokane, May 22.

Word has been received from Mayor Hill, of Walla Walla, stating that he will give his ideas on community relations at a noonday meeting. The official program calls for conference governing the relations of the community to the farmer, community development and diversified farming.

It has been requested by the Inland Empire Relations committee, who is in charge of this meeting, that the presidents and secretaries of all organizations be present at this meeting, so that a good representation may be had.

Genesee should be represented at this meeting.

Stir your steps. You won't get anywhere by sitting around in your own shadow.

GENESEE SCHOOLS CLOSE —FIFTEEN GRADUATES

The Genesee schools close this week and their closing ends one of the most successful years of school work that has ever been undertaken here. All departments, from the primary room to the graduating class, show the splendid judgment of Supt. Frank H. Thomas and the efficiency of his corps of assistants and Genesee should indeed be proud of the success attained by them and there is little doubt that all others of the community, with the Genesee News, fully appreciate the good work done and extend sincere thanks to them for the splendid work done.

The list of graduates of the class of '23 follows:: Norris Sather, Albert Anderson, Carrie Mae Hickman, Victor S. Casebolt, Robert Parks, Jasse Gray, Dwight Becker, Bernadine Hasfurther, Hertzel Edwards, William McCreary, Madeline Hasfurther, Florence Alber, Frank Wilson, Ethel Nelson, Thomas Platt.

The baccalaureate sermon, the first event in connection with the closing of the schools, was preached Sunday night in St. John's Evangelical Lutheran church by Rev. Wayne S. Snoddy of Moscow and was heard by a capacity house and many compliments were heard regarding the splendid sermon delivered. Special music was rendered by a mixed choir and was thoroughly enjoyed by the large audience.

The next event of the closing week was the class day exercises held in the opera house on Thursday evening, which were also enjoyed by a capacity house. The following program was given:

Girls' Octette—Kentucky Babe .....
..... Adam Geibel
Vocal Solo—Mother Machree....Young
Conrad Caldwell
Pianolgue—Dreamin' In de Moonlight .....
Estel Rogers
Class History ..... Albert Anderson
Vocal Solo—One Fleeting Hour .....
..... Karl Fuhrmann
Jesse Gray
Salutatory ..... William McCreary
Class Prophecy ..... Ethel Nelson
Vocal Solo—Roses by Summer Forsaken .....
Wilma Casebolt
Valedictory ..... Dwight Becker
Class Will ..... — Frank Wilson

On tomorrow evening (Friday, May 18) the commencement exercises will be held in the opera house and the following program will be rendered: Opening March—Anniversary March
..... Sibley G. Pease
Olive Jain
Invocation .... Rev. James N. Pendleton
Double Quartet—Nightengale and Rose ..... Carl Lehriert
Mrs. W. W. Burr, Mrs. Fred K. Bressler, Mrs. Fred Hampton, Mrs. R. I. Witty, Mrs. F. J. Niemann, Mrs. R. E. Emmett, Miss Esther Martinson, Miss Edith Winegardner
Commencement Address .....
..... Prof. James O'Gorman
(University of Idaho)
Vocal Solo—An Open Secret .....
..... Nordman
Mrs. W. W. Burr
Presentation of Diplomas .....
..... Supt. Frank H. Thomas
Benediction ..... Rev. F. L. Goodchnix

Every one will be welcome at these exercises and it is hoped that all will come on time in order that those who desire to get the most out of the entertainment will be allowed to do so without undue disturbance.

Professor O'Gorman, who will deliver the address of the evening, is a pleasing speaker and there is no doubt but that his address will be entertaining as well as instructive.

New Sedan Over Grade

About one of the most complete wrecks that has ever happened on the Lewiston grade occurred last Friday evening about 5 o'clock near the refreshment stand and spring on the Lewiston Hill highway. The sedan a new Cleveland, belonging to Spokane parties, was coming up the grade and when at a point just above the refreshment stand seemed to turn square from the grade and roll down to the bottom of the gulch, a distance of several hundred feet, turning over and over in the descent, landing at the bottom, a complete wreck. The car is said to have contained two men and two women, all of whom were pretty badly scratched and bruised, but no one was killed or seriously hurt.

The injured persons were taken back to Lewiston by passing motorists.

Walla Walla Pageant

Albert Fix of Walla Walla arrived in the city the latter part of last week from Walla Walla for a visit with his sister, Mrs. Amelia Rader, and family. Mr. Fix was placing advertising for the pioneer pageant to be held in his home city on June 6 and 7, next. This is said to be one of the biggest affairs of the kind that has ever been undertaken in this section of the great Northwest. It will depict all forms of pioneer activity and customs and it is said that more than three thousand people will take part.

Mr. Fix was formerly in the mercantile business at Uniontown and is now engaged in the same line of business at Walla Walla.

A "For Sale" ad. will sell your stuff.

Notice to Holders of Victory Bonds

HOLDERS of Victory Bonds uncalled are requested to turn same in for payment. These bonds do not bear intesest after May 20, 1923. If you will deliver your bonds to this bank we will be glad to handle them for you.

REASONABLE SAVING HELPS US ALL

MUST GET FLY TO KILL THE CHERRY MAGGOT

No doubt most everyone in this community has had the experience of getting cherries to can or of going to the orchard to pick cherries and found them to contain a small white worm. Several people have said that they picked their cherries early, before they became wormy. From what is now known of the pest one would have to pick their cherries before they turned if they were to beat the worm to them. Therefore when the cherries are picked before they are fully ripe you are only catching the worm before it is large enough to be noticed.

This worm that is found in the cherries is the maggot of a two-winged fly that is closely related to the dreaded Mediterranean fruit fly. It is from one-half to two-thirds as large as the ordinary house fly, nearly black, with yellow legs and head.

These flies make their appearance in the orchards the last of June or first of July, about the time the cherries show color. In about 10 days they lay their eggs just underneath the surface of the fruit. The eggs hatch in from five to seven days and spend several days in the fruit. They eat the flesh of the cherry and grow to maturity. When mature they work their way out and drop to the ground and bore a few inches below the surface. Here they spend the winter in a pupa case about the size of a grain of wheat and emerge in the fly stage the following June.

Since these maggots hatch underneath the skin of the fruit it makes it impossible to kill them with a spray. The only remedy is to attract the adult fly. The following spray is recommended for the flies: Lead arsenate, ½ pound; sirup, two quarts; water, 10 gallons; apply this to the trees about the time the Royal Anns start to show color as this is about the time the fly appears, and then another application 10 days later. Apply in a very fine spray. Do not use any more spray than is necessary to cover the tree—usually about a quart.

Blue Bird Club Meets

The Blue Bird club met at the home of Mrs. Arthur Hampton on Tuesday, May 15. After a short business meeting the following program was given:

Piano solo—Eva Hampton.

Playlet—"The Beauty Doctor"—Mrs. Arthur Hampton, Mrs. Nels Lande, Mrs. Arthur Tegland, Mrs. J. Borgen, Mrs. A. Peterson and Miss Eva Hampton.

Vocal solo—Mrs. J. Borgen.

After the program a delicious luncheon was served by the hostess, assisted by her daughter, Eva.

The invited guests were Mrs. August Johnson, Mrs. J. H. Jackson, Mrs. George Rader, Mrs. Milton Rader and Mrs. Woodley.

Gave Stag Party

The Knights of Pythias gave a stag party and smoker last week in their hall in honor of Chas. Jain, who will leave shortly for California with his family, where they expect to make their home. Mr. Jain was presented an emblem ring and along with it he received the very best wishes of the entire lodge membership. Plenty of cats and smokes put every one in a good humor—even Charley forgot he was soon to leave his host of good friends, for a time, at least, and joined in the hilarity of the evening.

His old-time friends here will send with him their very best wishes for continued happiness and prosperity in the land of sunshine.

Owns New Ford Sedan

Mrs. Ida Wheeler is the proud owner of a new Ford two-door sedan.

W. W. Gray also is the owner of a new four-door Ford sedan.

INTERESTING COMMUNITY MEETING HELD WEDNESDAY

A very interesting community meeting was held Wednesday noon at Smolt's when more than 30 residents of town and country gathered to eat and talk over community problems. In saying community problems, it does not mean the problems of the city of Genesee altogether—not by any means—but the problems of the entire community adjacent to the town.

This time it happened that the particular problem for discussion was whether or not the Genesee High school should be kept up, the Genesee High school is to be retained or whether it is to be abolished for lack of funds.

It seems that the last legislature "played holds" with the Genesee school district in their campaign for retrenchment along all lines they hit one of the most vital spots in our existence as an enlightened city, county, state or nation—that of placing the schools, not only of Genesee, but other places as well, in a position so they will be unable to meet necessary running expenses on account of a reduction of the levying power of the district.

Not only was the levying power of the school trustees reduced to a prohibitive degree, but the members of the legislature were so anxious to reduce the farmers' expenses that they made it impossible for the school district of Genesee to collect more than $ 9per month for each pupil schooled from outside districts whereas it costs more than $13 for the Genesee district.

Another community meeting will be held in two weeks, announcement of which will be made in the News. Watch for it. You will be interested.

A mass meeting of town and country people will be called shortly and every farmer in each of the surrounding districts will be asked to be present. The school problem will be discussed by men who are familiar with all phases of the consolidation problems and you will be interested to know just how they may be solved.

Completes Instruction

Last week Miss Clara Cowgill, district home demonstration agent of the extension division of the University of Idaho, finished conducting a series of millenery and dress form classes in various communities of Latah county. Millenery classes were held in Viola, Genesee, Cove, Big Bear Ridge, Deary, and Cedar Creek communities. Each millenery class required three days, and there was a total attendance of 266 at the sessions of these classes. Fifty-two new hats and fifteen shapes were made and two old hats remodled at a total cost of $140.85.

Dress form classes were held in Upper Crane Creek, Lower Crane Creek, Pine Grove, and Fix Ridge communities. The dress form classes required one day each. There was a total attendance of 60 at the four classes and 30 dress form were made.

These extension classes for women of the county were arranged by and conducted under the supervision of County Agent O. S. Fletcher, as a part of the regular extension program for Latah County.

Genesee Cleaned

At the game of ball on the local diamond last Sunday afternoon Kendrick, the visiting team, carried off the "honors" by a score of 13 to 12. The slogan seemed to be "hit and run," from the number of scores piled up on both sides.

Is Visiting Daughter

Mrs. M. E. Chase of Post Falls arrived Sunday night for a visit with her daughter, Mrs. F. S. Casebolt, and family.

Prosperity In Your Pocket Often Becomes Adversity

The people who save are the ones who systematically put their money in a bank until they are aple to invest it to better advantage.

When a fellow keeps his roll in his pocket there is always a temptation to "peel it off." Continued peeling eventually brings a person to the point where there is nothing left to peel.

Where do you keep your roll?

THE DANGEROUS AGE

Fictioned by
CONRAD GIBSON

INSTALLMENT NO. 9.

He again began to speak, but with the same little gesture as before, she placed her finger over his lips and said:

"No, John, dear boy, not now. Let's just sit and talk of how dear we are to one another, and of love and of all the nice things that have come to us. Will you?"

He turned and looked upon her as she nestled closely against his breast, and he sighed to himself. She was bewitching him. A light shone in his eyes which Mary had not seen before. He seemed unable to withold what was in his heart. He felt unable to be false to her now. His twisted, his fingers working nervously over the lacy fringe of her gown.

Then, even as the bride in the house next door had done on that even when John had looked so enviously upon their movements, Mary placed her other arm about her husband, implored him to come along, then raised, turned out the light and led him slowly up the wide stairway to the rooms above.

"Come with me, sweetheart," she said softly. "You're weary, I know."

He followed, muttering to himself quiet beneath his breath. Of course she ought to be told. He wanted to make a clean story of it all. Tell her of his weakness—his foolishness. He must.

But Mary was not to be overruled. As he grasped her tightly in his arms when they had entered their bedroom and began again to speak, she placed her palm across his mouth and shook her head prettily.

"Don't speak to me of all those horrid nights you spent away from me, dear. And I know now badly you feel about our dear little Ruth going away and leaving us. I feel the same way about it. It has almost driven me mad to see her go. Look at me now. I have felt for days that I could not stand it an hour longer. All alone, without Ruth, or you. It has been dreadful. Yes, and it isn't fair the way people always feel sorry for the mothers. The fathers, too, ought to come in for at least a little bit of sympathy. Don't you think so, my dear? They have the same feeling of loss as the mother. I think that's a question we ought to think about. I admit I haven't always been as thoughtful of my dear John as I might have been. But now he and Mary are left alone to themselves, and I'll promise to be better, my darling. I—"

But he could stand it no longer. He must defend her. He broke in upon her with:

"Mary, my darling wife, no man has ever been happier than I. I don't seem to be able to tell you exactly how I have felt about it. You must not talk that way. You've been a wonderful girl, always—and you are now."

He was stumbling along with his words—tangling them—failing to do with them precisely what he wished to do. He hesitated a moment, and Mary looked into his eyes. She saw again the old formation of a determination to say something which he disliked to say, but which he knew he must say.

"But, Mary," he began, before she could stop him, "there's a lot of things I've got to tell—"

"Not tonight," she cut in. "Not tonight. I will not have you fretting like this."

She stood before him and slowly extracted from her gown the letter—the dread letter which had caused her husband so many pangs of regret.

"Please, Mary," he almost shouted at her, appealingly. "Please don't read it. It's nothing. I don't want you to."

She held it before her, a look of astonishment in her eyes, while her husband, his hands visibly shaking, reached up toward her, almost prayerfully.

"No, dont read the thing," he said. And then, weakly: "It's just silly."

Mary laughed merrily, and said:

"Why, John, surely you're not ashamed to have me read a love letter from my own husband. What foolishness. Certainly you don't care if I read my own mash notes do you, dearest?"

As she stood there, the letter held firmly in her hand, the heavy, scrawled address beaming down into John's eyes, all the agony of the fleeting moments that had come and gone since he had written it and dropped it into the mail box swept over him. He saw again the scene of himself standing in a hallway waiting to see a woman whom he had no right to see, and he felt again the pang of remorse, the stinging, cutting conscience stroke that had come to him when, at last, he had realized Gloria Tuyl had only been playing with him. He realized now if he had not realized it before the utter impossibility of happiness from such a ridiculous situation as he had builded so falsely on his trip to New York, and he cowered and almost sobbed as he looked upon his own dear wife who stood now above him, looking down upon him with the same feeling of love and pity which a young bride casts upon her embarrassed lover.

"Mary," he began anew, "I want to tell you something that's awfully important. I—"

She would not accept it. Her face gre wtense, but it did not cast off the expression of love which had wreathed it since his return.

"I've told you, John," she spoke firmly, "that I can't listen to old matters of business now. We'll discuss all those things after tonight. For us now there is nothing but contentment and happiness, and a little bit of that romance about which you used to talk so much. It has come to me. I feel now that I am happy and carefree again. I walked last night in the garden. I saw beauty and great meaning in the grandeur of the sunset, in the coolness of the evening breeze which swept over me. It has all come back as I would have it come. We can be very, very happy now. That is, if you'll give up talking about the terrible old business things you encountered in New York. I'm entirely out of patience with business and commonplace things. I want to be loved, John, and loved in the good, old fashioned way. Here—"

She drew more closely beside him and placed his hands about her as she had placed them when they were sweethearts. And once they sat for many a minute that night, while in her fingers she held the ominous and fateful letter. He thought of asking her to give it to him, then of snatching it from her. But these actions, he concluded would only involve matters. No, he would be honest now, even though he had been dishonest before. He would be honorable now or die in the attempt. He had learned his lesson. He had sought new life beyond his own home, and had come back a whipped and wiser man.

As he was considering these things, Mary slowly rose and walked to the fireplace, in which a small blaze was leaping. She smiled back at her husband, and saw his lips move again as he watched her handle the little square envelope and paper. Now she would read it. Of that he had little doubt. But she did not. Instead, she held it high in the air so that he could have one clear view of it, then she dashed it quickly into the blaze, and it was consumed, curling up, as they watched it silently, into ashes that crumbbled and in little white flakes drifted up the chimney.

"There's my love letter," she said, finally. "You don't want me to read my own mail. And if I can't read it, nobody will." She spoke lightly, smiling, and in her voice was a note of triumph.

"But you don't even know what's in it."

"Why, my dear old boy, should I want to read it, when you're here to tell me all that was in it, and more, much more besides?" she asked calmly. "I'd rather you'd tell me now that you care than to have you write it to me, darling, no matter how many times you repeated it, or how big the letter, or how fast it got

"Mary," he said passionately, rising and rushing to her side, "I love you! I love you as I have never been able to love you before. It has always been a pretty big love, but now it is overwhelming."

His eyes were bright. As if he had thrown off a great cloak of darkness, he emerged a happy, contended, satisfied man. The letter was gone. No evidence of his guilt. Maybe, after all, it was better she should not know. Common decency ought to have told him so before. He loved Mary, so he ought not to want to hurt her. Yes, the letter was gone. All the horrors of an awful nightmare wiped away. He had erred and he was sorry. Deeply sorry. Would she forgive it she knew? Yes, she would, he felt.

"I know you do love me, John," she said softly, her face pressed closely against that of her husband. They stood silently for a long time. He caressed her shoulder with his now calm and steady hand. She breathing deeply, contentedly.

"You know, John," she said after quite a time had elapsed, "I was a little afraid and jealous while you were so far away. You know, they say a man in New York at forty—"

But she could not proceed. John interrupted her. With a strong voice, he said:

"Is not so damn young as he thinks he is!"

(The End)

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

President Alvear, in a message to the Argentine congress, said he would report concerning re-entry of Argentina into the league of nations, so as to obtain congressional action at the present session.

A resolution has been passed by the executive committee of the committee of 48 asking Senator William E. Borah of Idaho to be the progressive candidate for president in 120. J. A. H. Hopkins was named chairman of the campaign committee.

The nation's March gasoline production established a high record with 630,701,355 gallons, the department of the interior announces.

George Withers, postman at Farnham, England, has been on the job daily since 1877 and has never been late for duty. It is estimated he has walked 210,000 miles.

The old rivalry that exists between San Francisco and Los Angeles and the northern ports has seriously hindered the program for national defense, Admiral Eberle, commander in chielf of the Pacific fleet, told the American Legion here. "The coast cities should forget their selfish desires and work in unison on a defense program for the western slope," said the admiral. "Each port will have what is suited for it, if the navy is allowed to use its experience in selections."

American Legion promoters announced today they had plans ready to commence construction of a $50,000 arena at Shelby to stage the Dempsey-Gibbons fight immediately articles are signed. Attorney General Rankin, in an opinion, declared the bout legal. Tickets are already on sale with immense demands.

President Harding will attend Fourth of July celebration, sailing from Portland for Alaska July 5, he told Senator McNary today. Returning from Alaska, the president will land in Seattle, going to California from there.

It is learned on high authority here that the American government may soon withdraw recognition from China if evidence that the Chinese government is incapable of exercising authority continue to accumulate.

The United States will take a stand against the use of narcotics for other than medical or scientific purposes, at the meeting of the opium advisory committee of the league of nations at Geneva this month, advised Secretary Hughes in an address at the anti-narcotics conference.

Barred from two states—Illinois and Wisconsin—various groups engaged in selling Muscle Shoals real estate are nevertheless waging vigorous campaigns in other parts of the country. The Muscle Shoals real estate boom has grown so fast and spread so wide that at its meeting in Chattanooga the Tennessee River Improvement association felt impelled to issue a word of warning to prospective investors.

SETTLERS STRONG FOR NEW LAND LEASING LAW

Old settlers and stockgrowers of Idaho county feel good over the preference given them to release state lands adjoining their own grazing lands, according to I. H. Nash, state land commissioner, who gave out a statement in Boise, Monday, after being in the northern part of the state for the past week. The law giving them this preference was passed by the legislature of 1923. The bill providing for this law was recommended to the legislature by the state board of land commissioners, through the land commissioner.

It appears, Mr. Nash said, that the Brownlee Sheep company had been one of the organizations which, under the old law, was always the successful bidder when state grazing lands were put up for lease to the highest bidder.

Under the new law a small holder who runs a few cattle or sheep may have the preference over others when state lands immediately adjoining his own are put up at auction for lease.

IDAHO

Kootenai county shipped 380 cars of apples of the crop of 1922, according to the records of S. J. Klepfer, apple inspector for the state.

Dr. J. D. Adams, director of the state bureau of animal industry during the Davis administration and for four months under the Moore administration, retired from the position Monday, according to word from Boise, and will return to Moscow, his home city to again engage in private practice as a veterinarian. Dr. Adams was asked to remain with the present administration until his successor could be decided upon, but his resignation was filed April 19, with the request that he be relieved April 30. He will be succeeded by Dr. W. R. Smith of Boise. Dr. Adams, it is reported, will remain in Boise through this month, returning to Moscow about the first of June.

The announcement that the state highway department had joined with the forest service in allotting $482,000 for the Lewis and Clark highway was received with rejoicing in Lewiston and the entire Clearwater valley. This makes $932,000 allotted to this highway since the promotion was started in the fall of 1921 and leaves only 35 miles to be financed through the Selway national forest.

Representative farmers of Nez Perce and Asotin counties met at in response to invitations issued by the commercial club to organize a movement that will encourage the introduction of alfalfa on a more extensive scale. In this the farmers will have the direct aid of commercial interests and bankers in the towns of the two counties.

Marshall Smith, of Lewiston, Idaho, is now preparing a tract in Lewiston grounds for the establishment of a Silver fox farm. Mr. Smith is associated in this business with several Lewiston citizens, and it is planned that the farm will contain approximately 75 pairs of foxes.

A new garment factory will begin operations at St. Maries, in about three weeks. Some machinery has arrived, and more will be received and installed as fast as the plans develop. R. L. Stripe, superintendent of the new factory, is now in St. Maries supervising the work.

When he was setting a gun down beside a stump it accidentally exploded, tearing the top of Ira D. Bradshaw's head off, decided Coroner F. M. Leitch. Bradshaw had just left his ranch home near Kendrick to shoot squirrels.

The interior department has thrown open 222,000 acres land in Owyhee county, Idaho, for settlement under the homestead act, for ex-service men.

Cottonwood's automobile park, established last year under the direction of the Cottonwood Commercial club, and used quite extensively by tourists will be greatly improved this spring. Last fall the ground was leveled and within a few days some 20 trees will be planted about the grounds. A week ago the ground was seeded to clover and blue grass.

IDAHO TO TAKE PART IIN BIG DAIRY EXHIBIT

Governor C. C. Moore has given his approval for the extension division of the state of Idaho to participate in a transcontinental dairy train proposed for the education of persons engaged in the dairy industry as well as to stimulate added interest in this business, says the Idaho Statesman.

If the proposed itinerary is carried out the train will visit the northern and southern portions of the state.

The idea originated, according to L. W. Fluharty, director of the Idaho extension division, with L. K. Hatch, director of extension in Wisconsin. In the plan laid before Mr. Fluharty in a letter from Mr. Hatch it is proposed to start the train in Wisconsin and traverse the states of Minnesota, North Dakota, South Dakota, Montana, Washington, Oregon, Idaho, and end the trip in Utah.

Breeders' associations in the middle west are sponsoring the proposed transcontinental train which will be run to show the improvements made in all branches of the dairy industry. Improved types of dairy cattle as well as improved methods of the industry will be shown on the train. Feeding methods will be demonstrated as well as the most up-to-date dairy manufacturing equipment.

All lectures delivered at points where the train stops will be by the foremost dairy experts in the country, Mr. Fluharty said.

Diderot—Distance is a great promoter of admiration.

After 134 Years

The 134th anniversary of the inauguration of our first president was marked by a stirring scene as New York School children on April 30th trod the ground upon which Washington stood to make his inaugural address and take oath of office. The statue is located in New York, at Broad and Wall Streets, in front of the U. S. Sub-Treasury Building.

MY LADY'S MONEY

An Espisode in the Life of a Young Girl

By Wilkie Collins

INSTALLMENT NO. 1.

CHAPTER I.

Old Lady Lydiard sat meditating by the fireside, with three letters lying open on her lap.

Time had discolored the paper and had turned the ink to a brownish hue. The letters were all addressed to the same person—"The Right Hon. Lord Lydiard"—and were all signed in the same way—"Your affectionate cousin, James Tollmidge." Judged by these specimens of his correspondence, Mr. Tollmidge must have possessed one great merit as a letter-writer—the merit of brevity. He will weary nobody's patience, if he is allowed to have a hearing. Let him, therefore, be permitted, in his own high-flown way, to speak for himself.

First letter: "My statement, as your lordship requests, shall be short and to the point. I was doing very well as a portrait painter in the country, and I had a wife and children to consider. Under these circumstances, if I had been left to decide for myself, I should certainly have waited until I had saved a little money before I ventured on the serious expense of taking a house and studio at the west end of London. Your lordship, I positively declare, encouraged me to try the experiment without waiting. And here I am, ruined and unemployed, a helpless artist, lost in London, with a sick wife and hungry children, and bankruptcy staring me in the face. On whose shoulders does this dreadful responsibility rest? On your lordship's!"

Second letter: "After a week's delay, you favor me, my lord, with a curt reply. I can be equally curt on my side. I indignantly deny that I or my wife have ever presumed to use your lordship's name as a means of recommendation to sitters without your permission. Some enemy has slandered us. I claim, as my right, to know the name of that enemy."

Third (and last) letter: "Another week has passed, and not a word of answer has reached me from your lordship. It matters little. I have employed the interval in making inquiries, and I have at last discovered the hostile influence which has estranged you from me. I have been, it seems, so unfortunate as to offend Lady Lydiard (how, I can not imagine); and the all-powerful influence of this noble lady is now used against me. Struggling artist who is united to you by the sacred ties of blood. Be it so. I can fight my way upward, my lord, as other men have done before me. A day may yet come when the throng of carriages waiting at the door of the fashionable portrait painter will include her ladyship's vehicle, and bring me the tardy expression of her ladyship's regret. I refer you, my Lord Lydiard, to that day!"

Having read Mr. Tollmidge's formidable assertions relating to herself for the second time, Lady Lydiard's meditations came to an abrupt end. She rose, took the letters in both hands to tear them up, hesitated, and threw them back into the cabinet drawer in which she had discovered them, among other papers that had not been arranged since Lord Lydiard's death.

"The idiot!" said her ladyship, thinking of Mr. Tollmidge. "I never even heard of him in my husband's life-time; I never even knew that he was really related to Lord Lydiard, till I found his letters. What is to be done next?"

She looked, as she put that question to herself, at an open newspaper thrown on the table, which announced the death of "that accomplished artist, Mr. Tollmidge, related, it is said, to the late well-known connoisseur, Lord Lydiard." In the next sentence the writer of the obituary notice deplored the destitute condition of Mrs. Tollmidge and her children, "thrown helpless on the mercy of the world." Lady Lydiard stood by the table, with her eyes on those lines, and saw but too plainly the direction in which they pointed—the direction of her checkbook.

Turning toward the fireplace, she rang the bell. "I can do nothing in this matter," she thought to herself, "until I know whether the report about Mrs. Tollmidge and her family is to be depended on. Has Moody come back?" she asked, when the servant appeared at the door. "Moody" was her ladyship's stewardship not come back. Lady Lydiard dismissed the subject of the artist's widow from further consideration until the steward returned and gave her mind to a question of domestic interest which lay nearer to her heart.

Second letter: "After a week's delay, you favor me, my lord, with a curt reply. I can be equally curt on my side. I indignantly deny that I or my wife have ever presumed to use your lordship's name as a means of recommendation to sitters without your permission. Some enemy has slandered us. I claim, as my right, to know the name of that enemy."

Third (and last) letter: "Another week has passed, and not a word of answer has reached me from your lordship. It matters little. I have employed the interval in making inquiries, and I have at last discovered the hostile influence which has estranged you from me. I have been, it seems, so unfortunate as to offend Lady Lydiard (how, I can not imagine); and the all-powerful influence of this noble lady is now used against me. Struggling artist who is united to you by the sacred ties of blood. Be it so. I can fight my way upward, my lord, as other men have done before me. A day may yet come when the throng of carriages waiting at the door of the fashionable portrait painter will include her ladyship's vehicle, and bring me the tardy expression of her ladyship's regret. I refer you, my Lord Lydiard, to that day!"

Having read Mr. Tollmidge's formidable assertions relating to herself for the second time, Lady Lydiard's meditations came to an abrupt end. She rose, took the letters in both hands to tear them up, hesitated, and threw them back into the cabinet drawer

Student Body Conference.

The semi-annual conference of the college student body presidents of the Pacific coast will be held jointly at Pullman and Moscow, starting May 19. The last meeting of the group was held at Berkeley last November, in conjunction with the annual meeting of the collegiate newspaper editors of the conference.

This will be the first time that either Idaho or Washington state has been the meeting place of the association. A committee of student body officers of Washington State college, headed by Milton Enslow, student body president, met here with A. S. U. I. officers to make final arrangements for the conference.

For mites in the hen house I use the dirty oil I secure when cleaning an automobile and mix with it a little kerosene. I paint the roosts, nests and coop with it. It does the work.

SAYS BUTTER WAS USED AS MEDICINE

Should Eat More—Canadians Use Twice as Much Per Capita.

"Use more good butter!" says Alfred Rishol of the dairy manufacture department of the State college of Washington, talking over radio broadcaster K F A E.

"We find records of the use of butter 2000 years before Christ. Reference is made to it in the book of Genesis, and King Solomon is quoted as saying "Surely the churning of milk bringeth forth butter.' In early times the Hindus used butter for the greatest and holiest sacrifice in their worship. The Greeks and Romans used it as a remedy for skin injuries. In some places the amount of butter a man has in storage is the basis for computing his wealth.

"More than a thousand years ago butter became an article of commerce. The first record of such use was of a shipment from India to Red sea ports. In the 12th century butter was a Scandinavian export.

"Americans average 15 pounds of butter a year. In Canada they eat twice as much, but in Italy only about a fifth as much as we. Strong, vigorous people have always been liberal users of butter. Herbert Hoover is responsible for the statement that the white race can not survive without dairy products, and history shows that butter-eating nations rule the world.

"A French report given out during the war made the statement that when the cows in the invaded districts died, the children died also. In the hospitals during the war the wounds of the soldiers failed to heal properly when oleomargarine was supplied with rations instead of butter. Great improvement was evident when butter was restored to the diet.

"Nature has given us no substitute for the milk fat she has provided, and man has tried in vain to invent one. Butter is an excellent food for everyone; we like it on mashed potatoes, corn-bread and griddle cakes. It adds flavor to every dish; it is healthful and appetizing. Use more good butter!"

NORTHWEST NEWS

The Northern Pacific railway will spend $148,302 for improvements and additions to lines in the northwest during the summer, according to announcement received in Spokane recently, by A. D. Charlton, general passenger agent.

Most of the money will be spent in and about the eastern Washington divisions. Work will start as soon as definite arrangements can be made.

Historical lore hitherto unwritten is rapidly coming to light as a result of interest in the pageant, "How the West Was Won," to be produced in Walla Walla, June 6 and 7. No less than three prominent pioneers have furnished information regarding Pacific northwest history which throws an interesting light upon events briefly heralded in historic volumes. This information is being gathered and compiled for use during the pageant. It is expected that at least 3000 actors will take part in this stupendous affair.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Agriculture—Now is the time to add another hive body if the bees are in one brood chamber. Give plenty of room for brood rearing.

Horticulture—Be ready promptly for the calyx spray. It is the most important codling moth worm spray. It is important on the west side for scab.

Bailey—Imagination is the air of the mind.

Farm Crops—Work corn and potato ground often before planting.

Farm Management—Figure carefully a sufficient acreage of potatoes, corn and melons to keep overhead expense to a minimum.

Plant Pathology—Spray with lime-sulphur as blossoms begin to open for second spray for California blight of apricot, peach, almond and cherry.

Clothing—No woman is well dressed who does not consider the relation of her clothes to health. Remember this in planning the summer clothes.

POULTRY

According to the United States department of agriculture, the disease of baby chicks known as bacillary white diarrhea can not be cured by any known method of medical treatment, but it can be stamped out of a flock by other measures.

This disease is the most serious confronting most poultrymen during the spring months because most deaths caused by it occur within two weeks after the infected brood has been hatched. Usually only a few of an infected brood are left alive, and these are unfit for future breeding purposes, as they serve as carriers and sources of future outbreaks. The malady is so prevalent and destructive in many sections of the country that various tastes are taking active measures for its control.

Incubators and brooders which have held an infected brood should be thoroughly cleaned and disinfected with a 5 per cent solution of carbolic acid before they are again used. If a flock of hens is found to carry the disease, the entire flock should be disposed of so that it will not again be used for breeding purposes, and replaced with birds from a healthy flock.

Several state agricultural experiment stations are conducting an agglutination test for the detection of chickens which carry the germ of bacillary white diarrhea. Because of the expense this method of eradication is warranted only in the case of very valuable stock.

Poultry raisers who maintain flocks free from disease carriers, or who obtain eggs for hatching, or day-old chicks, derived from such flocks, are practically assured of freedom from the scourge of the disease.

PALOUSE LAND IS PLANTED TO HAY

State Seed Commissioner Finds Tendency Toward Legumes Is Growing.

C. B. Ahlson, state seed commissioner and field agronomist of the University of Idaho extension division, recently spent a week in northern Idaho inspecting seed. Analysis of samples purchased by farmers and interviews with growers indicated to Mr. Ahlson that they are demanding pure seed for planting. On the trip he visited the dealers' establishments and found the seeds to be of a high quality. Only a few samples were condemned because of the presence of noxious weed seed.

Th high cost of hay in northern Idaho due to the shortage of production last year and high freight rates has many farmers to plant more part of their wheat land to hay, Mr. Ahlson finds. There is a tremendous increase in the acreage of legumes, especially alfalfa and sweet clover, in north Idaho due partly to the desire to grow more hay but as a result of addition of the legumes as soil improvers. The experiments conducted by the University of Idaho experiment station on the various substation farms show that land seeded to legumes makes ideal seed beds. Idaho county was cited by Mr. Ahlson as an example of the basis upon which to estimate the increase in legumes. He says that although an area of 1000 acres of alfalfa was being grown in that county last year fully 5000 acres in addition will be seeded this year.

The number of samples received this season at the main seed laboratory at Boise and the branch laboratory at Moscow indicate that the growers realize the value of securing a test before planting the seed. Inoculation is also very general in north Idaho this year and the expenditure of about 25 cents an acre for inoculating bacteria is proving an exceptional investment.

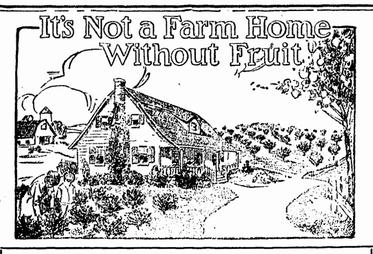
Towns on March Route.

Twenty-two cities and towns generally located on the Sunset highway between Spokane and Seattle, have been included in the marching itinerary of the Fort George Wright troops, who are leaving Spokane, May 15, to march to Camp Lewis.

Towns and cities along the route of the march include Deep Creek, Reardan, Davenport, Creston, Cavan, Hartline, Wilson Creek, Soap Lake, Ephrata, Winchester, Vantage Ferry, Burton, Ellensburg, Cle Elum, Easton, Denny Creek, North Bend, Falls City, Renton, Auburn and Milton. "Our camp sites have not been definitely selected any further than just a few miles out of Spokane," said Major Overholser, acting commandant at Fort Wright. "However, Deep Creek will be the first camp."

"I am speaking for the benefit of posterity," said the chapel period speaker.

"Yes, and if you don't get through soon they'll be here," piped up a sleepy freshman.—Ex.



You Can Have Peaches For Four Months

By selecting the proper varieties of peaches, this delicious fruit can be had in the prime of condition for the home table week after week throughout a long season—from June or July to October or November, according to the section of the country in which they happen to be grown. Peaches can be successfully grown from Georgia to California and from California to New Jersey. They are "at home" under more widely varied conditions than almost any other fruit.

When a single peach tree will yield from five to fifteen, or even twenty baskets of fruit and a peach tree costs about what you have to pay for one basket, there is no reason why home-grown peaches should not be found on almost every farm and small suburban place.

Everyone who has a home table to supply should realize that peaches grown and picked ripe, directly from one's own trees have a much more delicious flavor than those which can be purchased. This is not just sentiment. There is a practical reason for it; and that reason is, that the peach, being a very soft fruit, has to be picked in a very "firm," or in other words quite green condition, in order for it to "stand up" while it is being handled and shipped to market.

But the peaches that grow on your own trees—these can be left until the golden sunshine has accomplished its purpose of adding the last touch to their juicy sweetness, and they come off at a touch!

Why Not Plant a Few Trees This Spring?

Peach trees for home planting may be set fifteen to eighteen feet apart, or even closer if they are kept well pruned. Incidentally, too, peach trees will be worth while around the house for their ornamental value alone. You know how beautiful they are when covered in the spring with their light or dark pink blossoms! This is but another reason why at least a few trees should be found around every home.

Six peach trees should yield, after the third or fourth years, at a very conservative estimate, five baskets each, or a total of thirty baskets—enough to keep the average household well supplied for table and desert purposes and to fill the cellar shelves. Where there is room to grow them, however, a dozen or more trees will not be too much, for there is always ready local sales for the surplus if you grow good fruit; and good fruit can be produced easily if one will take the trouble to keep the trees pruned out and give them the necessary spraying to protect the foliage and fruit from infections; a job which is not difficult in these days of effective "ready-made" sprays.

A good selection of varieties which will give a succession of fruit from early to late in the season is the following: May Flower, June Elberta, Hylle, Belle of Georgia Elberta and Krummel October.

In buying trees, keep in mind that a sturdy well-grown tree which you can be confident is free from disease and true to name, such as a reliable agent or nurseryman will furnish is worth many times the price of a so-called "cheap" tree that is urged upon you on the basis of its low price alone.

How to Plant Your Trees to Assure a Good Start.

Before your trees arrive from the nurseryman or agent, prepare the places for planting them in advance. With good care peaches ought to bear some fruit the second season after they are planted. Therefore, it is worth taking extra pains to make sure that they will make their maximum growth during the first season.

Peach trees should not be planted in too sheltered a nook, as then their buds will start up too early in the spring, and run the chance of being killed by a late frost. Select a spot in your garden where they will get sun enough, but where it is not too sheltered.

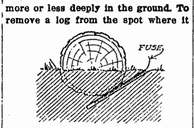
If possible, select a gravelly loam with a gravelly subsoil in which to plant them. This matter of drainage is very important in good fruit growing, and if the soil is not naturally well drained, you will have to provide drainage. Dig a good sized hole for each tree, fill in a foot to 18 inches at the bottom with gravel or well screened coal cinders.

Unless the trees are to be planted in very rich garden soil, three or four forkfuls of old, well, rotted manure should be dug into the soil for each tree, mixed with a couple shovelfuls of wood ashes (or 3 or 4 handfuls of bone meal). Work this fertilizer in most carefully and thoroughly. After the trees begin to grow, sprinkle a handful or two of nitrate of soda about each tree.

Always keep the surface about the foot of the newly set tree well cultivated, so that the ground will conserve the moisture necessary for the tree's healthy growth.

Dynamite for "Choker" Holes

In the logging operations of the northwest where large trees—particularly fir and spruce—are fell, the tremendous weight of the tree-trunks causes them to become imbedded more or less deeply in the ground. To remove a log from the spot where it has fallen, it is the practice among loggers to loop a steel cable around one end of the log. This cable, known as a "choker," is then attached to the main cable leading to the main cable leading to the donkey engine and by that means the log or tree is hauled to a landing spot and loaded on cars.



Formerly it was necessary to dig a hole by hand under the fallen tree in order to loop the choker around it. It was then discovered that a light charge of dynamite, properly placed, would blast a hole under the log, removing the dirt without injury to the log at less cost than the work could be done by the hand method, and at a considerable saving in time.

A hole is punched in the earth under the log, as shown by the sketch, at a point where it is desired to fasten the choker. Ordinarily an iron bar of a diameter slightly larger than that of the explosives cartridge is used for this purpose. The hole is punched deep enough to place the charge of dynamite under the center line of the log. Under ordinary conditions a charge of one 1 1-4-inch cartridge of 20 per cent Stumping Powder will excavate an opening through which the choker line can be passed easily. For large trees that have become deeply imbedded in the earth, it is sometimes necessary to use from two to thre cartridges for a charge.

QUALITY OF HOGS IS DUE TO PIG CLUB WORK

A big increase in the quality of swine is reported from Adams county by County Agent N. C. Donaldson. So far 28 boys and girls have signed up for a sow and litter pig club. In recognition of the work that the former swine clubs have done for better stock in the county, the Adams County Fair association has placed the Ritzville

Pig club in charge of the swine department at the fair. Will Buscher, president of the pig club, has just purchased the registered Poland China gilt, Giant Brice 3rd, from the state college. There were also three registered bred gilts and one registered boar brought into the county during the month.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

STOMACH SYMPTOMS.

When we think of grinding powdered glass between the teeth we find that the "mouth waters." Likewise if very hungry and we smell the fragrance of broiling juicy steak the saliva runs freely. On the contrary, smelling burning rubber does not make the mouth water. Pawlow, a famous Russian scientist, showed half a century ago that the stomach juices are similarly under unconscious nervous control and he likewise showed that the old Roman habit of starting dinner with soup, still exists because soups, or meat extractives, are a most powerful stimulant to the stomach juices.

The stomach may therefore secrete much gastric juice and have many little hunger contractions when its hungry owner sees the dinner table; and it may refuse to secrete, though its owner be hungry, in the presence of disagreeable sights or smells. In fact the contraction waves may reverse in direction and forcibly project upward and outward a very good dinner if a nauseating sight offends the sensitive brain of the surrounding party.

The stomach juices amount to several pints in the day and contain normally free hydrochloric acid, ferments, salts and water. Digestion is the stomach is largely a churning and mixing of the food by the powerful waves of the stomach's construction. Little food is absorbed from the stomach itself.

When a child is developing scarlet fever or pneumonia, one of the earliest symptoms is vomiting. When a grown-up gets an acute attack of appendicitis pain in the stomach and vomiting are usually the first symptoms. Brain tumors cause vomiting, likewise bad kidneys and diabetes. A bad heart occasionally upsets the stomach and gall stones usually do. Nervous breakdowns usually cause stomach symptoms.

Ulcer of the stomach is relatively rare in proportion to the number who consider themselves thus afflicted and is much more frequent in men than in women; and yet more women complain of their stomachs than men. An ulcer occurs just beyond the stomach outlet, in the first inch of the intestines, five times more frequently than in the stomach itself. These ulcers cause pain, sour stomach, gas and belching, and a marked increase in stomach acidity. Eating or taking alkalies reduces the acidity and temporarily relieves the pain, which comes back after the stomach is empty. Strange to say the kind of food makes little difference in the relief. Often long periods without symptoms occur and for no apparent reason; then the symptoms begin again daily for days or weeks. Hemmorhage from such ulcers occurs in about 10 per cent of victims. Occasionally such an ulcer perforates, causing sudden excruciating agony, so violent that the patient is afraid to move and can hardly breathe, and immediate operation is imperative to save life.

Cancer of the stomach is a most insidious disease coming on in middle life or later. Early in its progress it causes slight and indefinite symptoms or no symptoms at all. Gradually there is a failure in appetite and desire for food, but usually no pain. It is a great pity that early cancer rarely causes pain in any location, and yet if discovered early many cases can be cured by proper treatment.

The diagnosis of stomach diseases has in the last 10 years changed from a more or less haphazard guessing to one of the most exact of all diagnostic procedures. The careful watching and interpretation of the behavior and outline of the stomach (made visible by filling it with barium or bismuth) by an X-ray expert with the fluoroscope reveals its secrets with astounding accuracy. This work requires a high degree of technical skill and experience and can not be well done except by a physician who has taken much special training in this line of work. The outline of the stomach constantly and swiftly changes. A single X-ray plate may show what looks like no cancer or ulcer, a moment later the whole picture has changed. Therefore the unskilled worker may diagnose cancers and ulcers which do not exist, and this has led to grievous serror. In certain cases the expert must fluoroscope the patient more than once to be certain of his diagnosis.

The expert's final opinion is therefore very valuable both from a positive and negative standpoint, whereas inexpert examination is worse than useless. In good hands such diagnosis now is 95 per cent accurate, whereas 10 years ago the best was only approximate. In inexperienced hands present X-ray diagnosis is not even approximately correct.

Finally, only a carefully and complete study of the whole patient must be made to accurately determine why a stomach misbehaves. The X-ray examination only shows a deformity or spasm in the outline of the stomach and this occurs in only 15 per cent of those stomachs that growl. The people with the remaining 85 per cent of disturbed stomachs may be suffering from brain tumor or flat feet, or something wrong between these two.

Boys' and Girls' Farm Club Work

The Portland Union Stock Yards company is offering $275.00 in prize money to boys and girls enrolled in swine club work in Washington. This money will be given at the Pacific International Livestock exposition to be held in Portland this fall, for the best four market pigs from one litter raised by a swine club boy or girl.

Prize money offered in this contest will be divided $150.00 for counties east of the Cascades and $125.00 for counties west of the Cascade mountains. An additional grand championship prize of $75.00 will be offered the swine club member who has the best four pigs among the first prize litters of Washington, Oregon and Idaho. The first money offered will be divided into five or six prizes.

The purpose of the contest is to give boys' and girls' club members actual experience in feeding pigs for market and find out the rate of gain in weight, cost of grain and profit that can be made.

Any pig club member in the state may enter the contest provided they have their pigs from the same litter to feed for market. All pigs should be entered in the contest at weaning time, and an accurate feed and weight record kept for a period of at least four months.

All pigs must be exhibited at the Pacific International Livestock exposition at Portland, and the basis of awards will be for individuality of pigs, greatest average rate of gain in weight, lowest cost of gain and complete record book.

FARMS NOT PAYING, GOVERNMENT SHOWS

Suppose you had a business with an annual turnover of $16,400 for materials and labor and that it yielded you a net cash income of less than $2.40 a day. If you did, you would be in the same fix as the average farmer, as just revealed by a survey of 6000 farms by the department of agriculture. On the average, receipts for 1922 were $715 greater than the expenditures in cash, plus $202 greater in added inventory value. Fourteen per cent of the farms failed to break even, and about two-thirds of them returned less than $1000 each and only eight per cent, or one farm in every 12, returned more than $2500 net for the year.

The agricultural population in rural districts of the United States decreased approximately 400,000 persons in 1922. This is a drop of about 1.5 per cent based on 1920 census figures, which placed the agricultural population in rural districts at 31,859,000 persons.

DAIRY

I. F. Wood, of Carroll Creek, is challenging the dairymen of the Northwest to compete with a Holstein heifer owned by him which freshened last week. According to Mr. Wood this heifer starts out with a located equipment considerably above normal; her udder measuring five feet one inch in circumference with a milk flow in accordance to size.

Dairymen of Pend Oreille county have purchased 15 grade heifer calves from the Clallam County Cow Testing association, and one from the Grays Harbor association. The dams of these calves all have a record of better than 360 pounds of butterfat. Arrangements for the stock were conducted between the county agents of the three counties.

Work on the organization of a bull association in Clallam county was accomplished throug h the efforts of County Agent A. W. Holland. Nine dairymen signified their intention of joining the club. Each of the prospective members owns a large enough herd to keep a bull, but desires to belong to an association so as to have the use of a better animal. The object of the association is to make it possible for the dairymen to have use of uniformly high quality bulls. They are planning on four animals in the club.

Adds Undertaking Business

The W. J. Herman company has added an undertaking business to the furniture business conducted at the Herman stores. Mr. Herman states that a licensed embalmer will be in charge and that prompt and efficient service will be rendered at all times, he having made arrangements with one of the best funeral directors of the state to have charge of the business. An up-to-date auto hearse will be used whenever the condition of the roads will permit.

Many Attend Society "Sircus"

Many Genesee people attended the D. O. K. K.-Shrine society "sircus" at Lewiston on Thursday, Friday and Saturday of last week, as did the people of every other community in this section of the country.

Lewiston never does things by halves—and this happened to be one of the times when the "whole thing" was pulled off in one bunch. In addition to the many entertaining features of the "sircus" there was dancing every night and on Saturday the added incentive of learning who was to get the fine big Buick sportster that was to be given away that night. On the whole the affair was a huge success and every one seemed to think they got value received.

The car was drawn by a Mrs. Van Westover of Moscow, who keeps a hotel in that city. It is reported that she accepted $1800 in cash in lieu of the car.

School Notes

By Helen Casebolt

Last Saturday at the state track meet at Moscow Cecil Gray of Genesee took second place in the pole vault and Vic Casebolt won the 440-yard dash. Time, 53.8.

Last Sunday evening Rev. Snoddy, pastor of the Presbyterian church at Moscow, preached a fine sermon to the graduating class of our high school in the Lutheran church. The church was crowded to such an extent that a few had to stand.

Tommy Sanford and Kenneth Aherin have been visitors of the first grade this week.

The agricultural class shipped a carload of seed potatoes of the Netted Gem variety last Thursday to Kiona, Washington.

Virginia Bar entered the fourth grade last week, coming from Kendrick.

This being the last week of this school year, examinations are being given and many picnics are being planned for the last days of school. The fourth and fifth grades, the sixth and seventh grades, and the eighth graders are all interested in the picnics they will have Thursday and Friday.

Charles and Mabel Bottjer are leaving Saturday for Portland, where they will make their home.

Donald Burnett went to Spalding last Saturday to live.

Miss Juno Cole, now teaching in the Nez Perce county schools, will teach the sighth grade here next year.

The class day program was given at the opera house Thursday evening.

Prof. O'Gorman of the University of Idaho will deliver the commencement address Friday evening in the opera house at 8 o'clock.

Christian Endeavor Notes

By Fred Dicus

Last sunday afternoon the Christian Endeavor choir accompanied Rev. Pendleton to Pine Grove where they assisted in the singing. Alfrieda Hampton and Jesse Gray sang a duet which was well received.

The meeting next Sunday evening will be led by Ted Parks and the topic will be "Help from the Bible."

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. P. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Last Sunday the church was decorated with apple blossoms, which made a fine setting for the Mothers' Day service.

Next Sunday the church decorations will be lilacs and we will be glad to receive other flowers.

Church school at 9:45 and morning worship at 11, preaching by Rev. Pendleton.

Young people's meeting at 7:30.

The church board will meet in the study at the parsonage at 7:30 Monday evening.

The missionary society of the church will meet with Mrs. W. D. Woodward on Wednesday afternoon at 2:30.

Federated Missionary Society

The Federated missionary society will meet at the home of Mrs. W. D. Woodward on Thursday, May 24. All members are asked to be present.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Mabel Romine, plaintiff, vs. Guy E. Romine, defendant.

The State of Idaho Sends Greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff; the nature and general terms of which is to procure a decree of divorce on the ground of willfull neglect and also to procure a decree awarding the custody of the two minor children to the plaintiff, and for general relief.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of said District Court, this 12th day of May, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
By Adrian Nelson, Deputy Clerk.
A. H. Oversmith,
Attorney for Plaintiff, residence and P. O. Address Moscow, Idaho. 46-6

Whooping Cough

This is a very dangerous disease, particularly to children under five years of age, but when no paregoric, codine or other opiate is given, is easily cured by giving Chamberlain's Cough Remedy. Most people believe that it must run its course, not knowing that the time is very much shortened, and that there is little danger from the disease when this remedy is given. It has been used in many epidemics of whooping cough, with pronounced success. It is safe and pleasant to take.—Adv.

Rebekahs Entertain Teachers

The members of the Rebekah lodge gave a dinner Wednesday evening in honor of the lady teachers of the public schools, who will soon leave for their several homes.

After the regular lodge session a mock wedding and shower were given for Mrs. Gerald Coleman. Miss Esther Martinson acted as bride, Mrs. Geo. Boliou as groom, Mrs. J. J. Hirselberger was the preacher and Lillian Olson was ring bearer (the ring being a jar lid and was carried on a kettle lid); Margaret Sampson and Irene Mulalley were flower girls. Mrs. Coleman received many pretty and useful gifts.

American Legion Dance

The members of the American Legion will give a dance at their hall on Friday, May 24. A good orchestra has been secured and a good time is promised.

Good times are just ahead of us, but they seem to be moving about as fast as we do.

PERSONAL MENTION

R. S. Sullivan and A. H. Potsch were Friday visitors in Lewiston.

Miss Susie Alber was a Lewiston passenger Monday for a short stay.

John Lawson and son, William were Friday morning passengers for Lewiston.

Arthur Parsley arrived Thursday for a visit with his uncle, George Schlerth.

Edwin Bielenberg was a Saturday morning passenger for Uniontown for a short visit.

Mrs. Ben Pleiman was a Friday passenger for Uniontown to spend the day with friends.

O. E. Hall arrived Friday from Spokane for a short visit with relatives and friends.

J. N. Hollister was a Thursday morning passenger for Lewiston to attend the "sircus."

Mrs. Amelia Rader and brother, Albert Fix, of Walla Walla were Uniontown visitors Tuesday.

H. C. Potsch returned to Uniontown Tuesday after a short visit here with his brother, A. H. Potsch, and wife.

Mrs. S. J. Wood was a Friday passengers for Potlatch for a visit with her brother, J. H. Bottjer, and family.

Mr. and Mrs. P. H. Meader, accompanied by Mrs. H. L. Meader and Mrs. Marie Paris, were Genesee visitors on Wednesday.

Mrs. S. P. Schooley of Seattle is visiting at the McCreary home for a week. Mrs. Schooley is a sister of the late Mrs. P. C. McCreary.

Henry Clay of Alberta, Canada, and Henry Clay of Oakland, California, arrived Tuesday afternoon for a visit with their sister and niece, Mrs. Joe Reil.

Henry Martinson returned home Friday from Portland where he had recently undergone a surgical operation. While somewhat weak he says he is feeling fine.

Sim Currin and children went to Moscow Wednesday for a visit with Mrs. Currin, who is in a hospital there and who is not gaining as rapidly as might be wished for.

Mrs. Louis Malmarsh of Kendrick who has been visiting her daughter, Mrs. Herman, and her son, Fred Comnick, was a Thursday morning passenger for Pullman for a visit with her mother.

W. W. Gray arrived home Saturday from California where he had spent the greater part of the winter. He visited a week with relatives and old-time friends in the southern part of the state enroute home.

Mrs. H. M. Warren and daughter, Mrs. Mabel Romine, and children returned to Genesee last Saturday from Tekoa where they have spent the past winter. They were brought over by W. J. Davee, who returned to Tekoa that evening. Mr. Davee reports that things are none too swift at Tekoa but that he and Mrs. Davee and the twins are getting along all right.

Miss Adda Mathews and Miss Alfreda Hampton left Wednesday morning by way of Chicago and Cincinnatti for Asheville, North Carolina, for a short visit with relatives and friends. They will later return by way of Denver and the southern part of the state. Miss Mathews will stop at Twin Falls where she has a position as diatetics nurse in a hospital.

A Fishing Party

A fishing party composed of George Post, Cody Rander and Art. Mayer went to the North Fork of the Clearwater Saturday evening, returning Sunday evening. About the only thing of importance that happened was the fact that Cody Rader, while in the act of trying to "butcher" something cut one of his thumbs quite badly and it is rather a "sore spot" with Cody if you happen to mention it to him. Very little was said about fish, although several tracks are reported to have been seen in that section of the country, according to the fishermen.

Lady Teachers Entertain

The lady teachers of the Genesee schools entertained a number of lady friends at a dinner party at Smolt's Tuesday evening. Jokes and toasts were the main features of the evening's entertainment and a pleasant evening was had.

The invited guests were Miss Adda Mathews, Miss Ruth Martinson, Mrs. G. E. Sampson, Mrs. F. S. Casebolt, Mrs. E. M. Becker, Mrs. Henry Morscheck, Mrs. F. E. Dicus, Mrs. F. K. Bressler, Mrs. Ira Hanson, Mrs. W. M. Herman, Mrs. Fred Hampton, and Miss Viola Lorang.

MORSCHECK BROS.
GENESSEE, IDAHO

Entertain Teachers

Mrs. Fred Hampton and Miss Adda Mathews entertained the lady teachers of the public school at a dinner party Thursday evening of last week. A very pleasant evening was had.

Miss Viola Lorang entertained the teachers and a few other friends at her home on Tuesday evening of last week. A pick-up campfire dinner was enjoyed in the grove at the Lorang home. After the "eats" all went to Mr. Lorang's "curio shop" where they spent much time examining the wonderful collection of curios from all lands. Mr. Lorang has one of the finest private curio shops in the country. After the visit at the curio shop had been completed the remainder of the evening was spent with music and cards.

Those entertained were Mr. and Mrs. Geo. Boliou, Mr. and Mrs. G. E. Sampson and daughters, Misses Gertrude and Margaret, Mr. and Mrs. F. J. Niemann, Mr. and Mrs. Ira Hanson, Mrs. Coleman, Miss Lela Patch, Miss Frances Vaughn, Miss Edith Winegardner, Misses Ruth and Esther Martinson, Jas. Winegardner and Chas. W. Smith.

Girls' Sewing Club Organized

Under the supervision of Miss Cowgill from the University of Idaho a sewing club was recently organized and will meet every week during the summer months. They will follow a course of instruction as prepared by the extension division of the University of Idaho and at the end of this course the work will be exhibited at the Tri-State fair which will be held at Lewiston the second week in September.

The girls belonging to the club are Audrey Pleiman, Frances Smylie, Thelma Woodward, Emma Lou Sullivan, Angie Castle, Inez Mayer, Pearl Perkins, Wilma English, Mary Mullaley, Ethryn Casebolt, Dorothy Evans, Harriet Evans, Louella Freeman, Lulu Springer, Blanche Clark, Bernice Nordby, Myrtle Larson, Lela Castle, Blanche Craft and Grace Craft.

The following officers have been chosen: President, Frances Smylie; vice president, Angie Castle; secretary, Audrey Pleiman; treasurer, Lulu Springer.

Mrs. F. B. Evans will superintend the work.

Many Installments

There have recently been many installments of that "million-dollar" rain in this section. In fact, there have been enough showers for a while at least. What the farmers want most at this time is sunshine, which would act as a "drawing plaster" to bring the necessary stalks of grain from the ground. A good supply of sunshine just now and a good rain in June would make this sectoin of the country look like a "million bucks."

Follett Bros. Mercantile Co.

THE REVOLUTION IN ITALY

By CARROLL H. WOODDY,
Assistant Professor of American History, Washington State College.

On October 5, 1922, an audience in Milan was being addressed by a powerfully built man, swarthy of countenance, dark haired though half bald. An observer might have noted his thick lips, a sullen brooding expression that betokened the martyr or the tyrant—at all events the man of ambition. More obvious was the fact that he wore the black shirt, the emblem of the Fascisti, and that his enthusiastic audience was similarly clad. It was none other than Benito Mussolini, Italy's Man of Destiny, who has been compared with Caesar, with Garibaldi, with Napoleon, and who was at this very moment announcing the imminence of the event that has drawn toward him the eyes of the world. "In Italy," he declared, "there exist two governments—a fictitious one run by Facta (then Italian premier), and a real one run by the Fascisti. The first of these must give way to the second." This revolutionary statement was no mere rhetoric. At that moment in the organization headed by Mussolini there was an army of not less than 450,000 well-armed and well-officered men, equipped with cavalry, artillery, machine guns, armored cars, and even submarine chasers. Behind these was the tremendous reserve of a round million enrolled members of the Fascista party, and fully two and a half million workers who belonged to Fascist organizations. Nineteen days later the annual convention of the Fascist organization was being held. Ninety thousand militant black shirts were in attendance, having marched to Naples in well-organized units mobilized in every district of Italy. Amid wild enthusiasm Mussolini declared: "I take a solemn oath that either the government of the country must be given peacefully to the Fascisti, or we will take it by force." Events now marched rapidly to a conclusion On October 26th Mussolini ordered the military leaders of his organization to mobilize all their forces in case the ministry resisted. Premier Facta immediately resigned, with his entire ministry. On October 28th, the Fascist forces were seizing cities throughout the country, and obtaining control of the system of communications. With the party in virtual control of the whole country, King Victor Emmanuel was obliged to bow to the Fascist leader. Mussolini was invited to form a cabinet. Meanwhile the black-shirt legions concentrated on Rome. On the evening of October 29th 200,000 people assembled in the square before the royal palace and demanded the fulfillment of the entire Fascist program of reform. Mussolini made a hurried trip to Milan to complete his plans, conferred with the poet D'Annunzio, leader of the Nationalists. A special train carried him toward Rome; from Civita Vecchia he traveled in the king's private motor car. On October 30th the momentous revolution was accomplished. Mussolini appeared at a window of the palace and announced to the people: "Today Italy has not only a cabinet, but a government, a strong government such as she has needed for many years past, but never obtained."

Truly a spectacular episode this, but not more so than the career of the leading figure, and the momentous events which made his leadership possible. For the revolt of the Fascisti is nothing more than a reaction from post-war hysteria, magnified by Italy's political emotionalism, yet similar to the reaction that we have experienced in our own country and has been observed in England and other continental countries. It is not the least interesting of the contradictions of this movement that Mussolini, who now appears as the leader of a Nationalist, extremely patriotic, selfish, aggressive movement, began his public career as an extreme Socialist. Born in Romagna, a part of Italy often characterized as the hotbed of revolution, he was bred to the proletarian socialism, that prior to the war had gained so strong a hold over the masses both in the cities and the countryside. In 1914 he even participated in a violent revolutionary movement in his native district. He was, moreover, editor of the leading Socialist newspaper, "Avanti" (Forward). Though a director of the Socialist party of Italy and prominent in its councils, we find that in the Socialist congress in Milan, November, 1914, Mussolini is an outcast, hissed, booed, and driven from the party. The reason? Never content to follow the whole program of his party, Mussolini was convinced that Italy must enter the war to defend herself. He denounced the Internationalist program of his party. "I love peace," he declared, "but peace is worthless without national safety."

Refused a commission because of suspicion due to his Socialist activities, Mussolini waited his turn, entered the ranks as a corporal, fought bravely, was wounded, decorated for valor, and allowed to return, temporarily physically incapacitated, to civil life. The treachery and defeatism of his erstwhile comrades sickened Mussolini. Yet as the war ended, the soldiers returned, instead of a patriotic spirit determined to make the best of the situation and consolidate for the country the few gains of the war, Mussolini beheld Italy turned over to the Reds, to the Communists, to the enemies of all that he had sacrificed for in the battle line. The industrial centers of northern Italy one by one fell into the hands of the Communists, municipal authorities abdicated their powers, huge industrial plants like the F. I. A. T. establishment in Milan were turned over to the workers. In Sicily and Calabria the peasants were confiscating the land belonging to the large proprietors. Envoys of Moscow boldly proclaimed that Italy was to be the second nation to yield to the proletarian revolution. The Italian government, powerless to act, sat by.

Mussolini determined that something must be done to stem the Red tide. Believing that in the soldiers he would find the best material for restoring the ideal of patriotism, he began to organize small "Bands of Combat"—"Fasci di Combattimento." The name Fascisti comes from the old Latin word used to describe the bundle of sticks carried by the lictors, and hence implies unity. The program of these bands was simple. It was to substitute loyalty to Italy, to her people and her ideals rather than her selfish interests for the extravagant class hatreds that prevailed, and in particular to destroy by force the hold which had been gained by the Socialists and Communists. To further his purposes Mussolini established a newspaper, "Il Popolo d'Italia." From the first group of 150 faithfuls, organized March, 1919, his party grew by leaps and bounds. His platform became more and more popular, and by August, 1922, the Bolshevist menace had finally been quelled beyond any hope of resurrection. All this was not done without fighting, for the Communists resisted. Methods resembling those advocated by the Ku Klux Klan in the United States were employed, and not less than 6000 comrades lost their lives ere success had been attained.

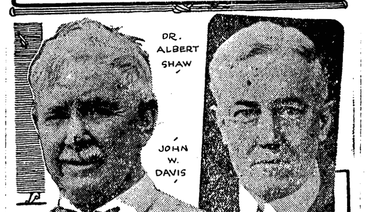
With the Reds defeated, a new problem confronted Mussolini. What was to be done with the tremendous weapon which he had forged to checkmate Moscow? Too clever a politician to allow it to rust in the scabbard he turned it against the political government. The breakdown of parliamentary government had become a reality. Italian ministries fell in rapid succession. Italy's reputation abroad had been incredibly lowered. Parliament was divided between thirteen different factions, none of them strong enough to lead, and none of them responsive to the popular will. Against this travesty Mussolini turned his guns. Broadening his aims, he attracted to his standard all of the vigorous elements in Italy's political life: the Nationalists, desiring Italy's aggrandizement, the fragments of Socialism, to which he guaranteed the gains of forty years of social legislation; capitalists to whom he promised an end of bureaucracy and the restoration of individual initiative; the landed proprietors and the Catholic middle class party to whom he offered protection against Communism; the peasants, for whom a vigorous program of agrarian reform was promulgated. While each of these groups surrendered something for the sake of unity, all have evinced tremendous enthusiasm for the organized patriotism which has "swallowed the class struggle" and given Italy a government founded on loyalty rather than on bribery, on service rather than on the dispensing of favors.

In domestic and foreign affairs Mussolini has not bolted his promises. The parliament which has voted him giving him an overwhelming vote of confidence and has approved a law giving his government full powers until December 31, 1923. Economy, work and discipline are the watchwords of his domestic policy. Balancing the national budget is a first object, and as a first step the minister of public works announced a cut of a hundred million lire in the expenditures on railroads. At present Mussolini has been content to work through the parliamentary system, and has drawn his ministry from the Nationalist party with one representative each from the Democrats nd the Catholic party. A schemo of electoral reform has been proposed, however, which would change the present system of proportional representation to permit a plurality party to have three-fifths of the seats in parliament. If this should be carried, the Fascisti, who command a plurality, though not a majority, would be in a position to carry through their whole program without outside aid.

In foreign affairs Mussolini has been busy restoring Italy's lost prestige. "Italy can not afford the luxury of altruism," he declares. "We will give nothing if we receive nothing in return." Yet he has not proved unwilling to deal fairly with other nations. After his first haughty gesture at the Lausanne conference, he entered cheerfully into the negotiations. To the United States he suggested the desirability of relaxing her immigration restrictions, yet he urged the ratification of the Washington disarmament treaties. He has declared that Italy will scrupulously observe all her outstanding obligations.

The difficulties confronting the Fascist leader are many. Will he be able to maintain the unity of a party composed of so many contradictory elements? Will a government founded upon force be able to survive the test of peace-time defeats in foreign and domestic policy as are sure to come to one who has promised so much? Whatever the answer may be, we must at least give Mussolini the credit not only of being a remarkably interesting figure but for having given Italy the first government in this generation that has even remotely promised efficiency.

Political Dark Horses—No. 1



Presidential dark horses must always be cogsidered when the political pot starts to boil.

Among publishers and farmers many leaders see in Dr. Albert Shaw, editor and publisher of "Review of Reviews," a strong independent Republican candidate. Dr. Shaw is internationally known, and aside from his dominate literary position he is a practical and successful farmer, owning and operating two big farms, one in New York and one in Virginia. In Democratic ranks, John W. Davis of West Virginia, former Ambassador to England, is looked upon with favor as a dark-horse candidate. Mr. Davis is now attorney for the Associated Press and N. Y. *Times*.

Start Preparing for State and County Fairs Right Now

Advertising is an important place in the marketing of farm products. Advertising increases consumption and tends to increase the selling price. Over $750,000,000 is spent in advertising in the United States each year. This is over $2,000,000 a day. The problem then becomes one of finding buyers who are willing to pay a higher price for a better quality of product.

Advertising widens the market. Your community, county or state fair is one of the best means of advertising your farm products. Plans should be made now for growing farm products that will be used as advertising mediums at the fairs.

Frank Pyle of Kansas put it this way: "I toiled, I sweat, and I produced—and I found that I must sell at the other man's price and for his profit. I produce better stuff than my neighbors only to find that theirs set the price, very often, at which I must sell in the local market."

By consistent exhibiting at fairs and other mediums you will be able to secure a fair price and it will free you from your neighbor's limitations.

Russell Adams of Oklahoma says: "We would hardly thank a man for information as how to increase production if at the same time he could not show us how to sell the overproduction to the best advantage."

About 76 per cent of the people will buy from advertising and products they see; 13 per cent from what they hear; and 11 per cent can not be reached by advertising or exhibits. The breeder of purebred livestock, farm seeds and horticultural products can not afford to pass up the advertising value of exhibiting his wares at the county and state fair. Many a big sale is made there. Have a well-painted banner hung over your exhibit, so worded that it will help to supply a true meaning of your exhibit and will sell to the public your product.

Exhibits should be neat and have the appearance of prosperity. The appearance of an exhibit is a big factor in setting the cash value of the product.

Livestock and crops must be grown for exhibit purposes. This takes time. He who starts early will be best prepared. The Egyptian mumies were preserved and prepared 3000 years ago. There is only a short period between today and your fair.

Plan your exhibits for the class of people that you want for prospective customers, city or rural people.

The color scheme should harmonize with the exhibit and should be elaborate for large fairs and expositions. Exhibits for city people or consuming public should be simple and only one idea shown. This class go to the fairs for entertainment and will not stop long for exhibits.

Exhibit samples of hay and forage. All grasses should be cut when in full blossom or when pollen is showing and before they begin to ripen. Cut full length straw, using a cureblade, or pruning knife. Spread the grass out in a well ventilated room over night, then build a shock. All sheaves should be cured by suspending heads down from a curing rack placed in a dark, well ventilated room. Samples of all crops representing hay or forage have all the leaves left on.

Grain Sheaves: Grain sheaves are made in practically the same manner as the grass sheaves. The straw should also be cut close to the ground so that the full length straw may be obtained.

Select the heads carefully, giving attention to trueness to type, uniformity, color and plumpness of berry. A very good stripping knife can be made by cutting in two a clamp from an Economy fruit jar, changing the shape somewhat so it will better curve around the straw, and sharpening one edge. A fan-shaped head is made similar to that of the grass sheaves, the wheat heads measuring about 15 inches and the oats about twenty-four inches. The first tie is placed at the base of the heads and the other two, eight inches apart.

Making Meat into Flour.

Australia and New Zealand are trying out a new method of disposing of their huge surplus of beef cattle, which is at present demoralizing the cattle trade of those countries. According to information reaching the United States department of commerce, the latest effort of Australia to solve the beef problem is the manufacture of meat flour.

A special process of drying and grinding produces a meat flour that is said to keep indefinitely and to contain all the body building and nutritive value of the fresh meat. Its cost will permit easy retailing. The meat is not cooked but is dried at a very low temperature, and all that is lost during the process is about 60 per cent of water and the deterrent properties.

During the drying the meat is squeezed and all the fats, blood and juices are expressed. These are treated, destroying the deterrent properties, and are then put back with the meat. The whole is then dried, and during the process the various gases are allowed to escape.

South American competition has had a disastrous effect upon the frozen meat industry of New Zealand and Australia. Some friends of the industry in those countries believe that much of their export trade can be regained by building up a meat flour industry.

Crowd Chaser.

May—What would you do for chapped lips?

Ray—Eat lots of onions.

May—Onions!

Ray—Rights! That ought to keep the chaps off your lips.

A FAMILY JAR.

She—"When I married you I thought you were a brave man."

He—"So did everybody else."

STAGE SEATTLE PAGEANT "AMERICANUS" JULY 23-28

PRESIDENT HARDING WILL VISIT STATE

To Spend One Entire Day in Spokane on Tour to Northwest This Summer.

President Harding will spend one entire day in Spokane during his trip to the west this summer. While in the northwest the president will visit Albany Falls on the Pend Oreille river, head waters of the Columbia Basin project supply.

This assurance was given Spokane recently in a telegram received by S. S. McClintock; president of the Spokane Chamber of Commerce, from F. R. Pope, local real estate dealer, who is a cousin of the president.

The only reservation President Harding makes in his Spokane visit is that he will not be compelled to make more than one address during the day.

The wire from Mr. Pope did not state the exact time of the president's visit.

PLANE IS ROMANTIC; LOOKOUT DOES WORK

"The use of the airplane in detecting forest fires adds a touch of romance to that serious business; but the solitary lookouts in their little towers on the tops of the lonely mountain, not the aviators, are saving millions of dollars each year in timber," says Theodore Shoemaker of Missoula, Mont., chief of the office of relations, district No. 1, United States forestry department.

"It is generally believed by westerners that the airplane is the last word in forest protection efficiency," continued Mr. Shoemaker. "I am sorry to have to disabuse their minds, but the fact is that the lonely lookout on the mountain peak, or the humble smoke chaser, are still the ones upon whom the forestry department depends. The officials of the forestry department see possibilities in the use of the airplane, but until it becomes more generally used as a means of travel, they feel that its value remains small."

Reason Enough.

Anthony—May I kiss you, dearie?

Adele—No! Indeed!

Anthony—Aw! You're so old fashioned.

Adele—Not so, but I've been eating onions.

"Last night," said Mr. Henpeck, "I dreamed that I was in heaven."

"And was I there with you?" his wife asked.

"Didn't I say it was heaven?" was his crushing reply.—Cleveland Plain Dealer.

Marker—I think the gilt is off the gingerbread as far as the marriage of the Newlyweds is concerned.

Quisser—Why do you say that?

Marker—Mrs. Newlywed has started eating onions again.

"Where is the onion counter?"
"Taroe sniffs to the right."

Misses Graduation to Attend Sick Cow

Otto Wenger, of Doylestown, Pa., four years ago an immigrant to America, worked hard for graduation day at Agricultural College. This cow took sick on the eventful morning so Otto stayed with her until she was out of danger—which was too late for him to don his new black suit and grace the platform.

Successor to "The Wayfarer" Requires 10,000 People in Cast.

WILL DEPICT U. S. HISTORY

Events and Personages Who Made America's Greatness to Be Shown in Tableaux.

Seattle—"The Pageant City"—will present this summer the world's greatest pageant-drama — "Americanus."

This gigantic production will be shown on six evenings, July 23 to 28, in the University of Washington stadium, which has a seating capacity of 30,000 persons. Proceeds from the pageant will be devoted to wiping out the debt against the stadium.

By the presentation for two seasons, 1921 and 1922, of "The Wayfarer," Seattle has gained fame and distinction throughout the North American continent. Never before had pageantry been attempted on such a large and spectacular scale. This year in order to maintain its reputation Seattle decided to give an even larger and more spectacular production and "Americanus" was written for that purpose.

"Americanus" is from the pen of Prof. Edmond S. Meany, head of the history department of the University of Washington. He collaborated in the production with Montgomery Lynch, producer of "The Wayfarer" and who will be producer of the new pageant.

The presentation of "Americanus" will require upwards of 10,000 actors and singers. The chorus it is declared will be the largest body of trained singers ever assembled to render the music of the world's greatest music masters. In addition to this large chorus it expected talented soloists of national reputation will assist in the musical part of the production.

"Americanus" is historically correct yet it has the gigantic, colorful, spectacular possibilities so dear to the hearts of the American amusement-loving public. Mammoth stage settings and gorgeous lighting effects are now being built for the adequate presentation of the great pageant. Some of these pieces of scenery will be the largest ever constructed for any stage. The great stage used for "The Wayfarer,"—the largest stage in the world—will be rolled up into the stadium and "Americanus" presented upon it.

"Americanus," aside from its spectacular features will be an education in itself. It deals with the outstanding events and epochs in American life and history since Revolutionary days. The first scene shows Gen. George Washington and his tattered little army wintering at Valley Forge. From that period the audiences of "Americanus" will be carried down through the thrilling pages of American history to the present day. Such presidents as Washington, Monroe, Lincoln, Roosevelt, Wilson and Harding will be featured prominently in the episodes.

The things that made America the greatest nation on earth—the things dear to the hearts of every loyal American—will be portrayed with startling clearness in a series of episodes and tableaux. The grand finale, in which 10,000 persons will participate, will depict the progress made in practically every phase of American life.

Many attractions of interest to visitors will be arranged during "Americanus" week. Most of the Pacific fleet will be on Puget sound at that time, many of the great battleships and destroyers being anchored in Seattle harbor. Boat races between the naval crews have been arranged. The Northwest Merchants' convention and exhibition also will be held in Seattle during "Americanus" week. Transportation companies will offer special reduced rates to Seattle from all points in the Pacific northwest at that time.

The Voice.

I skipped along in childish play,
The briers and stones along the way
I heeded not at all;
My eyes were toward the lure ahead,
When mother took my hand and said,
"Be careful, dear, don't fall."

And now, long after, when I stray
Amid the dangers of life's way,
Oh, I can hear her call,
As, clasping hands across the years,
Her loving voice comes to my ears,
"Be careful, dear, don't fall."

—Anne Porter Johnson.

Japers—Can you give me an example of independence?

Bubbs—Eating onions without caring a whoop who knows it.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

ROLLED AND WHIPPED SEAM.

This seam is especially good for very thin materials such as Georgette crepes, when wide seams would spoil the appearance of the garment. Make a small plain seam, sewing it by hand using tiny running stitches. Trim the seam to within 1-4 inch and roll this seam between the thumb and finger until a tiny roll is formed along the seam line. Whip over this roll occasionally catching into the running stitch used for the seam.

To Whip—Pass the needle under the roll and let it come out through the back of the roll. This forms a kind of fine overcasting over the roll, but it should not go through to the material itself. This is not a strong seam and will not stand much strain.

EDGES.

Hems may be used for edge finishes. They are suitable for most all materials. The hems may be held in by machine or hand stitching or a fancy embroidery stitch may be used as cross stitch, hem-stitching, chain, feather, etc.

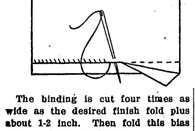
Bindings—Cut on the true bias are the best as they go on more smoothly. These bindings may be out either single or double. When a binding is finished only one-half of it shows on the right side.

Single Bindings—In making a single binding it should be cut two times as wide as the desired finish plus about 1-2 inch which is allowed for seams and turn in of the raw edge.

The raw edge of the binding is placed to that of the material, basted and stitched. Then the raw edge of the binding is turned in and the binding folded over to the stitching line and hemmed along the edge.

Great care must be taken not to stretch or twist the bias forming the binding.

Double Binding—This is much easier to put on, as there is less danger of stretching, but it of course takes a little more material.



The binding is cut four times as wide as the desired finish fold plus about 1-2 inch. Then fold this bias strip in half lengthwise.

The raw edge of this folded bias strip is applied to the raw edge of the material basted and stitched. The folded edge then is brought over and hemmed down along the stitching line. This does away with turning down the raw edge of the binding and so eliminates the danger of stretching the bias edge. This will make a little heavier binding, but it is not compared with that of a movable clumsy. It makes an excellent finish for collars, cuffs, sashes, belts, overskirts, panels, etc., and in fact most any place where a decorative finish is desired. These bindings may be made of self material or of contrasting material and colors.

CORDING.

Cording is used to finish edges of skirts, tunics, armholes, necks, etc., or where shirring might be used as a trimming. The size of the cord depends upon where it is used and the taste of the wearer. A smooth cord is better than a heavily twisted one as the twists wear on the material and also will show through.

To make cording the bias strip is folded nearly in the center. Then the cord is slipped in between this fold and held there by a row of fine running stitchee, care being taken to keep the bias drawn smoothly and tightly over the cord. If cording is to be used as a facing also the fold is made with one edge wider than the other. The cord is then slipped in and sewed with running stitches. The under side of the fold is finished with a once turned hem.

If the cords are to be along a straight edge or to be used as a round line decoration on a straight skirt—tiny tucks may be run in and the cording pulled through these. The tucks have to be very accurately made, else the casings will not be uniform throughout and will spoil the design through poor workmenship.

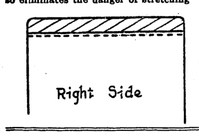
PIPING.

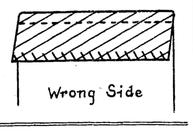
This method of finishing is very pleasing, when made of plaid or striped material or in contrasting color and makes a flat finish.

MACHINE PICOTING.

Machine picoting is a nice finish for thin materials. It is attractive and fairly strong, and especially good for Georgettes, crepes, and other thin silk or cotton materials. Indicate with basting stitch the place for the line of finish. Then have machine hemstitching done along this line. Later out the stitching through the center. This leaves an irregular edge with the appearance of a picot.

"Fastenings" will conclude the series.





Growing What You Eat

Prepared by the Extension Service,
State College of Washington.

BEES ON A FARM?

Should each farm or suburban home have a hive and produce the honey the family consumes? The answer would be in the affirmative if the farmer would take care of his bees. A hive of bees is a small investment, consequently they are neglected in the rush of farm and home work. One of the big problems of the state is the one or two hive owner who neglects his bees. Bees are different from other types of livestock. They will rustle for themselves and survive without attention from the owner, providing they do not become diseased. It is the one or two hive owner who does not take care o fhis bees, that is menacing the beekeeping industry. If their bees should become diseased they are a source of contamination infecting the entire neighborhood.

If one does not examine the brood of his bees, it is impossible for him to detect the first stages of the diseases which may be controlled. When bees are sick the honey produced is nil. In addition to this a valuable source of income is cut off. Experiments carried on in this state and others have shown the bee to be the greatest pollinizing agency in existence. One grower of 180 acres of prunes increased the yield 100 tons by placing 115 colonies in the orchard during blossoming time. The prunes sold at $120 per ton, so the extra yield gave a return of $12,000 or more than $100 per colony. A grower of cherries raised his yield 52 tons by using 10 colonies. Many Yakima apple growers pay $5 a colony to have the bees in their orchard during fruit bloom. Not only are bees valuable pollinizing fruit agencies, but aid in the fertilization of much of our garden truck.

We find many one and two hive owners are innocently breaking the laws of this state. Bees build cross comb when left to themselves thus entering their home to be classed as a box hive. According to the law any container of bees which does not have movable frames is a box hive. The bees of a box hive must either be transferred to a movable frame hive or be destroyed with the hive.

Not only is a box hive beekeeper a lawbreaker, but he is cutting down a source of income. The production of a box hive is practically nil when compared with that of a movable frame hive which has received attention. It is estimated that 20 per cent of the bees in this state are in immovable frame hives. Why not increase the family income by transferring these bees to movable frame hives this spring and give them the attention they are rightly entitled to?

Old maid (impressively)—Nora, that painting is over a hundred years old.

Nora—And did ye paint it yerself, Mum?

pay us to keep a calf? Then we could have liver every morning for breakfast."—Ladies' Home Journal.

Canning and Preserving

Gooseberry conserve requires four pints of gooseberries, three pints of sugar, one cupful of seeded raisins and one orange. Make a heavy syrup of the sugar and a little water, cooking until the syrup will spin a thread then add the gooseberries, raisins, the pulp and juice of the orange and the skin, finely chopped. Cook until thick, pour into hot glasses and seal.

Cherry and gooseberry preserves—Use equa l quantities of cherries (which have been pitted) and gooseberries and a pound of fruit use three-quarters of a pound of sugar. Make a thick syrup by adding a small quantity of water to the sugar, cook the gooseberries in the syrup until they are clear, then add the cherries and cook 20 minutes longer.

Cherry conserve is made of the red, sour cherries thus: Cook three and one-half pounds of cherries (pitted) for 15 minutes, then add two and one-half pounds of sugar which has been heated in the oven, one-quarter pound of seeded raisins, and the juice and pulp of three oranges. Cook until the mixture is as thick as marmalade, pour into glasses and seal.

To preserve strawberries—Make a syrup of one quart of water and seven pounds of sugar and cook in an open kettle until a candy thermometer registers 260 degrees Farhenheit. Add eight pounds of berries (washed and stemmed) and cook slowly, just at the boiling point. Stop the cooking when the thermometer registers 219 degrees, pour into shallow pans to cool and skim while cooling. When cold pack into jars and allow to stand unsealed, but covered with a cloth, for four days. Put rubber and lid in position, not tight. It using a hot-water bath outfit, sterilize 20 minutes; if using a water-seal outfit, or a fireless cooker pressure outfit, or a pressure cooker outfit, sterilize for 15 minutes. Remove jars, tighten covers, invert to cool and test for leaks. Wrap jars with paper to prevent bleaching and store in a cool, dark place.

NATIVE SPANIARDS TO JUDGE CONTEST

Three native Spaniards will judge the contest for prizes offered by the Spanish club of the State College of Washington on the evening of May 23, when the 120 students of the language at the college will submit written themes, and at the same time deliver short declamations in Spanish to show their proficiency in idiom and pronunciation. The judges have not all replied to the invitation, but will probably be Senor Ernesto Salzman of North Central high school, Senor Raphael Ferrer of Lewis and Clark high school, both Spokane, and Senora Williams, wife of another Lewis and Clark instructor.

AN EASY SOLUTION.

"How does the breakfast suit you, John?" inquired the young bride anxiously.

"It's just right, dearest," said her husband. "It may be plebian, but I'm awfully fond of calves' liver for breakfast."

"So am I, dear," said the wife. "Oh, John, don't you think it would have liver every morning for breakfast."—Ladies' Home Journal.

Tillamook Daisy Butter King Dekol

Tillamook Daisy Butter King Dekol is another Washington product who has helped to place the state at the very head of the dairying business. She was proclaimed the outstanding Holstein show cow of 1922, and is already the world's second greatest milk-producing heifer.

Tillamook Daisy Butter King Dekol started on a one-year test on March 14, 1922. In a little more than six months she produced 20,000 pounds of milk. Up to November she had averaged considerably more than 3,000 pounds of milk per month. Then, because she was an exceptionally fine in type, it was decided to take a chance on lowering her production and send her to the Pacific International Exposition. She went—and was awarded first prize—senior—and grand champion at this show and was later selected by W. S. Moscrip for the "All-American" show herd.

Her record of 32,472 pounds of milk and 1265 pounds of butter has been exceeded by but one other animal (all breeds considered) of her age or younger.

All ages and all breeds considered, she is the twelfth greatest milk producer in the world, and of those cows which have produced over 32,000 pounds of milk, but nine have equaled her record for butter production.

Tillamook Daisy was developed by Carnation Stock Farms, of Seattle, and is still a member of their herd of outstanding dairy animals.

The American Legion
Meets Each
First and Third
Wednesday of the Month

Decoration Day Plans

The ceremonial committee—George Post, chairman—has arranged appropriate exercises for Decoration Day, May 30. The program will take place in the City park in the morning.

Captain William Smith, superintendent of the schools of Clarkston, Washington, has been secured as the principal speaker.

The city council has arranged to repair and repaint the bandstand; the local post has arranged a firing squad, and a quantity of poppies are available for those desiring to commemorate the memory of the dead by wearing the emblematic flower. Everything points to an unusual program.

Membership

The membership drive, in charge of Chas. W. Smith, Nels Liberg and Harry Schooler, proved to be remarkably peppy and successful. Unusual activity and interest was displayed by the members of both teams and much friendly rivalry existed. The grand result shows an increaseof 39 members, bringing the post membership to upwards of 60.

This showing guarantees the local post a standing near the top of the Idaho department, and is exceptional in view of the fact that there are over 80 posts in Idaho, all going strong.

May 19

The various committees are prepared for the big Legion evening—Saturday, May 19. The program follows:

7:30 Assemble at Legion hall.
8:45 Ritual.
8:00 Entertainment.
9:30 Creeping barrage.
10:00 Banquet.
Adjournment.

Following adjournment there will be a special session for voyaguers of the 40 and 8.

Delegations of Legionaires from Lewiston, Moscow, Kendrick and other posts have arranged to be present.

Parents of Daughter

A young daughter made her appearance at the home of Mr. and Mrs. Jas. Magee on Tuesday morning, May 14, who tipped the scales at eight pounds. Mother and little visitor are getting along nicely.

Will Have Licensed Undertaker

George Schlerth, who has recently taken over the Lambert interests in Genesee, wishes to announce that he has made arrangements to have a licensed undertaker and embalmer take care of all Genesee work in that line and that prompt and efficient service will be rendered. 44-tf

Evils of Constipation

Perhaps the most serious of the diseases caused by constipation is appendicitis. If you would avoid this dangerous disease, keep your bowels regular. For this purpose Chamberlain's Tablets are excellent, easy to take and mild and gentle in effect.—Adv.

Legion Graves Endowment Fund

The American Legion is raising a Two Hundred Thousand dollar endowment fund for the perpetual care of the graves of 32,587 veterans of the World War, in France, Belgium and England.

Bielenberg-Schooler post is receiving small voluntary subscriptions to augment a fund to be realized from the sale of poppies on Decoration Day.

Anyone wishing to contribute to this fund is asked to please hand the amount to any member of Bielenberg-Schooler post of the American Legion.

The amount received to date is:

Fred K. Bressler	$1.00
Rodney Whalen	.10
Marie Whalen	.10
Monica Whalen	.10
Fred L. Niemann	1.00
Grant Clark	1.00
Thomas Feeney, jr.	.25
Laverne Edwards	.10
Chas. Jain	.50
Jack Barnes, jr.	.25
Total	$4.55

The names of contributors will be spread on the minutes of Bielenberg-Schooler post and form part of the permanent historical records of the post.

"Wobblies Still Working

While in the act of selling I. W. W. literature and soliciting members into that organization, Leo L. Sandell was arrested by Deputy Sheriff M. H. Page last Friday, April 20, while returning from one of the camps of the Potlatch Lumber company. He admitted being an organizer for the "wobblies" and also admitted that he was circulating literature for them.

"We'll get the Potlatch Lumber company, and you,too," he said to the deputy, "before we get through." He was placed in the city jail to await trial. Prosecuting Attorney F. F. Kimble of Orofino arrived Monday and held a preliminary examination, at which Sandell was placed under bonds of $1,000 and taken to Orofino, where he will face District Judge Steel. The prosecutor will try to have his bonds reduced to $500, which amount he states he will be able to furnish.—Elk River News.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MAY 25, 1923. — NO. 47

CHAUTAUQUA DAYS ARE CLOSE AT HAND

There are perhaps few who realize that the Genesee chautauqua will commence on June 10 and continue six days—but such is the program— and the program is said to be one of the very best that has ever been presented here. There will be plenty of good music and other entertainments, all for the insignificant sum of $2.50. It goes without saying that there isn't any other thing that you can buy for the same amount of money that will really give you as much entertainment and enlightment as a season ticket for the Genesee chautauqua.

Following is the daily program—read it, and then lay away $2.50 for a season ticket:

First Day .

Afternoon—
Opening announcement of the week by the chautauqua director.
Entertainment prelude by The Patton Brothers.
Special event — Children's Magic Lunar Circus—Myrtle McCoy and Junior chautauquans.
Evening—
"Futuristic Musical Program" by The Patton Brothers. A prologue, six episodes and an epilogue.

Second Day

Afternoon—
Artists' Recital—The Lewis Concert Party, featuring Sam Lewis, dramatic tenor.
Junior chautauqua.
Evening—
Artists' Prelude—The Lewis Concert Party.
Lecture—"Working Together for Billions"—Norman Allan Imrie. A "World Relationship" analysis.

Third Day

Afternoon—
Lecture—"The Four Cornerstones of Citizenship"—D. Pirie Beyea. A straight-from-the-shoulder talk by a "Citizen of the World."
Junior chautauqua.
Evening—
Play—"The Shepherd of the Hills"—Keighley and Peffer Players. Harold Bell Wright's delightful romance of the Ozark Mountains.

Fourth Day

Afternoon—
Popular convert—Oceanic Quintet.
Junior chautauqua.
Evening—
Concert—Oceanic Quintet. With a record of continuous success on three continents under five flags.

Fifth Day

Afternoon—
Musical entertainment—The Lombard Entertainers—Harry Lombard, baritone; Lela Fairchild Lombard, soprano and reader.
Junior chautauqua.
Evening—
Entertainment prelude—The Lombard Entertainers.
Lecture—"The Soul of Things"—Dr. Henry Gaines Hawn. A new philosophy applied to social, business and civic life.

Sixth Day

Afternoon—
Lecture-Entertainment—Norman V. Pearce. "A unique travel lecture and exhibition of curios from "Australia, the World's Curiosity Shop."
Junior chautauqua.
Evening—
Grand closing concert—Garner Jubilee singers. Featuring plantation lullabies, folk songs of the south, operatic and concert numbers.

There are just two numbers on the above program that will be worth the entire price of a season ticket—the play, "The Shepherd of the Hills," and the last number on the program—the Garner Jubilee Singers.

Remember, the chautauqua starts on Sunday, June 10 and continues for six days—all for $2.50.

At the Opera House

The offering at the opera house on Saturday night is Dorothy Dalton and Rudolph Valentino in the stellar roles of "Moran of the Lady Letty."

The picture is of unusual dramatic strength and is a story of the sea, with scenes along the coast of Norway, in Magdalena bay, Mexico, and along the waterfront of San Francisco. The principal action takes place abiord two sailing vessels, one a trader and the other a smuggling ship, commanded by Captain Kitchell, a murderous, tyrranical seaman. Ramon Laredo, played by Rudolph Valentino, is a society man, who has been shanghaied and forced to join Kitchell's crew. On the other vessel, which becomes a derelict, is Moran, a girl of sturdy, rough, seafaring type. Kitchell finds the derelict, Moran is carried aboard by Ramon, and from then on ensues a series of highly dramatic complications which makes the average spectator grip his seat and lose himself in the realism of the picture.

The usual good comedy will be given.

An Essay On the Frog

A small Japanese boy in a Chicago school wrote the followniy essay on the frog:

What a queer bird the frog are.
When he sit, he stand, almost.
When he hop, he fly, almost.
He ain't got no sense hardly.
He ain't got no tail hardly, either.
He sit on what he ain't got, almost.

DEATH OF AEVERA BRENNER AT UNIONTOWN LAST FRIDAY

Miss Alvera Brenner passed away at Uniontown, Washington, at 7 o'clock on Friday, May 18, 1923, death being due to a general decline in health after two attacks of influenza, from which she had suffered severely for the past nine weeks and gradually failed until the final summons came.

Miss Brenner was born at St. Clemence, Ontario, Canada, May 24, 1904, and departed this life May 18, 1923, aged 18 years, 11 months and 25 days. She came to Genesee with her parents, where the family resided for a year, later moving to a farm six miles west of town and six years later they removed to what was known as the Dertinger place, which has since been the family home.

Three years ago Miss Brenner had a severe attack of influenza, from which she never quite recovered, although she attended many social affairs, being quite popular with the younger people. During the past winter she suffered a second attack of the flu, from which she suffered steadily for the past nine weeks, three of which were spent in St. Joseph's hospital at Lewiston, where everything possible was done to relieve her suffering, but seemingly without avail. Two days before her death she was taken to the home of Mr. and Mrs. J. P. Hoefer at Uniontown, where on May 18 she passed peacefully away with her mother, father, Rev. Henry Leoffler and Dr. W. A. Burg at her bedside. She was a faithful member of the Catholic church.

The funeral was held from St. Boniface church, Uniontown, at 10 o'clock on Saturday, May 19, conducted by Rev. Father Loeffler, pastor of the church. Special music was furnished by the choir. Beautiful floral pieces covered the casket.

The pallbearers were Alfred Heitstuman, Raymond Gans, Gerald Mosman, Henry Jacobs, Otto Schwenne and Nick Fuchs. The honary pallbearers were Misses Louise Mosman, Mary Gans, Martha Wagner, Viola Wagner, Amelia Kinner and Clara Tuschoff, all of whom were dressed in white.

Burial was made in St. Boniface cemetery, Uniontown.

We wish to thank our many friends, and especially the Leon district, for their kindness and floral offerings during our recent bereavement.

J. K. Brenner and Family.

Death Of Father

Frank H. Thomas, superintendent of the Genesee schools, received the sad news on Sunday last that his father had passed away at Moscow that day at the Gritman hospital, where he had been a patient for the past two months.

Mr. Thomas and family had joined a picnic party at Asotin and was notified at that place of his father's passing. He at once went to Moscow by car from that place.

Albert Corwin Thomas was born at New Market, Taylor county, Iowa, October 7, 1858, and passed away at Moscow, Idaho, May 20, 1923, at the age of 64 years, the immediate cause of death being ulcers of the stomach.

Mr. Thomas went from Iowa to Wyoming where the family lived until 1902, when they removed to Marion county, Oregon, where they resided until 1909, when they went to Moscow to make their home, where they have since resided.

Besides his faithful wife he leaves to mourn their loss his aged mother, Mrs. Elizabeth Thomas, of Sheridan, Wyoming, who is 87 years of age; four brothers and three sisters; three sons, Frank H. Thomas, superintendent of schools, Genesee; Albert N. Thomas of Pryor, Montana, and Joseph J., a student at U. of I., residing at home, and three daughters, Esther E. Thomas of Santa, Ana, California; Hilda C. Thomas, a teacher at Valley, Washington, and Georgia E. Thomas, a student in the Moscow public schools, residing at home.

The funeral was held privately from the Short undertaking parlors on Tuesday morning at 9 o'clock with interment in the Moscow cemetery.

Mr. Thomas has the sympathy of this entire community in his hour of bereavement.

Snoqualmie Pass Open

The Snoqualmie pass over the Cascades is now open to travel. Cars have been passing over the mountains for several days, and the highway is reported as being in good condition. Much snow is encountered on the summit, but through the work of the road departments, a good trail has been cut.

Reports indicate that Blowett pass is in very good condition. The road is a little rough where road crews are working, but a car finds very little trouble or heavy travel en route.

That's Why It Is "Knocked"

There is not a country in the world that has as good a government as our to find fault with.—Newark (N. J.) Star-Eagle.

Unrepentant Europe

Europe hasn't got down to asking "What shall I do to be saved?" She wants the United States to do it.

COMMUNITY DINNER AND SCHOOL MEETING, TUESDAY

You are asked to please remember the community dinner to be held at the Lambert hotel next Tuesday, May 29, from 12 to 1:15. All who are interested in the community welfare are asked to attend.

This meeting is not for the sole purpose of talking over matters pertaining to the schools, but is for the purpose of creating a closer relationship between business men, farmers, and others interested in community life and advancement.

If you have any particular problem that you would like to have solved, bring it before this meeting and all possible will be done to help you to solve it. There are many things aside from the school question that might be taken up and discussed with profit.

A committee consisting of R. E. Emmett, John G. Meyer, F. E. Dicus and Milton Rader went to Garfield on Wednesday for the purpose of securing information regarding consolidated school districts. Garfield has had a consolidated district for the past 14 years and firsh-hand information was secured, and arangements made with several school authorities from that city to come to Genesee next Tuesday for the purpose of giving out desired information.

After the dinner at the Lambert hotel a meeting will be held in the school house at 2 o'clock, which every one interested in present school matters and want to gain first-hand information regarding the question of consolidation is asked to attend.

The members of all school boards of adjoining districts are asked to please come to the Lambert hotel on Tuesday at noon and be guests of the local community club at dinner, and everyone is invited to attend the meeting at the school house at 2 o'clock p. m.

It might be stated that members of the Garfield school board stated that they now have on file an application from the high school district at Elberton, several miles from Garfield, asking to be included in the Garfield consolidated district.

If you are at all interested in the future of the schools and the education of your children—whether you are in favor of consolidation or not—attend the meeting at the Genesee school house on Tuesday at 2 o'clock.

Tidemann-Skelton

Miss Melvina Tidemann of Genese and James C. Skelton of Reubens, Idaho, were united in marriage on Sunday, May 20, the Rev. John Lough of Gifford performing the ceremony. The bridal party immediately left for Myrtle, where a wedding dinner was sevved at the home of Mrs. Jack Hill, a sister of the groom. The newlyweds came to the home of the bride's father, S. M. Tidemann where a wedding dinner was served on Monday by the Misses Clara and Anna Tidemann, sisters of the bride.

Mr. and Mrs. Skelton will be at home in Reubens, Idaho, after May 27, where Mr. Skelton is employed as manager of the Tri-State warehouse.

The bride has many friends in the Genesee country who will extend congratulations and best wishes for a long and happy married life.

Is Given Shower

A very pleasant birdal shower was given at the Tidemann home, north of town, on Tuesday afternoon in honor of Miss Melvina Tidemann. A mock wedding was performed with Mrs. R. E. Nordby as groom, Mrs. Nels Lande as the bride, Mrs. Mae Narum and Mrs. Arthur Hove as bridesmaids, Mrs. John Lindrud acted as minister and Geraldine Bumpass was ring bearer. Alice Hanson played the wedding march.

The bride was presented many beautiful and useful presents, among which was linen, cut glass and silverware. A delicious pick-up luncheon was served.

Linger Longers Meet

Mrs. Frank Hoorman entertained the Linger Longers Wednesday afternoon at the home of her mother, Mrs. J. J. Tupker. The afternoon was spent socially and with needlework, after which a delicious luncheon was served. The invited guests were Miss Sophia Kambitsch, Mrs. Fred Morscheck, Mrs. Art Potsch, Mrs Henry Lorang, Mrs. Chas. Whalen, Mrs. Henry Morscheck, Mrs. R. I. Witty, Mrs. F. J. Niemann, and Mrs Milton Rader.

The next meeting will be with Mrs. Joe Tobin.

Farm Bureau Picnic

The fifth annual picnic of the Latah county farm bureau will be held at the City park in Moscow, on Thursday, June 7. The farm bureau picnic is conducted by the farm bureau for all farmers and persons interested in the farmers' problems and all are urged to keep the time and place in mind and plan to attend.

More detailed information in regard to the picnic will be given in week's paper.

Are Parents of a Daughter

Mr. and Mrs. Arthur Mayer are the proud parents of a baby daughter, born Tuesday evening, May 22. Mother and babe are doing nicely.

WHAT HAPPENED HERE TWENTY YEARS AGO

Vincent Lorang and wife have been out from Salmon river for a visit with relatives and friends.

Peter Steltz has been elected a delegate to represent the local Knights of Pythias lodge at the grand lodge session to be held at Lewiston in June.

J. P. Steltz has completed the building of a good sized barn on his property west of town and we understand will soon commence the erection of a new residence. It is his intention to move out there.

There will be a meeting at C. P. Burr's office tomorrow (Saturday) morning at 9 o'clock, to consider race and 4th of July matters. All interested and members of the Driving club are requested to attend.

Plans for the proposed opera house were submitted to the Woodman lodge members Saturday evening and also cost estimates. Under the present plans the building which would be 40x130, two stories and a basement, will cost $7000. A committee to solisit shares was appointed, they to report at the next meeting.

This section was benefitted by a soaking rain Sunday and Monday. To late sown spring grain it has done a great amount of good. Sunday night the rain was accompanied by a large fall of snow which soon disappeared Monday. The heavy frosts of the fore part of the week have probably done a little damage to the more tender fruits.

The graduating exercises will take place this evening at the congregational church. It is not expected that near all can gain admittance to the building and should the occasion demand the exercises will be repeated to-morrow evening. Following is the list of graduates: Ormond Patterson, Nellie Brant, Rachel Biram, Ethel Spurbeck, Edna Driscoll, Edith Mervyn, Mae Herman, Ilena Woods, Madge Fowler, Emma Christenson, Matt Toning, Cora Hodgins, Roy Hibbs, Inger Lisne, Rose Walby.

Lewiston Rose Show

On Monday, May 28th, the Lewiston Rose Society will hold its 23d Annual Rose Show and Rose Parade. Mr. James Harding, manager of the Lewis-Clark hotel has turned over to the Rose Society, the ball room, lobby and main dining room for floral exhibits, and the rose show and judging will be held under that spacious roof. A rose queen will be elected during the week and the coronation will take place on the lower north wing of the hotel at the close of the parade. The parade, consisting of many business, fraternal, civic society and individual floats, children's division, mounted division and bands will start at 2:30 p. m.

The rose show and parade are entirely free to the public, no charge of any sort being made for viewing the exhibits. The cost of the show is born by the Lewiston people.

During the evening a rose ball (informal) will be held in the Lewis-Clark hotel. Everbody is invited to the ball. Three valuable prizes will be given away during the ball. The regular admission fee will be charged for this feature of the annual event.

The exhibit and parade prizes will approximately equal $1000. Any person, firm or society, regardless of place of residence is entitled and urged to participate in the Lewiston Rose Show and parade. For further information call or write to Mrs. J. F. Thompson, president, Lewiston Orchards, Idaho. Phone 7153.

A special invitation is issued by the society, through the press, to all persons residing outside of Lewiston to attend the show. The society will do all in its power to make the show most interesting and educational to all participants.

Commencement Exercises Held

Commencement exercises for the Genesee High school were held in the opera house last Friday evening and the house was filled to capacity. The program was a very pleasing one and the address by Prof. James O'Gorman of the University of Idaho was exceptionally well received.

The graduates were given their "sheepskins" by Supt. Thomas, who made appropriate remarks during the presentation. The graduates received many beautiful and useful presents.

A Near Accident

While driving a teach hitched to a disc last Tuesday afternoon, Ray Hanson lost his balance and fell forward in front of the machine. Luckily he held onto the lines and succeeded in stopping the team, otherwise the accident might have proved more serious. A sprained ankle and a few minor bruises resulted.

Federated Ladies' Aid

The ladies' aid of the Federated church will meet at the Community house on Wednesday, June 6. The date has been set ahead one week on account of Wednesday being Memorial Day.

Undergoes Operation

Dorothy Evans, daughter of Dr. and Mrs. F. B. Evans, was taken to Lewiston Wednesday afternoon where she underwent an operation for appendicitis.

CAN THE GENESEE COMMUNITY AFFORD TO DO IT?

(Contributed)

In his address at the commencement exercises last Friday evening Prof. James O'Gorman quoted H. G. Wells, the great English writer and a man of world-wide as well as ageless vision, as stating that we are ever confronted with "Catastrophy on the one hand and education and religion on the other."

Were we to recognize this as as the fact of history, would our schools and churches be facing retrenchment, and in some cases , a temporary cessation?

Wealth in itself is a curse to any age, and as vast empires of the past have sacrificed everything else for it, they have had to pay the price of giving way to a new order: that of recognized education and religion. What history records of the life of nations it also records of the life of communities and individuals.

Are we as a community facing the age-long crisis, and is there not a danger that Genesee will soon be only a memory, instead of the life-giving center of a growing and prosperous territory?

Dare we deprive the coming generation, who are now in our midst as boys and girls, of any of the privileges now afforded them by our public school and our three churches? Will we continue to support clubs and lodges by the score, burn gasoline by the hundreds of gallons, and bond ourselves for better roads, etc., until our town is the wreck of its former self and all the progressive and worthwhile people have moved away?

Ignorance is the most costly thing on the market, and if those who can't see the handwriting on the wall must be sown, it is time for every thinking man and woman to lay aside every jealousy and petty barrier, demand that any thing we have—even if some of our cherished tax exempt bonds shall have to be sacrificed—before the school and churches, which are the life-blood of prosperity and civilization, shall be sacrificed!

We are indebted to the noble men and women of the past who made great sacrifices for the establishment and maintenance of these two great institutions which made it possible for them to develop the American home to which he owe so much.

Dare we, their sons and daughters, to whom they have left so rich a heritage, sacrifice it all for a paltry mess of pottage? Dare we go on with the song and dance of gay living while the future hangs in the balance? Ignorance is the costliest heritage we can pass on to our children, and made doubly so if with it they have material wealth.

"Catastrophe on the one hand, education and religion on the other." The people of Genesee and the surrounding territory must accept one or the other. Better temporary curtailment and sacrifice now than loss of all in the not far distance.

MEMORIAL DAY PROGRAM

Memorial Day will be fittingly observed by the citizens of Genesee.

The program will be directed by Bielenberg-Schooler post of the American Legion. George Post of the Legion ceremonial committee, announces the program, as follows:

9:30 a. m. Citizens assemble at City park; Legionaires assemble at hall.

10:00 a. m. Legionaires march to City park.
Introductory remarks by Thomas A. Feeney, post commander.
Invocation by Rev. Fr. Godschalx.
Reading "Lincoln's Gettysburg Address."
Address by Wm. Smith, Supt. of schools of Clarkston, Wash.
Benediction by Rev. Jas. N. Pendleton.
Salute to the dead.
Taps.
Adjourn to various cemeteries to decorate the graves of the dead of all wars.

Ex-service men are urgently requested to wear their uniforms; however, those unable to so appear, are expected to join in the program.

Gave Musical

A very grevious oversight was committed by the News when we neglected to mention the musical entertainment given by 24 of the piano pupils of Mr. and Mrs. W. M. Herman on Monday evening, May 7, at her home. The recital was a very pleasing one and showed that the pupils had received great care in their training. The pupils' mothers were invited in and appreciated the recital very much.

Has Removed To Farm

James Nelson and family have removed from their home at Lewiston to their farm home north of town—and Jim says he is mighty glad to get back for the summer at least.

Have New Overlands

Chas. Kraut and Leo Miller are the proud owners of new overland touring cars, bought through the Meyer & Son garage.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Is Wireless Operator

L. E. Combs has been granted an amateur license as wireless operator by the Federal Department, and is now enjoying sending and receiving messages in the evening. He is the second operator in the Colton territory to receive a license.—Colton News-Letter.

Turn Down County Agent

The board of county commissioners, Saturday canvassed the refrendum on the county agent question and out of the 3500 ballots sent out by them to the voters of Idaho county, 2453 were returned. 1719 voted against the appropriation for the agent, 708 for and 26 ballots were not counted for various reasons some having failed to sign their name and others signed their name but failed to vote yes or no.—Cottonwood Chronical.

Tammany Well Best Showing Yet

Lewiston's prospective oil wells are very much in evidence these days. Actual drilling operations continue on the Tammany and Swallows' Nest locations.

At the Tammany well yesterday a depth of a little more than 920 feet had been reached, with the best showing in sight yet made by any well in this district, company officers state. There is real oil in the well. They are feeling more confident than ever of the ultimate outcome—a real, producing oil well.

The Swallows' Nest well is down over 1,050 feet and the officers and drillers are in no doubt as to the successful outcome of the drilling operations now going on.—Lewiston Banner.

First Shipment of Fish

Deputy Game Warden, H. L. Walrath, returned Monday from Sandpoint hatchery, accompanying the first shipment of trout fry coming to the Clearwater this season. The assignment consisted of 45 cans of Eastern Brook, which being small, would total about 130,000 fish. They were unloaded at Greer and with the help of some of the citizens of that village were planted in the Lolo watershed.

Mr. Walrath reports that the Sandpoint hatchery will turn off about 2,000,000 fry this season of which the clearwater valley, Latah and Nezperce counties are slated for about half. The shipments will be continued regularly each week until the quota is filled.—Clearwater Tribune.

Father Loeffler Goes To Europe

Father H. J. Loeffler, who has served as pastor of St. Boniface parish for nine years, departs next Sunday on a extended vacation and he will take him across the Atlantic to the land of his birth. It is more than twenty years since he came to America and this will be his first trip to Europe since he left there.

Taking the afternoon train next Sunday for Spokane he will arrive in New York in five days, there he will rest and on the 29th will sail on the S. S. Reliance directly to Hamburg, Germany. From there he goes to Berlin where he will visit with relatives. Several other points will be visited before he reaches St. Maergen, his birthplace, where near relatives still reside.

During his stay in Europe he will take time to journey to Rome and perhaps to the Holy Land. He plans on returning to Uniontown the first week in September. During his absence Rev. Father Stempfle of Spokane, will admister the interests of this parish.

The entire community wishes Father Loeffler a pleasant and happy voyage and anticipates his return to resume his work here.—Uniontown Journal.

Progressives Progress

The Progressive Needleworkers' club met last Thursday at the home of Mrs. Fred Perkins, nust north of town, and a very pleasant afternoon was spent. During the afternoon arrangements were made for holding a picnic at Asotin park on Sunday next, with a pick-up lunch.

The guests were Mrs. H. H. Schooler, Mrs. Chas. Herman and daughter, Blanche, Mrs. Geo. Follett, Mrs.R. I. Witty and Mrs. W. E. English.

A splendid lunch was served by the hostess, assisted by her sister, Miss Neppa Naylor.

The next meeting will be held with Mrs. Haymond at the Wm. Cunningham home, north of town, May 31.

Will Hold Memorial Services

The beautiful custom of paying tribute to our departed dear ones, as well as honoring our soldier and sailor dead who so loyally served their country, will be observed again this week at the Federated church service next Sunday and the service will be in keeping with this memorial. There will be special music by the choir and a memorial sermon by the pastor.

An invitation has been extended to the American Legion members to attend this service in a body. Committees have been asked to decorate the church especially for this occasion.

The public is cordially invited to join us in this service.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Western Canadian wheat growers are going to use turkeys to exterminate grasshoppers from their fields this year. Fire and poison have failed.

Reconstruction of the famous library at Louvain university, burned by the Germans soon after they entered Belgium, is proceeding rapidly. Installation of 800,000 books will be possible by October 1.

The British piano industry is gradually killing off the German trade. All factories in England are working steadily. Nearly 10,000 persons are employed in them.

Reports have it there is much gold in the mountains of Luzon and on other islands. It is alleged that no thorough exploration for gold was ever made because the Spaniards were unable to conquer the tribes inhabiting the interior regions, and Americans never tried.

B. Bouril, on his way from the orient to Czecho-Slovakia, was arrested at San Francisco charged with smuggling. He offered cash bail. He was refused. He offered his ticket, some five yards of it still being left. The government figured he couldn't get anything like it here and took the ticket as security.

A turbulent scene in the British house of commons ended in suspension of the communist member, John T. W. Newbold by a large majority. Newbold spoke disrespectfully of the chairman of a committee.

Leonid Krassin, soviet trade representative in London in an interview predicted the rupture of the existing trade agreement between Britain and Russia probably will result by war within a year.

With the breaking of winter, Nome people are eagerly awaiting the first boats to reach them. Water is showing in the streams, though there is no sign of an ice movement. Five miles out in Bering sea, lines of water are visible among the ice floes.

Alaska enjoys the distinction of being the only country in the world where there are more motor boats than automobiles, the number of the latter, including trucks, tractors and ambulances, being but 855, while the census department reports 3,364 motor and gas boats plying the rivers, streams and bays of that great territory. The reason: Rivers are safer than roads—in Alaska.

Preparations for the Sesqui-centennial exhibition which is to be held in Philadelphia in 1926 to commemorate the 150th anniversary of the signing of the Declaration of Independence, have entered a new phase with the adoption of definite plans. A campaign has been inaugurated to raise $15,000,000, which engineers have estimated will be required for construction and promotion work up to the opening of the gates.

RULES FOR PREVENTING FIRE IN GRAIN FIELDS

1.—Keep your machinery in repair, well lubricated and provided with an air clarifier and a good spark arrester. Hot boxes and hot carbon cause 30 per cent of grain fires.

2.—Always have at hand on the harvester at least two good chemical fire extinguishers. They keep little fires from growing up.

3.—Don't smoke in the fields.

4.—Break up big fields by cutting hay strips at intervals while grain is green. These give you a chance to fight and confine fire to a small area.

5.—Plow several furrows around your grain field as a fire break. Your neighbor may not be so careful as you are.

6.—Help organize your community and install fire-fighting equipment at convenient points. After a fire starts it's too late.

Jean Paul—Joys are our wings; sorrows are our spurs.

SOME SENSE TO THIS MARATHON

The long-distance dish washing record of the world is claimed by Susie Hetlock of Covode, Pa., when she won a wager by washing dishes for 31 hours without stopping. She is employed in a hotel and used the old-fashioned dishpan, cloth and soap.

WASHINGTON NEWS

In the execution of a dog suspected of rabies, Patrolman Demps Butler of Pasco put a bullet through the thigh of Chief of Police E. A. Puryear, who was assisting him.

In an effort to break sugar prices, 100 tons of Guatemala cane sugar will arrive in Seattle June 1. They will sell to $9.75, duty paid, against a local price of $10.60. The supply of Guatemala high test sugar is practically unlimited. Local women's clubs say members are practicing stringent curtailment of sugar.

By a three-to-one vote Tuesday the issuance of $2,000,000 new school construction bonds was authorized in Tacoma. Seven new schools are planned and additions to seven present grade schools.

H. H. Maynard, assistant professor of business administration at Washington State college and vice president of the Kiwanis club, has resigned to become professor of business administration at Ohio State university.

Missing a turn in the darkness, Vernon Schwartz, 34, unmarried, drove off a pier and was drowned in Stillaguamish river at Stanwood. With him were L. Stafford and Miss Helen Rose of Birmingham, who extricated themselves.

Barring future frost damage, it is predicted the Kennewick district will produce the biggest cherry crop in its history, notwithstanding that some fruit buds have been killed.

An oil refinery with a daily capacity of from 500 to 1000 barrels of crude oil is to be built in Spokane this spring. The Spokane Refinery company, with a capital stock of $200,000, half common and half preferred, has been organized to build and operate such a refinery to handle Montana oil. The $100,000 common stock is already subscribed.

Dallas McClothlen post of the American Legion has decided to take over the care of one American grave in the military cemeteries of France. There are over 300 posts in the state of Washington and 111 of these graves have been apportioned to this state. Each grave is to have a headstone, on which will be inscribed a legend telling the name and home of the post which has undertaken its care. It is estimated that the cost will be about $25 per year for each grave.

Plans are being made for organization of a pioneer association in Pend Oreille county. A picnic will be held, to which all pioneers will be invited. Two of the oldest settlers in the county, Joseph Parker, Tiger, and Frank S. Marwell, Skookum creek, who came to the Pend Oreille valley in 1884, are promoting the plan.

J. L. Broderick, engineer, and G. A. Shamberger, leader of the Dunkard colony located between Oroville and Tonasket, are the backers of a proposed power company that is planning to erect another dam and electrical plan on the Similkameen river near Oroville.

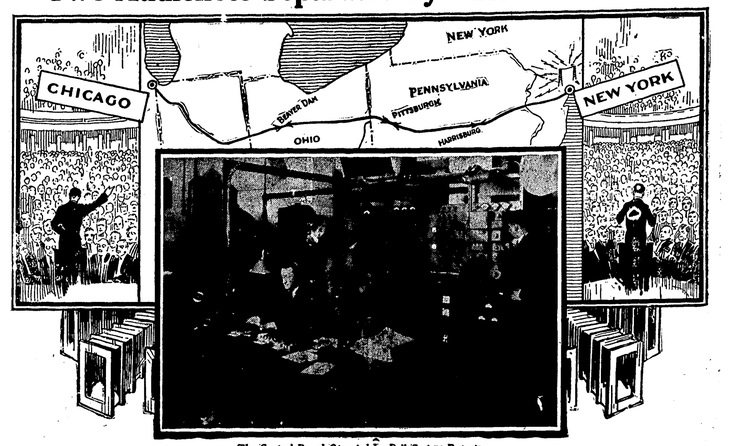
For a hen to sit and hatch in a poplar tree is very unusual, still it is done sometimes. Mrs. H. G. Nagel of Ringgold went into the yard and found a hen with two or three chicks about her. The hen seemed very much distressed and Mrs. Nagel could hear other chicks cheeping but for a time could not locate them. At last she discovered the sound came from above and in the crotch of the tree the hen had made her nest and hatched her brood of 11 chickens.

Applications for life diplomas have been made by more than 1550 graduates of the two-year course of the Cheney normal school this year. Graduates are entitled to a life diploma after obtaining 24 months of successful teaching experience. The diplomas, according to past custom, are to be presented by President Showalter during the annual alumni reunion and home-coming.

TO STOP GROWTH OF CALF HORNS

Preventing the growth of horns by use of a caustic should not stunt a calf. Use a stick of caustic potash or soda. Wrap one end with thick paper to protect the hand. Then dampen the skin over the horn buttons before the calf is a week old after smearing lard or vaseline on the skin not to be treated. Then rub with the caustic until the skin becomes white and ready to bleed. This will prevent the horns from developing and there is no need of burning the skin other than that over the horn buttons. When little "scurs" grow, that is proof that the cauterization was not properly done.

Long Distance Lines and Loud Speakers Unite Two Audiences Separated by Nine Hundred Miles



The Control Board Operated by Bell System Experts

The present year promises to be one of the most notable in the development of electrical communication, judging from the number and character of the events that have already marked the first quarter.

Scarcely had the civilized world recovered from its amazement at the marvel of sustained speech by radio across the Atlantic in January, when it awoke on the morning of February 15, just one month later, to read of the remarkable achievement of Bell System engineers in connection with the annual midwinter meeting of the American Institute of Electrical Engineers.

The fact that the meeting was held simultaneously in New York and Chicago did not, in any way, affect its unity or smoothness. The wonder of the telephone art of today brought these two widely separated audiences together and enabled them to function as though assembled under one roof.

Lantern slides were projected simultaneously upon similar screens in both cities. When the speaker in either city requested that the lights be lowered, it was instantly done both in New York and Chicago. The slides were changed in accordance with the speeches with a corresponding degree of rapidity. Motions were made and seconded, scientific papers were presented and discussed, resolutions were adopted and, in every way, the meeting was conducted as though the audience had been physically together.

One agency only was lacking to bring the two groups in still closer unison and that bond—visibility—looms up as a future possibility, according to predictions of Dr. Frank B. Jewett, president of the institute, who referred to such an accomplishment in the following words: "I wish to call your attention to the fact that we lack only direct vision to make this joint meeting one in every fact save for the element of personal proximity of those in attendance. And who among us is hardy enough to believe that this last limitation may not be removed within the lifetime of many of those now here?"

The 1,500 men and women who made up the audiences in New York and Chicago were not the only ones who were thrilled that night by the epochal features of the meeting. There was also a radio audience numbering hundreds of thousands who were "listening in" as the proceedings were broadcast from W E A F, the broadcasting station of the American Telephone & Telegraph company.

A small sensitive transmitter on the speaker's table and a group of small horns suspended above from which the amplified voices were emitted, constituted the only visible apparatus in both the New York and Chicago auditoriums. Loud speaker amplifiers and long distance telephone lines served as a means of uniting these two groups of men and women into one meeting in spite of the great handicap of distance. Duplicate equipment was at hand throughout the entire procedure, however, in order to prevent any interruptions from marring the smoothness of the evening's program.

That the new marvel of electrical mechanism, evolved from prolonged development and research which made this meeting possible is destined to affect the political and economic machinery of the nation was voiced by Dr. Jewett, who said, referring to it, "Who can picture the limits of the effects and influences which will flow from the development of electrical science and electrical engineering which have made this night possible. In truth, we are participants in an historical event and our children, nay even many of us, may see the agency we here use employed with mighty effects on controlling our collective relations in state and nation. The mechanism which we are here using is one adapted to permit many speakers in many distant audiences to be heard by all who care to listen and take part in a common discussion.

"May it not be that in this two-way working telephone with its sensitive transmitters and its loud-speaking receivers we have the instrumentality for insuring a simpler and better ordering of our affairs—an instrumentality which will enable us to derive many of the benefits of the town meeting in the greater conferences of our national life?"

He described this newest practical usage of the wonders of modern science as "The successful realization of a dream dating back to the pioneer days of Bell himself, namely, the production of a loud-speaking telephone which would reproduce the human voice, but in stentorian tones and in many places simultaneously."

WERE AMAZED BY TELEPHONE CONCERT THIRTY YEARS AGO

The large horn which delivers the sound from the Bell Loud Speaker is not the most important part of the marvelous mechanism, but it plays its own part. That such a horn would increase the volume of sound was recognized by the engineers of the American Telephone & Telegraph Company many years ago. An instance is told of a dinner given in Williamsport, Pennsylvania, by a prominent resident, a Mr. Rhoades, on April 3, 1891. A number of telephone receivers with horns attached to them were hung in the chandelier over the dinner table, and the whole contrivance concealed from sight and suspicion by a wonderful display of flowers. Mr. Rhoades' residence was connected by the American Telephone & Telegraph company with the Continental hotel in Philadelphia, where there was a fine concert that same evening. Great was the amazement of Mr. Rhoades' guests when suddenly they heard very clearly orchestral music from some invisible source such as they knew was not to be heard in Williamsport. No less was their interest and delight when it was explained to them that they were listening by telephone to a concert that was being given in Philadelphia.

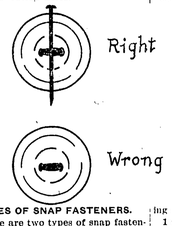
Improved methods of transmission, together with the vacuum tube amplifier, have produced results which would amaze those who attend this early demonstration. It is now possible to carry not only musical pograms but the words of public speakers over specially arranged telephone circuits across the continent and to increase their volume to such an extent that thousands of people can hear them with perfect distinctness.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

FASTENINGS.

The common fastenings for garmentsare hooks and eyes, snaps, buttons and button holes.



TYPES OF SNAP FASTENERS.

"There are two types of snap fasteners; those built upon the principle of the ball and socket, reinforced with a wire spring, properly designated as snap fasteners, and those of a flatter and structurally weaker design of a ball and socket without this wire spring, called press buttons."

SIZES OF BALL AND SOCKET TYPE.

This type of snap fastener comes in eight sizes suitable for dresses and five larger sizes for heavier use.

5-0 for chiffon, lace, veiling, tylle, etc.

4-0 for organdie, voile, etc.

3-0 for light weight waists, lawn, silk, etc.

2-0 for heavier weight wash waists, linen, cambric, etc.

0 for light weight and wash skirts, house dresses, under garments, bathing suits, etc.

1 for medium weight woolen skirts.

2 for heavy weight woolen skirts.

3 for slippers.

PRESS BUTTON SNAPS.

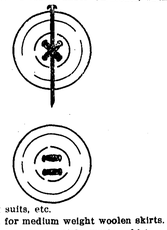
They sell in sizes 00, 0, 1, 2 and 3. The small sizes 00 and 0 are adapted for use on lace, net, and other delicate fabrics. Size 1, is for silk and summer fabrics. Size 2 for light wool and serge. Size 3, for heavy goods.

SIZES.

There are many sizes of hooks and eyes. The greatest satisfaction is obtained by using the correct size for the purpose, as:

No. 00 or 0, for lace and chiffons.
No. 0 or 1, for collars.
No. 2 or 3, for linings and girdles.
No. 4, for skirt bands.

The smaller sizes should be used on light weight materials; for example a No. 2 size might be used for fastening a silk dress, where the same sort of closing on a serge dress would be better served with a No. 3.



HOOKS AND EYES.

"I Gotta Beat It!"

The librarian in charge of the story hour is always very careful of her diction, as the telling and retelling and dramatization of these stories afford a splendid opportunity to stimulate the use of good English. The results are often gratifying and often disconcerting. These children possess an unusually strong sense of the dramatic. The story for the afternoon had been "Cinderella," and now one of the six-year-olds was "telling it back" to the "teacher." She started out beautifully, but as she became more and more interested in her tale, she reverted to her accustomed speech. Finally, in the third scene, where Cinderella while dancing with the prince suddenly discovers that the clock is striking twelve, Rose, no longer a mere story-teller but Cinderella herself, looked up at the clock, dramatically changed her hand to her forehead and in a tense, emotional little voice, cried:

"My Gawd! Lookut the clock. I gotta beat it!"

Last night I held a little hand
So tender and so neat,
I thought my heart would surely
burst
So wildly it did beat!
No other hand into my heart
Could greater gladness bring,
Than that I held last night,
Which was four aces and a king!
—Ht-Life.

"The butcher said it was a spring lamb," said Mrs. Carr.

"He's right," granted Mr. Carr. "I'm chewing one of the springs now."—Ex.

A man ought to be thankful when his wife declines to accept an excuse when he has none to offer.

FORD IS WORLD'S WEALTHIEST MAN

A statement of corporations filed in Massachusetts today indicated Henry Ford is now the richest man in the world. The Ford automobile company, capitalized 20 years ago at $100,000, now has on hand $159,605,687 actual cash. Ford's personal fortune is estimated at between 600 and 750 millions. Last year's net profits were estimated at 119 millions. Ford's personal fortune now exceeds that of the elder J. D. Rockefeller, who has given away money until his fortune is now placed at 300 millions.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

Effects of Fatigue and Overwork.

Sir James Paget has said, "You will find that fatigue has as large share in the promotion or transmission of disease than any other casual condition you can name." This view has long been held, and many authorities endorse it, but no definite facts are known to prove it. No observations have been made on a large scale, using comparable conditions, that show a definite relation between fatigue and disease.

During activity, there is a constant tearing down and building up of the various parts of the body. If the destruction exceeds the repair by a large amount, so that it causes decreased efficiency of the human machine, the condition may be called fatigue. This impaired ability to do work involves not only the muscles, but the nervous system as well.

Everyone has had the sensation of being "healthily tired out." That is not the sense in which the word fatigue is used here. We do not expect, nor do we hope, to end the day's work without being tired. But there is also the other experience of true fatigue, an indefinite condition which developes more slowly, perhaps, and which accumulates after days of trying work. This eventually makes itself felt in diminished output and perhaps breakdown.

There is no very good way to measure the degree of fatigue. The sensations of the individual are misleading as to the completeness of his fatigue. If he is deeply interested in his work, he may ignore his fatigue, and allow himself to be carried to the point of complete breakdown. If his work is distasteful to him, he may complain bitterly when his sensation is only a normal tired feeling. For the same reasons, and for many others such as a compelling rhythm of a machine, etc. the daily output is no good measure of the condition.

Output has been measured in many large factories, in the effort to determine the effect of fatigue. Some of the figures seem to show definitely that the exxcessive working hours diminish the output. The number of hours per day that will give the greatest return must depend on the particular tasks, and no definite length can be set for the best working period in all industries, so far as health is concerned.

It is to be expected that accidents will be more frequent when the workers are fatigued But to measure fatigue on this basis is not reliable, because many other factors are at work, such as proper lighting, speed of operation, attention to work, experience, etc.

The frequency of disease in relation to fatigue is very hard to measure, because we must also take into account the living conditions of the worker, his habits, his closeness of contact with diseased persons, his fitness for the work in hand, and varous other such circumstances. This question must still remain a matter of opinion, rather than of proof.

There is no doubt that fatigue is more often a result of insidious disease, than disease, is the sequel of fatigue. It is therefore important that the person who is the victim of fatigue should be sure that he has no underlying illness. We should not blame our work until we are sure it is the principal cause of the trouble.

She—"I suppose you had a pleasant sea voyage."

He—"Oh, yes, everything came out nicely."

DAIRY

In a cow testing association were 13 farmers milking 530 cows altogether that gave them 90,538 pounds of butterfat a year. There were 14 men with 530 cows that produced 147,381 pounds of fat in the same year. The 13 did not believe in purebred sires at the head of their herds. The 14 did have purebred sires, and had had them many a year and thus improved their cows until they were giving 56,843 pounds more of butterfat than were the scrub cows. The improved herds averaged 278 pounds butterfat per cow, the unimproved 171 pounds, which at 40 cents is $42.80 per cow in favor of keeping a purebred sire to improve the herd.

Work is being accomplished by the dairymen near Custer on the organization of a four-block Jersey bull association. County Agent H. B. Carroll of Whatcom county has held two meetings at the home of J. A. Porter and 140 grade Jersey cows have been signed up for the block.

Through the working out of balanced rations for members of the Whatcom County Cow Testing association, dairymen have saved from $4 to $9 per ton on their feeds. During March 1300 cows were listed for supervision in the association. The association now has 114 herds with Guy Anderson acting tester.

At a recent meeting of the directors of the King County Cow Testng association, a plan was adopted for the sale of calves from cows in the association. The plan calls for two classes of bulls, five classes of cows and nine classes of calves. Calves will range in price from $8.00 to $25.00 each, depending upon the butterfat records of the dam and sire. Only calves belonging to this year's members of the association will be sold. In many respects this plan resembles the one adopted by the Clallam County Cow Testng association. Dairymen belonging to the latter association have been unable to supply the demand for their high grade calves from good butterfat producing cows.

He—"I saw your wife on the street yesterday."

Him—"Did you see her gold teeth?"

He—"No, she had her mouth closed."

Him—"Then it wasn't my wife."

Clarke—"Sweets to the sweet."
Fair Neighbor—"Oh, thank you! May I pass you the nuts?"

"Were you ever pinched for going too fast?"
"No, but I've been slapped."

She: "Get away from that post there's paint on it."
He: "Oh, I thought it was your face I smelled."—Ex.

LUMBER MEN GIVE VETS FIRST CHANCE

Promising to give preference to employment of disabled World war veterans who have completed vocational training courses under the direction and expense of the government, members of the West Coast Lumbermen's association have resolved to cooperate with the U. S. Veterans' bureau in the program of job placement, A. E. McCabe, northwest employment head of the bureau, has announced.

This means that the lumber industry of the Pacific Northwest will soon have within its ranks many veterans of the war who were unable to resume their pre-war occupations because of injuries but who have worked earnestly and hard for many months mastering a new occupation.

With hundreds of ex-men completing their various institutional and placement training courses during the next six months, this move on the part of lumber employers will be of material benefit in the program of soldier rehabilitation, Mr. McCabe stated. The bulk of training completions must be handled between now and January 1, 1923, he stated.

The employment head urged employers along other lines to follow this lead of the lumbermen in this program of hiring rehabilitated war veterans. Several hundred ex-service men in this district must be taken care of this summer and fall. Employers wishing to cooperate should get in touch with the nearest office of the Veterans' bureau either by letter or telephone, it was urged.

Where can a man buy a cap for his knee
Or a key to the lock of his hair?
Can his eyes he called an academy
Because there are pupils there?

In the crown of his head what gems are found?
Who travels the bridge of his nose?
Can he use, when shingling the roof of his mouth,
The nails on the end of his toes?

Can the crook of his elbow be sent to jail?
If so, what did he do?
How does he sharpen his shoulder blades?
I'll be hanged if I know; do you?

Can he sit in the shade of the palms of his hands?
Or beat on the drum of his ear?
Does the calf of his leg eat the corn on his toes?
If so, why not grow corn on his ear?
—Ex.

"Dress! Dress!" the deacon impatiently exploded. "That's all the modern girl thinks about—dress. It's a mad race after fashion."

"Verily," replied the pastor. "Every girl is trying to outstrip the other.

Wife.—Our new maid certainly has sharp ears.
Hubby.—I notice that the doors are all scratched up around the keyholes.—Ex.

Customer.—Let me see something cheap in a cap.
Clerk.—Here Sir, put this on. There's a mirror to your left.

THE PHYSICAL CONDITION OF OUR SCHOOL CHILDREN.

Good health is the first requisite for happiness. A home may be ever so beautiful, convenient, and pleasant, but it can not be a happy home unless every member of the family living in that home is in good health. Especially does that apply to the children in the family.

It is a common belief that the country is a healthful place in which to live and there are many reasons why that should be true. However, investigations have shown that children in country schools are not in as good health on the average as the children in the city schools. Probably the chief reason for that condition is the fact that the country children have not had as careful attention as their city cousins in the way of physical examinations at school.

In such a progressive section as the Spokane Valley it is to be expected that the children would show a high average in health. The findings of the county nurse that has been examining children in the Valley schools do not bear out our expectations. On the contrary it is found that the children are in poor physical condition.

To determine just what the exact conditions are let us take from the records of the county nurse an average group of 300 boys and girls representative of the school children of the Valley. The children included in these records are just an average group not selected because they showed a high percentage of defects. They may be taken as an average for the entire Valley. They were all examined within the last three months.

The six physical defects for which the children were examined were, vision, tonsils, adenoids, teeth, glands and goiter. Only those who needed immediate medical attention were reported to the parents. In every case where a defect was found it was reported to the parents of the child with recommendation that the child be taken to a physician.

The smallest percentage of defective vision was four per cent, found in the first grade pupils. The largest percentage was found in the second grade where 45 per cent of the children were suffering from poor eyesight. The wide variation between the two grades may be explained by the fact that defective vision had not become noticeable during the first year of school, but developed as the child learned to read and use his eyes more. Much defective vision had been discovered by the parents when the children reached the higher grades and the percentages needing attention were lower. Of the entire 300 pupils in all grades 25 per cent had defective vision, or one in every four.

Diseased tonsils were the most common defect in all the grades. Of the entire group 65 per cent had tonsils that needed attention. When we remember that physicians give diseased tonsils as the cause for a great variety of human ailments such a high percentage among the children is alarming.

Adnoids are next highest in percentage defective with 45 per cent of all the children suffering with adnoids. Like tonsils, adnoids may be responsible for general poor health and are highly detrimental to the welfare of the child. Poor work in school may often be traced to one of these two common physical defects.

Defective teeth were found in from four to 82 per cent of the pupils in the different grades. The highest percentages were found in the second, third and fourth grades. Since the examination of teeth was of necessity superficial the percentage actually defective was no doubt higher. However, in all the grades 38 per cent of the children needed to be taken to the dentist.

Glands needing attention were found in 25 per cent of the boys and girls examined. No goiter was found in pupils below the fourth grade but the total number in the entire group with goiter totaled 11 per cent. While this defect is not considered serious unless present in a marked degree there is no excuse for children of nine and 10 years being allowed to develop a condition that will certainly become serious in later years.

These figures mean a great deal. In the first place it is quite apparent that trouble is in store for a large percentage of our children unless they are given more careful attention. The conditions that can easily be remedied now will certainly develop into serious trouble if neglected.

The cost in dollars and cents to the taxpayers as a result of the retardation of these physically defective children is hard to estimate. The repeaters who are compelled to take a grade over for the second time are for the most part an unnecessary expense to the school district. Many of these failures are among the children with physical handicaps that prevent them from keeping up with their class.

The time lost by children who are kept out of school because of poor health or who repeat a grade is a highly important consideration. It does not seem important that the child misses a year of school in the grades, but that year lost simply means that he will be one year older when he has finished school and is ready for his life work. One year's time lost early in school may mean that the student will be compelled to leave college to go to work when within one year of graduation.

Supervision of the children's health in school and the serving of hot lunches will accomplish much, but the final determining factor is the attitude of the child's parents in the home. Even the county nurse's examination and recommendations are entirely futile if disregarded by the parents.

While the building of an attractive and convenient home is highly commendable it is far more important that that home contains a happy and a healthy family.

Artificial Precious Stones More Valuable Than Natural

The play of light and fire in rubies and sapphires which thousands—even millions—of lovers of jewels are enjoying and are able to possess at nominal sums, has been made possible by chemistry.

"The modern synthetic gems," says Dr. Alexander Silverman, head of the department of Chemistry of the University of Pittsburg, and a member of the American Chemistry Society, "are as good as native gems as far as their practical and aesthetic value is concerned."

Dr. Silverman recenty collected natural and synthetic gems worth $50,000 for display before the Pittsburg Academy of Science and Art. He has also made a study of the history of jewels from biblical times to the present, together with legends concerning their endowment with "talismanic, curative and supernatural powers," and their supposed influence upon the stars and planets.

He traced the history of the diamond through India, Brazil and South Africa, where the most extensive deposits have been found.

"The South African fields were discovered accidently by the curiosity of a farmer concerning a bright pebble with which some Boer children were playing," said Dr. Silverman. "This pebble subsequently was sold for 500 pounds in Paris."

"The Cullinan, the largest diamond ever found, came from Johannesburg in 1905. This weighed 3024¾ carts in the rough (1.37 lb. avoirdupois) and measured 4x2x2½ inches. The Transvaal Colony purchased the stone for $750,000 and presented it to King Edward VII. of England.

"The South African mines have, according to estimates, yielded over eighty-five million carats, or about seventeen tons of diamonds since 1867. The sales for 1919 exceeded two and one-half million carats, valued at $65,000,000 in the rough. During the same year, the United States imported $290,797 carats of uncut diamonds for $64,222,947.

"Figures on imports for 1920 and 1921 show increasing importation into our country of uncut stones. This is due to the growth of the diamond-cutting industry in New York. In the past America had to depend almost entirely on the shops of Antwerp and London."

After discussing other non-precious forms of diamonds, used for grinding, cutting and drilling, Dr. Silverman described the Moissan, de Boismeau and Parsons' experiments for the preparation of diamonds. He mentioned the Franz Fischer theory, which may in time lead to commercial manufacture of the diamond. Diamond and other forms of carbon were shown to be chemically identical, through combustion experiments.

"The discovery of a method for artificially making rubbies and sapphires was made by August V. L. Verneuil in 1893," said he. The industry subsequently was established by L. Heller at Geneva, Switzerland, where rubies are now made by playing the oxy-hydrogen blowpipe, through the flame of which various metallic oxides pass on a heated point to build up the 'boule' or inverted pear-shaped mass from which the stones are cut by diamond dust.

"Lantern slides were used to illustrate the process which, through alumina, with a little chromic oxide, yields rubies; with less chromic oxide, pink sapphires; with small quantities of titanium and ferric oxide, forms blue sapphires; with feric oxide alone, yelow sapphires, or "oriental topaz."

"Alumina itself forms the white sapphire, a water clear gem almost as hard and brilliant as the diamond," said the speaker. "The Geneva plant has produced over two and one-half tons of cut rubies and sapphires. They are identical with the native gems, except for minute bubbles and striae, visible only under the microscope, and for their longer luminiscence in vacuum bulbs after exposure to cathode rays."

Dr. Silverman said that a one carat native ruby would retail at from $75 to $5500. Synthetic rubies and sapphires retail at two dollars per carat and may be obtained in any size up to 10 carats, while the average native stones are less than one-quarter carat weight. He urged that this contribution of the laboratory to the enjoyment of life be taken seriously to further encourage research in other fields.

"Sir, your daughter has promised to become my wife."

"Well, don't come to me for sympathy. You might have known something would happen to you; hanging round here five nights a week."

University of Washington Crew at Poughkeepsie Meet June 28

A NEW ADDITION FOR AUTO PARTY

Fireless Cooker Solves Problem of Housewife Preparing Picnic Dinners.

Week-end trips have already become a part of the regular schedule of the family owning an auto. What to eat and how to fix it is the ever increasing task of the housewife on these day trips. As a suggestion to help the family in preparing their picnic lunch, Miss Minerva Lawrence, extension specialist in home management of the State college, mentions that in many families in the state, the fireless cooker has become a part of the picnic equipment.

A place is reserved in many an auto load for the fireless cooker. Meals may be prepared the night before, carried in the fireless and a fine hot spread is ready to be served many miles from home.

The fireless has found a definite place in the auto picnic equipment, where the party is only going to be gone for a day's ride.

The principle of either the home-made or commercial fireless cooker is to retain the heat produced by a heated stone placed in the cooker nest, or by bringing to the boiling point for a few minutes the food to be cooked. Heat is retained by surrounding the food comparment with an insulator which tends to prevent its escape. The food is placed in the cooker and the stored heat continues the cooking.

Parts of a home-made fireless cooker include the outside container, inset, packing, asbestos, cushion, kettle, and stones. The outside container may be made of a home-made box or an old trunk.

A fireless cooker made of a cheese box or home-made box, from 15 to 18 inches square, fits into the floor space of an automobile better than other sizes.

Livestock—Remember that if irrigated land is not too high priced to raise hay, it is not too valuable to pasture.

Plant Pathology—Spray for apple scab just as blossoms are open. Use lime-sulphur 1-20 or Bordeaux mixture made by using 4 pounds bluestone, 5 pounds fresh lime 50 gallons of water.

TIMELY HINTS TO FARMERS

Agricultural Engineering—Watch the spring stream up in the hills to see if it is holding out good, for it might be a source of water supply for the house.

Apiculture—If unfavorable weather should set in, May swarms will starve unless fed. Keep on the lookout.

Farm Crops—Examine all fields for weeds for some new and dangerous ones may have appeared since last year.

Farm Management—On some of these off days, get the machinery ready for harvest work. Save time in harvest by having machinery ready now.

Horticulture—(West side) Cut the seed potatoes carefully. Very small cut pieces often either rot or dry out and produce weak plants. (East side) Be sure you have some accurate method or system of checking up on the evening temperatures in your orchard. You should know just when to apply the first cover sprays for the codling moth worms.

Oarsmen Will Again Attempt to Capture National Honors.

SECOND PLACE LAST YEAR

Will Also Stop Over for Race With U. of Wisconsin Crew—Are Champions of West Coast.

For the fourth time in the history of the institution, the University of Washington will be represented at Poughkeepsie by a crew of championship caliber, and will be matched in actual competition against the cream of American oarsmen. The state university has gained higher recognition among row authorities than any other western crew and will go east with a coast championship dangling from her belt.

Morton G. Bogue, president of the Poughkeepsie Board of Rowing Stewards has sent a formal invitation to the university, inviting three husky crews to participate in the Poughkeepsie regatta, to be held on June 28. There is every possibility of the varsity and freshmen crews making the trip, but it is a foregone conclusion that the supervarsity will do their rowing at home.

Washington has accepted an invitation from the University of Wisconsin for a stopover race on Lake Mendota, June 16. Evidently, the Badgers are out for "R-r-revenge" in regard to that little matter of eight boat lengths on Lake Mendota, last year. However, there is little possibility of a setback in this quarter, since Wisconsin is admittedly inferior to the championship husky oramen. The freshmen, who are Coach Rusty Callow's own product; will also exhibit their wares before the good people of Wisconsin.

In the three previous trips which the purple and gold have made east, they have established a record far superior to any other coast institution. The first try was in 1913 when eight oarsmen from the state institution pulled in for a good third place, in competition with six other crews. The next year, they journey east and finished last. In 1922, Washington came into her own, when they licked five championship crews to a fare-you-well and proceeded to give the Navy the scare of their lives. In a heart-breaking finish, and with the echoing cry of "Come on Washington," ringing in their ears, the eight stalwarts from the west pulled into a second place behind the Navy and an intercollegiate championship.

Immediately, Yale plucked the fruit from the tree, and signed Coach Ed Leader and Captain Mike Murphy for a two-year period. Russel Callow, varsity oarsman for three years under Hiram Conibear, and captain of one varsity shell, was chosen to fill the shoes of the missing leader. His first piece of work was to find a stroke. Dow Walling, stroke for the 1921 year-ling eight, was chosen to fill the bill. Rusty Callow set out to beat California, and when the waves had quieted down, Callow's crews, both of them, were found to be victorious, the varsity by seven lengths and the freshmen by three.

In commenting on the freshmen race, Coach Ben Wallis, of California, admitted that the husky yearlings had beaten the best freshmen crew ever turned out by the Bear institution, and had nothing but praise for the Purple and Gold oarsmen who so decisively defeated his varsity shell.

Callow will have three Poughkeepsie veterans in the shell when it is paddled to the starting line on June 28. The men are Captain Sam Shaw, coxwain Don Grant and Pat Tidmarsh. Two sophomores, Dow Walling and Harry John Dutton will swing oars for the first time at Poughkeepsie, while four seniors, Fred Spurn, Rowland France, Ed Dunn and Max Luft will complete the personnel. Wright Parkins, who rowed at No. 4 against California has graduated. His place will be taken, from present indications, by Rowland France, 1921 veteran, and a strong oarsman.

The probable varsity lineup for the annual titular struggle will be Walling, stroke; Bellingham, Dutton, 7, Seattle; Captain Shaw, 6, Portland; Spuhn, 5, Seattle; France, 4, Hoquiam; Dunn, 3, Spokane; Luft, 2, Seattle; Tidmarsh, bow, Seattle, and Grant, cox, also of Seattle.

The tentative freshman lineup is Captain Ulbrickson, stroke, Seattle; Sanford, 7, Seattle; Kerns, 6, Seattle; Brown, 5, Great Fals, Mont.; Armstrong, 4, Everett; Hart, 3, Issaquah; Gill, 2, Snohomish; Bolles, bow, Seattle, and Carlson, Everett, cox.

Father (reading a letter to mother from a son at college)—"Harry says he's got a beautiful lamp from boxing."

Mother—"Oh, I just knew he'd win something in his athletics."—Ex.

Harold Bell Wright's Masterpiece to Be Presented Here Soon

"The Shepherd of the Hills," Beloved Story of the Ozarks, Is Feature of Chautauqua Program.

The mere announcement of the play—and the players— should in itself be sufficient to insure a capacity audience when Chautauqua brings "The Shepherd of the Hills" to town. This most beloved of all American dramas will be presented on the third night by the Keighley and Peffer Players of New York City. "The Shepherd of the Hills" was dramatized from Harold Bell Wright's famous story. This great Ozark play is a sermon in action—a splendid moral lesson vividly impressed on the minds of all who see it. "Your Pete," with his plaintive story and impressive faith in God; the mighty Matt and winsome Sammy living their wonderful love story; and the splendid Shepherd will all be there with the other well-known characters of the story. It is clean and wholesome throughout, with many a laugh, a tear or two, and a host of thrills. It's a real American story told in a real American way. Don't miss it.

Genesee Chautauqua, Tuesday Evening, June 12

STATE FISH AND GAME DEPARTMENT'S PROGRAM

"The state fish and game department will adopt a definite program having for its aim more attention to the propagation and development of our fish and game resources," it was announced by State Game Warden R. E. Thomas following a conference with Governor Moore, in which plans for the department's work during the coming biennium were discussed. "More money spent in permanent improvements and in the purchase of game birds, game animals and their propagation and less money spent in salaries and traveling expenses is the aim of the governor and in that I fully concur," he continued.

"The biennial report of the fish and game department for the years 1921 and 1922 show $330,918.25 was expended. Of this amount $144,673.91 was expended for salaries in field supervision and approximately $40,000 was spent for expenses of the field force. The records of the game department indicate that in the years 1921 and 1922, of the revenue received during those years, $12,000 was expended in improvements, approximately $8,000 in additional equipment and $25,000 for supplies which latter items include the purchase of game birds, fish eggs and other supplies. We believe that a more economic administration of affairs of this department will permit us to expend or put into permanent improvements between $40,000 and $50,000 during the coming biennium with similar increases in the amounts for birds, fish and other game.

"During the biennium just ended an average of 48 field men were employed. These of course did not include hatchery superintendents and assistant superintendents and those immediately connected with the operation of the four fish hatcheries. Carrying out the program of economy in saleries and expense with more attention to permanent improvements and game propagation we propose to reduce the number of field men to not more than thirty-three, including the eight assistant chief deputy game wardens. This reduction on a basis of the revenue derived from the sale of licenses and other sources during the last biennium will mean a saving of approximately $44,000 in saleries for the biennium. The item of traveling expenses for local deputies is also quite a factor. On a basis of the field men employed during 1921 and 1922 this would amount to $500 per annum per man. A reduction of the field force will mean a similar reduction in this expense and we estimate that the saving on this account should be approximately $15,000 for the biunnium. This system alone being sufficient to build one additional hatchery.

"When the Republic administration took over the Game Department in 1918 matters generally were found in rather a deplorable condition, our hatcheries, for instance, were in a bad state of repair. The Coeur d'Alene hatchery had been closed or its operation discontinued. There had been, or was, very little attempt made to actively patrol the state, in consequence of which violations of the fish and game laws were common and particularly little respect was had for that feature of the fish and game law requiring that every hunter and fisherman must secure a license. It was apparent therefore that a strenuous effort must be made to provide additional revenue, all of which was accomplished, as can be readily shown, by increasing the number of field men at the same time and also demanding increased efficiency.

"It is very evident also, from a thorough investigation that on account of the very few fish planted by the former administration and the manner in which same were planted, that our streams in many instances had become almost entirely depleted. The demand for more fish seemed to be the crying need. The revenue of the department during 1919, 1920, 1921 and 1922 was expended largely in supervision, which practically doubled the revenue along all lines and greatly restock the streams as well as bringing greater respect for the law on the part of the sportsman and public in general. These results having been accomplished it would seem that the time is now ripe to expend less money in supervision or field work and devote a larger part of our revenue to permanent improvements, the building of additional fish hatcheries and a larger investment in the planting of game birds. It may have been necessary during the past four years to retain the large force of field men but experience has also indicated that by using care in the placing of these men at strategic points, this force can be considerably reduced.

"In no sense should it be understood that active supervision is going to be discontinued. With the organization of various gun clubs and sportsmens and co-operation of the farmers and public in general with the department, we should be able to carry on this work with a considerable reduction in the active force.

"It is planned this year to expend as large an amount as is possible in improvements on hatcheries at Sandpoint, Couer d'Alene, Hayspur and Ashton, where there is wonderful opportunity for development. We are also sorely in need of a hatchery in southern and western Idaho to take care of streams in this particular district. We firmly believe that a saving along the lines indicated will not only permit these things but will also place the department in a position to carry out our plans for creating a game farm.

"The game department is not on an appropriation basis, no money being appropriated by the legislature for its operative expense, but we believe the money derived from the sal of licenses should be expended as carefully and economically as though it were a direct tax on the people of Idaho. Agreeing perhaps that in bringing the department up to its present standard a large force was required and it was necessary to experiment more or less along these lines,isn't it now about time that we had something of a tangible nature to account for the way this large revenue is expended? This is the hope and aim of the department for the coming biennium."

Male Quartet Feature of the Garner Organization

The Singing of the Male Quartet Which Is Included in the Company of Jubilee Singers on the Last Day Will Be Musical Feature of Chautauqua.

George R. Garner, who heads the Garner Jubilee Company, and male quartet, is the possessor of a wonderful tenor voice and is generally considered to be one of the finest colored artists in all America. He has gathered together a group of distinguished colored vocalists, all of whom are either college or conservatory graduates. His organization has attracted attention in the large musical journals of the country. The Musical News of Chicago recently had this to say: "The Garner organization has established a secure place in the world of music and entertainment that is unparalleled in the annals of music. It is the leader in its line. Mr. Garner's singing at the Ziegfeld Theater Saturday thrilled the large audience that gathered to hear this sterling artist." The male quartet is said to be one of the finest in the country and their rendition of the old plantation songs and Southern melodies is superb. You will be surprised at the large repertoire of the Garners, for it includes many standard and operatic selections.

Last Day of Genesee Chautauqua---June 15

1 oz. or 1 ton?

One ounce of Royal Baking Powder is worth a ton of cheaper baking powders when you consider the superiority in the quality, healthfulness and taste of food prepared with it.

ROYAL Baking Powder

Made from Cream of Tartar derived from grapes

Contains No Alum—Leaves No Bitter Taste

Hogs Plentiful in Latah

While there are not sufficient hogs grown in the northwest to supply the northwest market, Latah county is producing more than enough for its wants and is supplying the Hagan and Cushing packing plant at this place to a large extent, according to C. A. Hagan, of the Hagan and Cushing company. The company is now paying eight cents per pound for good hogs, which is considered a fair price for this season of the year.

Tuesday morning B. J. Jones, extensive farmer in the northern part of the county, brought a large truck load of first-class porkers to the local plant, and a carload was received from the Farmers' Union company at Genesee. The number of hogs available indicates that the farmers in the Moscow territory have been getting back rapidly to the hog and alfalfa idea the past year.—Star-Mirror.

Crops Fine at This Time

John Forgey, who was down from his ranch to spend the week end and Sunday in Asotin, says he cannot call to mind, at least for a good many years, when the growing grain of Asotin county looks better than it does a this time. Some few weeks back, Mr. Forgey says there were a few spots here and there in some of the fields where it looked as though the grain might fail to materialize, but he declared that practically all of such spots had disappeared, due to the rains that we had and the fine growing weather that has since followed. Mr. Forgey is very jubilant over the outlook for a good crop this season, and says there is absolutely no reason at this time for anyone to entertain any other than optimistic views. What the month to follow may bring forth is yet to be seen, and it will be time to find fault when conditions warrant it. But just now, everything is lovely and full of promise.—Asotin sentinel.

Will Soon Start On Road

The work of resurfacing the North and South highway from the Washington state line to Moscow will begin shortly. Much of the machinery for the work has arrived and blasting has been going on at the rock quarry for the past several days. Four inches of rock will be put on the road—which will take just a little of the joy out of joy-riding on that particular stretch for some time.

Neighbor to Neighbor Sales

"It is to the farmer's benefit to observe the importance of pure seed. The Idaho pure seed law is as binding on the farmer as on the dealer," says C. B. Ahlson, state seed commissioner. "The law requires growers as well as dealers to sell only tested seed of alfalfa and clovers that conform to state regulations.

"Some farmers still persist in planting inferior quality seed. It is a losing game and many only realize this after sustaining a heavy financial loss at harvest time.

"The weed seeds found in a lot of clover or alfalfa ordinarily mature with that crop. If the weeds are planted they are most certain to mature and the growers sustain a loss on thousands of pounds instead of pounds instead of preventing this heavy loss by purchasing a few pounds of clover or alfalfa free from inseparable and noxious weeds. The expenditure of a few cents more per pound at planting time for seed free from noxious and inseparable weed seeds is one of the most profitable investments a farmer can make.

"A few farmers this year, as in the past, are willing to lose a few hundred dollars to learn this fact for the future.

"A test costs nothing and is one of the best insurance policies a farmer can obtain. Send a two-ounce sample to the State Seed Laboratory, Boise, at least a week before planting time."

A New Version

Maud Muller once on a summer's day, while her tightwad Dad was raking hay put up a job on the stingy cuss and went for a ride in the old tin bus. This Maud was one who would step on the gas—no sleepy John G. Whittier lass. She was a model "twenty-three," but the car had taken its last degree. The antique Lizzie still would run, but its days as a first -class rig were done. Its gizzard was loose and its liver and lights were gone with the days "when we had our rights." But the lady was wise to brakes and gears, and so forgetting the passing years, they clattered through town with a jerky roar, as the twilight fell, past the courthouse door. As Maud went by in her ancient car, the judge half swallowed a big cigar, and a moment later was heard to shout: "As sure as I'm judge, that tail light's out." He called to his henchman. "Bailiff, say fetch here that dame in the rattling shay." The bailiff got him to horse at once—he was used to pulling such fancy stunts—and Maud was stopped in her old tin car and faced cold justice across the bar. She looked at the judge and he hemmed and coughed, for Maud was a beaut and the judge was soft. And he said, "I note with profound regret, if it happened to rain you might get wet," and he murmured softly across the bar, "If you'll permit us we'll fix your car." The car was fixed and Maud helped in and she continued her evening spin. And they heard her laugh as she drove away, "You'd better be handsome than rich, I'll say."—Swiped.

Whooping Cough

This is a very dangerous disease, particularly to children under five years of age, but when no purgeoric, codine or other opiate is given, is easily cured by giving Chamberlain's Cough Remedy. Most people believe that it must run its course, not knowing that the time is very much shortened, and that there is little danger from the disease when this remedy is given. It has been used in many epidemics of whooping cough, with pronounced success. It is safe and pleasant to take.—Adv.

Gave Farewell Party

Mr. and Mrs. F. E. Dicus gave a farewell party for the teachers and a few invited guests at their home Friday evening and a very pleasant evening was spent.

Those present were Miss Lela Patch, Miss Frances Vaughn, Miss Edith Winegardner, Miss Esther Martinson, Miss Alice Winegardner, Jas. Winegardner, Chas. W. Smith, Mr. and Mrs. J. J. Tupker, Mr. and Mrs. Frank H. Thomas, Mr. and Mrs. Ira Hanson, Mr. and Mrs. G. E. Sampson and daughters, Misses eGrtrude and Margaret, Mrs. Gerald Coleman, Mrs. Winegardner, Mr. and Mrs. Geo. Bolou and Miss Ruth Martinson.

Schools Close

The Ingle school, Miss Johanna Dwyer, teacher, closed this year's term with a picnic last Friday. Only the mothers and children were present but a very pleasant time is reported just the same. The term is reported to have been a very successful one and Miss Dwyer is to be complimented.

BEST IN THE LONG RUN

Tire mileage and service comes from quality—not purchase price. Silvertowns have never been excelled for quality—so naturally they are the most economical.

MORSCHECK BROS.
GENESSEE, IDAHO

Goodrich Silvertown Cord Tire

Resignes Position

R. S. Sullivan, who has been manager of the Home Telephone company here for the past four years, has resigned his position and left Wednesday morning for Shelby, Montana, where he expects to open an electrical shop.

Mr. Sullivan has made many friends during his residence here who will regret that he has decided to leave Genesee. He has brought the telephone system up to a high state of efficiency and the best service has been rendered since his encumbancy that has ever been given here.

Carl Flomer, who has been assisting Mr. Sullivan for the past two or more years, has been appointed as manager and has taken up his duties in that capacity.

Mrs. Sullivan and daughter, will remain in Genesee for the present at least.

A Picnic Party

A very pleasant picnic party, was held at Asotin park Sunday and was participated in by Mr. and Mrs. Mahlon Follett, Mr. and Mrs. T. H. Herman, Mr. and Mrs. W. W. Burr, Mr. and Mrs. Frank Thomas—and of course they took the kiddies along.

Every man should write his own epitaph for his tombstone. He knows what to leave off.

Am leaving for the summer, but will be back in the fall to do business in Genesee again. F. W. Loncosty. 1

PERSONAL MENTION

Miss Lela Patch left Thursday morning for her home at Boise.

Walter Casebolt arrived Thursday for a short visit with home folks.

Mr. and Mrs. Herbert Potsch were visitors from Uniontown Tuesday.

Mr. and Mrs. Emery Vandenburg of Troy spent Sunday with relatives here.

Mr. and Mrs. John Lorang and daughter, Miss Viola, were Moscow visitors Monday.

Miss Frances Vaughn was a Saturday morning passenger for Lenore to spend the summer.

Miss Edith Winegardner and Jas. Winegardner left Friday evening for their home at Lewiston.

Mable and Charles Bottjer left Friday morning for Portland, Oregon, to reside with their mother.

Miss Lindy Collins left Friday for her home at Lewiston, where she will spend the summer vacation.

Miss Esther Clark arrived Thursday from Colton where she has attended school the past year.

Mrs. Ira Hanson and Mrs. Glen Sampson were Saturday passengers for Moscow to spend the week-end.

Mrs. Geo. Van Buskirk arrived Wednesday from Pullman for a visit with her mother Mrs. John Maldegen.

Arthur Parsley left Monday for his home at Lebanon, Oregon, after a visit with his uncle, George Schlerth.

Mrs. Gerald Coleman left Thursday to join her husband at Denver, Colorado, going overland in her Ford coupe.

Ira Hanson and daughter, Rowene, accompanied by Misses Gertrude and Margaret Sampson, spent Sunday in Moscow.

Mr. and Mrs. Chas. Jain and daughter, Olive, left Sunday for Spokane for a few days' visit, returning home Thursday.

Miss Maxine Lambert left Monday evening, via Lewiston, for Crabtree, Oregon, to join her parents in their new home.

Miss Elva Wilkinson arrived Monday evening from Buhl, where she taught school the past year, for a visit with friends here.

Dick and Jack Vandenburg arrived Saturday evening from Spokane for a short visit with their parents, Mr. and Mrs. John Vandenburg.

Mr. and Mrs. Chas. W. Smith and baby daughter arrived Wednesday from Spokane where Mrs. Smith had been visiting her mother.

Mrs. E. O. McAlister and children were Saturday passengers for Paradise, Montana, to visit with Mr. McAlister, who is working there.

Mr. and Mrs. Joe Reil left Sunday morning for Missoula, Montana, where Mr. Reil will enter the N. P. hospital for medical treatment.

Miss Irma Russell left Friday morning for a short visit with home folks at Reubens before leaving for California with the Jain family.

Mrs. Elizabeth McGary returned to her home at Oakesdale, Washington, Sunday afternoon after spending a few days visiting at the McCreary home.

F. W. Loncosty left Monday morning for the oil fields at Shelby, Montana, where he expects to spend the summer, returning to Genesee in the fall.

Mrs. J. G. Wilkins and son left Saturday morning for Tacoma, Washington, after a short visit with her mother, Mrs. Mary Isaksen, who is in quite poor health.

Mrs. Margarita Bottjer and daughter, Miss Maggie, left Wednesday morning for Sandpoint for a short visit with their daughter and sister, Mrs. Ed. Kempf.

Mrs. S. P. Schooley left Sunday morning for Huntington, Oregon, to join her husband, after a visit at the P. C. McCreary home. They will go from there to their home at Seattle.

B. B. Caldwell left Monday evening, via Lewiston, for Mapleton, Oregon, where he has accepted a responsible position with the Vaughn & Bester Lumber company. His family will remain in Genesee for the present.

Mrs. Fred Morscheck's mother, Mrs. J. E. Gibbs, her grandparents, Mr. and Mrs. I. M. Clark, her cousin, Henry J. Clark, and Misses Marie and Ruby McLaughlin, motored down from Spokane Sunday and spent the day with Mrs. Morscheck.

Mrs. J. S. Larrabee and daughter, Miss Gladys, arrived in Genesee Thursday from Odessa, Washington, where they had been visiting Mrs. Jake Hopp, nee Ilah Larrabee. They drove overland from Sacramento. They will spend a few days here visiting old-time friends.

Had Leg Badly Hurt

John Lorang suffered an accident Sunday evening that might have proven much worse than it turned out to be. While milking it seems that the cow became frightened at a horse and jumped upon one of Mr. Lorang's legs in such a manner as to break some of the smaller arteries. He suffered great pain as a result and was taken to a physican and some relief afforded. He is getting along nicely although his leg is badly bruised and very sore.

The Hasfurther Hardware store has taken over the distribution of the Craftex. F. W. Loncosty. 47-2

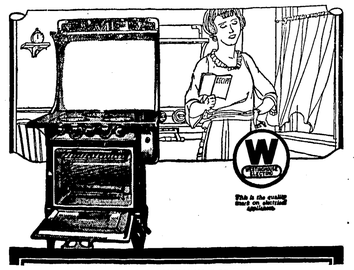
To know how good a cigarette really can be made you must try a—

The Popularity of Electric Cookery
Is Spreading Rapidly



WESTINGHOUSE 2-19-B

People are gradually coming to realize the value of the more convenient, quick, cool, safe and ecomimical way of cooking---THE ELECTRICAL WAY. In some of the towns served by this company *Every third kitchen is equipped with an Electric Range.*

A New World Record Was Set

In the recent electric range campaign just finished by this company, when 428 new electric ranges were sold in six weeks. Just think of it—428 electric ranges were purchased during a period of six weeks! This shows the increasing popularity of electric cookery. When these new ranges are all connected up, we will then be serving close to 2,000 electric ranges on our lines. Electric cookery is correct cookery.

Prepare for Chautauqua

CHAUTAUQUA TIME is rapidly approaching. You have only about three weeks' time in which to prepare for this, the most joyous and entertaining event of the entire summer season.

We are prepared to supply your requirements for this event. All departments of our store are well filled, including dress materials of all kinds, Star Brand shoes, hosiery, Munsingwear for all members of the family, Henderson corsets and girdles.

We herewith give a partial list of goods and prices, which will be to your interest to investigate:

DRESS GOODS, ETC.

36-inch Lingett, the latest and best cloth for gowns, slips and bloomers. We have it in the four leading shades—Orchid, maise, purple and white. Price, per yard ..... $ .80

Imported pongee silk, per yard 1.35

Paisley and Egyptian silks,, 40 inches wide, price, per yard ..... $3.50 and ..4.00

Normandy voiles—a beautiful assortment of patterns. Prices range from, yard 50c to 1.25

36-inch taffetas and satins, per yard 2.50

Ratines in plain and fancy plaids, price per yard ..... 75c to 1.25

Extra fine quality organdies, all colors, per yard 1.00

Silver tissues, fast colors, per yard ..... $ .65

32-inch zephyr zinghams, per yard ..... .50

All devonshires, per yard ..... .35

Army khaki, per yard ..... .35

Galatea, black and khaki, per yard ..... .40

36-inch fine qualty dress cambrics, per yard.. .30

DRY GOODS SPECIALS

40-inch voiles, plain colors, special, yard ..... $ .35

30-inch fancy flaxons, special, yard ..... .25

All 27-inch ginghams, special, yard ..... .20

We receive fresh vegetables three times a week. Tuesday, Thursday and Saturday.

HOLSUM BREAD FRESH EVERY DAY

Better Not Say It.

Bad news travels faster than good news. There is an old saying, "No news is good news." Let a man be convicted at a church service and there is not much of a stir, but let a resident be convicted of some crime and the news leaps by word of mouth from one end of the community to the other.

How thoughtlessly unkind we sometimes are when neighbors of ours suffer misfortune. Troubles are bound to come to us all in some shape or form and what we say about our friends and acquaintances today may apply to us tomorrow. News is no respector of persons.

We are prone to consider the ways of others not our ways when we should be watching our own step. What folks say of one another sometimes hurts more than anything they could have done. News, either good or bad, grows and becomes exaggerated and distorted with peddling. When the news is good it makes no material difference how it is exaggerated or distorted—it can never do any one any positive harm. But bad news given wings, may bring sorrow and ruin upon people who certainly are not deserving of a punishment beyond the penalty of their mistake.

More charity for others will mean more charity for ourselves and we will gradually come to take a keener delight in reporting something good of some person than something bad. Good is constructive, bad is destructive. Just before you are about to let out a bit of "bad news," stop and think a moment. See if you can't think of something good to say in place of it. The chances are ten to one that you can and that you will.—Asotin Sentinel.

THE SKIRTED ANIMAL

Half an inch, half an inch,
Half an inch shorter!
Whether the skirts are for
Mother or daughter!
Briefer the dresses grow,
Fuller the ripples flow,
While whisking glimpses show
More than they oughter.

Forward, the dress parade,
Is there a man dismayed—
No! From the sight displayed
None could be sundered!
Theirs not to make remark;
Clergyman, clubman, clerk,
Gaping from noon till dark,
At the four hundred.

Short skirts to the right of them!
Shorter to the left of them!
Shorter in front of them,
Flaunted and flirted!
In hose of stripe and plaid,
Hued most exceedingly glad,
Sporting in spats run mad,
Come the short-skirted!

Flashed all their ankles there;
Flashed as they turned in air!
What will not women dare?
(Though the exhibit show
Some of them blundered).
All sorts of types of pegs—
Broomsticks, piano legs;
Here and there fairy shapes,
Just built to walk on eggs,
Come by the hundred!

When can their glory fade?
Oh, the wild show they made!
All the world wondered,
Grande dame and demoselle,
Shop girl and Bowery belle—
Four hundred? H'm—oh, well,
Any old hundred.

—Carolyn Wells.

It would never do to settle all of our strikes and other troubles at once. We would have notaing left to worry about.

Read the ads.—keep posted.

PROSECUTING ATTORNEY TO ENFORCE CIGARETTE LAW

The Genesee marshal recently received the following communication from Prosecuting Attorney Frank L. Moore, which is self-explanatory. It should be read closely by all parents and boys:

It has been called to my attention, that a number of school children in your town are indulging in the use of cigarettes and tobacco in violation of the law, which you will find at Sec. 8363 of the Idaho Compiled Statutes, as amended by an act approved March 2, 1921, and is as follows: "Every minor person * * who shall buy, accept, cigars or tobacco in any form, or who shall buy, accept or have in his possession any cigarette paper or other paper or wrapper intended for the wrapping of tobacco in the form of a cigarette, or compounds of tobacco used in the filling or makeup of cigarettes, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than $100."

The following is the law prescribing the offense that an adult commits in selling or furnishing to a minor cigarettes or tobacco in any form: "Every person who shall give, sell or furnish, directly or indirectly, any cigarettes, cigars or tobacco in any form, or any cigarette paper or other wrapper or wrapper intended for the wrapping of tobacco in the form of a cigarette, or any compound of tobacco used in the filling or makeup of cigarettes, to such minor persons, or shall permit such minor persons to frequent any premises owned, held or managed by him for the purpose of indulging in the use of cigarettes, cigars or tobacco in any form, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished —for the offense by a fine of not less than $50 nor more than $100, and for the second offense by a fine of not less than $100 and not more than $300, or by imprisonment in the county jail for a period not to exceed six months."

It is also a part of Sec. 8363 and I wish you would call the attention of those engaged in the selling of tobaccos, to this law.

The foregoing law expresses the will of the people of Idaho upon the subject to which it relates, and its necessity as well as its origin is founded in the experiences of men. Open and flagrant violations of the law result in loose morals and a lack of proper regard for law.

The use of tobacco by immature children cannot be condemned too severely, and I am writing to ask you to use every effort and honorable means at hand, to suppress the habit as it exists in Genesee and vicinity. Confer with the teachers and the school officials; confer with the parents and ask their assistance; try and impress these children with the and impress these children with the thought that the future will not only bring to them sufferings and misery, if they persist in this habit, but that it tends not only to retard, but to destroy their physical and mental growth and development; that a violation of the law by them will tend to make them everything but upright, honest and patriotic citizens of the future. Convince them further that in the use of tobacco, they are subjecting themselves to prosecution as juvenile delinquents.

After you have done your best in this regard, I wish you would report to me the names of any children under 21 years of age, who still persist in using tobacco, as well as the names of the parents, if any there should be, who encourage their minor children in the use of tobacco.

I would also call your attention to the further fact that it is unlawful for any minor person under 20 years of age to loiter about or patronize any place where billiards or pool are carried on for profit.

Please see that this law is not violated. This does not mean that children may not purchase merchandise from a confectionery store operated in connection with a pool or billiard hall, but they must not in any sense, be permitted to loiter about the place.

His Pleasure Car

"I feel like having that fellow arrested for obtaining money under false pretenses," declared Jones.

"What's the matter?" asked Brown.

"When he sold it to me the agent said this was a pleasure car, yet on a twenty-mile trip I had three blowouts, ran out of gas two miles from the nearest filling station, my engine died three miles from home and I had to be towed home and finally I was bawled out by the traffic cop for obstructing traffic. Either that bird is an awful liar or he has the most perverted sense of plensure of any man in the world! Pleasure car! Bah!"

Every Little Helps

An alumnae of Radcliffe was helping in the recent drive to raise money for the Radcliffe endowment fund by selling soap. She employed two small boys to take the soap to the houses of some of her friends. Little Johnnie, with the boxes under each arm, marched up to one door and knocked.

"Why are you selling the soap?" inquired the lady of the house.

"To raise $3,000,000 for Radcliffe."

"Three million dollars! And are you trying to raise it all by yourself?"

"No," came the quick response, "there's another little boy helping me."

Appointing women as clerks and judges of election is a mistake. It entitles them to demand the ages of their dearest enemies.

"Oceanics" Played Under Five Flags

Noted Women's Orchestra Has Appeared in France, England, New Zealand, Canada and the United States.

Here's a musical organization with a history, and, if you please, an honorable record of service under five flags and in two hemispheres. It's the Oceanic Quintet, and it will thrill Chautauqua folks with two delightful programs; just as it has thrilled audiences all over the United States, Canada, France, England and New Zealand. Doughboys will remember their work in France, entertaining the soldiers as "The Western Four." Three of the original four are still with the company—Miss Amelia Carstensen, Miss Helen Ferguson and Miss Beulah Trultt. The program ranges from operatic to the semi-popular, including descriptive numbers and light opera selections, into which they have interpolated solos, duets, and talk songs. The personnel and instrumentation follows: Miss Amelia Carstensen, violinist, Helen Ferguson, cornet soloist; Beulah Trultt, reader and drummer; Gladys Hunt, soprano and pianist, and Louise Mignon, saxophone soloist and violinist.

FOOT COMFORT DEMONSTRATOR

from
CHICAGO
coming to our store
SATURDAY May 26

Pain or callouses there? See the Dr. Scholl Foot Comfort Demonstrator at our store

If foot troubles have clouded your life with needless misery, here is your opportunity to rid yourself of this trouble. Meet at our store a man specially trained in Dr. Scholl's Method of Foot Comfort. Let him tell you how the famous Dr. Scholl's Foot Comfort Appliances can ease the pain of such foot disorders as weak and broken down arches, weak, aching ankles, callouses on the soles, corns and bunions.

This is a direct invitation to you

F. S. CASEBOLT

U. S. Crop Prospects

Weather conditions the past month have not been favorable for winter wheat and in practically all sections of the belt the crop is backward owing to extreme cold weather recently and insufficient moisture earlier in the season.

There continues to be a large dry area in western Kansas, Oklahoma and Nebraska, although that territory has received a little moisture within the past two weeks. It is probable there will be considerable abandoned acreage in that section, but outside of the dry territory the outlook is better, especially in central and eastern Kansas and portions of Nebraska and Oklahoma, where they received good rains or snow during the month and have sufficient moisture for the time being.

Some reports have been received from Illinois of damage due to alternate freezing and thawing and the general condition there is such as to warrant considerable apprehension, but the extent of winter killing is yet to be determined and that cannot be done until they have ten days of warm weather with showers in that section.

Winter sown grains in California, particularly those planted in the latter part of February and early in March are in very poor condition owing to the drought that has prevailed the past month, but wheat and barley planted in the fall on summer fallow land is in fair condition in most localities and will be greatly benefitted by the rain that has fallen recently.

WHEAT FORECAST FOR BIGGER CROP

May 1 Government Report Indicates Gain of Ten Million Bushels.

The May 1 crop report for Washington forecasts a winter wheat crop considerably larger than that of 1922 and in excess of the average crop for the past 10 years while the forecast for the winter wheat crop of the United States is somewhat less than that of any crop produced in the past three years. The report, is issued by G. S. Ray, of the division of crop and live stock estimates, further indicates a slight increase in Washington's hay acreage as compared with last year. Spring plowing and planting have made fine progress. Pastures are in good condition and all classes of live stock are in slightly better condition than on May 1, 1922.

Winter Wheat.

On May 1 the area of winter wheat to be harvested in Washington was about 1,383,000 acres, as compared with 1,426,000 acres harvested in 1922, and 1,040,000 acres, the average area harvested during the past 10 years. The abandonment this season is 5 per cent of the area sown last fall as compared with 7 per cent abandonment in 1922, 2 per cent in 1921, and 20 per cent in 1920.

The crop on May 1 averaged 88 per cent of normal, an increase of 4 points from the April 1 condition of 84. This condition of 88 on May 1 forecasts a production of 33,469,000 bushels. The 1922 crop of winter wheat amounted to 23,244,000 bushels, while the average production for the past 10 years was 25,309,000 bushels.

The area of winter wheat to be harvested in the United States was, on May 1, about 39,750,000 acres, showing an abandonment of 6,629,000 acres, or 14.3 per cent of the acreage planted last autumn. The 1922 acreage was 42,127,000 while the average of the last 10 years was 38,416,000 acres. The 10-year-old average per cent of abandonment of planted acreage is 9.8. With a condition of 80.1 on May 1, the United States crop gives promise of 14.55 bushels per acre, assuming average variations to prevail thereafter. The forecast of total production is 587,287,000 bushels, or 1.4 per cent less than in 1922, 3.7 per cent less than in 1921, and 5.3 per cent less than in 1920.

Rye.

The 18,000 acres of rye for harvest in Washington this season, gave promise on May 1 of producing 227,000 bushels, based on a condition 92 per cent of normal.

Rye in the United States on May 1 averaged 85.1 per cent of normal.

Hay.

The acreage of hay in Washington this season is about 1,034,000 acres (1,007,000 tame and 27,000 wild), or an increase of 2 per cent over last year.

The Best Place to Raise Babies.

If you have to be born and want the very best chance to survive, choose the Pacific slope for your birthplace. That favored—we are not bragging or boosting we, but merely stating statistical facts—region has the lowest infant mortality rate, the tallest and heaviest children in the U. S. A. Owing to the equable climate, the lack of extreme temperatures, the abundance of room, the intelligence and high earnings of the population of cities well organized and financed health departments, the number of babies who are claimed by the Reaper in the first year of their existence is exceedingly small. During the past three years, for instance, the records for the lowest infant mortality of all cities with more than 250,000 inhabitants have been captured annually by Seattle, San Francisco and Portland. In the next smaller class, 100,000 to 250,000 population, Oakland and Spokane carried off first honors. In cities having from 50,000 to 100,000 inhabitants Berkeley, Long Beach, San Diego and Tacoma have been consistently leading the country, while Astoria in Oregon, Aberdeen in Washington and Pasadena, Santa Cruz and Richmond, all in California, have led the infant-saving procession among the smaller communities.

Babies may be a personal liability, but they are a community asset. The climate of the Pacific coast is indigenous, grows wild and is free to all, but the community effort to keep infant mortality down costs money. The Far West has been willing to spend it to make its infants safe. Other regions can do likewise, but if they want their infants and mothers to have the benefit of our free, wild and indigenous climate, they must move themselves bodily into it.

Radium rays will change yellowish diamonds of small value into emerald tinted gems.

At End of Record Non-stop Flight

From New York to San Diego, Cal., in 26 hrs., 50 min. 48 2/5 sec. is the history making achievement of these two army fliers, Lieut. John S. MacReady, (top) and Lieut. Oakley Kelly. It is the longest non-stop flight on record. It is hinted that the big monoplane was equal to many more hours, if army officials had cared to disclose the possibilities of the huge Liberty motor at this time

Boys' and Girls' Farm Club Work

Helen Middlicot of Napavine, Wash., a member of a Lewis county pig club, made the best gain on her pig last year. Helen started in with a 54-pound pig and fed it for 83 days, scoring a gain of 1.95 pounds per day. Besides this, it was the best finished pig in the club. Helen's father is a breeder of O. I. C. swine, but her prize pig last year was a Poland China and she wanted one of the same breed this year, and got it. She now proudly exhibits a bred gilt from Herbert Willard, Poland China breeder of Dayton, Ore. Mr. Alexander, who has fathered the pig club business in Lewis county, looks for Helen to be among the successful members of this year's club.

Over 600,000 farm boys and girls were enrolled in agricultural extension clubs in 1922, trying for themselves, under the direction of extension workers, approved methods of crop and live-stock production, farm and home management. The products grown or made by these young farmers and home makers are valued at over $8,600,000.

Skagit county dairymen are pushing boys' and girls' dairy club work this year. One club of 18 members has been organized and two other clubs of 12 members each are being formed at the present time. A committee of local breeders, together with County Agent C. H. Bergstrom, are selecting stock for the members. A standard for the clubs has been set for heifers with 350 pounds of butterfat production for two-year-old dams and 500 pounds butterfat for mature dams.

Reports given out by the extension service of the state college show that 70 boys and girls are already enrolled in dairy club work for the year. Counties reporting to date include: Clallam with nine members; Cowlitz, four; Pierce, eight; Snohomish, eight; Whitman one, and Yakima 40 members. It is expected there will be as many dairy club members enrolled as last year.

Curiosity is finding out something about somebody else that doesn't concern you and which would make you mighty mad if somebody else found it out about you when it didn't concern somebody else.—Milwaukee Sentinel.

They met on the bridge at midnight. They never will meet again; For one was an east-bound heifer, The other a west bound train.—Ex.

IDAHO

Florence Graves of Sandpoint has been elected president of the Women's league, an organization of all women students at the University of Idaho, for next year. Miss Graves is a junior in the college of letters and science. Myra Armbruster of Moscow was elected vice president; Mary McCallum of Coeur d'Alene, secretary; Mary Vassar of Lewiston, treasurer; Fairy Sanger of Payette, secretary of the point system. Ruth Hawkins of Emmett and Maude Carland of St. Maries tied for secretary of the exchange bureau and a special election will be held to decide who is to hold that office.

The Humbird mill located in Kootenai, Idaho, recently began its season's run. The mill will run two shifts, employing about 150 men. The planer is now closed for repairs but will be started in a few weeks. The company is erecting a building at the planer, where the lumber will be graded before storing in the sheds.

A project is on foot to build an automobile speedway at Ahn at a cost of $150,000. According to plans proposed it would be three and one-third miles in circumference and be banked 40 degrees on the curves and 6 degrees on the straight away to hold cars speeding at the rate of 150 miles an hour.

Plans have been made for a fair to be held in Worley on September 20. The Mountain View Fair association will cooperate with the people of Worley to make this a successful event. The officers have been divided between the two communities, Lance Kellough being chosen president; F. L. Klingensmith, vice president; Fritz Magnuson, secretary-treasurer. Committees for everything pertaining to the fair have ben appointed and all are asked to begin to prepare their exhibits at the same. The dance hall and the livery barn adjoining will be used for the exhibits.

Fred Herrick, lumberman and timber operator of St. Maries, Idaho, who made the record purchase in Portland last week of $90,000,000 feet of timber in the Malheur national forest in Oregon, will begin immediately to open up the district, according to word received. Mr. Herrick's bid represents close to $4,000,000.

GIVE IDAHO SMELTERS EQUAL FREIGHT RATES

Smelters located at Kellogg, Idaho, and Northport, Wash., should be given the same rates on their metallic products, the interstate commerce commission held Tuesday, when shipping to points east of the Mississippi, that railroads allow to smelters located in Montana and Utah. Railroads were ordered to make reductions effective on or before July 18.

The commission held that notwithstanding the longer hauls to the east from Idaho and Washington plants, the "desirability of maintaining and further developing the output of Idaho mines, the long haul on the traffic and the general tendency toward extensive groupings of many commodities for long hauls from this general western teritory" all argue for the reductions ordered.

Commissioners Potter and Eastman dissenting, declared the commission should not "deprive an industry or territory of the advantage of its location by requiring removal of a natural disadvantage of a competitor as carriers' expense."

SANDPOINT GIRL IS CHOSEN MISS IDAHO

All student activities at the University of Idaho this spring are focusing on the big historical pageant which is to be presented June 9 as the main entertainment on the commencement week program. It was decided to not have the annual May festivities and that instead of electing a May Queen the students should vote for a "Miss Idaho" and her attendants for the pageant. Miss Jean Rowlands of Sandpoint was elected "Miss Idaho," Dorothy Parsons of Moscow as maid of honor, and Mildred Specht of Priest River as page. Being chosen as May Queen is one of the highest honors that the student body can bestow but that of appearing as "Miss Idaho" in the pageant is considered even higher.

Kinda Particular.

Lady—If you please cook, may we have steak and onions for lunch today?

Cook—You can have the steak, but I'm afraid I can't let you have onions. You see, I'm going out this afternoon —and onions always make my eyes so red.

"I never knew, until I got a car, that profanity was so prevalent."

"Do you hear much of it on the road?"

"Why, nearly everybody I bump into swears like hell."

FARMERS WILL HOLD ANNUAL FARM TOUR

Nine Counties Combine to Make One Big Livestock and Farm Trip.

Touring through eight western and one eastern Washington county, will be the trip made by the Second Annual Livestock and Farm Tour. This annual tour will begin in Whatcom county on June 5 and end in Kittitas county June 15.

The nine counties covered in the tour will include: Whatcom, June 5; Skagit, June 6; Snohomish, June 7; King, June 8; Grays Harbor, June 11; Mason, June 12; Thurston, June 13; Lewis, June 14, and Kittitas, June 15.

It is the purpose of the tour to show to the livestock men and farmers attending what has been done in the way of improving all breeds of livestock and the use of better methods of farming in Washington.

As an added feature this year, some of the stops will include farms using improved methods of handling their general work as well as the dairy and livestock on the farms.

The tour is being conducted under the auspices of the stockmen, dairy men and farmers interested, together with the county agents of the nine counties represented cooperating with the extension service of the state college.

Besides the stops for picnics and overnight, 43 farms will be visited. Dairy farms lead, as 27 such farms will be visited and their methods of management and herds shown. Poultry plants come next to dairying in the number of stops, as seven chicken ranches will be seen. Swine herds will be shown on five farms and horses and beef cattle on two each.

The entire trip will be made by auto and parties will be joining and leaving the group all along the way. Arrangements in each county have been placed in the hands of the local farmers and livestock men, cooperating with the county agent.

Work on the organization of a bull association in Clallam county was accomplished throug h the efforts of County Agent A. W. Holland. Nine dairymen signified their intention of joining the club. Each of the prospective members owns a large enough herd to keep a bull, but desires to belong to an association so as to have the use of a better animal. The object of the association is to make it possible for the dairymen to have use of uniformly high quality bulls. They are planning on four animals in the club.

Honeymoon Habit.

The custom of referring to the time immediately after one's wedding as a honeymoon comes from the ancient tribes of central Europe. Newly married couples drank and served to their friends, wine made from honey gathered during the first thirty days after the performance of the wedding ceremony.

After continuing for several hundred years, this custom finally died out, but its significance remained. For this reason the trip which follows the marriage is now known as a honeymoon, though it has nothing to do with the wine and generally does not last a month.

"Thump-rattety-bang!" went the piano.

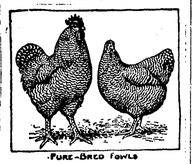
"What are you trying to play, Jane?" called out her father from the next room.

"It's an exercise from my new instruction book, 'First Steps in Music'," she answered.

"Well, I knew you were playing with your feet," he said, grimly; "but don't step so heavily on the keys—it disturbs my thoughts."—Ex.

POULTRY

Mrs. Perry Miller, of Harrington, states that she has 61 young barred rock hens that lay now about 57 eggs a day. They began laying last November and during the winter she got from 30 to 36 eggs a day. Eggs were 50 cents a dozen then and a hen that would lay then was worth money. Mrs. Miller believes in getting high-grade eggs. In building up their stock she paid $7.50 for one setting of the Butler Poultry Farm people and $2.50



—Pure-Bred Fowls

from the O. A. C. for a setting of 15 eggs. She states that she has paid as high as $25 for a setting of eggs. Mrs. Miller, before moving to Harrington, lived in southern Idaho and was poultry adviser for district No. 3, near Payette.

In deciding on the size of the back yard poultry flock, two things must be taken into consideration—the space available and the quantity of table scraps available. It is not often that the flock will consist of more than 20 or 25 hens, and for a flock of this size there should be a yard space not less than 25 by 30 feet. On the average there should be 20 to 30 square feet for each bird.

About the only way table scraps can be made to bring in a return in the small town or suburb is through the medium of a flock of hens. Each hen in her pullet year should produce at least 10 dozen eggs, or on the average an egg every three days. Thus, a flock of 10 laying hens would yield 100 dozen, worth, at a conservative estimate, $40. It also is worth something to have eggs concerning which there can be no doubt, and to have a supply of potent fertilizer for the garden.

The man who wishes to keep hens on a city lot or in the back yard should purchase pullets in the fall or buy day-old chicks or hatching eggs in the spring. Mature matured pullets are the only kind to buy, as they will begin to lay before cold weather sets in. The maturity of pullets is indicated by the red color of the comb and by the size of the birds. Day-old chicks are now a regular market commodity in all parts of the country and can be shipped long distances. It is much harder to raise small chickens in the small space of a back yard than out in the country where there is plenty of grass range.

An officer was showing the old lady over the battleship. "This," said he, pointing to an inscribed plate on the deck, "is where our gallant captain fell."

"No wonder," replied the old lady, "I nearly slipped on it myself."

For the benefit of the junior girl in the science department who refers to a member of the history department as Mr. Thompson—we offer the following correct spelling of this gentleman's name: Mr. Teakie.

(He over the phone).—Light of my life, let's go to a movie.

She (insulted).—Oh—huh, you want your light to go out don't you?—Ex.

Secretary's clerk (to new Frosh).—You are an old student aren't you?

New frosh.—Thank you, no. I am not as old as you are.—Ex.

DRAFT HORSES BECOME SCARCE

Neglect to Breed Heavy Mares Causes Trend Toward Inferior Stock.

DEMAND AND PRICES GOOD

But Farmers Raise Horses at a Loss Because Stock Produced is Small and Unsound.

Horse breeding is at a low ebb. In most localities there is little material, either in good mares or stallions, on which to expand the draft horse breeding business. This is true not only in Washington, but for the country as a whole.

There is a large proportion of small, light-boned, unsound, inferior, cheap horse stock which farmers have produced at a loss. There is only a small proportion of good, sound, flat boned, heavy, quality horses which are selling at a fair profit for the farmer. In order to make a profit during the years to come, farmers and stockmen must look to quality of product more than has ever been the case in the past.

Even if the farmer keeps all of the horses that he raises, the difference between the value of the high class horses and the poorer classes for work on his own farm will much more than repay any farmer for the care necessary to the successful breeding of high class horses.

C. M. Hubbard, extension livestock specialist of the State college, recently made a survey of leading farmers in various sections of the state on the horse situation. One of the main questions asked was: "What is the average age of the farm mares in your section?" In nearly every case, the answer showed the mares to be from eight years old and up. Not having raised colts for several years, in some instances many years, these mares will not be sure breeders.

Wayne Dinsmore, secretary of the Horse Association of America, recently made the statement that good draft horse values are on the increase and the top prices will not be reached before 1925 and 1926.

"Good draft horses," applies to real horses sired by high class, pure-bred draft stallions, and properly fed for strong development. Proper breeding furnishes the heritage of merit; good feeding, in order to obtain size and quality, brings out this merit and enables the farmer to raise his surplus horses at a profit.

"Be sure to breed your best farm mares this spring to high class stallions," is the warning of Mr. Hubbard.

$10,000 A YEAR DAMAGE BY ONE BARBERRY BUSH

"Not only can one barberry bush cause a loss of $10,000 in a single year but it produces seven times more bushes grow," says Dr. E. C. Stakman of the United States department of agriculture. "Still there are those in the United States who think barberry eradication either impossible or useless."

A single bush can cause extensive loss, and there is at least one instance on record where a loss of $12,520 was caused by one bush. A special study to determine the extent of infection and loss from a single bush was made by one of the state leaders of barberry eradication. The outbreak of stem rust which started from a bush was traced in one direction, at east, for about 5 miles. The total wheat area affected on 18 different farms was 963 acres. An average yield of only 8.1 bushels per acre was obtained, while it was estimated that had there been no loss from rust infection the average yield would have been 21.4 bushels. The average yield for that year was only 37 per cent of what it would have been without the black stem rust, or a total loss in yield of 12,520 bushels. At a dollar a bushel the combined money loss from this single bush in this one direction was $12,520 or an average loss to each farmer of $696 worth of wheat.

The barberry has destroyed too much grain in the past, says the United States department of agriculture. It will usually pay and destroy more in the future unless it is destroyed first. A barberry bush with a $10,000 potential damage possibility can be destroyed with 10 pounds of salt, or an hour's work with a grub hoe.

Mr. Young—"Why does Darwin's theory say?"

Kelly—"Darwin says that our ancestors came from monkeys, but my mamma told me mine came from Wales."—Ex.

Speaker: "Now, will some gentleman in the audience tell me where his taxes go?" Man, on back row: "Up!"

Plan Organized Warfare on Predatory Bird Enemies

This is the season of the year when a few days spent in shooting game and poultry-killing birds and animals will repay the effort many fold later on. If farmers, trappers and sportsmen would concentrate on a few bad species, the chief natural enemies of useful and game birds, and poultry, would receive such a setback that the annual leaving throughout the country would run into millions of dollars.

Among predatory birds, the crow occupies the worst place. The board of game commissioners of Pennsylvania say that he "destroys individually more birds of all kinds, more birds' eggs and young poultry than any other bird that ever flapped a wing." The great horned owl is another bird of prey, so voracious and destructive to useful wild life that he should be killed. This species destroys annually large numbers of partridges, pheasants, fur-bearing animals, rabbits, other game and poultry. It is especially an enemy of the quail. Every lover of birds knows how the quail covey sleeps—in a little circle on the ground—each night in about the same spot. Let a great horned owl once discover the sleeping place of a covey of quail, and he will "clean them up" to the very last bird.

Noxious hawks are another species which take a heavy toll from the farms each year. Two of these, Cooper's hawk and the sharp-shinned hawk, which might be called a minature of Cooper's hawk, are ferocious predatory birds of prey, ranging nearly everywhere throughout the country and the damage they do is estimated, in the aggregate, to exceed that done by nearly all other birds of prey. Remains of wild birds and poultry were found in nearly every stomach of Cooper's hawk, examined by the Biological survey. When the stomachs of 107 sharp-shinned hawks were examined, it was found that 105 of them contained birds, ranging from quail, morning doves and flickers—which are as large as the sharp-shinned hawk itself—down to birds as small as warblers and chickadees. These hawks kill the birds most valuable to farmers.

During the next few months, game birds and other beneficial wild birds will be hatching, and great numbers of them can be saved if their natural enemies are checked now.

MY LADY'S MONEY

An Espisode in the Life of a Young Girl

By Wilkie Collins

INSTALLMENT NO. 2.

A low growl followed the fresh young voice, and added (in dog's language), "Much worse, my lady—much worse!"

Lady Lydiard closed the door again, with a compassionate sigh for Tomkie, and walked slowly to and fro in her spacious drawing room, waiting the steward's return.

Accurately described, Lord Lydiard's widow was short and fat, and perilously near her 60th birthday. But it may be said, without paying a compliment, that she looked younger than her age by 10 years at least. Her complexion was of that delicate pink tinge which is sometimes seen in old women with well-preserved constitutions. Her eyes (equally well-preserved) were of that hard light blue color which wears well, and does not wash out when tried by the test of tears. Add to this her short nose, her plump cheeks that set wrinkles at defiance, her white hair dressed in stiff little curls, and if a doll could grow old, Lady Lydiard at 60 would have been the living image of that doll, taking life easily on its journey downward to the prettiest of tombs, in a burial-ground where the myrtles and roses grow all the year round.

These being her ladyship's personal merits, impartial history must acknowledge, on the list of her defects, a total want of tact and taste in her attire. The lapse of time since Lord Lydiard's death had left her at liberty to dress as she pleased. She arranged her short, clumsy figure in clothes that were far too bright for a woman of her age. Her dresses, badly chosen as to their hues, were perhaps not badly made, but were certainly badly worn. Morally as well as physicaly, it must be said of Lady Lydiard that her outward side was her worst side. The anomalies of her dress were matched by the anomalies of her character.

There were moments when she felt and spoke as became a lady of rank, and there were other moments when she felt and spoke as might have become the cook in the kitchen. Beneath those superficial inconsistencies the great heart, the essentially true and generous nature of the woman awaited the sufficient occasion to assert themselves. In the trivial intercourse of society she was open to ridicule on every side of her. But when a serious emergency tried the metal of which she was really made, the people who were laughing at her yesterday, at her stood aghast, and wondered what had become of the familiar companion of their every-day lives.

Her ladyship's promenade had lasted but a little while, when a man in black clothing presented himself noiselessly at the great door which opened on the staircase. Lady Lydiard signed to him impatiently to enter the room.

It is not necessary, in this day and generation, to hit a man with a brick to secure his attention.

"I have been expecting you for some time, Moody," she said. "You look tired. Take a chair."

The man in black bowed respectfully, and took his seat.

CHAPTER II.

Robert Moody was at this time nearly 40 years of age. He was a shy, quiet, dark person, with a pale, closely shaven face, agreeably animated by large black eyes set deep in their orbits. His mouth was perhaps his best feature; he had firm, well-shaped lips, which softened on rare occasions into a particularly winning smile. The whole look of the man, in spite of his habitual reserve, declared him to be eminently trustworthy. His position in Lady Lydiard's household was in no sense of the menial sort. He acted as her steward—distributed her charities ,wrote her letters on business, paid her bills, engaged her servants, stocked her wine cellar, was authorized to borrow books from her library, and was served with his meals in his own room. His secretaryship gave him claims to these special favors; he was by birth entitled to rank as a gentleman. His father had failed at a time of commercial panic as a country banker, had paid a good dividend, and had died in exile abroad. a broken hearted man. Robert had tried to hold his place in the world, but adverse fortune kept him down. Undeserved disaster followed him from one employment to another, until he abandoned the struggle, bade a last farewell to the pride of other days, and accepted the position considerately and delicately offered to him in Lady Lydiard's house. He had now no near relations living, and he had never made many friends. In the intervals of occupation he led a lonely life in his little room. It was a matter of secret wonder among the women in the servants' hall, considering his personal advantages and the opportunities which must surely have been thrown in his way, that he had never tempted fortune in the character of a married man. Robert Moody entered into no explanations on that subject. In his own sad and quiet way he continued to lead his own sad and quiet life. The women all failing, from the handsome housekeeper downward to make the smallest impression on him, consoled themselves by prophetic visions of his future relations with the sex, and predicted vindictively that "some time would come."

"Well," said Lady Lydriad, "and what have you done?"

"Your ladyship seemed to be anxious about the dog," Moody answered, in the low tone which was habitual to him. "I went first to the veterinary surgeon. He has been called away into the country; and—"

TUBERCULOSIS ASSN. TO MEET IN SPOKANE

Washington State Body to Hold Annual Session June 11-12—Thirty Locals Represented.

Preparations are already well under way for the annual meeting of the Washington Tuberculosis association to be held in Spokane, June 11-12. Especial interest is being shown in the convention as arrangements are being made for several speakers from the headquarters of the National Tuberculosis association, en route to the national convention in Santa Barbara, to be in attendance.

Details of the program will be announced later, but a full two days with an evening meeting Monday, June 11, are being provided. A visit to Edgecliff sanatorium will be included in the program, in order that the delegates and eastern visitors may thoroughly inspect the institution.

The 30 anti-tuberculosis leagues in Washington are expected to be represented as plans are in progress in several localities for the county tuberculosis nurse, and the league delegates to drive to the meeting, thus combining the greatest facilities of transportation with the least expense.

The sessions are free and open to the public. Every one interested is urged to plan his affairs so as to attend the meeting and get the national as well as the state viewpoint of the tuberculosis problem.

Uncle Abe says: The fellow who learned something from yesterday and works hard today, needn't worry much about tomorrow.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

BUTTER MAKING ON THE FARM.

In 1919 the farm women of this state made nearly 6,000,000 pounds of butter. A survey made in four representative counties of the state in 1920 showed that 68 per cent of the farm women make the butter they use on their tables.

This fact will surprise many people who have assumed that the farm housewife buys creamery butter and oleo the same as the city dwellers.

It is not hard to find the reason why more busy women have not given up this task. Butter making is interesting. It is not to be considered as drudgery when adequate equipment is available and the buttermaker knows her job.

The farm housekeeper will continue to make her own butter, because it is interesting and because her product, when it is properly made, is superior to anything she can buy.

Not all of the 68 per cent can make good butter, however. Many need better equipment for keeping the cream, making the butter, and caring for it after it is made.

Here is the scorecard by which exhibits of farm made butter at community fairs are judged:

Package and packing—5 per cent. These should be clean, neat, attractive; put up in a manner that will attract ready sale; standard size and shape used by creameries; wrapped in paraffin paper.

Color—15 per cent. Uniform throughout, not too high or too low; free from specks, mottles or streaks.

Body—25 per cent. Firm, waxy, texture; perfect grain as indicated by jagged edge when broken; brine clear and not too plentiful.

Salt—10 per cent. Proper amount worked in thoroughly; not gritty.

Flavor and odor—45 per cent. Agreeable; not rancid or cheesy, but having proper acidity; a pleasing aroma.

Condensed directions for making good farm butter include:

Cool the cream from the separator as soon as possible to 55 degrees Fahrenheit, or lower.

Never mix warm cream with cool cream.

Mix all the cream to be churned in one vat or can at least 18 hours before churning.

Cool cream to churning temperature as soon as ripe.

Let the cream stand eight hours or more (over night) at the churning temperature.

The temperature of churning should be such as to make the butter come in from 30 to 40 minutes, at 55 to 60 degrees Fahrenheit.

If it is desired to use artificial coloring, it should be added to the cream just before churning.

Stop churning when the granules vary from the size of wheat to the size of peas and draw off the buttermilk.

Wash the butter once with pure water at the temperature of buttermilk, agitating three or four times and drain.

Add the salt wet while the butter is in granular form, using about three-fourths of one ounce for each pound of butter, according to the demands of the market or your taste.

Work the butter just enough to distribute the salt evenly.

If the butter is to go on the market it should be put up in neat, attractive packages.

(Editor's Note)—If the reader wishes further information on home buttermaking we refer them to State College of Washington, Experiment Station bulletin No. 96 and Farmers' bulletin No. 876. These bulletins may be had free by writing the Extension Service, State College of Washington. Kindly mention the name of this paper when writing for them.

LIVESTOCK

All hogs raised on the experimental farm of the United States department of agriculture at Beltsville, Md., have been given fish meal or tankage as their protein supplement since the department demonstrated by a series of experiments that fish meal is as valuable as tankage as a hog feed. Other studies have shown that shrimp bran, a by-product of the shrimp factories, is a very valuable protein feed for hogs. Shrimp bran was practically valueless before the department made this study. Now it is worth almost as much per ton as tankage as a hog feed.

What is the basis of the hog's popularity, which, in spite of his relatively small size, enables him to stand third in total value among all our domestic animals in the United States? In the first place, of course, he produces toothsome meats which in some form or other combine well with most of our common vegetables, but, according to the department of agriculture, there are other reasons why the hog has become a favorite to more than three-fourths of our farms.

The hog converts much of our corn crop, 30 to 40 per cent annually, into a concentrated food, and in this work of concentratio nhe is no waster. He is an efficient user of feed. It takes about six pounds of grain and six pounds of hay to produce a pound of lamb (live weight), 10 pounds of hay and 10 pounds of corn to make a pound of beef, and 5.6 pounds of corn for a pound of pork. Hogs are frequently used to "hog down" or harvest crops and in this way they save the labor of harvesting.

In this country pork and lard enter prominently into our food supply. The average annual consumption per capita for the last five years was 67.3 pounds of pork and 12.5 pounds of lard as compared with 60.9 pounds of beef.

Some scrubs still think—

Bielenberg-Schooler Post The American Legion Meets Each First Wednesday In June, July and August

Amrican Legion Initiates

Last Saturday night Bielenberg-Schooler post of the American Legion, revived for a brief evening, thoughts of 1917-1918. To the former service man who participated, it was like a homecoming after a long absence. The veteran is not exactly like other men. The hardships and joys of military service are known only to him and his buddies. He is now beginning to live in the sweetness of memory. For a brief space he was back again in the care-free days in the camp, cantonment, cafe or gasthaeuser.

After completing a spirited drive in which 41 additional members were secured, efforts were bent on a program to fittingly receive the new members into the fold. It was conceded on all sides that Saturday night's ceremonial was one of the most interesting in local lodge history and marked a milestone in Legion activities.

Legionaires from Moscow, Lewiston, Asotin and Grangeville were present at the initiation. Paul Davis or Boise, department Americanization officer, brought a word of greeting from the department commander. The Lewiston 40 and 8 trio, L. L. Whalen, Mark Donaldson and Dr. R. C. Peterson, kept things lively during the evening.

Following the initiatory work in the Legion hall the scheduled barrage opened at 9:45. For a quarter of an hour the streets reverberated with "H. E.'s, star shells and white lamps."

A banquet was served at Smolt's cafe at 10 p. m., lasting until midnight. Paul Davis, Americanization officer of the Idaho department, was the principal speaker. He touched on various phases of the Legion work, particularly with reference to the Americanization program. Sergeant Eugene Nagele, post commander of Dudley Loomis post, Moscow, congratulated the local post on the success of its program. Frank Jacobs, post commander of Lewis-Clark post, Lewiston, also praised the local Legionaires for the high standard of the evening's entertainment. Henry Jones, past chief de gare of the Lewiston Voiture of the 40 and 8, spoke concerning that organization. A. Anderson of Asotin brought to the attention of the audience that elaborate plans were being made to entertain the surrounding country at Asotin on July 4 and extended a warm invitation to the local Legionaires to be present. Frank Simmons of Grangeville brought greetings from his post.

Following the banquet the members of the 40 and 8 held a meeting to discuss plans for the 40 and 8 initiation to be held in Lewiston on May 26. Local Legionaires who will join the box car organization are Dr. Thomas A. Elliot, Dewey Wardrobe, Nels Liberg and Wilson Archibald.

Spring Blossom Dance

The Legion entertainment committee is scouring the countryside for blossoms and flowers to decorate their hall for the Spring Blossom dance to be held this (Friday) evening.

This will be one of the best appointed dances of the season and promises to bring together a large group of dance enthusiasts from the city and vicinity.

THOMAS A. FEENEY IS NAMED DISTRICT LEADER

Thomas A. Feeney of Genesee was elected district commander of the second district of the American Legion at the annual convention of the second district held in the Elks' temple last Friday afternoon. W. M. Gregg of Whitebird, was named vice-commander and Sergeant Eugene Nagele, commander of the Moscow post, was elected adjutant and finance officer.

Grangeville was named as the next convention city. Resolutions were adopted thanking the members of the Dudley Loomis post for the entertainment of the convention and the Elks' club for the use of the Elks' temple, where all of the convention sessions were held.

A banquet was held in the Elks' temple for the delegates and their wives and for all Moscow former service men and their wives or lady friends. Six long tables were attractive in red, white, and blue flowers. The banquet room was decorated in red, white and blue bunting. The elaborate banquet was prepared by the Legion auxiliary to the local post and served by six young women.

Thomas A. Feeney of Genesee, the newly elected district commander, presided as toastmaster. Toasts were made by Paul Davis of Boise; Pittman Atwood, Marvin Jordan, and Prof. C. L. Harland, all of Lewiston; Sergeant Eugene Nagele, Mrs. Mae Whitcher, Dr. J. Harry Einhouse, and Col. E. R. Chrisman, all of Moscow, and William Gregg of Whitebird, the newly elected vice-commander.

Announcement was made at the banquet that all American Legion men and Latah county and all members of Latah county Legion Auxiliaries will be guests of the Moscow Auxiliary at luncheon at the chamber of commerce, Wednesday noon, May 30.

Announcement was also made of the auto caravan through the entire state to the state department convention at Couer d'Alene, August 9, 10, and11. The automobile caravan will start in southern Idaho and go through Boise, on up the north and south highway to Lewiston, and to Moscow on the way to Couer d'Alene.

The University of Idaho quartet sang at the banquet and music was furnished for the dance in the Elks' temple, in honor of the delegates by a University of Idaho orchestra. —Star-Mirror.

A Live One

A dealer in stuffed animals also kept a few live creatures for sale and gave his shop boy, who was permitted to sell the stuffed specimens, orders to call him when a customer asked for any of the live animals.

"One of these?" asked the boy, who was in charge. He pointed to the stuffed specimens.

"No, I want a live monkey," answered the customer.

The boy stepped to the back of the shop. "You're wanted, sir," he called to his master.

That's What Counts

The League of Nations has on its roster about every nation on earth except Uncle Sam's, but the Dove of Peace is nowhere in evidence except with Uncle Sam.—Chattanooga American.

Her Intentions

Mrs. Blifins met Mary Smith, whom she had recommended to a neighbor for a situation.

"How are you geting on at your new place?" asked Mrs. Blifins.

"Very well, thank you," was the reply.

"I am very glad to hear it," remarked Mrs. Blifins. "Your employer is very kind, and you can't do too much for her."

"I don't mean to, ma'am," replied Mary.

Lombago

This is a rheumatism of the muscles of the back. It comes on suddenly and is quite painful. Every movement aggravates the disease. Go to bed. keep quiet and have Chamberlain's liniment applied and a quick recovery may be expected. Mrs. F. J. Dann, Brockport, N. Y., writes: "I can honestly say that Chamberlain's Liniment cured me of lumbago a year ago last summer. When I began using it, I was flat on my back in bed and could not turn to the left or right. I had a bottle of Chamberlain's Liniment in the house and this was applied to my back. It promptly drove away the pains and aches."—Adv.

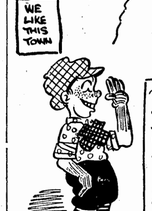
MICKIE SAYS—



SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Mabel Romine, plaintiff, vs. Guy E. Romine, defendant.

The State of Idaho Sends Greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff; the nature and general terms of which is to procure a decree of divorce on the ground of wilful neglect and also to procure a decree awarding the custody of the two minor children to the plaintiff, and for general relief.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of said District Court, this 12th day of May, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
By Adrian Nelson, Deputy Clerk.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JUNE 1, 1923. NO. 48

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Sell Wool At Lewiston

J. W. Myers, R. D. Stout and C. A. Greif sold their clips of wool in Lewiston Saturday. The price paid was 38¼ cents. At this price the sheep averaged about $3.75 each in wool. This was Shropshire wool; the price paid for Lincoln wool was 31 and for fine wool 41 cents. Ed. Fordyce of Cloverland sold the wool from 1700 fine wool range sheep receiving over $5000. There is a place for a limited number of sheep on every farm.—Uniontown Journal.

Blacksmith Makes Record

The Forest Service pack and saddle stock were driven in from Riparia, Washington, Sunday. The bunch totals 91 head and they were shod at the Atherton shop in two days. Oval Atherton put shoes on 49 head in two days, finishing early Tuesday afternoon. Tuesday morning 38 head loaded with supplies for the Canon district, headquarters at McKinnon's cabin at Salmon creek left Orofino and made an imposing sight. They were in charge of packers Rice, Osborne, Hosley and Coffee. The balance of the bunch was taken to Weippe Wednesday. — Clearwater Tribune.

Plant Fish Fry in the Lolo

Deputy Game Warden H. L. Walrath of Orofino returned last week from the State Fish Hatchery at Sandpoint, accompanying the first shipment of trout fry coming to the Clearwater this season. The consignment consisted of 46 cans of Eastern Brook, which being small would total about 130,000 fish. They were planted in the Lolo watershed. Mr. Walrath reports that the Sandpoint hatchery will turn off about 2,500,000 fry this season, of which the Clearwater Valley, Latah and Nezperce counties are slated for about half. The shipments will be continued regularly each week until the quota is filled.—Kamiah Progress.

Inspector Condemn's Candy

Fourteen hundred and eighty pieces of candy was condemned in a local wholesale house last Friday by Food Inspector A. H. Wilson of the state department. The candy was described as of the paraffine base type, with a liberal sprinkling of dirt, sand, etc., presumably to give it weight.

The last legislature passed a law prohibiting the sale in Idaho of paraffine base candies and the inspector has been busy recently going over the state and inspecting stocks of the wholesalers and retailers — and he has gotten results. Many dealers are not aware of the terms of the new law and the local house was not an intentional violator of the law.—Lewiston Banner.

The "Green" Driver

The motoring season is on in full blast—and so are accidents. And all over the country this question is being asked daily:"Whose fault was it?" In this connection it is interesting to note that a very small percentage of the accidents are really due to the "green" driver. On the other hand, they can almost always be laid at the door of the man who has had a car long enough to know how it should be operated. The new driver is far more careful than the experienced one, because he is afraid of hurting both himself and the car. So he looks a long way ahead, keeps well to his side of the road and takes his time. The "wise guy," who feels he knows more about a motor car than the men who build them, invites chance to sit on the seat with him, and, if he gets through unscated actually believes it was due to his skill. Our advice to auto drivers when out motoring is to watch the "wise" drivers, for there is no stunt they will not attempt. Don't worry so much about the "green" driver. He will be the last one hurt and the last one to cause you an injury.—Uniontown Journal.

Genesee Boys Have Parts

Two students from Genesee have parts in the Idaho City mining scene in the pageant of Idaho history, "The Light on the Mountains," that is to be presented by University students the night of Saturday, June 9, as a part of commencement week activities.

Orland C. Mayer takes the part of a miner, and Jack Hasfurther represents a "bad man" named Patterson.

Ex-Governor W. J. McConnell figures in this scene, and as he comes along the street of the mining camp leading a horse, Patterson and other loafers sneer at him.

"This hayseed from Jerusalem creek," says Patterson, Claims this horse was stolen from him. He got back the horse, but to get him back he had to pay costs of the trial and all stable bills; seventy dollars for his own horse. If that isn't a joke I don't know what to call it."

As McConnell comes back up the street Patterson throws a bucket of water over a tenderfoot, the latter reaches for his gun and Patterson kills him. McConnell arrests Patterson and turnes him over to the sheriff.

WILL BE HOSTS TO SHORTHORN BREEDERS

The following communication, realative to the annual picnic of the Whitman-Latah County Shorthorn Breeders' association, has been received from Howard Hackedorn, secretary of the association, and will be read with interest, especially by those interested in this particular breed of cattle.

The Nordby Bros. near Genesee, will be hosts to the Whitman-Latah County Shorthorn breeders on their fourth annual picnic, to be held Friday and Saturday, June 15 and 16.

The herd belonging to the Nordby Bros. has been rated by some of the breeders who formerly have attended some of the tours, as one of the best in the inland territory and are looking forward with considerable interest to inspecting the new bull, which the Messrs. Nordby purchased from the Prince of Whales farm of Canada.

The tour will start from the new beef cattle barn at the Washington State College at 8:30. From there they will go to the Earl Harper farm near Johnson, then to the Greif farm near Uniontown, continuing the journey south to the Nordby Bros. ranch near Genesee and winding up at Moscow, for dinner, after inspecting the University of Idaho's herd as well as that of J. E. Japineau.

After dinner the party will resume its journey, stopping at Palouse to see the herd of Nat Williamson. From here the herds of Houston McCroskey, J. E. Trimble and Geo. Imler, all near Garfield, will be visited. Supper will be served at Garfield, and from there the party will tour towards Sprague, stopping to see the Shorthorns of H. G. Goldworthy at Rosalia and Albert Owes at Amber.

Saturday will be spent at the famous Hercules ranch of F. M. Rothrock at Sprague, as well as visiting the oldest herd in the state, that of Jim McCroskey.

A number of breeders from Walla Walla and the Yakima country have already accepted our invitation to go with us, and we also expect several from west of the mountains.

Good Livestock

Nature strives for perfection. Man attains it. Nature creates and preserves animals and plants whose chief end is their own propagation. Man selects and improves these, and brings forth animals and plants for his own use as well.

Nature never created the Percheron horse, the Shorthorn cow or the Jonathan apple. Man did that through his knowledge of her laws, and his own well being followed.

Good livestock is the vital principal of the farm and the foundation of the nation's prosperity. With it comes good seed and good impliments and these combined with some good crops, good homes, good citizenship and good families.

Since man came upon earth, his culture, his enlightenment, his wealth and his comfort have been measured by the qualityof his domestic animals. If he is a millionaire he takes pride in the blooded stock with which he surrounds himself. If he is in another sphere he thrives as his livestock improves.—Ex.

At The Opera House

"Borderland," with Agnes Ayers in the leading role, will be the stellar actraction at the opera house Saturday night. There will also be the usual good comedy and other interesting pictures.

By reason of her art, Agnes Ayres has won and enduring place in the hearts of motion picture fans. She plays three parts in "Borderland"; those of a spirit, a super-modern wife and a girl. The three roles are blended in the happiest manner and afford Miss Ayres abundant opportunities for effective character work.

A young reckless, superjazz wife is warned from making a misstep by the spirit of an ancestor who made the same error fifty years before. There are two distinct plots and two separate sets of characters, creating a story that is not only a novelty, but it travels at top speed from the opening to the close.

Lose One —Win One

The Genesee baseball team went down to defeat before the onslaught of the Uniontown-Colton baseball aggregation Sunday, to the tune of 11 to 6. It seems that Genesee has misplaced the rabbit's foot that formerly kept as an omen of good luck; the horseshoe seems to be up-side-down, and the four leaf clover has been eaten by some hungry billy-goat; anyway, there seems to be something wrong.

In a game with the Lapwai Indians on Wednesday afternoon the local ball tossers succeeded in shutting out the visitors.

City Treasurers' Report

Your especial attention is called to the city treasurer's report of the city of Genesee, which you will find on the seventh page of this paper. Look at and then you can tell just what the city has been spending your money for. You can find a detailed statement at the office of the city clerk.

WHAT HAPPENED HERE TWENTY YEARS AGO

George Follett broke ground Monday for his fine new residence.

Fred Nagel sent out a load of fat hogs yesterday. They are now worth a little less than six cents.

The Latah county delinquent tax list appears this week in the Moscow Times-Democrat, occupying about ten columns.

Louis Anderson is erecting a very nice residence on his farm north of town. In size it will be 16x32 and 16x25, story and a half in height.

P. E. Becker is now a permanent resident of Genesee, having moved his family up from Lewiston the latter part of the week. They have taken possession of the Hodgins residence, which is one of the finest in the city.

In a few days an automobile line will be running between Lewiston and Clarkston. Captain Gordon, who is running the steam launch between Lewiston and Asotin, is the promoter of the scheme. He has ordered a 12-passenger machine which was shipped from Chicago on the 18th.

Mr. and Mrs. Ernest Miler, former residents of Genesee, are here on a visit from Mullin, Idaho, where Ernest is holding down a good position with one of the big mining companies. He has secured a month's leave of absence and they will spend the greater portion of the time visiting with her people near Colton.

George Steltz, with a force of men, has erected a fine band stand or speaker's platform, in the city park. It is octagon in shape and is 24 feet in width. For the erection of the same about $65 was raised by private subscription and the balance of the expenses, a little over $100, will be met by the city. It is a nice looking structure and will come in handy on numerous occasions.

Death of H. W. Brune

Word was received Thursday about noon by Mrs. J. S. Larrabee that her son-in-law, H. W. Brune, had passed away at his home at San Diego, California, Wednesday evening at 5 o'clock from diabetes.

Mr. Brune had been suffering from severe spells at various times for the past several months and they had become more severe at each attack.

Mr. Brune was formerly publisher of The Genesee News, selling to the present owners January 1, 1913. He had been located at various places until the United States entered the World War, when he left his business down in Oregon and answered the call of his country for volunteers, going to the Presidio, at San Francisco, to take the officers' training course. He was commissioned a second lieutenant at the close of the course and was later promoted to a first lieutenancy and was in direct line for a canptaincy. During this time he was taken ill and was taken to the army hospital where it was discovered that he was suffering from diabtes and since that time he has been fighting the disease, which had been gradually undermining his health.

Mrs. Brune and her family have the deepest sympathy of this entire community in their hour of bereavement.

Moscow Endeavorers Visit Genesee

Sunday afternoon three auto loads of Endeavorers came over from Moscow to visit the Genesee society. Katherine McMahon and Grace Willoughby had provided a dainty lunch which was served at 6:30, after which all returned to the church where the regular service, led by Walter Thomas, was held.

The visitors were loud in their praise of their reception and the splendid meeting. This week Dr. Snoddy wrote a fine letter to the corresponding secretary expressing the appreciation of the church for the inspiration and fine time enjoyed by their society.

Etiquette Class Have Dinner

One of the most successful banquets of the season was given at the Community house Wednesday evening, May 30, by the members of the Etiquette class. The dinner was given in honor of Miss Olive Jain, who is soon to leave for California to make her home. The table was beautifully decorated and covers laid for 18.

Irene Hall and Oma Castle planned and served the dinner, with Miss Jain as hostess. Rev. Pendleton acted as toastmaster and each member responded with suitable remarks.

A very pleasant evening was enjoyed by all and their only regret was that Miss Jain must leave their midst.

Largest "Cackleberry"

The largest egg yet brought to the News office was brought in last week by Matt. Baumgartner. The measurements are 8x6½ and the weight was an even quarter of a pound. While perhaps the dimensions may not be any greater, the weight is the fraction of an ounce more, making it the champion egg brought in this season. The quality was perfect, and made a fine breakfast.

Will Give Candy Dance

The local post of the American Legion will give a "candy dance" on Friday night, June 8. If you would be a "candy kid" be on hand. Good music will be furnished.

BIG FARM BUREAU PICNIC—THURSDAY, JUNE 7

Plans have been practically completed for the fifth annual picnic of the Latah County farm bureau which will be held in the City park in Moscow on Thursday, June 7. The program for the day will start with the big picnic dinner at noon, with ice cream and coffee furnished free. Following the dinner there will be addresses by George Sievers, active bureau worker, and manager of the Moscow Union Warehouse company, and E. J. Iddings, dean of the college of agriculture of the University of Idaho and director of the experiment station.

At the close of the program in the park there will be an excursion over the experiment station. Heads of departments will be on hand to tell what is being done in the various departments and to discuss their work with interested parties.

Music for the picnic will be furnished by the Moscow City band, under the management of C. D. Bell.

The farm bureau picnic is one that is always well attended and is looked forward to each year by farmers of the county and their friends. Farm bureau officials hope to make this picnic bigger and better than any of those held in previous years.

Erick Oller, president of the farm bureau, has issued the following statement: "While this picnic is under the auspices of the farm bureau it is not exclusively for farm bureau members, nor even just for farmers. but for all who believe that farming is the biggest business in Latah county and who feel that better farming, better country homes, and happier country people are a real asset to his or her business. Come one! Come all! Meet the friends from the other end of the country whom you have not met since last picnic day. A good time and a day profitably spent is assured.

Offer Dollar For 1923 Wheat

The generally expressed opinion among local grain dealers this spring has been that the wheat market will open this fall at about $1 per bushel, and it is evident that this opinion is pretty generally shared among dealers, from the fact that the first bid for 1923 wheat, was made for it by a small quantity ni Walla Walla and Columbia counties, was $1, for delivery immediately after harvest.

While the bidding at this time is merely speculative, it is backing the judgment of the grain dealers. There is now every reason to believe that the entire Inland Empire will harvest one of the biggest crops in its history, and, with the costs of seeding and harvesting something lower than during the past few years, a yield of 30 to 40 bushels to the acre will yield a fair return to the farmer at $1 a bushel, many who are familiar with the wheat game claim.

Decoration Day Observed

Decoration Day in Genesee was fittingly observed, the American Legion being in charge of the program, which was carried out as printed last week. The address delivered by Captain Smith of Clarkston was well received and was one of the best that has been delivered here on a like occasion for many a day. He is a pleasing talker and was easily understood.

Many people left town early in the day for various points to spend the day picnicing and the town was almost deserted.

All business houses, the postoffice and banks were closed during the day.

Was Given Party

A farewell party was given Saturday evening at Smolt's in honor of Miss Olive Jain, who will soon leave for California to reside. A delicious luncheon was served and dancing was indulged in until a late hour. Those present were Misses Olive Jain, Grace Crossett, Gladys Stovall and Irene Mullaley, and Louis Bershaw, Elmer Stovall, Harold Jackson and James Swenson.

Knights and Nights

Sir Aukland Geddes, the British ambassador, was talking at a luncheon about knighthood.

"Knighthood," he said, "is quite a complicated subject. Very few people understand the various types of knighthood, their significance and so forth. A young lady once said to a gentleman: 'What are the Knights of the Bath?'

"'Why,' the young gentleman answered, 'why, Saturday night, of course.'"

Playing Safe

The dear old lady entered the drug store and looked doubtfully at the youthful clerk behind the counter.

"I suppose," she said, "you are the properly qualified druggist?"

"Yes, madam."

"You have passed all your examinations?"

"Certainly."

"Not to my knowledge."

She heaved a sigh of relief.

"Very well, then, you can give me a nickel's worth of cough drops."

"Our political system is sound," chirps a candidate. Good—sound is noise.

REQUIREMENTS FOR CERTIFIED SEED, 1923

In order to have seed certified, according to a communication received from R. L. Spangler, assistant field agronomist for the University of Idaho, the following rules must be observed:

Another growing season is at hand and certified seed growers are making plans for the production of a pure product. There will be no material changes in the requirements this year. To certify, grain must come to the following standards:

1. Purity shall not be less than 99 per cent.
2. It must contain less than 2 per cent of cracked kernals.
3. It must germinate at least 90 per cent.
4. It must be free from noxious weeds.
5. It must not weigh below 2 pounds of the standard test weight per bushel.
6. It must contain less than 2 per cent loose smut and less than 5 per cent stinking smut.
7. It must not contain more than 1 seed of other cultivated plants per pound.

There will be one field inspection made before harvest and growers should plan to rid their fields of weeds and heads of other varieties before the arrival of the inspector.

After threshing the grain, a ten pound machine-run sample should be sent in to the state seed laboratory, Boise. If this sample shows that it has possibilities of meeting certification requirements, advice will be given, after which a five pound recleaned sample shall be submitted.

With the increase in the scope of the certification work it has been found necessary to make a small charge for this inspection work. Two dollars will be charged for a field inspection and two dollars for the final recleaned sample inspection.

Last year approximately 400 growers received field inspections and 46 growers completed the work. These growers paid 5 cents per bag for tags and seals. By purchasing in large quantities this year tags and seals can be had for 4 cents and the field and sample inspection fees will be applied on these so that tags and seals will be furnished at 3 cents per bag.

Those desiring inspection this year should place their applications in the hands of the County Agricultural Agent and send a check for $2.00 direct to the State Seed Commissioner, State House, Boise, not later than June 15.

Full particulars and application blanks can be secured from O. S. Fletcher, county agricultural agent, or by writing direct to C. B. Ahlson, Extension Agronomist, State House, Boise.

The Abnormal

It does not make any difference how much men believe in "luck" in planting crops "in the moon", or any of the many superstitions that are found here and there, no permanent excellence is attained without effort. Conditions have a way of equalizing themselves that is beyond the knowledge of men.

The miners said a long time ago that more gold was put into finding pay ore than was taken out of the earth. The man who this year gets rich on wheat, will through the years to come give back to his brothers in a large measure that which they have paid him in excess of the average price. The man who gets a fabulous price for his potatots and his apples this year or the next meets an equaling price later on. The high war prices of wheat and other crops has made few men wealthy. It has disturbed conditions among farmers and has in reality proved detrimentol to the country as a whole.

The abnormal, no matter where you find it, is never the most desirable. Abnormality in one thing generally means deficiency in something else. The great genius of the age is frequently a weakling in some respects. The breeders of today do not select at their choice the animal of abnormal size. The seed grower selects the average sized grain of corn in the variety he is planting. While we admire and eulogize the outstanding point of excellence, we must never forget that the thing or the being that is well balanced in all departments is entitled to consideration.—Western Breeders Journal.

Picnicked at Asotin Sunday

Members of the Progressive Needleworkers club inveigled their husbands to go with them to Asotin last Sunday where they spent a greater portion of the day picnicing—and they were not the only ones that were using Asotin's fine little park for that purpose. There was a large gathering of Woodmen of the World there also. It was estimated that there was fully 100 cars parked in the main street and on vacant lots.

Federated Ladies Aid

The Federated Ladies aid will meet at the Social house on Wednesday afternoon, June 6. There will be special work taken up and a good attendance is desired.

Got anything to sell? Tray a want ad. if you have.

COMMUNITY DINNER AND MEETING HELD TUESDAY

The regular semi-monthly community dinner was held Tuesday noon at the Lambert hotel, when between 25 and 30 residents of town and surrounding country gathered for the purpose of talking over matters of interest to both town and country residents.

After the splendid chicken dinner served at the hotel had been taken care of, several things of interest were taken up and discussed for a short time, the most important, of course, being the question of consolidated schools.

Prof. Shinkle, superintendent of schools of Garfield, Washington, where they have had a consolidated school district, comprising five former separate districts, for the past 14 years, explained the workings of a consolidated district and the advantages and disadvantages of such consolidation. He stated that during the life of consolidation at Garfield everything had worked out satisfactorily and that they had been able, by such consolidation, to have a really better school than they would otherwise have been able to conduct.

He stated that there were some 150 pupils being transported from the rural district and during the past 14 years there had never been an accident of any kind and that there had been but very few cases of tardiness. He stated that as a general rule the students seemed to take a greater interest in their work from the fact that there was more competition and rivalry and that the general moral of the students was better than it had been under the old system and that their standard of efficiency was generally good.

Prof. Shinkle had nothing to sell, no axe to grind, no particular end to accomplish in making these statements. He came to Genesee in company with a Mr. Leech for the purpose of explaining the consolidated school system as it had been worked out at Garfield. He was very conservative in his statements and answered all questions asked to the best of his ability.

An adjournment was taken until 2 o'clock, when a large crowd of interested people gathered at the public school building where Mr. Leech, who had been instrumental in bringing about the consolidation at Garfield, more than 14 years ago, took the floor and explained how such consolidation had been brought about and the good that had been derived from such consolidation, going into detail more fully than Mr. Shinkle had done. After Mr. Leech had finished John G. Meyer took the floor and with chalk showed in plain figures what would have to be done if the Genesee high school were to be continued, and much discussion was the result.

It was shown very plainly that it will be utterly impossible to run the Genesee high school with the curtailed assessment as laid down by the last legislature. The Genesee school district has formerly made a levy of 14 mills for school purposes, but the last session of the legislature cut the levy to eight mills—the maximum that may be levied. This may be increased to 13 mills by holding a special election—providing the vote is favorable, of course. But even so, the district would be short several thousand dollars, they being hardly able to break even at this time.

Many representatives from outside districts favored what is known as a "Rural High School"—that is, each district would be responsible for the transportation of their students and the tuition would be paid by a mill levy, practically the same as at the present time. However, that is hardly fair to the Genesee district, which would have to furnish the school building and equipment, which is valued at about $75,000, free of charge to the students of the outlying districts. The residents of the Genesee district would have to not only furnish the building and equipment, but keep it heated, pay taxes and insurance—all of which would be entirely free to those of the rural district, should a rural high school be organized. This would be working a hardship on the Genesee district for the reason that they would be receiving no pay for the use of their building, upkeep, heat, light, taxes, interest, etc. Neither does the tuition that has been paid by outlying districts for the past few years carry any of the above items—only the actual cost per pupil for instruction. It would hardly be fair to ask a farmer to furnish a town lad board and room at the mere price of preparing the food.

It is safe to say that unless the outlying districts see fit to join with Genesee in an equitable agreement of consolidation, there will be no high school in Genesee and that rural residents will be compelled thereby to send their children to other schools for high school instruction.

It is probable that a later meeting will be held regarding the matter, should there be sufficient interest from outlying districts to warrant it.

Card Club Will Meet

The card club will meet with Mrs. W. W. Burr on Tuesday, June 5.

Hen Is Only Critter

A hen is the only living critter that can sit still and produce dividends.

J. Stanley Webster, Statesman and Jurist, Has Had Remarkable Career

As Youth Prosecuted Famous Murder Trial in Kentucky Fued Case.

FEDERAL JUDGE AT AGE 46

Candidate for Office Seven Times, Never Defeated; Youngest Supreme Court Judge in State.

One of the most interesting political careers in the northwest reached a climax in the early part of the present month when J. Stanley Webster was appointed and sworn in as United States District Judge for the eastern district of Washington. The term "a climax" is used advisedly, for to say "the climax" would be beside the question. Considering his start, his career, and his youth, the supreme court of the United States and even the presidency are still within the range of possibilities for J. Stanley Webster, and in all probability the climax of his career is not yet reached.

Judge Webster is now 46 years of age, having been born in Kentucky on February 22, 1877. He is now entering his 21st year as a public official. During this period he has faced the public for election to office seven times, not counting primary campaigns, and in these campaigns has never known the taste of defeat.

His first political experience was in 1902, when at the age of 24 he was elected the prosecuting attorney of Harrison county, Kentucky. During his term of office, the famous murder trials which grew out of the Hargis-Cockrell feud, of Breathitt county—"Bloody Breathitt"—were transferred to his jurisdiction on a change of venue. Thus upon the shoulders of the youngest prosecuting attorney that Kentucky had ever known fell the burden of trying one of its most famous murder cases. The defendants, Curt Jett and Tom White, who were on trial for three separate murders, were backed by one of the most fearless and most lawless clans of mountaineers in the state. But despite threats against his life and other attempts at intimidation, the youthful Webster fought their cases to the end and obtained a conviction with a sentence of life imprisonment.

Judge Webster is not of robust physique, and about this time his health required a change of climate. Consequently he came to Washington in 1906, and took up a tract of land 17 miles north of Spokane. When he went onto this little ranch in May of that year he weighed 117 pounds, when he came away a year later he tipped the scales at 158.

Upon his return to Spokane he was appointed as special deputy prosecutor under Richard M. Barnhart, and became chief deputy when the latter was succeeded by Fred M. Pugh. His work in this connection was in the trial of criminal cases in the superior court, and it attracted such attention that when the Fifth superior court district was established for Spokane county in March, 1909, he was appointed to the bench by Governor M. E. Hay.

He was twice later a candidate for reelection to this position, and upon his second election received 76 per cent of the total vote in the primaries, which constituted an election. He was the only judge to be so elected in the state, and the high percentage of the total vote has never been equaled by any other judicial candidate in this state.

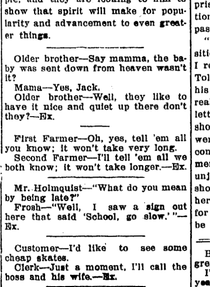
In 1916, Judge Webster became a candidate for the supreme bench of Washington, and was elected by the largest majority on record. He carried every county in the state, with one exception, and that exception was the home county of his opponent. He served in this capacity until in May, 1918, when with four years of his term unexpired, he resigned to become a candidate for congress from the Fifth district.

In the election of 1916 the district had elected a democrat to Congress, every county going democratic, and giving the winner a majority of 5000 votes. Judge Webster reversed this to the extent of a 3500 majority, and two years later was reelected by 11,000. In the primaries of 1922 he was unopposed and was reelected in November.

During his term in congress Judge Webster spoke but seldom on the floor of the house, but did tremendous work in the committees and with his personal influence. Among other things, during the latter days of the session just closed he forced through the $100,000 appropriation for the Columbia Basin survey, which was due to be sidetracked until the next session. This has resulted in speeding up work on the project and means that it will be in actual operation much sooner than otherwise it would have been.

He also obtained an appropriation of $660,000 for the Okanogan irrigation project, which is one of the big wealth producers of the state, two appropriations totaling $230,000 for the suppression of White Pine Blister rust in the forests of the northwest; a bill extending the time of settlement for the settlers on the Coiville Indian reservation, which kept many families from being dispossessed in times of adversity, and he had charge of the house hearings on the Columbia Basin project since its inception.

During his eight years on the superior court bench he put in two years in charge of the criminal department. In that time only one case was appealed from his court, and in that instance Judge Webster was upheld by the supreme court. In fact, no case, either civil or criminal, upon which he had rendered a decision or over which he presided, was ever reversed by the supreme court—a truly remarkable record.



J. STANLEY WEBSTER
Judge of the United States District Court, Eastern District of Washington.

Up to the present time Judge Webster is the youngest man who ever sat upon the supreme court bench of the state of Washington.

For two years Judge Webster lectured on criminal and elementary law in the law department at Gonzaga university, and is credited with being the founder of the law department at that institution. As a reward for his efforts the university has conferred upon him the honorary degree of Doctor of Laws, the highest that can be conferred in the legal profession.

Throughout his entire career as a lawyer, a jurist and a statesman, Judge Webster has been known amongst the people as their friend. Go down the street in Spokane and ask the men you meet, and they will tell you that his outstanding characteristics are fairness, honesty and ability. Even his political enemies will tell you that his decisions are uniformly based on law and elementary justice; that the word "integrity" in all that it implies best sums up his true character.

His elevation to the federal bench places him in a position which is free from political strife and manoeuverings; a position from which he can not be removed for any cause except malfeasance in office, and even those who know him by reputation only will agree that such a thing is the most remote of possibilities so far as J. Stanley Webster is concerned.

Judge Webster is yet a young man, but he has attained his position through sheer merit and ability. His friends are inclined to think that his present position is merely "a" climax in his career—that still greater things are ahead of him. The federal courts offer a splendid opportunity for a man of character and integrity to be of service to his country and to its people, and they are looking to him to show that spirit will make for popularity and advancement to even greater things.

MY LADY'S MONEY

An Espisode in the Life of a Young Girl

By Wilkie Collins

INSTALLMENT NO. 3.

Lady Lydiard waved away the conclusion of the sentence with her hand, find somebody else. Where did you tin dsomebody else. Where did you go next?"

"To your ladyship's lawyer. Mr. Troy wished me to say that he will have the pelasure of waiting on you."

"Pass over the lawyer, Moody. I want to know about the painter's widow. Is it true that Mrs. Tollmidge and her family are left in helpless poverty?"

"Not quite true, my lady. I have seen the clergyman of the parish, who takes an interest in the case—"

Lady Lydiard interupted her steward for the third time. "You have not mentioned my name?" she asked, sharply.

"Certainly not, my lady. I followed my instructions, and described you as a benevolent person in search of real distress. It is quite true that Mr. Tollmidge has died, leaving nothing to his family. But the widow has a little income of 70 pounds in her own right."

"Is that enough to live on, Moody?" her ladyship asked.

"Enough in this case, for the widow and her daughter," Moody answered. "The difficulty is to pay the few debts left standing, and to start the two sons in life. They are reported to be steady lads; and the family is much respected in the neighborhood. The clergyman proposes to get a few influential names to begin with, and to start a subscription."

"No subscription!" protests Lady Lydiard. "Mr. Tollmidge was Lord Lydiard's cousin, and Mrs. Tollmidge is related to his lordship by marriage. It would be degrading to my husband's memory to have the beggingbox sent around for his relations, no matter how distant they may be, Moody!" exclaimed her ladyship, suddenly descending from the lofty ranges of sentiment to the low. "I hate the very name of them! A person who is near enough to me to be my relation and far enough off from me to be my sweetheart, is a doublefaced sort of person that I don't like. Let's get back to the widow and her sons. How much do they want?"

"A subscription of five hundred pounds, my lady, would provide for everything—if it could only be collected."

"It shall be collected, Moody! I will pay the subscription out of my own purse." Having asserted herself in those noble terms, she spoiled the effect of her own outburst of generosity by dropping to the sordid view of the subject in her next sentence. "Five hundred pounds is a good bit of money, though; isn't it, Moody?"

"It is indeed, my lady." Rich and generous as he knew his mistress to be, her proposal to pay the whole subscription took the steward by surprise. Lady Lydiard's quick perception instantly detected what was passing in his mind.

"You don't quite understand my position in this matter," she said. "When I read the newspaper notice of Mr. Tollmidge's death, I searched among his lordship's papers to see if they really were related. I discovered some letters from Mr. Tollmidge, which showed me that he and Lord Lydiard were cousins. One of those letters contains some very painful statements, reflecting most unruly and unjustly on my conduct—lies, in short," her ladyship burst out, losing her dignity, as usual. "Lies, Moody, for which Mr. Tollmidge deserved to be horsewhipped. I would have done it myself if his lordship had told me at the time. No matter; it's useless to dwell on the thing now," she continued, ascending again to the forms of expression which become a lady of rank. "This unhappy man has done me a gross injustice; my motives may be seriously misjudged if I appear personally in communicating with his family. If I relieve them anonymously in their present trouble, I spare them the exposure of a public subscription, and I do what I believe his lordship would have done himself if he had lived. My desk is on the other table. Bring it here, Moody, and let me return good for evil, while I'm in the humor for it."

Moody obeyed in silence. Lady Lydiard wrote a check.

"Take that to the banker's, and bring back a five-hundred-pound note," she said. "I'll inclose it to the clergyman as coming from 'an unknown friend.' And be quick about it. I am only a fallible moral, Moody. Don't leave me time enough to take the stingy view of five hundred pounds."

Moody went out with the check. No delay was to be apprehended in obtaining the money; the banking house was hard by, in St. James street. Left alone, Lady Lydiard decided on occupying her mind in the generous direction by composing her anonymous letter to the clergyman. She had just taken a sheet of note paper from her desk when a servant appeared at the door, announcing a visitor—

"Mr. Felix Sweetsir."

CHAPTER III.

"My nephew!" Lady Lydiard exclaimed, in a tone which expressed astonishment, but certainly not pleasure as well. "How many years is it since you and I last met?" she asked, in her abruptly straightforward way, as Mr. Felix Sweetsir approached her writing table.

The visitor was not a person easily discouraged. He took Lady Lydiard's hand and kissed it with easy grace. A shade of irony was in his manner, agreeably relieved by a playful flash of tenderness.

"Years, my dear aunt?" he said. "Look in your glass, and you will see that time has stood still since we met last. How wonderfully well you wear! When shall we celebrate the appearance of your first wrinkle? I am too old; I shall never live to see it."

He took an easy chair, uninvited, placed himself close at his aunt's side, and ran his eye over her ill-chosen dress with an air of satirical admiration. "How perfectly successful!" he said, with his well-bred insolence. "What a chaste gayety of color!"

"What do you want?" asked her ladyship, not in the least softened by the compliment.

"I want to pay my respects to my dear aunt," Felix answered, perfectly impenetrable to his ungracious reception, and perfectly comfortable in a spacious armchair.

No pen and ink portrait need surely be drawn of Felix Sweetsir, he is too well known a picture in society. The little lithe man, with his bright, restless eyes, and his long iron gray hair falling in curls to his shoulders; his airy step and his cordial manner; his uncertain age, his innumerable accomplishments, and his unbounded popularity—is he not familiar everywhere and welcome everywhere? How grateful he receives, how prodigally he repays, the cordial appreciation of an admiring world! Every man he knows "is a charming fellow." Every woman he sees is "sweetly pretty." What picnics he gives on the banks of the Thames in the summer season! What a well-earned little income he derives from the whist table! What an inestimable actor he is at private theatricals of all sorts (weddings included)! Did you never read Sweetsir's novel, dashed off in the intervals of curative perspiration at a German bath? Then you don't know what brilliant fiction really is. He has never written a second work; he does everything, and only does it once. One song—the despair of professional composers. One picture—just to show how easily a gentleman can take up an art and drop it again. A really multiform man, with all the graces and all the accomplishments scintillating perpetually at his fingers' ends. If these poor pages have achieved nothing less, they have done a service to person not in society by presenting them to Sweetsir. In his gracious company the narrative brightens; and writer and reader (catching reflected brilliancy) understand each other at last, thanks to Sweetsir.

"Well," said Lady Lydiard, "now you are here, what have you got to say for yourself? You have been abroad, of course? Where?"

"Principally at Paris, my dear aunt. The only place that is fit to live in—for this excellent reason, that the French are the only people who know how to make the most of life. One has relations and friends in England; and one goes now and then one returns to London—"

"When one has spent all one's money in Paris," her ladyship interposed. "That's what you were going to say, isn't it?"

Felix submitted to the interruption with his delightful good humor.

"What a bright creature you are!" he exclaimed. "What would I not give for your flow of spirits! Yes; one does spent money in Paris, as you say. The clubs, the stock exchange, the race-course; you try your luck here, there and everywhere; and you lose and win, win and lose, and you haven't a dull day to complain of." He paused, his smile died away, he looked inquiringly at Lady Lydiard. "What a wonderful existence yours must be!" he resumed. "The everlasting question with your needy fellow-creatures, 'Where am I to get money?' is a question that has never passed your lips. Enviable woman!" He paused once more, surprised and puzzled this time. 'What is the matter, my dear aunt? You seem to be suffering under some uneasiness."

"I am suffering under your conversation," her ladyship answered, sharply. "Money is a sort object with me just now," she went on, with her eyes on her nephew, watching the effect of what she said. "I have spent five hundred pounds this morning with a scrape of my pen. And, only a week since, I yielded to temptation, and made an addition to my picture gallery." She looked, as she said those words toward an archway at the further end of the room, closed by curtains of purple velvet. "I really tremble when I think of what that one picture cost me before I could call it mine. A landscape by Hobbema; and the national gallery bidding against me. Never mind!" she concluded, consoling herself, as usual, with considerations that were beneath her. "Hobbema will sell at my death for a bigger price than I gave for him—that's one comfort!" She looked again at Felix; a smile of mischievous satisfaction began to show itself in her face. "Anything wrong with your watch chain?" she asked.

(To Be Continued.)

A sponge soaked in water and placed on the spot of the house plant will keep it fresh for a week, while the owner is away from home. The plant wil absorb the moisture necessary to keep it in good condition.

Break, Break, Break, on thy cold gray stones, oh sea!
I'll bet you could break for forty years, and not be so broke as me.—Ex.

A popular novelist is never a genius t chis stenographer.

Non-stop Hero Wins Bride by Flight

Miss Nellie Jay Turner of California promised Lieut. J. A. Macready she would marry him if he was successful in his non-stop airplane flight from New York to California. Here she is on her wedding day.

Kentucky's Most Perfect Girl

Miss Marjorie Barker

Miss Marjorie Barker, 18, of Hopkinsville, was adjudged Kentucky's most perfect girl in a state contest held at Louisville. She is 5 ft. 4 in. tall; weighs 110½ pounds; chest 29½ inches; and waist 20½ inches. Her health rules are, bridge, swimming, outdoor exercise—and plenty of pretzels.

"DON'TS" FOR TOURISTS COMPILED BY POLLARD

"Snub" Pollard, film comedian, is willing to stand up on a chair and shout that he is the world's champion tourist. "Snub" actually has toured the world extensively, as he hails from Australia, but it was during the filming of his latest two-reel Pathe comedy, "California or Bust," that the comedian learned more than he desired. The result was that "Snub" compiled a list of "Don'ts" for all tourists of the future. Here they are:

DON'T worry if you are stopped by a cyclone. If your wife is blown as far east as St. Louis she should be content that she holds the cyclone record.

DON'T be surprised if something happens to your flivver. You can never depend on those high-priced cars.

DON'T ever stop at a Tent City —one of those places where there is every known inconvenience.

DON'T try to stop a skunk when he enters your tent. He probably knows best, and you'll be sure to smell the worst.

DON'T get fresh with an Indian. Even if Sitting Bull is dead there are still any number of Standing Up Bulls.

DON'T fail to bring along your golf clubs. They are just dandy for smiting mosquitoes.

DON'T mind if you get stuck in the mud. You might have known it would happen, and it's splendid exercise for the back.

DON'T choke your wife if she complains. Just remind her that she always did want to be took somewhere."

STUDENTS CONSTRUCT FOUNTAIN AT N. P.

Pullman's pure artesian water will be available for all persons passing through Pullman on the Northern Pacific railway as a result of the activities of the students of the State college, who constructed a unique fountain at the N. P. depot as a part of their Campus day activities last Friday. The fountain is a mammoth boulder mounted on concrete, the water ebbing through a hole bored through the center of the boulder. Gangs of students also improved the city parts on Campus day. It was the first time that the students have sent gangs of workmen off the campus to do work on Campus day and is another evidence of the remarkable co-operation which exists between the college and the city.

Kids Know.

The teacher had been telling her class about the rhinoceros family. "Now name some things,' she said, "that are very dangerous to be near to, and have horns."

"Motor cars," promptly answered six children at once.

When traveling around the world a day is gained at the "international date line," longitude 180 degrees, in the middle of the Pacific ocean.

Smith—"Dennis claims not to have heard the horn. What's the matter with his hearing?"

Smithers—"Nothing. It's to be held Saturday."

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

Layette for the New Baby.

If there is a new baby expected in the family, these are the things that should be laid away ready for the little potentate on arrival: 3 part-wool shirts (second size); 3 part-wool petticoats (Gertrude style); 3 slips or simple dresses; 4 pairs part-wool stockings; 4 outing-flannel or thinner nightgowns; 2 long wrappers; 2 short knitted or flannel sacks; 1 coat; 1 hood in winter, or 2 in summer; 4 to 6 small cotton blankets; 3 flannel binders, torn 20x6 inches and left unhemmed, or 4 knitted binders (many doctors now advise leaving off the binder entirely after the first four weeks), 48 or more diapers, torn 18x36 in. or 20x40 in. Birdseye diaper cloth is better than the outing flannel or other.

• • •

Books on Baby Care.

Here is a list of good books on baby care, useful to the mother in many emergencies: "The Health Care of the Baby," a handbook for mothers and nurses by Dr. Louis Fischer, a New York specialist in children's diseases; "The Care and Feeding of Children" by Dr. Emmett D. Holt; "The Care of the Baby" by Dr. J. P. C. Griffith; "Prenatal Care" and "The Care of the Baby," two excellent pamphlets published by the U. S. Child Welfare Bureau and sent free on request. (Write the bureau at Washington, D. C.) Excellent booklets and bulletins on the feeding and care of children are printed for free distribution by many state boards of health, notably that of Minnesota (address Minneapolis).

• • •

"What's it, and How Do You Say It?"

Did you ever go into a restaurant or a hotel dining room, and pick up the menu card, only to find that you could not read it, much less pronounce it? Here are some explanations that will be useful to know, especially if you should be put on the menu committee for a club luncheon some day.

A la broche means cooked on a skewer. Andalouse (pronounced anda-louz) means in Spanish style. Anglais (an-glez) is in English style. Aspic (ax-pik) means meat jelly. If things are cooked "Attoresaux" (a-toro) they are alternate pieces of food cooked together on a skewer. If you see "Aubergine" on a list (o-ber-jen) you can call it just "egg-plant" and be correct. Anything served Au-Gras (o-gra) is with meat or fish. If it is cooked Au-Gratin (o-gra-tin) it is covered with a cheese sauce, sprinkled with crumbs, and baked. Serve meat Au-Jus (o-jus) and you will serve it just with the natural gravy. But if you serve it Beurre Noir (beu-re noar) then it will be with browned butter. Anything done Bain-Marie (bin-mari) is given a "hot water bath", that is, cooked in a steamer or double boiler. Blanc-Manje (bla-manzh) is a dessert made of milk and cornstarch. Highly seasoned little patties are usually called Bonne Bouchees (bon-bou-she), literally translated meaning "good mouths," or things that taste good!

• • •

Taking Out Scorch Stains.

A quick and easy way to take out scorch marks on clothing is to saturate the scorched part in hydrogen peroxide solution, put a white cloth over it, and iron with a warm iron until the stain disappears. Then rinse immediately to avoid injury to the cloth from the bleach. A slower but less drastic method is to lay the article scorched in strong sunshine for several hours. If the stain is slight it may sometimes be removed by putting a folded white cloth under it and rubbing gently with a damp cloth. An obstinate stain sometimes is removed by dampening it, soaping it well, and bleaching it in the dew and sunshine.

Making Hard Soap From Meat Scraps.

To make hard soap from scraps of meat, put into a jar of not less than a gallon capacity, 3 quarts and 1 pint of cold water, and pour in the contents of a 1-lb. can of concentrated lye. Set the jar in a warm place in the kitchen, and put in it all the scraps of fat meat trimmed off fresh meat or left from the table. Keep them under the liquid by the weight on them. Let them stand until the scraps have all disappeared and a mass of soap remains.

• • •

Children in Washington.

The number of children in the state of Washington between the ages of 10 and 15 years, according to the last census, was 69,714 boys and 68,931 girls. Of these 3,836 of the boys are engaged in gainful occupations, and only 814 of the girls are working for pay. The total number of illiterates over 10 years of age of native white parentage are 2,276, foreign-born white 11,630, and negro 245.

There even is the possibility war may reach a stage where you can say it with flowers.—New York Globe.

Fads and Fashions of Today

By DOROTHY PHILLIPS

While Deauville scarves are rioting in nearly all millinery displays just now, those who are experienced in

gauging the feminine public's fickleness, declare that these will have but a short reign on the pinnacle of popularity.

Flowers, fruits and feathers, they say will be the favorite ornamentation in summer headwear. The very smart woman will wear no trimming on her chapeau and will sacrifice her own beauty to the up-to-dateness of her chapeau—for it is conceded by all that these severe models are becoming to only one woman in a thousand.

In Paris Wild West conceits are being worn in preference to the King Tut atrocities which were inspired by the publicity given the discovery of the famous Pharoah—and nobody can deny that the Girl of the Golden West is a more suitable person to ascend the throne of fashion than an ancient mummy.

Fringed skirts, gauntlotted gloves with elaborate cut-outs and wide loops of silk floss edging the outer seams, stiff feathered bedecked hats and sandals, are all the rage.

In the upper sketch is shown a chic Fochontsar trotteur shape made of milan with a wreath and long quill motifs of clipped and looped ostrich. It fits snugly on the head and the visored brim is very easy to wear. Below is a poke hat of crimson horsehair, trimmed with a large cluster of organdy cherries with sequened foliage. A similar model was seen in the same shop, made of light beige felt, with fruta in variegated tones and gold foliage which made a most strikingly smart combination.

A visit to the flower section of the millinery sales this year is well worth while. Everything from the most pretentious hothouse flowers to the simplest of modest blossoms of forest and field are here to be found.

Among the most striking novelties there are flat garlands made of cabochon-like flowers. In one made of dull blue and burgundy flat roses, the center was occupied by a huge lacquered dogwood in delicate green and cream tints. Another effective design was a crown wreath formed by clusters of rose, green, blue and purple verbena grouped around silk roses in the richest of shades. Equally smart was a wreath of six flowers such as are never seen in nature; tiuffy white centers (like little powder puffs) of marabou, resting on a circlet of organdy petals in soft pinks and lavenders, and the whole reposing on a large rosette of long silky strands of Manitoba grass, which simulates the finest of aigrettes.

Gold wheat one sees used in a drooping tassel arangement combined with little green silk apples and chestnut burrs, with a few flat flowes in sombre tones interspersed.

Purple and organge anemones form another picturesque parniture. Some of these I saw grouped around a brilliant tiger lily and resting on a sheaf of long-stemmed fuschsias in many oriental tones, while a green-ish-brown rose, encircled by mauve, rose and green-gold silk begonias accompanied by sprays of metallic foliage formed another striking ornamentation.

Harding Picks Iowa Dirt Farmer

E. H. Cunningham of Cresco, Ia., was last week appointed "dirt" farmer representative on the Federal Farm Board by President Harding. Born in Wisconsin, Mr. Cunningham was left an orphan when 12 years old, and forced to leave school to shift for himself.

POULTRY

Make Chicks Work.

Assuming that you are not stinting your growing birds on either water or green feed, there are three other groups of food nutrients that they must have to develop properly—ash for bone-forming material, protein for tissue and muscle building and carbohydrates for producing reat, energy and fat. If you stint them on ash they will be less sturdy than otherwise, but their bones will be hard enough if they have the material

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. R. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. P. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

FED CH— Cheed cm

Church school at 9:45 a. m.

Morning worship at 11 o'clock.

Service at Shafer school at 3 p. m.

Young people's service at 7:30 p. m.

Clarence Aherin, leader.

Church board meeting in the study at the parsonage Monday evening at 8 o'clock.

The ladies' aid will meet at the Social house Wednesday evening.

The memorial service was well attended last Sunday. The Legion boys were very appreciative of the invitation accorded them. Special mention should be made of the floral decoration, which was done by Mrs. Jack Barnes, assisted by members of the young people's choir.

You are invited to make your church home with us.

Sucker Race Intact

In Barnum's time there was a sucker born every minute, and from the number of used cars sold every day we'll say there's been no race suicide. —The Vivifier.

Road Graveling Progressing

The work of re-surfacing the North and South highway from a point about 3½ miles southeast of Genesee to Moscow was begun last week and gravel is being spread at a rapid rate. There are five large trucks going day and night and it will be only a short time until the work will be done as far as Genesee, nearly a mile having been finished at this time.

From the fact that the gravel is being put on a hard surface—that is, very little scarifying having been done—it is going to be some job to keep the gravel in place until it is packed. There are already many places in the road where gravel has been spread that the ground may be seen. It will be necessary to keep a grader busy on the road most of the time, else the surfacing that is now being spread will be of little use.

Trout Season Opens Today

Plans have been laid—some secretly and some openly—by many a follower of Izak Walton who are today casting flies and using the lowly angle-worm to lure the wary trout to the hook for the first time this season.

But be sure you have your license with you, else you may have to pay rather heavily for the privilege of fishing. Wardens will be on the look-out for law violators.

Notice of First Meeting of Creditors

In the District Court of the United States for the District of Idaho, Central Division.

In the Matter of Gerard Broemmeling, Bankrupt.

To the Creditors of Gerard Broemmeling of Genesee, in the County of Latah, in the District aforesaid, a Bankrupt:

Notice is hereby given that on the 24th day of May, A. D. 1923, the said Gerard Broemmeling was duly adjudicated bankrupt, and that the first meeting of his creditors will be held at the office of the referee, Room 11, Lewiston National Bank building, Lewiston, Idaho, on the 13th day of June, A. D. 1923, at 10 o'clock in the forenoon, at which time the said creditors may attend, prove their claims, appoint a trustee, examine the bankrupt, and transact such other business as may properly come before said meeting.

Dated this 25th day of May, 1923.

EWING W. STEPHENS,
Referee.

Mother Knew

The young man who had been calling so frequently on Helen came at last to see Helen's father.

"It's a mere formality, I know, sir," he said, "this asking for your daughter's hand, but we thought it would be pleasing you if it were observed in the usual way."

Helen's father stiffened.

"And may I inquire," he asked, "who suggested that asking my consent to Helen's marriage was a mere formality?"

"Yes, sir," replied the young man. "It was Helen's mother."

Piano Lessons

I am prepared to give lessons on the piano in German, Latin, French or Italian. Mrs. Wm. Hordemann.

And He Probably Does

"Daughter, doesn't that young man know how to say good night?"

"Oh, daddy, I'll say he does!"

Why Suffer from Rheumatism

Do you know that nine out of every 10 cases of rheumatism are simply rheumatism of the muscles or chronic rheumatism, neither of which require any internal treatment? The pain may be relieved by applying Chamberlain's Liniment, which makes sleep and rest possible, and that certainly means a great deal to any one afflicted with rheumatism.—Adv.

Brilliant Speaker Discusses Problems of the English Speaking Peoples

"Working Together for Billions" Is Logical and Fearless Presentation of Some Vital Truths.

Norman Allan Imrie's rise to a place of real prominence in the platform world is almost as interesting a story as his climb to a captaincy with the Canadian forces during the late war. Two years ago he was practically unknown in the states as a speaker. Since then he has talked in hundreds of towns and cities in the West, has toured New Zealand, has spoken in practically every province of Western Canada—and even in some few far-off Alaskan cities. Today he is eagerly sought as an after-dinner speaker in both Chicago and New York. He needs no press agent, no recommendations. One talk is alone sufficient for invitations galore. Mr. Imrie's lecture, "Working Together for Billions," is a stirring, forceful, thought-provoking analysis and presentation of the Anglo-American problems that are burning issues at the present moment. Chautauqua second night.

"THE FOUR CORNER STONES OF CITIZENSHIP"

Mrs. D. Pirie Beyea Delivers Straight-From-the-Shoulder Talk on Community Welfare.

"Please let me have the honor of shaking hands with a woman who knows how to talk like a man, and ain't afraid to put it straight from

the shoulder—a woman who is all woman, and everybody can feel her sincerity." So spoke an old pioneer of the Western prairies after a lecture by Mrs. D. Pirie Beyea in a Saskatchewan town. Mrs. Beyea is a Chautauqua lecturer in the summer time, and in the winter does educational work for a large eastern dental manufacturing firm. She has a convincing knowledge of international affairs, and is an interesting, forceful speaker. Her lecture, "The Four Cornerstones of Citizenship," to be given here at Chautauqua, is a discussion of community welfare from the point of view of good business and good health.

Genesee Chautauqua

His Ultimatum

"I hear tell that a feller driving along in an automobile run over your least boy, Bearcat, in the big road tother day?" interestedly insinuated an acquaintance. "What did you do about it?"

"Well, the feller wanted me to pay him b'cuz Bearcat bit a hole in one of the tires while he was going over and over," replied Gap Johnson of Rumpus Ridge, Arkansaw. "But I says, 'Uh-uh! If you don't want your tires bit you needn't—p'tu!—run over my kids!'"

Prosperity In Your Pocket Often Becomes Adversity

The people who save are the ones who systematically put their money in a bank until they are aple to invest it to better advantage.

When a fellow keeps his roll in his pocket there is always a temptation to "peel it off." Continued peeling eventually brings a person to the point where there is nothing left to peel.

Where do you keep your roll?

Feature Musical "Episodes" in Unusual Entertainment

Patton Brothers Bring to Chautauqua Two Programs of Sparkling Originality on Opening Day.

A program of musical "episodes" is coming to Chautauqua and will be given by the Patton Brothers, three young men from the West Coast, who are particularly gifted along musical lines. The episodes are called the Russian, Old Fashioned, Religious, Popular, Oriental and Patriotic, and all are given in full costume. It is a different program, sparkling in originality, and all the episodes are written in musical form. The Patton Brothers have already established themselves in the hearts of Western audiences on account of the unique features of their program, the separate talents of each of the three young men, the spontaneity of their work, and the musical background that lies behind their efforts. It is a high-class program which will delight music lovers who like a dash of original in their entertainment.

Not Room for Two

General "Phil" Sheridan was at one time asked at what little incident did he laugh most.

"Well," he said, "I do not know, but I always laugh when I think of the Irishman and the army mule. A was riding down the line one day, when I saw an Irishman mounted on a mule which was kicking its legs rather freely. The mule finally got its hoof caught in the stirrup, when, in the excitement, the Irishman remarked, 'Well, begorrah, if you're goin' to get on, I'll get off.'"

Mistaken Identity

The following story about an absent-minded bishop is being whispered about in ecclesiastical circles: At the end of a very tiring day he was conducting a confirmation service, at which there was a large number of candidates.

The last candidate to come up was an old man with a perfectly bald head. The bishop placed his hand upon his head in the usual manner, but in the most unusual manner, was heard to exclaim as he did so:

"I declare this tone to be well and truly laid."

Recommends Chamberlain's Tablets

"Chamberlain's Tablets have been used in my husband and myself off and on for the past two years. When my husband goes away from home he always takes a bottle of them along with him. Whenever I have that heavy feeling after eating, or feel dull and played out, I take one or two of Chamberlain's Tablets and they fix me up fine," writes Mrs. Newton Vreeland, Mimoa, N. Y. Take these tablets when troubled with constipation or indigestion and they will do you good. —Adv.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

An increase of 1 per cent in the winter wheat acreage this year reported to date for 15 countries, which last year had 60 per cent of the total world's wheat area, both winter and spring, is announced by the department of agriculture.

Following a conference with Chairman Lasker of the shipping board, the White House announced President Harding will return from his Alaskan trip via Panama, sailing either from San Diego or Los Angles aboard the shipping board steamer President Harrison.

Lieut. F. J. Davis, who returned Friday on the President Roosevelt, commanding more "last soldiers" fro mthe Rhine, said today there is still one solitary doughboy keeping watch on the Rhine for Uncle Sam. The identity and activities of the lone man are kept secret.

Russia has sold 150,000 tons of grain to Germany. This is believed to be a part of the "single food tax" levied on peasants. "The Soviets," say experts, "must depend largely upon grain exports to build up purchasing power abroad for agricultural implements and other goods."

Over 25,000 men once engaged in smuggling Chinese now carry 100,000 gallons of booze across the border without the least fear of detection, asserts the Chicago Daily News. The paper declares the liquor business the largest single business in the United States, and says every apartment house in Chicago has at least one buyer or seller at liquor.

For the first time in Chinese educational history correspondence schools have been started here. They are in connection with the new school of civilization opened here by Liang-Chichao, eminent Chinese scholar.

Twenty-five native religious fanatics were killed by insular constabulary suppressing an uprising in the island of Pata, near Sulu, according to a dispatch from Manila.

A message to the American Radio Relay league from a ship wireless operator whose vessel was 100 miles south of Ceylon in the Indian ocean, says signals of E. W. Rouse, Galveston, Texas, were heard on board the ship. The distance, 11,000 miles, establishes a new long distance record for transmission by amateur radio.

Physicians, druggists and veterinarians may now obtain alcohol permits from the state prohibition director instead of Washington headquarters, according to an order issued by Secretary Mellon.

Thirty-two bodies, believed to be those of Italians and other foreigners murdered and robbed in attempting to enter the United States, have been recovered from the Rio Grande near Lardo. A Mexican family of smugglers is under suspicion.

IDAHO

The great and glorious Fourth of July will be celebrated in Sandpoint this year in a most becoming manner. The celebration will be under the auspices of the American legion, and according to the present schedule, two days will be given over to doing the job up brown. These days will be Tuesday and Wednesday, July 3 and 4. While no active canvass has been made of the city for funds nearly one-third of the $2000 sought to be raised has been secured and it is expected that the balance will be an easy matter to capture when active soliciting committees are placed at work.

Arrangements for the entertainment of delegates and visitors to the convention of the North Idaho Chamber of Commerce to be held at St. Maries, June 7 and 8, have passed the tentative stage. In variety they have progressed to the point where it is a foregone conclusion that the meet will resolve itself into an opechal event, not in the convention history of St. Maries, but it also bids fair to eclipse any former gathering that has ever adorned the pages of the convention history of the Panhandle of Idaho.

The St. Maries Colonization association has received two letters from big paper mill operators in Wisconsin the past week. The supply of pulp wood seems to be diminishing so rapidly there that paper mill operators are beginning to look for desirable locations. These Wisconsin capitalists will be invited to come to St. Maries and view the power site on the St. Maries river which is controlled by St. Maries business men. It is estimated that there is pulp wood enough contiguous to the power site to run a large paper mill for 25 years. The plant, if established as planned, would cost approximately $2,000,000.

An election has been called for June 19 for the voters of Shoshone county, Idaho, to determine the question of bonding the county to the amount of $300,000 for the purpose of repairing and paving the main highway between Kellogg and Mullan.

Oregon Short Line has asked the interstate commerce commission for authority to build 7 miles of line from Rogerson, Idaho, to Wells, Nevada. The extension is designed to provide additional outlet for highly developed irrigated lands.

Contracts for the surveying of logging road into the Burnt Cabin district of Coeur d'Alene forest was awarded to R. A. Biggs, civil and construction engineer. The road is to facilitate removal of the white pine tract recently purchased by the Ohio Match company from the government for $640,000. The road will cost $300,000.

The federal court jury disagreed in the case of Earl Mashburn, arrested at Lewiston o na white slave charge two years ago, and were discharged. Mashburn escaped from the Nez Perce county jail in August, 1921. He was apprehended at Aberdeen recently and returned here.

The Nez Perce Indians at their annual council held at Kamiah recently placed their approval to a contract with a Washington firm of attorneys for the prosecution of their claims to certai nuse in Montana covering immense acreages as allowed under the terms of the treaty of 1885. The Indians were granted hunting rights to a strip of territry in Montana practically 200 miles wide and running two-thirds the length of the state. It is estimated that some millions of dollars will be demanded in the settlement to be prosecuted by the Indians.

C. T. Tenwick, deputy game warden, has arranged for 50 cans of eastern brook trout, about 70,000 which will be planted in Latah country's streams. The trout will be planted in the upper Palouse, Meadow creek, and the Potlatch. They are furnished by the state from the state hatchery at Sandpoint. Mr. Tenwick desires volunteers from those who are interested in having the streams stocked with fish, to aid in making the distribution Monday, as this expense is not met by the state.

The state of Idaho owns some 700,000 acres of forest land. From this land it has already sold more than two and a half million dollars' worth of timber, the receipts going into permanent funds of the schools and institutions of the state. During the years 1919 and 1920 alone it realized $961,466 from the sale of timber. Only about one-third of the state land has been cut over in the 30 years over which the sales have extended. Timber is now bringing more than double what it brought a few years ago. Ten thousand acres recently cruised will, it is estimated, yield more than a half million dollars. The land will remain in state ownership and under the present policy of management should be left in shape to grow another crop of timber.

Walla Walla Pageant, June 6-7 To Show How the West Was Won

Not a Succession of Tableaus, But Actual Play Showing Different Periods.

FROM 1805 TO THE PRESENT

Stupendous Production Will Require Thousands of Characters and 500 Trained Voices.

The biggest stage, the most ambitious production, and the most thrilling history will be found in the community pageant which the city of Walla Walla invites the world to see on the afternoons of June 6 and 7. Two thousand people participate in the production under the leadership of the famous pageant director, Mr. Percy J. Burrell, of Boston, the original producer of "The Wayfarer" and other notable pageants.

"How the West Was Won" is a fasc

BRITISH INDUSTRIALIST SEES AMERICA'S DOOM

America's demand for her own natural resources—oil, metals, cotton and the like—is so great that a world-wide shortage of these commodities is foreseen; while an economic crisis, even a collapse, is predicted for the United States as a result of the insatiable and voracious consumption of the raw materials of the country, according to Sir E. Mackay Edgar, well-known British industrialist and financier who has returned to London from his annual visit to America, says a London dispatch.

All countries will be affected, but the United States most of all, and the best policy for Great Britain, according to the observer, is to develop and keep under British control as many physical assets as possible all over the world. If that is done, America will have to come to Great Britain for some of the indispensables of life and industry.

"In all the years I have known America," said Sir Edward, "I have never been so struck as during the last two months by her prodigality. Americans have long been the champion spenders of the world, but now they are making all previous records look silly. It is not merely money they are throwing about, but everything—copper, cotton, zinc, oil, lead, timber—you can hardly name any of the staples of industry that they are not literally devouring. It is an amazing spectacle.

"In America you have 130,000,000 people feverishly tearing from the earth irreplacable wealth and using it to maintain a rate of growth utterly without precedent in human history. This terrible consuming power is the biggest economic fact in the world today. It is terrible because it is already outrunning production. Before long, while the demand will be as voracious as ever, the supply will have run short. Then there will be a smash."

Sir Edward recalled that in 1914 America produced about 65 per cent of the world's supply of cotton, oil, copper, lead and zinc. Then America consumed roughly about 35 per cent of the total supplies. Today, while she is producing relatively the same, her consumption of these commodities amounts to over half of the world's output. Ten years from now America will be producing relatively less and consuming relatively more. She will be producing about half the world's output; she will be consuming something like 70 per cent of it. In other words, she will have to import.

It is difficult for an Englishman to imagine the United States importing cotton. Yet this is going to happen, according to this British industrialist.

"Do you realize that America is this year using in her own mills about 70 per cent of her cotton crop?" Sir Edward asked an interviewer. "Before the war she used 20 per cent. It seems that the time is coming when there will be precious little American cotton for the rest of the world to buy. The southerners seem to think that they do better with small crops fetching high prices. What Lancashire, England's textile district is going to do to obtain raw material for her huge mills I honestly do not know."

America already has reached the importing stage in oil, and in five years she will be taking in from aboard, if she can get it, not far short of a billion barrels, according to Sir Edward's calculations.

"That is what she will require if her present rate of consumption continues," he said. "It is with oil as with cotton, copper, lead and zinc—the world is nearing a shortage not far removed from a famine because of the voracity of American demand.

"Our business as Briton's," concluded Sir Edward, "is to sit tight on what we have and to exploit all the oil, cotton and metal possibilities of the non-American world. In that way we shall do more than safeguard our own position. We shall be able to supply America with the commodities she must have to keep going. She will have to come to us for some of the essential means of livelihood. It will be a costly experience for her, but, so far as I can see, America can not escape it."

Who Remembers

The old-time father who went down town on a Saturday night with a market basket and a dollar and came back with a basket filled with groceries and a sack of candy for the children?

Chamberlain's Colic and Diarrhoea Remedy

Every family should keep this preparation at hand during the heat of the summer months. It is almost sure to be needed, and when that time comes, is worth many times its cost. Buy it now.—Adv.

ALASKA AGAIN CALLS U. S. ARMY SARGEANT

Sargeant Patrick Healy, government-telegraph operator at the Presidio, San Francisco, who is known as the "trouble shooter" in Petersburg, Alaska, has announced his intention of going back to the Northland.

During the last six months, since he came to the Presidio, he said, he has tried to forget the impression that Alaska made on his mind while he was stationed there during the past three years, but without success and at last he asked for a transfer back to the northern territory.

At Petersburg he was the first resort of anyone in distress, whether with frozen feet or troublesome mortgages, for he was a licensed foot specialist, and knew the law, even the law of the North.

Center of Activity

Petersburg he describes as a throbbing center of activity. Twenty-two miles to the north of this city three San Francisco business men, F.L. Dutton, F .W. McNear, and F.C. Dougherty, are beginning operations for a plant on Cascade creek, in the Tonglass National Forest, for the development of 16,000 horse power. The project includes the erection of a pulp mill and the early investment of over $10,000,000.

"Thats what Alaska needs," Sergeant Healey said yesterday. "Ketchikan, the first port of call, is the threshold to untold riches for Western men and Western capitol. And the lure of it all is indescribable. When you arrive in Petersburg you can just forget the past.

Chinaman Grubstakes

"Sing Lee, the leading merchant, will stake you out if you wish to seek a claim, and will ask no questions. You will then have a new name, for you will appear on Sing Lee's books, not by your Christian and family names, but as 'Big-Eye Mary,' 'Taku (Windy) Jim,' 'Big Nose Charley,' 'Flat Foot Susie' or some equally colorful title. While I was the army telegraph operator at Petersburg I saw many prospectors start, supplied by the trusting Chinaman, on the trail that leads to the rainbow's end.

"But it's not the gold that lures today, as much as the silver that gleams in the fur of the Alaska fox. Although I have three excellent claims, when I return in May I shall turn my attention to the silver and blue fox. The Alladdin's lamp in Alaska is no longer labor, but intellect or initiative.

Mushroom Towns

"Busy towns spring to life, where restless human beings dig and scramble for gold, and the roar and blasts and din of noisy mills shatter the air night and day.

"Great cold peaks lift their pallid faces against skies so blue that it seems all the color in the world must have been spilled there. The painted hills of the Yukon rise on your vision, or, it may be, the soft heavy greens of the coast slopes, with their filmy mist mantles and rain-pears.

"One sees the crude gropings of a primitive people toward art in the quaint Indian villages tucked away in the coves. There are the weird totems, rich baskets, and old carvings in ivory and slate.

Big Future Promise

"It is to be the scene of untold action tomorrow, and the sources of untold wealth, unequalled in the days of the gold rush. Yet it is ancient and quaint, with an old world cicilization transplanted to its shores a century and a half ago. Those were the days when Baranoff was the little Czar of the Pacific, when the bells of the California missions were cast in the foundaries of Sitka, and Russian feet danced to the plaintive melodies of the steppes, in the castle on the hill."

We have no comments to make on the loose situation. Comment is superfluous.

An Eye for Business

"You may not remember me, sir, but two years ago, at the shore, I rescued your daughter from a watery grave and you made me a present of $1,000."

"Yes, indeed, young man, I recall you perfectly. What can I do for you?"

"I merely dropped in to inquire if she had learned to swim yet."

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Mabel Romine, plaintiff, vs. Guy E. Romine, defendant.

The State of Idaho Sends Greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff; the nature and general terms of which is to procure a decree of divorce on the ground of wilfull neglect and also to procure a decree awarding the custody of the two minor children to the plaintiff, and for general relief.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of said District Court, this 12th day of May, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
By Adrian Nelson, Deputy Clerk.

Attorney for Plaintiff, residence and P. O. Address Moscow, Idaho. 46-6

The Home of the Soul

In olden times, it was believed that the sent of the soul was the stomach, most likely for the reason for the reason that a man is never so completely used up as when his stomach is out of order. For the cure of ordinary stomach troubles, there is nothing quite so prompt and satisfactory as Chamberlain's Tablets. They strengthen the stomach and enable it to perform its functions naturally. Give them a trial. They cost a quarter.—Advertisement.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JUNE 8, 1923. — NO. 49

UNIFORM TRAFFIC LAWS ARE NATION'S NEED

"It was not difficulty twenty years ago to govern the operation of motor vehicles to the satisfaction of both the owners of power-driven vehicles and the pedestrians, but today, with some over 10,000,000 automobiles in operation in the United States, the problem has become intricate," says E. H. Beacham, manager of the Illinois Auto Club. "I am frank to say that our legislative bodies have failed to keep pace by passing legislation governing speed and operation of motor vehicles on the public highway.

"At every session of all state legislative bodies some representatives have pet traffice laws to introduce. They present apparently good reasons why their laws should be passed. There are today on the statute books of every state in the Union a great many traffic laws that are not enforced. In fact it is impossible to enforce them, owing to the rapid changing of conditions pretaining to transportation and increased congestion.

"This applies also to city ordinances and police orders in practically all of our cities. They have become more or less antiquated, but still can be revived if the authorities see fit to enforce them. The fact that these laws still remain on our public records, even though they are not enforced, makes practically every operator of a motor vehicle a violator of either the city or state laws.

"The Illinois Automobile Club recomends that all laws and ordinances pertaining to the operation of motor vehicles which are not effective or in keeping with present conditions be repealed, and new, modern and intelligent legislation be passed and properly published, enabling the motorist to operate his car within the law and not be a violator.

"We further wish to recomend the establishing of uniform traffic laws nationally, so that a motorist touring from one state to another will not innocently violate some ridiculous local ordinance, usually a hobby of some public official. We believe that if a traffic law is good in Chicago it is good in New York, Philadelphia, or any other city in the world.

"When we are suggesting traffic regulation let us not overlook the necessity of regulating the pedestrian traffic. Statistics show the pedestrian is more careless than the driver of a motor vehicle, notwithstanding the fact there are more pedestrians than there are drivers of motor vehicles. The principal object in changing motor laws and enforcing them is to prevent accidents and loss of life. Let us all, at the same time, enact such legislation as is necessary to govern motor traffic under modern and compel him to conform to these laws to the letter. Otherwise any motor vehicle laws would not accomplish the desired result."

Many Cars Stuck

Many cars were stuck in the deep mud hole near the Wm. Ingle farm, just south of town, on the highway, last Sunday. Mr. Ingle said he was kept busy practically all day pulling cars out of the deep mud hole. The place is naturally a springy one and the large gravel trucks had cut the road up so badly that when the heavy rains came a deep mud hole was formed and cars went clear through the rock bed to the mud below—and if the axles had not stopped them there is no telling how far they might have gone.

It goes without saying that the joy has surely been taken out of joy riding on the first four miles of the Lewiston road, and it will be so for some time because of the loose gravel, but it will pack very rapidly owing to the recent rains.

Cloud Burst and Lightning

A heavy thunder storm occurred to the north and west of Genesee Wednesday evening and a veritable cloud-burst was reported from the Thorncreek section, filling that little stream bank full.

The lightning struck a W. W. P. pole Thursday morning, putting the "juice" out of commission until 9 o'clock. It is reported that the lightning also struck Geo. Jacobs' barn and torn one end nearly out, but it did not burn.

The detonations of thunder were quite heavy at Genesee.

All Passed Eighth Grade Exams

The entire eighth grade at St. Joseph's school passed the recent state examinations. Following is the list of the graduates: Edwin Weber, Teresia Kraut, Teresia Miller, Julia Hasfurther, Leona Broemmeling, George Griesser, Cecelia Dwyer, Wilfred Hasfurther, Raymond Johann. Cecelia Dwyer made the highest grade, her average being 93.

New Arrivals

Mr. and Mrs. Edwin Smolt of Lewiston, are entertaining a little stranger at their home—a little miss—who arrived May 28. Mother and babe are reported as doing nicely.

Mr. and Mrs. Jewel Swenson of Lewiston are the proud parents of a little daughter who arrived to make her home with them on May 28.

Big M. W. A. Drive On

District Deputy Al. Larson and Special Deputy C. E. George of the Modern Woodmen of America were in town the first of the week making preparations for the big membership drive by the local camp, which will begin June 10.

The Modern Woodmen of America is the largest fraternal beneficiary society in the world and is the original order of woodcraft. It is operated by a representative form of government. It has over 14,000 camps and protection of the most completely equipped sanitorium for the care of tuberculosis patients in the country where its members are taken and cared for without cost.

The costs to join are very low in comparison with other societies and the great feature of the organization is the low insurance rates, which can be found the ad. in this paper. A limit of $3,000 is set on its insurance as a matter of protection from capital getting control and the money payment plan makes it very easy for the man of moderate means to carry.

A big time is promised all those entering during this drive and a money-back guarantee is given all those not satisfied after seeing what they have to offer.

It is a strictly non-religious and non-political organization, allowing no questions on either subject to be discussed in their hall. It bars, however, any man of unclean habits and of low moral standing. It has a membership of over 1,077,000 good American citizens banded together for the protection of each other's loved ones when death takes the bread winner from the home.

Mr. Larson has just completed a very successful drive at Lewiston and entertains great hopes of a duplication of that fete here.

See their ad. on page three of this issue.

Card Club Entertained

The Card club was very delightfully entertained Tuesday afternoon by Mrs. W. W. Burr. The afternoon was spent in playing pinochle and a very pleasant time is reported. Mrs. Mahlon Follett, Mrs. F. K. Bressler and Mrs. W. E. English having tied for the honors, a cut of the cards gave it to Mrs. Follett.

The following were invited guests: Mrs. Nell Haymond, Mrs. Fred Morscheck, Mrs. Mahlon Follett, Mrs. F. J. Niemann, Mrs. Frank Hoorman, Mrs. R. S. Sullivan, Mrs. J. M. Senecenbaugh, Mrs. T. H. Herman and Mrs. H. A. Thatcher, Mrs D. C. Burr and Mrs. A. C. Holman, all of Moscow.

Lewiston Will Improve Water System

By a vote of 1007 to 267, Lewiston citizens recently authorized the issuance of bonds for $380,000 for improvements of the city water plant. By the terms of the charter the bonds could not be issued except by a two-thirds vote in the affirmative.

Plans for the improvement were made by a Kansas City firm of engineers. A filtration plant comprises a part of the improvement while a great deal of wooden pipe will be replaced by iron. A new reservoir will be a feature of the work.

Funeral of H. W. Brune

The funeral of H. W. Brune, who died at his home in San Diego, Calif., on Wednesday of last week, was held at San Diego on Saturday. His father who resides at Lawerence, Kansas, and a cousin from Los Angeles were with him when the final summons came.

WHAT HAPPENED HERE TWENTY YEARS AGO

Aaland & Qualey have improved the farm residence of Henry Martinson by adding porches and making a number of changes.

Gilbert Crawford and Bill Burr returned to Genesee Tuesday after an absence of two or three months in the Coeur d'Alene country.

Louis Anderson Tuesday of this week began laying the stone foundation for the Follett store building. He is by no means a novice with the trowel and hammer.

John Larrabee left for Spokane Tuesday morning to meet a traveling man from whom he purchased a stock of dry goods. His opening will take place about the middle of the month and for a starter will carry dry goods and groceries. While away he also purchased show cases and fixtures.

W. J. Herman informs us that he will very soon commence to clear away the debris at his corner preparatory to the erection of his new store building. These fine new brick blocks look fine to the average Genesean, and not only show that her citizens have faith in the town but are willing to back it up.

It might be well to call the general public's attention to the fact that there is "something doing" in Genesee. We will mention a few of the improvements that the completed or under way: City park building, improvement of ball park and race track, A. Murphy building blacksmith and machine shop, George Steltz remodeling residence, George Follett erecting a fine new home, C. W. Hanson a new photograph gallery, Jane Brennan and Anton Mertes residence improvements, macadamizing of city and country roads, county bridge at outskirts of city, several miles of new sidewalks, Follett Bros. new store building, 50x80, W. J. Herman brick furniture store and the erection of a $5,000 opera house by the Woodmen of the World, as well as the remodeling of a number of residences and other improvements too numerous to mention. Keep your eagle eye on Genesee.

Tourists to Hear Radio

A radio set will be installed at the Down River tourist camp at an early date by the Spokane Radio association, according to an announcement made recently. It is planned that on Tuesday and Friday nights members of the association will take a receiving set to the camp to enable the tourists to hear concerts. In connection with the camp station, the broadcasting station will give out road information furnished by the Inland Automobile association and special talks will be given on side trips taken out of Spokane.

Christian Endeavor Notes

By Fred Dicus

The regular Sunday evening meeting of the Christian Endeavor was held in the Social house. The meeting was led by Helen Casebolt, the topic being "Every-day Objects." A very interesting time was had and was enjoyed by all. Grace Jain and Wilma Casebolt gave a piano duet and a verse finding contest proved very interesting.

There will be no Endeavor meeting next Sunday evening on account of chautauqua.

Who Remembers

When nearly every county seat town was divided on the question of whether there should be a hitching rack around the court house?

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Four Inches of Rainfall

The weather report for the month of May, as recorded at the Monastery west of town, shows a total rainfall of 4 inches for the month, which is about twice the normal precipitation. Rain fell on twenty days during the past month.—Cottonwood Chronical.

Baby Pheasants

Tuesday afternoon there arrived by express a shipment of one hundred and twenty baby Chinese pheasants, from the state game farm, at Walla Walla, consigned to the county game warden of Asotin county, M. C. Martin. Six hens of the regular poultry variety which have been mothering the little ones since they were hatched, came with the little birds. It will be necessary for Mr. Martin to give care and attention to these baby pheasants for at least three weeks before they can be liberated. They are a lively and interesting bunch of little birds.—Asotin Sentinel.

New Road Signes

New road signes have replaced the antiquated ones that have stood for so long on the Roosevelt highway at the entrance to Colton on either side of town. F. A. Smith, secretary of the Commercial Club, was responsible for the change that has been made.

The former signes were taken down and built over into the new signboards then Fidel Frei did the lettering, and turned out credible work. The new signes read as follows: "Colton, Wash., pure artesian water; rest room."

They make a far better advertisement for the town, and give briefly the principle things tourists are looking for along the route.

The change is appreciated by all, and we congratulate ourselves that someone had the energy to bring about the deal.—News-Letter.

The Fable of Tut

Three thousand years ago lived an Egiptian King named Tut-Ankh-Amen. It sounded like Stutter and the Gang at the Luxor Golf Club called him "Tut."

When Tut reached the Cake Eater age and got his Hair plastered back right—he died. Dying was one of the leading Egyptian In-Door Sports and Tut's death was a Major Event. They slipped him into a Swell Tomb in the Valley of the Kings.

Three thousand years later a Party of Snoopers dug up Tut's Tomb and all the Junk buried with him. The Advertising Men took charge of Tut and in a few weeks have given him a Rep which makes Charlie Chaplin's, "Doug's" and M. "Day-by-Day" Coue's look like last year's Almanac in comparison.

Dead for 3000 years! Lost! Forgotten! Then Bang! Advertised—and a whole world hollering for more news of Tut!

If advertising can thus put life into a Dead One—what can't it do for a Live One?

They could have dug up a hundred Tuts in the desert and if they had kept the god news to themselves—only a few Bald-Headed Historians would ever known it.

You have the best merchandise in the world. But if the world does not get Hep to it—the business will sleep along peacefully.

Remember Tut!

Never mind what the other fellow thinks of you. He may be too courteous to say it.

(Copyright, W. N. U.)

GENESEE CHAUTAUQUA WILL COMMENCE ON SUNDAY

The Genesee chautauqua will begin next Sunday,—June 10—and will continue for six days. The attractions are said to be among the very best that have ever been offered to the Genesee public. While many season tickets have been sold, there are yet many who have not bought. It is a fact that there are just a few of the attractions that will be worth more than the season ticket will cost—and the rest of the numbers will be "velvet" to the buyer as you may consider that they have cost you absolutely nothing at all. "The Shepherd of the Hills" alone is worth $1.00—and it will cost you that much to see it if you haven't got a season ticket—to say nothing of the eleven other entertainments that you will get for the other $1.50.

Season tickets are on sale at all the business houses and you can get them today (Friday) and Saturday at the regular price—$1.50. After that time it will cost you more, and then you will be sorry. Of course you can buy single admission tickets to all the entertainments, but if you will count them up separatly you will find that the single admissions to the entire course will cost $7.50, thus you will be saving $5 by buying a season ticket.

The big tent will be erected on the same grounds as last year—just east of Edwards & Son's place of business.

The juniors are planning to have a busy, interesting, happy week during chautauqua this year. The first event of importance is to be a circus—animals, monkeys, bears and loins, tight rope walkers, a snake charmer, and an elephant that eats a half bushel of peanuts every day—are only a few of the features.

All children wishing to take part in this "Magic Lunar Circus" may do so without being obliged to buy a chautauqua ticket.

Miss Elliott will meet the children at the Social house, Friday afternoon at 2 o'clock, and at the Legion hall, Saturday at 9 o'clock.

On Friday there will be a ticket hunt—the three children, finding the three hidden tickets may attend chautauqua all week, free of charge.

"Travelin' On

A man hard as iron, who believes only in himself, a man who doesn't even know his own name, but who has the utmost confidence in his own powers, is depicted by William S. Hart in his new Paramount picture, "Travlin' On," directed by Lambert Hillyer, and now screening at the drama from Mr. Hart's own story.

"J. B."—a cattle brand—is what the hero calls himself. He rides into town and makes everyone respect him. Even the itinerant preacher and his beautiful wife, learn to feel that he is a man among men, but they cannot induce him to admit his belief in a higher power than himself.

How finally he comes to realize that man alone cannot always controll human events, how love softens his heart and results in a great sacrifice—these things are told in a drama that is one of the most compelling ever shown on the screne.

Ethel Grey Terry is the wholesome and lovely heroine, and there are many other fine actors in the cast. Nndoubtedly this is an ideal western drama of the type that has made Mr. Hart famous and endeared him to the public fans. The picture comes to the opera house Saturday night.

Local Legion Post Honored

Bielenberg-Schooler post of the American Legion is in receipt of a letter from Lester A. Albert, department adjutant, in which he says in part as follows, "I can assure you that it was certainly a pleasure to know that you are doing such wonderful work in the Legion. I have heard from several sources of the activities of the Genesee post, so you can realize that they are not entirely unknown to your neighbors.

It is seldom that this office receives an annual report covering the post activities such as yours. Your financial condition is excellent, your activities going strong, and your membership, according to our records, is most excellent.

Will you give special attention to the matter of putting on a model initiation ceremonial at Coeur d'Alene convention? In talking the matter over with Paul Davis, Americanism chairman, he advised me that nowhere in his travels has he seen the ceremony put on as well as the Genesee post has done it. It would therefore be a great favor to the department if you could take your bunch to Coeur d'Alene and put this on for the benefit of the delegations present. Not only would this benefit us but would bring great credit on the Genesee post."

Graves Fund Small

The voluntary contributions for the graves endowment fund from the citizens of Genesee was not up to expectations. No drive was made but all were urged to give a mite for this noble cause.

The total sum realized from voluntary contributions was the disappointing sum of $3.55. The sale of poppies on Decoration Day brought the amount up to $11.39, which has been forwarded to apply on Genesee's quota in the national fund.

Candy Favors at Legion Dance

Tonight (Friday) a dance, with features unique to Genesee, will be held in the Legion hall. Following each dance a couple will be selected by lot and will be the recipient of a box of candy with the compliments of the committee in charge.

Indications point to one of the best-attended dances among the recent series given by the Legionaires. Harry Hanson's orchestra, enlarged and improved, will furnish the music.

Says Big Bend Looks Good

Mr. and Mrs. Wood Gash and daughter, Bertha, returned last Thursday evening from a ten-day trip to the Big Bend country, visiting their land holdings near Coulee. Mr. Gash said that prior to the last rain they had the best prospect for a good crop that they had had in that part of the country for the past six years—and that the recent rain would undoubtedly make it practically certain for a bumper crop for that section.

Will Cut Wheat Early

Wheat growers in the vicinity of Connell, Washington, are planning to begin harvesting operations in about 30 days and expect to be cutting wheat by July 1, according to reports sent out from that section.

The fall grain is reported to be up 18 inches and headed out. This wheat, visitors say, is the best looking in several years for that section.

Bielenberg-Schooler Post The American Legion Meets Each First Wednesday In June, July and August

Local Legion Post Honored

Bielenberg-Schooler post of the American Legion is in receipt of a letter from Lester A. Albert, department adjutant, in which he says in part as follows, "I can assure you that it was certainly a pleasure to know that you are doing such wonderful work in the Legion. I have heard from several sources of the activities of the Genesee post, so you can realize that they are not entirely unknown to your neighbors.

Will Cut Wheat Early

Wheat growers in the vicinity of Connell, Washington, are planning to begin harvesting operations in about 30 days and expect to be cutting wheat by July 1, according to reports sent out from that section.

The fall grain is reported to be up 18 inches and headed out. This wheat, visitors say, is the best looking in several years for that section.

More of That Million-Dollar Rain

The Genesee section has again received another installment of that "million-dollar-rain"—and it is nearly enough to make the grain without any further installments. Some of the farmers say they don't need any more while others say they can stand another one or two about three weeks. Just how the matter will be settled remains to be seen. Anyway, it was a great and glorious rain, lasting in the neighborhood of 50 hours, and the first part of it was a "soaker" in itself.

Here's hopin' that the farmers get 50 bushels to the acre and get not less than a dollar a bushel—and that it all grades No. 1.

Be careful to whom you give advice. They might take it.

Important Business Change

One of the most important business changes of the year has taken place in Genesee for a long time occurred on June 1, when J. H. Jackson sold his interest in the Follett Bros. Merchantile company to Mahlon Follett, Mr. Follett taking charge on the day of the transfer.

Mr. Jackson has been with the Follett store for the past 19 years and has made scores of friends who will indeed be sorry to learn that he has severed his connection with that institution, but who will wish him the fullest measure of success wherever he may choose to cast his lot.

Mr. and Mrs. Jackson expect to leave by automobile about the first of July for a visit with friends and relatives in the east, spending most of the summer with Mr. Jackson's mother in Minnesota. They will then turn their car toward California where they expect to locate.

More of That Million-Dollar Rain

The Genesee section has again received another installment of that "million-dollar-rain"—and it is nearly enough to make the grain without any further installments. Some of the farmers say they don't need any more while others say they can stand another one or two about three weeks. Just how the matter will be settled remains to be seen. Scientific Equivalent of Man

One of our employees, tired of hetring men boast of their importance, dug up the fact that, according to scientific investigation, the ingredients of a man, plus water, are as follows:

Fat enough for seven bars of soap.

Iron enough for a medium sized nail.

Lime enough to whitewash a chicken coop.

Sugar enough to fill a shaker.

Phosphorous enough to make 2,200 match tips.

Potassium enough to explode a toy cannon.

Sulphur enough to rid a dog of fleas.

This whole collection is worth 98 cents, and that in a day when things are higher than they used to be.—The Northern.

Famous Ballad Singer Coming to Chautauqua

Sam Lewis, Dramatic Tenor, Believes Americans Want Their Music in Language They Understand.

Sam Lewis, the prominent Welsh Tenor, and one of the most popular ballad singers in America, has little patience with the concert singer who tries to "foist foreign languages on Americans." Mr. Lewis says: "I believe the time is not far off when American audiences are going to demand more singing in a language they can understand. Personally I never sing even one group in a foreign tongue unless it is specifically requested." Mr. Lewis has made rapid strides in the music world of late years. He is appearing again this season at the head of his own company. Assisting artists are Marie Colliton, pianist and accompanist; Allen Ament, violinist; and Nell Adams, reader.

CORNCOBS MAY SUPPLY FUEL FOR MOTOR CARS

The lonely corncob, heretofore good only for the making "Missouri meerschaums," or to be burned, may soon be furnishing the fuel that runs your automobile. And it is predicted that by using this new "gas" the motorist may not have to "shell out" so freely as formerly.

More than six years of research work by chemists in the department of agriculture laboratories has resulted in the development of a process that it is predicted, will make possible the production of a lowpriced substitute fuel for automobile engines, as well as for a wide variety of hard rubber and synthetic resin products; provided a good market for waste farm byproducts, and conserve the native supply of methanol (wood alcohol) and the forest products, particularly hardwoods, used in the manufacturing of methanol.

The results of this work were announced through the American Chemical Society by Dr. W.W. Skinner, assistant chief of the Bureau of Chemistry.

Furfural is the Name

The achievement consists in the perfection of methods for producing a chemical compound known as furfural at a low price and by a simple process from corncobs. Dr. Frederick B. LaForge and Gerald H. Mains of the bureau of Chemistry are credited with having done this work. They have successfully brought the process for the production of furfural to a commercial scale, and at the same time have aided in the development of a commercial market for furfural by supplying quantities of the material to manufacturers for co-operative research on its utilization. After seemingly scaling the heights, she paused for the answer; that same blank look came over the boy's face. Again she tried, a little differently this time; again he shook his head. Then, with the utmost patience, she repeated the problem as she drew the lines. The answer came this time and with it such a look of joy in attainment!

The importance of the work is apparent when it is understood that such widely-used articles as printing plates—light, durable substitutes for electroplates— phonograph records varnishes, pipe stems, cigarette holders, electrical instrument parts formerly made from hard rubber, buttons, binders for brushes, glue and a hundred other kindred articles are now being manufactured from synthetic resin compounds, and the use of such resins is rapidly increasing.

Can't Use "Gas" Carburetor

Furfural has been tried as a fuel in an automobile engine and worked successfully, Dr. LaForge reports. It will explode under the conditions of the automobile engine, but because of its high boiling point, cannot be used with the type of carburetor suited to gasoline.

Plans are now under way for the erection of the first commercial plant to utilize the new process. It probably will be located somewhere in the corn belt where raw materials are near at hand.

And Then the Fun Began

For the first dinner in their new home the bride had made a pie. "I am afraid," she said, as she helped her husband to a slice, "that I have left something out, and that it isn't very good."

The husband tasted it and said "There is nothing, my dear, you could have left out that would make a pie taste like this. It's something you've put in."

When a man has dyspepsia he feels it and his family knows it.

Don't Coax Your Wife

Don't coax your wife into telling that secret. It may be the one you thought you had kept under cover.

Why Suffer from Rheumatism

Do you know that nine out of every 10 cases of rheumatism are simply rheumatism of the muscles or chronic rheumatism, neither of which require any internal treatment? The pain may be relieved by applying Chamberlain's Liniment, which makes sleep and rest possible, and that certainly means a great deal to any one afflicted with rheumatism.—Adv.

Prompt Attention *Phone 33-1*

Courses at Horace Mann Schools Make Backward Children Assets

By MAX DUBOIS.

I had heard of the Horace Mann schools—casually. This casual acquaintanceship was crystallized when a friend of mine told of a chance meeting with some of the pupils of one of the schools on a brief outing, chaperoned by their teachers. Hence the story.

I visited one of the schools, an old-fashioned brick structure at Howard and Sharp, Spokane, one morning early enough to take in everything. It was nearly time for school to begin; soon after the children had gone to their respective rooms, they were called to the main floor for singing exercises.

While the 50 odd pupils formed around the walls of the room I edged into one corner so as to make myself as inconspicuous as possible. One of the teachers lead the pupils, while Miss Lou Benson, the principal, played the piano. I was the object of many childish eyes, even in my corner. One of the boys near by advanced with a song book. I thanked him. The song was America, and as I did not need the book temporarily, I let it hang by my side. Another little boy, looking my way and seeing me apparently bookless, politely offered me his book. A refusal would have been misconstrued; so I took the book and thanked him. A few minutes later another book came forward.

Many Nations Represented.

While attempting to regain my equilibrium from this opening barrage of attention I watched the children. They stood closely together, a perichromatic representation of the nations. They were dark and they were fair, descendants of Italy, Assyria, Ireland, Sweden, Germany and France. All were singing, the mentally unbalanced, the flighty, the deaf. And every one seemed happy. The deaf sang, of course, with considerable difficulty because of their undeveloped vocal chords.

Afterward the children marched back to their rooms. And then Miss Benson showed me around the building.

First we went upstairs to the two deaf classes. Children ranging from nine years to 17 were in one of these classes. There is no age limit to children accepted in the various classes, according to Miss Benson. Age is not the object.

Miss Wilson, the instructor of the first class I visited, called me before the six children and first explained they could not hear a word, but learned through reading the lips alone. They then stood by their desks and she told them my name. I started when they spoke; the sound was ghostly.

But their voices were far better than no voices. For these children may carry on conversation with people, not extensively of course, but through their knowledge of lip reading they become a part of the world of which otherwise they would know little about.

Under old-fashioned systems the deaf converse by the sign language; thus their acquaintanceship is limited to those who also use that language. But lip reading has unfolded to them endless vistas.

"If John and James——"

The children were receiving their arithmetic lesson. Said the instructor, "If John and James get on their bicycles at the same place and ride in opposite directions—." A pause. She pointed to a little girl: "What does that mean?" The little girl demonstrated by placing her hands together, then drawing them apart. The teacher continued: "—And John rides five miles in an hour and James eight miles in an hour, how far apart will they be at the end of the hour?"

She watched them for the flicker of the eye which would tell solution. As this came she pointed to each of them in turn; back came the answer, "thirteen" in that strange voice. One of the boys, Frank, shook his head dazedly. It was too much. The teacher called him to the black board, and drew a diagram. Step by step she went over the problem. After seem-

Don't coax your wife into telling that secret. It may be the one you thought you had kept under cover.

Why Suffer from Rheumatism

Do you know that nine out of every 10 cases of rheumatism are simply rheumatism of the muscles or chronic rheumatism, neither of which require any internal treatment? The pain may be relieved by applying Chamberlain's Liniment, which makes sleep and rest possible, and that certainly means a great deal to any one afflicted with rheumatism.—Adv.

the first grade a child's vocabulary is limited to 50 words. The whole process is slow, painfully slow.

Transfer Vibrations.

The method of transfering the vibrations of the teacher's voice to the pupils so as to get correct enunciation was especially interesting. If a child has difficulty with a word the teacher touches his hand or shoulder and repeats it. The child discovers his mistake and enunciates correctly. In dancing the children step to the vibrations of the piano.

Besides the two classes for deaf there are special classes for the backward pupils. Children come to all of the classes from different parts of Spokane. There are special classes

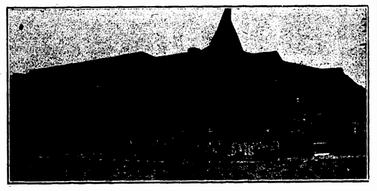
17. But he writes beautifully, according to his instructor.

Whenever a child has gone as far as it seems humanly possible for him to go, he is generally taken from the school by his parents. But through his course he has been taught some kind of hand work, such as rug making, brush work, basketry, sewing, cooking, manual training. Every child has some means for a livelihood. There are many specimens of the pupils' work at the school. The girls dye cloth for rugs, and the boys complete the article. Two of the boys proudly showed me some of the basket work they were doing.

Children Become Useful.

Just before I left Miss Benson

Horace Mann School



The Horace Mann school of Spokane offers courses for deaf and backward children. Deaf children are taught lip-reading which fits them for conversation with other people, which

conducted at the Whitman and Lincoln schools, also. Twice weekly the Horace Mann conducts special classes in defective speech. As has been said Miss Benson is principal of the Horace Mann school. Teachers are Vira Wilson, Edna E. Davis, Dorah Young, Alice Stone, Eleanor Hurley and Maude Morris. Helen Frey is instructor at the Lincoln school and Alce Vernier at the Whitman. The system for training deaf and backward children, used at the Horace Mann school, is also practiced in Seattle, Yakima, Everett and Tacoma.

A Mathematical Genius.

In one of the classes for backward children I found one boy, George, we shall call him, who was a genius in mathematics. Mentally he answered problems with lightning speed and with unfailing accuracy. No matter how difficult the problem propounded he solved it mentally. But he could not master reading or writing. Another little boy can not solve problems. His instructors say that he is flighty. When a problem is given him he will answer at random. To him three plus four means anything—ten, 13, eight,

they would not have if they were instructed by old-fashioned systems. Schools similar to the Spokane institution are also at Tacoma, Seattle, Yakima and Everett.

showed me the manual training room and the three rooms in which the girls practice household arts. She said the girls often invite their parents to meals. Cooking, house cleaning, interior decoration, proper arrangement of furniture, the entertainment of guests and table etiquette are taught the children.

I asked Miss Benson if parents did not sometimes object to taking their children from the other grades to send them to the Horace Mann school. She said that if they did she or some one else went to the parents and explained to them how much better it woud be for every one concerned to send the children to schools specially fitted for them. Parents when shown through the school itself were always satisfied with the change, she said.

And, as a consequence of the work being done by the Horace Mann school and similar institutions in other cities of the state, the deaf and backward children, who otherwise would become a burden upon society, acquire some means of livelihood so that they may become an active and useful asset in life.

IDAHO

By a vote of 1007 to 267, Lewiston citizens recently authorized the issuance of bonds for $380,000 for improvements of the city water plant. By the terms of the charter ,the bonds could not be issued, except by a two-thirds vote in the affirmative.

A filtration plant, comprises a part of the improvement, while a great deal of wooden pipe will be replaced by iron. A new reservoir will be a feature of the work.

Creeks tributary to the St. Joe and St. Maries river are being stocked with 500,000 eastern brook trout this summer, accohrding to E. Thomas of Boise, Idaho, state game warden. Virtually all of the creeks flowing into the two rivers are closed to fishermen at the present time, and no date for the opening of them has been set. With the exceptions of Mica, Marble and Slate creeks, all the streams between Chatcolet and Avery are closed.

At a special election held recently in St. Maries, the $50,000 bond issue to finance paving street intersections, laying cross walks and replacing walks and curbings that will be damaged by the paving in the improvement district, was carried. The paving improvement district will embrace about 32 blocks in the business district and the surfacing of streets abutting on private property will be paid for by assessments on the property.

Steps have been taken to save the historic Mullan tree, in Mullan park, in the Fourth of July Canyon, from the ravages of vandals, and accordingly an ornamental iron fence eight feet high is being built around the tree, according to information given out by C. K. McHarg Jr., supervisor of the Coeur d'Alene and St. Joe National Forests. A similar fence will probably be erected around Mullan monument, at Burns summit, in the canyon.

With ideal weather last week, the rose society show achieved in all details a distinct triumph over previous annual exhibitions in 22 years. Many hundreds of people witnessed the street parade, marked by gorgeous floats, emphasizing the remarkable character of roses grown in the Lewiston-Clarkston valley.

Beginning about the 15th of June the United States general land office will begin the survey of five townships lying mostly within the Clearwater national forest, starting with 41-7 and working south. Two crews totaling 18 men will be used and they will get their supplies from Orofino. Stonebreaker Brothers have the contract to do the packing and will use 20 head of stock. Sumner will have charge of the packing. The work will continue for about four months or until halted by bad weather. It is probable that it cannot be finished this season.

Thomas A. Feeney of Genesee was elected district commander of the second district of the American Legion at the annual convention of the second district held in the Elks' temple in Moscow last week. W. M. Gregg of Whitebird, was named vice-commander and Sergeant Nagele, commander of the Moscow post, was elected adjutant and finance officer. Grangeville was named as the next convention city.

The link of the Lewis and Clark highway being constructed between Orofino and Greer, Idaho, is being rushed to completion. This highway being built through Lolo Pass will open many opportunities for the Lewiston-Clarkston valley.

Dr. C. H. Seagraves of Coeur d' Alene, deputy state veterinarian, is in Latah county, working in connection with County Agent O. S. Fletcher in a cow-testing campaign. It is estimated that there are 4000 cows in the county.

The Rev. H. M. Mobbs, Congregational pastor, preached his farewell sermon last week and left for Spokane, from where he and Mr. Mobbs will go to Seattle, and will sail June 10 for Nome, Alaska, where the Rev. Mr. Mobbs will have charge of Congregational missionary work.

Costly Advice.

Young Man—I should like to ask your advice, sir, as to whether you think your daughter would make me a suitable wife?

Lawyer (ironically)—No. I don't think she would! $10, for my advice, please.

"You have a nerve to suggest my taking you in partnership. What's the idea?"

"Wouldn't you rather have your daughter marry your partner than your clerk?"

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

NOSE BLEED

On account of the rich supply of blood vessels to the mucous membrane of the nose and because it is in the most exposed part of one's anatomy and therefore subject to injury from falls and blows, bleeding from the nose is very common.

This troublesome complaint is more common anoung young adults, but no age is immune from it. Injuries: the habit of picking at the nose; colds in the head; the onset of influenza; measles; typhoid fever; severe sneezing or coughing spells; sudden changes in atmospheric pressure and hot weather are the common causes of nose bleed. Hardening of the arteries; kidney or liver diseases are the common causes in older people.

The usual place where bleeding takes place is from the lower and front part of the nose on the partition between the two nostrils or on the floor of the nose well forward. In this locality is a rich network of vessels that lie close to the surface.

In case of bleeding one should put a plug of cotton inside of the nose and well down toward the floor, then with the finger make pressure on the skin of the side of the nose. Cold water to the neck; keys to the back of the neck and the like are of little use.

In case this does not control the bleeding call a nose and throat specialist, or better yet go to his office where he has good light and proper equipment to examine and treat one. Nearly all nose bleed can be successfully stopped by him in a few minutes by means of cauterizing the bleeding point. This is not in the least painful, as I can speak from experience, having had this done on two occasions on account of this trouble.

In cases of full blooded and fleshy people with high blood pressure loss of blood from the nose is a good thing, as it reduces the blood pressure and lessens the chances of a stroke. One should always find out the underlying cause of nose bleed in order that proper diet and other steps may be taken to safeguard the health.

Taken From the Ancient Laws of Virginia.

Mynisters shall not give themselves to excess in drinking or ryott, spending their time idelle by day or night, playing at dice, cards, or any unlawful game, but at all times convenient they shall heare somewhat of the holy scriptures, or shall occupy themselves with some other honest studies or exercises, always doing the things with some other honest studies or exercises, always doing the things which shall appertain to honestie, and endeavor to profit the church of God, having always in mind that they ought to excell all others in puritie of life, and should be examples to the people to live well and Christianlie.

"Only four girls have responded to the call for help in selling of the poppies on Decoration day," said Miss Carrie Lake, faculty director of the sale. "We are responsible for getting fifty girls and we must get them. All those interested will please report to me."

Those who have been chosen as lieutenants for the sale are Lois Barnhart, Jean Stickney, Geraldine Torrance, Helen Donovan, and Esther Berelson.

Father (to daughter's suitor)—Why, young man, you couldn't even dress her.

Suitor (gamely)—Zatso! Well, it won't take me long to learn.

Brutus—"Hello, Caesar, old top; I see by your toga that you had eggs for breakfast."

Caesar—"Yek, et tu Brute"—Ex.

Harnessing the Small Streams

A. B. Crane, Extension Agricultural Engineer.

A good portion of the states of Washington and Idaho have numerous small streams coming down from the hills and spreading over the valleys. Some of these drop a hundred feet or more in a short distance; others may drop only a few feet while running across a farmer's land.

Many of these streams have volume and head enough so that, if harnessed, they could be made to light the house and out-buildings and to do many small power jobs, such as running the milk separator, washing machine, turning the grind stone, etc. Some of these power plants can be made to run the year around; some may possibly be operated during the winter months, yet may be installed at a profit even for so short a time, and their cost of installation will be well within the reach of the farm owner and their convenience well worth the cost.

Many people do not realize the amount of power that is running to waste in their streams; therefore, one of the first things to consider is the possible estimated horsepower that may be developed. In order to ascertain this, two points must be considered: the amoun of water delivered in a certain point in a second of time, measured in pounds, and the vertical distance which it will fall on to the power wheel, measured in feet. The product of these two points (called foot pounds), divided by 550 will give the theoretic horsepower, from 40% to 75% of which can be utilized as actual horsepower, according to the efficiency of the water wheel and other machinery.

For instance, 55 pounds of water delivered in one second of time and falling 10 feet on to the wheel will deliver one horsepower, from which two-fifths to three-fourths horsepower can be converted into electricity and used; 110 pounds falling 20 feet will produce 4 theoretic 1.6 to 8 actual horsepower, according to the machine's efficiency. To express this in electric units we remember that one horsepower is the equivalent of about 750 watts, which is the measure used in computing the consumption of electricrty about the house and barns.

To give an idea how much 750 watts will do, we might take an example of a common farm house, with say, front room, dining room and kitchen each one using a 50-watt light, three bedrooms each with one 40-watt light, two halls, front and back porch each with one 25-watt light, would use, if all were running at once, 370 watts, or just about one-half of the 750 watts —leaving the balance for barn lighting or running small machinery. For heating a much greater consumption is required, needing a greater horsepower to generate it.

To the great range of water power development of this kind makes it particularly convenient. A large amount may be used direct, or a smaller amount may be stored in batteries and used as needed; thus, a small stream, running the full twenty-four hours, may generate enough power to light the house and barns during the evening when needed.

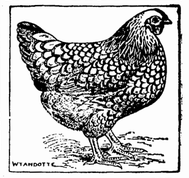
There are three types of wheels that may be used in developing power from a stream; the over-shot or undershot wheel for low heads with a good supply of water, the turbine wheel for medium heads and supply, and the Pelton type for high heads with a small supply. It depends on the head as to which type is best to install. This usually can be determined by an inspection of all the conditions surrounding the installation. It is best to have the plant location inspected by a hydraulic engineer and passed upon before much money is expended, as it might make a considerable difference in the cost if the best and most efficient is selected rather than one not so well adapted to the condition.

POULTRY

The use of the home made Dutch oven type of brooder stove is spreading rapidly in Whatcom county. County Agent H. B. Carroll states they are desirable and give satisfaction. This type of brooder is operated with little expense as it uses old logs or roots and waste products around the farm to keep the fire burning. Four of these ovens were constructed in the Pleasant valley community with an average cost of less than $40. These brooders are made of brick alone or brick and concrete, or concrete alone. It takes about two or three cords of wood to brood 100 chicks during the season.

Commercial poultry raising will be taught this summer at the State College of Washington at the summer session, June 18 to July 27, by L. W. Cassell, head of the college poultry plant.

Most any hen will cackle her glee when she has deposited a brand new egg in her nest, but it is an exceptional biddy who will flop her wings and crow like a rooster to celebrate the laying of an egg. Such an exceptional biddy may be found in the flock of Mrs. Jesse Grant, near



Pullman. The hen was hatched in March of last year and commenced laying last November. She will flop her wings and crow like a rooster, the while strutting around as though she were king of the flock. Otherwise she is a perfectly normal hen and lays her egg most every day.

Some striking results have been obtained in the raising of turkeys by Mrs. L. D. Baluss of near Connell. To date 506 Mammoth Bronze turkeys have been hatched with only a loss of four, and 200 more eggs are hatching at the present time. Rhode Island Red hens are used for mothers. The turks are fed four times a day at regular intervals, the last feeding being at 4:30 p. m.

The housing of the flock is inexpensive. The mothers and the small turks are segregated until they the danger of being run over, during the feeding time by the larger birds. They are then turned out and left to run loose in a rye fill near by where they pick bugs and insects. The young turks are thrifty and full of vim and are the only apparent hazard to them are chicken hawks.

Mrs. Baluss has experimented and studied the raising of turkeys on the coast. She believes that Franklin county is an ideal location for such an occupation. The original flock consisted of 30 hens and four gobblers. The hens were purchased in Walla Walla and the gobblers on the coast. Her aim is to raise 1000 turkeys this season.

It has been estimated that the average dairy cow in this country produces yearly about 4000 pounds of milik containing about 160 pounds of butter fat, Selection, feeding and breeding, says the United States department of agriculture, could double this low average. Doubling the present average production would make it possible to furnish the present supply of dairy products with fewer cows and at a much less cost.

HOW TO CLEAN SILVER

When silver needs polishing, according to Miss Martha Dressler, of the University of Washington home economics department, the cleaning may be done easiest by the electrolytic method, in which the tarnish reacts chemically and disappears.

Select a granite utensil large enough to immerse most of the silver to be cleaned. Miss Dressler says. Heat water to boiling, add salt and baking or washing soda, one teaspoonful of salt and one of soda to each quart of water, and place a flat aluminum pan in the bottom. The pan may be a 25-cent cake pan. Then add the silver. It is necessary to see that only piece of silver touches the pan.

Leave the silver in the boiling solution for five minutes then remove. Wash the silver in warm, soapy water, dry and polish with a silver polishing cloth to obtain a fine sheen. Unless silver is thus polished it will look "tinny", as some housekeepers have expressed it.

Large pieces, such as candle sticks and vases, can be cleaned in sections, if the container is not large enough to hold them all at once. Immerse a vase to one-half its depth. When the immersed part is cleaned, reverse and clean the other half.

This is a safe method to use on all plain or brushed silver, either solid or plated. It will remove the oxidized finish from silver thus grayed, so do not use it when you want to retain this finish. German silver and metal alloys are ruined by it because they are not really silver or silver plate.

The aluminum plate must be kept bright to be effective. When this becomes covered with the black deposit of aluminum sulphide clean with steel wool, plus vinegar plus whiting, mixed to form a paste. Wash, rinse and dry.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Church school at 9:45.

Morning worship at 11. Special music by the Young Peoples choir.

All church meetings will be postponed for Chautauqua, beginning Sunday afternoon and continuing until Friday.

Childrens' Day will be observed this year on the first Sunday in July.

At the meeting of the workers of the Church school a committee was appointed to visit the Vacation Bible schools at Moscow and Clarkston and make plans looking toward conducting one in Genesee July 5 to 15.

LET'S GO"

"There isn't any business," wailed the sad and gloomy man;
"I haven't made a dollar since the armistice began."
But I couldn't help reflecting, as I heard his story through,
That the hopeful, cheerful hustler seems to have a lot to do.
I've been in business places where the air was thick with gloom,
And the men were sad and solemn like the mourners at a tomb,
And there wasn't any business or an order coming in—
And what's more, there never will be till those fellows start to grin.
"There isn't any business"—aren't you weary of the cry?
Men have caught the gloomy habit and they sit around and sigh;
But the hustler, I have noticed, who has quit his easy chair,
And is confidently working, seems eo gather in his share.
It is time to get to business, it is time to hustle out,
With a man's faith in the future—much too long we've scattered doubt,
Much too long we've sobbed and whimpered, much too long we've talked of woe,
Now it's time for optimism and the hopeful word "LET'S GO!"

American Legion Dance

The American Legion will give a dance in their hall on Friday evening, June 8. Music will be furnished by "Harry's Jazzopaters."

Piano Lessons

I am prepared to give music lessons in the English or German languages. Also instruction in German, French, Latin or Italian languages. Mrs. Wm. Hordemann. 49-tf

LOWELL PATTON TO ENTERTAIN CHAUTAUQUA FANS

Gifted Pianist to Appear Here on Opening Day.

Lowell Patton, Manager and Director of The Patton Brothers, is a well-known pianist. With the famous Flying Squadron a few years ago, he played in every principal city in the

United States. As a "gob" during the war, he was chosen song leader at Bremerton Navy Yard, where his work was phenomenally successful. He has appeared as pianist with many organizations, and as accompanist for such well-known Chautauqua favorites as Frances Soule and Frances Ingram. A part of this last winter was spent in London and Paris, for additional study and new material for his trio. Two programs will be given by The Patton Brothers on the opening day.

McCORMICK
- and -
DEERING
Harvesting and Haying Machinery

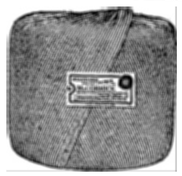
YOU farmers with years of experience in grain growing know that the binder plays an important part in making small grain crops profitable. To insure the safety of the crop, your binder must work efficiently and without delays in the short harvesting season.

McCormick and Deering Binders

Thousands of farmers have depended upon McCormick and Deering binders, and the increasing popularity of these machines shows that their faith has been well placed. In lightness of draft, ease of operation, and accuracy in getting all the grain under varying conditions, these binders have made good under the severe tests of time.

Come in and see them and talk with us about your harvesting problems.

We have a large stock of repairs for all makes of harvesting machinery, including John Deere. Order your repairs early.



McCormick Binder Twine—Sisal, Standard.

We have a large stock of the Pure Oil company's PURE PENNSYLVANIA OIL. A grade for every auto, truck or tractor.

PERSONAL MENTION

F. J. Niemann returned Tuesday from a business visit to Lewiston.

Mrs. A. Kern left Monday morning for Lewiston for a visit with relatives.

J. M. Swenson has been a business visitor in town this week from Lewiston.

Zeneth VanBuskirk arrived Saturday from Pullman for a short stay here.

Dan Healy was a Friday morning passenger for Pullman for a short stay.

Mrs. A. E. Elver returned Saturday from a few days' visit with friends in Spokane.

Mr. and Mrs. Wm. Hordemann went to Uniontown Tuesday morning for a short visit.

Ronald Geltz returned Tuesday from Lewiston where he had been visiting relatives.

Miss Baalim returned to Pullman Wednesday after a visit with Mrs. John Friederichs.

Msr. Becker returned to her home at New Plymouth after a visit with Mrs. Joe Gunther.

Miss Gladys Stovall went to Lewiston Sunday where she has accepted a position in a store.

Mrs. W. M. Herman spent Monday with her parents, Mr. and Mrs. John Dunbar, at Moscow.

Miss Johanna Dwyer returned home Wednesday after a few days' visit with friends at Moscow.

Mr. and Mrs. W. M. Herman left Wednesday morning by auto for Walla Walla to attend the pageant.

Mrs. Chas. P. Whalen and little daughters left Monday evening for a visit with relatives at Lewiston.

Mrs. M. Lawen left Tuesday morning for Spokane for a visit with her daughter, Mrs. Joe Busch, and family.

Arthur Hillman arrived Saturday from Potlatch where he has been teaching and will spend the summer here.

Mrs. R. C. Smith returned to her home at Palouse Tuesday after a visit with her son, Chas. W. Smith, and family.

W. A. Sheridan arrived Wednesday from Moscow for a month's stay with his daughter, Mrs. D. E. Thomas, and family.

Miss Viola Creswell and Walter Casebolt spent Sunday at the Casebolt home, having come over from the U. of I.

Mr. and Mrs. F. C. Shork and Mrs. Leon Follett left Wednesday morning for Walla Walla to be in attendance at the pageant.

Mrs. Dale Lamphier returned to her home in Clarkston Saturday after a visit here with her parents, Mr. and Mrs. Joe Hasfurther.

Mrs. George Gannon and little son, Don, arrived Tuesday from Pullman for a visit with her parents, Mr. and Mrs. Fred K. Bressler.

Mrs. Fick returned to her home at Tacoma Friday after a short visit at the home of her sister, Mrs. Dave Spurbeck, and husband.

Mrs. John Lawson was a Pullman passenger Friday for a few days' visit with her daughter, Mrs. A. A. Butterfield, returning Sunday.

Mrs. J. N. Hasfurther and daughter, Bernadine, left Monday for a visit with friends and relatives at Lewiston and Clarkston.

Dorothy Evans was brought home from Lewiston Monday after having been at St. Joseph's hospital for the past two weeks or more.

Mr. and Mrs. Fred Shirrod, accompanied by Mrs. J. S. Larrabee, left Tuesday morning for Walla Walla where they attended the pageant.

Mr. and Mrs. L. E. Hovland returned to their home at Spokane Sunday after a visit with Mrs. Hovelands' parents, Mr. and Mrs. Ben Sather.

A. N. Coverdale returned to Sebastopol, California, the first of the week after having been here to look after business matters and a visit with relatives.

Mr. and Mrs. Geo. Mochel left Monday for Walla Walla to be in atetndance at the big pageant and for a visit with their son, Charles Mochel, and family.

Mr. and Mrs. Grant Clark and daughter, Esther, and Mr. and Mrs. John G. Meyer left Wednesday morning for Walla Walla to attend the pageant.

Mrs. Karl Kosslan arrived Sunday evening from Spokane for a visit with Mrs. Jack Barnes. Mr. and Mrs. Barnes met her at Moscow and brought her over by automobile.

Mrs. D. E. Thomas was a Tuesday morning passenger for Lewiston to spend the day with her daughter, Miss Grace, who is in St. Joseph's hospital recovering from a surgical operation.

Miss Nora Hanson left Saturday from Spokane for a vacation trip to Milwaukee, Wisconsin, and Neenah and Minneapolis, Minnesota, and Sioux Falls, S. D. She was accompanied by her aunt, Mrs. Lavage, and daughter, Bessie, of Spokane.

Better Be Careful

Drink water and get typhoid. Drink milk and get tuberculosis. Drink whiskey and get jim-jams. Eat soup and get Bright's disease. Eat meat and encourage apoplexy. Eat oysters and encourage toxema. Eat vegetables and weaken the system. Eat dessert and take to the paresis. Smoke cigarettes and die early. Smoke cigars and get catarrah. Drink coffee and obtain nervous prostration. Drink beer and have dyspepsia. Drink wine and have the gout. In order eo be entirely healthy one must eat nothing, drink nothing, and even before breathing, one should see that the air is thoroughly sterilized.—Ex.

Country editors no longer take apples in payment of subscriptions, once quartered, an apple soon decays.

Is Now Wearing Crutches

H. H. Manderfeld is now going about on four legs instead of the customary two—but two of them are of wood. On Tuesday morning of last week he went out in the barn lot to look after the horses, letting three of them out of the lot and holding two of them for later use. Just as he got the gate closed his dog came through the fence and scared the ones he had held in the lot, and as they were already running and were quite close to him, it was impossible for them to turn and they knocked him down and ran over him. Just what happened, or how, Mr. Manderfeld is unable to tell—only that he is wearing crutches—his right foot and ankle being badly bruised and swollen. He will be using the extra legs for several days yet.

To attract instant attention these days, one should ride a horse, or bowl along in a buggy.

MY LADY'S MONEY

An Espisode in the Life of a Young Girl

—By Wilkie Collins

INSTALLMENT NO. 4.

Felix, absently playing with his watch chain, started as if his quiet had suddenly awakened him. While Lady Lydiard had been speaking, his vivacity had subsided little by little, and had left him looking so serious and so old that his most intimate friend would hardly have known him again. Roused by the sudden question that had been put to him, he seemed to be casting about in his mind in search of the first excuse for his silence that might turn up. "I was wondering," he began, "why I miss something when I look round this beautiful room; something familiar, you know, that I fully expected to find here."

"Tommie?" suggested Lady Lydiard, still watching her nephew as maliciously as ever.

"That's it!" cried Felix, seizing his excuse, and rallyin ghis spirits. "Why don't I hear Tommie snarling behind me? Why don't I feel Tommie's teeth in my trousers?"

The smile vanished from Lady Lydiard's face; the tone taken by her nephew in speaking of her dog was disrespectful in the extreme. She showed him plainly that she disapproved of it. Felix went on, nevertheless, imperturbable to reproof or the silent sort. "Dear little Tommie! So delightfully fat; and such an infernal temper! I don't know whether I hate him or love him. Where is he?"

"Ill in bed," answered her ladyship, with a gravity which startled even Felix himself. "I wish to speak to you about Tommie. You know everybody. Do you know of a good dog doctor? The person I have employed so far doesn't at all satisfy me."

"Professional person?" inquired Felix.

"Yes."

"All humbugs, my dear aunt. The worse the dog gets the bigger the bill grows, don't you see? I have got the man for you—a gentleman. Knows more about horses and dogs than all the veterinary surgeons put together. We met in the boat yesterday crossing the channel. You know him by name, of course. Lord Rotherfield's youngest son, Alfred Hardyman."

"The owner of the stud farm? The man who has bred the famous race horse?" cried Lady Lydiard. "My dear Felix, how can I prosume to trouble such a great personage about my dog?"

Felix burst into his genial laugh. "Never was modesty more woefully out of place," he rejoined. "Hardyman is dying to be presented to your ladyship. He had heard, like everybody, of the magnificent decorations of this house, and he is longing to see them. His chambers are close by, in Pall Mall. If he is at home we will have him her in five minutes. Perhaps I had better see the dog first?"

Lady Lydiard shook her head. "Isabel says he had better not be disturbed," she answered. "Isabel understands him better than anybody."

Felix lifted his lively eyebrows with a mixed expression of curiosity and surprise. "Who is Isabel?"

Lady Lydiard was vexed with herself for carelessly mentioning Isabel's name in her nephew's presence. Felix was not the sort of person whom she was desirous of admitting to her confidence in domestic matters. "Isabel is an addition to my household since you were here last," she answered, shortly.

"Young and pretty?" inquired Felix. "Ah! You look serious, and you don't answer me. Young and pretty evidently. Which may I see first, the addition to your household or the addition to your picture gallery? You look at the picture gallery—I am answered again." He rose to approach the archway, and stopped at his first step forward. "A sweet girl is a dreadful responsibility, aunt," he resumed, with an ironical assumption of gravity. "Do you know, I shouldn't be surprised if Isabel, in the long run, cost you more than Hobbema. Who is this at the door?"

The person at the door was Robert Moody, returned from the bank. Mr. Felix Sweetsir, being near-sighted, was obliged to fit his eyeglass in position before he could recognize the prime minister of Lady Lydiard's household.

"Ha! Our worthy Moody. How well he wears! Not a gray hair on his head—and look at mine! What do you use, Moody? If he had my open disposition he would tell. As it is, he looks unutterable things, and holds his tongue. Ah! If I could only have held my tongue—when I was in the diplomatic service, you know—what a position I might have occupied by this time! Don't let me interupt you, Moody, if you have anything to say to Lady Lydiard."

Having acknowledged Mr. Sweetsir's lively greeting by a formal bow, and a grave look of wonder which respectfully repelled that vivacious gentleman's flow of humor, Moody turned toward his mistress.

"Have you got the bank note?" asked her ladyship. Moody laid the bank note on the table.

"Am I in the way?" inquired Felix.

"No," said his aunt. "I have a letter to write; it won't occupy me for more than a few minutes. You can stay here, or go and look at the Hobbema, which you please."

Felix made a second sauntering attempt to reach the picture gallery. Arrived within a few steps of the entrance, he stopped again, attracted by an open cabinet of Italian workmanship filled with rare old china. Being nothing if not a cultivated amateur, Mr. Sweetsir paused to pay his passing tribute of admiration before the contents of the cabinet. "Charming!" he said to himself, with his head twisted appreciatively a little on one side. Lady Lydiard and Moody left him in undisturbed enjoyment of the china, and went on with the business of the note.

"Ought we to take the number of the note, in case of accident?" asked her ladyship.

Moody produced a slip of paper from his waistcoat pocket. "I took the number, my lady, at the bank."

"Very well. You keep it. While I am writing my letter, suppose you listen to the address on the envelope. What is the clergyman's name?"

Moody mentioned the name and directed the envelope. Felix, happening to look around at Lady Lydiard and the steward, while they were both engaged in writing, returned suddenly to the table as if he had been struck by a new idea.

"Is there a third pen?" he asked. "Why shouldn't I write a line at once to Hardyman, aunt? The sooner you have his opinion about Tommie, the better—don't you think so?"

Lady Lydiard pointed to the pen-tray, with a smile. To show consideration for her nephew was to sense irresistibly on the high-road to her favor. Felix set to work on his letter, in a large, scrambling handwriting, with plenty of ink and a noisy pen. "I declare we are like clerks in an office," he remarked, in his cherry way. "All with our noses to the paper, writing as if we lived by it! Here, Moody, let one of the servants take this at once to Mr. Hardyman's."

The messenger was dispatched. Robert returned, and waited near his mistress, with the directed envelope in his hand. Felix sauntered back slowly toward the picture gallery for the third time. In a moment more Lady Lydiard finished her letter, and folded up the bank note in it. She had just taken the directed envelope from Moody, and had just placed the letter inside it, when a scream from the inner room, in which Isabel was nursing the sick dog, startled everybody. "My lady! My lady!" cried the girl, distractedly, "Tommie is in a fit! Tommy is dying!"

Lady Lydiard dropped the unclosed envelope on the table, and ran—yes, ran—into the room where the dog was, ran—into the inner room. The two men left together, looked at each other.

"Moody," said Felix, in his lazy way, "do you think if you or I were in a fit that her ladyship would run? Ah! These are the things that shake one's faith in human nature. I feel infernally seedy. That cursed channel passage—I tremble in my inmost stomach when I think of it. Get me something, Moody."

"What shall I send you, sir?" Moody asked, coldly.

"Some dry Curacoa and a biscuit. And let it be brought to me in the picture gallery. Damn the dog! I'll go and look at Hobbema."

This time he succeeded in reaching the archway, and disappeared behind the curtains of the picture gallery.

CHAPTER IV.

Left alone in the drawing room, Moody looked at the unfastened envelope on the table.

Considering the value of the inclosure, might he feel justified in writing the gum and securing the envelope for safety's sake. After thinking it over ,Moody decided that he was not justified in meddling with the letter. On reflection, her ladyship might have changes to make in it, or might have a postscript to add to what she had already written. Apart, too, from these considerations, was it reasonable to act as if Lady Lydiard's house was a hotel, perpetually open to the intrusion of strangers? Objects worth twice five hundred pounds in the aggregate were scattered about on the tables and in the unlocked cabinets all round him. Moody withdrew, without further hesitation, to order the light restoratives prescribed for himself by Mr. Sweetsir. The unclosed letter reposed in its place on the table.

The footman who took the Curacoa into the picture gallery found Felix reconstructed on a sofa—to all appearance so completely absorbed in the Hobbema that he was quite unable to look at anything else.

He took the Curacoa mechanically, drained the glass at a draught, and held it out to be filled for the second time. "Don't interrupt me," he said, peevishly, catching the servant in the act of staring at him. "Put down the bottle and go!" Forbidden to look at Mr. Sweetsir, the man's eyes, as he left the gallery, turned wonderingly toward the famous landscape. And what did he see? He saw one towering big cloud in the sky that threatened rain, two withered, mahogany colored trees sorely in want of rain, a muddy road greatly the worse for rain, and a vagabond boy running home who was afraid of the rain. That was the picture to the footman's eye. He took a gloomy view of the state of Mr. Sweetsir's brain on his return to the servants' hall. "A slate loose, poor devil!" That was the footman's report of the brilliant Felix.

(To Be Continued.)

Where 76 Perished in School Fire

First and exclusive picture of the scene at Cleveland, South Carolina, where 76 perished when a kerosene lamp exploded at a school house amateur play. Whole families lost their lives and every family in the community suffered loss of life. Outside wooden stairs collapsed when the rush for safety was made.

BANFF-WINDERMERE HIGHWAY FINISHED

Connecting Link in Long Western Tour to Be Opened on June 30.

When the ribbons are cut on the Banff-Windermere highway, officially opening the road on June 30, an important addition to the fine highways of the Pacific Northwest will be made. This road will connect Windermere, which lies north of Spokane in British Columbia with Banff, across the Canadian Rockies.

The new road completes the Banff-California Beeline highway and is the final link in the Grand Circle tour through Canada and the Western states. Both of these routes pass through Spokane and are of importance to all the Inland Empire.

The Grand Circle tour extends from Lake Louise, its most northern point, south through the Banff park and over the new Windermere highway through Windermere to Kingsgate on the International boundary. The route passes through Bonners Ferry to Spokane.

National Parks Included.

From Spokane the road leads almost directly south to Sacramento, giving rise to the name "Bee-line highway." From Sacramento the route extends farther south to Los Angeles by way of Oakland and San Francisco. From Los Angeles the road turns eastward to the Grand Canyon of the Colorado, thence north to Salt Lake City and Ogden.

The Yellowstone Park is included in the next lap to Helena. Great Falls and the Glacier National Park are on the route to the border. From the Canadian line the road runs north to Calgary and then westward to Banff, completing the circle of almost 3000 miles.

A shorter tour of interest to many Spokane Valley people will be made possible by the completion of the Banff-Windermere highway. It forms a quick loop to Spokane, Banff, and Helena at the angles. It passes through some of the most beautiful scenery to be found on the North American continent, and is an ideal trip for the summer vacation.

LIVESTOCK

Practically all the sheep are on the Chelan national forest ranges now, Glenn Mitchell, acting superVisor of the forest, said. The lambs are all in good condition and most of the ewes came through the winter in good shape. This is due to the fact that the ranges in the low places have been good this spring.

The lambing was unusually heavy, running from 100 to as high as 1440 per cent. Few of the lambs have been sold on contract because the wool brought a good price this spring and the sheep men felt that they would rather wait, taking a chance on the market this fall.

Ninety per cent of the wool in the state has been sold, all at prices hat were satisfactory to the wool growers. The ranges in the forest are all in unusually good condition this year, and it is expected that the sheep men will all have a highly satisfactory year.

To those who are going to build and propose putting concrete floors in horse stables I wish to advise roughening the floor in such a way that slipping will be less likely to occur. Deeply rib or checks the concrete before it dries ,so that "footing" will be given to the horses.

Another good plan is to make the floor roughly or to use plenty of small pebbles or coarse crushed material in the surface layer as it is far less slippery than smooth cement.

In Scotland, heavy Clydesdale work horses stand on cobble stones set in mortar or cement and such a floor has always been most popular. Of course, it has to be well bedded at night, but that is true of any kind of stable floor for animals. Cows also tend to slip on wet, smooth cement. A roughened surface is therefore best for these animals.

One of the commonest and least suspected ill-effects of a concrete stable floor is that it chills the udders of dairy cows when used in their stalls. Subacute and chronic mammitis or garget is often caused by this chilling. In one great dairy stable occupied by five cows making certified milk, under veterinary inspection for a municipal medical board, such forms of mammitis were prevalent until we discovered the cause to be chilling and slight bruising from inadequately bedded concrete stall floors. The trouble subsided when the floor of each stall had been covered with pitch pine planking.

Cork brick floors would be preferable, as board are slippery and difficult to keep in a sanitary condition. Failure of the congested or "caked" udders of new calved heifers and cows to soften quickly and yield a maximum amount of milk may also be attributable, in many cases, to uncovered concrete stall floors.

A study of yearly butter fat and income records of 18,014 cow-testing association cows for the period 1919 to 1920 showed that the cows giving 100 pounds of butter fat a year produced an average income for the farmer above feed cost of about $10; at 200 pounds of butter fat a year the income above feed cost averaged about $42; at 300 pounds a year the income averaged about $72, and at 400 pounds of butter fat the average income was about $106 a year per cow. While the cows in the last class averaged four times as much in production as those in the first class, they gave an average income over cost of feed that was more than 10 times as great. A tabulation of the records of dairy cows from those districts where the product was sold as milk showed similar results. In all cases the high-producing groups were the profitable producers from the standpoint of income over cost of feed.

WASHINGTON NEWS

Mary A. Lister, widow of the late Governor Lister of this state, died at Tacoma last week after an illness of nearly two years. She was active in politics and was a delegate to democration conventions in 1920.

Rains on the west side of the Cascades have been a beneficial effect. They insure good crops, plenty of fresh forage and also have put out several small forest fires. At this time last year there was a haze of smoke over all western Washington.

The main section of the Pacific battle ship fleet will arrive in Seattle harbor, July 14, and later in the month, probably July 25, will be reviewed by President Harding. The fleet will bring 20,000 officers and men, for whom plans for entertainment ore being made.

During the past two months the state highway department has awarded contracts for $2,664,000 worth of new highway construction. This brings the total value of state work under way up to $33,500,000, the balance being represented by contracts awarded last year.

It took W. H. Van Duyn an hour to land a trout he hooked while fishing in the Methow. The big boy, a steelhead, weighed 11½ pounds and was 33 inches long. Mr. Van Duyn was fishing with light tackle, so had to play with the fish until it was worn out before he could land it.

The dates for the Ritzville horse show this year have been set at June 155-16. The committee that makes up the program states that the premium list and prizes will be big enough to attract more attention of horsemen than ever and they expect to have a bigger showing of horses and mules than last year.

State Engineer G. G. Harvey has announced that all preparations had been made to let the contract for the last 12-mile stretch stretch of the North Central highway west of Odessa on August 23. The letting of the contract is being held up until that time to give tourists a chance to use the road this summer. As soon as the job is let work is expected to begin and will continue all winter, the idea being to finish it up during the winter so as to have it ready for tourist traffic next spring.

Hundreds of motorists, many of whom are living in California, will take part, July 1, in the celebration opening the Banff-Windermere highway, through the heart of the Canadian Rockies, according to J. P. Spalding, of Fernie, B. C., commissioner in charge of the Southeastern British Columbia and Southern Alberta Tourist association. A caravan of cars is now being organized by Frank V. Guilbert, secretary of the Inland Automobile association, to make the trip to Canada for the celebration of the opening of the $1,000,000 highway.

The contractors are making good progress on the 36 miles of paving between alama and Toledo, the last stretch of unpaved highway between Oregon and British Columbia on the Pacific highway. There is a 36-mile detour but it is in excellent shape and cars are making it easily in one hour and 40 minutes and average 20 miles or more over the entire distance of this detour save for five miles, where there are some grades, which have been put in good shappe in the last two weeks. The average driving time from Portland to Seattle eight or nine hours.

Easterners have bought much stock in the Puget Sound, Spokane & International railway, according to the state department of public works, and they are now writing to learn why they don't get any dividends. The line was "promoted" some years ago, and the happy stockholders appear to have assumed that it was built between Spokane and Bellingham, through Slate Pass and the Okanogan country. Secretary Calderhead of the state board is informing inquirers corporation taxes for seven years that while the company has paid its it has never laid a rail, and so far as he knows hasn't even a right-of way.

France is offering lottery tickets free to parents of seven children or more. If a lucky couple happens to win a big prize, however, they must get two more children before they win another free lottery ticket.

Porter: "Dah next stop am yo' station, boss. Does yo' all wish to be brushed off?"

Passenger: "No, thank you. Just call out the name. I'll get off in the regular manner."

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

The war department announces an attempt of the army air service to make a transcontinental flight between dawn and sunset, in June. It will start at New York, end at San Francisco.

One of the oldest applicants for an operator's license, in this country, is reported from Bath, Conn. Benjamin F. Range, 96 years old, bought an automobile, and successfully passed the examinaiton to drive it.

Canada plans to spend $440,000,000 for good roads in 1923 This is the largest appropriation ever made by Canada for this purpose, and yet it is only about two or three times as much as our largest states spend annually.

Four thousand persons now are reported to have perished in the earthquake which devastated the region around Turbati-Haidari, in eastern Persia. Advices indicate six villages were wiped out. The shocks are said to be still continuing.

Attaining a height of three miles and breaking the record for women fliers, Mlle. Andree Peyre, French aviatrix, astonished Los Angeles airenthusiasts Sunday. She used a special 70-horsepower machine and was in the air an hour and 10 minutes.

Turkey gets a slice of her former territory back under a decision of the diplomats devising a Near East peace pact. Despite Jugoslav protests the border near Kara-agatch was advanced, giving Turkey several towns previously allotted to Jugoslavia.

At the Olympic games at Paris, in 1924, the contests are not to be confiend to ordinary athletics alone. There are to be world championships also in painting, sculpture, music, art, literature and architecture. Three medals are to be awarded in each division.

The 93-year-old kid postmaster at Caledonia, Ala., who claimed to be the oldest postmaster in the country, will have to revise his figures. David J. Tavenner produces the family Bible to show that he is 9 years of age and has served as postmaster at Philmont, Virginia, since 1893. He thought some of resigning on account of advanced years, but in response to public demand has consented to stay on the job another decade or so.

Quite a boom in closing titles to homesteaded lands is now on in Alaska, titles to nearly 11,000 acres having been issued the first of the months of this year, which is more than for the entire year 1922, or for several years past, for that matter For the past 15 years there have been issued patents to 784 persons covering 161,000 acres of land or about one-tenth of the total acreage surveyed. A total of 743 persons and corporations have been granted permits to drill for oil in Alaska.

THE LARGEST OUTDOOR STAGE IN AMERICA

Pageant Field at Walla Walla, to be the scene of the greatest Pioneer Pageant on June 6 and 7, is the largest field that has ever been utilized in America for Pageantry.

The constructed scenery extends over a breadth exceeding three city blocks; the entire sweep of action is within an oval nearly 1500 feet long, with a width of over 400 feet. The scenery towers more than 50 feet in the air at the high points and permits of the passage of pack trains and horses up and down the mountain trails.

A stream of water tumbles down the mountain side to a level below where it forms the river on which the voyageurs and trappers embark in their canoes.

Nature has been lavished in her contribution, furnishing a background of magnificent vista, mountains, fields, greensword and forest.

Stop Currant Worms Now.

Currants and gooseberries have suffered severely from the currant worm. These worms can in a few days strip the bushes of leaves. Now is the time to put a stop to the ravages of this insect. The most effective treatment is spraying with lead arsenate at the rate of 2 or 3 tablespoonfuls to a gallon of water.

Wash all uncooked fruit before using.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

Every household has its cooking problems. To have a knowledge of the "whys" of the processes of food preparation means to be forearmed, and in putting this knowledge into practice the housewife may avoid much embarrassment as well as waste to the food budget.

When the thoughtful housewife takes from the oven a fallen cake, or bread with a heavy streak through it, or when her jelly fails to "jell," she at once wants to know why these things have occurred.

For that reason we are going to discuss some of the conditions which cause the failures.

First—CAKE:

Why does a cake baker, in rising, become high in the middle, crack open and sometimes form a "peak" or "hump" on the top?

Usually it is caused by too hot an oven at the beginning of the baking. The heat of the oven should be moderate at first so that there may be time for the formation of the bubbles of gas which are to make it light. If the oven is too hot a crust is formed around the cake before the heat has had time to penetrate to the center of the loaf. So when the heat does reach the center the dough has to expand and will burst out at the weakest place, which is on top. This kind of cake will not be so light as one baked properly. A cake may also crack from one other cause, and that is when the batter is too stiff.

What causes a cake to fall?

There are several reasons. First, too thin a dough. Second, oven not hot enough. This can be explained by the fact that the heat is not great enough to "set" the dough while the gas bubbles are forming. Third, too much fat; fourth, too much sugar.

Why beat the yolks and whites of cake separately for cake making?

Because they can be beaten much lighter separately. More air can therefore be beaten into the cake, and since air is a leavening agent, the cake will be lighter.

Why bake a sponge cake in an ungreased pan?

A sponge cake properly made, without shortening, and baked in an ungreased pan will adhere to it. This is exactly what we want to happen. When the cake is baked and turned upside down, the cell walls will be elongated while the cake hangs from the bottom of the pan and is drying out and cooling. When cool loosen around the edge and gradually pull from the pan.

Second—BREAD.

Why does bread sometimes have a heavy streak through it?

This may be due to the dough getting too hot in the rising process before being placed in the pans, and then this "half baked" dough being kneaded into the whole mass. Again it might be due to the dough settling in the pan, after having risen, and the oven not being hot enough when the bread is placed in it to be baked.

Why bake bread in small loaves?

Bread is baked in small loaves so that it may be baked through to the very center of the loaf. Round loaves never are properly baked, either the center of the loaf will not be thoroughly cooked, or the outside of the loaf will be over-done.

Why is a large proportion of crust in a loaf of bread desirable?

On account of the higher degree of heat to which the crust of the loaf is subjected, the starch is changed in composition into a substance which is more easily digested. For this reason do not bake several loaves in the same pan.

Why should the housewife use milk instead of water in the making of bread?

Milk makes the bread more nutritious and increases its food value about 10 per cent if it is made with all milk. Water is cheaper than milk, but the bread keeps moist longer when it is made with milk, and the flavor is better.

Third—JELLY MAKING.

Another common question asked by the housewife is, "Why does my jelly not jell?"

It may be due to more than one reason. First, not enough pectin in the fruit juice. This pectin is a jelly-like substance which is necessary in order to make jelly. The housewife may test any fruit juice for this substance by taking some of the warm juice (about 1 teaspoonful) in a glass and adding an equal volum of alcohol, mixing thoroughly, and cooling.

If pectin is present a gelatinous mass will appear in the liquid which may be gathered up on a spoon. If it is not present there is no use in wasting sugar by trying to make jelly of such a fruit juice. Second, if the fruit juice is lacking in acid, do not attempt to make a jelly from it. Third, if the fruit juice and sugar is cooked too long, the acid in the fruit juice will change part of the granulated sugar into a less sweet form of sugar similar to glucose, and the mixture will become stringly instead of jellying.

If the Home Economics department of the State College of Washington can assist you in solving other problems that you meet in your food preparation, let us hear from you.

AMERICAN LEGION PLANS CELEBRATION

Acrobatic feats on a wire 100 feet above ground a military display from Camp Lewis, a concert by the International Salvation Army band and a $10,000 pyrotechnic display, will be features of the American Legion program July 4 in the University of Washington Stadium. The program will include about fifteen separate events.

Other members will be: an exhibition drill by the Seattle Fire department, a game of auto polo, competitive drills by teams from fraternal organizations, circus acts and athletic exhibitions by local gymnasium teams.

A grand parade around the Stadium, led by Miss Liberty, will start the program. An effort will be made to have President Harding attend the performance and speak if he is in the city at that time. If the President is not here the speaker will be one of the members of the cabinet or a man of national prominence.

Events from the recent horse and motor show at Camp Lewis, including a demonstration by army tanks, mounted drill and field military drill, will be given.

TO LAY THE DUST

If you happen to live on an unpaved auto road you know how unpleasant it is to have great clouds of dust roll straight for your home with the passing of every car. Oiling the road is very effective but too expensive for the sum of moderate means to consider.

If the dust bothers you, try spreading a layer of straw over the road. I'm admit that it looks rather queer, but it's wonderfully effective.

Japan's textile exports in 1921 were valued at more than $200,000,000.

Fads and Fashions of Today

By DOROTHY PHILLIPS

For another year at least milady may dress her tresses as fancy dictates.

This was the decision of the master hairdressers of America at the big convention held at the Waldorf-Astoria in New York City recently.

The Tut-Ankh-Amen bob was tentatively adopted as the year's national hairdress, but this was done more in a spirit of levity and derision than anything else. Hardly had the master of ceremonies solemnly christened this eccentric new style before there was a hubbub of protest. Only a few types of feminine features harmonize with this ancient coiffeur which was worn eons ago by a famous Egyptian pharoah. It is all right for the very young girl with slender oval face, but for the woman over 20, or at least the woman who looks over 20 (which is quite a different thing these days), it is impossible.

TRILBY BOB

This new bob has the hair chopped off just below the upper tip of the ear and has it brought forward cowlick fashion well over the cheeks. The bang is cut half way down the forehead.

While bobbed heads have been officially buried by the dictators of fashion in Paris, American women are slow to abandon this popular mode. Still, the hair dressers do report that only fifty per cent as many women are having their hair bobbed as were accounted for last year.

That bangs will be quite the rage is quite evident by many of the social leaders in Paris are wearing them, and in England Lady Bowes-Lyon, the finance of the Duke of York, has introduced the fashion. Therefore, it will be a bang summer over there. Here the bang is being ushered in under the title of "Trilby Bang!" This is quite different from the Tutankhamen ornament. It comes right down to the eyebrows.

For the woman who has a low forehead the bang is very becoming, as it tends to lengthen the face; on the other hand, the woman who has a high forehead and long thin face, should avoid this mode as she would an unfluttering color. It accenuates her long facial lines.

According to Professor Francois Marcel, the famous authority on all matters pertaining to our coiffures, it will be a year or so before and definite hairdress can be declared the fashion of the day. The invention of permanent wave machines, the fad for bobbing the hair, and the unrest in sartorical circles, are about equally responsible for this. Much fulse hair is being worn in the evening when the bob is really taboo with the smartly dressed woman during the formal affairs where elaborate evening dress is absolutely "comme-il-faut."

Another report which was made at the convention was of interest—it concerned the sale and use of henna. Never before, the hairdressers remarked, had they used such a quantity of this brilliant dye.

For those who do not care for the Tutankhamen bob or the Trilby model (which is really not a bob, but a bobbed effect achieved with long hair), the hair should be dressed high on the head, with several detachable curls, giving an airy finishing touch.

CERTIFIED SEED POTATOES GIVE INCREASED YIELD

While there has been an increasing tendency on the part of pototo producers to use certified seed during the last few years, the favorable results that have been obtained from the use of such seed should encourage a much more general use of certified seed, says the United States Department of Agriculture. A number of states are now producing certified seed and have records showing the comparative yield from certified fields with the average yield of the state.

In New York state yields for ordinary fields averaged 103 bushels an acre. In Minnesota the yield in favor of the certified seed over that of the ordinary fields was 60 bushels an acre, and in Pennsylvania certified fields yielded 306 bushels while the ordinary fields produced only 106 bushels an acre. Reports from other states show similar increase in yield from the certified fields in comparison to the average of the state.

Certified seed sent from Michigan to several corn-belt states for experimental and demonstrational tests in 1921 showed a decided improvement in yild ovr th local seed. In Iowa the increase in yield secured from this Michigan certified seed was 61.2 bushels, in Indiana 21 fields showed an increase of 02 bushels, in Illinois 61 fields yielded 44 bushels increase, while in Ohio, where the great part of the acreage of the state is planted with certified seed, the increase due to the Michigan seed was only 2.6 bushels. In two tests conducted in Delaware the Michigan certified seed averaged 083 bushels more an acre than home-grown seed.

Last season was a good one for both producers and buyers of certified seed. The large production of certified seed has brought the price so low that although reports show that a premium of 50 to 150 per cent is being paid for certified stock, the grower is at least getting a little profit out of his work, while the buyer is able to buy this seed at a reasonable cost.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

The family flock is increasing in size and weight each day ,and among their number will be found many cockerels. One of the best methods of caring for these young fellows is to can them for next winter's use.

The canuing season for cockerels comes about the same time all over the country, for it is the time the poultrymen are culling their flocks and there is a surplus on the market.

If each home followed the practice of canning enough chicken to supply family needs until young fry are ready the following season, it would result in economy of time, fuel and make necessary the purchase of very much meat. Chickens may be roasted, fricasseed, fried or made into soup.

The directions for roasting fowl are given as: Clean the fowl, wash and wipe dry. Tie small pieces of larding pork over the breast. Put two tablespoons lard and butter mixed in a roasting pan. Place in oven, and when hot lay fawls in hot grease and turn until seared on all sides. Season with 1 tablespoon of salt sprinkled all over and 3-4 tea spoon of pepper. Pour into rousting pan half a cup of boiling water.

Place in oven to roast, and baste frequently with the liquid in the pan, turning the fowl once in a while to get it nicely browned. Cook until done without needing to be entirely tender. Remove from oven, cut meat from bones and pack into cans. Pour gravy over meat in cans until half an inch from the top. Cap, exhause five minutes if cooled, tip and process:

No 2 cans 45 minutes at 250 degrees F, or 15 pounds of steam pressure.

No. 3 cans 55 minutes at 250 degrees F., or 15 pounds of steam pressure.

WHAT IS MOST IMPORTANT PIECE OF HOME EQUIPMENT?

At a recent home management demonstration meeting, conducted by Miss M. Minerva Lawrence, of the extension service of the state college, this question was answered. Miss Lawrence was telling the women how necessary it was to have a good location for the new house. That it was important to have a good view from the work rooms, and gradually built the house on the blackboard. Finally she was ready to equip the new house and wanted a suggestion from those present. She asked: "What is the most important piece of home equipment?" A bright high school girl in the back seat answered promptly. "A husband."

Hidden Identity

Young Man (contorting his large mouth into a broad smile to make a good impression)—I have come to ask for the hand of your daughter, I—

Old Gentleman (interrupting mildly) —Would you mind closing your mouth for a moment until I see who you are?

Alice: "Ready, Dorothy?"

Dorothy: "Just have to dress my hair."

Alice: "Dress your hair?"

Dorothy: "Yes, put on my haircut of course."

NOBODY WANTS SILVER DOLLAR

Although United States mints are working overtime to complete coinage of 270,000,000 silver dollars, none of these dollars are going into circulation.

"The people don't want to carry heavy cart wheels," says Ed Scobey, director of the mint. "Not even out west. I have just returned from the west and saw very few silver dollars. Everybody wants paper money. It is easier to handle and it is lighter to carry."

The government, therefore, is building additional vaults at Denver, San Francisco and Philadelphia to store the silver coins. New dollars accumulate at the rate of 700,000 a day.

Against the coins, silver certificates are being issued. Incidentally use of the paper money is a good business transaction for the government, as the treasury collects two per cent interest from banks where the silver is deposited.

Folks who prefer real hard money can get silver from the banks, at any time.

Federal-aid road building during the fiscal year beginning July 1, 1922, has progressed steadily toward the goal of almost 200,000 miles to be included in the federal-aid highway system, reports the Bureau of Public Roads, U. S. Department of Agriculture. On March 21, 7,335 miles had been completed since the beginning of the fiscal year, and with three months of good construction weather still remaining it appears likely that the 10,000 miles completed in the preceding fiscal year will at least be equaled. At the same time, prospects are good for rapid progress during the coming fiscal year as on March 31 there was under construction 14,010 miles and slightly more than 10,000 miles in projects approved but which have not yet reached the construction stage.

It's a long trail

From the North Pole to the South Pole, but Royal Baking Powder went with Admiral Peary—Amundsen has it with him now. It went with Scott to the South Pole. Stanley had it in darkest Africa. Royal is the *only* baking powder you can buy anywhere under the sun.

ROYAL Baking Powder

Made from Cream of Tartar derived from grapes

Contains No Alum—Leaves No Bitter Taste

INDIVIDUAL BAKED ALASKA

Cut slices of sponge cake one inch two inches in diameter. Arrange on a paper spread on a board. Place a spoonful of ice cream on each round of cake. Then cover round ice cream and sides of cake with a meringue. Flash in oven to just brown with top butter on low for 3 minutes. Meringue is made by beating stiff the whites of 3 eggs—adding gradually 6 level tablespoons granulated sugar

Here Is The Range You Have Been Looking For

This new model is a perfect beauty. It has been designed for space economy, but still has ample room.

The oven is large and equipped with a drop door that can be used to set cooling food on if necessary.

The cooking surface is of one piece with all corners nicely rounded making it easy to keep clean.

These and many other conveniences are all combined in this new Hotpoint Hughes Electric Range to make your work more pleasant—more profitable.

Food prepared on a Hotpoint Hughes Electric Range is better cooked and more wholesome food because of perfect heat control.

Many other new models are shown and designed for every particular condition. Let us show them to you.

This advertisement is one of a series carrying a new recipe. They are valuable. Cut them out and save for reference.

Washington Water Power Co.

Prosperity In Your Pocket
Often Becomes Adversity

The people who save are the ones who systematically put their money in a bank until they are aple to invest it to better advantage.

When a fellow keeps his roll in his pocket there is always a temptation to "peel it off." Continued peeling eventually brings a person to the point where there is nothing left to peel.

Where do you keep your roll?

First Bank of Genesee

A. E. CLARKE, Pres. N. S. VOLLMER-HOPKINS, V.-P.
F. J. NIEMANN, Cashier

Loose Stock On Roads and Streets

Some considerable complaint has been made about the amount of loose stock on the roads and sometimes within the city limits. There is a herd law regarding loose stock on the highways and there is a city ordinance requiring the corraling of stock within the city limits.

There are few trips made on the Lewiston road that loose stock is not encountered at some place and only last week a considerable herd of catle were resting on the Lewiston hill. It makes it extremely dangerous for autoists.

Blue Bird Club

The Blue Bird club met last Tuesday afternoon with Mrs. W. O. Borgen. The time was spent in making quilts and a social time is reported by those present. A delicious lunch was served by the hostess at 5 o'clock.

Was invited guests were Mrs. John Geselichen and daughter, Miss Helen, Mrs. Jas. Nelson and daughter, Miss Mildred.

Special Notice

Notice is hereby given that the Latah County Farmers Mutual Fire Insurance company will hold a special meeting to amend Section 2, Article XII of the By-Laws, on the 19th day of June, 1923, at the I. O. O. F. hall at Troy, Idaho, at 1 o'clock p. m. All members are requested to be present.

Dated this fourth day of June, 1923.

Recommends Chamberlain's Tablets

"Chamberlain's Tablets have been used by my husband and myself off and on for the past five years. When my husband goes away from home he always takes a bottle of them along with him. Whenever I have that heavy feeling after eating, or feel dull and played out, I take one or two of Chamberlain's Tablets and they fix me up fine," writes Mrs. Newton Vreeland, Minoa, N.Y. Take these tablets when troubled with constipation or indigestion and they will do you good. —Adv.

Additional Personal

Mr. and Mrs. Milton Rader left Wednesday morning for Walla Walla to attend the big pageant.

Mrs. May Whitcher, sister of Mrs. D. E. Thomas and Jos. Collins came over from Moscow Wednesday and spent the day at the Thomas home.

Underwent Operation

Miss Grace Thomas, daughter of Mr. and Mrs. D. E. Thomas, underwent a major operation at St. Joseph's hospital, Lewiston, the first of last week. She is reported as getting along nicely.

Is Improving

The many friends of Mrs. Frank H. Thomas are delighted to learn that Mrs. Thomas is recovering from her severe illness.

There's nothing in a name—when attatched to a worthless check.

GOODYEAR Service Station

TIRE buying need not be a matter of bargaining or of risk. You can have every assurance of good value, good service, and a square deal. All you have to do is to buy your tires where you see the Goodyear Service Station Sign. There is one on our place of business in this town.

As Goodyear Service Station Dealers we sell and recommend the new Goodyear Cords with the beveled All-Weather Tread and back them up with standard Goodyear Service

Notice of First Meeting of Creditors

In the District Court of the United States for the District of Idaho, Central Division.

In the Matter of Gerard Broemmeling, Bankrupt.

To the Creditors of Gerard Broemmeling of Genesee, in the County of Latah, in the District aforesaid, a Bankrupt:

Notice is hereby given that on the 24th day of May, A. D. 1923, the said Gerard Broemmeling was duly adjudicated bankrupt, and that the first meeting of his creditors will be held at the office of the referee, Room 11, Lewiston National Bank building, Lewiston, Idaho, on the 13th day of June, A. D. 1923, at 10 o'clock in the forenoon, at which time the said creditors may attend, prove their claims, appoint a trustee, examine the bankrupt, and transact such other business as may properly come before said meeting.

Dated this 25th day of May, 1923.
EWING W. STEPHENS,
48-2 Referee.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Mabel Romine, plaintiff, vs. Guy E. Romine, defendant.

The State of Idaho Sends Greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff; the nature and general terms of which is to procure a decree of divorce on the ground of wilfull neglect and also to procure a decree awarding the custody of the two minor children to the plaintiff, and for general relief.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of said District Court, this 12th day of May, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
By Adrian Nelson, Deputy Clerk.
A. H. Swersinth,
Attorney for Plaintiff, residence and P. O. Address Moscow, Idaho. 46-6

The Home of the Soul

In olden times, it was believed that the seat of the soul was the stomach, most likely for the reason for the reason that a man is never so completely used up as when his stomach is out of order. For the cure of ordinary stomach troubles, there is nothing quite so prompt and satisfactory as Chamberlain's Tablets. They strengthen the stomach and enable it to perform its functions naturally. Give them a trial. They cost a quarter.—Advertisement.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JUNE 15, 1923. NO. 50

FIRST ANNUAL JUNIOR EXTENSION SHORT COURSE

The object of the junior extension short course is to give every boy and girl club member in Idaho an opportunity for a weeks intensive and practical training in the fundamentals of agriculture and home economics—June 17, 1923. This work will be given under the direct supervision of the university faculty, and extension specialists. Special consideration will be given to your projects through practical judging and demonstrations in both field and laboratory in the major junior projects, animal husbandry, dairy husbandry, poultry, baking, and sewing. A limited amount of special work and lectures will be given by various departments in interior decoration, beautifying the farm home and grounds, literature, music and art in the home, ideal community life, health, sanitation and hygene, farming as a business, what junior extension club work can mean to you.

The university prize winning herds of livestock, the university farm, Experimental plots, home economic laboratories with complete and modern equipment will be used by club members under the direct supervision of university faculty and extension specialists. These facilities will furnish an excellent opportunity for study and practical training in judging and demonstrationwork, and a foundation for your years work.

University of Idaho dormitories will house all club members and local leaders attending. There will be no charges for the use of the university dormitories, but every club momber is required to bring his own blankets, sheets, comb, towel, tooth brush and necessary clothes for one week. Each room will accomodate two people.

Meals will be served at the university dormitory dining room to club members and local leaders at cost. The total cost of meals will not exceed $6 for the entire week. The first meal being served will be lunch Sunday evening, June 17, and the last meal, breakfast Sunday, June 24. Except for meals all other entertainment and activities of the week will be free to club members and their leaders.

All Idaho boys and girls enrolled in junior extension club work, also local leaders, are invited and urged to take an active part.

A well balanced program is being planned providing an unlimited opportunity to expand physically and otherwise. You will have an opportunity for both work and play. A special feature for one evening will a state line picnic where about 600 Washington and Idaho club members will meet for an evening together. Special contests are being arranged for this occasion. Saturday morning judging and demonstration contests at U. of I. and a track and field meet for all club members Saturday afternoon. Each member should come prepared to put on a special "club stunt."

While at the University both girls and boys will be properly chaperoned at all times, and the best of accomodations will be provided by the University of Idaho.

Rough on the Wahls

In spite of their reputations for sticking to anything, three of the Wahl boys took the count recently. Phil headed the list.

While jockeying a gang plow last Wednesday at the George Follett ranch the plow stopped in a pile of rocks.

Phil didn't.

As a result of the stop two of Phils ribs gave way when he struck a mould board with a plow. Phil wasn't injured otherwise, so is still able to tell about it.

George and Matt met their Marne while galloping to town in their fliver Tuesday night. Though George Morscheck has been talking "spoke tight" around the barber shop several years, Matt and George forgot to soak one of the rear wheels of Lizzie in the creek before starting to Genesee.

Liz went well until she came to the turn of the road near the Ed Peterson place. There she balked—and turned clear over. When the Wahl boys picked themselves up they found Liz' still there but the rear wheel was in splinters.

George cut his leg very badly when he made his exit through the wind shield. The glass stopped Matt but made a very nasty scalp wound. They left Lizzie in the road and came to town and had their injuries dressed.

Dance Good

The dance held at the American Legion hall last Friday night was well attended and a good time had by all. A large crowd from out of town attended.

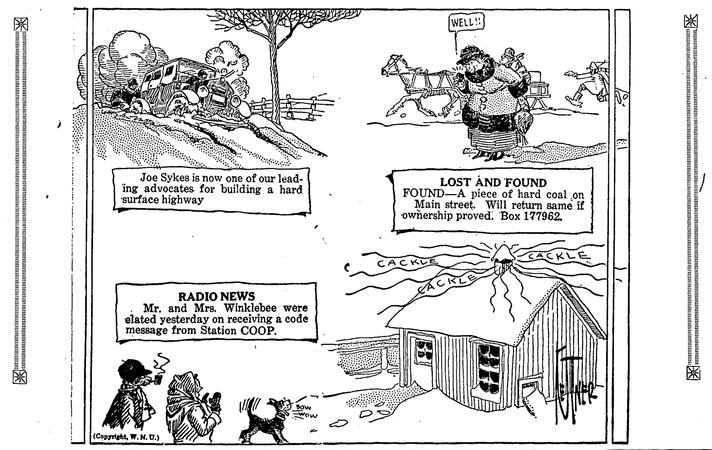
Dinner Party Given

A dinner party was given in honor of Miss Olive Jain at Smolt's Confectionery Wednesday noon. Those present were:

The Misses Olive Jain, Gertrude and Margaret Sampson, Viola Lorang, and Irene Mulalley.

Of course children may not know quite as much as their parents do, but they know it better, perhaps.

Locals



SEVERAL FAREWELLS FOR THE JACKSONS

Mr. and Mrs. J. H. Jackson were surprised so many times last week—right in a row-that they have hadly recovered yet, but their many friends thought it would be a good idea to get them ready for the long auto journey they are planning, and proceeded to help them.

On Friday evening of last week the Pythian Sisters, of which organization Mrs. Jackson has been a faithful member for many years (and Jim is a "Sister" too, for that matter), gathered at the Jackson home, not waiting for an invitaion, and made themselves welcome. There were about 20 in the party, and "what they said and the things they did" must have been plenty, from the amount of noise they made. Anyway, in order to help Mrs. Jackson make ready for the journey the Sisters proceeded to pack her trunk for her and the things they put therein would put a variety store to shame when it came to the number and kind of articles put in for her use. We were told on the "Q. T." that it would not do to mention all the articles so we refrain from mentioning any of them. After the trunk was properly packed games were played and a splendid evening spent.

Just to show their appreciation of the friendship of Mr. and Mrs. Jackson they presented them a fine camping equipment, consisting of camp stove, frying pans, and everything that is needed in the department of making a well regulated tourist camp—with the exception of the eats, of course—which they brought with them and helped the surprised hosts eat the delicacies, just to show how they were good. After the ice cream and cake had been disposed of Mr. and Mrs. Jackson were bid "bon voyage" and the guests returned to their homes.

Again on Saturday night Mr. and Mrs. Jackson were surprised by some of their country friends who gathered to give them a farewell visit and spend the evening socially. These self invited guests also brought delicious eats in the form of strawberry shortcake and plenty of real ice cream which was thoroughly enjoyed by all. A very pleasant time was passed until 12 o'clock when the guests bid the hosts good-night and good-bye. They gave Mr. and Mrs. Jackson a beautiful silver bread plate as a token of rememberance and esteem.

Those who made up the party were Mr. and Mrs. Henry Hanson, Mr. and Mrs. Nels Lahde and son, Mr. and Mrs. Arthur Hove, Mrs. Chas. Ingle and daughter, Mr. and Mrs. Ben Sather, Mr. and Mrs. John Hove, Mr. and Mrs. I. Rossebo, Mr. and Mrs. Arnold Olson, Mr. and Mrs. Arthur Tegland, Mr. and Mrs. Albert Peterson, and Mr. and Mrs. Sum Stucker and little son.

The Monday bunch entertained in honor of Mr. and Mrs. Jackson at the home of Mr. and Mrs. F. S. Casebolt Wednesday. Dinner and supper were served and a nice time had. Those present were:

Mr. and Mrs. J. H. Jackson; Mr. and Mrs. W. M. Herman; Mr. and Mrs. Leon Follett; Mr. and Mrs. Ira Hanson and daughter Rowena; Mr. and P. C. Shork; and Mr. and Mrs. F. S. Casebolt and family.

On Tuesday evening the Knights of Phythias gave a dinner at Smolt's confectionery in honor of J. H. Jackson who, accompanied by his wife, left Thursday morning by automobile for the east. During the dinner, toasts were given by members and Mr. Jackson was presented with a K. P. ring as a remembrance. A very enjoyable evening was had and all wished him good luck on his journey.

The Ladies Aid and the Eastern Stars gave a farewell party for Mrs. H. Jackson on Tuesday evening this week. The ladies brought a lunch and spent a very enjoyable evening. The Ladies Aid presented Mrs. Jackson with a beautiful set of Community silver salad forks, while the Eastern Star ladies presented her with a very pretty hair comb set with green sets.

Death of Mike Driscoll

The death of Mike Driscoll occurred June 8, at his home in Pasco, death being due to epilepsy.

Mr. Driscoll was born in Bathurst, New Brunswick in 1854. He came to Idaho in 1878 and homesteaded in Troy. He came to Genesee 31 years ago, and was postmaster here for 8 years after which he was city marshal until 1907. He then moved to Kennewick going from there to Pasco where he died.

The deceased leaves to mourn his loss three children; Hattie who lived with him, Will and Frank; two sisters, Mrs. Mary Cunningham of Genesee; and Mrs. Ellen Dunn of Moscow; and three brothers, Joe Frank and Jack all of Moscow.

He was a member of the Knights of Pythias and belonged to the order of the Woodmen of the World. The funeral servicese were held at his home on Sunday, June 10. The body was laid to rest beside that of his wife at Walla Walla the following day.

"After Many Years"

It has been just 20 years ago this week since the ordinance was published calling for the graveling of the town's main street—and 20 years later it received its first new coat of gravel—long after it had been needed. In graveling the main street, Genesee has taken on an entirely different appearance and while some are of the opinion that it was the wrong procedure, the News is of the opinion that it is one of the best things that has happened here for a long time. By keeping it graded to the center it will make a street that will be plenty good enough for any small town. There are many towns that haven't half as good streets as Genesee now has—and, for that matter, what has Genesee had for lo, these many years? It is better to late something that can be gotten than to always be crying for something that is unobtainable.

Thorncreekers Show the Stuff

Getting the jump on many of the rural districts of the country, the Thorncreekers have erected a building to be used for the benefit of the community. They are opening things up with an old time bazaar Wednesday, June 20, with eats, a baseball game and dance in connection.

The building has a dance floor of 30x70 and an honest-to-goodness dance is promised those with shimmy feet. Byer's orchestra will furnish the music.

During the afternoon the Catholic ladies of the St. Francis church will hold a food and clothing sale,—and a real "country store" will be in progress. At the same time the Thorncreek pill-twisters will line up in a base ball game with the Colton "Comets."

Ticket Puncher to go East

Johnny Roberts, conductor of the Genesee "Bullet" with Mrs. Roberts and two children are to leave today, (Friday) for St. Paul. Mrs. Roberts will undergo an operation for a goiter at Rochester, Minn., next week. With her daughter, Mildred, she expects to visit at Wild Rose, Wisconsin, during the summer. Mills, will spend the summer studying at the art school in Chicago. Johnny expects to return to his work within a month.

The Lord builded wisely when He made woman's hand smaller than man's. Otherwise, how could a wife go through her husband's pockets?

Mayor Orders Weeds Out

The noxious weed problem is again before the people and already some of the farmers are beginning to wonder if the noxious weed law is going to be complied with without invoking the authority. Jim Hill mustard should be looked after at this time as well as thistles of various kinds—in fact, noxious weeds of all kinds must be taken care of.

In case of doubt as just what to do —cut the weeds first and then ask questions afterwards. It may save expense.

Elmer M. Paulson, county commissioner, was in town Thursday looking over the weed situation in Genesee. He notified the city council that all noxious weeds must be removed at once. He consulted with John Meyer, mayor of Genesee, who is passing the word down to property owners that weeds must me removed at once, otherwise they will be removed at the expense of the property owners.

Governor Calls Holiday

In response to a proclamation issued by Governor Moore calling on the people of Idaho to observe Idaho Pioneer day, Friday June 15, the two Genesee banks will be closed for the day. The proclamation is as follows:

"In grateful commemoration of the dauntless men and women who braved the dangers of the plains and the forests in establishing this commonwealth of the west, the Eleventh Session of the State Legislature set aside June 15 to be observed as a legal holiday in this state and designated is "Idaho Pioneer Day."

"Therefore, it is indeed an honor and great pleasure, pursuant to the laws of the state, to remind the people of the state of Idaho of this provision of our statutes, and I do hereby proclaim Pioneer Day, June 15, a public holiday in honor of the early settlers of Idaho.

C. C. Moore, Governor."

Dance Crowd Hit the Ditch

Returning to Moscow from a dance here Friday night a Ford coupe carrying six high school and college students plunged from the highway near the Tobin ranch, two miles north of town, and upset in a deep ditch.

The car was without lights, following another car, and was being driven at a high rate of speed.

Lottie Parkins, 18, riding on one of the running boards is said to have sustained internal injuries but is improved at present. Norma Oliver received a broken collar bone from the crash, while Helen Torgeson was badly cut from the broken glass.

The car was driven by William Dilly at the time of the accident. Three of the girls were oin the front seat with him, while a boy and girl clung to the running boards.

WHAT HAPPENED HERE TWENTY YEARS AGO

Mrs. John Meyer and family, Mr. and Mrs. Blume and Miss Dolly Morscheck left Tuesday morning for New York where they will spend a couple of months visiting relatives and friends.

Roy Burr took his departure Tuesday morning for Annapolis, where on the 16th inst, he will take the examination for a naval cadetship. The best wishes of his numerous friends go with him.

The marriage of Andrew Hasfurther and Regena Kasper was solomnized at the Catholic church Wednesday morning. They are both well known young people of this community and their numerous friends wish them a long, happy, and prosperous life.

Strawberries are selling for $1 a crate in Clarkston.

Rural route No. 2 will be started July 1st, and all those living on this route are requested to secure their mail boxes.

Messrs. Biram, Davis, and D. Scharnhorst returned from Heppner, Oregon, the first of the week where they proved up on their claims.

Preparations for the race meeting and celebration on July 2, 3, and 4 are so far advanced that, too much weather not preventing Genesee will have the greatest time in its history. Three good ball games between the home team and the teams of Johnson, Colton, and Uniontown will be played for liberal purses. About $650 will be hung for prizes. The feature of the first afternoon will be a quarter mile heat race for a $75 purse; a ⅜ mile dash, a ⅝ mile dash and an Indian race to be run free to the Indians under their own particular rules and regulations. Friday the big race will be the ½ mile running race for a purse of $125 or over, best two in three heats. There will be ½ and ¾ pony races, a slow race and possibly an Indian and trotting race. Anyway the program will be full and varied and no pains spared to make the day a success. On the fourth there will be an all-day celebration all over the city. Dancing pavilions, refreshment booths, etc., will provide amusement and solace, and the festive cracker will pop—even if the bashful swain does not.

Mr. and Mrs. Jackson Start East

Mr. and Mrs. J. H. Jackson left on Thursday of this week for an automobile trip of several thousand miles, going first to Yellowstone park where they will take in the sights and from there they will go to Independence, Iowa, for a visit with Mr. Jackson's mother, who is getting along in years, and other relatives. From Independence they will go to Monroe, Wisconsin, for a visit with Mrs. Jackson's relatives and thence to Darlington, Wisconsin, where Mr. Jackson was born and raised and he and Mrs. Jackson took the vows that has held them together all these years, for a visit with old-time friends and to look over boyhood haunts. After spending most of the summer in the east they will go by way of Dallas, Texas, for a visit with a sister of Mrs. Jackson's, thence to Los Angeles where they will spend the winter and may locate.

Their journey will be a long one but will be full of pleasure for both of the travelers. Tis will be the first real vacation Mr. Jackson has had for many years, and while he now feels a little "lost" perhaps, he expects to enjoy every minute of the time. Here's hopin' he does.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Builds Shop in Shelby

Loncosty & Brummend, of Moscow and Genesee, Idaho, proprietors of the Shelby Wood Working company, are erecting a wood-working shop directly across the street from the Midland Iron Works. Their building will be of stucco, 34 by 100 feet. They will do all kinds of mill work, and will have a modern shop. This is the only wood-working factory in Shelby.—The Shelby News.

A True Fish Story

The record fish reported by Clarkston anglers were landed Sunday by Rupert Koelzer and Dale Lamphere. These two fishermen made a trip to the upper Tucannon and returned with one each of the finest trout seen in the city for several years.

The second largest fish was caught by Dale Lamphere weighing three pounds eleven ounces and measuring twenty-five and one-half inches in length. It was landed from the water of the main creek and put up half an hour's fight.—Clarkston Republic.

Who'll Squeeze the Blanket

It looks as though Governor Al Smith of New York was going to try and load the old donkey down with a "wet" blanket during the next campaign. Don't know which would be worse—a "wet" blanket or Henry Ford. Henry's money might help a little in campaign expenses, while on the other hand some might get a bit of satisfaction in squeezing a "wet" blanket. But then, its a little early. We shall see.—Asotin Sentinel.

Parley on Weed Menace

The Latah county commissioners, who have been in session since Monday, have devoted much of the time to checking up on violations of the noxious weed law, which it is their purpose to enforce strictly.

In case weeds are not destroyed within a period set by the commissioners, men will be sent out to destroy them and the cost charged against the property, appearing as an addition to the taxes next year.—Idaho Post.

Starts Cherry Harvest

The cherry harvest in the Lewiston valley is now under way. Monday the several packing houses in Clarkston opened for the packing of Tartarians, and car shipments will soon start.

At the down-river orchards of White Bros. & Crum, the harvest of Tartarians was completed last week, and a start was made yesterday on Bings. Today the firm expected to load a car, with Bings from the down-river orchards and the Tartarians from Clarkston. The next fruit to come from the down-river orchards will be apricots, about July 1.—Lewiston Tribune.

Successor to Jordan

A. F. Shirley, for eight years with the Northern Pacific railway, and recently serving the company as traveling freight agent, was installed as successor to W. J. Jordan, for 16 years travling freight and passenger agent, who died a few weeks ago in Portland, after an illness of many months, a party of officials from Seattle, headed by Wilber C. Corman, western traffic manager, being here for the purpose.—Lewiston Tribune.

Fishing Party

Don Bressler, George Post, and Art Springer returned Wednesday from a weeks fishing trip to the Rapid River District. In the main, they were very unfortunate in their catch and only brought home 15, although Don says they had enough to eat. They had to ride 40 miles on horseback to reach their camp, and return.

Many Go to Celebration

Many Genesee people went to Uniontown Monday to attend the dedication of the new $20,000 community building. Over 2000 were in attendance.

Addresses were made by H. F. Hoefer, August Braum and Professor F. P. Nalder, head of the extension department of Washington State College, and music composed the program. The women of the alter society of the St. Boniface's Catholic church served dinner in the banquet room of the building.

At 2 o'clock a base ball game as a part of the day's program was played on the Uniontown diamond. The Washington State college team played the Uniontown-Colton consolidated team before a record crowd that swarmed over the grandstand and bleachers. After an excited contest the college boys went down in defeat in a 6-7 score.

A band concert followed the ball game and early in the evening a free motion picture show was staged in the community building. At nine o'clock the program was turned to dancing and 300 couples occupied the floor in the gymnasium of the Community building and had rom to spare. Mann's music and the remarkably fine condition of the floor made dancing a real pleasure and it continued until well after midnight.

MY LADY'S MONEY

An Espisode in the Life of a Young Girl

—By Wilkie Collins

INSTALLMENT NO. 5.

An interval of some minutes elapsed and at last the silence in the picture gallery was broken by voices penetrating into it from the drawing room. Felix rose to a sitting position on the sofa. He had recognized the voice of Alfred Hardyman saying, "Don't disturb Lady Lydiard," and the voice of Moody answering, "I will just knock at the door of her ladyship's room, sir; you will find Mr. Sweetsir in the picture gallery."

The curtains over the archway parted, and disclosed the figure of a tall, lean man, with a closely cropped head set a little stiffly on his shoulders. The immovable gravity of face and manner which every Englishman seems to acquire who lives constantly in the society of horses, was the gravity which this gentleman displayed as he entered the picture gallery. He was a finely made, sinewy man, with clean-cut, regular features. If he had not been affected with horses on the brain he would doubtless have been personally popular with the women. As it was, the serene and hippic gloom of the handsome horsebreeder daunted the daughters of Eve, and they failed to make up their minds about the exact value of him, socially considered. Alfred Hardyman was, nevertheless, a remarkable man in his way. He had been offered the customary alternatives submitted to the younger sons of the nobility—the church or the diplomatic service—and had refused the one and the other. "I like horses," he said, "and I mean to get my living out of them. Don't talk to me about my position in the world. Talk to my eldest brother, who gets the money and the title." Starting in life with these sensible views, and with a small capital of five thousand pounds, Hardyman took his own place in the sphere that was fitted for him. At the period of this narrative he was already a rich man, and one of the greatest authorities on horse-breeding in England. His prosperity made no change in him. He was always the same grave, quiet, obstinately resolute man, true to the few friends whom he admitted to his intimacy, and sincere to a fault in the expression of his feelings among persons whom he distrusted or disliked. As he entered the picture gallery and paused for a moment looking at Felix on the sofa, his large, cold, steady gray eyes rested on the little man with an indifference that just verged on contempt. Felix, on the other hand, sprung to his feet with alert politeness, and greeted his friend with exuberant cordiality.

"Dear old boy! This is so good of you," he began. "I feel it; I do assure you I feel it!"

"You needn't trouble yourself to feel it," was the quietly ungracious answer. "Lady Lydiard brings me here. I come to see the house—and the dog." He looked round the gallery in his gravely attentive way. "I don't understand pictures," he remarked, resignedly. "I shall go back to the drawing room."

After a moment's consideration Felix followed him into the drawing room, with the air of a man who was determined not to be repelled.

"Well?" asked Hardyman. "What is it?"

"About that matter?" Felix said, inquiringly.

"What matter?"

"Oh, you know. Will next week do?"

"Next week won't do."

Mr. Felix Sweetsir cast one look at his friend. His friend was too intently occupied with the decorations of the drawing room to notice the look.

"Will tomorrow do?" Felix resumed, after an interval.

"Yes."

"At what time?"

"Between 12 and 1 in the afternoon."

"Between 12 and 1 in the afternoon," Felix repeated. He looked again at Hardyman, and took his hat. "Make my apologies to my aunt," he said. "You must introduce yourself to her ladyship. I can't wait here any longer." He walked out of the room, having deliberately returned the contemptuous indifference of Hardyman by a similar indifference on his own side at parting.

Left by himself, Hardyman took a chair and glanced at the door which led into the boudoir. The steward had knocked at that door, had disappeared through it, and had not appeared again. How much longer was Lady Lydiard's visitor to be left unnoticed in Lady Lydiard's house?

As the question passed through his mind teh boudoir door opened. For once in his life Alfred Hardyman's composure deserted him. He started to his feet, like an ordinary mortal taken completely by surprise.

Instead of Mr. Moody, instead of Lady Lydiard, there appeared in the open door-way a young woman in a state of embarrassment, who actually quickened the beat of Mr. Hardyman's heart the moment he set eyes on her. Was the person who produced this amazing impression at first sight a person of importance? Nothing of the sort. She was only "Isabel," surnamed, "Miller." Even her name had nothing in it. Only "Isabel Miller!"

Had she any pretensions to distinction in viture of her personal appearance?

It is not easy to answer the question. The women (let us put the worst judges first) had long since discovered that she wanted that indispensable elegance of figure which is derived from slimness of waist and length of limb. The men (who were better acquainted with the subject) looked at her figure from their point of view, and finding it essentially embraceable, asked for nothing more. It might have been her bright complexion, or it might have been the bold luster of her eyes (as the women considered it), that dazzled the lords of creation generally, and made them all alike incompetent to discover her faults. Still, she had compensating attractions which no severity of criticism could dispute. Her smile, beginning at her lips, flower brightly and instantly over her whole face. A delicious atmosphere of health, freshness, and good humor seemed to radiate from her wherever she went and whatever she did. For the rest, her brown hair grew low over her broad, white forehead, and was topped by a neat little lace cap with ribbons of a violet color. A plain collar and plain cuffs encircled her smooth, round neck and her plump, dimpled hands. Her merino dress, covering but not hiding the charming outline of her bosom, matched the color of her cap ribbons, and was brightened by a white muslin apron coquettishly trimmed about the pockets, a gift from Lady Lydiard. Blushing and smiling, she let the door fall to behind her, and shyly approaching the stranger, said to him, in her small, clear voice, "If you please, sir, are you Mr. Hardyman?"

The gravity of the great horse breeder deserted him at her first question. He smiled as he acknowledged that he was "Mr. Hardyman"—he smiled as he offered her a chair.

"No, thank you, sir," she said, with a quaintly pretty inclination of her head. "I am only sent here to make her ladyship's apologies. She has put the poor, dear dog into a warm bath, and she can't leave him. And Mr. Moody can't come instead of me, because I was too frightened to be of any use, and so he had to hold the dog. That's all. We are very anxious, sir, to know if the warm bath is the right thing. Please come into the room and tell us."

She led the way back to the door. Hardyman, naturally enough, was slow to follow her. When a man is fascinated by the charm of youth and beauty, he is in no hurry to transfer his attention to a sick animal in a bath. Hardyman seized on the first excuse that he could devise for keeping Isabel to himself—that is to say, for keeping her in the drawing room.

"I think I shall be better able to help you," he said, "if you will tell me something about the dog first."

Even his accent in speaking had altered to a certain degree. The quiet, dreary monotone in which he habitually spoke quickened a little under his present excitement. As for Isabel, she was too deeply interested in Tommie's welfare to suspect that she was being made the victim of a stratagem. She left the door and turned to Hardyman with eager eyes. "What can I tell you, sir?" she asked innocently.

Hardyman pressed his advantage without mercy.

"You can tell me what sort of dog he is?"

"Yes, sir."

"How old he is?"

"Yes, sir."

"What his name is?—what his temper is?—what his illness is?—what diseases his father and mother?—what—"

"Isabel's head began to turn giddy. "One thing at a time, sir?" she interposed; with a gesture of entreaty. "The dog sleeps on my bed, and I had a bad night with him, he disturbed me so, and I am afraid I am very stupid this morning. His name is Tommie. We are obliged to call him by it, because he won't answer to any other than the name he had when my lady bought him. But we spell it with an 'i' at the end, which makes it less vulgar than Tommy with a 'y.' I am very sorry, sir, I forgot what else you wanted to know. Please do come in here, and my lady will tell you everything."

(To Be Continued)

BOISE TO REALIZE ITS FONDEST HOPE

Main Line Railroad for Capital City Is Assured by Union Pacific System.

The dream of Boise for a quarter of a century—a mainline railroad, with mainline trains running through, is at last ready to be realized.

Carl R. Gray, president of the Union Pacific system, which is the only system in southern Idaho, promised Boise Commercial club members at a recent meeting that as soon as the intedstate commerce commission issues the certificate of public convenience, actual construction would begin on Boise's new main line.

A magnificent depot on a bench overlooking the city will be built. All mainline through trains will be run through this city, which for so many years has been 20 miles from the mainline on a branch road.

Boise people's bonast, that it was the largest city in the United States off a mainline railroad and without water transportation, has always had a tone of viewing optimistically an unhappy subject and with the building of the new line, this city is expected to grow materially.

Spot in Badland Yet Unexplored

No White Man's Foot Has Ever Rested in South Dakota Mystery Place.

Half a dozen miles southwest of Scenic, S. D., in the very heart of the Badlands, Big Foot Wall stretches away to the southwest and the northeast for miles. Between this wall and the pinnacles of Whitewater Wall, and bounded on the west by Sage Creek Wall, is an area of approximately four square miles. No white man's foot has ever rested there, so far as can be learned.

The Indians call the plot "sichi makoche," meaning "bad place." A large scale map of Pennington county, drawn in 1908, describes the place as "Badlands bluffs and canyons, impossible of survey."

Occasionally one of the Dakota (Sioux) Indians who will talk tells strange tales about this particular rugged portion of South Dakota. Deep canyons and gorges lead up to spirelike pinnacles and every attempt to follow their tortuous paths thus far, has ended in failure. Baffling culdesacs greet the explorer at every path.

Chief Flaming Arrow, a veteran of the frontier days, gives what probably is the Sioux belief. Many years ago, the chief said, before the pale-face came, there was the place where dwelt the Wankinyan (Thunder Bird) high in the pinnacles of stone. This wall of rock kept out unwelcome visitors, the chief contended, and added that the protected area is rich in food, sunlight and warmth and has pure cold streams of running water.

The old chief said that perhaps at some time some one may have found their way into the place, but if so they never returned.

CHEESE LAGS IN INCREASED USE OF DAIRY PRODUCTS

While the consumption of dairy products in the United States is increasing, there is still room for dairy interests to expand through creating an increase in the consumption of cheese, says the United States Department of Agriculture. Although the American people are large users of butter compared with European peoples, they consume relatively small amounts of cheese. The consumption of cheese is approximately 3.8 pounds per person, while in some European countries the consumption is four or five times this amount. Cheese of the American Cheddar type is chiefly manufactured in this country, but there is a demand for cheese of foreign varieties, especially by persons who have come from foreign countries. Before the war more than 60,000,000 pounds of cheese, or approximately one-fifth as much as was produced of all varieties in this country, was imported annually.

Increasing the consumption of cheese offers large opportunities for the development of the dairy industry, if the people of this country would consume as much cheese per capita as the Dane, the Englishman, the Hollander, the German, or the Frenchman, or half as much as the Swiss, it would create a market for 9,000,000,000 pounds of milk more than is required at the present time.

IDAHO

Nez Perce county commissioners at Lewiston, Idaho, May 21 opened bids for the construction of a steel bridge over the Clearwater river at Lenore. The Security Bridge company of Lewiston, of which Fred W. Straw is manager, submitted the lowest proposal, $41,047.

Charles Preuss of Tacoma has been elected president of the University of Idaho, Pre-Medic club for next year. He is editor in chief of this year's "Gem of the Mountains." Carter Pitcher, Moscow, was made vice president and Samuel Poindexter, Boise, secretary-treasurer.

Word from the University of Idaho has been received by School Superintendent O. E. Faulkner that Orofino high school graduates at the university rank 5.11 per cent above the average in scholarship for students throughout the state. Citizens of Orofino, knowing the keen competition at the university, are more than pleased at this report.

Members of the senior class took both prizes in the annual song and stuntfest this year. The winning song, "Fair Idaho," was written by Henrietta Peasley of Boise and Elaine Wheeler of Caldwell, while the winning stunt was a burlesque of "If," a fantasy by Lord Dunsany, celebrated Irish playwright, which was produced this year as the all-college play.

Prof. R. T. Parkhurst, head of the the poultry department of the University of Idaho college of agriculture, has been licensed as an official judge by the American Poultry association. This appointment is taken as a distinct recognition for Prof. Parkhurst as the number of judges in the west is limited and the association is unusually discriminating with regard to personality.

Lewiston and Clarkston are taking a permanent position on the aero map of the United States, with the establishment of a training field for fliers. The station will become a visiting point for United States army planes on cross-country flights. Garage men of Lewiston are sponsors of the enterprise, and the field and station will be at Clarkston, where an ideal site is being obtained from the Lewiston-Clarkston Improvement company.

Second district convention of the Idaho department of the American legion, will be held in Grangeville in 1924, it was decided at the convention of the second district, in Moscow recently. The convention will meet in May, 1924. Thomas A. Feeney, Genesee, was elected commander of second district, at the Moscow meeting, and W. M. Gregg, Whitebird, was chosen vice commander. Eugene Nagel, Moscow, is adjutant and finance officer.

Karl M. Kraemer, cashier of the State Bank of Plummer, was recently appointed superintendent of Heyburn park, by Governor C. C. Moore of idaho, and D. H. Kerr of St. Maries, has been appointed official caretaker. Commissioner of public works, W. J. Hall, announced some time ago that several improvements would be made this year in the park, including a floating dock on the Chatcolet side of the St. Joe river, better drinking water facilities and the improving of several roads leading to the park.

Sixty students of Idaho history have made their choice of the 10 foremost men in Idaho history (excluding men still living), and have headed the list with the name of Meriwether Lewis, leader of the famous Lewis and Clark expedition. William Clark, his companion on this expedition, came third. David Thompson, who has been styled "the greatest land geographer," received one more vote than Clark, and so won second place. Votes received by the winning 10 were as follows: Meriwether Lewis, 50; David Thompson, 46; William Clark, 45; Chief Joseph, 44; Peter J. DeSmet, 41; Daniel S. Tuttle, 37; Elias D. Pierce, 36; Peter Skene Ogden, 32; Nathaniel J. Wyeth, 28; John Hailey, 27. With only one or two exceptions, all these characters, with many others appear in the pageant of Idaho history, "The Light on the Mountains," which was presented here the night of Saturday, June 9, as part of the university commencement exercises.

Stopping Leaky Radiators.

W. G. Weber, Pendleton, Ore., gives a sure cure for leaky radiators on automobiles. Weber says, "just break three or four raw eggs and put them into the radiator.

We have three trees, one apple, one crabapple and one Flemish Beauty pear tree. They were 15 years old and had not borne, so we hung on them old rusty horseshoes, or any old iron that was rusty, and they certainly did bear.

GOOD BROODING HENS DESERVE GOOD COOPS

Best Coops Shelter Hens and Give Ample Room Free From Vermin.

Success in brooding chicks in the natural way depends upon two things, the brood coop and the disposition of the hen. A good motherly hen will do a good job if given good quarters in which to take care of her brood.

Brood coops should be built so that they will shelter the hen and her brood effectively from the weather. They should be large enough to supply ample room and should be free from dampness and insect vermin. Care should also be taken to adopt the brood coop to the weather conditions of the locality.

In some sections the ground may be used as the floor of a brood coop, but this is only possible when the

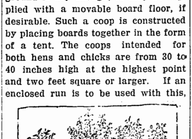
Glass Front

ground is well drained. In places where the ground is likely to be damp, particularly on low spots, an earth floor will not do.

An ample supply of fresh air is important. Cramped quarters or badly ventilated coops are unfit for chicks because they can not stand being cold and damp unless they have a good place to get warm, and dry out afterwards.

If there is danger from rats, cats, etc., or from birds of prey, coops with enclosed runs are essential.

A simple coop called the Apex may be used with an earth floor where the ground is dry enough, or may be supplied with a movable board floor, if desirable. Such a coop is constructed by placing boards together in the form of a tent. The coops intended for both hens and chicks are from 30 to 40 inches high at the highest point and two feet square or larger. If an enclosed run is to be used with this,



Large Brood Coop

a framework of the same shape as the coop can be built and covered with poultry netting. Such coops are usually used for only one hen and her brood.

A brood coop that will house three or four hens and their broods of chicks may be desirable and may also be used for hatching purposes. Such a coop may be built about six feet long, three feet deep and three feet high in the front, with a roof slopping down to the back wall, which is about six inches lower than the front. The front should be constructed of slats and wire netting; the wire netting in the upper part being protected by a wooden hood so that the rain will not beat into the coop.

Brood coops may be built with

Apex

glass and wire screen fronts, the glass being the lower part and the wire screen the upper part. This kind of coop is constructed in localities where the chicks need shelter from predatory animals. Such coops are usually constructed two feet square and two feet high in front. The glass window in the bottom is usually made to slide and the coop is ventilated through the wire netting. Such coops may be built 30 inches wide, 33 inches deep, and three feet high in front, with the roof slopping down to a rear wall 21 inches high. The frame, except the sills, which are two inches square and are made of strips one inch by two inches, and the siding, may be made of lumber either one-half inch or seven-eighths inch thick. The siding should extend about one and one-half inches below the bottom of the frame. The movable floor may be of one-inch lumber and should fit into this opening. The floor should rest on the two sills, leaving the air spaces underneath it in order to promote dryness.

A brood coop should be painted, inside and out, with a strong insecticide, at least a week before it is to be occupied by the hen and her chicks. Creosote diluted with two or three parts of kerosene is a good antiseptic. There are many others on the market.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

The Southern Pacific announced wage increases for 13,000 shop craftsmen ranging from 2 to 5 cents hourly. It adds about $750,000 to the annual payroll.

Mrs. F. W. Justin, of Kansas City, Mo., paid $10 fine for beating an alleged masher while her husband held ababy in the family flivver, and looked on. "My husband offered to whip him," she said, "but I thought it was my fight."

The last remnants of General Kappell's anti-bolshevik army numbering 540, are on their way to the United States from Manila. Plane are being made to bring them to Grays Harbor from San Francisco and find homes and employment for them.

There'll be plenty to drink in Shelby when Gibbons and Dempsey mix on July 4, James A. Johnson, mayor of Shelby promised here. "Nobody'll go thirsty," Johnson said. "Our water storage capacity has been increased from 100,000 gallons to 1,110,000 gallons."

Large cargoes of Canadian bonded liquors are moving toward the international boundary, en route to New York state as the result of the repeal of the state prohibition enforcement law there. Canadian officials along the border reported rum runners prepairing to flood New York with dominion "bonded stuff."

The treasury department has decided on a strict application of the supreme court ruling barring liquor from teritorial waters on foreign owned srips. Officials said that nothing short of legislation would do away with the difficulty. They prophesy that the next congress would probably amend the present Volstead act.

Steps have been taken by the French government today to checkmate royalists who are scheming to restore the monarch and overthrow the republic in fascisti fashion. All royalist leaders are being watched, their meeting places observed and their followers shadowed. Newspapers applaud the government's course. Official Paris was thrown into a turmoil by revelation of the plot's discovery.

A new secret order known as the "Knights of Kamelia" is being organized by William J. Simmons, founder of the Ku Klux Klan. In a proclamation Simmons said he was determined to establish the "Knights of Kamelia" in order to save the Knights of the Ku Klux Klan from spoilation and destruction. "Everything I've striven to build during the year gone by is in peril of being subverted to personal, political and sordid ends," Simmons said.

A combination between the government, organized labor and industry in the United States to put American prosperity on a "continuing basis" is being worked out as a result of aconference at the home of Secretary of commerce Hoover. Hoover, Gompers and Julius Barnes president of the United States chamber of commerce, were spokesmen for the three groups. Another and larger conference is planned soon. The connference discussed immigration, the 12-hour day in the steel industry, foreign trade and a great number of other related subjects.

OUTLET SOUGHT FOR IDAHO ALFALFA HAY

Problems affecting the movement of Idaho's hay crop out of the state will be discussed at a meeting of the western plant quarantine board in Phoenix, Ariz. M. L. Dean, Idaho state director of the bureau of plant industry, has gone to attend the meeting, which will be held May 21, 22 and 23.

Oregon and Washington have both refused to allow Idaho hay to move through those states in going from southern Idaho to the northern part of the state because of alfalfa weevil. For a long time, state officials say, there has been a shortage of hay in north Idaho and the surplus in the southern part of the state cannot be moved.

Several months ago the attorney general held that the quarantine established by the state of Washington was virtually an embargo and therefore void and without effect.

Corn is the outstanding milk and pork producer.

Should the United States Cancel Europe's Debt?

By Carroll H. Wooddy, Asst. Professor of American History, Washington State College.

In the last four years this country has been harassed by a cloud of advocates of isolation. Our doubboys and our dollars had helped save Europe from the German menace, our interests had been protected, our political and material future safeguarded—hence our best policy was to withdraw entirely from the tangle of post-war hatreds and devote ourselves to a restoration of prosperity and a solution of domestic difficulties. In spite of the doubtful mandate of the election of 1920, our foreign policy has been turned over to bitter enders, opponents of the league or even a League of Nations, and other non-interventionists. With the exception of the Washington conference, President Harding and Secretary Hughes have been more concerned with internal problems, such as the tariff, bonus, ship subsidy, taxation and the budget system, than with a revival of European enterprises. Yet in the background, looming above all of the temporary shifts of partisan politics, there has remained a tremendous spectre that no senatorial oratory can exercise—the menacing shadow of world debts. Whatever our views on world courts, on leagues of nations, or international economic conferences, it is hopeless to assert that we can be freed from European entanglements so long as we are bound to her by chains of gold.

In its origins, the international debts question was a straight forward one. Prior to our entrance into the war, the battling nations financed themselves by loans subscribed by European bankers, bonds sold to their own subjects, or loans floated in this country by private banking concerns like the Morgans. After the war began the United States as a government flung its resources into the fight. Advances were freely made to each of the belligerents as their needs required. England, the strongest of the allies financially, had already strained her credit to the utmost in assisting France and Italy, as well as Belgium, and found in our plentiful treasury at least a temporary salve for her financial wounds. Tremendous sums were thus advanced between April, 1917, and December, 1918, nor did the armistice cause a cessation of the golden flow, for demobilization was expensive and the period had to elapse before war expenses could be materially reduced. Of course during the war and the months immediately following no repayment of these advances could be expected, and in the meantime a strong sentiment in favor of the mutual cancellation of all war debts developed.

The origin of this sentiment was probably in the agitation initiated by Dr. Maynard Keynes, an English professor of economics, and member of the British treasury delegation at the Versailles conference. Both British and French delegates were to the peace conference determined upon making Germany pay the cost of the war. Lloyd George had just been returned to office in the Khaki election of 1918 the issues of which were: Punish the Kaiser, and collect the indirect as well as the direct war costs to the last farthing. What was the result? According to Keynes, the reparations bill which was fixed was so high that Germany could never pay. The attempt to compel her would simply result in the destruction of Germany as a producing and consuming unit in the European economic fabric, and incidentally ruin England, who depends upon Germany as a market for large quantities of her manufactured goods. Hence the reparations bill must be vastly reduced. But what of France? "If France is to live, she must be paid," says ex-Premier Barthou, president of the reparations commission. Maynard Keynes supplied the answer. Cancel the debts owed by France to England and the United States, and it will be possible to reduce the sum of reparations. Thus both France and England will be saved from bankruptcy! A pretty solution, truly! and one which the British government began to advocate, though in such terms that American revulsion from the scheme was to be averted. In July, 1922, a note was dispatched to France over the signature of the Earl of Balfour, foreign minister in the Lloyd George cabinet, a statesman favorably known in the United States for his work at the disarmament conference. In effect this note declared that in British opinion the only solution for the whole tangled situation was a complete elimination of all inter-allied debts, a procedure to which the British government pledged itself in advance. This was a splendid gesture, for by it England appeared to be offering to cancel a debt to her amounting to twelve billion dollars on condition that the United States would cancel about five billions owed her by Britain. If the United States failed to play up to this scheme, Balfour solemnly asserted that England would have to collect enough from France, Italy, and the others. Now, to pay America, which meant, of course, that reparations, France's only source of income would have to remain at an impossible figure, to the continued detriment of Britain's trade.

Needless to say, this proposal created a tremendous discussion in the United States, dividing American opinion into two camps. The opponents of cancellation called attention to the fact that the debts had been honestly contracted in good faith by both parties, and that there was not the slightest moral obligation on the part of the United States to remit a single penny. Furthermore, critics have urged, our European debtors deserve little consideration at our hands. Their budgets are inflated with expenditures for military purposes, their national policies are cumbered by violent rivalries and animosities. Instead of attempting by every means to restore peace and prosperity, they have hindered the flow of trade by high tariff barriers, by rigid discriminatory policies. For us to forgive their debts instead of bringing peace nearer, would be but to furnish more fuel for the rivalries that devastate Europe.

In spite of these cogent arguments, cancellation has found powerful friends. The national convention of the American Association of Bankers, after listening to arguments presented by Mr. Reginald McKenna, former British chancellor of the exchequer, declared for cancellation. J. P. Morgan, Mr. Paul Warburg, Mr. Otto Kahn, our foremost international bankers, urge the point that American prosperity can never be restored until Europe is once more able to buy our products. The heavy burden of war debts discourages any effort to begin restoration of sound credit. Cancellation would inspire war weary peoples with renewed hope and courage. In addition to this argument, which combines humanitarian impulses with sound business, it is asserted by economists that the payment of Europe's debt will injure rather than benefit us. This argument depends upon an understanding of the operations of the foreign exchanges and the fixing of the purchasing power of money—both of them difficult to comprehend. In effect it reduces the problem to a dilemma. Europe must either pay us in goods, or in money, that is, gold. If in goods, then these must take the place of goods produced by the domestic manufacturer, for at any given time, the purchasing power of the American public is the same, and he can not buy American goods and foreign goods with the same dollars. If the foreign debt is paid in gold, rather than in goods, the effect simply will be to inflate credit, and cause an increase in the general level of prices. It is known by all economists that perhaps the chief reason for the tremendous increase of prices in the United States during and after the war was the presence in this country of surpluses of gold, just as the lack of gold in Europe is largely to blame for the flood of paper money that has well nigh ruined them all.

We must forget, however, that the money which we loaned to Europe was raised in this country by the sacrifice of the American public in the form of the four Liberty loans, and the Victory loan. Many people believe that if we were to restore Europe her credit by cancelling the debts it would be merely to say that the United States, the only victorious nation that did not profit commercially or territorially by the war, would pay not only her own costs, but a large part of the costs of the European nations. In view of this widespread sentiment, the cancellation of the foreign debts is probably an impossibility as a practical issue. Good evidence for this assertion is found in the fact that at the beginning of this month an arrangement has been concluded with England, by negotiations ratified both by congress and the British ministry, for the funding of the entire British debt of four billion, six hundred million dollars. The terms of the arrangement are undoubtedly liberal to England, providing as they do for an interest rate of 3—3 1-2 and a term of 65 years for repayment. Yet the United States treasury will benefit by a sum of 150 millions per annum, and an excellent example has been set to other European nations. If the debts are to be paid at all, an arrangement such as this is likely to disturb our trade to the least possible degree, and is, hence, the most satisfactory solution of the problem.

Champion Canning Club Teams Sail for France

Their prize a two month trip to France, the two canning club girls teams which won in national competition at Chicago recently, set sail last Wednesday from N. Y. on the S. S. La France; after four days in Chicago and Washington and in meeting the President. The first prize team is from Eddyville Ia. The second team from Burkington Colo. Reading left to right, front row; Bertha Rodgers, Buelah Rodgers and Katherine Bolibaugh. Back row; Maude E. Sheridan, Elaine Hendricks, Pres. Bradfute, American Farm Bureau, Ester Bolibaugh and Secy. John Coverdale of the Farm Bureau.

Pageants Inspire Interest---Create Review History of the Northwest

The recent pageants held at Walla Walla and Moscow, and the one soon to be held at Seattle, have inspired an awakened interest in the history of the Pacific Northwest. Many oldtimers who remember some of the stirring incidents of the earlier days have come forward with bits of information which serve to embellish the written history of the settlement period of the Northwest, and many interesting sidelights have thus been gained.

Men who bore arms against the Indians during the brief uprisings of the late fifties are now dead and gone, but in papers which they left and in stories which they told their children there are many interesting bits of fact which serve to illuminate some of the stories which have already been written. These incidents have come out most vividly as a result of the awakened historical interest, and for the benefit of the younger generation it is perhaps well that the main facts surrounding these episodes be published at this time.

Steptoe Butte.

In the northern part of Whitman county there is one towering peak which dominates the northern rolling plain of what is called the Palouse country. This is Steptoe Butte, which can be seen for miles in every direction. Not far away is the town of Steptoe, and it is more than probable that there are those now living in this section of the country who do not know from whence comes this rather unusual name. For the benefit of such, be it said that Steptoe Butte and the town of Steptoe are named for Col. E. J. Steptoe, who was commander of Fort Walla Walla at the time of the wars with the Indians north of the Snake river, and that the Butte was the scene of his final stand before the beginning of the retreat which marked the first defeat of the whites in this war.

Previous to 1855 the Spokane and Coeur d'Alene Indians had always been friendly to the whites. Governor Stevens had made several treaties with them, all of which looked forward to a peaceful penetration of the country by the whites, without in the least disturbing the rights and privileges of the Indians. However, the Yakimas had made a treaty which had been ratified by the government which their crafty chiefs sought to nullify, and a brief war followed, in which the Yakimas were worsted.

The Tricky Palouses.

The Palouses, who occupied the territory immediately to the north of the Snake river, were a treacherous and crafty tribe. They were in sympathy with the Yakimas, but during their brief war committed no overt act. Mullan says of them that they were made up of outcasts and renegades from every other tribe in the interior, and that their best traits were lying and thieving.

They immediately set themselves about the task of inflaming the Spokanes and Coeur d'Alenes against the whites. In this they succeeded, and finally brought such pressure to bear against Chief Garry, of the Spokanes, that the old chief, while protesting friendship for the whites, claimed later that he was compelled to take the warpath by the younger members of his tribe.

The chiefs of the Spokanes and Coeur d'Alenes were made to believe that they had been deceived in the making of the treaties; and in fact they urged upon the whites that the men who had made the treaties against which question was raised were without authority from the tribe. This, however, was again inspired by Palouse propaganda.

Cause of the Trouble.

About the best motive that has ever been advanced as a reason for the activity of the Palouses was that they desired to form a strong enough Indian alliance to go to war; the principle involved meant little or nothing to them. They desired war merely for the sake of the loot that they could obtain, and tried to arrange things so that the other tribes would do the fighting while they did the looting.

The actual beginning of hostilities is also believed to have been inspired in some measure by the friendly Nez Perce scouts which accompanied the expedition led by Steptoe. These scouts were from a tribe which hated the Palouses and Spokanes, and they believed that in case of war the whites would easily defeat and humiliate their ancient enemies.

On May 6, 1858, Steptoe started from Fort Walla Walla with his command for an expedition to Fort Colville. That he would be required to do any fighting enroute seems to have been beyond his calculations, for the expedition was poorly equipped as to arms and ammunition. Most of the infantry carried muketoons, which had a range of less than 50 yards, and were far inferior to the British-made rifles carried by the Indians. Thirty rounds of ammunition was the largest amount carried by any man, and this, together with two howitzers, made up the entire fighting equipment of the expedition.

The Attack.

On the morning of Sunday, May 16, Steptoe's command was met by a body of Indians which outnumbered them several times over. The Indians paralleled the line of march and throughout the day taunted the whites, evidently trying to enrage them into some outbreak which could be construed into a cause for action. Steptoe told them that he had no intention of fighting; that his expedition was merely in the nature of a visit to Fort Colville, and that he contemplated no encroachments on the rights or territories of the Indians.

However, when night fell and the camp was made, it became apparent that a fight was imminent. A council of the officers was held, and it was decided to turn back on the following morning, rather than have trouble of any sort.

Accordingly, this was done, but the retreat was not three hours under way until the Indians commenced their attack upon the rear guard, and this quickly developed into a general action. The fighting grs wmore severe as the day progressed, until Steptoe finally decided upon a stand at the site of what is now the town of Rosalia, in the northern part of Whitman county.

However, this proved futile, and the retreat was resumed, as the Indians' superiority of arms made it impossible for the whites to inflict any severe injury upon them without making direct charges, which proved to be ineffective, as the Indians were scattered through the tall grass. At evening athe command reached Steptoe Butte, where camp was made for the night.

The Final Retreat.

The officers held another council, at which it was deemed best to continue the retreat under cover of darkness. The odds were already overwhelmingly against the soldiers, and it was anticipated that morning would bring fresh hordes of Indians against them, so that they would be annihilated. History has proven that the Custer massacre would undoubtedly have been repeated had Steptoe decided upon a stand.

The howitzers were buried in the soft mud of a little stream in the near vicinity; camp equipment was stripped to the bare necessities required for a forced march to the crossing of the Snake, where Steptoe had established a fort, and under cover of darkness the little command, after burying such of their dead as they could find, began its weary march to safety.

It had been learned that the Indians had planned on cutting the line of retreat by beating the soldiers to the Snake and taking their canoes, and this also had a great deal to do with the decision to make a sudden retreat. Steptoe and his men reached the safety of the fort without further fighting.

Seven Killed, 13 Wounded.

The official account of the battle places the loss of the command at seven men killed, including two officers, and 13 wounded. The losses of the Indians were probably much greater, but nevertheless the victory remained with them because of their superior numbers and equipment.

An attmpt was made to prove that the uprising was caused by the activities of Father Joset, a priest who labored among the Coeur d'Alenes at that period, but the charge was afterwards proven to be ridiculous. In fact, historians says that it was doubtless inspired by the Palouses themselves, as Fther Joset was really instrumental in keeping the Coeur d'Alenes from making an active alliance with the Palouses.

Timothy, the Nez Perce guide who directed the troops in their march, is also blamed with responsibility for the battle, and perhaps justly, although he had no idea that it would result in disaster. At the time of the engagement he was elading the soldiers considerably to the eastward of the regular crossing of the Spokane river, and it is beyond the bounds of imagination to suppose that he did not know this. History has claimed for him that he was really desirous of precipitating a battle, but that his desire was prompted by the supposition that the whites would easily defeat and humiliate the ancient enemies of his tribe.

The account of the reprisals by the whites under Wright and the subsequent disposal of the rebellious Indians furnishes two or three more interesting chapters in the history of the northwest, which will be told at a later date.

Ways of Sleeping Animals.

Elephants sleep standing up. When in a herd a certain number will always stand watch while the others sleep, for the big, powerful beasts are timid and cautious at night and will not go to sleep unguarded.

Bats sleep head downward, hanging by their hind claws.

Birds, with few exceptions, sleep with their heads turned tailward over the back and the beak thrust beneath the wing.

Storks, gulls and other long-legged birds seep standing on one leg.

Owls, in addition to their eyelids, have screens that they draw sidewise across their eyes to shut out the light, for the eyeep in the daytime.

Foxes and wolves sleep curled up, their onses and the soles of their feet close together, and blanketed by their bushy tails.

Lions, tigers and cat animals stretch themselves out flat upon the side. Their muscles twitch and throb, indicating that they are light and restless sleepers.

"Bully," said the steak. "Punk," said the firecracker. "Rotten," said the apple. "Fit," said the tailor. "Corkin," said the bottle. "Fine," said the judge. "First rate," said the postmaster. "Grate," said the coal. "Grand." said the piano. "Ripping," said the trousers. "All done up," said the shirt.

Dairy Animals Make Part Meat Supply

About One-Fourth of Beef Supply of County Comes From the Dairy Herds.

About 17 per cent of the matured dairy animals in this country find their way to the slaughter and packing plants, according to the United States department of agriculture. It this percentage is applied to the number of matured dairy animals reported on farms by the last census, and the average live weights and dressing yields are used in calculating the beef production, the result shows about 1,502,450,000 pounds of carcass beef produced from dairy cattle during the year 1920. This quantity represents more than 23 per cent of the total beef production of the United States for that year. Probably 30 per cent of all the calves slaughtered are of dairy breeding. If this percentage is applied to the total number of calves slaughtered in 1920 nd the resulting figure multiplied by the average live weight and dressing yields, the amount of veal produced by dairy calves is about 560,647,000 pounds for the year 1920.

The principal conditions which causedairy cows to be discarded for milk-production purposes are old age, disease, physical defects, low milk yield, and sterility. Many old dairy cows and others that are unprofitable as milk producers are fattened for a short period and then sold for beef. When properly fed such cows make rapid gains, although the tendency is to accumulate fat externally and in the body cavities rather than to produce a well-marbled flesh. About 5 per cent of the cow carcasses are graded as common or lower, and the meat is used largely in the preparation of sausage and canned meat.

Bulls that are no longer desired in the herd for various reasons make up a part of the meat from dairy cattle. They are seldom suitable for dressed beef, a large proportion of the rounds being used for dried or smoked beef and the remaining portions of the carcasses for sausage.

While the quality of beef produced from mature cows and bulls is of lower grade, it is not necessarily true with respect to the veal obtained from dairy calves. Probably 95 per cent of the, male and 50 per cent of the female dairy calves are slaughtered as calves. Most of these animals if properly handled and slaughtered while young produce a high grade of veal.

DAIRY

Cheddar cheese making is a popular phase of extension work in Bannock county, Idaho. Through instruction in this process many families effect considerable savings, as most of the farmers keep several cows. As a result of demonstrations in the county about 2,000 pounds of cheese was made by the farm women of the county up to July, 1922, according to a report received by the United States department of agriculture, and many women made a good deal of fall cheese.

Nearly all disorders or diseases of calves are caused either directly or indirectly by lack of cleanliness. Filth, whether it is in feed, pens, bedding, or pails and utensils, is dangerous to the health of the calf. To be on the safe side use nothing but clean milk (never use separator slop), scald pails or sterilize them with steam, remove old feed from the boxes and clean them daily. Filth and dirt are the natural breeding places of many bacteria that will cause disturbances in the young animal's stomach. Freedom from filth usually means freedom from disease.

Under most conditions on the dairy farm fall calving is desirable. The calf receives milk for the first few months of its life, and when it is ready to be weaned from this food good succulent pasture is available. During the winter it has learned to eat grain and roughage while it has been getting whole milk, skim milk, or milk substitutes, and when grass comes it can make the change without getting a setback. There is another advantage in fall calving, as the cow gives the greatest flow of milk at the season when prices are usually the highest. Also calves are at the right age so that if well developed they may be bred to calve in the fall. From the standpoint of profits on milk, local conditions, such as cost of feed and price of milk in different seasons, should have consideration.

Mrs. De Nagg—It's about time our Mary was getting married.

Mr. De Nagg—Just let her wait until the right man comes along.

Mrs. De Nagg—Why should she? I didn't.

Sea Crimes and Criminals

The sea has its own particular crimes—coopering, barratry, piracy, blackbirding, and, better known, perhaps mutiny. It has its own queer unsolved crimes, as the sea today is a more lawabiding place than it used to be. It is only the bootleggers who defy prohibition round the coasts of the United States who give any trouble to authority.

And of the souvenir hunters—they are he real criminals of modern times. There are accounts in the office of a wellknown firm of passenger-carrying ships where the estal losses of crockery, linen and plate in a single ship on a single trip were set out. The totals per ship per voyage reached such figures as $7,300, $6,100 and $4,500. Now crockery we admit, can be an accidental loss. But linen to the value of $4,500 does not get blown overboard between New York and Southhampton. Nor does electro plate to the value of $1,000 slip down the sink grating.

Bullion is sometimes stolen mysteriously at sea. There was a gang working on the Pacific coast just before the war that got away with $55,-000and $30,000 in two hauls and were never run to earth. Bonds have been known to go from the strong room of a steamer and never be traced.

Arson is a crime rarely practiced at sea, but there was at least one strange case. A tramp steamer crossing the North Sea was suddenly found to be on fire. A hatch was opened, the flames fought down, and then an examination that the fire had begun in a wooden case, which, the captain remembered, was very heavily insured. Its charred remnants of books, clothing, papers, fire lighters and powdered charcoal soaked in creosote. There were some fragments of rubber tubing, which had apparently been filled with sulphuric acid. This ate through he rubber, and then made contact with a mixture of potassium chlorate and sugar, which burst into flames.

All sea crime is not grim. One mutiny is recalled that was as comic as you could find. A bark owned by a Finnish concern signaled to the British cruiser Berwick at Spithead some years ago that there was a mutiny on board, and armed seamen and marines were rushed across to her. They found the captain, the mate and the stewart blockaded by the crew of twelve who, decided to leave when the marines appeared. There was a difficulty about paying them off, however so the naval officer in command left a garrison of marines on board for the night. The first thing the garrison did was to suggest to the mutineers that the ship wanted cleaning up a bit, which it did—so each party took half and vied with each other in puttings shipshape. The rest of the day passed peacefully swabbing decks and at night the mutineers serenaded the garrison with a fiddle and a broken concertina, playing Finnish airs.

An exchange says "let bruterly love continue." But why not let it begin?

Commercial Statesmanship

In the not far distant past the chautauque graft almost became a national scandal.

A certain type of senators and representatives in congress would howl and rant all through the session, not for the purpose of preventing the passage of a bad bill nor for the purpose of promoting the passage of a good one, but for the purpose of keeping their names before the public so that on proof of being "better advertised" they conuld consistently demand from the lyceum or lecture bureaus more pay per lecture.

To cover the trail from the front door of the capitol to the back door of the lecture bureau they always endeavored to make it appear that they were "fighting for the people." They never originated a helpful bill nor offered remedial amendments to a bad bill. That was not their business. Their business was to howl and rant and keep their names in the daily press reports and then shake down the chautauqua organization for more money.

President Taft practically broke up this practice by keeping congress in session, and the chautauqua spellbinder who had to remain in Washington to attend to public duty for which he was paid, and dig down into his pocket to employ some one else to fill his lecture engagements, at once became his bitter opponent.

It is more or less a political secret but all the way in which that much of the opposition to President Taft came from those prevented by an extra session of congress from commercializing their "statesmanship" on the chautauqua platform. The lure was not the call of the people, but the jingle of the gate receipts.

While wholesale education of the masses best insures public rectitude and mental equipoise, still in view of the harm potentialized by demagogic preachment it may well be questioned whether any man in public life shall be permitted to commercialize his views on the public platform, for back of and surrounding it is the incentive to play to the grand stand, not for the purpose of promoting the public welfare, but to become "better advertised". Senators and representatives are paid regular salary by the people for all their time and when permitted to commercialize their views on the lecture platform they compel a portion of that same public to pay twice. If a sense of public duty impels them to lecture let such lecture be free and not tainted with veneered duplicity and avarice.

Hot Days Soon Here

McCORMICK - and - DEERING

Harvesting and Haying Machinery

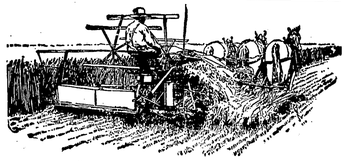
YOU farmers with years of experience in grain growing know that the binder plays an important part in making small grain crops profitable. To insure the safety of the crop, your binder must work efficiently and without delays in the short harvesting season.

McCormick and Deering Binders

Thousands of farmers have depended upon McCormick and Deering binders, and the increasing popularity of these machines shows that their faith has been well placed. In lightness of draft, ease of operation, and accuracy in getting all the grain under varying conditions, these binders have made good under the severe tests of time.

Come in and see them and talk with us about your harvesting problems.

We have a large stock of repairs for all makes of harvesting machinery, including John Deere. Order your repairs early.



International Binder Twine—
Sisal, Standard, Manila

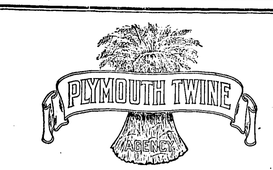
We have a large stock of the Pure Oil company's PURE PENNSYLVANIA OIL. A grade for every auto, truck or tractor.

Beginning at Once

All merchandise strictly cash with the exception of farm machinery, tractors, threshers, trucks and other large equipment.

FOR SERVICE SEE

MEYER & SON



A Straight Tip

THERE is a real saving in the use of Plymouth Twine, to say nothing of the satisfaction, over the cheap kinds which do not have the necessary strength and uniformity, and which are invariably under measurement.

A recent comparison of a ball of

PLYMOUTH TWINE

with that of another make which was made in the field last season showed that it would take 135 pounds of the cheap twine to bind the same amount of grain that 100 pounds of Plymouth Twine would tie. The cheap twine was not only greatly under measurement, but was decidedly inferior in quality and strength.

Better take no chances; place your order for Plymouth Twine with us and get full length and strength, which is guaranteed by the Plymouth Tag on each and every ball.

BILLIONS FOR 1922 AUTOMOBILES

e tendency to regard the autolle as a luxury, even by legislabodies at Washington, must die ly, if the story told by the figof the last year are taken into nt, says George H. Hannum, dent and general manager of Oakland Motor Car company.

e automobile industry, including and tires, had an output in 1922 ,725,000,000, making it the largndustry in the United States. t apart from the fact of the size e industry, the largest factor afg general business conditions in country that is not taken into ac- is the influence of the automoindustry on the raw material et.

fact, some of the basic industries e country are dependent on the hobile business. Such, for in-e, is the rubber industry. Of 00,000,000 pounds of crude rubmported into the United States year, 490,000,000 or 81 per cent required last year for automires.

oline and lubricating oil consti- in point of value, two-thirds of tput of petroleum refining. Last approximately 5,400,000,000 gal- of gasoline were produced, and of this amount more than 4,320,000,-000 gallons or 80 per cent of the total were used in automobiles. Of the lubricating oil used for domestic purposes, 40 per cent was needed for the automobile.

Approximately 75,000 bales of Egyptian type long staple cotton were grown in the United States last year, while 400,000 bales were imported from Egypt. About 38 per cent of this total was used in the manufacture of automobile tires.

Nearly one-third of all the plate glass made in this country and approximately 1,750,000 tons of iron and steel were used in the construction of automobiles last year.

It is apparent, therefore, that any weakness in the market for automotive products will be immediately reflected in the business of all of these industries, which depend wholly or in part on the automotive business for a market.

Why Suffer from Rheumatism

Do you know that nine out of every 10 cases of rheumatism are simply rheumatism of the muscles or chronic rheumatism, neither of which requires any internal treatment? The pain may be relieved by applying Chamberlain's Liniment, which makes sleep and rest possible, and that certainly means a great deal to any one afflicted with rheumatism.—Adv.

The Goose and the Gander

And they talk of wanting "equal" rights! Are they willing to give up enough of their special privileges to render their rights equal to those of poor man? That's the question.

Noting of late how they carry their make-up boxes with them and blushingly perform their ablutions and the rest of their toilet whereverthey happen to be, I took heart of hope and saw a way out of an occasional difficulty. But my hope was vain, because it was founded upon the belief that women sincerely wanted equal rights and that men were willing that those rights should equal. I found that I was wrong on both counts of the indictment. Women will not accept a condition involving equal rights; and men will not let other men exercise rights equal to those granted unprotestingly to the women.

In Memphis recently I found that I should have to hustle terribly if I shaved and then went to church. So I presumed upon the sincerity of some of the equal rights propaganda I had heard, and took my oughtto-stay outfit with men in my hand. I was sure opportunity would arise if things were not exceedingly normal in that town.

Sure enough, a girl came and sat in the same pew with me, and after settling down to a perfunctory observation of the service—just enough to assure her things were running along the single, safe and sane track of ecclesiastical normalcy, she opened her tool chest, took out a little bottle of liquid rouge, touched up her lips and cheeks, rubbed them neatly with a chamois, with which she also unshined her nose, took her eyebrow pencil and let it do its duty, produced an orange stick and did her nails finishing with a small manacure scissors. Then she ran a little comb deftly through her hair, looked at herself in the mirror, cocking her head on this side and that, and with straight-fingered pats she put her ear-prot ectors in order. Then I breathed easier. I knew I was safe in what I contemplated.

Taking out my razor and the strop, I fastened the latter to the hymnbook rack, silently stropped it a bit, dug out a little bottle of liquid soap, took off my collar, rubbed my face well with the soap, and then lathered with the brush, and was just beginning to give my countenance the first explanatory scrape when I was attracted by frozen horror on the face of my seatmate, who had done everything except wash her feet and brush her teeth since she had seated herself in the pew. Turning about with pallid cheeks and eyes distended with outraged and insulted and insulted womanhood, she beconed to one of the deacons. The latter came, saw what I was about, called another deacon, and the two hurriedly and firmly escorted me from the edifice. I had the greatest difficulty persuading them to let men gather up my tools before leaving. And as we went down the excited aisle—I with my collar hung over my forearm and my hands crowded with shaving paraphernalia—I realized that even an explanation, much less a protest, would be vain, in the face of such blind prejudice as exists in favor of the other sex—the only one of our well-known sexes permitted to make its toilet in church; to get itself publicly ready for appearing in public.—Strickland Gillilan.

Statesmanlike Cooperation Needed

Among many similar pleas for the betterment of rural schools are those for assessing property at its true and actual value, those for a finer cooperation between the county superintendents and normal schools, those for the increase of the maximum levy, those for good roads and consolidated schools, and those for longer tenure for teachers and county superintendents.

The whole problem of rural school betterment is one which may well challenge the attention of the ablest community builders. Nothing short of statesmanship like cooperation after facts and conditions are realized, can serve to bring to the superintendents of America assistance and facilities worthy of those who are faced with the responsibility of supervising the instruction of more than nine million of America's children. These leaders deserve the active cooperation and support of legislators who shape their laws, of voters who call them to service, and of the tax payers through whose good business sense, alone, the real program of better rural school conditions must be developed.—American Educational Digest.

Will Entertain Progressives

Mrs. J. J. Tupker will entertain the Progressives at her home on Thursday June 21.

U. OF I. PAGEANT WAS GRAND SUCCESS

Portraying Idaho's history from the time of Indian occupation to the present, University of Idaho students Saturday night enacted a pageant of drama, dance and song, "The Light on the Mountains," before a crowd in which all parts of Idaho and the inland Empire were represented.

Spectacular lighting effects, including the repeated appearance on the hilltop of the gigantic figure of an Indian horseman, typifying "E-dah-ho," were the features of the pageant, which was staged at night especially to make these effects possible.

The pageant opened with a symbolic masque, introduced by the appearance of Earl Whitteborg of Caldwell, who took the part of "The University" and heralded the approach of "Miss Idaho" represented by Miss Jean Rowlands of Sandpoint, who had been elected by the students, to this honor.

Significance of the pageant title, "The Light on the Mountains," was explained by "The University," in a poetic version of the fact that the Shoshoni Indians used to cry "E-dah-ho" in the morning when they saw the rising sun throwing a rim of light about the mountain tops. This was the origin of the name, "Idaho" and meant, "Behold, the sun coming down the mountains."

In this prelude the pageant struck a high literary which it maintained throughout and which excited special comment on the fact that the book had been written by a student, Talbot Jennings, formerly of Nampa and of Boise.

Numerous speaking parts in the production gave opportunity to test the acoustic qualities of MacLean field, university athletic field, which were found to be excellent. Lightening was provided on three distinct arenas of action by six large searchlights.

The first scene depicted an enormous encampment of Shoshoni Indians in what is now Lemhi county. By the campfire, Walking Thunder, the medecine man, whose part was taken by Maxwell Sholes of Moscow, predicted that when a Shoshoni maiden should be stolen it would foreshadow the overthrow of the Indians by the whites. This prophesied the kidknapping of Sacajawea, the "Bird Woman" who in the next scene was shown guiding Lewis and Clark into Idaho.

The part of Meriwether Lewis was taken by William G. Guernsey of Kingston, N. Y., while Clark was represented by Wilbur C. Disney of Rupert. Sacajadea was played by Jeanette Greve of Cottonwood. She was shown meeting her Shoshoni brother, Chief Cameahwait, whose part was taken by R. K. Stanford of Boise.

Following the appearance of "the explorer," as typified by Lewis and Clark, came "trader and trapper," typified by David Thompson at Kullyspell house in 1809, and by John Reed on the Boise river in 1814. "The Missionery" was represented by Henry H. Spalding at Lapwai and by Father DeSmet at the Mission of the Sacred Heart near St. Maries. Part 4, "The Oregon Trail," concluded the first episode, entitled "The Trail Breakers."

"Gold" was the title of the second episode, which was made up of five scenes in two parts—"discovery" and the "mining camp." These scenes were: "Gold on the Clearwater, 1860"; "The Prospector, 1861;" "Gold in the Boise Basin, 1862," "Old Idaho City, 1863;" and "The Vigilantes, 1863."

The third episode was "The Epic of the Nez Perces, 1877," in three scenes: "The Defiance;" Indian and Settler;" and "The Last Stand."

Clayton Hoover of Blackfoot took the part of David Thompson, and Bert Stone of Nampa played the part of John Reed.

The Rev. Henry Spalding, Pioneer missionery at Lapwai, was represented by Carl Nelson of Moscow. Mary Kelly and Louise Yeaman, both of Idaho Falls, took parts respectively, of Mrs. Spalding and of Eliza Spalding, the first white child born in Idaho.

Father Peter J. DeSmet, famous Catholic missionery, was played by L. N. Wilson of Boise. He with Father Point, companion Jesuit, whose part was taken by Bryan Bundy of Culdisac, was shown receiving a deputation of Crow Indians and promising them a visit in the spring.

Capt. E. D. Pierce, discoverer of gold on the Clearwater and the starter of the great immigration that made Idaho a territory in three years, was represented by Dave Neelan of Boise; and Nez Pesce Jane, who guided the discoverers on this expedition, was played by Pauline Pence of Payette. Moses Splawn and George Grimes, leaders in the discovery of gold in the Boise Basin, were represented by Chester L. Justus of Harrison and Harry Rubie of Johnson, Wash.

In the Idaho City scene, depicting the heyday times of the gold-rush, when 16,000 people had rushed to the New El Dorado, the following were among the characters introduced: Bishop Tuttle (Everett R. Erickson of Curlew, Wash.); former Governor W. J. McConnell (Lyn Nash of Boise) Patterson, a "bad man" (Jack Hasfurther of Genesee); John Hailey, (Wayne Davis of Gooding); former Governor James H. Hawley (Deane Sibley of Boise); a northern sympathizer (Gilbert Darwin of Lewiston); a southern sympathizer (Don Cunningham of Boise); a confederate colonel (Robert Broch of Wallace); Mrs. Luna Florence Shelby of Boise); Gentleman Dick (Fred Taylor of Nampa); and Reynolds, another "bad man" (Maurice Hoffman of Troy).

Many Genesee people were in attendance and all were loud in their praise of the entertainment.

FARM BUREAU PICNIC DRAWS LARGE CROWD

The fifth annual picnic of the Latah County farm bureau which was to been held in the city park in Moscow on Thursday, June 7, was held in Eggen's hall instead. This was necessary because of the heavy rain which fell during the morning. In spite of the rain there was a large crowd. Approximately 300 people spread their dinners on the tables provided in the hall.

Immediately following the dinner the tables were pushed back and addresses were delivered by George Sievers, manager of the Moscow union warehouse company, and Dean E. J. Iddings of the college of agriculture. Music was furnished by the Moscow city band.

Following the program at the hall there was an excursion over the experiment station. Stops were made at all of the principal departments and talks were given by those in charge of those departments. There were 20 cars on the excursion over the farm.

Cooperation was the keynote of the talk given by Mr. Sievers. "We often hear that the business interests are organized to work against the farmer," Mr. Sievers said. "This is not true and I have no sympathy with the statement. Business interests are organized, not against the farmers but to work for their own best interest. This is a privilege that is granted to any group. The farmers have the same right but have only recently begun to make use of that privilege. Practically all progress in practical cooperation among farmers has been made during the past 15 years. Now we have the equity, the grange, and the various wheat growers' associations, the farm bureau, and others, working to better the farmers' financial condition.

"It is time for all farmers to take advantage of their opportunity to work together and cooperate. I have felt and still feel, that the farm bureau offers what is probably the best organization we can use in getting together. Let us all get together and do our parts in making cooperation practical and an actual reality.

"For a number of years, I have heard little other than complaint from the farmers," the speaker said at another point. "This has been due to poor crops and to the fact that prices of farm products have not been in proportion to other products. Today we have the best prospects that we have had in the Palouse country for a number of years, and we are hearing less complaint in regard to poor prices for farm products."

Dean Iddings spoke concerning the possibilties of modern farming, of the ways in which the farmer of today can serve tih community in a constructive way, protecting the future of the community and developing new and fertile fields.

"We have come to a new day, a new period in the history of the West when the great problem facing us is the preservation, conservation and wisest possible utilization of the natural resources of the state and western regions that have already been taken possession of," he said. "This calls for a new type of pioneer, those who will find ways of better extraction of metal and of wiser utilization of minerals, coal and oil resources, those who will build great irrigation works, reveal new knowledge of soil, discover new plants, and breed finer types of animals, solve the problem of protecting the former from insects, pests and plant diseases, thereby contributing to the prosperity of agriculture, and finally those who will work for humanity, solving the great problems of human disease and finding ways of alleviating the suffering of mankind."

"It is a day, speaking particularly with reference to the farm, when the old methods will no longer suffice. With the conservation of soil, the introduction of new plants, the diversification of methods and careful study of the marketing problems and the bringing of the greatest possible amount of intelligence to bear upon the problems of the farmer are fundamental for success.

...ents of the past few years in-

In closing, Dean Iddings assured the assembled farmers of the cooperation of the local college of agriculture and experiment station. He spoke complimentry of the progress made in molding the agriculture of this region to conform with the needs and ideals of the new period.

TWO GENESEE BOYS GRADUATE FROM UNIVERSITY

Two Genesee students received degrees from the University if Idaho on the graduation of the largest class in the history of the institution. Recipients of the degrees were John Hasfurther and Alfred Brigham.

John Hasfurther received the degree of bachelor of arts in commerce. He is a member of the Sigma Nu fraternity, Alpha Kappa Psi, honorary commerce society, and the Desmet cub. The first semester of his sophomore year he served as class as vice-president and the second semester as president.

Alfred Brigham received a B. S. degree in agriculture. He is a member of the Ag club and the Glee club, and a member of the college of agriculture stock judging team his junior and senior years.

Degrees were conferred on 171 students at the twenty-eigth annual commencement exercises of the University of Idaho. The class was nearly twice as large as the graduating class of any previous year. Fifteen masters' degrees were granted, and 156 baccalaureate degrees.

Prof. Edmond S. Meany, head of the department of history at the University of Washington, delivered the Commencement address, speaking on "The Northwest in Contact with the Nation." Governor C. C. Moore and I. E. Rockwell of Bellevue, president of the board of regents, also spoke. The baccalaureate sermon was delivered by Dr. W. J. Boone, president of the College of Idaho.

A feature of the exercises was the dedication of Mary E. Forney Hall, new dormitory for women, which was built this winter. This structure, a $100,000 brick building, is named for Mrs. Mary E. Forney of Moscow in recognition of her long friendship for the university and her services to the cause of education in Idaho, though the activities of the state federation of women's clubs.

Graduates with the degree of bachelor of arts numbered 58; bachelor of science, 14; bachelor of science in home economics, 4; bachelor of science in pre-medical, 1.

Sixteen completed the four-course course, four graduated in forestry, four in geology, and three in mining engineering. One completed the course in civil engeneering, six in electrical engineering,and four in mechanical engineering, all graduated from the law school and 29 from the school of education.

The present state superintendent of public instruction, Miss Elizabeth Russum, and a former state superintendent, Miss Bernice McCoy, both were members of this year's class, having completed their work in the school of education last summer. Miss McCoy received also the degree of master of science in education as a result of continuing her studies this yenr. Her thesis was on"Educational Progress in Idaho as shown by the Development of the Public School System."

Stock Holders Meeting

Notice is hereby given that the annual meeting of the Genesee Union Warehouse Company will be held in the American Legion Hall at Genesee Idaho on Saturday, June 16, 1923, beginning at 1:30 p. m. for the transaction of such business as may leagally come before the meeting, including the election of six members of the board of trustees.

A. Carbuhn, Secretary.

Colton Dance Postponed

Owing to adverse weather conditions Tuesday the dance at the Colton open-air pavilion has been postponed until Friday, June 15, weather permitting. A regular dance will be held every Tuesday. Mann Brothers will furnish the music. 50-1

NEW YORK TO BUENOS BY TRAIN IS POSSIBILITY

Between 65 and 70 per cent of the proposed Pan-American Railway, which will permit of through overland passage from New York to Buenos Aires, is completed, according to figures compiled by the Pan-American union. These show that more than 6500 miles of the total 10,116 have been finished.

In many cases the route comprises sections of already existing national railroads. The route mapped out some years ago by a special committee is from New York to the Mexican border, thence through Mexico, Guatemala, Honduras, Nicaragua, Costa Rica, Panama, colombia, Ecuador' Peru, Bolivia and Argentina, to Buenos Aires.

Extensions would be built from the main line so as to include those Pan-American countries which the not in the direct path.

From New York to the Guatemalan border through railroad passage is possible now. Fram Guatemala to the Canal Zone more than half of the projected line remains to be built. The greatest uncompleted portion is from the Canal Zone down through Colombia, Eucador and Peru, to Lake Titicache, on the boundary between Peru and Bolivia, where there will be a short distance by water route.

In this section of the road only 542 miles is completed of a total needed of 3362. Another short link is required in Bolivia, a stretch of 127 miles on which construction recently has been begun. In Argentina the 1060 miles from the Bolivian border to Buenos Aires is completed.

Most of the sections now in use were completed before the outbreak of the World War, only a few miles having been constructed since that time. The increased flow of capital to the southern republic, some of which has been for the express purpose of railroad building, will give impetus to the completion.

MOST men are likely to hear a good deal about Revere value before they themselves get around to trying a Revere Cord.

That puts it up to the tire to satisfy some pretty high expectations.

The fact that the Revere Cord performs even better than the car owner could have hoped accounts for its growing thousands of steady users.

Ask the nearest Revere dealer.

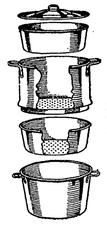
THE NEW HOTPOINT-HUGHES BUNGALOW ELECTRIC RANGE

Here Is The Range You Have Been Looking For

ON SPECIAL SALE
June 18 to July 21
Only $4.75
Down
And $7 a Month
Puts this
Electric Range with Electric Water Heater and Tank Cover completely installed in your home.

HUSBANDS---HAVE A HEART

Don't make your wife sweat and worry over a HOT COAL RANGE---It isn't necessary---there is a more modern way of cooking---THE ELECTRICAL WAY---which is the most practical way of cooking, because it is COOL, CLEAN, SAFE, CONVENIENT and actually CHEAPER.



ON MONDAY MORNING, JUNE 18, THE PRICE WILL BE REDUCED "FOR A SHORT TIME ONLY" ON THE HOTPOINT-HUGHES BUNGALOW TYPE ELECTRIC RANGE.

ONLY $4.75 DOWN AND $7.00 A MONTH

AS AN EXTRA OFFERING THIS SALE WE WILL GIVE WITH EACH RANGE AND WATER HEATER ONE FIVE-PIECE WEAR-EVER ALUMINUM COMBINATION COOKER SET—FREE

DON'T HESITATE - - - LET US DEMONSTRATE

PERSONAL MENTION

Bianche and Edith Craft were Saturday morning passengers for Coule City for a short visit with friends.

Miss Lindy Collins was a Genesee visitor Friday and Saturday.

Mrs. Lew Jain was a Moscow passenger for Moscow for a short stay.

Mrs. Maxwell was a Thursday morning passenger for Spokane for a short visit with her daughter.

Clyde Renchenhauser arrived Sunday on a short business trip.

J. N. Wicks returned Friday from a short visit in Moscow.

Mrs. Loren Bumpus returned Friday from Uniontown where she had been visiting friends.

Miss Lucile Stovall spent Thursday and Friday with friends in Lewiston.

Miss Edith Winegardner arrived Sunday evening from Lewiston for a short visit with friends.

George Schlerth was a Thursday morning passenger for Spokane for a short stay. Mrs. Schlerth returned withhim.

Lloyd Esser returned to his home at Uniontown after a short stay at the Chas. Grieser home.

Mrs. George VanBuskirk was a Saturday morning passenger for Pullman for a short stay.

Mrs. W. M. Herman was a Saturday morning passenger for Moscow for a short visit with friends and relatives.

Mr. and Mrs. Geo. Mochel returned Saturday from Walla Walla where they had been visiting friends.

Mrs. Fred Nagel and Mrs. Elliot were Monday passengers to Uniontown to spend the day.

Miss Martha Roth returned to her home in Lewiston after a short visit with her aunt Mrs. John Kretschmer.

The Misses Johanna Dwyer, and Violet Qualey, left Monday morning for Lewiston to take the summer course at the normal.

Miss Ethel Nelson and Miss Carrie Mae Hickman left Saturday for Lewiston to attend the normal.

Mrs. Dale Lamphier came up Friday from Clarkston for a short visit with her parents Mr. and Mrs. Joe Hasfurther.

Mr. and Mrs. Fred Morscheck, accompanied by Mrs. Ray Edwards, spent Sunday visiting with Mrs. Morscheck's parents, Mr. and Mrs. Gibbs, who live at Culdesac.

Miss Edith Daugherty left Tuesday morning for Spokane for a short visit with her sister.

Miss Grace Crossett left Tuesday morning for Troy for a short visit with relatives.

Louis Bershaw and Cecil Gray left Tuesday for Coeur d'Alene where they expect to stay for the time being.

Misses Ruth Wolf, Maxine Ehlen and Orland Mayer were visitors with home folks over the week end.

Mrs. Mary Burr arrived Saturday from Spokane for a short visit at the W. W. Burr home.

Mrs. J. T. Peterson and sister Mrs. W. L. Schrodder arrived Sunday afternoon for a visit with their brother Frank Qualey and family.

Mrs. Jim Edwards and family arrived Sunday from Lewiston for a visit here and to attend the chautauqua.

Miss Ida Evans returned to Genesee Wednesday after a visit with relatives at Spokane.

Mr. and Mrs. Chas. Jain and daughter Olive left Thursday for Boise, where they will visit before going to the Yellowstone park.

Grain Inspection Dates

C. B. Ahlson, state seed commissioner, Boise, announces that grain growers who desire inspection for certification may have until July 1 to file application instead of June 15, as stated in the certification circular. Extending the time two weeks will give the growers a better opportunity to observe the seed possibilities of the fields.

If this condition can be determined by June 15, please make appliecation to state seed commissioner so that ample time will be given to complete schedule of inspection. Notify county agent when inspection is desired.

Those "Easy Marks"

"When is a mark not a mark?" Just at this time a mark isn't but little American money. On Saturday the mark reached a real low mark, the exchange being 80,000 for one American dollar. If you want to become a millionaire on short notice, just send for a carload of German marks. The present status of the German mark is indicated graphically by the number of postage stamps required on even the simplest packages going out to other countries. A botany catalogrue, paper covered, small, only 100 pages, just received by the State College of Washington, bore on its wrapper stamps nearly covering it and totaling 3,585 pfennigs in value.

Better Buy One Soon

The price has been reduced for a short time only. At the new low price you can afford one and now is the time to put in your order for a new Bungalow model electric range.

A Phenomena

Astronomers can explain almost everything, except the odd circumstance that moonshine is more abundant on dark nights.

Special Notice

Notice is hereby given that the Latah County Farmers Mutual Fire Insurance company will hold a special meeting to amend Section 2, Article XII of the By-Laws, on the 19th day of June, 1923, at the I. O. O. F. hall at Troy, Idaho, at 1 o'clock p. m. All members are requested to be present.

Dated this fourth day of June, 1923.

49-2 J. H. VEDVIG, Secretary.

An Old Timer Visits

Andrew Solberg returned to his home at Bellingham, Washington, last week after a visit with his sister, Mrs. Mary Isaksen, who is in very ill health. Mr. Solberg was one of the pioneers of the Genesee country and is well and favorably known here by many old-timeers. He left here some 30 years ogo, going to Canada where he settled near Wetaskiwin, he being one of the pioneers of that section also. He stated that he and his family underwent many hardships and privations but that they finally won out.

Mr. Solberg removed from Canada to Bellingham in 1901, where he has since lived. This was his first trip to Genesee since his departure 30 years ago and he was naturally much interested in the town and country.

Reached Denver O. K.

Word has been received by friends in Genesee that Mrs. Gerald Coleman and Miss Elva Wilkinson, who left some time ago to make the trip overland to Denver Colorado, reached their destination without mishap worthy of mention.

Wins Honors

Miss Mabel Therese Bonney, young American woman, has been given a degree by Sorbonne University, France. Prior to that she had been awarded a scholarship to the institution. She is a brilliant student, and has translated several French plays for production in New York.

McCormick, Deering and Titan Tractors

International and New Racine Threshers

The right size for every farm

Don't leave it in the straw

Thresh for yourself. Then thresh for your neighbors and make the New Racine earn part of its cost.

Just the machine for threshing rings.

The line that invites comparison

The machine with a longer life

The new Racine threshes beans, peas, alfalfa and all grasses

Incorporating the field and factory experience of over three-quarters of a century.

Soil Washing and the Remedy

Leonard Hegnauer, Extension Specialist in Soils and Crops.

In many sections of the Palouse and in portions of the Walla Walla country, wherever the hills are steep, most fields show to a very alarming degree the effect of soil washing. Wherever the farming practice has been grain and summer fallow only, and where no effort has been made to stop washing, the damage is serious and is becoming worse each year. Soil washing in the last three years has been far worse than at any similar period during the time that these lands have been farmed.

Soil washing is affected by the steepness of the slope, the amount and character of the rain fall, and the method of cropping and soil management practiced. The single cropping system of grain and summer fallow, has brot about this condition.

So long as this practice is continued, it is safe to predict that conditions will get steadily worse and much of the land will ultimately be ruined. But the very seriousness of the situation will be the means of bringing about its own solution. The changing of the single cropping system, with summer fallow, to one of greater diversification will have to come. Just as the boll weevil forced the cotton farmer to abandon the one crop plan and compelled him to adopt a safer and better system of farming, so soil washing will be the means of changing summer fallow plan into another and a better one in which peas, vetch, alfalfa, clover and sweet clover will be found. The league to be used will be determined by the type of soil and by the amount of moisture available.

The soil originally contained a certain amount of organic matter which acted, among other things, as a binder to hold together the mineral soil particles so that soil washing did little damage. After years of cropping and summer fallow, during which time very little was done to make good the losses due to the breaking down of the organic matter caused by tillage, the soil now shows the serious effect of washing. The soil particles are readily carried by the running water and ditches and ravines down the slopes become common.

The remedy for this difficulty is greater soil protection during the rain season. It is noticable that the ployed or summer fallow field loses most during such a season, and a field protected by a well rooted crop looses plast.

To control the situation it will be necessary to reduce the frequency of the summer fallow until finally it will practically disappear altogether. The years of summer fallow should be occupied by a suitable legume, which will not only restore when properly handled, the organic matter, but also the nitrogen which the soil so greatly needs.

On the north sloops and in the ravines when the soil is heavy and the moisture is ample, alfalfa or clover may be used. Alfalfa, especially, may be left for a period sufficiently long in the rotation to make a marked improvement in both organic matter and nitrogen. Then when the crop is plowed up and put in grain the material thus taken into the soil will be sufficient to hold the soil together without serious washing.

The Washington Experiment station has found that it is good practice to turn under a limited amount of straw with the alfalfa which adds to the organic matter and in this combination reacts beneficially upon the soil.

On the slopes sweet clover will be much more desirable as this crop will grow better on the more compact and drier soil. A light application of straw with sweet clover, the same as with alfalfa will add to its value. These legume crops, while growing together with their residues when turned under, offer the only permanent solution to the problem of soil washing.

Ducks can sleep on open water. To avoid drifting ashore, they keep paddling with one foot, thus making them move in a circle.

Boys' and Girls' Farm Club Work

Three purebred gilts were purchased by boys and girls swine club members of Connell, while one was brought in from another district in the county. A swine club was formed and they expect next fall to have some good purebred stock to sell in the community.

Nine communities in Kitsap county have organized boys and girls clubs in various farm and home work. To date 188 boys and girls have joined in this work. The work is being encouraged through the cooperation of the commercial clubs and chambers of commerce of the various Kitsap county cities and the county agent.

While we were reading of the men and women striving for the marathon in dancing, Bernice Ross, a Wisconsin girl, did a stunt that was worth more to the world than dancing. She fed a Jersey calf three months at a cost of $19.84. She won prizes amounting to $91 on the calf and then sold it for $150, making a net profit on the investment of $221.16 for her labor. She has a record to be proud of.

The Flee clubs head the Pierce County list for 1923, showing a production over and above expenses of $1983.34; Puyallup takes second place with a showing of $1315.20; Connell's Prairie with its eleven members follows with a close third and a production of $1287.34, and McKenna, with only five members, takes fourth place, due to consistent and splendid work of Alma Ockfen, who has the distinction of being our first one-thousand girl. Other clubs follow in the order named: Weyerhaeuser, Marion, Alder, Woodland, Parkland, Thrkti, Midland, Alderton, Loveland and Kirby.

Agricultural Engineering—Compare the fertilizer improvement on your drained and undrained fields. Note if you see a marked increase in effect upon the drained field.

Plant Pathology—Well irigated and well cultivated soil keeps potato vines vigorous and helps prevent wilt.

Taken from the Massachusetts "Blue Laws."

They Took the Cake.

"It is ordered that no person shall sell any cakes or buns, either in the market or victualling houses, or elsewhere, upon paine of ten shillings fine; provided that this order shall not extend to such cakes as shall be made for the buriall or marriage or such like special occasion."

WASHINGTON NEWS

After stealing a Buick car in Sedro-Woolley a few days ago and driving it across the mountains the proposed bandit careers of Lee Johnston and Wesley Martin, two beardless youths of Sedro-Woolley, ended when they were arrested at Spokane. The young men were taken before Judge R. M. Webster and pleaded guilty to grand larceny. They were each sentenced to servefrom six months to 15 years at the Monroe reformatory. The car, owned by C. B. Ogle, was returned to Sedro-Woolley.

The young ladies who were selling poppies at the passenger station in Pasco on Decoration day had the opportunity of selling a flower to Rudolph Valentino, famous movie star who passed thru here that day on Northern Pacific train No. 3 on his dancing tour of the United States. Two of the girls, Miss Ada Sargent and Miss Mildred Schmaisled approached him as he strolled on the lawn at the station with his two dogs. They found him a willing purchaser, giving them $1.50 a piece for their flowers.

A contract was closed recently by the Clarkston cherry pool for the sale of 270 tons of berries to W. A. Murphy, of St. Paul. His bid submitted through C. F. Carlits, was about one cent above last year's market, being 10 7-8 cents for Bings, 9 7-8 cents for Lamberts and 6 cents for Black Eagles and Black Republics. The price is for the packed product and payment will be made as the cherries are received at the packing house and packed out. The first deliveries will be made about June 5 The cherry pool sold the entire Royal Anne crop to the Oregon Packing Company for nine cents, the purchasers to receive the fruit at the company's cannery, at Lewiston. Last year, Royal Anne's sold for 7 1-2 cents.

The city council of Waitsburg recently awarded the contract to pave approximately 20 blocks in the residence district of that town to a Yakima concern. The type of paving as decided upon will be a two-inch asphaltic-concrete. Construction will begin within ten days.

Wheat growers in the vicinity of Connell are planning harvesting operations in about 30 days and expect to be cutting wheat by July 1. The fall grain is reported to be up 18 inches and headed out. This wheat visitors say, is the best looking in several years.

Married women should remember that nagging doesn't make the nag go.

TIMBER GOING VERY RAPIDLY

Period of Severe Shortage Is Inevitable, Says Forest Service.

NOW MORE THAN HALF GONE

Even With Best We Can Do In Preservation and Replanting, Forests Sure to Fail.

A period of severe timber shortage in the United States is inevitable, according to the forest service, in an article in the 1923 Yearbook of the United States Department of Agriculture, entitled "Timber: Mine or Crop?" The evil effects of having treated the forests of this country as mines from which to extract the timber without regard for proper method or of growing new timber crops are discussed.

"American standards of living and much of our industry have been develope dupon timber supplies so abundant and cheap that the United States today is the largest consumer of wood in the world," states the forest service article. "We now use nearly half the lumber, more than half the paper, and about two-fifths the wood in all forms. We produce from two-thirds to three-fourths of the naval stores. The timber to supply our demand has been mined from the forest much as coal has been mined from the ground."

Timber More Than Half Gone.

The original forest lands of the country, according to the bulletin, totaled 822,000,000 acres and the stand of timber on that original area is conservatively estimated at 5200 billion board feet, probably having been far more. Today the forest land area is but 470,000,000 acres and the timber stand is reckoned at 1,600 billion feet of saw timber and 600 billion feet additional of culled and second-growth stands.

The rate of timber consumption in the United States, including loss by fire and other destructive agencies, is nearly four times as great as the rate of timber growth, it is also stated, the country's requirements amounting to about 23 billion cubic feet each year while but approximately 6 billion cubic feet is being grown. Although timber is growing on perhaps 250,000,000 acres of our forest land, the crop is so poor and so subject to damage that the land is producing but a small part of what it could produce under forest management.

However, according to the data contained in the article, if the entire forest area of the country—470,000,000 acres—were placed under intensive forestry about 27 billion cubic feet could ultimately be produced each year. This amount would exceed the present drain on our forests by a relatively small margin.

Increased Production Would Be Slow.

"This production, however, can not be brought about in a short time," continues the article. "To make the practice of intensive forestry universal or even the rule throughout the United States will be possible only through gradual progress. It will require the development of scientific knowledge and technical methods of timber growing comparable with what has slowly and at large cost been obtained for agricultural crops.

"It will require effective protection against fires. It will require methods of cutting the mature timber that assure prompt and complete reforestation. It will require the selection and concentration of growth on the best species in each region. It will require cultural operations, such as thinnings, which in European countries yield, and in this country may be expected to yield, a revenue from forest land before the main crop reaches maturity. It will require a cut so regulated that only the mature timber will be taken, and no more than the total growth of the whole forest.

"Even if intensive forest management could be applied instantly to the entire area of forest land in the United States, it would take a generation or two to bring about forest conditions as favorable to high production as those now to be found on small areas in this country or over large areas under forest management in Europe.

"Further, since the timber crop requires several decades to grow to maturity, though a full stand of the right kinds of trees could be started on all our forest land by some magic overnight, it would be 30 years at least before new growth would, under average conditions, attain sufficient size to furnish even low-grade material.

"In short, with the utmost that can be done many years must pass before we can make our forests produce through growth as much timber as is now yearly taken from them, and a period of shortage is inescapable."

Progress of Washington Litter Contest

C. M. Hubbard, Extension Specialist in Livestock.

Swine club members, farmers and breeders from Adams, Spokane, Whitman, Walla Walla, Yakima and Klickitat counties have enrolled in the 1923 Washington "Ton Litter" contest. While the enrollment is not heavy, still the owners of these litters are enthusiastic, each contestant expecting to win the contest for the Berkshire, Chester White, Duroc Jersey or Poland China breed, as the case may be.

Among the first to enroll were Lester Hartley of Cheney, with Duroc Jerseys, and Alva Bull of Ellensburg, with Berkshires. All of the entries are purebred litters.

From the interest and enthusiasm aroused in the contest to date, it is safe to say that the 1924 contest will include many more counties and be several times larger from the standpoint of litters entered.

The purpose of the contest as it is being carried on this year in Washington, Illinois, Indiana, Ohio, Texas and elsewhere, is to demonstrate proper breeding, feeding and management methods in efficient pork production, the thought being to produce a ton of pork from one litter in six months. Many farmers feel that this ton of pork cannot be produced in one hundred and eighty days, or at least that it cannot be done except at excessive cost per pound of pork produced.

In order to win the achievement emblems to be awarded by the State College of Washington, extension service, for winning ton litters, the following points are being closely watched by the contestants: All are using purebred sows, their litters being by purebred boars; rations containing strong muscle and bone building foods, together with exercise and good shelter were furnished the sows, both before and after farrowing; every effort was made to save large litters, at least eight pigs being necessary, preferably nine or ten pigs; pasture of a legume nature, where possible, is being utilized, in connection with farm by-products and the necessary amount of grain for maximum growth and development.

All successful livestock farmers know that it takes less feed to produce 100 pounds of gain when animals are in the "infant" stage than later when they are maturp. The Ton Litter contest takes advantage of this vital factor.

The Duroc Jersey swine breeders' association has offered $200 in specials to the heaviest Ton Litter in the state, provided it is sired by a purebred Duroc Jersey boar. Other breed associations are expected to do likewise.

Taking Out Spots.

"Fruit stains are rather complex, but practically all of them can be removed from wash materials if taken when fresh," said Miss Edna Irene Avery of the Home Economics department at the state college of Washington in a recent talk over radio broadcaster K. F. A. E.

"Simply pour boiling water through them from a height. Peach stains are more resistant than some others. If the stain still remains after the water has been tried, dash on a little oxalic acid, or use some potassium permanganate. You will find these two spot chasers very useful, so I am going to tell you something about them.

"Oxalic acid is a very strong poison, and should be kept out of reach of children, and marked POISON. It is made from pure crystals of oxalic acid, or it may be bought at any drug store. A 5 per cent solution is best, as it attacks the fibres of cloth, even cotton and linen, it should be rinsed out immediately after using.

"Potassium permanganate is made by dissolving a teaspoonful of the crystals in a pint of water. This can be bottled, and applied when needed with a medicine dropper. It will a brownish-red color which has to be removed by placing the material in oxalic acid and then rinsing. Before using it, always try it on a piece of the material first to see if it affects the dye. Some people use this for removing almost every sort of stain, but not everyone is so successful."

The most satisfactory method of keeping water out of a cellar is by a weeping drain running around the foundation wall outside about 6 inches below the cellar floor level. The drain should be connected to a tile which will run the water out of the ground at a level below that of the basement. Sometimes this requires quite a long run of pipe; sometimes not.

"A 1-2-4 mix is a waterproof mix, but is rather expensive. For a foundation wall you could put in concrete composed of 1 part of cement to 2 1-3 parts of sand and 5 parts of gravel is free of sand. This will not be a waterproof job, but will be more economical than a richer mix. To make this wall waterproof you can coat the outside with a tar of asphaltum.

"When you put in your cement cellar bottom, have it drain from all directions to come one point near on outside wall and at a point conveniently below one of the cellar windows. If a small amount of water seeps through the walls, or comes up through the cement floor and the walls, it will accumulate at this lower point and can be easily dipped or pumped out of the basement as it slowly accumulates.

"This is the best method where a weeping drain is not possible. Sometimes it is necessary even with a weeping drain, as the soil may be so heavy that the water does not get down quickly to the drain."

Freddy, do you (know what became of that piece of cake that was left on the tray? asked mother.

Freddy: Yes, mother, I gave it to a little boy that was hungry.

Mother: That was good of you. Who was the boy?

Freddy: It was me!—Ex.

POULTRY

A local poultry organization has been formed at Neppel, to become a part of the county organization recently formed at Wilson Creek. W. D. Van Slyke of Trinidad was elected president and Richard Thiemens of Ephrata, secretary. The main object of the association, as stated by County Agent A. R. Chase, is to promote the poultry industry of Grant county by better stock, better methods of handling and the standardizing of a few breeds. Poultry interest is intense in the county and several farmers have bought stock from accredited hatcheries, and four communities are working along the lines of having not more than two standard breeds.

For shipping eggs by freight or express, the regular method of packing in the standard egg crate which holds thirty dozen is the best and only satisfactory way. Place a layer of clean straw or excelsior in the bottom of the crate. Use clean fillers and pasteboard flats and place the eggs with the small end down. When the crate is filled, place a layer of straw or excelsior over the top and nail it securely at both ends but do not nail in the center.

Since the parcel post shipping has been in force, some producers of high-grade eggs have built up a very lucrative business in supplying individual customers with fresh eggs in this manner. Such eggs are usually supplied at considerable premium over the ordinary prevailing market price. Containers suitable for one or two dozen are to be had for this purpose. When shipping by parcel post, it is best to wrap each egg in newspaper or wrapping paper and then wrap the box securely after it has been packed. A firm, rigid package will ship well while a loose one will not.

One hundred and twenty eggs a week from 250 hens is not enough to put a flock into the profit making class by any means. So thought Frank Ferguson, a Jefferson county, Indiana, farmer.

In hunting for the cause of the hens' seeming lack of ambition, Mr. Ferguson called on his county agent for help. The agent suggested that instead of corn alone, the hens receive liberal amount of wheat. A dry mash mixture of 150 pounds of bran ,100 pounds of middlings and 100 pounds of tankage was also added to the scratch grain. After a month of such treatment the hens showed themselves willing to work when their overall did his part. Their production had increased from 10 dozen to 40 dozen eggs a week.

The rate of growth and development of chicks can be influenced quite materially by altering their ration. The high-protein feeds, such as meat, tankage and milk, tend to hasten growth and maturity. Accordingly, if pullets are hatched so early that there is danger of their beginning to lay before the molting season passes, the feeds mentioned should be removed from the ration as soon as the chicks reach full growth. On the other hand, a free use of these feeds will help to overcome the handicap of late hatching.

John, have you got $100 to lend me?

John: No.

Bill: Why you said 10 minutes ago you had $5000 back of you.

John: Yes, but I was leaning against the bank at the time.—Ex.

The United States now mines 200,000,000 more tons of coal than Great Britain.

A man never accomplishes much unless he has a wife to boss him—so a woman says.

LIVESTOCK

Nature never created the Percheron horse, the Shorthorn cow or the Jonathan apple. Man did that through his knowledge of her laws, and his own well being followed.

Nature strives for perfection. Man attains it. Nature creates and conserves animals and plants whose chief end is their own propagation. Man selects and improves these, and brings forth animals and plants for his own use as well.

Good live stock is the vital principal of the farm and the foundation of the nation's prosperity. With it comes good seed and good implements and these combine to produce good crops, good homes, good citizenship and good families.

Since man came upon earth, his culture, his enlightenment, his wealth and his comfort have been measured by the quality of his domestic animals. If he is a millionaire he takes pride in the blooded stock with which he surrounds himself. If he is in another sphere he thrives as his livestock improves.

With few exceptions there is feed enough wasted on every farm in the country to make the pork and pork products consumed on that farm. The hog is more efficient than other farm animals in making use of the farm by-products. With the hen the hog will select and utilize the whole-some parts of unsound and unmarketable grains, refuse from truck crops and by-products of dairy. This is one reason why hogs are used on such a large proportion of our farms. But the hog's principal article of diet is corn, and the Secretary of Agriculture has remarked that "our hog crop serves as a slow absorber for the variation in production of our corp crop year by year, thus ironing out the irregularities in corn prices."

"Ranchers in the Kennewick district are finishing the harvesting of their first profitable strawberry crop in 15 years," according to N. N. Doan, asparagus growers of Kennewick. "The berries ripened, just right, were large and well flavored and made the best crop that I have seen in 15 years of farming in that section," Mr. Doane said. "The only drawback was the shortage of pickers, which is still being felt in some sections. The best feature, is the price. I never saw prices hold up better, and there is no end to the market this season."

Work on the construction of 79 miles of a new toll telephone line between Colfax and Dayton, at a cost of $222,000, will be completed this week by crews of the Pacific Telephone and Telegraph Company. The new project consists entirely of new poles and neew wire, and the line follows the state highway from Colfax to Dayton, with a branch from Dodd to Pemeroy.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

HOME MADE CREAM CHEESE.

Cream cheese is expensive when purchased on the market. It usually comes in packages wrapped in tin foil, and retails for 15 cents for a 2 1-2-ounce package. This cheese can be made at home very satisfactorily and with little equipment. If properly made and stored, a supply should keep from six to 12 days.

For this cheese, milk containing 6 per cent of butter fat is needed which means that part of the milk must be run through the separator and the cream added to the rest of the milk.

This cheese also may be flavored with pimento, making a very fine sandwitch cheese. Pimento seems to add to the keeping quality of the cheese and if kept in glass jars and held at 50 degrees or below, it should still be palatable at the end of a month.

Neufchatel cheese is made by a process very simiair to that of cream cheese, except that whole milk which tests 4 per cent is used.

Following is a summary of the directions for making of Neufchatel and cream cheeses at home:

1.—Use only clean, fresh milk.

2.—Cool or war mto a temperature of 80 degrees for cream cheese.

3.—Set milk away for several hours hodling at this temperature.

4.—Add Rennett or Junket to curdle milk. For Neufchatel cheese 8 drops of Rennet or 1-3 of a Junket tablet is enough for 30 lbs. of milk, or 3 1-2 gallons.

5.—Add the Rennet or Junket to a cup of cold water and stir in the milk thoroughly.

6.—Set milk aside to curdle, holding at the same temperature. The time necessary for proper curdling is from 16 to 18 hours.

7.—Pour curdled milk on a draining cloth and allow to drain from 2 to 4 hours until curdle is comparatively dry.

8.—Tie corners of cloth together and place on ice for three hours or more. If ice is not available, allow curd to drain an extra hour or more.

9.—Place bags of curd between 2 clean boards.

10.—Put on 50-lb. weight and let stand for 6 to 8 hours.

11.—Remove curd from cloth, put in pail and add fine salt at the rate of 2 level tablespoonfuls for 30 lbs. of milk.

12.—Mix thoroughly with a potato masher until cheese is smooth. A food chopper or butter mixer may be used instead of the potato masher.

13.—Keep in a crock or enameled dish until ready for use.

Farmers' bulletin 960 contains directions for making Neufchatel and cream cheese and also gives 21 splendid and unusual recipes for the use of these cheeses in salads, as well as a number of recipes for sandwitches and other cheese dishes.

While the cream, Neufchatel and cottage cheeses are easily made they do not keep long and the supply which it is practical to make up is limited by immediate family needs. Perhaps the most practical way of usin ga large quantity of surplus milk is to make cured cheese because of its superior keeping qualities.

Why do you call a fast automobile rider a scorcher?

Because he goes out at a hot pace, makes pedestrians boiling mad, warms up the police, gets roasted in court, and calls it a burning shame.—Ex.

Father—"Son, there's nothing worse than to be old and broken."

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

MOUTH BREATHING.

Nature gives us some very remarkable warning signs of trouble ahead and it is the duty of intelligent people to act upon the recognition of these warnings. Perhaps no sign is more definite than that of mouth breathing, which means that there is an obstruction to the passage of air into the nose. In infants and growing children the cause of this obstruction is usually a hypertrophy of the normal adenoid tissue at the back of the nose and in about one-third of the cases is associated with enlarged tonsils also.

During a severe head cold there may be a temporary closing off of the nasal air passages from the acute swelling of the lining membranes of the nose, but in one or two days this condition is relieved while the child with enlarged adenoids will have no permanent relief until these tissues are removed.

When the normal air passage has been obstructed for some time there develops a chain of complications which may be far reaching in its effect upon the normal physical and mental growth of the child. If the obstruction develops in infancy there is a definite change in the upper jaw; the roof of the mouth becomes high and narrow and this changes the normal contour of the jaw so that when the teeth erupt there is overcrowding and poor position. The Eustachian tube, which runs from the ear to the throat, lies very near the adenoids, and when these enlarge they press upon this soft tube and prevent it from functioning and soon as a result of this we have impairment of hearing and very frequently actual inflammation of the middle ear.

Because of the lack of proper circulation of air through the sinuses of the head, which opens into the nose, the little mouth breather becomes the subject of headaches. With constant discomfort in his head it is not to be wondered at that he begins to do poorly in school; that his reports say "Unsatisfactory."

The mouth breather is usually a restless sleeper. He rolls and tosses about his bed and wakes up in the morning unrefreshed. He frequently complains of bad dreams and indeed may wake his family with his piercing cries at night.

From the beginning he has a dull expression of countenance, his appetite is poor, and soon he becomes anaemic. He lacks energy and is the subject of frequent colds. Due to his malnutrition and his lack of desire for normal exercise his body fails to develop normally. He has narrow shoulders, a sunken chest and does not stand erect.

Since our schools have been taking more interest in the backward child, more and more information is acculuating to show the marked stunting of the mental development which can be caused from obstruction to the air passages. Indeed the change wrought by the removal of the overgrown and deceased adenoids and tonsills, on some of these little unfortunates whose parents failed to heed the warning sign, is a modern miracle.

NORTHWEST NEWS

The Alaska salmon canning industry is preparing for a run said a have started along the southeastern coast. Within a month canneries at Cordova and Juneau will start packing. Fifteen thousand men are employed during the height of the season.

Pay increases granted maintenance of way men on the Northern Pacific railway will affect 3000 men in this state, road officials announce. The raise gives the men $300,000 more annually. Carpenters, section hands, trackmen, flagmen, watchmen and laborers benefit by the increase.

Eastern Washington recently experienced the greatest shower of rain in its history, with one exception, government records at the Spokane weather office show. This record does not include some periods of heavy snow fall. Rain began to fall at eleven o'clock, Thursday night, May 31. The government instrument showed and registered 1.91 inches up to five o'clock, Saturday evening, June 2, a continuous shower of 41 hours, with the exception of brief interval jut after midnight Saturday morning. The only record exceeding this was on June 7, 1888, when 2.22 inches of rain fell. The details of that rainfall were destroyed along with all records of the office in thes fire of 1889, and the length of time covered is not known.

Our girs of the farm are always beautiful. If you do not believe it, read this: For a ballroom scene in a motion picture, 300 girls were hired. The requisite was that each girl must be beautiful. Of the 300 girls, 223 were born or reared on farms, 58 in small towns, three in New York City, and six in other large cities.

He Knew.

Teacher—Johnny, can you tell me what a hypocrite is?

Johnny—Yes, ma'am. It's a boy who comes to school with a smile on his face.—Ex.

Doug Fairbanks Jr. Into Movies at 13

Doug Jr., not yet 13 years old, is going into the movies at $1,000 a week. His mother, now Mrs. James Evans, shown with him here, signed the contract for him. Doug Sr., thinks it would be better for the boy to give all his time to school work, but says his former wife has the right to decide.

Governors Help in Placing Veterans

Northwest Executives Aid in Establishing Disabled Men in Permanent Positions.

Governors of Washington, Oregon and Idaho are cooperating with the United States Veterans' Bureau in the campaign t oplace in employment disabled World war veterans who have finished vocational training courses under the direction and at the expense of the government. More than 1000 trainees will complete their training during the summer and early fall months.

"It is my hope that the employers of Oregon will assist in providing these men with employment," says Governor Pierce of Oregon through the state press. "They are fitted by instruction in Oregon schools and colleges in hundreds of occupations and it is our duty as citizens, not only to permit them the right to earn their living, but to do whatever possible to bring man and job together."

Governor C. C. Moore of Idaho was equally as enthusiastic about the employment campaign. Here is what he says:

"During the World war these men went from Idaho as our representatives in that struggle, returning to us injured, broken, and disheartened. With the assistance of the United States Veterans' Bureau they have since prepared themselves to again become active in civil and industrial life and to enjoy the independence and happiness of self support.

"As governor of the state of Idaho, I do hereby officially and earnestly request the employers of this state to interest themselves in these rehabilitated men and to assist them to find employment. By the instruction received they are fitted for numerous occupations and it is the duty of citizens of Idaho to give them encouragement in their desire and right to earn their living. Where an opportunity exists for employment of a man, permit the United States Veterans' Bureau to recommend a disabled and trained ex-soldier for the position. Public officials should remember that these men are entitled to preferential rights in employment."

Governor Hart of Washington is also preparing publicity matter urging empoyers of this state to give preference to rehabilitated ex-service men when vancies occur or new jobs are created.

An unusual case of government insurance benefit has come to the attention of the Veterans' Bureau. Compensation of a Tacoma war veteran, totally disabled, was cut off when a definite diagnosis showed that his disability was of a non-compensable nature. Fortunately, he retained his war risk insurance and, upon proof that he had been incapacitated since August 12, 1921, he will receive $1300 insurance money in a lump sum and enough in the future to live on. This is just one of many instances showing the value of war insurance.

Vetch Helps Apple Crop.

A survey was made in three orchard districts near Ephrata where vetch had been used as a cover crop in the orchards and ti was found that this legume had helped the blooming of the trees. County Agent A. R. Chase reports that in one orchard where there are three lots of five acres each on trial, one plot which had been in vetch for three years showed 75 per cent bloom. The plot which had been in vetch for two years showed 40 per cent bloom, while the five acres demonstration plot where clean cultivation was practiced, there was less than 15 per cent bloom. Winter vetch will be recommended for the districts where the soils are shallow.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Apiculture—If bees cluster at entrance, they need more room. Place second super between first super and brood chmaber.

Dairy — Buy one of the real high class bull calves now for sale in this state and raise him for service next spring.

Farm Crops—This is a good time to study the effects of early and late plowing for summer fallow, or for spring crops.

Farm Management—Look around you and see if there is not a farmer who handles his place a little better than you, and profit by what you see.

Livestock—A change of pasture makes fat lambs. Rotate your sheep pastures from month to month.

Poultry—Deliver strictly fresh eggs and your will do your bit to increase the price. One good egg calls for another; a poor one lasts a long time.

Horticulture, (West Side)—Be sure you have enough berry harvesting material, crates, carriers, etc. See that they are ready for picking time.

(East Side)—The early sprays tell the tale of the seasons codling moth family. Spray thoroughly on time and let the other fellow wery about the worms next fall.

The Home of the Soul

In olden times, it was believed that the seat of the soul was the stomach, most likely for the reason for the reason that a man is never so completely used up as when his stomach is out of order. For the cure of ordinary stomach troubles, there is nothing quite so prompt and satisfactory as Chamberlain's Tablets. They strengthen the stomach and enable it to perform its functions naturally. Give them a trial. They cost a quarter.—Advertisement.

Recommends Chamberlain's Tablets

"Chamberlain's Tablets have been used by my husband and myself off and on for the past five years. When my husband goes away from home he always takes a bottle of them along with him. Whenever I have that heavy feeling after eating, or feel dull and played out, I take one or two of Chamberlain's Tablets and they fix me up fine," writes Mrs. Newton Vreeland, Minoa, N. Y. Take these tablets when troubled with constipation or indigestion and they will do you good. —Adv.

At the Opera House

The Genesee picture fans will have the opportunity of seeing Wallace Reid at the opera house Saturday night. This is probably the last time that any of his pictures will be shown here, so all those who can, should be present. The play "Across the Continent" is considered as one of his best plays—and we all like Wallie.

In the story, Mr. Reid is piloting his little car at tremendous odds across the country, and leaving his larger and more powerful contestants behind one by one. To prevent ultimate victory, one of the contestants sets fire to tall grass in the roadside, in the belief that the driver of the flivver would be stopped indefinitely. But not so. As the flames gather force, Mr. Reid dashes into the blazing inferno at tremedous speed and dashes through the fire belt unharmed.

Eighth Grade Has Successful Year

Although the returns from the May state eighth grade examinations have been quite tardy in arriving, the results are very gratifying. Out of a class of 17 candidates, 12 students received their diplomas, and five must make another attempt. The average grade of the 12 who passed was 91.02 and only three of these graduates made averages of less than 90. Ethel Qualey was highest with 95.11.

The general averages of those passing follows:

Ethel Qualey, 95.11; Donald Burnett, 94.77; Wilma English, 93.44; Angie Castle, 91.66; Wade Mayer, 91.00; Genevelieve Hampton, 90.66; Thelma Michelson, 90.22; Verna Geltz, 90.22; Francis Bumpus, 90.11; Alice Hanson, 89.33; Viola Blume, 88.00; Irvin Flomer, 87.77.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Mabel Romine, plaintiff, vs. Guy E. Romine, defendant.

The State of Idaho Sends Greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff; the nature and general terms of which is to procure a decree of divorce on the ground of wilfull neglect and also to procure a decree awarding the custody of the two minor children to the plaintiff, and for general relief.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of said District Court, this 12th day of May, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
By Adrian Nelson, Deputy Clerk.

THE GENESEE NEWS

VOL. XXXIV | GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JUNE 22, 1923. | NO. 51

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Snake at Maximum

The Snake river last night at 5 o'clock had reached its highest stage this season, being at 13.2. Previously on May 26, the river was at 13 feet for a day.—Lewiston Tribune.

Postpone Opening Camp Grizzly

Owing to the continued heavy rains the camping committee of the Palouse Council Boy Scouts have decided to postpone the opening of Camp Grizzley, Boy Scout summer camp, until June 24. This will give a week period in June and two periods of two weeks each in July.

The work crew is busy building tent floors and mess hall and clearing away the west bank of the river. C. K. Warne, regional scout executive, inspected Camp Grizzley, Sunday, with the committee.—Star Mirror.

Barn Hit By Lightening

During the electre storm in this section last Thursday morning the barn of George Jacobs east of town was struck by a lightening bolt and one end of the building was wrecked. Fortunately no fire was started and the damage was nominal. The electrical charge jumped into the electrical wires which paralled the barn at a distance of a few feet and followed them into the local substation where some damage was done by burning out of all the high power fuses. Service was impaired for several hours.—Uniontown Journal.

Millions of Roses

We have never let a June pass without mentioning the wild roses, and if they have been worth our comments in the past they are doubly so this year. Many folks consider the queenly wild rose a whole lot of a pest. She persists in growing and spreading in places that farmers wish to devote to wheat or gardens, and is thus quite bothersome to be near but she is the most beautiful of all blooming flowers on earth. Within a few days this whole country will be a riot of color and sweetly fragrant from millions of wild rose blossoms.—Deary Press.

Christian Endeavor Convention

On Wednesday morning Jesse Gray, Orland Mayer, Fred Dicus, Marion Mayer, Fred Cann, Roy Harris, Hope Michelsen and Grace Jain, accompanied by Mr. and Mrs. Geo. Follett and Rev. James N. Pendleton, went to Walla Walla as delegates from the Senior Christian Endeavor society to attend the state Christian Endeavor convention. It is expected that two thousand young people from Washington and northern Idaho will be in attendance.

Noted speakers from California, Oregon and Washington will bring inspiring messages from their long experience and the contribution we expect from these delegates will enable the local society to do even better work in the future than they have done in the past.

The delegates expect to return home next Monday.

The Modern Way

"Will you love'n honor?"
"Uh-huh."
"Lady, are you all set?"
"S'tuff! He's your'n. Ten bucks."
"If you need my services again, I make special discount to old customers."

"Our Leading Citizen"

Thomas Meighan, supported by Theodore Roberts and Lois Wilson, will have the leading role in "Our Leading Citizen," which will be the attraction at the opera house Saturday night. The play is wholesome, clean and amusing, with a dash of thrill and a charming love interest. It also has a fish story attached to it.

It is a story of a young lawyer in a small town, who is devoted to fishing and who, at the outbreak of the World War, enlists and returns a hero. In France he meets again a girl he has admired back home. She returns first and paves the way for his reception, but his modesty prompts him to hide his light under a bushel. Finally he is caught and properly "received" by the populance. He is groomed for Congress, but refuses to agree to certain corrupt demands and learning, as he believes, that the girl has urged him on to further her brother's ends, disappears from town. Later he is brought back, wins the election weds the girl who was always true to herself and him.

Mr. Meighan is ideally cast, with the natural, lovable characteristics of a true Ade hero. Lois Wilson is charming as the girl; Theadore Roberts, Will Carleton, Laurance Wheat, Charles Ogle and others appear in a well balanced cast.

Advertising

Mail order houses go after business by all means within their power. One of their men, Herman Rosenfield, advertising manager of a large eastern mail order house, recently told one of the members of the American Ad club at a convention of one of their methods: "We have a bureau whose duty it is to read each week the country newspapers from all over the country. There is not a paper of any consience in our trade territory that our bureau does not get. This bureau looks over these papers, and when we find a town where the merchants are not advertising in the local paper we immediately flood that territor with that literature. It always brings results far in excess of the same efforts put forth in territories where the local merchants use their local papers.—Ex.

Lewiston Wool Sold

W. W. Stabler, of Portland, Ore., an active wool buyer in the Inland Empire, said recently in Lewiston, that actually all the 1923 clip of the Lewiston region has been marketed. Mr. Stabler purchased 150,000 pounds that was shipping out through the Lewiston gateway, and about 100,000 pounds in the eastern Washington district.

Poultry Culling Demonstration

Pren Moore will put on a poultry culling demonstration at the Wm. Schlueter farm on Tuesday, June 26, commencing at 9:30 a. m.

Mr. Moore will discuss all phases of poultry raising and will cull Mr. Schlueter's flock for egg production. If you are interested in poultry, "be there."

Two Views

I saw her at the ball last night
In costume light and airy;
She beamed upon my 'raptured sight
For hours, a sprightly fairy.
Today I'm burdened with distress;
My heart is filled with sorrow;
I seen her in a bathing suit—
I'm going home tomorrow.

HOW TO GET RID OF THE CANADA THISTLE

The following article from C. B. Ahlson, field agronomist and state seed commissioner will be of interest to many.

Weeds are perhaps the source of more worry than any other on the farm. Everyone knows in a general way how to get rid of weeds, but it is discouraging to work all summer fighting weeds and then find them still showing life and appearing where they should not be.

What are we going to do? First, we will consider clean cultivation. What does this mean? Albert Hay of Burley can give an account of what he considers clean cultivation. Last summer he decided to rid his field of a patch of Canada thistle, and he did it.

About June 1 the noxious, evergrowing perennial, Canada thistle began to show a vigorous, green growth, for Burley has plowed the area, which was about a half acre in size. The plow was left in the patch. Next week the team was hitched to the plow and the area turned over again, so that only the green shoots appear at the surface. This operation was continued each week thru the summer until September. What was the result?

J. W. Barber, county agricultural agent and the writer visited this area in May, took a shovel and dug to three of four feet in depth in every portion of the area and not a single rot of Canada thistle could be found. The process was truly clean cultivation and the soil was in excellent tilth for the spring crop. The plant was starved out by preventing the appearance of any green growth above the surface of the ground.

Any perennial weed such as Rusian knap weed, morning glory, hoary cress, should be handled in this way; but the hoe can be used with comparable results.

The early work gets the weeds.

Fred Hove Takes Bride

Mr. and Mrs. Fred Hove returned to Genesee Wednesday of last week after a two weeks tour of the coast by automobile, having gone direct from Spokane to Seattle and returning by way of Tacoma, Portland, Walla Walla, and Lewiston.

They were quietly married in Lewiston May 23. The bride was formerly Miss Evelyn Tesch, only daughter of Mr. and Mrs. Peter Tesch of Lewiston, and who has been a popular and succesful teacher of Latah county. The groom is the son of Mr. and Mrs. John Hove, a prominent pioneer family of the Genesee country. He is also an ex-service man.

Thursday night June 7, about 150 friends and neighbors gathered at the Hove farm where the newlyweds were given a rousing charavari. A good time was had by all in dancing and playing cards and a generous treat of cigars, candy ice-cream and cake was shared by all.

Lettuce to Bring $750,000

This spring $150,000 will be the receipts in Lewiston Orchards for the lettuce crop, according to estimates made by growers and packers. To this will be added this fall, from a heavier crop with higher prices, an estimate of $600,000, making the total receipts for the year $750,000.

This is comparatively a new industry for Lewiston and is larger than it has ever been before.—Lewiston Tribune.

Work it Out for Yourself

"You are no gentleman," she wrote, "if you think I said such a thing as she said you said I said I had said."

"Dear girl," he answered. "you must be the kind of a girl I think you must be if you said such a thing as you said she said you had said."

It seems he knew she knew she said just what she said she heard her friend had heard him say he had heard her say, but with intuitive feminine tact she accepted the apology.

Card Club Meets

The card club met with Mrs. R. I. Witty on Tuesday. The afternoon was spent in playing pinochle and in social converse. Mrs. Glen Sampson won the honors. The invited guests were: Mrs. Mahlon Follett, Mrs. Frank Hoorman, Mrs. Harry Schooler Mrs. Ray Edwards, Mrs. P. B. Evans, Mrs. Jack Barnes, Mrs. Fred Morscheck, Mrs. F. J. Niemann, Mrs. E. Niemann, Mrs. Henry Lorang, Mrs. Nell Haymond, and Mrs. Art Potsch.

Lad Run Down by Auto

The three-year-old son of Mr. and Mrs. J. M. Reisenauer of Colton was struck by an automobile in that place last Sunday and sustained a broken leg. The flesh was badly torn and the bone nearly protruding through the flesh, making it impossible to put the lad's leg in a cast. The car was being driven by Miss Martha Entel. The lad was attempting to cross the street and became confused at the sound of the auto horn.

Who Remembers

When householders complained of the dust kicked up by horses and buggies in front of dwellings?

GENESEE UNION WAREHOUSE COMPANY
Genesee, Idaho Phone 38-1

WHAT HAPPENED HERE TWENTY YEARS AGO

In this issue the purses offered for the three day racing program—July 2, 3, and 4—amounted to $600.

Fred Nagel last week installed a new engine at the meat market to propel the sausage machine and other machinery.

Sheriff J. J. Keane is the recipient of a black hawthorn cane, a gift from Rasmus Jackson. Enroute home from Norway, Mr. Jackson stopped at Queenstown, Ireland, where he secured the cane.

Con. Steltz, while splitting wood Saturday last received a severe cut in the right foot. The axe, as he was about to strike a blow, caught on a clothes line and his foot received the blow intended for the stick of wood. The cut is quite a serious one and will lay him up for quite a while.

Get ready to entertain the largest crowd during the celebration ever assembled in Latah county. Other celebrations will be tame affairs compared with the great three days' fete at Genesee this year. What is more exciting than a good race—and speed? The big horses will be here. The derby race on the Fourth will be something long to be remembered.

Idaho Mining Active

A good road constructed up the South Fork of the Clearwater river would open one of the greatest gold mining districts of the west is the opinion of Stewart Campbell, state mining inspector, who returned recently from an official study of the mines in northern Idaho. There is more mining activity in Idaho, according to Mr. Campbell, than there has been for years. Miners and common laborers are scarce in that section.

The Elk City mines along the Clearwater have made sexeral of the most startling gold discoveries of the last decade. The two chief properties there are the Homestead Gold Mining company and the Center Star group. The Homstead has by means of a long tunnel cut a vein to the depth of 450 feet and exposed a free-milling gold vein, two to five feet wide of high value. A ten stamp mill will be in operation there in July.

The Center Star company has recently re-discovered the vein which had been lost through faulting and a high-grade vein from six to eight feet wide has been opened. Mr. Campbell states that this is the largest exposure of gold rock of high values in the state of Idaho.

The Dewey mine on the Clearwater has good values but is waiting transportation. The Jumbo and Cracker-Jack of the Buffalo Hump district are also very rich gold properties awaiting the solving of the problems of transportation.

Citizens Military Training

Rescruiting for the Citizen's Military Training camps which will be held at the various camps in the country, July 26 to August 24 is brisk in eastern Washington, according to county representative E. F. Cartier van Dissel, who reports that the quota for Spokane is nearly filled and every effort is being made to bring the county's quota to normal. Men between the ages of 17 to 24 are given military training under the supervision of commissioned officers, with all expenses incured taken care of by the government.

Gravelling Being Rushed

The work of re-surfacing the North and South highway from a point some four miles south of Genesee to Moscow, is progressing very satisfactorily and the gravel is being spread at a rapid rate and will be a big improvement to the highway—or at least here's hoping it will be.

Just now the road is very badly cut up in places by the large gravel trucks, which makes it almost impassable for cars that haven't a very high clearance.

Signs of a Glorious Fourth

There are visible signs that the great and Glorious Fourth is not far distant. Some early celebrators are using fire crackers—while others are using fire water. They are both noisy at times.

While Genesee will have no celebration, there will be plenty of places to go—if the weather man will only behave himself. Kendrick is planning for a big time, as is Asotin, both of which places promise a good time to those who attend.

Miss Thomas Improving

Word has reached Genesee to the effect that Miss Grace Thomas has so far recovered from her recent operation as to be able to leave the hospital at Lewiston. She was taken to the home of friends, Mr. and Mrs. F. A. Reynolds. Her many friends here will be delighted to learn of her rapid recovery.

Gives Program at Kendrick

Mrs. W. D. Woodward and daughters, Thelma, Bonnie and Patricia, gave the "Woodward entertainment" at Kendrick Wednesday night to a good house, and if the people of that village are as appreciative as are the Genesee people, they enjoyed every minute of the evening.

Birthday Parties

A sprprise birthday party was given for W. M. Rosenau at his home in Genesee on Sunday, June 17, in honor of his seventieth birthday anniversary. All his children were present with the exception of Mrs. O. V. Johnson and one of those real old-fashioned times was had. Those present were Mr. and Mrs. W. H. Rosenau and family, Mr. and Mrs. G. B. Rosenau and family, Mr. and Mrs. Ingle Halverson and family, Mr. and Mrs. Fred Taylor and family, Mrs. Gus Hagenah and family, Mr. and Mrs. Herman Morscheck, A. Rach, George Morscheck, Henry Blume and Wm. Michael.

The home of Mr. and Mrs. O. V. Johnson, in the Thorncreek neighborhood, was the scene of a very pleasant birthday party on Sunday, June 3, when a number of relatives and friends invited themselves to the Johnson home to help Mrs. Johnson celebrate her birthday anniversary. The time was spent in playing cards and a general good time is reported. Those present were Mr. and Mrs. Ingle Halverson and children, Mr. and Mrs. Fred Taylor and children, Mr. and Mrs. G. B. Rosenau, Mr. and Mrs. W. H. Rosenau and family, Mr. and Mrs. Albert Peterson and son, Mr. and Mrs. John Flomer and family, Mr. and Mrs. Hugo Gehrke and family, Mr. and Mrs. Chas. Ingle and family, Mrs. Gus Hagenah and family.

Business People Move

Several changes in places of business are scheduled to take place within a short time.

Mrs. Ida Wheeler has moved her Ready-Made Shop from the building she has occupied since starting her store to the room in the First Bank block, two doors north of the bank entrance, where she is ready to meet her friends and customers.

Miss Pauline Steltz has purchased from Dr. Howard Rouse the building formerly occupied by Mrs. Wheeler and will in a short time remove her Hemstitching and Needlecraft Shop to that room. A few minor changes will perhaps be made to accomodate her stock and machines.

As son as Miss Steltz vacates the room she has occupied for the past several months, the Washington Water Power company will move their office and stock of electrical equipment there. It is understood they have taken a five-year lease on the building from Geo. Morscheck, the owner.

Chautauqua Was Success

The Ellison-White chautauqua was a success from an entertainment standpoint, although not so from a financial. It is understood that the guarantors had to put up several dollars each to make the guarantee good. However, they are not daunted and there will be a chautauqua in Genesee again next year. The entertainment was of high order and was generally enjoyed by all. Of course not everyone liked all the features, but there was something in the week's entertainment that was appreciated by even the most exacting.

There is one thing sure about chautaqua entertainments—they are all good, clean, wholesome entertainments and there is no chance of your boy of girl — or yourself, for that matter—hearing or seeing something that should not be heard or seen.

IDAHO IS COMING INTO ITS OWN

Idaho is coming into its own. This year there is more industrial development than has been known in the past ten years. The agricultural sections were hard hit by the depression that followed the war but the farmers by retrenchment and by different methods of farming including intensified and diversified farming along with the stabilizing of markets and prices are on their sure way to prosperity.

Besides a number of small reclamation systems being developed in the state there are two that stand out as major projects which mean thousands of new homes and better living conditions for many who are now working dry farms. These two greater reclamation projects are the American Falls and the Greater Fort Hall systems. In the Greater Fort Hall system $350,000 will be spent in raising the dam level and running canals on a higher level bringing more than 50,000 acres under the water.

The American Falls reclamation system will place a small empire under cultivation for the first time, over 120,000 acres in the first unit. However more than one million acres of ever more than one million acres of land will be affected in securing better and greater water service under the American Falls dam.

The Oregon Short Line railroad is spending several millions in the state, first in double-tracking a large section of its road out of Glenn's Ferry and in extensions. The main line road to be built through Boise and the line now authorized from the Twin Falls country to Wells, Nevada, mean much to the development of Idaho.

The Idaho Power company has already authorized a budget of improvements and new outlay in Idaho amounting to approximately two million dollars.

The Utah Power Company is installing the second great hydro-electric power plant near Grace and for this purpose approximately four million dollars have been budgected.

The Portland Cement company is planning on a mammoth cement plant at Port Neuf station a short distance from Pocatello and a number of factories and other plants are springing up in southeastern Idaho as a direct result of the American Falls development.

The agricultural prospects are exceptionally bright and the immediate future will see this fundamental industry entirely recovered from the depression following the war. Several cheese factories and milk evaporators have opened in the past few weeks in the state and registered dairy cows are increasing in number very rapidly.

Diversified farming, with no dependence upon one crop, and an income all of the year around to the farmers will diminish the shances of bank failure and insure sound prosperity. Stock-men are now beginning to realize upon their work and there are bright prospects ahead for the sheep industry.

M. W. A. Initiation

An initiation of several candidates will take place at the K. P. hall on Saturday evening, June 23.

The Lewiston team will be present to put on the work and delegatoins from Moscow, Troy and Culdesac camps will assist.

Refreshments will be served and a very good time is promised all members attending.

MY LADY'S MONEY

An Episode in the Life of a Young Girl

By Wilkie Collins

SYNOPSIS OF PRECEDING CHAPTERS

Lady Lydiard, widow of Lord Lydiard, sends for the Hon. Alfred Hardyman, veterinarian, to treat her pet dog, Tommie, who is ill. Hardyman arrives simultaneously with Lady Lydiard's nephew, Felix Sweetair, who has just returned from abroad, sadly in need of funds. At the same time her factotum, Robert Moody, returns from the bank with a five-hundred-pound note, which Lady Lydiard prepares to send and send to a poor relative, whose husband has just died.

Tommie grows suddenly worse, and Her Ladyship is summoned away, leaving the envelope containing the 500-pound note unsealed. Later she sends her adopted daughter, Isabel Miller, to attend to the matter. Isabel seals the envelope without looking into its contents. Moody finds her alone and makes violent love to her, and upon being rebuffed, charges that she is being treated unfairly.

INSTALLMENT NO. 6.

She tried to get back to the door of the boudoir. Hardyman, feasting his eyes on the pretty, changeful face that looked up at him with such innocent confidence in his authority, drew her away again from the door by the one means at his disposal. He returned to his questions about Tommie.

"Wait a little, please. What sort of a dog is he?"

Isabel turned back again from the door. To describe Tommie was a labor of love. "He is the most beautiful dog in the world!" the girl began, with kindling eyes. "He has the most exquisite white curly hair and two light-brown patches on his back, and, oh! such lovely dark eyes! They call him a Scotch terrier. When he is well he appears to enjoy existence—when he is not comes amiss to him, sir, from pate de foie gras to potatoes. He has his enemies, poor dear, though you wouldn't think it. People who won't put up with being bitten by him (what shocking tempers one does meet with, to be sure) call him a mongrel. Isn't it a shame? Please come in and see him, sir; my lady will be tired of waiting."

Another journey to the door followed those words, checked instantly by a serious objection.

"Stop a minute! You must tell me what his temper is or I can do nothing for him."

Isabel returned once more, feeling that it was really serious this time. Her gravity was even more charming than her gayety. As she lifted her face to him, with large, solemn eyes, expressive of her sense of responsibility, Hardyman would have given every horse in his stables to have had the privilege of taking her in his arms and soothing her.

"Tommie has the temper of an angel with the people he likes," she said. "When he bites, it generally means that he objects to strangers. He loves my lady, and he loves Mr. Moody, and he loves me, and—and I think that's all. This way, sir, if you please; I am sure I heard my lady call."

"No," said Hardyman, in his immovably obstinate way. "Nobody called. About this dog's temper? Doesn't he take to any strangers? What sort of people does he bite in general?"

Isabel's pretty lips began to curl upwards at the corners in a quiet smile. Hardyman's last imbecile question had opened her eyes to the true state of the case. Still, Tommie's future was in this strange gentleman's hands; she felt bound to consider that. And, moreover, it was no everyday event in Isabel's experience to fascinate a famous personage, who was also a magnificent and perfectly dressed man. She ran the risk of wasting another minute or two of time on with the memoirs of Tommie.

"I must own, sir," she resumed, "that he behaves a little ungratefully—even to strangers who take an interest in him. When he gets lost in the street (which is very often), he sits down on the pavement and howls till he collects a pitying crowd round him; and when they try to read his name and address on his collar he snaps at them. The servants generally find him and bring him back; and as soon as he gets home he turns round on the door-steps and snaps at the servants. I think it must be his fun. You should see him sitting up in his chair at dinner-time, waiting to be helped, with his fore-paws on the edge of the table, like the hands of a gentleman at a public dinner making a speech. But, oh!" cried Isabel, checking herself, with the tears in her eyes, "how can I talk of him in this way when he is so dreadfully ill? Some of them say it's bronchitis, and some say it's his liver. Only yesterday I took him to the front door to give him a little air, and he stood still on he pavement, quite stupefied. For the first time in his life he snapped at nobody who went by; and oh, dear, he hadn't even the heart to smell a lamp-post!"

Isabel had barely stated this last afflicting circumstance when the memoirs of Tommiee were suddenly cut short by the voice of Lady Lydiard—really calling this time—from the inner room.

"Isabel! Isabel!" cried her ladyship, "what are you about?"

Isabel ran to the door of the boudoir and threw it open. "Go in, sir. Pray go in!" she said.

"Without you?" Hardyman asked.

"I will follow you, sir. I have something to do for her ladyship first."

She still held the door open, and pointed entreatingly to the passage which led to the boudoir. "I shall be blamed, sir," she said, "if you don't go in."

This statement of the case left Hardyman no alternative. He presented himself to Lady Lydiard without another moment of delay.

Having closed the drawing room door on him, Isabel waited a little, absorbed in her own thoughts.

She was now perfectly well aware of the effect which she had produced on Hardyman. Her vanity, it is not to be denied, was flattered by his admiration—he was so grand and so tall, and he had such fine large eyes. The girl looked prettier than ever as she stood with her head down and her color heightened, smiling to herself. A clock on the chimney piece striking the half-hour roused her. She cast one look at the glass as she passed it, and went to the table at which Lady Lydiard had been writing.

Methodical Mr. Moody, in submitting to be employed as bath attendant upon Tommie, had not forgotten the interests of his mistress. He reminded her ladyship that she had left her letter, with a bank note inclosed in it, unsealed. Absorbed in the dog, Lady Lydiard answered, "Isabel is doing nothing, let Isabel seal it. Show Mr. Hardyman in here," she continued, turning to Isabel, "and then seal a letter of mine which you will find on the table." "And when you have sealed it," careful Mr. Moody added, "put it back on the table; I will take charge of it when her ladyship has done with me."

Such were the special instructions which now detained Isabel in the drawing room. She lit the taper, and closed and sealed the open envelope, without feeling curiosity enough even to look at the address. Mr. Hardyman was the uppermost subject in her thoughts. Leaving the sealed letter on the table, she returned to the fireplace, and studied her own charming face attentively in the looking glass. The time passed, and Isabel's reflection was still the subject of Isabel's contemplation. "He must see many beautiful ladies," she thought, veering backward and forward between pride and humility. "I wonder what he sees in me?"

The clock struck the hour. Almost at the same moment the boudoir door opened, and Robert Moody, released at last from attendance on Tommie entered the drawing room.

CHAPTER V.

"Well," asked Isabel, eagerly, "what does Mr. Hardyman say? Does he think he can cure Tommie?"

Moody answered a little coldly and stiffly. His dark, deeply set eyes rested on Isabel with an uneasy look.

"Mr. Hardyman seems to understand animals," he said. "He lifted the dog's eyelid and looked at his eye, and then he told us the bath was useless."

"Go on," said Isabel, impatiently. "He did something, I suppose, besides telling you that the bath was useless."

"He took a knife out of his pocket, with a lancet in it."

Isabel clasped her hands with a faint cry of horror. "Oh, Mr. Moody, did he hurt Tommie?"

"Hurt him?" Moody repeated, indignant at the interest which she felt in the animal and the indifference which she exhibited toward the man (as represented by himself). "Hurt him, indeed! Mr. Hardyman bled the brute—"

"Brute?" Isabel reiterated, with flashing eyes. "I know some people, Mr. Moody, who really deserve to be called by that horrid word. If you can't say, 'Tommie,' when you speak of him in my presence, be so good as to say 'the dog.'"

Moody yielded with the worst possible grace. "Oh, very well! Mr. Hardyman bled the dog, and brought him to his senses directly. I am charged to tell you—" He stopped as if the message which he was instructed to deliver was in the last degree distasteful to him.

"Well, what were you charged to tell me?"

"I was to say that Mr. Hardyman will give you instructions how to treat the dog for the future."

Isabel hastened to the door, eager to receive her instructions. Moody stopped her before she could open it.

"You are in a great hurry to get to Mr. Hardyman," he remarked.

Isabel looked back at him in surprise. "You said just now that Mr. Hardyman was waiting to tell me how to nurse Tommie."

"Let him wait," Moody rejoined, sternly. "When I left him, he was sufficiently occupied in expressing his favorable opinion of you to her ladyship."

The steward's pale face turned paler still as he said those words. With the arrival of Isabel in Lady Lydiard's house "his time had come"—exactly as the women in the servants' hall had predicted. At last the impenetrable man felt the influence of the sex; at last he knew the passion of love—misplaced, ill-starred, hopeless love, for a woman who was young enough to be his child. He had already spoken to Isabel more than once in terms which told his secret plainly enough. But the smoldering fire of jealousy in the man, fanned into flame by Hardyman, now showed itself for the first time. His looks, even more than his words, would have warned a woman with an knowledge of natures of men to be careful how she answered him. Young, giddy, and inexperienced, Isabel followed the impulse of the moment, without a thought of the consequences. "I'm sure it's very kind of Mr. Hardyman to speak favorably of me," she said, with a pert little laugh. "I hope you are not jealous of him, Mr. Moody?"

Moody was in no humor to make allowances for the unbridled gayety of youth and good spirits. "I hate any man who admires you," he burst out, passionately, "let him be who he may!"

Isabel looked at her strange lover with unaffected astonishment. How unlike Mr. Hardyman, who had treated her as a lady from first to last. "What an odd man you are!" she said. "You can't take a joke. I'm sure I didn't mean to offend you."

"You don't offend me—you do worse—you distress me."

(To Be Continued)

Shriners at Washington

Trains, automobiles and airplanes brought thousands of Shriners to Washington, D. C., to their national convention. Photo shows Imperial Potentate James McCandless being greeted upon his arrival.

Boys' and Girls' Farm Club Work

"When I was a boy living on the old home farm, 35 years ago, I did not know that plants suffer from disease, just as men and animals do," says Dr. F. D. Heald of the State college of Washington.

"About the only troubles we knew of the mwere apple scab, corn smut, and rust of grain crops, but these were hardly viewed as diseases, as we think of them today. Since then the science of plant pathology, or study of plant disease, has made wonderful progress, and has come to be one of the important lines of agricultural work.

"Boys and girls of today, especially in rural life, have opportunity to become familiar with the common crop diseases and the environment in which they live.

"How do plants tell us that they are suffering from disease? One should watch for and be able to recognize conditions not normal for the healthy plant. If they could talk, the cabbage might say to the sick tomato plant, 'Good morning, I see you are looking a little pale today. Did you hear that our friend lettuce dropped dead yesterday?' Also, 'They say the tree surgeons removed a cancer from brother apple.' Plants would talk much as people do if they could, about their ills. They have constitutional troubles and infectious diseases, and must sometimes be quarantined on account of the more virulent types of infection. Those who are interested may receive a brief synopsis of such troubles on application to the college department of plant pathology, with which to study deviations from the normal in such crops as you have available.

"The department maintains a plant disease survey in the state to get information on prevalence and severity of all crop diseases. Any boy or girl who applies for the synopsis of disease symptoms will be enrolled as a voluntary observer in the survey work, and may send sick plants to the hospital (the college plant pathology laboratory) that diagnoses may be made of their troubles. We send full directions for collecting and packing specimens so that they will go safely, and also furnish a special record book.

"By beginning this study boys and girls may learn plant disease symptoms and be able to recognize many troubles affecting their own crops. The value of such knowledge may be appreciated when we realize that the potato alone has 20 or more specific diseases, the apple an even larger number—so many, in fact, that we keep a card catalog of them. Each demands special control or prevention measures. Our final goal is the prevention or control of all plant diseases.

Club girls are working to develop a keen sense of right standards in dress. Scoring of garments is one of the best methods of reaching this goal. Every girl should train herself to acquire the requisites of an able judge. The following score card will help:

Forty per cent is given to appearance and appropriateness. A garment should suggest certain uses, certain occasions and by all means it should be suggestive of the type of girl for who mit is intended.

A school dress should wear well. To fulfill its purpose it must stand hard wear for a reasonable length of time without becoming shabby. Undergarments that do not lend themselves to much laundering will not score as standard garments. When a judge considers the purpose and use of undergarments she will at once eliminate from the number to be scored all those that do not give perfect freedom to bodily action.

House dresses should be of the sort that launder easily and not fade with proper care. Afternoon or party dresses can be made of less durable material, and in daintier coloring, while the design may be more elaborate than would be appropriate in the home or school dress, yet it is best to remember that simplicity of design is always a safe slogan for a girl to follow, if she would be well dressed.

A sense of correct color harmony is a gift with a few, but all may become reasonably proficient as a result of study and observations. Make sure that the color harmony in the garment itself is good and also that it fits well the use of the garment.

Laundering of garments, should not be necessary before scoring, but if it can not be avoided it is best not to use starch, as it is the aim to give the appearance of an unlaundered garment. Much care should be taken in pressing and folding. The services of any women in the community may have had experience in a commercial laundry can well be employed for the purpose of demonstrating methods used in this work.

Workmanship includes not only cutting and sewing, but neatness and finish as well, and may be given 60 per cent in the score. Every article exhibited by the club girls should show proper methods in manipulative processes. Seams should be accurately made and kind of seam should be well suited to material. French seams are suitable only in the softer and more shur materials. If a plain seam lends itself better than any other to the problem, make sure that it is properly overcast.

Repairing Farm Machinery.

Repairing farm machinery is an important part of the course in Farm Shop Work to be taught this summer, among other courses, at the State College of Washington summer session June 18 to July 27 by Prof. L. J. Smith and C. C. Johnson.

Although the course is specially planned for teachers of vocational agriculture in high school, it would be helpful to anyone who handles machinery and may need the simpler repairs; soldering, babbitting, pipe fitting, belt work, rope work, and harness repairing.

Concrete construction, and the planning of small farm buildings will be studied, as well as the equipment of the farm shop, and for teachers the planning of a farm shop course for high school boys.

IDAHO

Growers of Lewiston are in the rush of initial shipments of lettuce, which is going out in car lots. Some estimates are that the season's output may reach 250 cars. The first cutting has been heavy, with instances of growers netting $600 an acre.

Another four-legged chicken was hatched in Idaho county this week at the home of Frank Staab in the Ferdinand section. The strange animal, however, lived for only a short time. It was taken to Spokane by Rev. W. S. Prichard of Greenacres for preservation.

The department of commerce announces that provisional figures compiled by the bureau of the census for 1922 show slightly higher mortality rates than for 1921. For the 33 states shown for both years, the 1922 mortality rate was 11.9 against a rate of 11.6 for 1921, the highest 1922 rate being 14.7 for Maine and the lowest 8.1 for Idaho.

The first session of the semi-annual convention of the North Idaho Chamber of Commerce was held recently at St. Maries. The chief speaker of the convention was Governor C. C. Moore, who addressed the group on the subject of "Law and Order Administration." Following the first day's meeting, the Benewah post of the American Legion gave a smoker and boxing bout in their hall.

A gold medal and check for fifteen dollars is the award of Vaughn Simmons, pupil in Soda Springs public schools, for the best essay submitted from Idaho in the last national safety campaign, according to announcement by the highway education board. In addition his paper will represent his state in the national competition for three prizes, the first of which is a gold watch and a free trip to Washington.

For many years the forest service has pursued a definite plan of planting with valuable species of trees areas that do not naturally reproduce after burns and logging. In some cases those who buy the timber are required as a part of their contract to replant the areas. No planting has been done in the Clearwater forest, but a survey was made the past two years to determine what areas, if any, were not reproducing naturally. For the next two years, two-thirds of all the planting in District 1 will be done on the St. Joe and Coeur d'Alene forests. The purpose of planting is to restore to a productive condition areas which have been denuded by fires. Areas which did not regenerate naturally and are not valuable, grass up to brush and weeds. Large areas then, laid waste by fire and made unproductive, are planted to a desirable species and made productive.

A sale of lodgepole pine from the Moose creek district of the Targhee national forest in northeastern Idaho is announced by the forest service, United States department of agriculture. The stand in question is estimated to contain 1,800,000 railroad ties and some saw logs and mine timbers. The timber, which is very old and contains considerable defect, was sold at the rate of 8 1-2 cents for each railroad tie, 50 cents per thousand board feet for saw logs, one-fourth of a cent per linear foot for mine timbers, and 25 cents per cord for fuel wood. The total estimated volume to be cut in terms of board feet is 62,000,000. The selection or partial cutting system will be followed and the brush disposed of as in the usual practice of the forest service in cutting this type of timber. All of the young and thrifty trees will be left standing and only the mature trees will be removed.

University of Idaho alumni, at their annual commencement gathering, decided unanimously to launch a campaign to build a new, combined armory-gymnasium as a permanent memorial to the university students who served in American armies in the Spanish-American and World wars. This decision was reached following the reading of a report from the committee appointed by Dr. J. H. Einhouse of Moscow, president of the alumni association, to investigate the feasibility of adopting the armory-gymnasium memorial plan. The committee report cited that although there were many needs at the university in which the alumni association could function the most important was the need for a suitable gymnasium. The new structure will have a capacity of approximately 3500 and will cost about $200,000. The present gymnasium has a normal capacity of around 800 but during the basketball season 1200 are crowded into it. It was built in 1905 at a cost of but $26,000. The demands upon the gymnasium have been increased by the addition of 1140 to the size of the student body since its construction.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

England imported more automobiles from America last month than during any one month in the history of the business. Frightened, British car manufacturers are studying some sort of amalgamation of plants and capital by which they hope to meet the constantly increasing competition.

The South Manchurian railway intends to erect an elevator at Dairen, Manchuria, during the present year, which will be the first elevator to be built in the Orient. Its cost is estimated at 4,000,000 yen ($2,000,000), and it is to have a capacity of about 3,250,000 bushels.

The navy department has ordered concentration of the United States battle fleet at Seattle July 27 for a review by President Harding. It will be held just following the president's return from Alaska. The fleet will comprise 10 battleships, 31 destroyers, repair and hospital ships.

Spurred on by the collapse of two curb brokerage houses during the past few days Carl Sherman, state's attorney general, has announced a campaign to "drive underworld Wall Street" into the open and out of business. "We'll make Wall street as clean as a hound's tooth," Sherman declared.

On the Royal isle in Lake Superior, the ruins of an ancient town have been discovered. These ruins extend over an area two miles long and half a mile wide, and are thought to be about 2000 years old. The houses were apparently dug out of the ground, and had walls with thatched or wooden roofs.

Work is being started this month on the greatest radio broadcasting station west of New York, which is to be located at Oakland, Calif. The General Electric company is building the plant, which will have an ordinary sending radius that will cover the whole North American continent, and in case the government gives its permission, one-third of the way around the earth.

Third party political medicine to cure the country's ills was being mixed in Chicago during the past week. Farley P. Christensen, Farmer-Labor party candidate for president at the last election, forecasts another third party in 1924. He said 30,000 invitations have been issued for a Farmer-Labor convention July 3, to pave the way for candidates to formulate the "third party voice."

Remember how we worried over those shell-torn farms ruined at the front in France during th ewar? Well said it would be years and years before anything could be made to grow there. But time has told a different story. These shell-torn acres are now producing just as well as other parts of France, says a report from Commercial Attache C. L. Jones, now in Paris, received last week.

Senator Hiram Johnson of California has somewhat modified his views on the European situation as a result of his contact with European people and statesmen, Senator Spencer of Missouri, said on returning from a European tour. Spencer said he and Johnson called on Poincare and Johnson seemed much impressed with the French attitude. Germany seems prosperous, France united and solidly back Poincare's reparation stand, Spencer told President Harding.

Forest highway funds, amounting to $210,000 made available for roads within or adjacent to the national forests of Washington, will be used on four projects, according to a bulletin received recently from the department of agriculture. One of the projects is at Blewett pass, where two and one-half miles will be constructed. The sum of $50,000 has been approved for the construction of 10 miles of road in Perry county. A new project, called the Randle-Yakima road, will receive an allotment of $50,000. The other project will be the building of a bridge in Clallam county.

In Case of Accident.

If you are unfortunate enough to swallow a fish bone and you can not dislodge it from your throat, sucking a lemon will dissolve it for you.

The Japanese are to raise bullfrogs. A consignment of American bullfrogs has just been sent over to Japan for distribution throughout the island kingdom for propagation. It is thought that the peasants, with a minimum expenditure of time and labor, will be able to supply a dainty addition to the diet of the Japanese.

Strawberry Pests

Although strawberries have been grown in Washington for many years none of the many pests that are usually found in the patches have come to the attention of the growers until this spring. At times the strawberry leaf-roller has been more or less numerous but never has done a great deal of damage.

In line with the movement for greater diversification of crops in the state the growing of strawberries has been encouraged. The necessity of better marketing facilities has been realized and steps are being taken at the present time to put that part of the business on a more satisfactory basis.

It is unfortunate that the pests that have been reported as serious in the strawberry patches this spring should put in their appearance just when the growers are becoming more interested in the small fruits and looking to them as a solution for the problem of diversification. However, the common pests that are found in all berry sections will certainly be with us sooner or later and it is just as well that we get acquainted with them now and learn to control them as the growers in other districts have had to do.

Strawberry Weevils.

The weevils that infest strawberry patches are of two types, which might be designated as small and large. There have been two or three species of each type reported in this state and most of them have been discovered in Spokane Valley patches this spring. Mr. Wiley, the district horticulturist, reports that he has found both the small and large weevils at work on plants in the Valley.

One type of weevil works on the roots and so injures them that the plant is unable to produce a crop and in some cases may even die. Another type works on the crown and kills the plant. Others feed on the leaves and stems and defoliate the plants entirely.

The true strawberry weevil (Anthonomus signatus) differs from the others in its manner of feeding and the injury resulting. The mature beetles come forth in the spring from their places of hibernation and the females lay their eggs inside the unopened buds. They then cut off the stem of the flower cluster so that the bud falls to the ground and never opens.

The egg inside the dead bud hatches and the young grub feeds on the pollen in the bud. When mature it builds a nest in the withered bud and there transforms into a small dark red or brown weevil. After feeding for a short time on the flowers of nearby plants the weevil goes into hibernation until the following spring.

New Plantings Spread Insects.

The weevils develop only one generation a year and in most cases spend the winter hibernating in the ground or under trash and leaves along the fence rows or in ground that is not likely to be disturbed. They can be distinguished from other beetles by the long snout protruding from the front of the head.

There are many other species of weevils but any snout-nosed hard-shelled bugs working in the strawberry plants should be regarded with suspicion and investigated further. The district inspector should be notified and allowed to inspect the patch for the presence of weevils.

Although the insects are equipped with wings they rarely fly and do not spread rapidly. Most infestations come from new plants that have been dug from infested patches. More careful inspection of the source of supply of new plantings is the only effective means of control of these pests.

It is a customary practice among growers in the state to supply their neighbors with plants from their old patches and start their own beds from the same source. Where the plants are given away there is little or no attention paid to the old bed to insure clean plants. It is in this way that infestations occur in new plantings. Officials state that they are powerless to control the spread of the pests as long as this practice continues.

Plow Up Old Beds.

Beds that are known to be infested with weevils should be plowed up after the crop is removed and the ground planted to another crop. Rotation of crops in such a way that infested ground will not be planted to berries for several years is one of the most effective means of controlling the weevils.

In order that new patches do not become infested it is highly important that clean plants be secured. Plants should never be dug from a neighbor's field unless it has been inspected by the proper authorities and found to be free of weevils. After the plants have been secured the roots should be washed free of dirt to make sure that none of the insects are hibernating in the roots.

It would be well for growers who contemplate planting strawberries next spring to keep these precautions in mind.

The Crown Borer.

The grubs of the strawberry crown-moth have recently been found by the inspector in patches in the Valley. The grubs bore into the crown and eat out the heart of the plant, causing it to die. The grub hibernates when only partly grown and finishes its development and transformation into the adult moth in the spring.

The grubs cannot be poisoned when feeding on the plant. The only way they can be destroyed is to pull up the dying plants and burn them. After the patch has borne its last crop it should by all means be plowed up so as to destroy the breeding places of the insects.

Cutworms.

These common pests have become more numerous in the berry patches than ever before and are doing considerable damage in some localities in the state. Their work was at first credited to the weevils until the worms were discovered in great numbers in the beds.

The worms are working on the strawberry plants in the same manner as on other plants. The leaves are being cut down at the base of the plants and the crop will be cut short by the destruction of the fruiting stems. In one or two instances patches have been practically defoliated.

Since the worms work on the outer surfaces of the plants and are chewing insects they are susceptible to stomach poisons. The district inspector is suggesting that the vines be sprayed with arsenate of lead where the infestation is heavy. The only disadvantage to that practice is that the berries are so far advanced now that the poison might remain on them at harvest time.

Other Insect Pests.

Poison bait is always effective against the worms and it has also been recommended by the inspector. The bran and arsenate of lead bait used to protect tomato plants could be scattered in the rows of berry plants. This method of poisoning would not result in any injury to the plants or danger of poison on the fruit.

The strawberry leaf-roller was present in the state long before his more famous cousin, the fruit-tree leaf-roller arrived, but has not become a serious pest yet. Mowing the vines and burning the leaves as soon as the crop is harvested will control the leaf-roller to a great extent.

Ground beetles and other insects sometimes feed on the ripening berries and benefit the fruit for market. It is only a very small percentage of the fruit that is destroyed by these minor insects and consequently they are of little importance in commercial plantings. The attention of the grower should be directed toward the weevils, the crown borers, and the cutworms if he is to keep his patch in a healthy and productive condition. Serious infestations that may even threaten the life of the strawberry industry are sure to result from carelessness on the part of the growers when these pests are discovered in their patches.

BELLINGHAM JERSEY BREAKS STATE RECORDS

Gypsy of St. Hawes, a junior three-year-old, has produced 701 pounds of fat in a year, and thus made the highest record of any Jersey cow of the age in Washington. The American Jersey Cattle club has just notified R. D. Tucker, superintendent of the official testing for the state under the dairy department of the State College of Washington, that Gypsy's record has been accepted and filed. She now holds state record in two classes, for last year, as a Junior two-year-old, she produced 568 pounds fat. Carlyon and Hogg of Bellingham, her owners, have now started her on her third year's record, and expect even better results. Eleven different supervisors appointed by the college conducted 14 two-day tests on Gypsy.

A high testing strain of Jerseys is being developed by Carlyon, most of his cows tested in recent years yielding on an average test over 6 per cent fat.

Vote for Honor System.

An overwhelming majority of students voted for the Honor System at the State College of Washington when it was put to ballot, but there was an even greater feeling against any system of reporting dishonesty which might be interpreted as student espionage. Students feel that best results will eventually be gained by trusting every man and woman to do the square thing.

The teacher had asked all the pupils to tell the vocations of their fathers. Levi Einstein refused to say but when the teacher insisted, he blurted out. "He's the fat lady at the circus."—Ex.

"Say, Jack, what are you going to be after you graduate?"

"I don't know. I guess I'll be an old man."—Exchange.

WASHINGTON NEWS

A steel safe weighing 900 pounds, containing an undetermined amount of money and securities, was stolen by burglars from the Piggly Wiggly store in Seattle last week.

The victorious University of Washington rowing crews left last week for the East, where they will participate in the national championship regatta at Poughkeepsie, New York, June 28, and compete at Madison, Wisconsin, with the Wisconsin university crew.

Believing that the vegetable produce industry in Spokane is under the control of the Japs, the Spokane post of the American Legion decided to conduct an investigation. According to members of the local post complaints are pouring in constantly about the oriental control of the market.

Farm wages this year are nearly 40 per cent higher in Washington than they were in 1922, according to figures published by the state farm bureau. The average wage of general farmi abor is now $1.88 a day, compared with $1.87 a year ago, while the monthly average is $32.57, whereas it was $23.75 last year.

The pageant at Walla Walla, "How the West Was Won," was considered one of the best festivals of its kind ever held in the Pacific Northwest. More than 16,000 people saw the performance. It is reported that there were parts of the performance that surpassed anything that has ever been presented to picture the western pioneer life.

Only 36.5 per cent of the cost of the buildings on the University of Washington campus has been met by state funds raised by taxation. The Alaska Yukon Pacific exposition provided 26.5 per cent of the cost of the university buildings, student fees 23 per cent, rentals from the university's Seattle property 10.9 per cent and the United States army and navy 3.1 per cent.

Farmers in the vicinity of Palouse are working hard to secure the location of a milk condensery in that community. They have had the matter up with the Borden Milk company and have the assurance that when 3,000 cows will be signed up a representative of the company will be sent to look over the field. More than 2,000 have been pledged, and it is considered certain that the balance will be secured in a very short time.

The last car of extra fancy Winesaps shipped out of cold storage by the American Fruit Growers of Wenatchee and sold through the Northwestern Fruit Exchange brought the highest price of the entire season, or an average of $4.87 for the 766 boxes, including all sizes. There are four more cars on the way to be sold at auction in New York, and this shipment will close the 1922 apple deal for north central Washington.

Revised figures on building permits in Wenatchee, show that $665,000 worth of new construction has been authorized by the city engineer's office. Among the notable structures for which permits have been taken out, besides the Chelan county courthouse, which will cost nearly $100,000, are the Emporium building, to cost $11,000; the George Miller warehouse, to cost $16,000, and a Standard Oil service station, which is estimated to cost $7,000.

The American Railway association has ordered that all Great Northern and Northern Pacific refrigerator cars be sent home promptly, in order to be available for fruit loading during the latter part of July and early August, according to a bulletin issued by J. M. Egan, manager of the refrigerator department of the American Railway association. The bulletin adds that the purpose of the order is to enable the Great Northern and Northern Pacific to put the cars through their shop and get them in readiness for the fruit season.

Last week a company of United States senators and representatives, accompanied by their wives to the number of sixty, spent three days in Seattle, and were entertained by representatives of the chamber of commerce and citizens generally. Members of congress interested in military affairs were taken to Camp Lewis and Sandpoint aviation station in this city while members of the naval affairs committee were taken to the navy yard at Bremerton. The entire party were taken to Snoqualmie Falls, where they were interested spectators of the mill and logging operations of the big lumber company. The party left Friday night on a government transport for an extended visit to various sections of Alaska.

POULTRY

Although caponizing is not generally practiced by poultrymen of western Washington, the practice is gaining in favor, as is shown by the splendid turnout at a recent caponizing demonstration at North Bend, King county. There were about 35 who attended, according to L. C. Boggs, instructor of poultry husbandry at the state college, who put on the demonstration.

While Leghorns were used and out of the 130 cockerels there was only one killed. The visitors were given a chance to try their hand and one boy 10 years old made a successful operation.

In order to show the value of capons for brooding chicks, Mr. Boggs secured a Black Minorca capon, that was brooding 23 young chicks. The capon took as good care of the chicks as though it was their own mother.

One lady in the community told of having a Barred Rock capon weighing 12 1-2 pounds that brooded 50 chicks when he was less than a year old. She rents her capons out each spring to neighbors for brooding purposes.

"A capon requires less feed per pound of weight gained than a cockerel because he is more docile, less active and nervous than the cockerel," explained Mr. Boggs. "The quality of the capon meat is far superior to that of any other bird. The meat of a capon compares with that of a cockerel as the meat of a fat steer does with that of an old bull. A person who has eaten capon meat will prefer it to the turkey for Thanksgiving or Christmas. The price for capons should be the same per pound as for turkeys.

"A capon at 8 months of age will weigh two pounds more than his cockerel full brother of the same age. The best breeds to caponize are those of the American class, such as Plymouth Rock, Rhode Island Reds, etc., or of the heavier breeds, that is, Brahma, Langshan and Cochan.

"The Legborn is not so profitable for this work, but rather than give them away, or if a few are to be held for home consumption, caponizing will greatly improve the quality of the meat."

The poultry department of the state college will be glad to furnish full information regarding caponizing to those who inquire. Such bulletins may also be had from any county agent's office or from poultry supply houses.

Oregon Lands Opened For Ex-Service Men

The department of the interior has thrown open for homesteading by ex-service men of the World war approximately 220,569 acres of public land in the western part of Oregon. The land is classified as agricultural in character and for the most part is covered with a growth of timber. It is well watered and the climate is good. Ex-service men will be given 90 days in which to file upon the land, after which it will be thrown open to the general public. Entries are restricted to 160 acres.

With this latest area of public land made available for homestead rights by ex-service men, more than 899,000 acres have been thrown open for veterans of the World war since the first of the year. This includes public lands in Emery and Grant counties, Utah; Owyhee county, Idaho; Beaver Head county, Montana; Eureka and Elco counties, Nevada; Alo Arriba county, New Mexico, and Mesa county, Colorado. It is generally believed that thousands of acres of other public land will be added before the year is over.

In all cases the ex-service men will have preference in the homestead rights. Furthermore, they can deduct from the legal period of three years necessary to prove homestead title, the time they served with the colors. In other words, any ex-service man who served two years can prove his title to homestead rights by living on them 12 months.

Rich Lady Bug Find.

Clark Turner of Wauconda is $50 richer through having discovered the hibernating place of a host of lady bugs estimated at 125,000. Deputy Horticultural Inspector Scott made a trip last week and brought down the lady bugs, which were bought by John Petersen and other orchardists on Pogue flat for use in consuming aphis. Lady bugs feed on aphis and make quick work of them.

In California and other parts of the country the lady bugs are captured in large quantities. They fly from the lower elevations each fall and take shelter in the crevises of rocks at high altitudes, congregating in a mass so that they can be easily taken when found. Mr. Scott expresses the opinion that the lady bugs found by Mr. Turner had flown from the Tomasket section, some 35 miles distant.

When spraying starts, it has been observed that lady bugs promptly fly out of the trees and are therefore not injured by the poisonous mist.

For a Stiff Back

Willie Trene, athlete, recommends touching the hands with toes while six feet in the air in a broad jump, as a cure for stiff back. Try it.

LIVESTOCK

Horses would become cast in their stalls less often were the front part of the manger brought down flush with the floor. A horse thrusts out his forefeet and legs when he starts to rise and when there is a space under the manger it sometimes traps the legs and prevents rising. The horse then struggles until exhausted and may even break a leg in his struggles.

Other cases of casting are due to the halter shank or rope being too short so that the horse is cramped when trying to rise, or weak boards are put in lengthwise in the stall partition and break when they are kicked so that the foot goes through and is caught. The halter shank should run through a ring or staple, the slack being taken up by a heavy sinker. Partition boards should be strong and of sound pine; not of hemlock, which splinters readily.

When a horse is found cast in his stall, it is a mistake to lick him with a whip or stick to make him rise. The muscles of the under leg are probably numbed and will not act. The right thing to do is to pull the horse back into the alleyway, if there is sufficient room for that, then turn him, and if examination shows that a leg bone has not been broken, massage and rub the muscles, even rubbing in a stimulating liniment until circulation is restored. Then he will usually be able to get up without further trouble.

If the space behind the stall is narrow, the partition against which the horse is lying should be removed, the horse turned and the muscles massaged. These seem simple instructions, but they are necessary, for I have many times been called to attend a down horse and found him cramped in a narrow stall where he could not possibly rise and in not a few cases, where the owner and neighbors had been applying the whip industriously, a leg bone was found fractured, necessitating destruction of the poor beast.

The Michigan Agricultural college advises feeding potatoes to live stock in the following amounts and cautions against using larger quantities:

Dairy cattle, 25 to 30 pounds a day, raw cut; beef cattle, 20 to 40 pounds, raw; swine, all the boiled potatoes they can eat in connection with a good grain ration; horses, 12 pounds, and sheep, two to three pounds; poultry when fed in ration high in protein content boiled potatoes to the extent of 50 per cent of the ration weight.

One dairyman reports getting an increase of 50 per cent in milk production in 10 days by feeding potatoes to his dairy cows. With butterfat at 50c a pound, he says by feeding the tubers to the cows he virtually sells the potatoes at 30 to 40 cents a bushel.

TIMELY HINTS TO FARMERS

Agricultural Engineering—If your spring streams up in the hills are drying up, forget them as a source of supply for they probably will not pay the expense of development.

Dairy—Pile manure over 50 feet from where cows are miked and over 100 feet from the milk house. This is a state law.

Farm Crops—Study at this time, in your district, the stands of grain or other crops in relation to the amount of seed sown. It will help you decide what is the right amount to sow.

Livestock—Straight corn, wheat or barey developes short, fat, chunky, slow-maturing pigs. Balance the rations with such feeds as oats, millrun,

PROSPEROUS YEAR KENNEWICK GROWERS

Strawberries Bring High Price With Record Crop—Other Crops Looking Good.

The Kennewick strawberry growers now ending their 1923 season, shipped 50,000 crates, at an average price of $2.50 a crate net to the grower, according to L. E. Johnson, president of the First National Bank of Kennewick. Premium crates, he reports, sold as high as $6.00, and many averaged $3.00 and $4.00. The district had a large acreage and production of strawberries this year, with ideal growing conditions. Prices, however, were only normal, because of the lateness of the California crop. Twenty-eight straight cars of strawberries were shipped.

In addition to the bumper crop of strawberries, the Kennewick Valley growers have shipped 25,000 boxes of asparagus, at running prices from $1.25 to $2.25, averaging about $1.50 to the grower. The district shipped six straight cars of asparagus this season, soon going as far as New York and others as far as Minneapolis and Chicago.

"The first cherries from Kennewick are beginning to reach the market," Mr. Johnson states. "The tonnage this year will not be large, but it is believed that a fair crop will be placed on the market. New potatoes will be shipped from June 20 to July 1, but the acreage is only about 60 to 65 per cent of normal, because of the bad potato year of 1922."

"Present prospects are for a good crop of peaches, pears and apples," said Mr. Johnson. "All look good now. The hay crop is also good, and the first cutting of alfalfa is under way and is yielding one and one-half to two tons to the acre, which is a good yield, considering the grower averages three or four cuttings and sometimes five or six during the year."

peas, tankage, skim milk, alfalfa, rape and sweet clover.

Horticulture—Destroy the wormy apples at thinning time and save many stings next harvest. Have a sack to put the wormy ones into.

Farm Management—If you are raising a calf, it will be well to keep records of cost and find out what the animal costs you.

Plant Pathology—It is now time to plant potatoes that are intended to grow seed stock. Less disease and more vigorous stock will be produced.

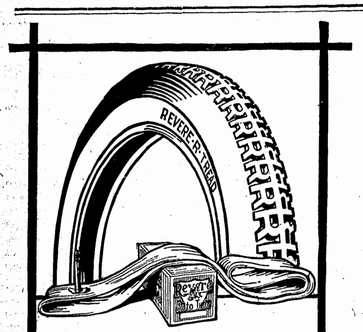
Poultry—Plan for next winter's green feed supply. If you are going to use Kale set out six pants for each hen.

OLD GLORY

I'm going to tell you a story,
A tale of the land and the sea;
The wonderful tale of Old Glory,
The beautiful flag of the free.

In seventeen-seventy-seven,—
It came not a moment too soon;—
This glorious gift out of heaven
Was born on the fourteenth of June.

Its father was just Revolution,
Its mother was swe



TO the man who is familiar with Revere "R" Tread value the money's worth that he finds in a Revere Red or Grey Tube is no surprise.

He knows that Revere Tubes must set the standard of mileage in their field just as Revere Tires do in the field of casings.

The name "Revere" marks distinguished generosity of service in Tires and in Tubes. Ask the nearest Revere dealer.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. P. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Church School at 9:45 a. m.

Morning Worship at 11.

Young Peoples meeting at 7:30 p. m. in the Church.

Ladies aid Wednesday at 2:30 p. m.

The adult church choir will sing Sunday morning, owing to the absence from town of several of the young people.

Ball Game

The ball game between Genesee and Potlatch, which was played at Potlatch last Sunday, resulted in victory for Potlatch by a score of 11 to 8. One of the Potlatch boys had a leg broken during the game and this took a great deal of the fun out of it.

Given Lodge Pin

Mrs. J. H. Jackson was presented a beautiful lodge pin by the members of the local Rebekah lodge as a token of remembrance and esteem. Mrs. Jackson had been a faithful member of the local lodge for many years.

Piano Lessons

I am prepared to give music lessons in the English or German languages. Also instruction in German, French, Latin or Italian languages. Mrs. Wm. Hordemann. 49-tf

Christian Endeavor Notes

By Ida Evans

Last Sunday afternoon the senior C. E. went to the country home of Hope Michelson and were loyally entertained. Four cars carried over 20 young people and after a social time the regular C. E. service was held led by Irene Hall. This was said to be one of the best meetings held this year. After the meeting a delicious lunch was served by the hostess, assisted by her mother and younger sister, Thelma.

All the cars returned in time for the evening service in the park. Owing to the failure of the pictures to arrive, a song service with a special coronet solo by Lucile Stovall and a short address by Rev. Pendleton, filled the program.

The stereoptican lectures will begin in the park on Sunday evening, July 1 and continue for four weeks. Sunday, July 1, will also be Children's Day and a program will be given in the church at the time of the regular church service.

There will be several babies and small children presented for baptism at this time.

Linger Longers Linger

The Linger Longer club met at the home of Mrs. C. P. Whalen Wednesday afternoon and a very pleasant time is reported. Delicious refreshments were served by the hostess.

The invited guests were Mrs. R. I. Witty, Mrs. Milton Rader, Mrs. Frank Hoorman, Mrs. F. J. Niemann, Mrs. E. Niemann of St. Joseph, Mo., Mrs. J. F. Barnes, Mrs. Henry Lorang, Mrs. Fred Morscheck, Mrs. A. H. Potsch.

The next meeting will be held on Wednesday, June 27, at the country home of Mrs. Jas. Magee.

Tomorrow Last Day

Tomorrow (Saturday) will be the last day you can pay the last instllment of your taxes without penalty. If it has slipped your mind, better attend to it at once.

Why Suffer from Rheumatism

Do you know that nine out of every 10 cases of rheumatism are simply rheumatism of the muscles or chronic rheumatism, neither of which require any internal treatment? The pain may be relieved by applying Chamberlain's Liniment, which makes sleep and rest possible, and that certainly means a great deal to any one afflicted with rheumatism.—Adv.

GOODYEAR takes the highest-grade, long-staple cotton, of unusual tensile strength, and builds up the carcass of the Goodyear Cord Tire by the exclusively Goodyear method of group-ply construction. The result is a tire that lasts longer in any service and is the most economical you can buy.

As Goodyear Service Station Dealers we sell and recommend the new Goodyear Cords with the Scouted All Weather Tread and back them up with standard Goodyear Service

"Our Leading Citizen"

THE Good Luck Star as a big, lovable ne'er-do-well who turned Main street upside-down. More fun than the circus; more American than buckwheat cakes. A warm slice of real life flavored with romance and spice.

One man, sixty women attend women's club meeting. It was a trying experience but he showed no fear. He must be admired for his bravery.

McCORMICK - and - DEERING

Harvesting and Haying Machinery

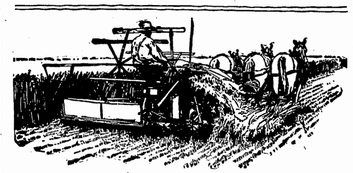
YOU farmers with years of experience in grain growing know that the binder plays an important part in making small grain crops profitable. To insure the safety of the crop, your binder must work efficiently and without delays in the short harvesting season.

McCormick and Deering Binders

Thousands of farmers have depended upon McCormick and Deering binders, and the increasing popularity of these machines shows that their faith has been well placed. In lightness of draft, ease of operation, and accuracy in getting all the grain under varying conditions, these binders have made good under the severe tests of time.

Come in and see them and talk with us about your harvesting problems.

We have a large stock of repairs for all makes of harvesting machinery, including John Deere. Order your repairs early.



International Binder Twine—
Sisal, Standard, Manila

PERSONAL MENTION

Robert Port arrived Monday from Kellog for a visit.

Dr. J. N. Perkins was a visitor from Lewiston last Saturday.

Elmer Johnson was a Saturday morning passenger for Spokane.

Mrs. Glen Sampson, Mrs. Dickie and Mrs. Ira Hanson spent Sunday at Colfax.

Miss Sylvia Evans arrived from Spokane, where she has been attending school.

Mrs. Martin Foster and little son were Thursday morning passengers for Leon for a visit.

Miss Grace Crossett returned Monday after a visit with her sisters at Troy and Palouse, Washington.

Miss Maggie Nesbit of Dufur, Oregon, came over from Moscow Friday for a visit with old-time friends.

Mrs. E. Niemann of St. Joseph, Missouri, is visiting at the home of her son, F. J. Niemann, and family.

Miss Amalia Lawen and little niece were Saturday morning passengers for Spokane for a visit with relatives.

Mrs. Henry Craft was a Saturday morning passenger for Spokane and Cheney, Washington, for a short visit.

Miss Mary Wardrobe came down from Spokane Saturday for a visit with her mother, Mrs. A. M. Wardrobe.

Mr. and Mrs. Ed. McLean left Thursday morning for Mold, Washington, where they will make their home.

Mr. and Mrs. Alma Butterfield of Pullman spent Sunday with Mrs. Butterfield's parents, Mr. and Mrs. John Lawson.

Mrs. C. Dicus returned to her home at Garfield, Washington, after a visit at the home of her son, F. E. Dicus, and family.

Mrs. W. D. Woodward and children left Monday morning for Kendrick for a visit at the home of Mr. and Mrs. J. F. Brown.

Miss Sophia Kambitsch and brother, John, left Saturday morning for Seattle where they will visit with friends and relatives.

Mrs. R. S. Sullivan and daughter, Emma Lou, left Friday morning for Fort George Wright, where Mr. Sullivan's sister is very ill.

Mrs. Thos. H. Herman and children left Saturday for Humboldt, Nebr., Kansas City and Sabatho, Kansas, for a visit with relatives.

Mrs. G. E. Hammer and children left Monday for their home at Kellogg after a visit with Mrs. Hammer's mother, Mrs. Craig.

Miss Elsie Smith returned to her home at Palouse, Washington, Saturday after a visit with her brother, Chas. W. Smith, and family.

Mr. and Mrs. Oscar Rader and Mrs. Wm. Post and sons, George and Virgil, left Sunday morning for a fishing and camping trip to Lake Chatcolet.

Mr. and Mrs. Sim Currin and family left last week for Lewiston, where they will take up their residence in hopes of benefiting Mrs. Currin's health.

Henry Morscheck and Chas. Mauch left overland Wednesday morning for Reardon, Washington, to look after a threshing outfit belonging to Morscheck Bros.

Miss Thelma Michelsen was a Thursday morning passenger for Spokane, where she will visit her sister, Miss Marie Michelsen, who is a nurse at Sacred Heart hospital.

Milton Rader and Glen Sampson went to Walla Walla Sunday to spend the day. They were accompanied home by Mrs. Rader who had been visiting her parents in that city since the pageant.

Mr. and Mrs. L. A. Hitt returned to their home at Portland, Oregon, Monday after a few days' visit at the home of their daughter, Mrs. O. F. Stucker, and husband. They made the trip overland.

Eli Goodwin and son, Zealand, and sister, Mrs. Lulu Duncan, of Harrington, Washington, returned to their home Monday after a visit here with the G. A. Bumpass family and Mr. and Mrs. Arthur Hampton.

Eleanore Peterson returned home to Palouse, Washington, Saturday after a visit at the home of her uncle, George Carbuhn, and family. She was accompanied home by her cousin, Irma Carbuhn, who will visit at the Peterson home.

The Home of the Soul

In olden times, it was believed that the seat of the soul was the stomach, most likely for the reason for the reason that a man is never so completely used up as when his stomach is out of order. For the cure of ordinary stomach troubles, there is nothing quite so prompt and satisfactory as Chamberlain's Tablets. They strengthen the stomach and enable it to perform its functions naturally. Give them a trial. They cost a quarter.—Advertisement.

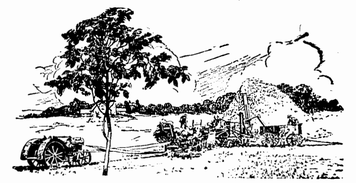
Wheat Prospect Good

The wheat outlook in the Palouse is brighter this year than ever before in the opinion of E. E Paddock, merchant at Farmington for the last 44 years, who was recently in Spokane, attending to business matters. The yield this year will be over the 30-bushel mark on an average, Mr. Paddock stated. In addition to a good crop this year, Mr. Paddock predicts a good crop for a number of years, on account of the amount of moisture now in the ground.

Better Buy One Soon

The price has been reduced for a short time only. At the new low price you can afford one and now is the time to put in your order for a new Bungalow model electric range.



McCormick, Deering and Titan Tractors

International and New Racine Threshers

The right size for every farm

Don't leave it in the straw

Thresh for yourself. Then thresh for your neighbors and make the New Racine earn part of its cost.

Just the machine for threshing rings.

The line that invites comparison

The machine with a longer life

The new Racine threshes beans, peas, alfalfa and all grasses

Incorporating the field and factory experience of over three-quarters of a century.

Experiments Show Use of Dynamite in Tree Planting Insures Success

A recent census report on the apple and peach industry throughout the United States reveals the fact that during the past 10 years the number of apple trees of bearing age decreased 23 per cent, or 36,000,000. The decrease in non-bearing trees was 45 per cent in the non-bearing

In the case of peaches there was a decrease of about 30 per cent in the number of trees of bearing age, and 48 per cent in the non-bearing trees. The facts are, then, that new plantings did not offset the mortality. The heavy losses are due largely to neglect, failure to protect trees against the San Jose scale, ravages of other fungus diseases and insect pests, attacks of small animals, and starvation.

east to western growers. One of these is that proper planting of young trees has a great deal to do with their future bearing capacity, and perhaps still more to do with the speed at which they reach maturity and production.

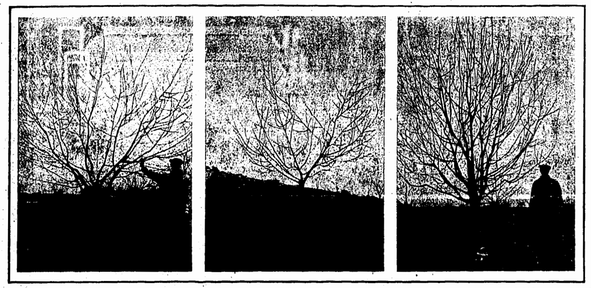
In 1911, 1912 and 1913 extensive experiments were made in a certain section of Virginia in setting out young apple trees in dynamited holes, instead of digging with a spade. The full results of the experiments are now ready for publication for the first time. The verdict is that stronger, healthier trees have resulted in the cases where dynamite was used for the hole-drilling, and that trees so planted reached the age of bearing considerably earlier than others set

to new depths have brought up new food elements which make the trees thrive and bear almost as well as those set out on new ground. Subsoil is brought to the top, fissues are opened into the earth which permit the penetration of air and with it the other elements of life. In short, the soil is practically "made over," if such a way of expressing it may be permitted, and in the freshened soil the trees thrive and bear profitably, whereas, in spade-dug holes the young roots are forced to find their way through hard soil to such nutriment as they can find in earth which has not been aerated since the beginning of time.

In one orchard of the Rose Cliff Track farm, Waynesboro, Virgia, 4,000

management was convinced after the first two years that a mistake had been made in not planting all the trees in dynamited holes. Since then dynamite has been used for all trees planted, and any one can see a marked difference in the thrifty growth of trees planted in dynamited holes and the scrawny development of those planted in spade-dug holes. Godfrey Henkel, Staunton, Virginia, planted an orchard in 1915, using dynamite, and he said he would use it again, as he had obtained good results.

Massie Brothers, proprietors of the Ridgewood Orchards, Winchester, Virginia, planted 8,000 trees in the fall of 1911, using dynamite for every hole. They believe in the dynamite



The illustration shows trees at either side planted it in holes dug with dynamite. Tree in the center was planted in a spade-dug hole at the same time and in the same soil. Note the difference in size and general thriftiness of appearance.

An apple orchard will deplete the soil of its plant food, quite as much as successive crops of wheat raised on the same land, unless crop rotation is practiced and the soil food put back. Young trees are often set out and left to scuffle for themselves; consequently they rarely live long, and the horticulturist is discouraged and goes into other lines of endeavor, where the returns are not so long in coming in, even with the best of results.

Recent experiments in some of the eastern states have established certain facts which may be of inter-

out in the same soil at the same time, but in spade-dug holes.

The experiments have proven so successful that the men who made them are continuing with the use of dynamite exclusively, and the business of planting young apple trees has received a considerable impetus, not only because the original cost in money and labor is less, but because the result shave proven far more successful.

Even in old ground the young trees have developed into bearers very nicely, because the blasting of the soil and the consequent stirring

trees were planted in 1913, 3,000 more in 1914 and 1915—and every hole was "dug" with dynamite. At the time of my visit only 12 trees had been lost, and there was evidence to show that the whole orchard had made a remarkable and uniform growth. This company used more than a carload of dynamite in its orchards, and has been well repaid for the initial cost in the excellent results obtained.

The Beliview Orchard company, Fisherville, Virginia, planted 3,000 trees in the fall of 1912. Part of the orchard was planted in dynamited holes and part in spade-dug holes. The

method and would use it again under similar conditions. Mr. Massie says the root system of the orchard has been declared by experts to be very fine. He also stated that they have not had a tree blown over.

The results of these experiments in the east seems to indicate that there is yet hope for the replacement of our diminishing orchards, and that the days of profitable fruit-raising are not in as much danger of passing as some of the more pessimistic would have us believe.

NATIONAL WHEAT CROP SMALLER BUT NORTHWEST SHOWS GAINS

Return of Prosperity Seen in Good Crop With High Prices.

JUNE REPORT BEATS MAY

Northwest Shows Gain in Condition While National Crop Shades Off—Apples Not So Good.

General crop conditions in Washington were very favorable during May and the June 1 report, as issued by G. S. Ray of the division of crop and live stock estimates, indicates that the production of all small grain crops will considerably exceed that of 1922. Spring wheat and barley show increased acreages this season, while the oat acreage is practically the same as last year. Apples give promise of producing a heavier crop than in 1922.

Winter Wheat.

Conditions were very favorable for the development of winter wheat during May and the crop averaged 92 per cent of normal on June 1st as compared with 88 on May 1st, while the average condition of winter wheat on June 1st for the past ten years was 88. The June 1 condition of 92 forecasts a production of 35,753,000 bushels. The May 1 forecast was 33,488,000. The 1922 winter wheat crop amounted to 23,244,000 bushels while the average for the five years, 1917-1921, was 23,368,000 bushels.

The winter wheat crop of the United States, averaging 76.3 per cent of normal showed a decline of 3.8 points as compared with the May 1 condition of 80.1. The condition of winter wheat on June 1. 1922, was 81.9, while the 10-year average condition for June 1 was 82.3. The forecast for the winter wheat crop is now 580,541,000 bushels as compared with the 1922 crop of 586,204,000 bushels and the average for the five years, 1917-1921, of 589,858,000 bushels.

Spring Wheat.

The Washington spring wheat acreage shows an increase of 6 per cent over that of last year and the area for harvest is estimated to be 1,060,000 acres. Conditions have been favorable for spring wheat since planting time and the crop on June 1st averaged 92 per cent of normal. This condition of 92 forecasts a production of 17,066,000 bushels, as compared with 9,200,000 bushels in 1922 and 16,673,000 bushels, the five-year average for 1917-21.

The United States is estimated to have 18,503,000 acres of spring wheat this year. This acreage is a decrease of more than 5 per cent as compared wit hthe 1922 acreage. The country's spring wheat crop averaged 90.2 per cent of normal on June 1 and gives promise of producing 236,039,000 bushels. This production is considerably less than the 275,887,000 bushels produced last year and also less than the average production for 1917-21, which was 244,943,0000 bushels.

All Wheat.

The combined acreage of winter wheat and spring wheat in Washington this season is 2,443,000 acres as compared with 2,426,000 acres in 1922 and 2,317,000 acres, the average wheat acreage for the five years, 1917-21. June 1 conditions forecast a total production of 52,819,000 bushels as compared with 32,444,000 bushels in 1922 and the average production for the five-year period, 1917-21, of 40,040,000 bushels.

Oats.

Washington has practically the same acreage in oats this season as in 1922. Conditions have been very favorable for oats this spring and the crop averaged 97 per cent of normal on JJune 1st. This condition of 97 forecasts a production of 9,111,000 bushels as compared with 7,959,000 bushels in 1922 and the average production for the five-year period, 1917-21, of 9,660,000 bushels.

Apples.

The apple crop of Washington on June 1 averaged 88 per cent of normal and gave promise of a total crop of 27,261,000 bushels and a commercial crop of 23,991,000 bushels as compared with 25,687,0000 bushels (tota) and 21,312,000 bushels (commercial) in 1922.

The total apple crop of the United States, based on a June 1 condition of 75.5, shows a decrease from last year and is placed at 186,637,000 bushels against 201,000,000 bushels in 1922. The commercial apple crop, however, shows an increase over 1922. The June 1 condition of 78.6 for the commercial crop indicates a production of 32,284,000 barrels as compared with 30,955,000 barrels in 1922, or an increase of a little over 4 per cent.

Peaches.

Peaches on June 1 averaged 80 per cent of normal and the estimated crop is 1,112,000 bushels as compared with 1,125,000 in 1922.

The peach crop of the United States, averaging 66.7 on June 1, gives promise of about 46,525,000 bushels as compared with 57,000,000 in 1922 and an average production (1917-1921) of 43,000,000 bushels.

Pears.

Washington pears were 82 per cent of normal on June 1st and the forecast for the coming crop is 1,701,000 bushels against 1,708,000 bushels in 1922.

G. S. RAY,
Agricultural Statistician.

China's Great Need Is Ford, Says President Sun Yat Sen

What China really needs is Henry Ford for president and a fleet of flivvers to scatter modern influences over the country.

In a nutshell that is the meaning of President Sun Yat Sen's gigantic scheme to put China on her feet and remove her as a constant menace to the peace of the world.

Frightened lest international complications should arise making armed intervention unavoidable, Washington confesses it is up against it to know what to do.

Peking is tottering; bandits in the provinces seem to be getting the upper hand; foreigners are being captured and held for ransom; a new war is threatened; and nobody seems able to do anything. Punishing China in itself, all realize, would do little good. It would be like slapping a habitually very bad small boy.

Need Practical Plan.

Punishment-plus is admittedly imperative. But plus what?

"If anybody has a practical plan to offer," a high official in Washington told me, "we would love to hear it."

Dr. Sun Yat Sen, a Chinese himself, has a plan. He suggests the great powers get together and make China over new.

Sun wants at least 1,000,000 miles of macadam road for China; 100,000 miles of railway; wider canals; deeper rivers; three ports each as big as New York; old cities built over new; reforestation of the entire country; colonization of Manchuria, Mongolia and other dependencies; development of water power and other natural resources, and innumerable other jobs done.

He wants the great powers to undertake this work, allowing private initiative to do all it can, the government doing the rest. He proposes supervision by the foreign powers of the whole thing and guarantees enormous profits to those taking part—not to mention a world free from the constant dread of war over a weak, defenseless China.

Wants Good Roads.

Sun's ambition is to see an endless procession of flivvers scurrying across a China cobwebbed with good roads; schools to teach reading; newspapers for folks to read, and motor cars and trains to distribute them all over the land.

He wants radio sets every which way, farming machinery on the farms, telephones in every house. He wants China standardized, Fordized.

China's stupendous wealth is as yet untouched. Sun suggests a way for her and the world to share it all without going to war over it.

But Dr. Sun issues one warning: If there is to be such a deal he says, it must be made with the people of China, and for the people, and not with a few crooked politicians ever ready to line their pockets at the expense of the people. Any deal which does not take this into account, he says, will fall flat.

Chinese mossbacks and their ilk in this and other countries call Sun a "radical" and a visionary. I found him one of the few men in China with an idea.

Helpful Hints.

There are several ways of using baked ham. One of the best is to eat it.

Spaghetti should not be cooked too long. About 10 inches is right.

A cold bath will be found more pleasant if made with hit water.—Ex.

Fireflies.

The fireflies in the West Indies and in the tropics of South America are so big and so brilliantly illuminated that it is quite easy to read by the light they give.

Since the advent of the missionaries the natives have begun to use the cocoanut for food rather than for the making of an intoxicating drink, are observing the Sabbath, have quit gambling and cock fighting, and are paying their taxes. Before the missionary can build up the morale of the native, he must have a vision of God, a vision of himself, and a vision of service to the world, the Reverend Dunlap believes.

Fads and Fashions of Today

By DOROTHY PHILLIPS.

Quite apart from the appropriate dashing appearance of the cape as a spring wrap, there attaches to it more than one quality which especially fits it for a place in milady's wardrobe at this time of the year.

In the first place, we are all glad to get rid of our winter coats in which we have been bundled up during the past few months, and the more radical the lines of the new garments which we don at the same time as mother nature herself, the bigger the thrill we get out of them. Then, too, there is the matter of comfort. The mornings are still quite chilly, and voluminous folds wrapped around us in cavalier fashion give snug warmth; later when the sun mounts and the tired spring feeling descends upon us, it is an easy matter to throw these back over our shoulders and enjoy the cool breezes.

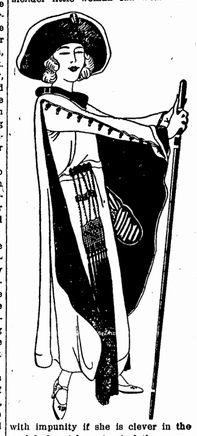
Capes and cape coats are going to be all the rage this year, the fashion authorities declare, and many interesting varieties of tweeds and other woolen cloths are being introduced for their achievement.

Color combinations, we find, have been accomplished in startling contrasts in both checks and heavy stripes at wide intervals. Checkbacks are well represented, and these are peculiarly well suited for the sport cape. Large overchecks in window pane and skeletone form, big block checks and tartan effects are also found in abundance for sport wear.

Flannel frocks and matching capes are being shown in a wide range of colors such as tan, Patrick green, rose, pigeon blue, navy with white stripes, tan with brown checks and gray with black.

In the sketch is reproduced a stunning model of the more dressy type of three-piece costume. A very light tone of beige harmonizes with jade green in soft duvetyn. The lining of the cape, the collar and the dashing side ornament of fringe and fillet, is of the green ,and this is echoed in the facing of the hat. Beige colored silk stockings and matching suede slippers were worn with this outfit.

It is needless to warn the short stout woman against the cape costumes; one of their drawbacks is that they detract from height and add materially to width. However, the slender little woman can wear them



with impunity if she is clever in the model she picks out. And they come in such a marvelous variety of styles that with a little care and patience, each one can find just the model which is especially suited to her peculiar type.

NATIVE OF SABOU NO LONGER SAVAGE

RETUINED MISSIONARY TELLS OF PROGRESS MADE IN RECENT YEARS.

Progress in missionary work among the natives of the Phillipine islands has been remarkable, according to the Reverend George Dunlap, Presbyterian missionary from the island of Sabou, who has just returned to Spokane.

The speaker outlined conditions that show that on the island where he has been working the natives are not savages, as they are thought to be, but have made much progress toward civilization. Through the work of the missionaries the native government now allows freedom of religious belief, of speech, and of the press. The Bible has been translated into 37 dialects for the use of the natives and 42 per cent of them have embraced Christianity. At one time the possession of a Bible was a crime punishable by banishment from the island.

At the present time 3,000,000 of the 10,000,000 inhabitants of the island can read the Bible and over a million children are studying the English language in the schools. Sanitary conditions have been much improved and the death rate among children has decreased as a result of the teachings of the missionaries.

The magnitude of the work to be done in the missionary fields is indicated by the figures given by the Reverend Dunlap. He reported that there were 19,050 pupils in the high school in Sabou and that there were only three missionaries and their wives to work among 800,000 natives.

Public Sale in 1850.

Readers of this paper will probably be interested in what is without doubt the oldest public sale bill on record. The sale was held in Kentucky in 1850, and the following articles were listed:

"Having sold my farm, and intending to move to Missouri, I will sell at public sale 1 mile west and 4 miles south of Harrisburg, Ky., on Saturday, September 26, 1850, the following described property, viz: One black nigger, 25 years old, weight 225 pounds; 4 nigger wenches from 18 to 24 years old; 3 nigger boys, 6 years old; 13 nigger hoes; 1 fine sled; six yoke of oxen, well broke; 10 ox yokes with hickory bows; 2 ox carts with 6-inch tires; 1 saddle; 2 double shovel plows; 10 and 12 inch; 25 one-gallon whisky jugs; 100 gallons apple cider; 1 barrel of good sorghum; 2 barrels of soap; 2 barrels of kraut; 1 extra good nigger whip; 2 tons of tobacco, 2 years old. Sale will start at 10:30 sharp. Terms, cash. I need the money. Col. H. W. Johnson, auctioneer. Bill Crawford, clerk. Joe Cooley, owner."

Varnished Candles.

Hold the candles by the wick and give them a coat of white varnish. Let them dry thoroughly and when you light them you will find the grease will not run down the sides of the candles and they will last twice as long.

"The dentist said all my teeth must be replaced."

"He said a mouthful."—Ex.

Hammer Slayer Again Behind Bars

Clara Phillips, Hammer Slayer of Los Angeles, is once again behind bars, this time in California State Prison, where fellow prisoners have crowned her "Queen of San Quentin." Photo shows her coming down the gangplank upon her arrival in New Orleans from Honduras, where she was captured. Insert is a close-up of her.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

Tea and Coffee.

From the earliest days of history man has sought to improve the taste of the water he was forced to drink, either by allowing vegetable substance to ferment in it, or by extracting herbs, fruits, etc.

Today the most extensively used plants are the tea leaf and the coffee bean, both of which have been used by the people of Asia and Eastern Africa for many centuries, while their use by the Europeans is but of comparatively recent date, tea being first used in England about 1650.

The active principle in both tea and coffee is the alkaloid Caffein, the stimulating agent, while a variably large percentage of tannic acid and the various volatile aromatic oils give to the beverage their peculiar aroma and flavor.

Green tea contains 10 per cent tannic acid, black tea only 5 per cent, due to the process of fermentation to which it is subjected.

As tannic acid is detrimental to the process of digestion, it would seem that black tea is the less harmful. However, neither kind of tea should be allowed to DRAW, as the amount of tannic acid extracted will be greater the longer the water remains in contact with the leaves.

One cupful of coffee made with 2 ounces of the freshly roasted and ground beans to a pint of water, contains 2 grains of caffein and 3 1-2 grains of tannin.

One cupful of tea contains from 7-10 to 1 and 1-5 grains of caffein and 9-10 to 4 and 1-5 grains of tannin.

A cup of black coffee contains more caffein, therefore, than a cup of tea of the same size, while a cup of coffee with milk equals about the caffein content of a cup of the average tea.

The stimulating effect and the agreeable aroma of these beverages quickly caused coffee and tea to become two of the most valuable items of the East India and Asiatic trades to the extent, that 2,500,000,000 pounds of tea are grown yearly, with 2,000,000,000 pounds of coffee. Of these beverages, when taken without sugar or cream, have the least nutritive value, we must of necessity class them as luxuries, and deplore the enormous sums spent yearly on this one group of gustatory non-essentials. If taken occasionally and in small quantities and not too strong, neither tea or coffee is injurious to the adult, although the stimulating effects will be in evidence; but when taken regularly and in the usual concentration and quantity, and this is the rule with coffee and tea drinkers, then the stimulating effects upon all the organs and nerves of the body, especially stomach and bowels, attain a stage at which the functions of these organs are interfered with to such a degree that the person's health is impaired. He becomes nervous, irritable, sleepless, his appetite becomes disturbed, the stomach grows acid, he complains of belching, of gas after meals, gnawing sensation in the stomach at night, he becomes constipated and soon develops the whole train of symptoms accompanying chronic constipation. All of these symptoms, if other complications have not in the meanwhile developed, quickly abate when coffee and tea are dropped from the menu.

It is surprising to note how hard it seems for some people to give up these two beverages, especially is this true of the women, who seem to be the main offenders, they all claim that a cup of coffee or tea is the only means of stopping a pet variety of headache, or of regulating their bowels, or of giving them the necessary vigor to carry them through the day. Invariably, after having stopped the use of these drugs, they reluctantly become convinced that they do no longer need them, as these complaints are no longer present.

There are certain conditions, however, in which the use of either of these beverages is very beneficial, thus coffee may be of excellent value in certain acute heart disturbances; while weak tea is an old and well tested aid in the treatment of certain acute stomach disorders, as mothers of large families know.

DAIRY

Two dairy calf clubs with 17 new members, were organized in Grays Harbor county during the month. One group of members solicited all their neighbors to get them to test for tuberculosis and are now working to place a purebred sire in their community.

A total of 4263 head of dairy cows were tested for tuberculosis in Pacific county with only six cows showing signs of the disease. Dr. F. B. Allen, federal veterinarian, working under the direction of the state department, made for the test. Ninety-two per cent of all the dairy cows in the county were tested.

At a recent reduction sale of the Cloverfields Farm near Olympia, cows with cow testing records brought an increase in price. The auctioneer, Col. Payne, was asked if the records made any difference in the selling price and replied: "Six of the ten cows in milk sold for $25 to $30 more than they would if they had not had cow testing association records."

Newaukum Netherland is the new Washington state leader for Holstein junior two-year-olds in the 365-day division. Her record of 20,252.3 lbs. of milk, nearly 745.11 lbs. fat, and over 931.38 lbs. butter was made at the farm of her owner, Lloyd Garretson, Yakima. She is a daughter of King Korndyke Sadie Vale, No. 139,736, who has more than 25 advanced register daughters. This is one of the first yearly records completed by Mr. Garretson, who started his pure-bred herd last year on the fine farm he has named "Painted Rocks," and takes great pride in his Holsteins.

Agricultural Summary of Pacific Northwest

All staple crops made satisfactory advancement the past two weeks in Oregon, Washington and Idaho, due to frequent showers. There were good soaking rains the last three days of May, especially in Idaho. Cool weather the past week was favorable for small grains but corn, hay and truck crops need warmer weather. Winter wheat, rye and barley are heading. Alfalfa is being cut in the early districts and strawberry harvest is on. Another two weeks passed without damaging frosts and the fruit prospect continues promising, especially in Idaho and Washington. In western Oregon, cherries, prunes and pears have dropped heavily. Cherries have also dropped heavily in Washington and northern Idaho. Except for southern Oregon, pastures and ranges are excellent, especially so in Idaho after the last rains. Shearing is nearing completion and stock is moving to the upper ranges.

Washington.

Washington crops made favorable progress during the past two weeks. Wheat, oats and barley are doing exceptionally well and a good stand is reported for the grain crops in most localities. Corn planting is under way. Some alfalfa has been cut in the earliest districts. Fruits and berries are developing nicely. Apple growers are paying particularly careful attention to codling moth spray this season. Good showers have benefited pastures and ranges and live stock generally is in good condition.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

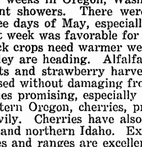
BLOOMERS

Material—Bleached or unbleached muslin; galatea; cotton crepe; sateen; denim or flannel may be used. The material used should depend on use and wear.

Pattern—A commercial pattern may be purchased for this garment, making sure that it is simple in design and well suited to use. Test carefully as to size before using.

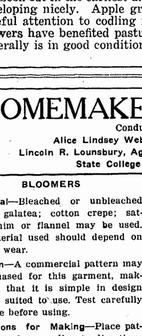
Directions for Making—Place pattern on goods according to directions given on the pattern envelope. Secure with pins and cut carefully. Before removing pins mark all necessary perforations with tailors' tacks, using thread or contrasting color. Fold each leg with right side of material inside, bringing corresponding perforations together on leg seams. Pin, baste, stitch, and finish with flat fell seam 1-4 inch wide. Place both legs so that fronts face up. Beginning at seams, with right sides together, pin and baste the two front edges together; then the two back edges together. Stitch and fell the entire seam. If band is to be used make a plain continuous placket.

Cut band lengthwise of material three and one-half inches longer than waist measure, which allows one inch for finish at each end, one inch for lap and one-half inch for shrinkage. Place band at top, making sure that gathers are distributed evenly. Sew



To Make Tailors' Tacks: Use double thread but do not knot it. Take a small stitch through a perforation in both thicknesses. Draw the thread through, leaving an end at least one inch long.

Take two more stitches through perforations into material, leaving one-



Continuous Placket

PAJAMAS

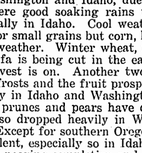
Material—Materials are the same as for drawers. Pajama cloth, flannelette or outing flannel may also be used.

Directions for Making—Exact directions will depend on type of pattern

button on the end of back of the band at placket, and work button-hole in front of band opposite button.

If elastic is desired instead of band at top, a placket will not be needed. Finish edge with true bias facing on wrong side making a casing 1-4 inch wider than elastic to be used. Stitch on each edge of facing. Insert elastic in casing and secure ends together. Arrange fullness property and tack in four places to avoid twisting.

Continuous Placket—Cut piece lengthwise of material two and three-fourths inches wide and one inch longer than twice length of placket opening. Place right sides together and with garment toward you and edges even; pin in place. At bottom of placket the edge of garment will drop below edge of placket piece, and the sewing will catch just a few threads at end of sash. Be careful to keep stitching exactly parallel with edge of placket piece the entire length of seam. Make one-fourth inch turning on other edge of piece and fold and baste so that stitching is barely covered. Hem by hand, catching hemming stitches and machine stitches. For overlap fold placket back on wrong-side at seam; allow placket to extend full width for underlap. Before applying placket make a dart one inch long and one-eighth inch deep on wrong side of garment at bottom of placket opening.



Tailor's Tackets.

inch loops. Cut the thread one inch from stitch. When all performations have been marked remove pins and lift pattern from material being careful not to interfere with tacks. Separate two pieces of material as far as tacks will permit and cut threads in center of loops. (Drawing.)

selected, be sure to select simple pattern and follow directions given on commercial pattern used. Use flat fell seam and finish neck with bias facing; sleeves and bottom of pajamas with flat hem or facing.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

Pectin in Jellies.

We have been growing in our gardens this season, many of the fruits and vegetables which have supplied our tables. The time has come when there are more fruits becoming ripe, than we can use while fresh, so as to save these, it is necessary to can and preserve. One of the big standbys for the lunch basket and the winter table, is jelly.

Three things go to make up good jelly—pectin, acid and sugar. Many fruits would make splendid jelly if they could be made to jell. This is particularly true of strawberries, peaches, loganberries and cherries, because these fruits lack sufficient pectin to make them jell.

We have often heard the housewife remark: *"If* I had a little apple to put with this fruit juice, it would make the best kind of jelly." Apples are used because they contain sufficient pectin to help harden the juices.

Pectin to add to fruit juices may be made in the home by scraping or grating the yellow from the orange peel. Remove the remaining white portion and pass it through the food chopper. Weigh and for each half pound allow three cupfulls of cold water and one tablespoonful of lemon juice for each cup of water.

Mix thoroughly, allow to stand for four or five hours and then boil for 10 minutes and cool. Add another three cupfuls of cold water. Bring to a boil and let stand over night. Next morning boil for five minutes, allow to cool, place in a flannel jelly-bag, squeeze it to remove all the juice and then filter the juice through a clean flannel jelly-bag without pressing it.

This pectin may be used as a foundation in making jellies from fruit juices which do not contain a sufficient amount of pectin. If the pectin is to be kept for use later, pour into sterilized jars while hot, process quart jars in a water-bath at simmering, or 180 degrees F., for 30 minutes; seal and store in a dark place. Canning by the Pressure Cooker—next week.

PEOPLE IN CITIES ARE DRINKING MORE MILK

Did you consume 945 pounds of whole milk in some form or other last year? According to the United States department of agriculture nearly 103 billion pounds of whole milk was used in 1922 in the production of butter, cheese, ice cream, milk chocolate and various other milk products, including 47 billion pounds consumed as milk. The quantity of whole milk used in 1921 was approximately 99 billion pounds, which includes 45 billion pounds consumed as milk.

Consumption of milk for household purposes increased from 49 gallons per capita in 1921 to 50 gallons in 1922, according to the department's figures. Consumption by city folks increased 2 gallons per capita but lack of any increased consumption in rural communities pulled down the average increase for the country as a whole to 1 gallon.

A big increase in consumption of milk chocolate is shown, 100 million pounds of whole milk being used for this purpose in 1922 as compared with 40 million pounds in 1921.

The number of milk cows on farms January 1, 1923, is placed at 24,429,000 as compared with 24,082,000 cows on farms January 1, 1922. To the average of these two figures is added 1,250,000 cows in towns, making a total of 25,505,000 milk cows producing approximately 103 billion pounds of whole milk or an average production of 4,020 pounds per cow. Average production per cow in 1921 was 3,945 pounds.

A tiny maid, held up to hear her father's voice on the telephone burst into tears. "What are you crying for? asked her mother.

"Oh, mamma," sobbed the child, "however can we get dadda out of that little hole?"—Ex.

Notice to Delinquent Stockholders

Genesee, Idaho, June 22, 1923.

Notice is hereby given that there is delinquent upon the following described stock, on account of an assessment levied on the twentieth day of December, 1922, for three (3) mills per share, being assessment No. 20, the several amounts set opposite the names of the respective shareholders, as follows, to-wit:

Name	No. Shares	Amt.
W. N. Gibb, jr.	2000	$ 6.00
H. J. Herman	5000	15.00
John Kempf	360	1.08
Joe Knapp	3500	10.50
Oscar Rader	500	1.50
Mrs. J. Rader	500	1.50
F. Scharnhorst	7222	21.66
Mrs. Cecelia Saferstein	1000	3.00

And, in accordance with law, so many shares of each parcel of such stock as may be necessary will be sold at the office of the Company, in the City of Genesee, Idaho, on the 9th day of July, 1923, at the hour of 7 o'clock p. m. of said date, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

Meyer's Orchestra On Job Again

After retiring from the music profession for several years on account of ill health, Prof. M. W. Meyer is back on the job and if his health will permit will soon work up a good orchestra for Colville.

Prof. Meyer has had many years of professional experience, having had charge of the Colville band for about seven years, but on account of his health was forced to give up the music profession the last few years.

Talented musicians have joined in his orchestra.

Mrs. Meyer, with the saxophone, under the instruction of Mr. Meyer, is fast becoming a competent player. —Colville Patriot.

Some people do not believe in paying others back in their own coin. They keep it instead.

Will Have Licensed Undertaker

George Schlerth, who has recently taken over the Lambert interests in Genesee, wishes to announce that he has made arrangements to have one of the best licensed undertakers and embalmers take care of all Genesee in that line. An up-to-date auto hearse will be in use whenever the roads will permit and prompt and efficient service will be rendered. Phone 41-tf

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Mabel Romine, plaintiff, vs. Guy E. Romine, defendant.

The State of Idaho Sends Greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff; the nature and general terms of which is to procure a decree of divorce on the ground of wilfull neglect and also to procure a decree awarding the custody of the two minor children to the plaintiff, and for general relief.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and seal of said District Court, this 12th day of May, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
By Adrian Nelson, Deputy Clerk.
A. H. Dewsmith,
Attorney for Plaintiff, residence and P. O. Address Moscow, Idaho. 46-6

Recommends Chamberlain's Tablets

"Chamberlain's Tablets have been used by my husband and myself off and on for the past five years. When my husband goes away from home he always takes a bottle of them along with him. Whenever I am feeling heavy after eating, or feel dull and played out, I take one or two of Chamberlain's Tablets and they fix me up fine," writes Mrs. Jos. Vreeland, Minoa, N. Y. Take these tablets when troubled with constipation or indigestion and they will do you good. —Adv.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JUNE 29, 1923. NO. 52

WHAT HAPPENED HERE TWENTY YEARS AGO

Albert Carbuhn is building a large new barn on his farm southwest of town.

Antone Borgan is erecting a substantial addition to his farm residence.

Miss Anna Tonning is home from Wallace on a visit to relatives and friends.

The frame work for George Follett's new residence, near the park, is about up and will soon be enclosed.

Thos. H. Brewer and W. E. Smith will go to Lewiston today to play a matched game of tennis with some of the experts of that city.

"A woman with a hoe." Friday of last week Mrs. Con. Steitz, with the aid of a hoe, killed a rattlesnake at their home on the reservation which measured nearly four feet in length and had ten rattles. Such acts take nerve and we know of some men who lack it.

A pretty wedding took place Tuesday morning at the Catholic church when Miss Mamie Phinney and Peter Johann were made man and wife, the wedding mass being said by Rev. Father Keyze. The bride is a sister of Mrs. O. V. Porter and has grown to womanhood in this community where she enjoys the acquaintance of a large circle of friends. The groom is one of the prominent young farmers of this vicinity where he has resided since early settlement of the country. His friends are legion. The newly married couple left on the early morning train for a tour of the Sound cities and will return home by way of Portland. We understand they will settle down on Mr. Johann's farm west of town shortly after their return. The News, with their host of friends, extends best wishes for a long and happy wedded life.

Tuesday of this week John and Henry Meyer purchased from Ed. Dahlke what is known as the creamery building, now occupied by the creamery, Phil's barber shop and Adair's saloon. The consideration was $3,500. In addition they bought from Rasmus Jackson the 60 feet of ground lying between the creamery and the monarch saloon paying him $625 for it. It is their intention to at once fix up the room now occupied by the creamery for a saloon and will place the same in first class condition. The saloon room on the north will be occupied by them with their large line of agricultural impliments. On the vacant lot they will for the present time erect a large platform to be used in displaying machinery and later on will erect a large fire proof shed. They found their present quarters wholly inadaquate to carry on their business, hence the purchase.

Sure, It Was a Woman

"I saw a woman on a street car," remarks an unknown reporter, "open a satchel, take out a purse, close the satchel and open the purse, take out a dime and close the purse, open the satchel and put in the purse, close the satchel and lock both ends. Then she gave the conductor the dime, and took a nickel in exchange. Then she opened the satchel and took out the purse, closed the satchel and opened the purse, put in the nickle and closed the purse, opened the satchel and put in the purse, closed the satchel and locked both ends. Then she felt to see if her back hair was all right, and she felt all right, and she was all right and just as sweet."

Picnic at Colfax

A small picnic party composed of Mr. and Mrs. F. C. Shork, Mr. and Mrs. Leo Follett and Mr. and Mrs. W. M. Herman journeyed to Colfax Sunday and had a picnic dinner in the park. None of the picnickers were badly sunburned.

Value of Junior Club Work

The Boys' and Girls' Club work is satisfying a two-fold need. In the first place it is of educational value along the farm lines. The boy and girl engaged in club work are learning scientifically the essential facts of farming and breeding that were worked out more or less successfully the trial and error method by their predecessors. They are both in touch through their clubs with the best and most acredited methods of modern horticulture and have the advantage of realizing their importance early in life. The club boy will make a better farmer while the club girl will make for him a better home companion.

In the second place club work is of high value for it teaches the great lesson of cooperation. The value of community work is realized and appreciated through the club as it could not otherwise be, and it will be learned there that individual prosperity can follow only in the wake of the common or community well-being. The movement is a long step toward better living through better community business, better schools, better social opportunities, better churches, and a better neighborhood atmosphere. These clubs are not only a benefit of the present but an insurance for the future—Western Breeder's Journal.

A Sure Shot Barometer

The Exchange Bank has abarometer that has anything backed off the map that we have ever seen, when it comes to accuracy—in fact, it never fails to give the correct dope on the weather. It is doubtful if many people really know of this truthful weather forecaster or they perhaps would visit the bank often to consult it.

The directions for reading this wonderful weather forecaster are extremely simple and can be readily understood by anyone and easily remembered by the most absentminded. Any of the boys in the bank will explain it so that in future you will be able to read it at a glance.

Electricity Raises Chicks

The Pullman Game Protective association has made a start toward stocking the Palouse country with Chinese pheasants by hatching 54 baby "Chinks" in the first two settings.

The pheasants are being brooded with an electric brooder and as soon as they are large enough to take care of themselves they will be liberated near here. The protective association proposes to purchase an electric incubator and brooder and go into the hatching business on a large scale. The state game farm has furnished the eggs so far this year.

Weather Conditions

The weather conditions throughout this section of the country have been rather damp for the past "some time." There have been many installments of that "Million-dollar rain." Now the next ingredient needed to make the concoction just as desired is a "millyun" dollar's worth of sunshine. And it started in Monday morning—and continued throughout the day. Tuesday wasn't quite so nice, but Wednesday again made up for it and all are in hopes that a sure 'nuff installment of that million dollars' worth of sunshine is with us.

Boys and Girls Join In Picnic

The first joint state gathering of boys' and girls' clubs held in the west took place recently when 181 delegates to the second annual club camp on the campus of the State College of Washington joined 110 from Idaho in a day's picnic in the Moscow mountains. Twenty Washington counties were represented and the 10 northern counties of Idaho.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Fine Berries in Kamiah

A box of strawberries which were raised on the J. V. VanDyne place at Corbett's Ferry and brought to this office Saturday contained just eighteen berries—and the box was well filled, too. Placed side by side (not lengthwise) the eighteen occupied a space of twenty-five inches. Some berries, we say, and they were just as good to eat as they looked.—Kamiah Progress.

Catches 10-foot Sturgeon

The fore part of this week Ted Graham, who operates the mail launch between Asotin and Rogersburg, and who is incidentally a real fisherman when it comes to going after real fish, was successful in capturing four fine sturgeon in Snake river, at Fisher's Bar. All were of good size, but one of the number proved to be the largest that has been gathered in this section for a good many years. This large fellow measured ten feet and six inches and weighed in the neighborhood of five-hundred pounds. It is Mr. Graham's intention to ship this fish in a few days and peddle it out. In the meantime anyone desiring to take a look at this large fish, can do so by driving to the east part of town where the fish is anchored in the waters of the river. —Asotin Sentinel.

Deary District to Front

Judging from the number of labels ordered from this office by strawberry growers this week, the strawberry crop of the Upper Potlatch country will be quite large. The Texas Ridge growers were the largest buyers of labels, this section having established a reputation as a strawberry center. Big Bear Ridge will this year come into notice as a strawberry section also.

The strawberries here go on the market after all the Lewiston and Clarkston product have been disposed of, and prices usually start better than can be had for irrigated berries except for the first offerings from the irrigated fields. Our berries are considered of better quality than those of the lower regions, in that they are firmer and therefore better shippers, and have a finer flavor.—Latah County Press.

Juliaetta Girl Goes to Hawaii

Miss Amsel Green, daughter of Mr. and Mrs. T. O. Green, left Thursday for a trip to Hawaii. Enroute Miss Green will visit with Miss Caroline Hoppe, at Berkley Calif. She will sail from San Francisco June 26 for Lihue on the island of Kauai, where she will visit with Miss Ethel Richmond, daughter of Mr. R. R. Richmond of Lapwai, Idaho. Miss Richmond went to the islands last August to teach in the public schools there.

Later both Miss Richmond and Miss Green will go to the city of Honolulu, where Miss Richmond will teach English in the Honolulu city schools the coming year.

Miss Green will return to Idaho, in time to resume her work as head of the Latin department of the Coeur d'Alene city schools, next September. —Star Mirror.

[Miss Richmond was formerly teacher of English in the Genesee High school and has many warm friends here who will be glad indeed to hear of her advancement in the land of the Hoola maids.]

Beach Opens July First

The Clarkston Beach, at the east end of Chestnut street will be open, and ready with accomodations for the swimmers and bathers July 1, according to announcement made today by Harold Fountain, manager of the beach this season.

Mr. Fountain reported that the beach is better than ever and that the receding river, which is now at a six-foot stage, has revealed that the sandbar will extend to the southward out into the river farther than ever this year and provide one of the longest beaches found on the Snake river.

He reported that work will begin on the buildings in the next week and that boats and equipment are now being repaired and put in shape for the season. The rates to patrons will be same as formerly and in some instances reduced, with cheap season tickens being offered for sale at the beginning of the season.

Mr. Fountain stated that the annual water carnival will be held the last week of July or the first week in August, when a complete program of water sports, motor boats, and if possible, sea planes will be offered to the public. It is planned to have an attendance of five or ten thousand people at the event. Last year attendance was four or five thousand drawn from all parts of the valley.—Clarkston Republic.

Entertained at Hiking Party

Mrs. George Boliou entertained the following young ladies at a hiking party Monday evening: Misses Gertrude and Margaret Sampson, Ruth and Esther Martenson, and Bernadine Hasfurther. The party hiked out for several miles where a delicious picnic lunch was served. They all report a good time.

TWO GENESEEANS HONORED WITH GRAND LODGE OFFICES

Two Genesee people received honors at the hands of the Knights of Pythias and Pythian Sisters grand lodges, held last week at Buhl. R. E. Emmett was made grand outer guard for the Knights and Mrs. Lela Jain was elevated from grand senior to grand chief of the Pythian Sisters, which is the highest gift of the Sisters within the state. The local lodge of Knights was represented by R. E. Emmett and Walter F. Jain and the Pythian Sisters by Mrs. Walter Jain. They report a splendid trip and are loud in their praise of the reception and entertainment given the delegates by the people of Buhl, during the three days of the convention — Wednesday, Thursday and Friday of last week. They also report that they were royally entertained during their short stays by the Knights and Dokkies at Pendleton and Walla Walla, on the return trip.

The Genesee Locals are justly proud of the splendid record being made by their representatives.

Following are the newly-elected state officers of the Knights of Pythias:

Grand Chancellor—Geo. H. McMahon, Nampa.

Grand Vice Chancellor—E. A. Bowler, Shoshone.

Grand Prelate—M. M. Farmer, Blackfoot.

Grand Keeper of Records and Seal —Wm. Voigtlander, Kellogg.

Grand Master of Exchequer— C. W. Culp, Rathdrum.

Grand Master of Arms—R. L. Brainerd, Kellogg.

Grand Inner Guard—W. C. Renfrow, Moscow.

Grand Outer Guard—Robt. E. Emmett, Genesee.

Grand Tribune—C. D. Moore, Pocatello.

Grand Trustee—A. R. Ingalls, Payette.

Grand Trustee—A. P. Hay, Couer d'Alene.

Supreme Representative—Jas. R. Hall, Wallace.

The newly elected officers for the Pythian Sisters are as follows:

Past Grand Chieft—Myrtle Mitchell, Nezperce; Grace Cook, Coeur d'Alene.

Grand Chief—Lela Jain, Genesee.

Grand Senior—Mathilda Marchel, Craigmont.

Grand Junior—Clemence Elldred, Twin Falls.

Grand Manager—Julia Haynes, Lewiston.

Grand Mistress of Records and Correspondence—Lula Jain, Moscow.

Grand Mistress of Finance—Theo M. Sherfey, Buhl.

Grand Protector — Pearl Scott, Coeur d'Alene.

Grand Guard—Lou Mathiewson, Sandpoint.

Grand Press Correspondent—Lottie Roberts, Boise.

Supreme Representative for four years—Ella Smith, Boise.

Supreme Alternate—Ethel Hoffer, Lewiston.

There were between 30 and 40 Sisters in attendance at the convention, 16 of them being delegates from the 20 temples of the state.

The altruistic work is the pride of the state organization, $7038.15 having been raised during the year for the care of the sick and the needy. At the last supreme meeting Idaho reported more nurses than any other state in the Pythian domain.

Look For No Buying Orgy

We have been litle dissappointed in the business revival, perhaps, because ie was not measured up to the orgy of 1918-19, and yet when we come to think of it that period was not a healthy one.

Easy money is not of much benefit to anybody. It creates a false set of standards and we find it hard to overthrow the habits we form under such conditions.

We find business pretty good. We are not intoxicated and crazy. We do not buy everything we see, regardless of what it costs. We do not have prices so high that they do not have any bearings on standards at all. But the volume of business is increasing steadily and prices are tolerably firm.

Stores Will Close July 4

According to present plans practically all business houses in Genesee will be closed on the Fourth.

The News office will be closed all day.

Have You

Have you named your farm and placed a sign over the gate? That is one of the best ways of creating a reputation for your produce.

Puts In Stock of Groceries

Mrs. Ida Wheeler has added a small stock of groceries to her Ready-Made Shop and will conduct it on the "Cash and Carry" plan.

Returns from Extended Visit

Mrs. W. J. Mervyn returned home Thursday morning from Norwalk, California, where she has spent the past nine months.

Beauty that is only rough deep is better than none.

Valentino Faces Real Bulls

Real Spanish fighting bulls were transported from Spain to Hollywood, via Mexico, for the sensational bullring scenes in "Blood and Sand," Rudolph Valentino's star picture which will be shown at the opera house Saturday night. They are said to have differed from the domestic variety as "Man-o'-War" differs from the humble truck horse. Running wild from birth on lonely ranches, shipped in black boxes to continue their isolation from mankind, they entered the arena with only the elemental instancts of wild animals—to kill and destroy any one daring enough to face them. And Mr. Valentino had to get out in front of these interesting creatures!

"Blood and Sand" is the story of a bull-fighter. It abounds in those colorful elements that every American loves. Lila Lee and Nita Naldi have the principal feminine roles.

As an added attraction on Saturday night, July 7, George Nelson, the famous singer, will entertain the audience.

Blue Bird Club

The Blue Bird Club held their semi-monthly meeting Tuesday afternoon at the home of Mrs. John Lindrud. The time was spent with needlework and a very pleasant and profitable time was had. It was decided to send the quilt made by the club to the children's home at Lewiston.

Delicious refreshments were served by the hostess.

The invited guests were:

Mrs. August Johnson and daughter, Ida, Mrs. A. Danielson, Mrs. A. Olson, Mrs. Scheele, Mrs. O. Peterson, Mrs. J. Hagan, Mrs. Guy Brown, Mrs. E. Hovland of Spokane.

Many Weeds Laid Low

About one of the best things that has been done around the town for many a day was the cutting of the grass and weeds in the city park and along a number of the streets, which adds materially to the sightliness of the city. There are still several streets that might be improved by the use of a mower or a good sharp scythe—but there are few who are adept in the use of man-power mower and as a consequence there are many weeds standing that should be cut before they go to seed.

Return From Fishing Trip

Mr. and Mrs. Cody Rader and little son and George Post and mother and little brother returned Sunday evening from a few days fishing trip to Lake Chatcolet. They reported catching all the perch they wanted—and more, too—and a few trout. They said the bass season was closed, so of course the bass wouldn't bite on that account. Anyway they had a splendid time and everyone enjoyed the outing.

Underwent Operation

Connie Caldwell was taken to Lewiston Monday by Dr. Evans, accompanied by his mother and aunt, Miss Pauline Steltz, where he underwent an operation that evening for appendicitus. The appendix had already ruptured and the case was a serious one, but at last reports he was getting along as well as could be expected and it was anticipated that his recovery would be only a question of time.

Be No Car Shortage

Even if the highest crop expectations of the wheat farmers are realized the railroads in the Inland Empire and the Palouse and Big Bend sections will be able to handle the wheat crop without any car shortage, according to information given out on reliable authority.

PRESIDENT AND MRS. HARDING TO VISIT SPOKANE JULY 2

Plans for the entertainment of President and Mrs. Hardnig, in Spokane, during their stay Monday, July 2 from 2 to 11 p. m., as made by the local committee, were approved by Walter Brown, personal representative of the president, who was in Spokane recently.

The presidential party will arrive at the Union station, where they will be met by a committee composed of the governor, mayor, senators and representatives, the chairman of the board, Miss Spokane and Princess Columbia.

At 2:15 the party will enter a fleet of automobiles which will parade the downtown district so that every one will have an opportunity of seeing the president.

The president will deliver his address on "Reclamation" at the armory at 8:30 p. m. Arrangements have been made whereby 9,000 persons will be admitted, the only reservations to be made will be the Grand Army men and the physically disabled war veterans.

The entire Inland Empire has been invited to take part in this program, and representatives are expected from every community. Spokane will keep an open house on this day.

Co-Operation Begins at Home

Maybe we are oldfashoned, but we still incline to the belief that for a successful co-operative organization of any kind, the spirit must be planted fostered and grown before there can be any hope of success.

Lack of consideration for the rights of neighbors is the rock on which most co-operative institutions are wrecked. Until we regard the other fellow's rights, we cannot expect him to regard ours. Until he does and we do, there is not much chance for any co-operation.

When we find a neighborhood in which the people are honestly neighborly, in which friendship and good will reign, we will discover that the machinery for co-operation is simple enough. Selfishness makes the need for co-operation, and selfishness prevents it.—Western Breeders Journal.

Locusts Arriving On Time

According to a dispatch from Everett, Washington, the first seventeen-year locust has been seen in that section of the country. It is believed that this is the first of these insects that have ever appeared in western Washington.

Among the Sick

It is reported that Nick Wagner is in a Lewiston hospital suffering from a severe case of diabetes.

Mrs. Barr, wife of one of the road contractors, is in a Moscow hospital suffering from sleeping sickness.

Opens Cream Station

The Hazelwood company of Spokane has opened a cream station in the Sullivan building, just east of the postoffice, which will be in charge of Chas. Merrifield. Cream will be tested and cash paid for same.

Loses End of Finger

George Johnson, son of August Johnson, had the misfortune to have two fingers of his left hand badly mashed the other day while working with a pump, the end of the little finger being severed.

Ships Car of New Potatoes

According to reports sent out from Pasco the first carload of new potatoes from that district were shipped from Kennewick to Pocatello last week. They brought $80 a ton f. o. b. Kennewick.

Prosperity In Your Pocket

Often Becomes Adversity

The people who save are the ones who systematically put their money in a bank until they are aple to invest it to better advantage.

When a fellow keeps his roll in his pocket there is always a temptation to "peel it off." Continued peeling eventually brings a person to the point where there is nothing left to peel.

Where do you keep your roll?

First Bank of Genesee

A. E. CLARKE, Pres. N. S. VOLLMER-HOPKINS, V.-P.
F. J. NIEMANN, Cashier

Notice to Holders of Victory Bonds

HOLDERS of Victory Bonds uncalled are requested to turn same in for payment. These bonds do not bear intesest after May 20, 1923. If you will deliver your bonds to this bank we will be glad to handle them for you.

REASONABLE SAVING HELPS US ALL

MY LADY'S MONEY

An Episode in the Life of a Young Girl

By Wilkie Collins

INSTALLMENT NO. 7.

Isabel's color began to rise. The merriment died out of her face; she looked at Moody gravely. "I don't like to be accused of distressing people when I don't deserve it," she said. "I had better leave you. Let me by, if you please."

Having committed one error in offending her, Moody committed another in attempting to make his peace with her. Acting under the fear that she would really leave him, he took her roughly by the arm.

"You are always trying to get away from me," he said. "I wish I knew how to make you like me, Isabel."

"I don't allow you to call me Isabel!" she retored, struggling to free herself from his hold. "Let go of my arm. You hurt me."

Moody dropped her arm with a bitter sigh. "I don't know how to deal with you," he said, simply. "Have some pity on me!"

If the steward had known anything of women (at Isabel's age) he would never have appealed to her mercy in those plain terms and at that unpropitious moment. "Pity you?" she repeated, contemptuously. "Is that all you have to say to me after hurting my arm? What a bear you are!" She shrugged her shoulders and put her hands coquettishly into the pockets of her apron. That was how she pitied him! His face turned paler and paler —he writhed under it.

"For God's sake, don't turn everything I say to you into ridicule!" he cried. "You know I love you with all my heart and soul. Again and again I have asked you to be my wife, and you laugh at me as if it was a joke. I haven't deserved to be treated in that cruel way. It maddens me— I can't endure it!"

Isabel looked down at the floor, and followed the lines in the pattern of the carpet with the end of her small little shoe. She could hardly have been further away from really understanding Moody if he had spoken in Hebrew. She was partly startled, partly puzzled, by the strong emotions which she had unconsciously called into being. "Oh, dear me!" she said, "who can't you talk of something else? Why can't we be friends? Excuse me for mentioning it," she went on, looking up at him with a saucy smile, "you are old enough to be my father."

Moody's head sunk on his breast. "I own it," he answered, humbly. "But there is something to be said for me. Men as old as I am have made good husbands before now. I would devote my whole life to make you happy. There isn't a wish you could form which I wouldn't be proud to obey. You mustn't reckon me by years. My youth has not been wasted in a profligate life. I can be truer to you and fonder of you than many a younger man. Surely my heart is not quite unworthy of you, when it is all yours. I have lived such a lonely, miserable life; and you might so easily brighten it! You are kind to everybody else, Isabel. Tell me, dear, why are you so hard on me?"

His voice trembled as he appealed to her in those simple words. He had taken the right way at last to produce an impression on her. She really felt for him. All that was true and tender in her nature began to rise in her and take his part. Unhappily, he felt too deeply and too strongly to be patient and to give her time. He completely misinterpreted her silence—completely mistook the motive that made her turn aside for a moment to gather composure enough to speak to him. "Ah!" he burst out, bitterly, turning away on his side, "you have no heart!"

She instatly resented those unjust words. At that moment they wounded her to the quick.

"You know best,' she said. "I have no doubt you are right. Remember one thing, however; though I have no heart, I have never encouraged you, Mr. Moody. I have declared over and over again that I could only be your friend. Understand that for the future, if you please. There are plenty of nice women who will be glad to marry you, I have no doubt. You will always have my best wishes for your welfare. Good-morning. Her ladyship will wonder what has become of me. Be so kind as to let me pass."

Tortured by the passion that consumed him, Moody obstinately kept his place between Isabel and the door. The unworthy suspicion of her, which had been in his mind all through the interview, now forced its way outward to expression at last.

"No woman ever used a man as you use me without some reason for it," he said. "You have kept your secret wonderfully well; but sooner or later all secrets get found out. I know what is in your mind as well as you know it yourself. You are in love with some other man."

Isabel's face flushed deeply; the defensive pride of her sex was up in arms in an instant. She cast on disdainful look at Moody, without troubling hrself to express her contempt in words. "Stand out of my way, sir!" that was all she said to him.

"You are in love with some other man," he reiterated, passionately. "Deny it if you can!"

"Deny it?" she repeated, with flashing eyes. 'What right have you to ask the question? Am I not free to do as I please?"

He stood looking at her, meditating his next words, with a sudden and sinister change to self-restraint. Suppressed rage was in his trembling hand as he raised it emphatically while he spoke his next words.

"I have one thing more to say," he answered, "and then I have done. If I am not your husband, no other man shall be. Look well to it, Isabel Miller. If there is another man between us, I can tell him this—he shall find it no easy matter to rob me of you!"

She started, and turned pale; but it was only for a moment. The high spirit that was in ehr rose brightly in her eyes, and faced him without shrinking.

"Threats?" she said, with quiet contempt. "When you make love, Mr. Moody, you take strange ways of doing it. My conscience is easy. You may try to frighten me, but you will not succeed. When you have recovered your temper I will accept your excuses." She paused, and pointed to the table. "There is the letter that you told me to leave for you when I had sealed it," she went on. "I suppose you have her ladyship's orders. Isn't it time you began to think of obeying them?"

The contemptuous composure of her tone and manner seemed to act on Moody with crushing effect. Without a word of answer the unfortunate steward took up the letter from the table. Without a word of answer he walked mechanically to the great door which opened on the staircase, turned on the threshold to look at Isabel, waited a moment, pale and still, and suddenly left the room.

That silent departure, that hopeless submission, impressed Isabel in spite of herself. That sustaining sense of injury and insult sunk, as it were, from under her the moment she was alone. He had not been gone a minute before she began to be sorry for him once more. The interview had taught her nothing. She was neither old enough nor experienced enough to understand the overwhelming revolution produced in a man's character when he feels the passion of love for the first time in the maturity of his life. If Moody had stolen a kiss at the first opportunity, she would have resented the liberty that he had taken with her; but she would have thoroughly understood him. His terrible earnestness, his overpower agitation, his abrupt violence—all these evidences of a passion that was a mystery to himself—simply puzzled her. "I'm sure I didn't wish to hurt his feelings" (such was the form that her reflections took in her present penitent frame of mind); "but why did he provoke me? It is a shame to tell me that I love some other man, when there is no other man. I declare I begin to hate the men, if they are all like Mr. Moody. I wonder whether he will forgive me when he sees me again? I'm sure I'm willing to forget and forgive on my side, especially if he won't insist on my being fond of him because he ise fond of me. Oh! dear, I wish he would come back and shake hands. It's enough to try the patience of a saint to be treated in this way. I wish I was ugly! The ugly ones have a quiet time of it—the men let them be. Mr. Moody! Mr. Moody!" She went out to the landing and called to him softly. There was no answer. He was no longer in the house. She stood still for a moment in silent vexation. "I'll go to Tommie," she decided. "I'm sure he's the more agreeable company of the two. And—oh, good gracious!—there's Mr. Hardyman waiting to give me my instructions! How do I look, I wonder?"

She consulted the glass once more, gave one or two corrective touches to he hair and cap, and hastened into the boudoir.

(To be continued.)

Winged.

Ray—When does a fish imitate a bird?

May—You tell me.

Ray—When it takes a bait fly.

WASHINGTON NEWS

Plans are being made for a Fourth of July celebration in Waterville with horse racing a feature of the program. In addition to a real snappy ball game, a street carnival is to be held.

Eastern capitalists have purchased a large tract of land at Lilliwaup Falls, where they will build a great summer hotel and resort. The hotel will contain 600 rooms. Summer cottages, tennis and golf grounds will be other attractive features for the tourists.

A launch 35 feet long, with a rated speed of 18 miles an hour, arrived at Seattle last week from Norfolk, Va., to be used by Millard T. Hartson, collector of customs, in catching rum runners. It is to be manned with a picked crew of inspectors and is to watch the waters of Puget sound for illicit cargoes from British Columbia.

After considering bids submitted on June 8 for construction of the legislative building of the capitol group, the state capitol committee again rejected all bids, as was the case with the bids submitted May 8. The committee made no announcement as to future plans and gave no reason for rejecting the bids, other than that they were not satisfactory.

Each year the Garfield County Pioneer association presents chairs to the man or woman who have held the longest continuous residence in the county and this year Mrs. Eliza Bentley, pioneer of 1876, and John W. Reid, pioneer of 1874, received the gift chairs. Attorney C. W. Jewett was elected president of the organization for the ensuing year.

The cut of lumber is decreasing in all the eastern states; in practically every state west of the Great Plains it is increasing, says the forest service, United States department of agriculture. The principal source of softwood lumber for the entire nation will soon have shifted to the west coast and the average freight cost paid by the home builder or manufacturer will have advanced to a new and higher level.

The state highway committee has decided in favor of Milton citizens in establishing a new route on the Pacific highway between Tacoma and Seattle. Tacoma business men had protested against this routing. The decision was based on the fact that the Milton route is the shortest and has the best grades, it was said. Grading from Tacoma to Des Moines is to begin this year, but no paving will be done this biennium.

Highways from eastern Washington are in excellent shape and there is heavy travel over the Yellowstone Trail, the Vantage Ferry route and over the Sunset Highway. Motorists arriving over the paved Pacific highway from California are being directed eastward through Washington at Seattle. There are a considerable number of eastern Washington, Idaho and Montana people now "summering" on Puget Sound.

One hotel complete—from bathtub and kitchen sink to lace curtains and parlor lounge—will be rolled from Chicago over the western prairies and mountains to Longview, Wash. The shipment will go by special train of 15 cars, and will be placed in its final resting place, the Hotel Monticello, Longview. The coffee shop and hotel barber shop will be included in the transfer. The total valuation of the equipment is $200,000. The hotel will become a part of a specially built city which the Long Bell Lumber company, formerly of Kansas City, is erecting in its big lumber tracts in the northwest.

New Drivers' Licenses.

The department of licenses expects to begin the issuance of the new drivers' license for the two-year period, beginning August 1, sometime this week, or as soon as it is possible to secure the necessary printing. The new licenses will be on index cardboards instead of on thin paper as used during the last two years. New application blanks are being sent out now for general distribution to the motoring public.

Still Bar German.

The teaching of German will be restored in high schools of the state only where an authorized petition from the district board is presented to the state superintendent of public instruction recommending it, according to a resolution adopted by the state board of education at its annual meeting in Olympia and made public last week by Mrs. Josephine Corliss Preston, state superintendent. The state board was not favorable to a complete dropping of the bars this year, it was said.

"The fools aren't all dead yet."

"No, and the worst of it is most of them aren't even sick."

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

President Harding has sold the Marion Star, according to a White House announcement. The chief purchaser, Louis Brush, is publisher of the Salem, Ohio, News.

Two petitions for the recall of Governor Walter M. Pierce of Oregon are in circulation at Albany, according to reports. It is said that the petition bears numerous signatures.

There are 1,250,000 cows still living in towns, dairy division of the department of agriculture said today, in spite of reports that in many cities school children are growing up without seeing cows.

Erwin R. Bergdoll, wealthy draft evader, left Fort Leavenworth last week after serving two years and ten months for evading military service during the war. He is a brother of Grover Cleveland Bergdoll, who escaped to Germany.

Alleged defalcation of a million and a half dollars by Cashier Philip A. Drumm recently caused the failure of the American State bank of Wichita, one of Kansas' strongest institutions. The cashier made large investments in oil stocks, officials said.

The soviet red army of Russia is said to be the finest in the world at the present time. The forces, composed of 1,500,000 troops, are well drilled and equipped with every kind of modern weapon, including light and heavy artillery, bombs and aeroplanes.

Attempting to establish a world's altitude record, Lieutenant Bury ascended to 9000 meters. At that point his oxygen tank broke and he fainted. The plane strated tumbling eastward. Bury recovered consciousness in time to regain control, straighten out and make a safe landing.

There are 5000 Chinese coolies in New York city who have sneaked in as sailors. To deport them would cost the government a million dollars, Secretary of Labor Davis told the Harding cabinet. Davis made a vigorous speech in the cabinet on immediate legislation for alien registration.

The British government is considering a proposal that the United States be allowed to search foreign vessels 12 miles from the American coast, in exchange for which such ships will be allowed to retain liquor if their bars are sealed while in American ports, Ronald McNeil, under-secretary of state for foreign affairs, announced in commons.

President Harding was pledged two votes for renomination by the republicans of Porto Rico in a special convention last week, which also adopted a new platform with statehood as the goal and advocating the immediate liberalizing of the territorial form of government to include the extension here of the United States constitution and the election of the governor.

An experimental air freight service between Cleveland and Detroit will be started July 1, it was announced by the Detroit board of commerce. Three all-metal monoplanes, equipped with pontoons and capable of carrying cargoes of 1500 pounds each, will be used in the experiment, flying a direct route across Lake Erie. Each plane will make 12 trips over the distance of 90 miles, it was announced. The planes will be flown at the rate of 135 miles an hour, making the distance in less than an hour, according to plans.

Washington-Idaho Conference.

A conference looking toward adjustment of the situation arising from shipment of alfalfa hay through Washington from sections of Idaho under quarantine on account of the presence of alfalfa weevil was held at Olympia Monday in the offices of the agricultural department. The conference was attended by Washington agricultural officials, Mark A. Means, commissioner of agriculture for Idaho, and representatives of railroads shipping a result the town of Hillyard has more hay from quarantined districts. The situation was brought to a head by the seizure and burning of two cars of alfalfa from Idaho in Spokane last April.

Highly Pussible.

"A salmon will go for a mouse quicker than any other kind of bait," said a clerk in a sporman's store.

"Well, there is another kind of fish that ought to fall for that bait," returned a bystander.

"What's that?" asked the clerk.

"Catfish, of course." was the reply.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

COMBINATION OR ENVELOPE CHEMISE.

Material—Muslin, nainsook, long cloth, cotton crepe, or pajama cloth. The amount of material varies according to style of pattern, usually the amount required will be twice the measurement from the highest point of shoulder to just above the knee, plus nine inches. Determine the amount of trimming necessary after garment has been sewed up, by measuring loosely around neck and arm holes and bottom of combination.

Pattern—Select commercial pattern of simple design.

Directions for Making—Study pattern. Test and alter to fit figure of wearer. Lay pattern on material according to chart given on pattern. Pin and baste on seam allowance line, the shoulder seams, then the side seams. Finish with French or flat fell seams. Finish neck and arm holes with bias facing, either commercial or cut from same material. Finish bottom of combination with narrow hem. Lace or embroidery may be used for trimming, or decorative stitches may be applied. Lace should be joined with an invisible button-hole stitched seam, and embroidery with fell seam, matching pattern of embroidery. If pattern of combination has a flap at bottom, face flap with one-inch facing. Face the bottom of the center front with a piece of material the same width as flap. This piece is for the button tolee. Buttons are placed on flap.

PRINCESS SLIP.

Material—Same as for combination suit.

Pattern—Use commercial pattern.

Directions for Making—If pattern requires placket, use faced and bound placket. Put slip together in same way as for combination suit. Bottom of slip: Put on slip and have the desired length marked with pins. Use a yard stick to measure distance from floor, hanging same length as dress. Finish bottom with a plain two-inch hem, and run in by hand a 1-2-inch tuck to be taken out when garment shrinks. Stitch on edge of hem.

Flounce Set Above Bottom of Garment—Mark line on slip with pins by measuring with ruler width of flounce from lower edge of, slip. On this line mark center front, center back, and points have way between on either side; thus dividing in fourths. Divide flounce in fourths and designate points with contrasting thread, being careful to have center front in center of width of material. Gather width of tape. Stitch lower edge of tape first and before stitching upper edge make sure that no ravelled edges of flounce show above tape. If receiving tuck finish is to be used, threefourths inch must be allowed for tuck when hanging slip. Locate line on slip by measuring width of flounce plus three-eighth inch from lower edge of slip, and mark with pins. Crease on this line, baste and stitch three-eighths inch from edge, making tuck. Baste flounce in place as if bias tape finish were to be used. The upper edge of flounce will come just to stitching of tuck. Bring tuck down over flounce; baste and stitch carefully on lower edge.

Flounce Set on Bottom of Slip—When flounce is to be applied at lower edge of slip, provision must be made for width of flounce, seam and receiving tuck, if latter is used. The width of flounce must be subtracted while seam and tuck must be added.

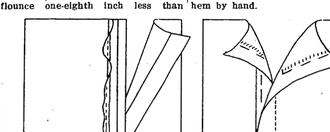
UNDERSKIRT.

Material—Same as for combination; sateen and gingham may also be used.

Pattern—Select simple two-piece pattern.

Directions for Making—Lay pattern on material according to chart given on pattern. Pin and baste seams together beginning at top, allowing for placket on left side or at back. Finish with flat fell seams. Use faced and bound placket. Put on band according to directions given for bloomers. For putting in hem and flounce follow directions given for princess slip. Lower edge may be finished with fitted facing in either even or scalloped line. In planning facing make sure that material runs same way as for garment, cutting separate pieces for each gore of skirt. Pin and baste right sides together. If scalloped edge is desired mark line of scallops with chalk or contrasting thread, and stitch on this line. Cut seam width below stitching and slash seam sufficiently to insure flat finish when turned. Be sure that it is turned exactly on seam and baste carefully at lower edge. Lay skirt over table of machine and pin and baste upper edge of facing in place. This may be secured with machine stitching or some decorative stitch.

Faced and Bound Placket—Cut, pin, baste and stitch the same as for continuous placket. Holding placket piece toward you, place the two edges together and crease on fold, marking center. Then crease and mark exact bottom of placket. The overlap is finished as a facing and underlap as binding. Less material is required for former. Cut width of turning out-side of creases on one-fourth of placket piece for overlap. Fold, baste, and hem by hand.



Faced and Bound Placket.

2,809 at State College.

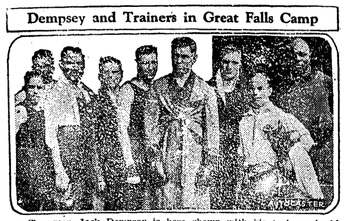
Final figures on attendance at the State College of Washington for the year just closed show a total of 2,809, excluding all duplicates. There were 154 graduate students; 2,655 undergraduates; 371 summer school students, Pullman; 49 winter school, Pullman; 162 winter school, Puyallup; 31 veterinary short course.

The total attendance at extension meetings for the year was 197,649. The boys' and girls' club enrollment was 6,290. In the correspondence courses there were 290 in the general courses, 549 in extension classes, and 105 in agriculture.

Making Emergency Road Repairs.

How to make emergency road repairs on an automobile will be taught this summer by Prof A. C. Abel, of State College of Washington in the summer session, June 18 to July 27, at the college, in his course on the care and operation of automobiles. He will show how the various kinds of troubles are detected, all about lubrication, and how to make the simpler adjustments. The course is planned for those who know nothing at all about autos, but the instruction and practice will be varied to suit the needs of those who are not beginners, also.

Dempsey and Trainers in Great Falls Camp



Champion Jack Dempsey is here shown with his trainers in his camp on the outskirts of Great Falls, Mont., where on July 4th, he will defend his title against Tom Gibbons, of St. Paul. Dempsey is now into heavy training.

Peculiar Tangle Gives Hillyard Double Set of City Officials

Mayor and Council at Loggerheads Over Appointment of Police, Etc.

BOTH SETS ARE SERVING

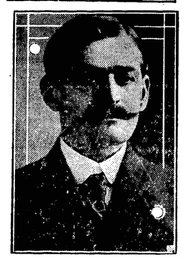
Law Invoked to Solve Problem, but Tangle Only Grows Worse as Time Goes On.

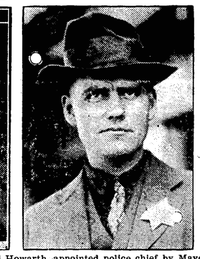
Day and night, two sets of policemen walk the streets of Hillyard. Two police judges sit in judgment on the arrests made by their respective police forces, and two men are trying to decide who is legally the city clerk of the railroad town, which is a suburb of Spokane.

Besides this, some of the other appointive offices within the supervision of the mayor and council are vacant, paid, for the council can refuse to allow the salaries of the mayor's appointees, while the mayor can retaliate by refusing to sign the warrants for the payments of the others' salaries, even though they be allowed by the council.

The controversy over the city clerk's job is not a part of the dissension between the mayor and the council, however. This grew out of a tie in the city election, at which both candidates received a total of 479 each. A recount was demanded, and this failed to change the result in any way. The county auditor then proceeded to settle the question by flipping pennies, and the "out" candidate won over the incumbent, who was a candidate for reelection.

The incumbent, however, refused to turn over the keys and books of his office, as he claimed that the law did not give the county auditor power to settle a case involving a city election





Top, left to right, are: Virgil Howarth, appointed police chief by Mayor Brown, and Clyde Engle, holdover chief. Below are (left) Night Marshal William Luders, Brown's appointee, and M. T. (Mickey) O'Brien, holdover night chief.

others are being filled by two men, the at every session of the city council the mayor, the city attorney, the clerk, and the council glare at each other across the council table, and repartee passes back and forth which evokes sentiments not entirely harmonious in their nature.

Meanwhile, the town is divided into two hostile camps, and day by day the breach is growing wider and wider. The law has been invoked to settle the case, and it has thus far been unable to adjudicate the differences which have arisen. There doesn't seem to be any statute covering what must be defined as unholy wrangling.

The whole thing came about as the result of the recent city election. Thomas Kehoe was mayor of Hillyard, and so far as his own administration was concerned, he was popular enough. But some of his appointees were decidedly unpopular, and with the idea of getting rid of them, an opposition ticket was put into the field, headed by former Mayor Pat Brown.

In the election Brown won out over Kehoe for mayor, but most of the candidates for the city council who ran with him were defeated. This left the new administration in charge of the Brown forces so far as the mayor was concerned, but the majority of the city council was composed of Kehoe men —who were favorable to the retention of the Kehoe appointees.

At every session of the council Mayor Brown announces a list of appointees to the various offices under his control, which the council promptly refuses to confirm. The mayor recently asked the old officers to turn over their offices to their successors, which they refused to do. Whereupon, the mayor promptly put his appointees to work in their various positions, and as a result the town of Hillyard has more city government than it knows what to do with.

In the meantime, there is no way of knowing which set of officers is legally qualified to serve, and when it is all settled up, as it must be some day, there will be several interesting knots to untangle, for everything which is being done by one or the other of the two sets of officers is, of course, illegal, and must some day be set aside.

Also, there is the question of salaries to be disposed of. As long as the deadlock continues no salaries can be

"With all due respect for the opinion of the attorney general, I prefer to stand on the advice of Corporation Counsel J. M. Geraghty of Spokane and other lawyers I have consulted," said Mayor Brown. "They have told me that the terms of the police officers of Hillyard under the former mayor expired with that of Mayor Kehoe and that they are now acting without authority. That is my stand on the matter.

"The cleaning out of the Hillyard police force was the one and only issue in the recent city election. The people voted for a change and I intend to stand by their verdict regardless of what the attorney general says or the city council does until the matter is settled by court decree. I am going to go through with the fight to the end if I have to go it alone."

Mayor Brown says that he positively is not going to sign any warrants for salary pay to any of the officers presuming to hold office without appointment from him, not even if the attorney general says they're legally officers and entitled to pay; before he'll sign any pay warrants, he says, the matter will have to be taken into court and a court order issued for him to sign such warrants.

Today (Wednesday) Mayor Pat Brown reuested the old police officers to surrender their stars and keys to the hoosgow. They refused.

Shortly afterward Virgil Howarth, appointed chief of police by Mayor Brown Tuesday night, appeared on Market street with a nice new shining chief of police star pinned to his bosom. Likewise Clyde Engle appeared as usual on the street in his uniform and star with eyes peeled for cars parked in violation of traffic ordinance or other infringements of the law.

When the shades of darkness silently fell over the city this evening and the goblins began to walk, Night Officer Mickey O'Brien strolled on Market street with his gat on his hip to watch through the night for those coming a bunk behind the bars and likewise William Luder, named by Mayor Brown Tuesday night for night officer, armed himself, pinned on an officer's star and took up his night's vigil.

And there you are!

DAIRY

Better Underfeed Than Overfeed

The United States Department of Agriculture gives some figures on the quantities of milk that may be fed to calves at different ages. At birth a 50-pound calf needs about 8 pounds a day, while a 100-pound calf will use 12 pounds. Underfeeding at the start, says the department, is better than overfeeding. Some beginners make the mistake of giving the calf all it wants. This would probably be a good practice if the calf were fed every 2 or 3 hours, as is the case when it runs with the cow. However, when a young calf has been without feed for from 8 to 12 hours, there is danger that it will gorge itself if allowed to consume all its wants, which may cause digestive trouble.

A uniform temperature of about 90 degrees F. is necessary if the milk is to agree with the calf and produce the best results. Some feeders attempt to make up for any lack in quality of milk by increasing the quantity. For instance, they will feed much more skim milk than whole milk in the belief that the increased quantity will make up for the lack of butter fat. This is wrong, as the same rule about overfeeding holds good with skim milk as with whole milk.

If, on account of age, souring, or dirt, the quality of the milk is poor, the quality should be reduced rather than increased. The calf will not lose so much in development through a reduction in feed as he would from digestive disorders. A calf often can take a relatively small quantity of bad milk for long periods and hold its own and even make small gains, when a larger portion would cause digestive trouble and even endanger the animal's life.

The longer a calf is allowed to nurse the cow the harder it will be to teach it to drink from a pail, says the United States Department of Agriculture. However, the first milk or colostrum, has properties that normal milk does not have and which are necessary to give the calf the best start. For this reason the youngster should always receive the first milk. If it is left with the mother for 48 hour s it will get enough of the stimulating first milk and may still take to drinking from a pail without much trouble. A weak calf may be left with the cow a little longer, but more patience will be rqeuired to teach it to drink.

There were 1,62,000,000 dozen chicken eggs produced on the farms of the U. S. in 1922.

OKLAHOMA MAN BLUFFS HIS HENS

The man who sent the following chicken story to the daily press from Penooka, Okla., was probably raised by one of those old fashioned couples who kept the family switch or strap in plan sight and the results were so apparent that he figured it was worth trying in his hennery. The story follows:

"Anton B. Bisbee, a farmer residing not far from Penooka, whose White Leghorn hens have broken all records, disclosed his method. Whenever egg production begins to fall off Bisbee spends 10 to 15 minutes grinding his ax in full sight of the hens. Apparently the hens are frightened into laying.

"Bisbee says that his discovery was purely accidental. One day last October after gathering the eggs and finding the number very small, he became disgusted, ground his ax and beheaded a dozen or more hens. The next day was a record breaker in the egg line. The poultryman states that he decapitates a hen now and then in order to maintain his authority, so to speak. Usually after grinding his ax he finds most of the hens and some of the roosters on the nests."

Music This Summer.

Frederick C. Butterfield, regional director for the Fountainebleau School of Music, France, where he spent last summer, will be in charge of the school of music courses at the State College of Washington this summer term. He will organize a chorus which will give practice in sight singing under an experienced director, and will also arrange for those who wish to study piano, voice or violin under the regular members of the school of music faculty.

Have you done your good deed today? If not, please join our committee that is collecting overcoats for the starving moths.

DIFFERENT WAYS TO SERVE STRAWBERRIES

Strawberries as an Appetizer.

Pick over the berries, place in colander, pour over cold water, drain thoroughly, arrange attractively on dishes and serve with powdered sugar.

Old Fashioned Strawberry Shortcake.

Sift together 2 cups flour, 4 teaspoons baking powder, 1 teaspoon salt, 1 tablespoon sugar, then work in 5 tablespoons good shortening, using 2 knives in a cutting motion until mixture resembles coarse meal. Then add gradually three-fourths of a cup of milk or enough to make a soft dough, working liquid in with a knife. Roll the dough out to one inch thickness and cut with a fancy cookie cutter, a little larger than ordinary baking powder biscuit. Bake 15 minutes in a moderate oven or until a golden brown. Cut each cake in halves and spread with crushed strawberries which have been sweetened, decorate the top with whole berries and whipped cream.

Strawberry Shortcake with Cake Foundation.

Cream together one-half cup butter, and one cup sugar. Add 2 egg yolks well beaten. Sift together one and one-half cups flour, two and one-half teaspoons baking powder, one-fourth teaspoon salt, and add to mixture alternately with one-half cup milk. Fold in beaten whites of two eggs and one-fourth teaspoon orange extract, and one-fourth teaspoon vanilla. Bake in layer cake tin 20 minutes or in cup cake pans for thirty minutes.

Pineapple and Strawberry Shortcake.

Use equal amounts of berries and pineapple which have been sweetened and a little lemon juice added will improve the flavor. Either of the shortcake recipes will be good.

Fruit Salad.

Dice pineapple, bananas and strawberries (if they are large size), arrange on a lettuce leaf and sprinkle with powdered sugar. Serve with a fruit salad dressing to which has been added whipped cream.

Strawberry Ice Cream.

3 pints thin cream.
2 boxes berries.
2 cups sugar.
F. G. salt.

Wash and hull berries, sprinkle with sugar, cover and let stand 2 hours, mash them and squeeze through a cloth, then add salt. Freeze the cream to consistency of mush and add gradually fruit juice and finish freezing.

Strawberry Ice.

4 cups water.
1½ cups sugar.
2 cups strawberry juice.
1 tablespoon lemon juice.

Make a syrup of sugar and water, cool and add berry and lemon juice and freeze.

Strawberry Sun Preserves.

Wash, hull and drain the berries. Weigh and add the same amount of sugar as berries. Let stand over night, which draws out the juice. Set on the stove the next morning and boil six minutes, then put in shallow pans; put a cloth over the pan and clamp it down with snap clothes pins. It usually takes 12 hours of good hot sunshine to finish the preserves, but to test them when you have a rich thick syrup they may be put in glasses and sealed with a paraffine.

Strawberry Whip.

One and one-fourth cups crushed berries, one cup powdered sugar, and white of an egg. Put in bowl and beat with a Daisy egg beater until stiff enough to hold its shape; about thirty minutes will be required. Chill and pile lightly on dishes or in glasses and serve with a custard sauce.

Strawberry Cottage Pudding.

1-3 cup butter.
1 cup sugar.
1 egg.
1-2 cup milk.
1 3-4 cup flour.
3 teaspoons baking powder.

Cream the butter and sugar, add the beaten yolk of egg, then add alternately the flour and milk, and fold in the beaten white of egg. Flavor with vanilla, bake 25 minutes in shallow pans, cut in squares and serve with mashed and sweetened strawberries.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Apiculture—If bees are fanning at the entrance, give more ventilation by raising the hive body upon little blocks.

Dairy—Cool the milk gradually to 50 degrees. Run over surface cooler or set can in cold water and stir milk often until cool.

Farm Crops—Decide now on the portion of each field of grain or other crops from which to set your seed for next year.

Horticulture—(East side) Finish the apple thinning promptly. Thin enough. Don't have to go over the trees again. (West side) Clean out the garden weeds and cultivate well. Gardens bring higher returns per acre than any other part of the farm.

Poultry—Plan for next winter's green feed supply. If you are going to use kale, set six plants for each hen.

"THE HORSE IN MOTION" NEW FILM IN BIG DEMAND

Until more copies of the motion-picture film, "The Horse in Motion," recently made by the United States department of agriculture, can be obtained, persons desiring to borrow this popular picture are requested to make application for it as far in advance as possible. The film, which shows by "slow motion" effects of various gaits such as pacing, cantering, and trotting, received an unusually warm reception. Although completed only a few months ago, it has been shown in nearly every town in Kentucky, the home of fine horses, and has received wide distribution in other parts of the country.

The United States army has purchased eight prints of the film for its own use. Polo clubs, horse associations, artillery schools, Young Men's Christian associations, riding clubs, county agents, and numerous other organizations and individuals have either purchased or borrowed the film for educational use. Among officials who have taken particular interest in the picture is General Pershing, whose charger is one of the horses used in making the picture.

The film shows clearly how a horse handles his legs at the different gaits. In the opinion of a livestock specialist of the Texas Agricultural college, the film has an educational value which descriptive matter alone can not give clearly. His students, he said, learned more about the action of horses in 15 minutes from seeing the film than they learned in all the time they spent in college.

Proves Barn Roof Strength.

Weights totaling 1,825 pounds were suspended from the center of a gambrel roof frame before it finally gave way, proving the strength of that type of structure. The test was made by the class in farm buildings and concrete construction under Prof. L. J. Smith of the State College of Washington.

Because of the belief that it might not be possible to create entire unanimity of opinion on a state development program at the proposed conference, the opinion generally expressed at Monday's meeting was that no resolutions be adopted. It is proposed to make the Ellensburg conference the beginning of an educational campaign for the upbuilding of all interests in the state, and it was the opinion of those who have studied the matter that adoption of specific resolutions on controversal questions would not be helpful.

The annual business meeting of the Washington State Press association will be held at Ellensburg Saturday, August 25, in the auditorium of the normal school.

STATE UNITY SOUGHT BY EDITORS OF STATE

Members of Press Association Outline Plans for Ellensburg Meeting in August.

Development of a "state consciousness" and a spirit of unity among different interests of this state, is the purpose of a "state unity day" conference which this year will feature the annual meeting of the Washington State Press association to be held at Ellensburg. Tentative details of the conference were worked out at a meeting of the executive council Sunday, June 3, and on Monday, June 4, a conference was held with state leaders.

Plans were made for discussions led by representatives of the agricultural, railroad, commercial and educational interests of the state and a study of possibilities for development of the state's resources. These discussions will open Thursday night, August 23, and continue the following day.

It is proposed to have a nationally known speaker open the meeting. Herbert Hoover, secretary of commerce, has been asked to come, but a reply has not been received.

State Editors Attend.

Those present at the meeting Monday representing the Washington State Press association included the following: Chapin D. Foster, Herald, Grandview; Grant Angle, Mason County Journal, Shelton; M. F. Brown, Journal of Commerce, Seattle; E. B. Brown, Globe-Republican, Auburn; S. H. Lewis, Tribune, Lynden; A. S. Hillyer, Sun, Sunnyside; F. L. Wolf, Miner, Newport; H. J. Campbell, Columbian, Vancouver; N. Rassell Hill, Times-Tribune, Davenport; C. Ellington, Bee-Nugget, Chehalis; Fred W. Kennedy, School of Journalism, University of Washington.

Because of the belief that it might not be possible to create entire unanimity of opinion on a state development program at the proposed conference, the opinion generally expressed at Monday's meeting was that no resolutions be adopted. It is proposed to make the Ellensburg conference the beginning of an educational campaign for the upbuilding of all interests in the state, and it was the opinion of those who have studied the matter that adoption of specific resolutions on controversal questions would not be helpful.

The annual business meeting of the Washington State Press association will be held at Ellensburg Saturday, August 25, in the auditorium of the normal school.

POULTRY

The percentage of hens classed as culls—that is, not capable of producing enough eggs to pay for their feed—has been reduced in Idaho flocks from 15 per cent in 1919 to not exceeding 24 per cent in 1922, according to reports to the United States department of agriculture. This has been accomplished by culling campaigns carried on by agricultural extension wokers, through which as much as possible of the unprofitable stock was eliminated from the flocks each year.

Feed the Laying Hens.

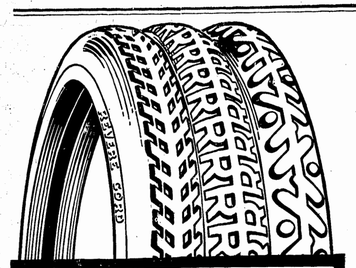
On far too many farms the hens are left to shift for themselves during the spring and summer months, or perhaps, if the owner feels particularly generous, a little grain is thrown to them. Though hens fed in this way may produce well at the time, they will not do well, or give a profitable production the next fall and winter.

A scratching food consisting of two different sorts of grain may be fed. Indeed there is much scattered grain about the place. And the following dry mash may be kept in the hoppers or self-feeders: 100 pounds, corn chops; 100 pounds, wheat bran; 50 pounds, wheat shorts; and 5 pounds, meat scrap.

If the hens have free range or plenty of milk the meatscrap may be omitted. Oystershell should be kept before the layers during the summer as well as in winter.

Be sure the birds never go to roost without full crops. Anyone who is really interested in their poultry will know without exact directions, whether the fowls are getting a sufficient amount of grain. It is impossible to tell just what proportion of the feed should be grain, as there is more scattered about some farms than others.

Once a day is not often eonugh to water chickens during hot weather, as the water does not stay fresh more than a few hours. We always give our hens fresh water at morning and noon, and the drinking vessels are sterilized every other day, as the fowls will not thrive if sanitary rules are not observed.



WHEN a Revere Tire user tells his reasons for sticking to this one brand his enthusiasm can be taken to apply to the whole line.

The Revere Cord, the Revere Granite and the Revere "R" Tread Fabrics belong to the same distinguished family in point of money's worth.

All of them show the same notable Revere value. Ask the nearest Revere dealer.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Next Sunday will be observed as annual Children's Day and the children will have a part in the morning service.

Several children will be presented for baptism. If you wish your baby baptised notify Rev. Pendleton before Sunday.

Sunday evening the postponed illustrated lecture will be held in the park. This will be the first of four consecutive lectures on succeeding Sunday evenings. The lecture and pictures for next Sunday evening are on Angola.

There will be a special song service conducted by the young people preceeding the service. One of the delegates from the Walla Walla convention will give a short talk on the convention.

The entire Sunday morning service on July 8 will be given to reports of the Walla Walla Christian Endeavor convention.

Genesee Makes Fine Showing

The 11 delegates from Genesee to the Walla Walla Christian Endeavor convention returned Monday evening after six wonderful days' experience in Washington's Garden City.

Young People's societies from all over the state of Washington and northern Idaho were well represented. Whitman-Latah union, of which Genesee is a part, had the third largest delegation and there were no towns represented of the size and distance from the convention city that had as large a delegation as Genesee.

The state president was chosen from Olympia, the first vice president from Walla Walla and the second vice president from Genesee, while Seattle furnished the secretary.

Genesee young people are proud of Orland Mayer for his splendid service as vice president of the Whitman-Latah union and we know the state convention selected wisely in choosing him as one of the two state vice presidents.

Trips were made to the site of the old Whitman mission on Saturday and our delegation visited the penitentiary on Monday before starting on the trip home.

Lemon for the Face

The lemon is useful in so many ways in Milady's toilet that the seeker after natural beauty will not treat it with levity. Lemon juice is useful for three general purposes; that is, for external use to correct oiliness, as a bleach, and for internal use as a medicine.

An oily complection is the bane of many a woman, and yet it is not safe to use too drastic means of correcting it. A few drops of lemon juice added to the water in which the face is rinsed after the nightly cleansing with hot water and soap will, if used daily, correct this objectionable condition without any harm to the skin. The skin of a lemon or an orange put into the washing bowl will soften the water and impart a pleasing fragrance as well as acting as an astringent.

When it is necessary to use a bleach on the skin or neck, lemon juice is the safest and simplest thing to use. For whitening the skin of the neck, mix one part lemon juice and one part borax with two parts water softened with oatmeal. Apply the lotion at night with a small sponge. Next morning wash off with hot water, then with cold water to close the pores.

Truth About "Petting" Told

The recent publicity given so-eds at a university has caused quite a lot of apparently "tongue-twisted" comments from the co-eds themselves. For instance, in substance, the following is a conversation between two of the fair damsels:

"Well what do you think of the scandal that they are shooting at us about petting parties?"

Other co-ed: "I have passed it up as a huge joke."

"Why, sure; that's all it is. Why should they accuse all of them by actions of a few of us?"

Cuts Hand Badly

C. H. Broenneke last week suffered a bad cut on the back of his left hand which might have caused his death had it not been for Vincent Hasfurther, who happened to be near, and gave first aid.

It seems that Mr. Broenneke was in the act of killing a chicken but as the blow that was intended for the severing of the chicken's head fell it was directed to the back of Mr. Broenneke's left hand, severing an artery which might have caused his death from bleeding had it not been for young Hasfurther.

The wound was dressed by a physician and the injured man is getting along nicely at this time.

Serum Cure for Rheumatism

Discovery of a serum that accomplished nearly positive cure of rheumatism, as has been prover from 5,000 actual tests, was announced today by New York university medical college.

The serum is a graduated series of streptococus viridine, which the physicans who developed it acknowledge to be the underlying cause of rheumatism. A small amount is injected at first and increased as the treatment is continued.

Durant and Star

car owners are pleased owners. When you want information about a car or Durant car ask anyone that is using one of these cars or investigate the standard parts of which the cars are built; ride in one and learn from experience of the easy riding qualities and wonderful hill-climbing ability of these cars; information acquired in this way will be more reliable than from some unscrupulous salesman that makes which he cannot certify. Star and Durant cars give more value for the price asked than any other car.

Rev. Fr. Ferd. Hoorman of Carthagena, Ohio, is visiting his brother, Frank Hoorman, and wife, he having arrived last Saturday afternoon to spend a week or two here.

Father Hoorman is connected with the publication of the Catholic magazines, The Messenger and Der Botschafter, edited by the community of the Most Precious Blood.

Notice to Delinquent Stockholders

Genesee, Idaho, June 22, 1923.

Notice is hereby given that there is delinquent upon the following described stock, on account of an assessment levied on the twentieth day of December, 1922, for three (3) mills per share, being assessment No. 20, the several amounts set opposite the names of the respective shareholders, as follows, to-wit:

Name	No. Shares	Amt.
W. N. Gibb, jr.	2000	$ 6.00
H. J. Herman	5000	15.00
John Kempf	360	1.08
Joe Knapp	3500	10.50
Oscar Rader	500	1.50
Mrs. J. Rader	500	1.50
F. Scharnhorst	7222	21.66
Mrs. Cecelia Saferstein	1000	3.00

And, in accordance with law, so many shares of each parcel of such stock as may be necessary will be sold at the office of the Company, in the City of Genesee, Idaho, on the 9th day of July, 1923, at the hour of 7 o'clock p. m. of said date, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

J. G. MEYER,
Secretary-Treasurer Rapid River Mining and Milling Co., Ltd. 51-2

Why Suffer from Rheumatism

Do you know that nine out of every 10 cases of rheumatism are simply rheumatism of the muscles or chronic rheumatism, neither of which require any internal treatment? The pain may be relieved by applying Chamberlain's Liniment, which makes sleep and rest possible, and that certainly means a great deal to any one afflicted with rheumatism.—Adv.

PERSONAL MENTION

Miss Mary Wardrobe returned Friday from Lewiston.

Blanche Craft was a Pullman visitor on Wednesday.

William Gunther left Wednesday morning for Tacoma for a short stay.

Miss Elaine Heitfeld returned home to Lewiston Monday after a visit with friends.

Thames Williamson arrived last week from Boston, Mass., for a visit with old-time friends.

Misses Evangeline Fix and Florence Rader attended the stock show at Uniontown Thursday.

Miss Florence Hetlinger returned to her home at Walla Walla after a visit here with her mother.

Miss Ethel McMillan was a Saturday morning passenger for Winchester for a visit with relatives.

I. E. Stovall arrived Friday from San Francisco, Calif., where he had spent the past several months.

Mr. and Mrs. Fred K. Bressler left Sunday morning for Spokane for a visit with relatives and friends.

Mrs. B. T. Lorang and daughters arrived last Thursday from Lowiston for a visit at the John Lorang home.

Mrs. R. S. Sullivan and daughter, Emma Lou, returned Friday from Ft. Wright, where they had been visiting.

Jack Vandenburg arrived Tuesday from Spokane for a visit with his parents, Mr. and Mrs. John Vandenburg.

Mrs. Ruth Struppler returned to her home at Spokane last Friday after a visit with her aunt, Mrs. A. L. Etter.

Lester Bumpass was a Friday morning passenger for Harrington, Washington; where he will spend the summer.

Mrs. W. H. Ehlen and daughter, Maxine, were pasengers for Uniontown Thursday morning to attend the stock show.

Mrs. J. T. Peterson and Mrs. W. L. Schroeder returned to Spokane Friday after a short visit at the home of their brother, Jas. Qualey, and family.

Mrs. Stricker returned to her home at Lewiston Friday after a few days' visti at the home of her daughter, Mrs. Byrn, and her friend, Mrs. Joseph Trautman.

Miss Ethel Nelson, accompanied by her friend, Miss Kathryn Fredenburgh, came up from Lewiston and spent the week-end with her parents, Mr. and Mrs. N. A. Nelson.

H. O. Wiswell was in Genesee for a short time Monday on his way from Moscow to Nezperce. He is again employed by the International Harvester company setting up threshing outfits.

Mr. and Mrs. Fred Follett returned from Spokane Tuesday evening after having gone there by auto to meet Helen Misenhimer of Flora, Illinois, a grand-niece of Mrs. Follett, who will spend the summer here.

Dr. Witty Returns From East

Dr. R. I. Witty returned home Saturday afternoon from a trip that took him as far east as Chicago, spending most of his time at Mt. Sterling, Illinois, visiting his aged parents. The doctor said he had bum luck making train connections, making only one out of a possible five, which was rather a poor percentage.

He reports the crops in the Sucker state as being very good, the corn being better than 18 inches in height, and wheat looks good, but that the country looks very "flat" as compared to the hills of the Palouse country. He stated that the weather was rainy and cool, just about the same as it is and has been here—and practically all other sections of the country, for that matter.

Wins Honors at Washington

Winifred McMimimy, daughter of Mr. and Mrs. O. Orr McMimimy, now of Washington, D. C., but formerly residents of Craigmont, graduated from the Washington schools this June with a class of 159, receiving highest honors and winning a scholarship at Maryland university. Her brother, Clare, also graduated at the same time. The graduates are niece and nephew of Mrs. W. E. English.

Food Sale

A food sale will be given by the ladies of St. Mary's Catholic church at the Hasfurther Hardware on Tuesday, July 3, commencing at 9 o'clock. They will have for sale, spring chickens, cakes, cream puffs, doughnuts, Dutch cheese with cream, cream in any quantity, and fresh strawberries. This will be a good time to get your picnic dinner ready for the Fourth. 52-1

Birthday Party

A very pleasant birthday party was held at the VanBuskirk home Tuesday when a number of the kid's friends and acquaintances gathered to help him celebrate his twelfth birthday anniversary and a very pleasant time was had by the youngsters. Those present were Harley English, Richard Haris, Pearl Springer, Leland Emmett Clifford McGarvey, Lester Craft, Dewy Dresher, Virgil Post, Luther Pendleton, Emma Lou Sullivan, Katherine Casebolt, Pearl Perkins, Patricia McLean, Audrey Pleiman, Jean Freeman, and Inez Mayer. Seneth VanBuskirk and Lula Springer were the hosteses.

Linger Longer Club

The Linger Longer club met at the county home of Mrs. Jas. Magee on Wednesday and a very pleasant time was spent with needlework and conversation. A splendid luncheon was served by the hostess during the afternoon.

The invited guests were Mrs. E. L. Vandenburg of Troy, Mrs. Donnelly of Spokane, Mrs. Nellie Haymond, Mrs. Arthur Mayer, Miss Ricks, Mrs. Walter Jain, Grace Jain, Mrs. A. Hampton, Mrs. Lou Jain, Mrs. Fred Morscheck.

There will be no more meetings of the club until September 1.

Basket Weavers Convention

A basket-weavers convention was held Monday afternoon at Mrs. Wheeler's Ready-Made Shop, when some 12 or 15 women gathered to learn how to make baskets, Mrs. Munsell being the instructor.

From the maneuvers being made by some of the artists there must be quite a few intricacies to the art. Of course the first thing that had to be done was to lay a foundatioin. This was done by taking two pieces of floor matting and gluing them together, which also served as a floor. The next thing was the making of the frame work and being able to twist the grass around the mainstays seemed to be taxing the ingenuity of some of the ladies. However they explained that as soon as the baskets were completed they were going to fill them with sandwiches and coffee and pass them around, so here's hopin' they have all kinds of success.

Get Your Ice July 3

Users of ice are requested to please lay in a supply on July 3 as none will be delivered on July 4.

52-1 Geltz & Edwards.

We have taken over the agency for the Lewiston bakery and are now prepared to furnish you bread, doughnuts, rolls, etc. Hotel Genesee. 52-tf

Fads and Fashions of Today

By DOROTHY PHILLIPS.

Both skirts and coats are to be short this year in the newest suit models.

This news will be glad tidings to the majority of women, for, with the exception of the tall willowy creatures, few really looked well in the knee length coats and ankle skirts of the past season. There is no argument against the fact that the short coats are much more youthful and swagger, and the dressy tweeds in bright colors and heather mixtures which are arriving from London on every boat are simply too attractive to describe in mere words.

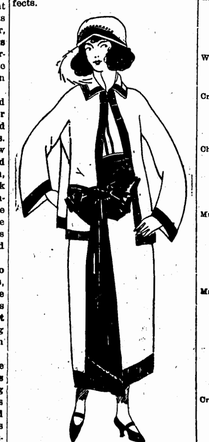
Braid binding in black on reds and blues are a new note this year, for heretofore, it has been considered bad form to use braid on tweed suits. One raspberry red suit which I saw in a very smart shop last week had a little box coat of fingertip length, single breasted, and bound in black silk braid. The skirt was very simple with slash pockets and was made to be worn nine inches from the ground. A narrow notch collar was long after the type of the Tuxedo and had a button hole on the left lapel.

Circular skirts are again trying to get a foothold with these tweed suits, but no one in the shops seems to be very optimistic about their chances of popularity. The straight line skirt really does look better with the trig box coats, is the consensus of opinion along Fifth avenue.

While 1923 models for the more mature woman are not yet numerous or especially attractive, as now being shown, the younger generation has been favored with an early crop, and the designers have taken much pains to prepare for them a wonderful display which simply breathes the spirit of youth.

Besides the tweeds and sport suits, there are stunning dressy models which show many tricky conceits and intriguing notes of rimming and embellishment. Eton coats, there are, on velvet suits with broad white collars of organdie and lace, and duvetyn in delicate shades and brilliant hues.

Fringe plays an important role in these elaborate creations for the toilettes of youth, and rich sashes and girdles add to the gayety of the effects.



The sketch shows a hockey red duvetyn suit which I found in one of the recent fashion shows, and the black braid and black satin sash give a dashing touch to a very piquant costume.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

DIABETES MELLITUS

There are probably more than a half million diabetics in the United States. Statistics show that this disease is rapidly increasing. In the United States in 1900, there were 10 cases to 100,000 population; in 1915 there were 18 per 100,000. These facts are given by Joslin in a recent paper on the prevention of diabetes. He presents an analysis of 1000 cases, and concludes that, to a large extent at least, this disease can be prevented.

In diabetes, the ability of the body to utilize starches and sugars is impaired. If the usual amounts of these foods are taken, sugar accumulates in the blood and is excreted in the urine. This results, not only in impaired nutrition, with great thirst and hunger, but the presence of unusual amounts of sugar in the blood causes diminished resistance to infections, resulting in crops of boils, carbuncles, etc., and often nervous symptoms develop, such as neuritis, headache, numbness and paralysis.

Certain glands, principally the pancreas, exert by means of an internal secretion a regulatory action on the absorption of sugars and carbohydrate foods, and in certain disorders of the pancreas, we have symptoms of diabetes developed. The action of this gland may be compared to the carbureter on the automobile engine. The carbureter regulates the proportion of gasoline and air that is fed to the engine and when it gives the proper "mixture" we have a smooth-running engine which delivers the maximum of power. But if the carbureter is not working properly and allows too much gas or little air, the engine chokes and jerks, and does not deliver the normal power. In a similar manner, an improperly functioning pancreas does not allow the absorption of the necessary amount of sugars and starches, and thus give symptoms of disturbance of nutrition, and at the same time the accumulation of the sugar in the blood gives us the many symptoms seen in diabetes.

Probably the great majority of cases of diabetes can be prevented. It is well known that diabetes occurs most frequently in the obese, and in those prone to high living. Joslin says, "Over weight is a predisposition to diabetes. The individual who is over weight is at least twice, and at some ages forty times as liable to the disease. For the prevention of more than half of the cases of diabetes in this country no radical under-nutrition is necessary. The individual is simply asked to maintain the weight of his average fellow man. It is rare for diabetes to develop in an individual over twenty who is habitually under weight."

Early diagnosis of the condition is necessary to get good results in treatment. The majority of cases consulting a physician are considerably advanced. Systematic physical examination and particularly, examinations of the urine will usually detect this trouble at or before the early stage. Particularly should those with a tendency to over weight have a systematic inventory of their condition made at regular intervals. Many having obscure headaches, attacks of neuritis, boils or carbuncles, will show on examination, a high blood sugar before the urine shows any sign of the trouble, and in these cases a properly regulated diet will cause the symptoms to disappear. Those who find that they have diabetes should be tested out to find what their capacity to handle sugar is, and many of them learn to make their urine tests and thus become acquainted with their limitation in this respect.

FUR-BEARING WOMAN TAKING HEAVY TOLL FROM OUR WILD LIFE

The fur-bearing woman is putting the fur-bearing animal out of existance.

This is the belief of naturalists and zoological students here.

It's all on account of the craze for wearing furs all the year round, and the extravagant prices to which modistes are putting every scrap of fur they can get their hands on.

"Why," exclaims Dr. William T. Hornaday, director of the New York zoological park, "they're putting fur on sunshades, fur on boots, fur on fans and even advocating fur for wrist watches."

Ermine on nightgowns is one of the latest Paris ideas.

The hunt goes on all over the earth and into the earth, according to Dr. Hornaday. He has in mind the mole, who has been dug out of his hole to contribute his pelt.

"A respectable Cheyenne squaw would have been insulted if she were asked by the lord of the tepee to make for him a coat of 300 gopher skins. Today even zoological nightmares of striped striped skunk are seen at large on streets sheltering the American girl."

Dr. Hornaday, however, advises none but his enemies to go into fur farming. He mentioned the black fox farms on Prince Edward Island, but said the animals bred there were sold in pairs to other fur farmers.

Foxes raised in domesticity seldom have the lustrous fur of their wild relatives, he said.

The Hessian fly probably will not be a serious factor in this year's wheat crop over most of the important wheat-growing regions, according to reports received by the United States department of agriculture.

MENU FOR THE WEEK

SATURDAY

BREAKFAST
Strawberries with Powdered Sugar
Oatmeal Sugar and Cream
Toast Eggs and Bacon
Preserves
Coffee Milk

LUNCH
Macaroni and Cheese
Lettuce and Onion Salad Bread Butter
Strawberries and Cream

DINNER
Swiss Steak
Gravy Riced Potatoes Fried Onions
Lettuce Salad Bread Butter
Orange Custard Vanilla Wafers

SUNDAY

BREAKFAST
Strawberries and Shredded Wheat
Cream and Sugar
Waffles Honey Pork Sausage
Coffee Cocoa

DINNER
Roast Lamb
Creamed Asparagus Lettuce Salad
Rice Greens
Rolls Butter Radishes
Strawberry Ice Cream Cake

DINNER
Cottage Cheese Salad Nut Bread
Chocolate Jam Bread and Butter
Fruit Cake

MONDAY

BREAKFAST
Stewed Prunes
Cream of Wheat Cream and Sugar
Muffins Egg Omelet Butter
Coffee Cocoa

LUNCH
Creamed Chipped Beef Potato Cakes
Spinach Rolls Butter
Strawberry Shortcake

DINNER
Lamb Reheated in Gravy
Macaroni Creamed Onions Tomato Salad
Bread Butter
Tapioca Pudding

TUESDAY

BREAKFAST
Strawberries and Dry Cereal
Cream and Sugar
Whole Wheat Hot Cakes Syrup
Pork Sausage
Coffee Milk

LUNCH
Creamed Eggs on Toast Stewed Tomatoes
Bread Butter Milk
Fruit Cookies

DINNER
Hamburger Loaf
Baked Potatoes Creamed Carrots
Combination Salad
Bread Butter Milk Ice Tea
Strawberries and Cream

WEDNESDAY

BREAKFAST
Orange
Oatmeal Cream and Sugar
Toast Eggs and Bacon Preserves
Coffee Milk

LUNCH
Cream of Tomato Soup Croutons
Fried Potatoes Buttered Beets
Fruit Cookies

DINNER
Baked Beans
Boiled Rice Spinach Lettuce Salad
Rolls Butter
Strawberry Whip and Boiled Custard

THURSDAY

BREAKFAST
Strawberries Powdered Sugar
Whole Wheat Cereal Cream and Sugar
French Toast Bacon
Coffee Milk

LUNCH
Vegetable Soup Saltines
Baked Beans Catsup
Lettuce and Radish Salad
Bread and Butter
Strawberry and Pineapple Shortcake

DINNER
Broiled Ham

Poached Eggs on Toast Ham
Coffee Milk

LUNCH
Cream of Potato Soup
Boiled Asparagus Cold Slaw
Graham Muffins Butter Strawberry Preserves

DINNER
Baked Salmon
Buttered Potatoes Spinach with Eggs
Tomato Salad
Rolls Butter Radishes
Strawberry Cottage Pudding

Home Education

"The Child's First School is the Family."—Froebel.

THE HABIT OF RESPECTING PROPERTY RIGHTS

After ten years or more of working with children from kindergarten to high school ages, in the schoolroom, on play grounds, and at summer camps, the most prominent problem with which I had to deal was that of PROPERTY RIGHTS, says an eminent educator.

Not one child in twenty-five has a well-balanced attitude of mind toward the property of others. Most children will fight to protect their own property, but are absolutely indifferent, if not criminally careless, with the property of others. And the occasional child will be wantonly destructive. But is usually an intense carelessness due to lack of training which is to blame for this condition.

Public property — libraries, school buildings, play grounds and fences, and materials used in public classwork —are deliberately or carelessly or thoughtlessly destroyed, defaced, or mutilated every day all over the land, by every class of children.

Children will scrawl words and drawings with chalk upon public walks and walls, and also upon private houses, and go unreproved.

What is at the bottom of this universal indifference to the use and abuse of property not distinctly "Mine?" Is it entirely the fault of the children? After a rather careful study of sources, I would say, "Put it up to the parents."

Do parents instill into young minds under their charge that the personal property of each one in the family is sacred and not to be used without express permission, unless it is community family property?

How often, for example, does mother forget that baby Katherine has her property rights in the bits of scrawled paper which mother consigns to the waste basket without consulting Katherine? How often does father kick down the carefully constructed pile of blocks, which to Johnny's eyes represents a wonderful palace or bridge which is quite important and say to his son, "Here, get that mess out from under-foot, quick!"

And yet, how perfectly astonished and enraged mother would be if little Katherine, in a righteous effort to clean things up, should rummage mother's desk and destroy all the previous memoranda and receipts which were of value to mother, but which were meaningless to Katherine. And how violent father would become if Johnny should grab up his blue-print of a large contract and stuff it into the stove because it meant nothing to Johnny, and was in his way on the table where he wanted to study.

The real trouble is that from the start parents do not respect the precious little belongings of childhood, and set a mighty bad example of ignoring property rights in the heart of the household. It is not the value of the things destroyed or mutilated, which counts, it is the principle of consideration for others and their belongings—the conscious recognition of the fact that other's things are as valuable to them as your belongings are to you. If this trait is developed early in regard to even the little things that hardly seem to count, the habit of consideration for other people's property will become a fixed one and will last a life-time.

Parental indifference is appalling when it comes to public property. "Oh, the government—or the town—pays for that. I should worry if it is destroyed!" This will be said right before the impressionable youngsters. Naturally the children respond to such an attitude with scorn for such property.

Respect your child's property if you expect him to respect yours. Teach him that he is to respect the property rights of others, and resent a reasonable degree any infringement upon his own. He will take better care of belongings he has been taught to respect.

In his address at the celebration of Lincoln's birthday, President Harding said: "The world today sees civilization brought to its supreme test. The sobering and distressing realization has come at last that, in its eagerness to harness and dominate the material forces of the world, humanity had lost its anchorage to the ultimate things of the higher, the nobler, the spiritual universe."

Since a knowledge of the "things of the higher, the nobler, the spiritual universe" is given to little children in kindergarten classes, it were well for every community to provide this early educational advantage for all of its children.

IDAHO

Lazy husbands in Idaho are likely to find trouble in this state if other probate judges follow the policy of Judge F. E. Chalfant of Ada county, who has put into effect the "lazy husband" law. Willard Case, the first husband to feel the law, was sentenced to serve four months at hard labor because he refused to work and provide for his wife. It took a jury of six men about 15 minutes to decide that Case was guilty.

Benewah post, American legion, has decided to abandon plans for a Fourth of July celebration, owing to inability to prepare a program in so short a time. The post also was influenced by the request of citizens of Coeur d'Alene and Cliarkia, where plans to celebrate were completed several weeks ago.

W. W. Stabler of Portland, Ore., an active wool buyer in the Inland Empire, said recently in Lewiston, that actually all the 1923 clip of the Lewiston region has been marketed. Mr. Stabler purchased 150,000 pounds that was shipping out through the Lewiston gateway, and about 100,000 pounds in the eastern Washington district.

The purchase of the telephone property of the Clearwater Telephone company, operating the telephone system of Clearwater county in Idaho and of the Elk River Telephone company at Elk River, by, the Interstate Utilities company was announced recently.

After an exhaustive study of the property by geologists and engineers the board of directors of the Copper King Mining company at Mullan, Idaho, decided Monday to let a diamond drill contract to explore for 1200 feet of work on the property. The ore body on the property is broken up by a fault, and it is to ascertain what is beyond the fault that the diamond drill work will be done.

The Jesuit order has acquired by purchase the Carl Plant home at the upper end of Hayden lake for a reported consideration of $10,000. The property will be used as a vacation home by the Gonzaga fathers and students at the St. Michael's scholastic. The property consists of 53 acres; 12 cottages and a 26-passenger launch. Prior to this summer the Gonzaga fathers have spent their vacations at Spirit lake.

NORTH-SOUTH ROAD FOR IDAHO

State Also Plans to Have East and West Auto Highway This Year.

With the addition of several important links the highway system of Idaho will be materially strengthened this year. Work soon to be completed will give the state an unbroken highway from north to south as well as from east to west.

A contract has been let for the construction of 5.5 miles of the Coeur d'Alene-Yellowstone trail in Shoshone county at a cost of $60,000. This is federal aid project, as is the contemplated Mullan-Kellogg road for which the county is considering a bond issue of $500,000. The Mullan-Kellog link will add 19 miles of paving to the state's system of main highways, as well as several branch roads to towns along the route.

The section between the Cataldo bridge and the Fourth of July school-house is 60 per cent completed. This section, with the Coeur d'Alene-Yellowstone trail road, involves an expenditure of approximately $100,000.

In Latah county contractors already have begun the surfacing of the north and south highway, and work also is going forward in Nez Perce county. This work is being done between Moscow and Union Hill. In Boundary county about five miles of surfacing will be done north of Copeland. A small contract for three and a half miles of construction of the Lapwai-Spalding section of the highway will be awarded in June, and negotiations for financing 14 miles of construction from Cottonwood highway district line to Grangeville are being carried forward. Completion of the work now under construction, together with the sections to be built under the program at a later date, will give the state continuous improved highway from the St. Joe national forest to Lucile in the Salmon river canyon.

Saves Electric Wires.

The twisting and consequent breaking of wires attached to electric appliances such as flatirons, toasters, heaters, etc., is a common annoyance. To remedy this, an inventor has produced a rotating attachment plug, of which the center portion turns freely when the wires are twisted.

May originally was the third month of the year, but the Romans added January and February to those ahead of it.

WISE LEADERSHIP AND SANE THINKING PREVAIL

That sane thinking and wise leadership will prevail in the end, against all the dangerous and disruptive influences at work in the social and political body of the common wealth, was the text of Dr. E. O. Holland's address to the 328 seniors graduating from the State College of Washington.

"In a despotism force must be used frequently; a despotic government could not last for a single day without force," said Dr. Holland. "But in a democracy force is used only in crises, at times when people lose their moral balance because of a great catastrophe, or nation-wide financial depression. Then it is, and only then, that a democratic people is justified in the use of force. If force must be used continuously the country that invokes it can no longer be considered a successful democracy.

"The man properly educated, in or our of college, knows there is no short cut to prosperity, and is willing to study both sides of a question. He believes prosperity is based largely on individual industry and economy and can not be obtained through the enactment of laws. One truly educated does not lose faith in his fellows during a crisis. He knows that if given a chance the majority will do the right thing.

"All of us are tempted at times to do and say things that are dangerous, self-destructive; but in the end sanely balanced thinking and wise leadership will prevail. It is the business of the college trained man and woman to see that it does prevail.

IDAHO GOVERNOR IS STRONG ON ECONOMY

Directs State Officials to Be Careful of Phone Bills, Traveling Expenses, Etc.

Governor Moore recently gathered his official family around him for an informal conference and a real nice time was enjoyed by all, as the society editors sometimes say. Matters of interest in administrative circles took up part of the time and the governor made a few rules and several suggestions to aid in the economical running of the state's business. Two weeks' vacation for state employes, with full pay, was decided as the proper thing.

The rules laid down govern the matters of communication and travel:

Use of the postage stamp instead of the telephone and telegraph; use the telephone and telegraph instead of the sleeper, and travel only when absolutely necessary.

If state business necessitates you to travel, then I shall expect you to do it, but I shall also expect every state employe to co-operate in keeping down travel expenses.

Much loss of time results from lack of care in properly making out and presenting claims to the state auditor's office, both to the state and to the claimant.

THE PEAR SLUG

The pear slug has been known as a serious pest in Europe for over two centuries and was known in the New England section of this country as early as 1800. It is found at the present time wherever the pear or cherry is grown in the United States. It confines its work to the pear, cherry, and plum.

The pest will first be discovered when the skeletonized leaves are seen on the tree during the summer, showing where the slugs are working. The slimy, brown slugs themselves will be seen where the leaves show their work. The adult fly that develops from the slug is not often seen. It appears on the leaves during the month of May, when the females lay their eggs.

The eggs are laid under the surface of the leaf on the under side. The fly cuts through the surface and loosens the epidermis and lays a single oval egg in the blister formed. When the egg hatches the slug eats through the upper surface and begins work on the leaf.

Two Generations a Year.

The slugs are probably familiar to most fruit growers and can best be described as resembling half-grown tadpoles. As they grow they molt or shed their skins four times. After the last molt the slug is no longer covered with its sticky coat and changes to a yellow color. It does not feed in this stage.

When the slug stops feeding it enters the ground and burrows to a depth of two or three inches. There it spends six or eight days in a cocoon and emerges as a fly. The fly lays eggs in the leaves again and starts another generation. There are usually two generations, but in some cases the first generation slugs stay in the ground until the following spring.

Although the slugs may become quite numerous the eggs are preyed upon by a tiny parasite so that the pest may not reappear in numbers for several years. They have never become serious in the Spokane valley, but they are capable of doing considerable damage in a single year.

Like all other chewing insects the slugs can be killed with stomach poisons. Arsenate of lead in the same strength as used for the codling moth is effective. Usually only a few trees are infested and the insects can be controlled by throwing slacked lime over the tree so that the slugs will be covered with the dust. Road dust will kill many of the slugs if applied in the same manner.

Cow Testing.

Farmers last year entered over 194,000 cows in cow testing associations to determine their standing as butterfat producers through demonstrations by agricultural extension workers, according to reports to the United States department of agriculture.

Overseas Women.

No fewer than 2000 former overseas women comprise the membership of the Women's Overseas' Service league, now represented in 30 cities. These girls served in France as caneten workers, hospital hut workers and entertainers and librarians.

Gertrude Z.—"Helen told me that you told her that secret I told you not to tell her."

Elva—"She's a mean thing! I told her not to tell you I told her."

Gertrude—"Well, I told her I would not tell you she told me, so don't tell her I told you."—Ex.

VIEW POSSIBILITY OF CANADA SECEDING

Recent Course of Dominion Government Almost Equal to Declaration of Independence.

Will Canada "secede" from the British Empire?

Suppose the United States still belonged to Britain and was obligated to get London's permission to sign a treaty with Mexico over fishing rights in the Gulf of California?

Suppose that in carrying on a $13,000,000,000 a year foreign trade, this country had to depend on London to keep its foreign relations on a friendly and profitable basis?

How long would it work?

Canada, perfectly loyal though she is, today is thinking along these lines. Within the last six months she has taken two unprecedented steps, showing which way the wind is blowing.

First, she has authorized the appointment, by the Canadian premier, of a Canadian minister to Washington, to act, in Canadian matters, independent of the British ambassador.

Second, she has negotiated and signed a treaty direct with the United States, Canadian minister of marine and Fisheries Ernest Lapointe signing for Canada, Secretary of State Hughes signing for the United States.

This is the first time any British dominion ever did either of these things, and they are regarded as having established a precedent which may lead far.

But there has come a hitch. The Canadian minister has not yet been appointed and the directly negotiated treaty is still not a treaty. Why?

The charge has been made that the Canadian minister to Washington has not been named because of London. If Canada appoints a minister to Washington, Ireland will appoint one too, it is said, inasmuch as Ireland's new status is based on Canada's.

Refuting this charge, however, is the argument that Ireland, having the same privileges as Canada, might imitate Canada and authorize the appointment of an Irish minister to Washington. Once authorized, it is pointed out, Ireland might name her man and thus be the first British dominion to have an officially accredited diplomatic representative in the United States.

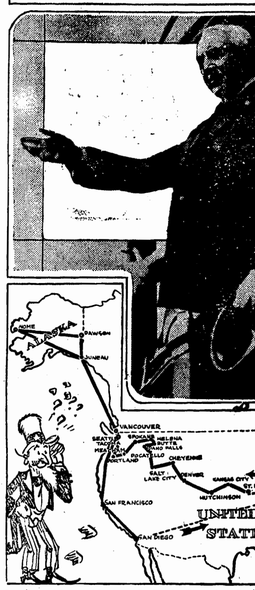
President Off on Alaskan Trip



Opening with an address at St. Louis, Thursday, June 21st, President Harding will make 19 speeches on his Alaskan trip. One address will be delivered at Vancouver, British Columbia, July 26th. The itinerary is as follows: St. Louis, June 21st; Kansas City, June 22nd; Hutchison, Kan., June 23rd; Denver, June 25th; Cheyenne, Wyo., June 25th; Salt Lake City, June 26th; Pocatello, Idaho, June 28th; Idaho Falls, Idaho, June 28th; Butte, Mont., June 29th; Helena, Mont., June 29th; Spokane, Wash., July 2nd; Meacham, Ore., July 3rd; Portland, Ore., July 4th, and Tacoma, July 5th.

The President will spend two weeks in Alaska; returning, he will speak at Vancouver, British Columbia, July 26th; Seattle, July 27th; San Francisco, July 31st; Los Angeles, August 1st, and San Diego, August 4th.

Sophia Braslau Will Sing in Americanus

Noted Opera Star Engaged for One Entire Week by Seattle Pageant.

Sophie Braslau, America's most celebrated and talented operatic star, has been engaged for an entire week to sing each evening in "Americanus," the spectacular pageant-drama to be presented in the University of Washington stadium, July 23 to 28. Never before in the annals of the Pacific northwest has a star of such magnitude as Miss Braslau been engaged for a whole week. She and other noted singers have been heard in the large coast cities, but enter for more than one night. She comes direct from the Metropolitan Opera company of New York.

For weeks the "Americanus" management has been trying to obtain Miss Braslau's services, because of her sensational success in singing the "Robin Woman's Song" in the opera "Shanewis" and it was only after Mrs. Carl Sacajawea, the Indian woman who led the Lewis and Clark expedition from Montana to the coast. In addition she will sing between the episodes while scenery is shifted.

It is expected the appearance of Miss Braslau coupled with the assurance that President Harding will attend one performance of "Americanus" will attract thousands of visitors from all parts of the west during "Americanus" week. The president will review the great Pacific fleet in Seattle harbor in that week also. This will be the greatest collection of naval forces ever assembled on the Pacific. No other attraction will be staged on the evening of the president's visit but "Americanus." Word has come that he is especially desirous of seeing the production because of the patriotic lessons it teaches.

NORTHWEST NEWS

Alaska will have 31 boosters for it in the next congress, according to members of the congressional party, who have just returned from inspecting that territory. Labor, home rule and capital are what Alaska needs to develop it, the congressmen believe.

Recruiting for the Citizens' Military Training camps which will be held in the various camps in the country, July 26 to August 24, is brisk in eastern Washington, according to County Representative E. F. Cartter Van Dissel, who reports that the quota for Spokane is nearly filled and every effort is being made to bring the country's quota to normal. Men between the ages of 17 to 24 are given military training under the supervision of commissioned officers, with all expenses incurred taken care of by the government.

Problems of the Columbia basin project will be kept constantly before President Warren G. Harding on his trip through the northwest early in July. Members of the Columbia Basin Irrigation league, meeting recently in Spokane, adopted a resolution providing a plan whereby the entire northwest will center its forces during the president's visit on methods of keeping the transportation always in the foreground. Among many of the plans worked out, will be the showing of moving picture films and slides at the banquet which will be given in the president's honor.

Sure Cure for Woodticks.

They must not be pulled off, for if so they leave their head in, and that is what causes all the trouble. To remove them take a small oil can, fill with kerosene and put a few drops on the tick. It will at once commence to remove its hold. Put on a little more kerosene to keep it working and it will come off bringing its head with it.

It may save a lot of trouble and money if you write on the back of each receipt for registered mail some little note that will recall the package, the recipient and the value placed upon it.

Boys' and Girls' Farm Club Work

Spokane county pig club boys are helping raise more pigs in the county by furnishing breeders to farmers. This interesting fact was brought out lately by a questionnaire sent to the club members by County Club Agent Wm. J. Green.

In answers to a question as to how many pigs their sow farrowed this year, 15 club members reported that 17 sows farrowed 178 pigs or an average of 10 1-3 pigs to the sow and they had saved 140 pigs from the litters. This makes a fine average of better than 8 pigs per sow.

"This wonderful record," said Mr. Green, "indicates two things: first, good breeding for production, and second, excellent work at farrowing time on the part of the local leaders and club members. In one case I know of a local leader spending the whole night helping his club member take care of the sows."

Another interesting fact revealed by the survey, was the number of head of breeding hogs these 15 boys furnished in their communities. Fifty-three sows were raised by the boys, with 27 sold to farmers for breeding purposes and 24 being kept on the farms of the club boys.

If this is a fair estimate of what all the pig club members did this year, next year's report with 93 boys and girls in the pig clubs of the county will show a larger number of purebred breeding sows placed among the farmers of the county.

A new idea in club insignia has been developed by girls in Brown county, Texas, to enable other club members, their friends, and neighbors to identify them with H clubs. As they have chosen cannas for their club flower, each girl was given one to plant at the right-hand side of her front door. If a girl had more than one canna, they were planted on each side of the door. Club girls all over the county can locate each other easily by the cannas, and an indirect benefit of this simple but distinctive mark has been that all the girls take a great deal more pride in their homes and yards.

LIVESTOCK

Losses of pigs before weaning are heavier in the spring than in the fall, as shown in a survey just completed by the United States department of agriculture. The loss amounts to 36 per cent of the pigs farrowing in spring litters before weaning compared with a loss of 24 per cent of pigs farrowing in fall litters, in records on 3,025 litters of pigs during 1922. The following table gives the principal causes of pig losses up to weaning time:

Number of Pigs Lost Before Weaning per 1,000 Farrowed.

Causes of Death	Spring	Fall
Overlaid	151	113
Farrowed dead	69	32
Farrowed weak	30	7
Chilled	22	6
Starved	17	23
Scours	11	3
Injured by other stock	3	11
Sore mouth	8	5
Eaten by sows	6	3
Worms	3	9
All other causes	38	30
Total died in each 1,000 farrowed	358	242

These records serve to show that fully one-fourth to one-third of the feed and other expense in keeping sows is lost before weaning, by not giving the sow proper feed and care during gestation or proper farrowing quarters, the department points out. By far the major share of losses in pigs is due to improper handling and feeding and not to disease.

Sows running on pastures while suckling pigs saved the largest litters. Sows that were fed the following quantities of feed, per one hundred pounds liveweight, monthly, during the gestation period, farrowed the largest litters: 45 pounds of corn, 10 pounds of oats, 1.5 pounds of tankage. Tried sows that had produced pigs previously seemed in this study to show a tendency to produce larger litters than untried gilts.

A similar study upon 3,574 pigs produced on these same farms in the spring of 1921 showed that 340 of every 1,000 pigs farrowed died before the date of weaning. The important causes of losses in the spring of 1921, as in 1922, were pigs laid on by the mother sow, and those born dead or so weak they could not get up to suckle. The 1921 pigs, however, were bothered more with necrotic enteritis than were those in the spring of 1922.

The study indicates that barring fluctuations in prices of feeds and the occurrence of disease, the number of thrifty pigs produced per sow more than any other factor influences the cost of producing pork. All the care in feeding possible after weaning the pigs ca nevry seldom overcome the production cost due to small litters, the department says. The figures show that the majority of sows last winter had a carrying charge of $15 to $25 per head, which covered the cost of carrying them while producing a litter of pigs; with a large share of the sows this meant carrying charges for twelve months.

Plenty Grain in Russia.

Too much bread promises to be Russia's dilemma in 1923. From 1917 until 1922 bread was the most precious thing in Russia. A farmer could trudge into Moscow with a small sack of grain and trade it for a grand piano or anything which the hungry city dwellers had to offer. Now the same peasant could walk from one end of Russia to the other and, excepting in a few isolated famine districts, could not get a jack-knife for the same sack of grain.

Saving What You Grow

Prepared by the Extension Service, State College of Washington

CANNING BY THE PRESSURE COOKER

There are many ways to can fruits and vegetables, but one which is always sure, is the steam pressure canner. To insure success by this method, a few rules should be followed.

Fill the canner with water to such depth that its level is just below the rack which holds the jars; if heated for some time before closing the canner, add hot water occasionally to prevent its boiling dry.

When packing highly perishable vegetables, such as peas and sweet corn, place each jar in the canner as soon as it has been packed, to keep it as hot as possible. There should be, of course, heat under the canner and hot water in the bottom; the cover should be kept on though not clamped down. The heat of the circulating steam will thus gradually penetrate the jars and will tend to arrest the growth of bacteria during the period of time necessary to complete the packing.

After fastening the clamps on the canner, see that no steam escapes anywhere, except at the petcock when it is open. Allow the petcock to remain open until steam escapes from it in a steady stream, so that no air remains inside. Then close the petcock enough so that only a very small trace of steam can escape.

Allow the temperature to rise until the gauge registered the desired steam pressure. Count the time from the moment the desired pressure is reached.

Always maintain a uniform pressure during the processing of the fruit or vegetables. At the end of the processing period remove the canner from the fire.

When caning in glass jars which are only partially sealed, allow the canner to cool until the steam gauge registers zero before opening the petcock. It is sometimes necessary to wait three or four minutes after the zero point has been reached before opening the petcock.

Remove the jars from the pressure canner and tighten the lids, being careful to see that no draft strikes them. Do not stack jars or cans close together until thoroughly cool. If these few rules are followed, success will be yours in canning with the pressure cooker.

Suggestion that orchardists of this state suggest means for preventing a repetition of the refrigerator car shortage rather than being contest with a recital of past shortages, is made in a communication sent to commercial bodies in all fruit producing sections of Washington by the transportation committee of the Seattle Chamber of Commerce. The chamber is taking the initiative at the request of growers over the state in getting data to be presented July 17 to the Interstate Commerce Commission which will hold a hearing on that date to inquire into the adequacy of transportation facilities in the Pacific Northwest states.

Flies Walla Walla to Spokane

Airplane shipping was introduced to Spokane recently when Mr. and Mrs. J. C. Rankin of Walla Walla arrived in Spokane after flying from the southern city. They made the trip under dark skies and while rain was falling at intervals, in one hour and forty minutes.

Mr. Rankin conducts an aviation school in Walla Walla and used a practice plane to make the trip to Spokane. After shopping and attending to other business in the city, the fliers returned home facing prospects of a continuous rain on the entire trip.

Our social order is not perfect and it never will be until all of us can have our own way.

WORLDS LARGEST AIRPLANE TO BE TESTED SOON

The largest airplane the world has known, with a wing spread of 120 feet—half again as wide as the great Martin bombers of the army air service—will take to the air for the first time this month.

The new monster of the skies, intended solely for use as a bomber, and said to be capable of carrying a quantity of explosives sufficient to destroy a large portion of a modern city, is being assembled at McCook field, the army air station, under the direction of Walter H. Baring its designer.

With its great width and other measurements in proportion, the plane will dwarf the largest ships now used. The height of the new plane will be 28 feet, while its length from nose to tail will be 65 feet.

Driven by six Liberty engines, the new ship will require a minimum crew of four men and contain provisions for a working force of eight men to be used when the occasion requires. Exclusive of the crew, it will weigh more than 40,000 pounds.

With the idea of obtaining a maximum of lifting power, stability and safety, Mr. Barling designed the ship as a triplane of modified type. The upper and nether wings will be of practically the same dimensions, while that in the center will be narrower. Along its length will run the control devices, giving them protection and adding a feature of safety.

Describing the value of the new plane as a machine of war, Mr. Barling, who during the war did much experimental work for the British royal flying corps, says that its maximum load of several tons of explosives could do untold damage.

Dashing Counts Now Menials

Two Russian noblemen have been discovered in menial positions in this city and both were disclosed by their attempts to market imperial rubles. Count Reon Takaroff, formerly a dashing cavalryman in the forces of Czar Nicholas, is now a ditch digger on the streets here, and Count Halaroff Kasasky is a coal slinger in one of the bunker departments of a city dock.

Both these men came here some time ago and had a little money when they arrived. Count Takaroff invested in a chicken ranch in North Vancouver, but, not being accustomed to marketing, the count was forced to eat the chickens and the eggs as the only way he could get any profit. Finally the last of the chickens were killed and the once brilliant officer at court was forced to take a position on the streets as a ditch digger.

Kasasky refuses to tell how he got into British Columbia, but rumors have it that he knows more about the czar's last hours than many of the writers who say they were near the death chamber. This Russian is known to have come through Sibera by sleigh and to have been seen with prominent members of the imperial family in Russia just prior to leaving.

Cause of Many Wrecks

A good many automobile wrecks are caused by the wrecks that drive them.

Christian Endeavor Notes

By Ida Evans

The regular Christian Endeavor meeting was held Sunday evening in the church and was led by Grace Willoughby, the topic being "Friendships." This one of the best meetings held for some time, every one taking part and trying to make it a success on account of the absence of Rev. Pendleton.

The meeting next Sunday evening will be led by William McCreary. At this meeting reports of delegates to the Walla Walla convention will be made.

Will Have Licensed Undertaker

George Schlerth, who has recently taken over the Lambert interests in Genesee, wishes to announce that he has made arrangements to have one of the best licensed undertakers and embalmers take care of all Genesee in that line. An up-to-date auto hearse will be in use whenever the roads will permit and prompt and efficient service will be rendered. Phone 41-tf

The Home of the Soul

In olden times, it was believed that the seat of the soul was the stomach, most likely for the reason for the reason that a man is never so completely used up as when his stomach is out of order. For the cure of ordinary stomach troubles, there is nothing quite so prompt and satisfactory as Chamberlain's Tablets. They strengthen the stomach and enable it to perform its functions naturally. Give them a trial. They cost a quarter.—Advertisement.

Unsought Conversation Squelched

Persons who are bothered by bores in trains and on boats are recommended to try the following method of squelching unsought conversation. A student traveling in England and wishing to make up for lost time by reading was very much annoyed by the man opposite, who insisted on keeping the conversation afloat. He was determined to exhaust every possibility offered by the weather.

"The grass is very green, isn't it?" inquired the would-be conversationalist cheerfully.

"Yes," said the student savagely; "such a change from the red and blue grass we've been having lately.

Chaos Came First

A doctor, an architect and a bolshevik were discussing the priority of their occupations.

The doctor said: "When Adam's side was opened and a rib removed to make a woman, there was a surgical operation—medicine was the oldest trade."

The architect: "Yes, but when the earth was made out of chaos there was the building process, the use of materials according to a plan. The architect's is still older."

The bolshevist smiled and said: "Who supplied the chaos?"

Columbus Poorly Paid

Columbus received $320 for discovering America, a Berlin mathematician has estimated. The captains of his other two ships received $180 each, according to the estimate, and the sailors $29.

Recommends Chamberlain's Tablets

"Chamberlain's Tablets have been used by my husband and myself off and on for the past five years. When my husband goes away from home he always takes a bottle of them along with him. Whenever I have that heavy feeling after eating, or feel dull and played out, I take one or two of Chamberlain's Tablets and they fix me up fine," writes Mrs. Newton Vreeland, Minoa, N. Y. Take these tablets when troubled with constipation or indigestion and they will do you good. —Adv.

Chamberlain's Colic and Diarrhoea Remedy

Every family should keep this preparation at hand during the heat of the summer months. It is almost sure to be needed, and when that time comes, is worth many times its cost. Buy it now.—Adv.

Case Threshers

Through timeliness in plowing, harvesting, threshing and other necessary work—made possible by Case machines—bigger crops of better quality and more certain returns are assured. This crop insurance is the very foundation of success in farming.

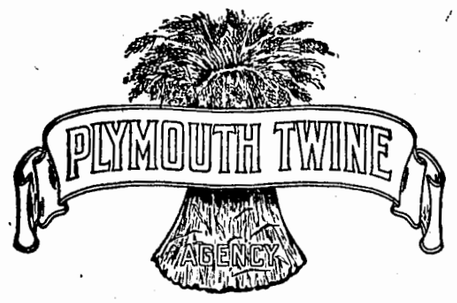
Right now you are facing a season in which timeliness is of the utmost importance. Without belt work this year's crop cannot be marketed at the best prices. Unless your fall plowing is well done, on time, next year's crops can be only a partial success.

With a Case tractor your work will be done, and your fields plowed. Because it gives you both these advantages it is one of the most profitable machines you can own. For these reasons, the extreme dependability and economy of Case tractors are exceedingly important.

Case tractors are well adapted to all field and belt work. Their great dependability has been proven by thousands of users. Because of their sturdy and careful construction these tractors are good for years of service after the average tractor is worn out.

If you are planning for a better farm and a larger, more certain income, write for **"Better Farming With Better Tractors,"** the book that has helped many farmers to make more money.

Hasfurther Hardware



A Straight Tip

THERE is a real saving in the use of Plymouth Twine, to say nothing of the satisfaction, over the cheap kinds which do not have the necessary strength and uniformity, and which are invariably under measurement.

A recent comparison of a ball of

PLYMOUTH TWINE

with that of another make which was made in the field last season showed that it would take 135 pounds of the cheap twine to bind the same amount of grain that 100 pounds of Plymouth Twine would tie. The cheap twine was not only greatly under measurement, but was decidedly inferior in quality and strength.

Better take no chances; place your order for Plymouth Twine with us and get full length and strength, which is guaranteed by the Plymouth Tag on each and every ball.

VOL. XXXIV | GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JULY 6, 1923. | NO. 1

VISITORS FLOCK TO UNIONTOWN STOCK SHOW

That interest has not been lost in the raising of good stock is shown by the large number of exhibits at the Uniontown Stock show and the hundreds of visitors from the Palouse and northern Idaho regions that attended the show on Saturday, June 28. The Lewiston Moose band participated in the parade, which was a feature of the show and the Lewiston baseball team defeated the Uniontown team by a score of 10 to 9.

Winners at the show were as follows:

Horses

Best animal in parade, Shetland pony, Miss Helen Thiessen, Uniontown; Percheron stallion, first, Uniontown Percheron Breeders association; second, Joseph Casteel, Uniontown; grand champion purebred stallion, any draft breed, first, Uniontown Percheron Breeders' association; second, McKay Brothers, Uniontown; grand champion purebred mare, any draft breed, first and second, McKay Brothers; best purbred group of three, any age or breed, first and second, McKay Brothers; Shire mares, first and second, Mike Mayer, Uniontown; third and fourth, McKay Brothers; best purebred mare, any breed, with foal at side, McKay Brothers; best purebred 1923 draft colt, any breed, McKay Brothers; best grade 1923 draft colt, first Nick Bielenberg, Uniontown; second, V. Ricard, jr., Uniontown; third and fourth, Henry Mueller, Uniontown.

Best grade draft mare or gelding, first, C. A. Greif, Uniontown; second, Richard Stout, Uniontown; third, Guy Lamb, Colton; best grade draft 3-year-old, first and second, Peter Kinzer, Uniontown; best grade draft yearling, Edward Dahm, Uniontown; best grade draft team shown in harness and owned by exhibitor, first, Guy Lamb, Colton; second, Mike Kinzer, Uniontown; third, C. A. Greif, Uniontown.

Best showmanship displayed by boy or girl under 18, exhibiting colt at halter, first, Raymond Kinzer; second, Henry Mueller; third, Henry Kinzer; fourth, V. Ricard, jr., all of Uniontown; best saddle mare or gelding, first, William Cooper, Pullman; second, William Tuschoff, Uniontown; third, Louis Bentley, Uniontown; best saddle pony owned and exhibited by girl or boy under 16, horsemanship considered, first, William Tuschoff, Uniontown; second, Louis Bentley, Uniontown; third, Helen Thiessen, Uniontown, fourth, Frank Springer, Genesee, Idaho.

Best five colts by one sire, first, N. Bielenberg, Uniontown; second, Joseph Casteel, Uniontown.

Cattle

Best purebred Hereford bull, any age, first and second, Harry Beach, Uniontown; best Hereford female, any age, Herman Nordby, Lewiston; second, Harry Beach, Uniontown; best Shrothorn bull, any age, first, Carl Greif, Uniontown; second, Nordby Brothers, Genesee; third, J. W. Meyer, Uniontown; best purebred Shorthorn female, any age, first, Washington State college; second, Carl Greif, Uniontown; third, Nordby Brothers, Genesee; best purebred female, any age, or beef breed, first, Washington State college; second, Carl Greif, Uniontown; third, Washington State college; best purebred bull, any age or breed, first, Carl Greif, Uniontown; second, Nordby Brothers, Genesee; third, Harry Beach, Uniontown.

Best purbred calf under 16 months, first and fourth, Nordby Brothers, Genesee; second, Harry Beach; third, Carl Greif; best calf under 16 months, grade or purebred, sired by registered Shrothorn, first and third, Nordby Brothers; second, Carl Greif; fourth, Washington State college; best group of one bull and three females, pure bred, any beef breed, first Carl Greif; second, Nordby Brothers; third Herman Nordby, Lewiston; best purebred group, three females, any age or breed, first Washington State college; second, Carl Greif; third, Nordby Brothers; best dairy cow giving milk, M. Schultheis, Colton.

Show an Outstanding Success

Cash prizes of more than $400 were given in the animal exhibit. The weather was ideal and the show was the most successful ever held at Uniontown.

Among the outstanding exhibits was Orange Blossoms Lady, Shrothorn cow from Washington State college, which won the grand championship over purebred females, all breeds, showing two years ago.

Victoria Sultan, a 2110-pound Shorthorn bull, owned by Carl Greif, won the grand championship over all Shorthorn bulls and was also made grand champion over all breeds. Nordby Brothers showed an exceptionally fine herd of Shorthorns. A young bull bred by them was reserve champion. Their cattle were exceptionally well fitted. Herman Nordby showed a well balanced herd of Herefords, while the Polled Herefords were represented by Harry Beach.

Varen Second won the grand championship over all pure-bred stallions. This stallion was senior and reserve champion at the Northwest Livestock show three years ago at Lewiston. Jolly B. Shire, mare grand champion for three consecutive years on the northwest circuit, was made grand champion mare. Grassiece, a Percheron mare that was grand champion for two years on the northwest circuit, won the reserve championship.

Professor Howard Heckadorn of Washington State college, C. W. Hickman and J. E. Nordby of the Universtiy of Idaho, were judges. Prof. Heckadorn said the cattle excelled those at the state fair at Yakima last fall.

Big Events in the Lives of Little Men

FEDERATED CHURCH TO CONDUCT VACATION SCHOOL

Beginning next Monday morning at 9 o'clock a vacation Bible school will be conducted at the church for the entire week.

The school will have several attractive features for the children, consisting of instruction in music, mBible stories, dramatization and memory work. Health talks will be given by Dr. and Mrs. Evans and special features every day at the surprise hour.

The school will run for one week at least and if the interest is good will continue through out the second week. The sessions will be from 9 to 11:30 every morning, except Saturday. Children of the junior age from eight to 15 only, will be received this year.

There will be a registration fee of 50 cents to help defray the cost of material used. Any child of the community may attend this school and visitors will be welcome after the first three days.

Rev. Pendleton will supervise the school, assisted by Mrs. Pendleton, Dr. and Mrs. Evans, Grace Jain, Helen Casebolt, Mrs. Munsell and others.

Low Prices For Products

A great many people seem to have the notion that the low prices for the farm products during the past three years have been due to a reduction in our exports. Secretary of Agriculture Wallace says: "Take our eight principle food crops: corn, wheat, barley, rye, buckwheat, rice and potatoes. The average annual exports of these eight crops for the years 1920 to 1922 inclusive were 142 per cent greater than the average annual exports of these same crops for the years 1905 to 1914 inclusive. During the past three years our corn exports were 82 per cent greater than in the pre-war years named; our wheat exports 140 per cent greater; our oats exports 37 per cent greater; barley 116 per cent greater; rye 2,600 per cent greater; buckwheat 114 per cent greater; rice 2,212 per cent greater; potatoes 125 per cent greater."

Entertained at Dinner

A very pleasant dinner party was given by Mrs. W. R. Hickman at her home on Thursday in honor of Mrs. J. S. Larrabee who left today (Friday) for a short visit with friends and relatives at Pullman and Spokane and then to Odessa for a visit with her daughter, Mrs. Jake Hopp, and family before returning to her home near Sacramento, California, for which point she expects to leave about August 1.

Those present at the dinner party, besides the guest of honor, were Mrs. A. M. Wardrobe, Mrs. Johanna Christenson, Mrs. Hattie Herman, Mrs. Cerrie Platt and Mrs. Mary E. Burr.

Progressives Will Meet

The Progressives will meet at the home of Mrs. Glen Sampson on Thursday, July 12.

FOURTH OF JULY PICNIC DINNERS AND PARTIES

The following enjoyed a picnic at Jas. Magee's home on the Fourth, driving to Lenville for the afternoon program and returning for lunch in the evening: Mrs. Mary Cunningham, Jack and Will Cunningham, Mr. and Mrs. John Vandenburg, Mr. and Mrs. Emery Vandenburg, Mr. and Mrs. Walter Jain, Mr. and Mrs. Ben Jain, Mr. and Mrs. Lew Jain, Mr. and Mrs. Isaac Isaksen and son, Lowell, Mrs. J. C. Donnelly and daughters, Louise and Cecelia, and Miss Audrey Henry of Spokane; Mr. and Mrs. Le Roy Barron, son Marshall, and Miss Mary Clay of Cavendish; Mrs. Nellie Haymond, George Driscoll, Don Jain, Grace Jain, Eva Hampton, Grace Willoughby, Clarence Aherin, Tom Platt, Jack Vandenburg, Dick Vandenburg and Mr. and Mrs. J. Magee and family.

Mr. and Mrs. F. C. Shork, Mr. and Mrs. Leon Follett, Mr. and Mrs. W. M. Herman, Mr. and Mrs. W. W. Burr and children and Mr. and Mrs. Harry Schooler left Tuesday evening for a camping trip near Helmer, on the Big Potlatch, returning Wednesday evening. They all report a splendid time.

Mr. and Mrs. R. E. Emmett and Leland, Mr. and Mrs. Geo. Bolliou and Herman Krier left Tuesday evening for a hiking and camping trip to Bovill, where they stayed until Wednesday evening, returning very much "mussed up."

Dr. and Mrs. R. I. Witty, Mr. and Mrs. Ira Hanson, Mr. and Mrs. F. J. Niemann, Mrs. E. Niemann, J. C. Hanson, Mr. and Mrs. Fred Perkins, Mr. and Mrs. Glen Sampson and Lucille Freeman went to Paradise mountain Wednesday morning where they spent the day picnicking.

Mr. and Mrs. John Lorang entertained Mr. and Mrs. J. J. Tupker and Mr. and Mrs. C. P. Whalen and children at a picnic dinner on the Fourth.

There were undoubtedly many other picnic dinners and camping parties of which we did not learn—but if it isn't mentioned it is your fault and not ours. Our telephone umber is 16-2.

Poultry Meetings Held

Pren Moore, poultry specialist of the extension division of the University of Idaho has just completed a series of poultry meetings in Latah county in cooperation with O. S. Fletcher, county agricultural agent. Eleven meetings were held with a total attendance of 188. Meetings were held in the following communities: Farmington, Deep Creek, Potlatch, Harvard, Avon, Deary, Big Meadows, Kendrick, Juliaetta, Cedar Creek, and Genesee.

At these meetings Mr. Moore demonstrated poultry culling and gave general information in regard to feeding, housing, care and management of the farm flock. Considerable time was spent in discussing raising of young chickens. A number of flocks were found to be infested with worms. Information was given on the control of this pest which seriously affects any flock that is attacked.

Although prices for poultry have been low during the past season, those attending the meetings showed much interest in poultry work, and it was frequently stated that the hens were one of the best and most dependable sources of income on the farm. Tentative arrangements were made for mating demonstrations to be held by Mr. Moore during October. Communities desiring this service can secure it by applying to the county agent.

F. D. HAWLEY GOES TO TWIN FALLS

At a meeting of the executive committee of the Palouse council, Boy Scouts of America, comprising Whitman and Latah counties, held last night at Pullman, the resignation of F. D. Hawley as scout executive was accepted, and William Ernest Crowe, a native of Indiana, but for the past ten years in the Phillippines and China, was elected as scout executive.

Mr. Hawley, who has been scout executive since October, 1921, when the council was organized, is resigning to accept the position of scout executive in a recently organized first class council at Twin Falls, this state. He was selected for the position because of his success in the pioneer work with the Palouse council, and his experience in working with boys, which has extended over a period of several years. Resolutions strongly commending the work accomplished by Mr. Hawley with the Palouse council were unamiously adopted by the committee.

Members of the committee from Colfax, Pullman, and Moscow were present. The Moscow delegation consisted of J. D. Davis, chairman of the executive committee; C. B. Green and J. G. Eldridge. The meeting was called especially to receive Mr. Hawley's resignation and to elect his successor.

Mr. Crowe, Mr. Hawley's successor, spent a number of years in the Palouse country as a young man, and was a student at Washington State college some 12 years ago, leaving the college to take up work in the Phillippines as a department superintendent of schools, which position he held for some ten years, after which he went to China in an executive capacity for the Standard Oil company. Durng the past year he has given intensive study to boy problems and Boy Scout work, and comes to the Palouse council with the recomendation of C. K. Warne of Spokane, regional director for the four northwest states. There were some 15 men available for the position.

Mr. Crowe will take up his work immediately. Mr. Hawley will spend a few days in helping his successor to familiarize himself with conditions, before going to Twin Falls. It is desired by the south Idaho council that he take up his work as soon as possible. He will move his family to Twin Falls.

With the advent of good weather, boys are flocking into Camp Grizzly, the scout's summer camp, which was opened last Sunday for the summer. The camp is in charge of L. B. Williams, as camp director. Mr. Crowe, however will make frequent trips to the camp.—Star Mirror.

A Pleasant Picnic Party

One of the very pleasant picnic parties of the summer season was held at the Ira Hanson home, just east of town, last Sunday when a number of friends gathered there to spend the day with Mr. and Mrs. Hanson and enjoy the splendid shade of their grove—and of course one of those old-fashoned picnic dinners was served.

Those making up the party were Mr. and Mrs. Eli Hickman and daughter, Clarice, of Spalding, Mr. and Mrs. J. Watson and Mr. and Mrs. Ritchey of Lapwai, Mr. and Mrs. F. C. Shork, Dr. and Mrs. R. I. Witty, Mr. and Mrs. Glen Sampson, Mr. and Mrs. W. M. Herman, and Jas Hanson.

Never ask your neighbor what he thinks of you. He might blurt it out.

WHAT HAPPENED HERE TWENTY YEARS AGO

Great growing weather and crops generally are looking good.

Wait for the grand display of fireworks tomorrow evening. Nothing like it ever before witnessed in Genesee.

Dr. W. H. Ehlen has purchased the building now occupied by Mrs. Debow from C. F. Burr and will occupy the same as an office room. It will be put in good repair and a good sized addition erected in the rear.

The following will make up a camping party to leave here July 7 for a two weeks outing at Lake Chatcolet: Mrs. Fowler, chaperone, Miss Borg, Mae Herman, Miss French, Maud Summers, Mabel Reed, Geo. McMahon Will Herman, Arthur Morgan, Reed Knapp, W. E. English.

Congressman Burton L. French reached Moscow Saturday from Chicago where at the University of Chicago he received a master degree. Until the convening of congress, Moscow will be his headquarters. Tomorrow he will deliver an address at a picnic to be held on one of the ridges near Kendrick.

"Boomerang Justice"

A special feature picture to be put on at the opera house next Saturday night is entitled "Boomerang Justice," with George Larkin in the leading role. While Mr. Larkin is new to the picture fans of Genesee, he is by no means new in the picture world and will be appreciated by all lovers of good acting.

A short synopsis of the picture follows:

Kit Carson Boone slipped across the Mexican border line just a few seconds ahead of two Rurals. He has done nothing wrong in the sister republic, but wasn't stopping to explain, as Rurals are very sensative with trigger fingers.

Safe in his native land, on his way to Cactus City, Arizona, he met with Ruth Randolph, daughter of Randolph of the Circle L Ranch. She was being molested by a half-breed who was attempting to wrest an important letter from her. In the melee her horse broke away, frenzied with fear, with a broken bridle. The animal headed for a cliff, completely out of control. Boone saw this, and after a terrific race and a thrilling moment on the brink of the chasm he was able to rescue her, after nearly losing both lives.

At the rear entrance to the Circle L Ruth left him and continued on her journey. While watching the girl who had impressed him so, Boone was startled by a bullet whistling in his immediate vicinity, missing him by inches. A quick look located the mysterious assailant riding madly over a distant hill, leaving Boone greatly puzzled as to the intent of the assault.

Nate Stinson, who controlled the town of Cactus city, also controlled the cattle industry of the surrounding country. He and Stan Maxwell together unscrupulously waxed fat at the expense of the ranchers.

And of course you will be more than anxious to know the rest of the story—which is very interesting. Don't miss it.

Have Gone to Montana Ranch

Mr. and Mrs. A. E. Elver left Friday morning for their ranch near Thompson Falls, Montana, where they expect to spend the next month or six weeks. Mr. Elver left by jitney route while Mrs. Elver started on Johnney Roberts' Bullet and expected to reach Montana in due time.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Pour Moonshine Down Sewer

Twenty-five gallons of moonshine whiskey was destroyed by the Latah county authorities at the court house this morning. The liquor was confiscated some two months ago when Frank Mays and James McGee of Bovill, and Joe Edwards of Meadow Creek, were arrested on a charge of illegal possession of liquor. The men were given a suspended sentence.

The moonshine was poured out in the presence of Sheriff James J. Keane, George Vennigerhólz, county assessor; H. A. Thatcher, county auditor; Grant Robbins, deputy sheriff, and Charles Summerfield, constable.—Star Mirror.

Starts Airplane Patrol

Pilot Nick Mamer of Spokane has undertaken a patrol of the holdings of the Coeur d'Alene and Potlatch Timber Protective Associations, previous announcements of this action having made early in the year by the timber holders. Mamer's contract is the first known in this section for patrolling privately owned forests for the protection against fire.

Wireless equipment will be used to notfy headquarters and fire fighters when smoke is sighted of when any fire situation changes. It is believed that fire fighting on a large scale can be directed from the air most effectively when radio affords means of constant communication. The contract requires the patrol machine to be in the air a few hours a day from June 15 to September 15.—Clearwater Tribune.

$5,000 Paid to Beef Producers

Farms around Uniontown have supplied the outside markets with almost a hundred head of good beef cattle within the last ninety days, and the market is clamoring for more, according to John F. Schlee who has been associated with the buyers in obtaining the supply.

The beef cattle thus far obtained here have been above the average in size and quality and have brought prices ranging from 4½ to 7 cents. Steers have averaged 1100 pounds and cows 1000. The Shorthorn breed has predominated in numbers sold thus far.

Mr. Schlee is thoroughly convinced that the farmer with high priced land cannot afford to raise scrub cattle, but he is just as certain that it it profitable to devote time and land to the producing of a good grade. This has been his experience and his ideas are confirmed by the number of other farmers in this vicinity who are giving attention to cattle.—Uniontown Journal.

Potlatch Grows Head Lettuce

The growing of lettuce is spreading from the Lewiston orchards to the various parts of the surrounding territory. It has been found that head lettuce of excellent quality can be grown in the territory tributary to the Kendrick and no irrigation needed. The lettuce here matures just about the time the last crop is marketed in the Lewiston country. The quality is excellent.

Oriel Dumbauld of Juliaetta raised a head of lettuce that weighed 5½ pounds. Other excellent specimens have been brought in from American ridge and from town lot gardens in Kendrick. Gardeners in Kendrick have raised first class head lettuce for several years, even through the past three dry years, without irrigation.

A little organized effort, particularly on the part of the bench farmers tributary to Kendrick, might make the growing of head lettuce here a most profitable venture. The lettuce here would come on the market after the Lewiston lettuce had all been marketed, so the demand ought to be good.—Kendrick Gazette.

Must Have Fire Permit

In order to keep a check on campfires built on acres most frequently visited in the Nezperce forest during the fire danger period a system of camp fire permits will be put into effect beginning July 1. The areas where these permits will be put in use are on or adjacent to the Adams road from the forest boundary to the Adams ranger station and thence to Slate creek the South Fork road from the forest boundary to the Castle creek ranger station and the Red river hot springs.

Several thousand tourist and campers visit these areas every year and in order to insure these areas against destruction by careless burning, it is necessary to emphasize the need of care with fire and to keep before the public their duty and responsibility.

These permits will be issued without charge and contain the regulations governing the use of camp fires and show how they can be made safe. Permits for building camp fires between July 1 and September 15 on the areas indicated may be obtained from the Forest Supervisor at Grangeville, Idaho, and at the ranger stations on the forest.—Cottonwood Chronicle.

Young men in love are adepts at concealing their mind—when there is no one around.

MY LADY'S MONEY

An Episode in the Life of a Young Girl

By Wilkie Collins

INSTALLMENT NO. 8.
CHAPTER VI.

For a quarter of an hour the drawing room remained empty. At the end of that time the council in the boudoir broke up. Lady Lydiard led the way back to the drawing room, followed by Hardyman, Isabel being left to look after the dog. Before the door closed behind him, Hardyman turned round to reiterate his last medical directions, or, in plainer words, to take a last look at Isabel.

"Plenty of water, Miss Isabel, for the dog to lap, and a little bread or biscuit if he wants something to eat. Nothing more, if you please, till I see him tomorrow."

"Thank you, sir. I will take the greatest care—"

At that point Lady Lydiard cut short the interchange of instructions and civilities. "Shut the door, if you please, Mr. Hardyman. I feel the draught. Many thanks! I am really at a loss to tell you how gratefully I feel your kindness. But for you my poor little dog might have been dead by this time."

Hardyman answered, in the quiet, melancholy monotone which was habitual with him. Only be careful not to overfeed him. He will do very well under Miss Isabel's care. By the bye, her family name is Miller, is it not? Is she related to the Warwickshire Millers, of Duxborough House?"

Lady Lydiard looked at him with an expression of satirical surprise. "Mr. Hardyman," she said, "this makes the fourth time you have questioned me about Isabel. You seem to take a great interest in my little companion. Don't make any apologies, pray. You pay Isabel a compliment; and as I am very fond of her, I am naturally gratified when I find her admired. At the same time," she added, with one of her abrupt transitions of language, "I had my eye on you and I had my eye on her when you were talking in the next room, and I don't mean to let you make a fool of the girl. She is not in your line of life, and the sooner you know it the better. You make me laugh when you ask if she is related to gentlefolks. She is the orphan daughter of a chemist in the country. Her relations haven't a penny to bless themselves with, except an old aunt, who lives in a village on two or three hundred a year. I heard of the girl by accident. When she lost her father and mother, her aunt offered to take her. Isabel said, 'No, thank you; I will not be a burden on a relation who has only enough for herself. A girl can earn an honest living if she tries, and I mean to try'—that's what she said. I admired her independence," her ladyship proceeded, ascending again to the higher regions of thought and expression. "My niece's marriage, just at that time, had left me alone in this great house. I proposed to Isabel to come to me as companion and reader for a few weeks, and to decide for herself whether she liked the life or not. We have never been separated since that time. I could hardly be fonder of her if she were my own daughter, and she returns my affection with all her heart. She has excellent qualities—prudent, cheerful, sweet-tempered; with good sense enough to understand what her place is in the world, as distinguished from her place in my regard. I have taken care, for her own sake, never to leave that part of the question in any doubt. It would be cruel kindness to deceive her as to her future position when she marries. I shall take good care that the man who pays his addresses to her is a man in her rank of life. I know but too well, in the case of one of my own relatives, what miseries unequal marriages bring with them. Excuse me for troubling you at this length on domestic matters. I am very fond of Isabel, and a girl's head is so easily turned. Now you know what her position really is, you will also know what limits there must be to the expression of your interest in her. I am sure we understand each other; and I say no more."

Hardyman listened to this long harangue with the immovable gravity which was part of his character—except when Isabel had taken him by surprise. When her ladyship gave him the opportunity of speaking on his side he had very little to say, and that little did not suggest that he had greatly profited by what he had heard. His mind had been full of Isabel when Lady Lydiard began, and it remained just as full of her, in just the same way, when Lady Lydiard had done.

"Yes," he remarked, quietly, "Miss Isabel is an uncommonly nice girl, as you say. Very pretty, and such frank, unaffected manners. I don't deny that I feel an interest in her. The young ladies one meets in society are not much to my taste. Miss Isabel is my taste."

Lady Lydiard's face assumed a look of blank dismay. "I am afraid I have failed to convey my exact meaning to you," she said.

Hardyman gravely declared that he understood her perfectly. "Perfectly," he repeated, with his impenetrable obstinacy. "Your ladyship exactly expresses my opinion of Miss Isabel. Producent and cheerful and sweet tempered, as you say—all the qualities in a woman that I admire. With good looks, too—of course with good looks. She will be a perfect treasure (as you remarked just now) to the man who marries her. I may claim to know something about it. I have twice narrowly escaped being married myself; and thought I can't exactly explain it, I'm all the harder to please in consequence. Miss Isabel pleases me. I think I have said that before. Pardon me for saying it again. I'll call tomorrow morning and look at the dog, as early as 11 o'clock, if you will allow me. Later in the day I must be off to France to attend a sale of horses. Glad to have been of any use to your ladyship, I am sure. Good morning."

Lady Lydiard let him go, wisely resigning any further attempt to establish an understanding between her visitor and herself.

"He is either a person of very limited intelligence when he is away from his stables," she thought, "or he deliberately declines to take a plain hint when it is given to him. I can't drop his acquantance, on Tommie's account. The only other alternative is to keep Isabel out of his way. My good little girl shall not drift into a false position while I am living to look after her. When Mr. Hardyman calls tomorrow, she shall be out on an errand. When he calls, on his return, she shall be upstairs with a headache. And, if he tries it again, she shall be away at my house in the country. If he makes any remarks on her absence—well, he will find that I can be just as dull of understanding as he is when the occasion calls for it."

Having arrived at this satisfactory solution of the difficulty, Lady Lydiard became conscious of an irresistible impulse to summon Isabel to her presence and caress her. In the nature of a warm-hearted woman, this was only the inevitable reaction which followed the subsidence of anxiety about the girl, after her own resolution had set that anxiety at rest. She threw open the door, and made one of her sudden appearances in the boudoir. Even in the fervent outpouring of her affection there was still the inherent abruptness of manner which so strongly marked Lady Lydiard's character in all the relations of life.

"Did I give you a kiss this morning?" she asked, when Isabel rose to receive her.

"Yes, my lady," said the girl, with her charming smile.

"Come, then, and give me a kiss in return. Do you love me? Very well, then, treat me like your mother. Never mind 'my lady' this time. Give me a good hug."

Something in those homely words or something perhaps in the look that accompanied them, touched sympathies in Isabel which seldom showed themselves on the surface. Her smiling lips trembled, the bright tears rose in her eyes. "You are too good to me," she murmured, with her head on Lady Lydiard's bosom. "How can I ever love you enough in return?"

Lady Lydiard patted the pretty head that rested on her with such filial tenderness. "There! there!" she said. "Go back and play with Tommie, my dear. We may be as fond of each other as we like, but we mustn't cry, you know! Go away!—go away!"

She turned aside quickly; her own eyes were moistening, and it was part of her character to be reluctant to let Isabel see it. "Why have I made a fool of myself?" she wondered, as she approached the drawing room door. "It doesn't matter. I am all the better for it. Odd, that Mr. Hardyman should have made me feel fonder of Isabel than ever!"

With these reflections she re-entered the drawing room and suddenly checked herself with a start. "Good heavens!" she exclaimed, irritably, "how you frightened me! Why was I not told you were here?"

Having left the drawing room in a state of solitude, Lady Lydiard, on her return, found herself suddenly confronted with a gentleman mysteriously planted on the hearth rug in her absence. The new visitor may be rightly described as a gray man. He had gray hair, eyebrows and whiskers; he wore a gray coat, waistcoat, and trousers, and gray gloves. For the rest, his appearance was eminently suggestive of wealth and respectability, and in this case appearances were really to be trusted. The gray man was no other than Lady Lydiard's legal adviser, Mr. Troy.

"I regret, my lady, that I should have been so unfortunate as to startle you," he said, with a certain underlying embarrassment in his manner. "I had the honor of sending word to Mr. Moody that I would call at this hour, on some matters of business connected with your ladyship's house property. I presumed that you expected to find me here, waiting your pleasure—"

Thus far Lady Lydiard had listened to her legal adviser, fixing her eyes on his face in her usually frank, straightforward way. She now stopped him in the middle of a sentence, with a change of expression on her own face, which was undisguisedly a change to alarms.

"Don't apologize, Mr. Troy," she said. "I am to blame for forgetting your appointment, and for not keeping my nerves under proper control." She paused for a moment, and I took a seat before she said her next words. "May I ask," she resumed, "if there is something unpleasant in the business that brings you here?"

"Nothing whatever, my lady, mere formalities, which can wait till tomorrow or next day, if you wish it."

Lady Lydiard's fingers drummed impatiently on the table. "You have known me long enough, Mr. Troy, to know that I can not endure suspense. You have something unpleasant to tell me."

(To Be Continued.)

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Organization of a "wheat council of the United States," with power to act for all branches of the industry dealing with production, transportation and marketing of wheat, was started in Chicago last week. The council was authorized by 500 delegates attending the National Wheat conference, called for the purpose of seeking higher prices for wheat.

A total of 357,803 immigrants will be admitted into the United States during the forthcoming year, beginning July 1, the immigration bureau announced. Twenty-five thousand are expected to apply during the first three days of July, when the new quotas become effective.

A third national political party, with the ai mof electing Henry Ford president in 1924 will be formed in Detroit in the near future at a convention of "Ford for President" clubs.

Harvest hands en route to Kansas harvest fields in caravans in trucks are being kidnaped by farmers unable to obtain help by any other method.

Fifty thousand dollars was voted last week at a K. K. K convention in Portland for a W. C. T. U. children's home. A proposed recall against Governor Pierce was not acted upon.

Know what inflation means? In Berlin, according to the department of commerce, it means today that a family of four is spending 203,000 marks each week for living expenses. In the old days that meant 48,314. Today it means very little in American dollars and tomorrow it will mean less, but it is still the German mark to the people in Berlin.

Continuing vocanic disturbances are reported in the China sea, causing the reported rising of a number of islands and shoal banks. Wireless dispatches from vessels near where an erupting island volcano shot up from the sea recently, reported more islands appearing near them. Mariners have been urged to use caution in traveling there by the U. S. hydrographic office. The ocean in the vicinity of the erupting island is reported hot enough in places to open seams of vessels.

Daniel Willard, president of the Baltimore & Ohio railroad, confirmed the statement that the country's railroad would present a two-fold solution of their own for the transportation problem, offsetting both the administration consolidation plan and the progressives' demand for more stringent governmental control. He said if the present law is allowed to stand the railroads' answer to demands for changes in the law will be their record for more effective service than ever before in the nation's history and lower rates than those charged anywhere else in the world.

IDAHO

Registration for the annual summer session of the University of Idaho is in full swing and many have enrolled for the six weeks' work. The registrar was unable to give figures, but thought they would exceed those of last year.

A sweeping victory for the $300,000 Shoshone county good roads bond issue was made at a recent election held in Wallace. Under the state law, a two-thirds majority is required for the bond issue to carry, and up to a late hour the returns stood 3103 for the bond issue to 81 against.

A noteworthy bull exchange has been made by the University of Idaho and the University of Nebraska, Idaho shipping its Holstein herd bull, Matador Violet Idaho, 273447, to the University of Nebraska, and taking in exchange the Nebraska herd bull, King Piebe Pontiac Segis, 174303. The exchange is made for one year.

The first week of the 1923 summer season of the Lewiston state normal school shows an enrollment of more than 400. The current issue of the normal school annual is dedicated to H. E. Fowler, head of the department of English for many years, who will leave the institution with the close of this summer's work. He will go to the Bellingham state normal school.

The Bonner county republican central committee last week tendered a dinner at the Methodist community hall to Governor and Mrs. C. C. Moore, state land commissioner, and Mrs. I. H. Nash, Attorney General A. H. Connor and Milo Thompson, editor of the Bonner County Statesman, and Mrs. Thompson. About 100 were at the dinner and the guests all spoke briefly.

About 300 boys and girls, club workers of Washington and Idaho, joined forces recently at a big picnic in the Moscow mountains five miles northeast of Moscow. This was the first joint state club gathering of record in the west, and the boys and girls made the mountains echo with their yells and songs. The party included 181 delegates from 20 counties in Washington and 110 delegates from the 10 northern counties of Idaho.

Such progress is being made in installing machinery that it is believed that the big mill being erected at Weippe, Idaho, by Daly Brothers of Weed, Cal., to cut under contract 50,000,000 feet of lumber for E. T. Chapin & Co. will start operations July 10. Chapin & Co. took over the Weippe mill property and timber holdings of the Scofield-Marined syndicate last fall. The big plant will have a capacity of 50,000 feet each eight-hour shift.

The road program for the northern part of Idaho contemplates an expenditure of $3,000,000, according to William J. Hall, state commissioner of public works at Boise. Much of the work is proceeding, and the remainder is to be contracted for soon. Only 125 miles of the north and south highway remain to be built. This road will lie between the British Columbia boundary and the southern line of the state, a distance of more than 500 miles. The uncompleted part is connected by fair roads and is open, except in the Salmon river region, where construction work is being done.

The annual edition of the Idaho Forester, published by the Associated Foresters of the University of Idaho, has just appeared. This is an attractive booklet of sixty-eight pages and is replete with timely articles and notes dealing in the main with the forestry situation in Idaho and the activities of the school of forestry for the past year closed. The edition is dedicated to W. D. Humiston, assistant general manager of the Potlatch Lumber company, widely known in forestry and lumbering circles, who contributes an able article on "Forest Taxation."

8000 CARS IDAHO APPLES TO MOVE DURING 1923

Idaho will ship 8000 cars of apples from the 1923 crop, according to estimates being compiled in the state bureau of plant industry at Boise. The report will be submitted Monday to a member of the interstate commerce commission, in a hearing at Pocatello.

The Pocatello hearing is for the purpose of making a survey of the car situation in the northwest during the last crop season, and to get estimates of the northwest's crop this year, in order to provide for an adequate supply of cars. Idaho's case will be presented by the public utilities commission.

In addition to the apples estimate, the report shows that there will be approximately 2200 cars of prunes, 200 cars of cherries, 300 of peaches, and about 2000 of lettuce.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

COMMON SENSE AND BLOOD PRESSURE

Blood pressure, defined in simple terms, is the amount of pressure within the blood vessels. This pressure is produced by the contraction of the heart and is further aided by the elastic walls of the blood vessels. Readings are taken by placing an elastic cuff around the arm, just above the elbow; air is pumped into the cuff until the pulse is no longer felt at the wrist. A dial connected with this cuff register the amount of pressure in millimeters.

There are certain variations in blood pressure that are normal, the principle one being due to the following causes: Age, being higher in adults than children; sex, being higher in men than in women, and it is temporarily increased by exercise and posture.

The recording of numerous blood pressure readings by the various insurance companies has resulted in the adoption of a standard normal blood pressure for the different ages. Up to 15 years the pressure averages from 75 to 90 millimeters. After the age of 20 it is about 120 millimeters, increasing one millimeter for each year. Example, at the age of 35, the normal pressure would be 135. Variations of 10 to 15 millimeters are found in health. To be of value these readings must be made on different occasions and at different times during the day in order to establish an average for the individual under observation.

So far we have been considering the variations at the different ages and in people who are apparently in normal health. Now we will consider some of the causes of abnormally high blood pressure, which is not a disease within itself, but the result of changes that have not taken place within the body, due to errors in diet, overwork and disease.

Food taken in large amounts, especially, when the diet consists largely of meat, causes an increase in the waste products in the blood and causes a chronic food poisoning, called auto intoxication. This waste is an increased blood pressure. Excessive use of alcohol and tobacco will also cause high blood pressure.

Bright's Disease (inflammation of the kidneys) a disease which usually follows the acute infectious diseases, such as scarlet fever and diptheria, is a very common cause for high blood pressure. Changes take place in the kidneys as a result of this disease that causes an increase in the resistance of the blood passing through the kidneys. As result of this change, the heart is called upon to work harder in order to carry the blood through. This resistance causes a marked increase in pressure is necessary in order for the kidneys to functionate.

Arterio Sclerosis, or hardening of the arteries, is a condition that gradually takes place with increasing years. It may be brought on earlier in life, by errors in diet, long continued business worries or overwork. The elastic tissue of which the walls of the vessels are made, is replaced when it wears out by an inelastic tissue, called connective tissue. The inelastic tissue offers more resistance to the flow of blood through the arteries, in this manner increasing the work of the heart, which in turn raises the blood pressure.

Certain types of goitre are accompanied by a marked increase in blood pressure. Other diseases of the thyroid gland cause a decrease in blood pressure.

In conclusion I wish to convey that the term blood pressure is a very broad one. What constitutes an abnormal blood pressure can not be determined by a single examination. It must be the result of numerous readings, by a history of previous diseases, occupation, and careful physical examination. Conditions may be found that account for these abnormalities which may be corrected by proper diet, changes in the manner of living, that will soon bring about a return to normal.

Fads and Fashions of Today

By DOROTHY PHILLIPS.

In spite of the convincing, efficiency sales expert, patronizing and would-be squelching tone of the milliner who is trying to bulldoze you into buying a fabric summer hat while you are more or less firmly insisting on a straw, don't let her bluff you that straw is "really passe you know" and that nothing but silk and felt will be worn this season.

She's wrong. She knows she's wrong, but like the rest of the hat hunters she believed seasonable straw for summer had been deeply buried under a flood of eccentricities which has deluged us for the past few years.

There's not much of a thrill in exchanging the winter's collection of velvet, silk and felt for a similar assortment to top off our summer wardrobe. Some French fanatics started twelve years ago and we've followed their fallacies ever since.

Just what hypnotic means these unknowns took to convince us of the wisdom of this incongruous mode—wearing airtight, scalp melting apologies for the regular cool and featherweight headgear of by-gone days—is difficult to say. Personally, I think it was the work of men fashion writers who saw the chic without the discomfort of the fabric hat on the feminine head.

However that may be ,word now comes from Paris that such leaders of fashion as Rose Descat, Maria Guy, Jeanne Lanvin and Marie Louise, have resurrected straw as a medium for their most advanced models and will shortly display a rarely charming millinery which will bring back the real good old summertime.

After all in summer one ought to give the impression of coolness—of comfort despite broiling sun and baked pavements—of crispness and a goddess-like disregard of high mounting thermometers. It isn't a time for a striving after the last word in just sheer smartness.

Tailor gowns and odd-shaped brims we shall see, and singular effects in trimming. Should our tastes incline to the oldtime beloved wreaths of natural looking roses or daisies and buttercups, no fashion autocrat bans our choice.

Leghorn, which for ages was as much a part of summer as the birds and the flowers themselves, has come back into favor in all the ultra smart houses of Paris. It is handled in an infinite variety of interesting ways. Jeanne Lanvin has launched a clever tailored model in dull green with ribbon ruches in beige and chestnut brown; a small and effective one of a Louis XVI hat is offered with a narrow wreath of multi-colored flowers standing out vividly on the deep cream foundation; a leghorn hat with side crown of cyclamen taffeta, and brim covering formed by five taffeta folds, flame, mauve, dull blue, apricot, and rose with a half wreath of

tiny velvet pond lilies in blue, green, copper and mimosa tones completing an exceptionally chic ensemble. Which gives a slightly representative idea of the simplicity and complicity with which the 1923 leghorn is adorned.

Black and white combinations have made their late spring annual appearance, and the large capeline model in the sketch illustrates a good example of the last minute mode. It is of Milan straw—the sugarloaf crown of cream and the curving brim of black. Around the base of the crown is a garland of small pink roses; these are veiled with black Chantilly lace which ends by falling in a ripple over the right shoulder.

The Exception.

Newlywed: "What do you think of the state of matrimony?"

Old-timer: "Waal, it's been my observation that it is the exception to Lincoln's rule. It continues to endure —half slave and half free."

Dry Land Fish.

Japers—I notice that fishing parties don't take much bait along nowadays.

Bubbs—Righto! They got it outside the three-mile limit.

Acquitted, of Course.

Judge—"Young lady, you are charged with making whiskey."

Young L.—"Judge, you old flatterer."

Community fairs encourage community spirit.

Moody Staten, Washington Colored Man, to Head Army of Republic of Liberia

Look on the map of Africa, just above the equator on the west coast, where the continent takes a great bulge to the westward as if it had once been joined to the similar bulge of South America, which is Brazil. Look more closely, at the point where the coast line begins to swing northward again, and you will find the republic of Liberia.

Keep Liberia in mind for just a moment, for the standing army of the republic will soon be under the supreme command of a Washington man—Captain Moody Staten, of Spokane, late of the United States army, veteran of the Great War, who left Spokane on June 9 to take command of the army of a republic. After his arrival at Monrovia, the capital, he will be given a short period of training, after which he will take over the direction of the army and become military adviser to the president of the republic.

Splendid War Record.

Captain Staten's appointment to this responsible post comes as the result of his splendid record in the United States army. When the Liberian government asked the secretary of war to nominate some colored American for the position of commander-in-chief of its army, the war department at Washington tendered the nomination to Captain Staten. After due consideration, he decided to accept, and within a few months will be followed to his new location by Mrs. Staten, who has remained behind in the beautiful home at 957 E. Hartson avenue, Spokane, until he is ready to send for her.

Moody Staten first enlisted in the United States army in 1912. At that time he was just 21 years of age. He began to study the science of war. Before he had completed his first three-year enlistment, at the age of 24, he had been made first sergeant, the highest noncommissioned rank attainable in the company, the youngest soldier to hold such a post in the entire regiment and one of the few soldiers in the entire army who, during peace time, have risen to the rank of first sergeant during a first enlistment.

At the time of the entry of the United States into the Great War, he was stationed with his regiment in Hawaii. Because of the great aptitude he had shown in military affairs, he was detached from his outfit and sent to Camp Dodge, at Des Moines, Iowa, where a great training school for negro officers had been established in connection with the huge cantonment.

In St. Mihiel Battle.

Staten made rapid progress there, and was commissioned captain in the United States army and ordered to France, where he was placed in command of Company A, 317th Infantry. At the battle of St. Mihiel, the greatest single offensive undertaken by the American army without the cooperation of any of the allied troops, Captain Staten's company captured an advanced position and held it for several hours, though heavily outnumbered by the Germans. When the pressure became too great the Americans gave ground, and after the battle it was charged that the negro troops had not stood the shock of battle well. However, when the false facts became known, it appeared that the colored troops held their position for several hours on the promise of relief by white troops, and that they gave way only when the pressure became too great and they found out that the promised relief was not coming.

Later they charged the Germans and retook the lost ground. The final investigation of the affair proved that the negro troops had performed heroically, and that they were to be highly praised for their actions, rather than censured.

When the armistice was signed Captain Staten was in command of a company of military police facing the German fortress of Metz. In the fall of 1919 he returned to Spokane and resumed civilian life.

To Lead His People.

He set about preparing himself for educational leadership among his people, and to do this took a course in the Blair Busines college which was followed by two years at Cheney Normal.

Then came the call of the military again — this from far away Liberia, on the famous Ivory Coast of the Dark Continent. And Moody Staten answered the call, because it was a call to the service of his own people. There he knows, a patriotic and devoted band of colored people, perched on a fertile seacoast and ruling forty times their own number of uncivilized and savage people, are spreading the light of civilization and progress.

His duty will be to command the army which holds back the savage tribes from wiping out the foothold which civilization has gained, while missionary and teacher cary to others less savage the message of Christianity, civilization and enlightenment.

The Story of Liberia.

The history of Liberia itself is rather interesting. The slavery question began bothering the American republic almost from its very beginning. In 1777 Vermont freed its slaves and forever prohibited the traffic in that colony. When Washington died he freed his slaves, and many other notable men followed his example.

These freed colored people constituted more of a problem than did the slaves. Their status was uncertain; they were denied citizenship, and looked upon with disfavor by even the Northern whites, who professed to be their friends.

President Monroe first undertook the solution of their problem by suggesting a return to Africa. But a return to Africa meant a relapse to savagery, and these enlightened negroes refused to consider such a program unless it meant that they could be located in some place where they could forgather as a civilized people and maintain their educational and religious standards as a unit.

Named for Monroe.

Thus came about the establishment of the colony of Liberia, and when the capital city was built it was named Monrovia, in honor of President Monroe. The colony was brought into being by the activities of Jehudi Ashman, a white man, and in the years from 1822 to 1828 several thousand freed negroes emigrated to the colony which was maintained under American supervision.

Another colony was founded on the same part of the African coast under the name of Maryland. In 1847 the two republics of Liberia and Maryland declared their independence and were formally recognized by the great powers of the world in the two years following. In 1857 they were united under the name of Liberia, the republic of Maryland becoming one of the four counties which now make up the country.

The constitution is modeled closely after that of the United States. The president, who at the present time happens to be C. D. B. King, is elected for four years, and has the same veto powers as does the president of the United States. The senate is composed of eight members, two from each county, while the house of representatives is elected on the basis of population, and at present consists of thirteen members. A splendid school system is maintained, and the English language is the only one spoken among the civilized people of the republic.

Two Million Population.

The population at present consists of about 12,000 or 15,000 descendents of the original immigrants from America, probably 40,000 natives who have been civilized and Christianized by the American negroes and brought up to their standards of living, and 2,000,000 savages, who are as yet unredeemed from the wilderness.

Of the savage tribes which inhabit the interior, perhaps the most interesting is the Kru. In every story of the sea which is laid along the African coast, one reads of Kru boys. The Krus, although coming from the interior, seem to be natural-born sailors, and once placed on a ship make the greatest sea-going people that probably the world has ever known.

Considerable progress is being made with the work of civilizing the natives. They do not molest their civilized neighbors to any great extent, and no very large army is necessary to guard against them, but they do make frequent and terrible warfare against other tribes. Like all African savages, they practice voodooism and other terrible cults of a superstitious nature. But that the American negroes have had a tremendous influence in checking their savagery there can be no possible doubt, and most of the good work has been done through education and the message of Christ.

Liberia in the War.

Liberia declared war against Germany in the late conflict, and while her troops took no part in the actual fighting, she supplied several labor battalions which did effective service at the front and in the seaports. When she declared war she created a serious problem for herself, for Germany had carried her policy of "peaceful penetration" to great lengths in the negroe republic, in an effort to offset French influence on the Gold Coast and British influence in Sierra Leone.

Added to this was the fact that when the German colonists were driven out of the various German holdings in Africa by the Union of South African armies, about the only neutral refuge left was Liberia. They flocked there in great numbers, until Liberia herself declared war.

What to do with them became a problem, until the Liberian government finally packed them up and sent them into other neutral territory—mostly to Spain, rather than be bothered with interning them. During the war a German submarine appeared in the harbor of Monrovia and bombarded the city for several hours, in addition to sinking the cruiser "President Howard," which constituted the entire Liberian navy. Since that time the country has been without a navy, but its army is being maintained in excellent shape. Until lately it has been under the command of Colonel Young, an American negroe who was a graduate of West Point and the only colored man who ever attained the rank of Colonel in the American army. He died recently and the body was sent back to America for burial. Captain Staten is to be his successor as commander-in-chief.

Captain Moody Staten, late of the U. S. Army, veteran of the World War who saw much active service, together with his wife and Evelyn, the little girl whom they are raising. The picture was taken at their beautiful home at 957 East Hartson avenue, Spokane, just before Captain Staten sailed for Liberia, where he will become commander-in-chief of the army of that republic.

Copied U. S. Flag.

The flag of Liberia is exactly like the American flag, except that one large star takes the place of the 48 smaller ones in our flag. The field of blue and the thirteen stripes, alternating red and white, are of the same proportions as our own.

Monrovia, the capital, is a city of about 6,000 people, with splendid schools, churches, and modern improvements such as are needed by a city of that size. The country is exceedingly fertile and productive, and wild life is abundent in the mountains back from the coast. The vast resorces in natural wealth have not as yet been more than slightly touched. The country is about 40,000 square miles in size, being about 300 miles long and 200 miles wide at its greatest extremities.

Great opportunities are open to Captain Staten. Even the presidency of the republic is not beyond him, as the constitution of Liberia permits one to become eligible to that office after five years of residence in the country. And Captain Staten is as yet young, having just reached the age of 32.

It's a long way from Washington to Liberia, but Captain Staten expects to be happy there, once he is joined by his adoring wife and Evelyn, the little girl whom they are raising. He expects to be happy because he knows that he can be of service to his own people, and that has been the aim and object of his life. To such a man, nothing is impossible.

MOST MEN ARE HONEST SO DEMOCRACY ENDURES

"Most men and women are honest. That is why our democracy will endure," said Dr. E. O. Holland, president of the State College of Washington, in making his farewell address to the seniors.

"But no great people can go forward in peace and prosperity unless there can be good faith and real cooperation, based on a clear understanding of public issues; and no man can get a proper understanding of public issues, or cooperate, who is afraid to study both sides of a question.

"Some insist that all change means progress; others fear that deviation from the established order means ruin. Both are wrong, but in a democracy like ours it requires real leadership, real judgment in the weighing of facts and issues to bring about changes and advances which will be of enduring benefit. A spirit of mere negation, or of loyalty, is not leadership.

"The public schools of America were established in the belief that democracy is based on an intelligent and cooperating citizenship. The corollary of this theory is the belief that public education will train competent and unselfish leaders so that they can act with wisdom and judgment.

"At no time in our history have the people been more extreme in their views, more imperative or contradictory in their demands. But a properly educated citizenship can always distinguish between the essential and the non-essential aspects of public questions. If this were not true, democratic government could not exist. It is the sifting of wheat from chaff that saves the individual, and eventually the nation."

DEAF-BLIND GIRL HEARS ON FINGERS

There was a time, not so very long ago, when to be totally blind and deaf meant to be completely isolated socially from the rest of the world. Such a person could have no interest in events that were going on and other people thought very little about these poor unfortunates except to express sympathy for them now and then.

Conditions are vastly different now. The telephone has proven a God-send to many a deaf or blind person and to many of those who are both unable to hear or see. The case of little seventeen-year-old Willetta Huggins, of Janesville, Wisconsin, is perhaps one of the most astonishing examples of how the telephone has proved a great blessing. This most extraordinary girl, refusing to succumb to the utter helplessness usually resulting from total deafness and blindness, can actually see and hear through her highly sensitized finger tips.

Willetta has astonished scientific men with her almost uncanny ability to receive visual and auditory impressions in this manner. Her telephone she considers her best friend. Through it she carries on a conversation with the ease and accuracy of a person equipped with all five senses. By pressing her finger tips very slightly upon the telephone receiver, she is able to hear the words spoken at the other end of the wire.

Willetta can hear the music of a piano, a symphony orchestra or the human voice and, by the vibration of small pieces of paper held between her fingers, is able to hear lectures and be keenly interested in them. By pressing her finger tips against the side of the head of a person, Willetta can distinctly hear the words spoken to her. She recently carried on a very interesting conversation in this way with Governor John J. Blaine of Wisconsin.

ORIGIN OF CHINOOK INDIAN JARGON TOLD

Origin of the Chinook language, or jargon, spoken by Indians of the Northwest, was told recently by Prof. Edmond S. Meany, of the University of Washington, in an article in the Washington Historical Quarterly, published at the university.

This name was used for a group of Indian tribes occupying the lower banks of the Columbia river, according to Professor Meany. The word is said to come from Tsinuk, the Chehalis Indian name for the Chinook Indians. The Chinook jargon, or trade language, was begun from the brief vocabulary recorded at Nootkka by Captain James Cook in 1778. The headquarters of the fur trade was removed to the Columbia river after the founding of Astoria in 1811. Many Chinook Indian words were added, and in that way it became known as the Chinook jargon instead of the Nootka jargon. The word, becoming familiar, was frequently used for geographic names, some of which have persisted. On early charts there was shown an Indian village on the eastern bank of Port Discovery as Chinook. That name has disappeared. An early settlement on Baker bay in Pacific county received and has retained the name Chinook. What is now known as Scarborro hill was once called Chinook hill. A small stream flowing into Baker bay has been mapped a number of times as Chinook river, while others use Wappalooche as its name. James G. Swan says: "which would carry us down the Wappalooche, or Chinook river, to its mouth." Chinook point mentioned by Swan as the headquarters of the once powerful tribe of Chinook Indians, was called "Point Konkomlle" in 1811 by David Thompson of the North-West company of Montreal. Concomly was the famous one-eyed chief of the Chinooks in early Astoria days.

Good laying hens must have vigor and breeding.

Etiquette
What & When to do it
By Alenda

Any questions on etiquette will be gladly answered in this column if addressed to Alenda, care of this newspaper.

• • •

Dining.

If a guest spills salt at a table, should he clear it up or let the maid do it? At a dinner where there is no maid, when passing the food, should a man help himself first if he is next in line, or let the girl next him help herself first? Thank you.

GEORGE B. PENN.

1. It is the maid's place to clear anything split at a table.

2. He should offer it to the lady next to him, just saying, "May I help you?" Then she will see he is served before it is passed on.

In the Theater.

Dear Aleda: My husband and I attend the movies a great deal, and I should like to know the answers to the following question: (1) Should a wife precede her husband down the aisle? (2) Also leaving the theater. (3) Which should go in the row to take their seats first? (4) Does the same rule apply in church.

MRS. E. M. S.

(1) Yes, whether married or not, a woman should always precede a man down the aisle.

(2) The same rule holes good if there is such a crowd one must leave in single file. Otherwise a man may step into the aisle, wait for the lady, when they can go out together.

(3) The lady.

(4) Yes.

This Was Real Prohibition

Prohibition as we know it is not the only kind of prohibition the people have been subjected to. Once upon a time in a cripue to take a bath and a 100 per cent American was naturally a dirty person. On December 20, 1842, the first bathtub in the United States was installed at Cincinnati, by Adam Thompson. The newspapers denounced the installation as unnecessarily extravagant and Thompson was regarded as a son of satan. The next year the legislature of Virginia laid a tax of $30 a year on each bathtub installed in that state; and in the same year the comon council of Philadelphia failed by two votes to pass an ordinance prohibiting all bathing in that city between November 1 and March 15. Two years later the cities of Charleston, Wilmington, Hartford and Providence instituted charges of heavy water rates against owners of bathtubs; and Boston, the intellectual hub of the universe, made bathing unlawful except on medical advice.

Fast Worker.

Minister—"Poor woman! It is a hard blow for you to be made a widow, still there is a comforter for you."

Widow—(Sniff, sniff)—"What's his address?"

Freedom

High on the crown points of the Statue of Liberty in New York harbor, Carl Berquist, acrobatic steeplejack, executed some thrilling stunts last week. Photo shows comparative size of man to the great statue, which holds out the torch of Liberty and Freedom to thousands of old world oppressed as they came to merge in this great melting pot of freemen.

HELPFUL HEALTH HINTS

Your Nails—Never cut the cuticle on your nails. Instead, take an ordinary orange stick and push it back. Cutting makes it grow twice as fast —and harder.

Sore Throat—An economical and splendid gargle is salt and lukewarm water. An even teaspoon of salt to a glass of lukewarm water.

Warts—The oil of cinnamon used on warts will soon make them disappear.

Good reads and the auto have brought the farmer closer to the city.

It took years of work to get a chicken to lay over 300 eggs per year.

PLAN BUILDING FOR RARE MUSEUM RELICS

Action toward providing a building for the state museum on the University of Washington campus has been taken by the board of regents, with the appointment of a special committee, of which Alexander McEwan, of Seattle, former regent, will be head.

Means of caring for the relics and exhibits have been under consideration since the present museum building was condemned last week, but no definite action will be taken until the return of Mr. McEwan, who is now in Europe.

The museum collection is valued at approximately $200,000, and includes 100,000 specimens which show the mineral, lumbering and horticultural resources of Washington and Alaska. Before the building was closed, it was visited by thousands of tourists and residents of the state.

Auto Travel Growing.

Spring reports indicate that when the highway department takes this year's traffic census an enormous growth of automobile travel over Washington roads will be shown. Travel is not only heavier than last year, but the big rush has started earlier.

Last year the highway department counted motor vehicles using the roads at 152 points. An interesting disclosure was the fact that east of Ellensburg the maximum daily travel was 4,135 and 2,77 respectfully: the eastern city limits of Spokane reporting 4,465 and 2,055, and the Everett bridge, 4,074 and 2,005, respectively.

DAVID'S

SEMI-ANNUAL YELLOW TRIANGLE CLEARANCE SALE BEGINS SATURDAY, JULY 7th

A Gigantic Event in merchandising that brings crowds of people from all over the Inland Empire. A Major Sales Event, the value of which will be lost to anyone that does not appreciate Quality Merchandise. From Bargain Basement to Top Floor there will not be a dull moment. Unmatchable Values in Every Department.

The Store will be ablaze with Sparkling, Startling Bargains. This is our way of getting ready for the great on-rush of fall goods.

We cannot urge you too strongly to be here. Sale continues two weeks.

Moscow **DAVID'S** Moscow

Four Floors of Dependable Merchandise

Special Tire Sale

One week only, beginning July 7th, on all our standard make tires. No terms given on the following prices:

30x3	$ 7.00
30x3½, fabric	10.00
30x3½, cord regular size	12.50
30x3½, cord oversize	14.00
32x4, cord	24.00
33x4, cord	25.00
34x4, cord	26.00

Our harvester oils and greases will arrive in a few days. See us for prices before you buy.

WE DO JOB PRINTING OF ALL KINDS—AT REASONABLE PRICES

SMILE WHEN YOU PAY YOUR INCOME TAX

The following are extracts taken from an address given recently at Boise by Rex B. Goodcell, collector of internal revenue for the sixth California district. There is much valuable information contained therein as well as giving an insight of the workings of the tax:

When revenue officers descend upon a community the question in everybody's mind is: "Who is under investigation?"

We are not here to make an investigation of any of you,but to invite you to a brief contemplation of the obligation the individual owes to his community, state and nation, and the benefits he derives from these agencies of the government. Then with that obligation and those benefits in mind, we suggest that you should "smile when you pay your income taxes."

Most of us fail to comprehend that we are but units in the governmental institution called the United States of America, that great cooperative organization dedicated to the one thing in life that is worth while—human happiness. It is only because you and I, and all citizens of the United States maintain this great agency that society is able to function at all, or that we have the blessings and benefits of Christian civilization.

A few common things will illustrate what I mean. For instance the food you eat, and the milk you give to the babies—few of you know where it comes from, or who has handled it. You accept it on faith because you depend upon the Government for the protection through the effective administration of pure food and sanitary laws.

Then, there is the public health. Do you ever stop to consider what you get for your tax money which goes into this governmental activity? Through it, cholera and bubonic plague, which take their toll by thousands in foreign lands, are kept from our shores, and all forms of contagious diseases are now almost unknown.

The public schools are supported by taxiation, and if you received nothing else for your money, they alone would more than reimburse you for the whole amount of your tax bill.

I do not suppose there is a man here tonight who has a gun in his pocket. That is not because you believe there are no bad men in the country, but because you rely upon the instruments of government for protection. You go to your work in the morning, leaving the wife and "kiddies" at home. The doors are open; the children are playing in the back yard. You know they are but you do not worry. Why? Because of your faith in the protection afforded by the governmental agencies supported by the taxes you pay.

If you would know what this sort of protection is worth, go with me to Boston for one day. If there is an intellectual, cultural center in the United States, it is the city of Boston. There the police went on a strike for bill is $76.36 per person, and they do not get one-fourth the blessings out of it that we do.

You have a right to demand that your government shall be human and humane. Under the revenue law of 1918 a married man was given an exemption of $2,000, and $200 additional for each dependent. The act of 1921, which was passed by the present administration, increased these exemptions to $2500 for husband and wife, and $400 for each dependent, thereby affecting a saving in income taxes to every married man with an income of less than $5,00 a year, and having any taxes at all to pay, of $20 for himself and wife, and $8.00 for each dependent. Single persons with incomes of less than $1,000 a year have no taxes to pay. The law of 1921 also removed the tax from freight, railway tickets, ice cream, theatre tickets up to ten cents, and many other commodities. The elimination of these items has saved many millions of dollars to the masses of the people with incomes of less than $5,000 a year, it being this class which had a very large percentage of these taxes to pay. These modifications in the law have all been made in the interest of the American home and th American standard of living.

The income tax law is the most nearly fair tax law ever written and for two reasons:

First, a man pays in accordance with his ability to pay.

Second, he pays in accordance with the benefits he derives from the maintenance of th government—and therein is shown the equity of the graduated scale of taxiation from four per cent to fifty per cent. The man with very little needs but little protection from the government. The more property a man has the more protection he needs for himself and property—the more the government does for him in maintaining him in the enjoyment and ownership of his property. The man with an income of $200,000 a year does not need merely one hundred times as much protection as the man who with an income of $1,000 a year. He needs more nearly ten thousand times as much protection, for the more he has the more temptation there is for the criminal to attack either him or his property. Accordingly, these men should pay for their protection on the relative basis of the cost of providing that protection. It is on this principle that the graduated scale of income taxes is framed.

There is not a thing you own you do not own because of the ability of the government to keep you in that ownership. There is not a thing you value, except the love and affection of family and friends, and there is no hope you entertan for the future, except spiritual salvation, that is not based upon the stability of the country in which you live—our own United States. Do you get your money's worth?

Think of these things—and "Smile when you pay your income tax bills."

A Beautiful Thought

Of course there are as good fish in the sea as ever were caught—but you can't catch them sitting on shore.

Read the ads.—keep posted.

What Have You Done With Yours?

According to the latest report from the national capital each and every person in the United States is entitled to $42.34—have you yours on hand? The statement follows:

Money in circulation on the first of June totaled 4,706 million dollars compared with 4,668 million dollars a month before and 4,370 million dollars a year ago, making the per capita circulation $42.34 compared with $42.04-a month ago and $39.87 a year ago. The total stock of money in the United States is 8,537 million dollars compared with 8,471 million dollars a month ago and 8,127 million dollars a year ago. Stocks of gold coin and bullion now for the first time in history exceed four billion dollars, the present stocks being 4,023 million dollars compared with 3,982 million dollars a month ago and 3,774 million dollars a year ago. We now hold in this country one-half of all of the known and countable gold in the world, which makes the United States the undisputed leading financial power.

Be On Aero Map

Lewiston and Clarkston are taking a permanent position on the aero map of the United States, with the establishment of a training field for fliers. The station will become a visiting point for United States army planes on cross country flight, according to word received in Spokane. Garage men of Lewiston are sponsors for the enterprise and the field station will be at Clarkston, where an ideal site is being obtained from the Lewiston-Clarkston Improvement company.

It's easy to judge a girl by the company she keeps—if you are able to judge the company.

For Your Summer Comfort

Oil Stoves

New Perfection and Mars-wells Stoves. The burner Is the Important Part of Any Stove.

The "Kerogas" burners on the Mars-wells stoves produce an intensely hot double "flame within a glass," and yet consume a minimum of oil—and you can regulate it perfectly—the merest turn of the small control wheel gives you instantly the exact degree of heat you want: Intense heat, moderate heat, or a low "summer" heat.

Just what you want Angler

If you are going fishing this summer, remember that your catch depends upon the kind of Fishing Tackle you use. We have a large assortment of flies, lines, rods, etc—and anything else you may want.

TENTS—All sizes and shapes.

MEYER & SON
Genesee, Idaho

PERSONAL MENTION

Mr. and Mrs. Roy Le Barron, son Marshall, and Miss Mary Clay of Cavendish spent the Fourth with the Walter Jain family.

Mr. and Mrs. Joe Hasfurther and daughter, Bernadine, T. Driscoll and Mrs. S. B. Gibson left Sunday for Walla Walla, where they spent a few days visiting.

Henry Rees left Tuesday morning for Athol, where he spent the Fourth with his daughter, Mrs. Jack Linehan, and family.

Emma Lou Sullivan left Tuesday morning for Palouse where she spent the Fourth.

Mr. and Mrs. Ed. Huckabay left Tuesday for their home at Colfax.

Mr. and Mrs. Leo Edwards and children and Mrs. H. M. Warren left Tuesday morning by car for Tekoa where they will visit with Mr. and Mrs. W. J. Davee over the Fourth.

Miss Maurine Swenson left Tuesday morning for Winchester for a visit with friends.

Charles Lorang arrived Tuesday from Spokane where he had been attending Gonzaga college.

Dick Vandenburg arrived Tuesday from Spokane to spend the Fourth with his parents, Mr. and Mrs. John Vandenburg.

F. E. Dicus was a passenger for Pullman Thursday on a short business trip.

Mrs. Emma Evans of Redlands, California, arrived Tuesday to spend the summer with her children, Edgar and Roy Evans and Mrs. Oscar Anderson, and families.

Mr. and Mrs. Casey and son, Joseph and daughter, Helen, arrived Tuesday afternoon from Mullin, for a visit with their daughter and sister, Mrs. George Wheeler, and family.

Miss Audrey Henry of Spokane arrived Tuesday for a visit at the John Vandenburg home.

Misses Susie Alber and Katherine Dwyer spent Wednesday with home folks, returning to their work at the State normal at Lewiston that evening.

Miss Sophia Kambitsch arrived home Sunday from a two-weeks vacation trip by auto to Wenatchee, Seattle, Tacoma, Portland, and other points, returning via the Columbia highway. She reports a very enjoyable trip.

Visit the Meaders

On Friday night of last week the members of the local Rebekah lodge motored to Lewiston to spend the evening at the F. H. Meader home. There were 20 from Genesee and seven from Lewiston and Mr. and Mrs. Clay Halley were specially invited guests.

It seems that the local Beckys intended to take a few "eats" along and Mrs. Ira Hanson and Mrs. W. E. English were delegated to furnish cakes—and they claim they did—but the other members of the party say that when the packages were unwrapped—well, they were a delusion and a snare and all that could be found were boxes said to contain stones—and they weren't their first cakes, either.

However, things seemed to be going along very nicely until Ruth Martinson got reckless and broke up the Haviland. This also broke up the party and all came home claiming to have had a wonderful time.

George Nelson Wins Prize

In the singing popularity contest held at the Rex theatre, Lewiston, George Nelson, son of Mr. and Mrs. Jas. Nelson, won second place, receiving a prize of $75. This is considered a decided compliment to Mr. Nelson as the contestants were numerous and were singers of high order. The first prize was won by Miss Jeanette Loff of Lewiston with 2012 votes, Mr. Nelson coming second with 1849 votes.

Mr. Nelson will sing at the Genesee opera house Saturday night, July 7. You are going to miss a treat if you miss hearing him.

Town Almost Deserted

Genesee was about as quiet a place as one could "celebrate a safe and sane Fourth." Practically everyone went some place to spend the day. Some went to Asotin, some to Kendrick, and many more attended picnic parties of various sizes and to various points, while a few went fishing.

The day was a very pleasant one and everyone seemed to enjoy it to the fullest.

If You Fail

To attend the show at the opera house Saturday night you are going to miss something that you will always be sorry about. The show is a good one and George Nelson will sing. 1-1

50 GOOD CIGARETTES 10¢

GENUINE "BULL" DURHAM TOBACCO

Travelers Heard From

Word from the J. H. Jackson family, enroute to visit in the Central states, is to the effect that they have been getting on fairly well, owing mostly to the condition of the roads, they having had to spend one night in their car stuck in a mudhole. But of course that is only one of the "joys of motoring" and those things must be looked for in making a long trip. They did not get to go through Yellowstone park on account of the muddy condition of the roads.

The Chas. Jain family are having the time of their young lives taking in the sight of the park. They were accompanied from Boise by Mr. and Mrs. Al. Burtch. Charley was always quite fond of the ladies, but when one of the old mother Bears tried to hug him he very ungallantly called for help.

Mercury Reaches 89 Degrees

At Genesee Last Sunday afternoon the mercury reached an altitude of 89 degrees—some thermometers showing as high as 92. At Lewiston at the same time the mercury reached a point at the 100 mark. The mercury reached 87 at Genesee on Saturday afternoon.

Sunshine is plentiful and very much appreciated by everyone and a few blankets feel very comfortable at night.

The weather at the present time is just "what the doctor ordered."

Is Doing Nicely

Last reports from Connie Caldwell, who is recovering from an operation for appendicitus at a Lewiston hospital, is to the effect that he is doing very nicely at this time although he has been a very sick boy.

He has so far recovered as to want to eat everything in sight and is figuring on coming home.

More Big Berries

One article last week about the Van Dyne strawberries started a little competition among the berry growers. L. A. Ellis brought in eighteen, which more than filled a box and Sam Rankin had a well filled box with but ten berries in it. Among the latter were three of the largest strawberries we ever saw.—Kamiah Progress.

Dertinger Beach Opens Sunday

Dertinger beach will be opened for bathers and public picnic parties on Sunday, July 8. The beach has been enlarged and more accomodations provided. A charge of 15 cents per car will be made for parking and use of picnic grounds. 1-1

We have taken over the agency for the Lewiston bakery and are now prepared to furnish you bread, doughnuts, rolls, etc. Hotel Genesee. 52-tf

REVERE TIRES & TUBES

THE tire user who has the attitude that "one is about as good as another" has never measured a tire dollar by the Revere standard of value.

It may be either the Revere Cord or the Revere "R" Tread Fabric that first shows him the extent to which one make of tire can excel in money's worth.

And the more tire experience he has had the more he will be impressed with Revere performance.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, minister
(Study at the Parsonage)

Church-School at 9:45 a. m.

Morning Worship at 11 o'clock.

At this service the Walla Walla convention delegates will give their reports of the big Christian Endeavor gathering.

The church board will meet on Monday evening at the parsonage.

The Ladies' aid will meet Wednesday at Mrs. George Carbuhn's

Bible class in the Social house at 7:30 Thursday.

Big Sunday School picnic at Pine Grove Wednesday, July 18.

Celebrate Birthdays

Mrs. Geo. Mochel and Mrs. R. E. Emmett claim the same natal day and decided to celebrate the event together—Sunday, July 1—not saying anything as to when either event happened—and as a consequence a very pleasant time was had, a dinner party being held at the home of Mrs. Mochel. The time was spent socially and was pleasantly passed. Those present were Mr. and Mrs. Geo. Mochel, Mr. and Mrs. R. E. Emmett and son Leland, Mr. and Mrs. Geo. Boliou and Mr. Whitcher.

Food Sale Great Success

The food sale held at the Hasfurther Hardware by the ladies of St. Mary's church on Tuesday, July 3, was a success and everything was sold out at an early date—especially the spring chickens.

The ladies cleared the neat sum of $62.05 and are to be congratulated on their success.

Grain Never Looked Better

There has perhaps never been a time "within the memory of the oldest inhabitant" when the grain—both spring and fall—looked better than at present, or promised a heavier crop. However, one can never tell just what may happen between now and harvest time—but if the weather man doesn't hold all the highcards there will be one of the biggest harvests here that has taken place in many years. Some farmers are talking 60-bushel-wheat—and we need it all.

Have Gone Fishing

Thos. H. Herman and Chas. W. Smith left Saturday morning for Bannock, Mont., where they will spend a week or ten days engling for the finny tribe. It is estimated that trout will be bought at a low figure and those unable to land a mess will be able to get them from Smith-Herman Fishing company at a slight advance in price.

Mrs. Smith accompanied the gentlemen as far as Spokane and will spend the time visiting home folks.

Pythian Sisters Elect

The Pythian Sisters have elected the following officers for the ensuing year: Pearl Lambert, most excellent chief; Lillian Morscheck, excellent senior; Leona Geltz, excellent junior; Grace Jain, manager; Mabel Emmett, mistress of finance; Josephine Loncosty, mistress of records and correspondence; Grace Willoughby, protector; Lizzie Boliou, press correspondent; Lela Jain, trustee

Illustrated Lecture in Park

A good crowd attended the illustrated lecture on Angola at the city park last Sunday evening. The song service preceeding the lecture was full of life and spirit.

Next Sunday evening the lecture will be on The Pyrenees, or pictures of old Spain. The lecture will be preceded by a song service.

Everybody is invited to come and enjoy the service.

Will Have Licensed Undertaker

George Schlerth, who has recently taken over the Lambert interests in Genesee, wishes to announce that he has made arrangements to have one of the best licensed undertakers and embalmers take care of all Genesee in that line. An up-to-date auto hearse will be in use whenever the roads will permit and prompt and efficient service will be rendered. Phone 41-tf

New Squirrel Poison

John N. Stone, representing the California Cyanamid company, is conducting a series of meetings in Latah county to demonstrate the use of calcium cyanide in gassing squirrels. During the past week demonstrations have been conducted in Farmington, Kennedy Ford, Driscoll Ridge, American Ridge, Fix Ridge, and Big Meadows Community. Demonstrations were held in Moscow, Little Potlatch, and Genesee communities during May and demonstrations will be held in several additional communities during the present week. These demonstrations have been held in cooperation with the pest control committee men of the various committees and under the direction of County Agent O. S. Fletcher.

The calcium cyanide method of killing squirrels has proven very effective in Latah county and promises to revolutionize squirrel control work in this section.

Where Your Money Goes

A great many people are wondering where their money goes, when as a matter of fact there is no secret to it at all. Aside from the small amount spent with the local merchants the rest of it goes as follows: taken from the statement sent out by the Old National Bank of Spokane in their June letter:

The Montgomery Ward & Co. May sales were $10,796,431, as compared with $6,377,076 a year ago, an increase of 69 per cent.

Sears, Roebuck & Co. May sales were $18,465,379 as compared with $14,477,694 a year ago, an increase of 28 per cent—to say nothing of the printing that is sent out of town.

Now, do you wonder what has become of at least a portion of the local money?

First Frost of Summer

Matt Kambitsch is authority for the statement that there was a light frost down on the "flat" early on the morning of July 4. If you don't think he gets up that early in the morning, just get up and trail him some of these times.

Will Meet In Country

The ladies' aid of the Federated church will go to the home of Mrs. George Carbuhn on Wednesday, July 11. Meet at the Follett store at 2 o'clock. Bring your car and take a friend.

Don't Miss "Boomerang Justice

The main feature at the opera house Saturday night will be "Boomerang Justice," a special show, and George Nelson will sing between acts. You will miss a treat if you miss this show. Prices, 20 and 30 cents. 1-1

A Splendid Medicine for the Stomach and Liver

"Chamberlain's Tablets for the stomach and liver are splendid. I never tire of telling my friends and neighbors of their qualities," writes Mrs. William Vollmer, Eastwood, N. Y. When bilious, constipated or troubled with indigestion, give them a trial. They will do you good.

Some people gain richess in their dreams and proceed to spend them in their waking hours.

OPERA HOUSE
Saturday, July 7

Big Special Show

GEO. LARKIN
— IN —
"Boomerang Justice"

"Boomerang Justice" is a story of a young adventure seeker who saves the daughter of a ranch owner. An acquaintance springs up quickly and the hero performs many daring and heroic stunts to protect this girl whose life is constantly endangered by a band of Mexican bandits who are rustling cattle from her father's ranch.

You will miss a big treat if you fail to hear George Nelson sing.

PRICES, 20 AND 30 CENTS

McCORMICK - and - DEERING
Harvesting and Haying Machinery

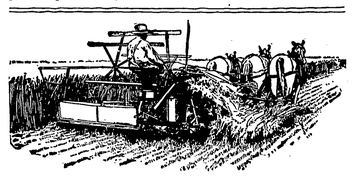
YOU farmers with years of experience in grain growing know that the binder plays an important part in making small grain crops profitable. To insure the safety of the crop, your binder must work efficiently and without delays in the short harvesting season.

McCormick and Deering Binders

Thousands of farmers have depended upon McCormick and Deering binders, and the increasing popularity of these machines shows that their faith has been well placed. In lightness of draft, ease of operation, and accuracy in getting all the grain under varying conditions, these binders have made good under the severe tests of time.

Come in and see them and talk with us about your harvesting problems.

We have a large stock of repairs for all makes of harvesting machinery, including John Deere. Order your repairs early.



International Binder Twine—
Sisal, Standard, Manila

We have a large stock of the Pure Oil company's PURE PENNSYLVANIA OIL. A grade for every auto, truck or tractor.

BRATTON & MORRIS
Lewiston, COMPANY Idaho

Alaska's New Railroad Is Greatest Engineering Feat

When President Harding drives the golden spike at the "official completion" of the Alaskan railroad he will have celebrated one of the most remarkable pieces of engineering the world has witnessed.

When the railroad was first proposed, the engineers who had planned the Trans-Siberian railroad, which up to that time was considered the mightiest work of railroad engineering, considered the Alaskan project impossible.

Alaska is so far north that during a large portion of the year the frozen earth is as solid as rock, making ordinary construction tools useless. In addition, tremendous glaciers, miles in extent and thousands of feet high, blocked the way. Mountains of solid rock added to the apparently insurmountable difficulties. The mountain streams were treacherous. Landslides and snowslides were daily, almost hourly menaces. Gorges hundreds of feet deep had to be spanned. Marshes with apparently no bottom had to be traversed.

Against these foreseen handicaps American engineers wagered their reputations. When the railroad was first projected in 1912 President Taft sent a commission into Alaska to investigate its feasibility. In the face of all these obstacles, the project was approved.

The original act passed by congress in March, 1914, authorizing construction of the railroad specified that it "be so located as to connect one or more of the open waters of the interior of Alaska, with the coal field or fields so as best to aid in the development of the agricultural, mineral, and other resources of Alaska, and the settlement of public lands therein, and so as to provide transportation of coal for the army and navy."

The railroad, just completed, complies with the provisions of the act. Its sea terminal is Seward, at the head of Resurrection bay, one of the finest harbors on the Pacific ocean, open all the year round and completely sheltered. The harbor and the town takes its names from William H. Seward, secretary of state under Lincoln. Seward negotiated the purchase of Alaska from the Russian government.

The interior terminus of the railroad is Fairbanks, 467 miles inland from Seward. It was first purely a mining camp. Now, in addition to being the center of vast mining industry, it is the center of a rich agricultural section lying astride of the Arctic Circle.

Between Seward and Fairbanks the railroad traverses the heart of Alaska, touching and passing through two of the three large coal fields and all of the large valleys in Alaska devoted to agriculture, namely, the Matanuska valley, the Susitna and the Tann valley.

Everything in connection with the construction of the railroad had to be developed as the work was carried on. Ocean docks, camps, railroad shops, supply terminals, wagon roads, all had to be constructed as an antecedent or a corollary of the construction of the railroad itself. Shortage of labor supply had to be continually combatted. The most rigorous winters of more than half a year's duration had to be contended with.

The work began in May, 1915, so its completion a few weeks ago marks an even eight years which has been expended in constructing this 467-mile steel highway. All told, the tunneling on this road is greater in the aggregate than that of the St. Gothard pass in the Alps, which is acclaimed as being the greatest feat of tunneling in the world. Some of the canyons spanned rival those of the Grand Canyon district in Arizona. One of the last bits of work done was the construction of a steel bridge over the Tanana river, which is one of the largest bridges in the world, having a span of 700 feet.

In addition to being one of the greatest engineering feats in the world, the Alaska railroad is the first railroad of any consequence built, owned and operated by the United States government. The only other railroad ventures of such character are the Panama canal railroad and a few short lines built upon federal irrigation projects in the west.

The golden spike with which President Harding will celebrate the completion of this wonderful construction is presented by the people of Anchorage, through which the railroad passes. Anchorage is situated at the head of Cook inlet, and is the port and the commercial center for one of Alaska's large coal fields and one of its richest agricultural sections.

Women Keep Pace in Field of Invention

Patent Office Records Show They Contribute Their Share of New Discoveries.

"Woman's" Contributions in the field of Invention" is the title of a bulletin just issued by the woman's bureau of the department of labor. It is the result of a study of records of the U. S. patent office covering a period of 10 years, prefaced with a review of records of the patent office from the beginning.

The bulletin is an interesting human document. It shows, first, that in so far as patents secured by women are concerned practically all of them prove the truth of the old adage that necessity is the mother of invention. It points out that the inventive spirit "flares out in response to calls of emergency, necessity or inconvenience. The impulse to devise and discover new ways to meet old wants stirs human beings in all walks of life. The washer woman invents and secures a patent on a washboard that protects the hands and lightens the labor of rubbing. The nurse creates a device to facilitate the care of the bedridden."

The bulletin states: "For 19 years after the enactment of the patent law in 1790 not a single one of the patents issued was granted to a woman. The first successful application from a woman was recorded in 1809 and was for a method of weaving straw with silk or thread." For a quarter of a century afterward less than a score of patents were granted to women.

The record of the last ten years shows that there is an average of over 500 patents granted annually to women. This is more than twice the number granted during the decade ending 1894 and five times the number during the decade ending 1895. Prior to that time the number of patents granted to women were practically negligible.

The tabulated lists of patents granted to women are very interesting and disprove the common charge that women are vain rather than practical. During the period covered by the survey only 18 inventions pertaining to beauty parlors and vanity shops were credited to women.

Most of the things women have invented have been articles for use in the household: a holder for hot utensils, a kettle polisher and scraper, a kitchen cabinet, a washing machine, a carpet beater, a mattress turner, a mouse trap, and so on through a list of nearly 1,400 different items. Next to household equipment the largest number of inventions was of articles for personal wear or use, such things as hooks and eyes, shoe strings, shoes, and tooth brushes.

Women's inventive activities carry them much farther afield, however, than the household. Women on farms have patented a lot of contrivances to make work easier or more efficient. They haven't confined their imaginations to poultry raising and dairying but have invented cultivators, seed planters, tractors and windmills, as well as incubators and churns.

The same thing is true of all the other phases of industry and the professions. We have found women taking out patents for office supplies and equipment, for improvements to steam and street railway equipment, for methods of road building, for machinery of all sorts, as well as for many kinds of tools, musical instruments, toys and educational devices.

It is interesting to know how women came to invent all these different things. Sometimes just the name of the invention will tell us what caused it. For instance, any one who has ever milked a cow can easily imagine what caused one woman to invent a cow tail holder. Many of us can sympathize with the woman who invented a reinforced wooden bowl after the bowl in which she was working butter split in two, spilling the butter into her lap. A woman who had spent many hot July days in a hospital invented a special window ventilator, which would make the room less stuffy.

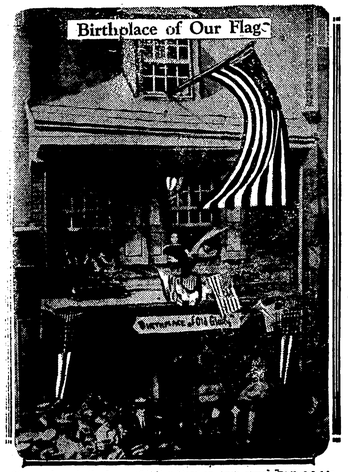
This variety shows, more graphically than perhaps any other single thing could, how women's activities are surrounding us on every field of occupation and endeavor. These patented inventions are one more witness to the fact that women's interests cannot be relegated to two or three narrow fields.

Small City Park.

Pendleton, Ind., though a community of only 1500 people, has transformed an abandoned railroad fill and an unsightly rock quarry into a municipal park and swimming pool. The cost, $3000, was repaid the first year by a 10-cent admission charge to out-of-town visitors.

A Japanese syndicate, in competition with American and Russian capitalists, has obtained a lease of a large tract of forest land in the maritime province of Siberia.

The 300 egg hen didn't come from a scrub.



Shown above is the home of Betsy Ross on Arch street, Philadelphia, where 146 years ago, June 14, the flag of the United States was designed. Thousands gathered there two weeks ago to pay tribute in citing services.

Test in English.

Teacher—"William, what three words are most use din the English language?"

William—"I don't know."

Teacher—"Correct."

If a farmer succeeds he must keep accounts.

Green Peas

Peas and beans are quite commonly thought of as the "poor man's meat," but it has been discovered through experiments on animals that the proteins of both are inferior to those of meat. But when used in moderation they form a valuable addition to the food supply and add that variety which the palate of the civilized man demands. These facts are not mentioned to discourage the use of peas and beans, but to make clear that their place in the diet is subordinate to the meats.

Shrimp Wiggle.

Make a medium white sauce, and add shrimps which have been cut in fine and cooked drained peas. Serve this hot on toast. This makes an excellent luncheon dish.

Pea and Beet Salad.

Cool an ddrain the peas and beets. The beets may be put in vinegar or they may be used plain. Small beets and peas arranged on a lettuce leaf and mayonnaise put on the top makes an attractive salad for a dinner.

Pea Croquettes.

Cook peas until tender, strain and press through a sieve. Fry one chopped onion in 1 tablespoon fat, add to peas and 1 tablespoon butter; 2 tablespoons flour; salt and pepper to taste; 2 beaten eggs and bread crumbs to make stiff enough to form into cone shaped croquettes. Brush over with beaten egg and toss in bread crumbs, and fry to a golden brown in hot fat. Serve hot with tomato sauce.

Buttered Green Peas.

Shell peas and throw into plenty of boiling water, containing a tablespoon of salt and a teaspoon of sugar, boil fast until tender, then drain. Mix 1 tablespoon lemon juice with 4 tablespoons of butter and 1 tablespoon chopped parsley, stir this among the peas, reheat them and serve at once.

Peas and Ham.

1 quart cooked green peas and 2 ounces of lean cooked ham cut into dice, 2 tablespoons fat, 2 tablespoons of good stock, 1 tablespoon flour, 1-2 small onion finely chopped, a pinch of sugar, salt and pepper to taste. Fry onion until lightly browned in fat, add flour and ham and stir over fire for a minute or two, then put in peas, stock, and sugar, season to taste, simmer for 10 minutes stirring occassionally.

Peas in French Style.

Shell peas, melt 4 tablespoons of butter over a moderate heat, add 1 teaspoon of sugar, and 2 teaspoons salt and then add peas (about 2 quarts), cook slowly until the skin of the peas begins to wrinkle. While cooking shake the pan frequently, but do not stir the peas with a fork or spoon. When cooked dredge with 1 tablespoon flour and shake the pan until flour and butter are blended.

Then add chopped onion and parsley and 1-4 cup boiling water. Cook until the peas are tender.

Creamed Peas.

Drain boiled peas and to 2 cups add 3-4 cup of medium white sauce. Season to taste and serve hot.

Creamed Peas and New Potatoes.

Boil the potatoes until they are tender and add to the creamed peas and serve at once.

Cream of Pea Soup.

To the shelled washed peas add 2 teaspoon sugar and 2 cups cold water and simmer. Drain, rub through a sieve, and add to the hot milk which has been thickened with butter and flour and season with salt, pepper and onion.

DeSmet, Friend of Indians, "White Man Who Did Not Lie"

One of the strong scenes in the pageant of Idaho history, "The Light on the Mountains," which university students presented on the night of June 9, depicts Father DeSmet and Father Point, pioneer Jesuit missionaries receiving a deputation of Crow Indians at the mission of the Sacred Heart on the St. Joe river, near the present site of St. Maries, in the year 1842.

Pierre Jean DeSmet was born in a small Belgian village in 1801. Influenced by an American missionary who was interested in procuring more recruits, he left for America, where he entered the novitiate at Whitemarsh, Md.

In 1840 he started preaching among the Flatheads around St. Louis and continued to do this until 1845. After much travelling through the different missions, he came to the land of the Shoshone or Snake Indians who treated him with the greatest respect and reverence. The Flatheads and Pend d'Oreilles, with whom he spent several months, could not do enough for him to show their gratitude and happiness at his coming.

After a short time spent in St. Louis, DeSmet again returned to the northwest, where he established a mission on the site of the present city of Helena, calling it St. Mary's mission. In 1842 he continued west and preached to the Coeur d'Alene Indians, founding a mission among them. This mission, the Sacred Heart, was originally on the St. Joe river about a mile from the south end of the Coeur d'Alene lake. It was moved, however, in 1846 to Cataldo on the Coeur d'Alene river and again in 1877 to a site in the beautiful Hangman valley. There it remains to this day in a small town the post office address of which is DeSmet.

DeSmet had great power among the Indian tribes, who all knew him and loved him. He was a white man in whom they had implicit faith and trust. To them Father DeSmet was "the one white man whose tongue does not lie."

The government was compelled to call on him several times for assistance in quelling troublesome Indian tribes. One of the most important of these occasions was at the time of the Yakima war in 1855, which was caused by the encroachment of the whites upon Indian lands. The Indians, even the peaceful Flatheads and Coeur d'Alenes, joined the league to repel the invaders. Father DeSmet was sent by the United States to pacify the Indians, and after visiting the different tribes, DeSmet succeeded in bringing the chiefs together and renewing peace with the government.

Father DeSmet died in 1873 and was laid to rest in St. Louis. He was mourned by Protestant and Catholic alike, and perhaps most of all by his beloved children of the wilds who held "Blackrobe," as they called him, so highly in esteem.

Aged of France, Germany.

More than 10 per cent of the population of France has reached the age of 60. In other words, the republic has nearly 5,000,000 men and women traveling toward three score years and ten. Germany, with a population one-third greater than France, counts only 5,113,000 persons, or 8 per cent, in this same age category.

RADIO BRINGS ALASKA NEARER THIS COUNTRY

A few years ago a trip to Alaska was regarded as separating a traveler farther from civilization than a trip to South Africa, South America or Asia. This was due largely to the fact that there was no communication between Alaska and the outside world except by means of boat. The distance from Alaska to Seattle is approximately 1,000 miles and the schedule of boats was very irregular and uncertain.

When President Harding, accompanied by some of his cabinet and others of the party, make their trip to Alaska this summer, they will be in as close touch with the government at Washington as the president was when he was on his trip to Florida. This is largely due to the development of the radio. All existing facilities for telegraph and radio communications in Alaska are government owned.

The navy maintains nine radio stations along the coast of Alaska. These stations are very powerful and maintain contact directly with large radio stations situated in the United States. The army maintains radio stations throughout Alaska, having a station located at approximately every 200 miles along the lines of travel and telegraph wire systems. The principal army radio stations are situated at such isolated but strategical points as Fort Egbert, on the Canadian Alaska border; Fort Yukon, within the Arctic Circle; Nome, on Seward Peninsula separating Bering sea from the Arctic ocean; St. Michael, on Norton sound; Holy Cross, on the Yukon river; and McGrath, on the Kuskokwim river.

In addition, the army has a telegraph wire system reaching from Cordova on the Gulf of Alaska north to Fairbanks, thence east throughout the country to Fort Gibbons, thence to Nulato. In addition to this, the government's railroad has a telegraph system. In addition to communication from Alaska to the United States by radio, there is one cable. These facilities are sufficient to enable to president and his party to keep in intimate touch with the seat of government at Washington throughout his Alaskan journey.

Ten-Year Leases.

Beginning in 1925, 10-year permits are to be granted to stock men who desire to graze cattle and sheep within the national forests. This announcement is made by the forestry service of the U. S. department of agriculture. This new policy is inaugurated by Secretary Wallace for the purpose of assisting the live stock industry to recover from its depression of the last few years. The new ruling exactly doubles the maximum period for which grazing permits have been issued and by so doing stabilizes the live stock industry, making it possible for live stock interests to plan ten years ahead and thereby arrange their financial affairs with greater security.

Head o' the Class, Bill.

Teacher—"Willie! Define puncture."

Willie—"A puncture is a little hole in a tire usually found a great distance from a garage or repair shop."

Annual Field Day at W. S. C. July 11th

Annual Gathering Expected to Draw Visitors From All Over State and North Idaho.

July 11 is the date of the annual Experiment Station Field day at the State College of Washington this year. Everyone interested in the progress of crops and soils advancement in the state is invited, through press announcements and by letter to the commercial clubs, to attend and see what has been done during the year toward solving farm problems.

In connection with the field day the summer meeting of the Grain Growers', Shippers' and Millers' association of Washington will be held at the college. Visitors will be shown results of the grain hybridization experiments that are being carried on to develop new and better grades of wheat and other grains.

One of the most interesting hybrids developed is the new smut-free combination of Turkey and Florence, planted on an area of more than an acre for the first time this year. It has already proven of exceptional milling quality in experimental tests, and has yielded well in the field nursery and in field plats. If it stands up in yield in the plats this year as well as in a smaller experiment last year, several hundred bushels of the variety will be grown next year so that distribution to farmers in Washington may be begun.

Other interesting experiments are extensive tests of varieties of cereals and forage crops, and crop rotation work on the Spillman plats established 25 years ago, with more extensive field crop rotation experiments started 5 years ago. The increased interest in diversified farming will undoubtedly draw much attention to these rotation experiments.

Those organizing automobile parties for the field day are invited to plan to reach the campus by 10:30 in the morning in order to have time to see everything. Basket dinners will be brought, for picnicking either in or outside the gymnasium, as the weather dictates, the experiment station furnishing hot coffee and ice cream to the guests.

HOW INTEREST DOES PILE UP

Last year Floyd N. Rice, who died at Rahway, N. J, left a most unusual will. He directed that his estate, amounting to about $25,000, should be turned into cash and deposited in a New York bank, where it must remain until principal and interest total $2,000,000. The amount shall then be turned over to the Grand Lodge of New York for the erection of a school for the children of Masons born in the United States. At six per cent interest, compounded annually, seventy-one years must elapse before this bequest will be available.

IDAHO INDIANS SUE U. S. FOR MILLIONS

Tribesmen Begin Action Against Government for Lands Illegally Taken From Them.

The initial step in the legal battle against the United States by the Nez Perce, Blackfeet, Flathead, Kootenai and Grosventres tribes of Indians was taken in the district court in Lewiston last week, when the duly elected representatives of the Nez Perces affixed their signatures to the contract with a Washington, D. C., law firm, who will handle the Indians' case before the court of claims, and in the United States supreme court, if necessary, and the third representative placed his right hand thumb on an ink pad, and then made the impression of the ink on the contract. The government required that the signatures to the contract be done in a court of record.

The Washington law firm are taking the case of the Indians without a cent of cost in case they are unsuccessful in winning, and should the contest be decided in favor of the red men the attorneys will receive but 10 per cent of the money paid, and in no event more than a fee of $25,000. Some years ago the Cherokee Indians of Oklahoma brought a similar action before the court of claims and secured millions of dollars in payment for lands given them through treaty, and then taken from them. In this instance the attorneys handling the case were paid a fee of $750,000. The Colville Indians also won in their fight with the government over treaty lands, being reimbursed to the extent of about $6,000,000.

The amount at stake in the present litigation is not known, but one in close touch with the situation stated that should the Indians come out victorious in their suit from $6,000,000 to $10,000,000 will be paid them. If the Indians are found to be entitled to reimbursement the money so received will be pro rated among the men, women and children of the five tribes.

AMERICA'S PIONEER DOG REMEDIES

Imitate Mother Hen In Care for Chicks

Support Natural Efforts of Mother to Obtain Strongest Chicks.

The poultryman who succeeds in raising strong chicks is the one who imitates the care and solicitude of the motherly hen for her brood.

The hen constantly tries to provide only the best for her chick and, if intelligently assisted, will usually do a good job. By providing warmth, dryness and cleanliness the poultryman can best assist the patient hen. Chicks should be carefully sheltered from the weather until they are at least two or three weeks old.

Safety Feed Dish

When the chicks are about two days old they should be moved with the hen to a brood coop. Until they reach this age they should remain in the nest with the hen. While in the nest the chicks require no food, but the mother should be given plenty of wholesome food daily.

The floor of the brood coop in which the chicks are to be placed should be covered with dry earth and sand, and with a little chaff on top of it.

Chilling the chicks when removing them should be carefully guarded against. The head and throat of each chick should be carefully examined for any lice that may be hidden in the down. If any are present, sweet oil or lard should be rubbed into the down on the top of the chick's head or under its beak and throat. This rubbing is done with the finger and only a small quantity of oil or lard should be used. The grease will spread over the skin and destroy the vermin.

Aniseed powder dusted into the feathers of the hen and the down of the chicks also will destroy parasites of all kinds without injury to the chicks. This powder must be as fine as possible and very dry. Insect powders that irritate may prevent the chicks from eating; hence, only very mild powders should be used.

If the weather is cool the chicks will probably do better if confined to the coop with the hen for a day or two. If the weather is warm the chicks may be permitted to run into the sunshine. Experienced poultrymen refrain as far as possible from disturbing the hen and the chicks, for if they are frequently disturbed the hen is liable to become irritable and some-

Feed Board

what nervous and to step on the little ones. Unnecessary attention is sometimes as bad as not enough.

Feeding should be regular and the water supply must never be allowed to run out. If this is the case, the chicks will become very dry and are liable of gorge themselves with a large supply. This usually results in sickness.

The strain on the hen caused by sitting and hatching the eggs is considerable and tends to reduce her vitality. She must, therefore, be well fed and cared for. A conscientious hen will often deny herself in an earnest effort to induce the chicks to eat. If this happens, she should be fed special food that is too coarse for the chicks to eat. She should also be frequently dusted with antiseptic powder. As soon as the chicks are large enough she should be permitted to go to the dust bath, which can be provided by digging in the ground close to the coop.

Neither the hen nor the chicks should be fed from the floor of the coop or from the ground. Small feed boards with a flange around the edge may be provided. Feed dishes made of iron with wire tops to prevent the chicks from walking in the feed may also be used.

Regular Tightwad.

First Waitress—Don't wait on that fellow just coming in.

First Waitress—He's so mean he wouldn't even leave an asparagus tip on the table.

Like Volstead Act.

May—Tipping is a nuisance. Isn't there a law against it in some places?

Ray—Yes and it's just as carefully observed as some other laws that aren't observed at all.

It cost a dollar per hen to trap nest for a year, but many poultrymen believe it pays.

Mother—"Hey Jimmy, what's all the racket up stairs?"

Jimmy—"Paw just threw his heavy underwear in the hall."

HOMEMAKERS' CORNER

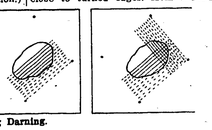
Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

DARNING OF STOCKINGS.

Materials Needed—Worn stocking, darning cotton to match both in color and size, long eyed needle not too coarse.

Directions for Making Darn—Turn stocking right side out; place left hand inside and smooth stocking over it. Trim off ragged edges with scissors. Place running stitch around edge of hole and draw up very slightly to counteract a tendency to stretch. A darn should be made on the right side.

First put in lengthwise threads, allowing them to extend about 1-4 inch beyond edge of hole. Next, weave first over and then under edge so that there will be no ridges. Do not draw thread too tight as washing causes threads to shrink and then the darn will not be smooth. (See illustration.)



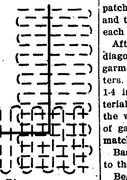
Stocking Darning.

DARNING OF WOOL GARMENT.

Materials Needed—Woolen garment with tear at right angles. Thread to match. Threads ravelled from same fabric are often used if strong enough. Never use cotton thread on wool material.

Directions for Darning—Baste a thin piece of cloth or net on under side of tear to hold it in place. Work with running stitch without knot and begin a few threads beyond tear. Continue back and forth across tear.

Keep thread just loose enough not to draw and to allow for stretching and pulling in use. This is usually accompanied by leaving a tiny loop at the turn of each row of stitching. At the corner where direction of tear changes, there will be both warp and woof rows of darning. These should be interwoven like a stocking darn.



Darning Diagram.

DARNING OF LINEN.

Materials Needed—Linen garment or article with small holes or weak places in it. Thread to match. If possible ravel out threads from a piece of linen or use soft linen floss.

Directions for Darning—Darning stitch is used the same as for darning stockings.

Examine weave to see whether weave is simple or complex—that is, or whether the woof threads go alternately over and under only one. This is important as darn may be woven in same manner so that it will not show so plainly.

Darn on right side of material. If there is a weak place in linen it should be strengthened by weaving warp and woof threads which should extend 1-4 to 1-2 inch beyond worn place.

MENDING OF GLOVES.

Small hole, proceed in same manner as for stocking darn.

Cotton and silk gloves may be darned or they may be mended by button-hole stitching around the edge of the hole and then in the stitches, narrowing until the hole is filled.

Materials Needed for Kid Gloves—Gloves with rips in them should be mended with mercerized cotton thread to match color and a fine sharp pointed needle.

Directions—Blanket stitch or button-hole stitch both edges of rip, then over hand edges together, taking up only the loops formed in the blanket stitching. Gloves should be mended when rips first appear. If not, they do not look neat and pull out of shape.

PATCHING.

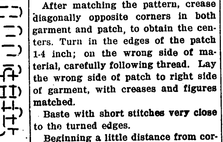
There are two kinds of patches commonly used; the hemmed and the overhand patch. The hemmed patch is chiefly used for garments that are frequently laundered and especially for undergarments, also for worn holes.

The overhand patch is used where there is little strain and when it is desirable to have patch show as little as possible. It is usually used for garments that are not frequently laundered, and where the darn can not be used in wool, this is the kind of patch usually used.

Materials Needed—Garment to be mended, piece of same material, and thread to match. If material has been washed, wash patch so that the patch on the garment will not be noticed so plainly.

Directions for Making Hemmed Patch—Give special attention to making stitches regular and inconspicuous and to matching of pattern. Cut away all frayed or worn parts, being careful to cut with threads in both directions. Cut patch two inches larger each way than the trimmed opening. Cut each corner diagonally 1-3 inch and make turning to wrong side same width.

Place the right side of patch against the under or wrong side of garment matching the warp of the garment and the patch. Match also any stripes or designs. Baste on right side close to turned edges. Hem around



edges of garment and patch separately on wrong side. (See illustration.)

FORD MOTOR COMPANY TWENTY YEARS OF AGE

The Ford Motor company was 20 years old on June 16.

And this birthday anniversary finds it enjoying the greatest prosperity in its history and engaged in carrying out an expansion program of enormous magnitude necessary to bring manufacture up to meet the ever-increasing demand for Ford products.

In the score of years which have passed since its incorporation, on June 16, 1903, the growth of the company has been amazingly rapid and now its activities extend to nearly every country on the globe and the Ford car is in use in practically every land on earth.

The capital originally subscribed in the company was $100,000, of which only $28,000 in cash was actually paid into the treasury. Among the 12 stockholders with the company in its infancy Henry Ford held 25 per cent of the stock.

Aesopian Answer.

Speedo (in hotel)—Why do you tip the bellboys so promptly?

Peppo—A nickel in time may save a dime.

Saving What You Grow

Prepared by the Extension Service, State College of Washington.

HOME-MADE SOFT DRINKS

One phase of canning which has been neglected is the putting up of home-made soft drinks. What is more refreshing for a light lunch, a children's party or toward the middle of a hot summer afternoon, than a drink of fruit juice? This can be had in the fruit pantry, as well as the jellies and jams.

There are two methods of preserving the juice of fruits. The first method is to press the juice out of uncooked fruit by means of a cider-press, fruit-press or in some other way. Then warm it in an enamelware kettle up to 110 degrees F. The juice may then be poured into ordinary hot jars or hot bottles which have been boiled for 30 minutes and (in many cases) processed by the same directions as those for canning the fruit itself. If poured into bottles of miscellaneous shapes and sizes, it is suggested that the fruit juice be processed as follows:

Use new corks and dip them in melted paraffin. Put the stopper lightly into the bottle, and leave it in during the processing period. Set the bottles into hot water up to the neck and process the juice for 30 minutes at a temperature of 180 degrees F. Remove the produce and immediately press the cork in as tightly as possible. Certain fruit juices (including those of sour cherries, peaches, and apple cider) handled in this way are less likely to "flatten in taste" and will keep fresh for future use.

The second method of preparing fruit juices is to select sound ripe fruit, crush and heat slowly to the simmering point (about 185 degrees F.) Strain through a double thickness of a cheesecloth. If juice free from sediment is desired, let it stand in a cool place for a few hours. Then pour off carefully from the dregs.

The addition of sugar to the fruit juices will give a finer flavor. It may be used in any desired proportion, a fair allowance being 1 cup of sugar to 1 gallon of juice. Pour the warm juice into scalded bottles, put scalded stoppers in lightly, set the bottles on a rack in the water bath, and process for 30 minutes at simmering point or a little lower than the heat at which the fruit was cooked. Remove from the bath, tighten the stopper, and when the bottles cool dip the tops into melted paraffin or sealing wax. A good wax may be made by melting together equal parts of rosin and beeswax.

The Child's Own Fault.

Distracted Mother: Heavens! What happened to baby? How did the little tutsum get such a bruise on his head?

Nurse: "Beg pardon, mum—but you said to let him play on the piano if he wanted to—and he fell off."

Words of the Wise.

John D. Rockefeller says the reason he never attends dinners or banquets is because the most of speakers remind him of automobile wheels—the longer the "spoke" the bigger the "tire."

TOTAL ECLIPSE OF SUN IS TO OCCUR SEPTEMBER 10

Darker than a cloudy day but brighter than moonlight, will be the light that will suffuse the earth at certain points for a short time September 10. Dogs will growl, chickens will go to roost. Creatures will feel a sense of impermanence as an immmence black ball passes over the face of the sun. There will be a total eclipse of the sun on that day, the first visible to the inhabitants of North America in five years.

The total eclipse of the sun always has stirred the imagination of mankind and often made men act in unwonted ways. The first record of an eclipse tells us that a Chinese emperor relieved two of his ministers of their heads because they had not foretold the eclipse that came in B. C. 2158. So great was the effect on the Medes and Persians B. C. 585 that they quit fighting when the heavens darkened suddenly. Ancient races believed that a dragon was eating up the sun.

The effect on the modern scientist is almost as great as upon the primitive races. Try as they will to make mathematical notes during an eclipse, they forget the task and are carried away by the sight that confronts them.

Lives become flecked with little images of the sun in its crescent shape. From the top of the mountain the shadow of the moon may be seen sweeping across the landscape with terrifying rapidity. There is a feling as if some giganic object is swooping down upon the earth. Weird lights of pearl flare from the sun when the moon has darkened its face.

The axis of the mon's shadow-cone will strike the earth at sunrise in Aisa September 10. From there the path of total eclipse, 150 miles wide, will sweep across the Pacific ocean, reaching Southern California early in the afternoon. The partial phase of the eclipse will be visible over all North America. At central points along its path the total eclipse will last for 3 minutes and 36 seconds.

And still, the fact that the other fellow is a man after your own heart may not be to his credit.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

Anna Burns, Plaintiff, vs. John Burns, Defendant.

The State of Idaho sends greeting to the above named defendant:

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial district of the State of Idaho, in and for the county of Latah, by the above named plaintiff, to procure a decree of divorce from the said defendant on the grounds of willful neglect and to procure the custody, care and control of a minor child, George Meacham Burns.

And you are hereby directed to appear and answer the said complaint within twenty (20) days of the service of this summons, if served within said judicial district, and within forty (40) days if served elsewhere; and you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of said District court, this third day of July, 1923.

HARRY A. THATCHER,
Clerk of said District Court.
(Seal of Court Affixed)
A. H. Oversmith,
Attorney for plaintiff.

One Dollar Saved Represents Ten Dollars Earned

The average man does not save to exceed ten per cent of his earnings. He must spend nine dollars in living expenses for every dollar saved. That being the case he cannot be too careful about unnecessary expenses. Very often a few cents properly invested, like buying seeds for his garden, will save dollars outlay later on. It is the same in buying Chamberlain's Colic and Diarrhoea Remedy. It costs but a few cents, and a bottle of it in the house often saves a doctor's bill of several dollars.—For sale at Clark's Drug Store.

GRADE ESTIMATES ARE ALWAYS TOO HIGH

"How steep is the grade on that road? Well I should say it is all of 30 or 35 per cent. But I didn't have any trouble making it with my car, No, sir. She pulled it like a house afire. Made it on high all the way. Passed two cars laboring along in second."

How often, with variations, do we hear these words from drivers proud of the achievements of their cars, frequently to the disparagement of higher priced cars, from which presumably a better performance should be expected. After listening to statements of this kind from hundreds of tourists anxious to tell of their trips and the remarkable exploits of their cars, one is at least convinced that not one man in 100 has the proper estimate of the percentage of a grade encountered. No reliance can be placed on such estimates expressed by any other than one who knows from actual measurements with a gradometer.

Approaching an ascent the grade naturally appears steeper than it actually is. This, coupled with the performance of the individual car, which may or may not make the grade in high gear, gives rise to an incorrect estimate of the percentage of the grade.

Many tourists do not understond the process by which the designation of a grade percentage is arrived at, believing that a 20 per cent grade, for instance, is on which rises at an angle of 20 degrees from the horizontal. This is erroneous.

The designation of 20 per cent to a grade means that in the grade there is a perpendicular rise of 20 feet in horizontal feet. In other words to generalize, the numerical percentage of a grade indicates that number of feet perpendicular rise in 100 horizontal feet.

In relation to degrees it will be found that a grade percentage properly arrived at in this way forms an angle equal to about one-half of the angle formed when the numerical expression is taken to mean degrees. Definately, a 30 per cent grade is about one-half as steep as the grade formed by a 30 degree angle from the horizontal.

The steepest grade on which a car can obtain traction is 45 per cent, and this is a very stiff grade indeed. You can be reasonably sure that if you have estimated a grade as 30 or 35 per cent and your car pulls in high gear your estimate of the road steepness is probably double or even more what it actually is.

Ain't It the Truth?

Perhaps 50 per cent of all the worries are, in some way, financial, and probably 50 per cent of these are caused by not having sense enough to reduce Packard tastes to flivver incomes.

Biliousness and Constipation

"For years I was troubled with biliousness and constipation, which made life miserable for me. My appetite failed me. I lost my usual force and vitality. Pepsin preparations and cathartics only made matters worse. I do not know where I should have been today had I not tried Chamberlain's Tablets. The tablets relieve the ill feeling at once, strengthen the digestive functions, helping the system to do its work naturally," writes Mrs. Rosa Potts, Birmingham, Ala.—For sale at Clarks' Drug Store.

NOTICE OF SPECIAL ELECTION

To the qualified voters of the city of Genesee Idaho: you will take notice, that the city council of the said city pursuant to section 3940 of the Idaho compiled statutes, as amended by the session law, 1923 at page 229, hereby calls a meeting to consider a tax levy in addition to ten (10) mills for municipal purposes.

The assessed valuation of all property in the city for the preceding year was $264,929.29: a ten (10) mill levy will raise $2649.29: an estimate of the money to be raised to pay the expenses of the city is $3000.00; the purpose for which money levied in addition to the said ten (10) mills is to continue the city government efficiently: a meeting will be held at 7:30 p. m. on the 16th day of July, 1923, at Burr's office.

Only qualified electors of said city are entitled to vote: it will require two-thirds of those present and voting to authorize any levy in addition to the said ten (10) mills; only electors qualified to vote in the city of Genesee at a general election shall be entitled to vote at such a meeting; if at such meeting two-thirds of the qualified voters, present and voting, vote in favor authorizing the city to make a levy in addition to the said ten (10) mills, as provided in the session laws of 1923, in any amount not exceeding five (5) mills on the dollar, such city council shall be authorized to levy such additional mills authorized not exceeding the said five (5) mills.

Dated at Genesee, Idaho, this second day of July, 1923.

Attest: JOHN MEYER,
W. W. BURR, Mayor.
City Clerk.

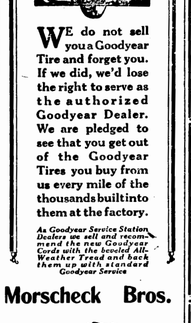
Every Spring Just the Same

There isn't much in spring to see—
Same old robin, same old tree—
And every poet starts to sing
Same old tra la la of spring;
But after all, it's kinda good
To hear blue peckers on the wood,
To loll and stretch on greening sod
And feel spring fever in the blood;
To find the same old violets, too,
And carry them to same old you.

The Same Everywhere

The editor of Paisa Akhbar, a native newspaper of Lahora India, says, "I have used Chamberlain's Colic and Diarrhoea Remedy many times among my children and servants, for colic and diarrhoea and always found it effective.—For sale at Clark's Drug Store.



WE do not sell you a Goodyear Tire and forget you. If we did, we'd lose the right to serve as the authorized Goodyear Dealer. We are pledged to see that you get out of the Goodyear Tires you buy from us every mile of the thousands built into them at the factory.

THE GENESEE NEWS

VOL. XXXV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JULY 13, 1923. — NO. 2

WHAT HAPPENED HERE TWENTY YEARS AGO

The city attorney was instructed to draw an ordinance to prohibit the use of music in saloons.

Mrs. Elliot and son Tommie have taken up a residence for the summer on the farm south of town.

A. Murphy has been putting the finishing touches on his new blacksmith shop this week and he will take possession next week.

J. J. Owen, Wm. McMahon, J. E. Reed, L. Jain, Geo. W. Daggett are representing Genesee at the G. A. R. doings at Pullman this week.

Pearl Rogers of this place carried off the foot race purse at Culdesac on the Fourth, being an easy winner over anything that city produced.

Among those who are installing new telephones are: Dr. Conant, residence and office, Grand Central hotel, J. K. Ball, at store, and Wm Hickman at the livery stable.

Peter Johann and bride returned the latter part of the week from their tour of the coast cities. They report seeing a number of former Geneseeites in all places visited.

Mrs. Hibbs, Mrs. Nagel, Miss Maud Burdic, and father left the first of the week for Deary where they make their timber claims. Mr. Burdic and Maud will go on to Portland where they will be joined by Mrs. Burdic when they will go to Ashland for a visit with relatives.

The macadamizing of the county road east of town is progressing nicely and by the close of the present week the old town will be nearly reached. Monday a strip three hundred yards in length was covered with rock. No trouble is experienced with the working of the crusher and Manager Stracker seems to have the same entirely subdued. Twenty-five men and four or five teams are daily employed.

Has Been Here 35 Years

The Genesee News has been on the job in Genesee for the past 35 years; its thirty-fifth birthday anniversary having taken place last week, and while its general health has been somewhat impaired during this summer, it is still in a fairly healthy condition. About the only thing needed to bring it back to its former healthy condition is a little "greenback" salve, of which we hope to get a sufficient amount this fall to make a poultice large enough to bring out the good points and put its "circulation" in good shape.

The present owner has been at the helm for the past ten and a half years and from present indications he will still be guiding its destiny for some time. There is one thing sure, no matter who may be at the "wheel" the fact remains that no one will be more appreciative of the treatment accorded them than is the present owner.

Are Taking Vacation

Mr. and Mrs. A. H. Potsch are this week taking a vacation from their duties in the postoffice and are proceeding to burn some of John D.'s gas, having left overland for Spokane and Coeur d'Alene for a few days' visit. They also expect to visit Walla Walla before going back to work. "Art" is not exactly sure just how long he may stay at Walla Walla.

Miss Helen Casey of Mullan, who formerly scattered mail in the local office, is assisting Mrs. Smylie in the conduct of the office during the absence of the "big chief."

Entertained Card Club

Mrs. J. J. Hirselberger very delightfully entertained the card club at her home Tuesday afternoon. Pinochle was the game of the afternoon. Mrs. R. S. Sullivan won the honors while Mrs. Glen Sampson was awarded the consolation prize. The invited guests were Mrs. R. S. Sullivan, Mrs. F. J. Niemann and Mrs. Ray Edwards.

"A Western Demon"

Wm. (Bill) Fairbanks will play the stellar role in "A Western Demon," the main attraction at the opera house Saturday night.

The story goes that Ned Underwood, a red-blooded young American of Arizona, is called to New York to complete the purchase of the ranch which he has formerly been leasing. He makes his first visit to the big city.

Miss Rose Dale, who was born and raised in Gallup, Arizona, has been attending a finishing school for girls in New York, her parents having been dead for several years. At her father's death she became sole owner of the B. B. ranch, a large stock ranch in Arizona. Joe Dalton, foreman of the ranch, was resorting to underhanded methods to secure the ranch for himself, and thus defraud Miss Dale, who decides to immediately go back to the ranch and protect her interests. Just at this time, while she is explaining the matter to an elderly lady friend, Ned Underwood strolls through the park, when her friends little girl falls off the bridge and is about to drown. Ned makes a daring leap from the top of the bridge and saves the child, thus meeting Miss Dale, who admires him for his manly rescue. A few days later both leave New York City for Arizona, and a train robber attempts to hold up the passengers. Ned attacks the bandit single-handed, overpowers him and throws him off the train, at which time Miss Dale and Ned meet again and laugh over their second accidental meeting. In the course of conversation it developed that their ranches are in adjoining counties.

And the rest of the story is just as interesting as the foregoing, and of course you can't afford to miss it.

Special Sunday Show

There will be a special picture show in the opera house Sunday night, July 15, when Williamson's famous master picture, "Wonders of the Sea," will be shown. This is a picture that every one should see. It shows the marvels of the deep in a way that will be instructive as well as intensely interesting.

How'dje Like It, Girls

According to a recent dispatch from Muskogee, Oklahoma, where an old girl hangs out, and whom the people of a certain district in Oklahoma were unfortunate enough to have represent them in congress, says:

Offie girls employed at the federal soldiers' hospital there must go back to corsets, quit bobbing their hair, roll up their hose and adopt high neck dresses, according to the ultimatum laid down by Miss Alice Robertson, former congresswoman, now welfare chief at that institution.

"There has been too much laughing and talking down the halls with the patients," Miss Robertson said. "Give the boys a run for their money; the girl a man admires most is one who he must fight for.

"The woman who flagrantly displays her charms soon will be a back number. They are only toys with which men play and then cast aside.

"Go back to corsets, girls, tend to business, wear decent clothes and don't try to hark back to the days of Adam and Eve."

The old girl probably speaks from experience as she is evidently still on the market.

Loses Ends of Fingers

Louie Bershaw arrived in town from Kellogg Wednesday afternoon, bringing with him a rather badly lacerated right hand. He had been doing some work with a circular saw when he had the misfortune to lose the ends of the two middle fingers of his right hand by coming in contact with the revolving blade. The index finger of the right hand was also quite badly cut, but will heal and be in good condition when well.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Sold 24 Good Hogs

H. F. Lohman sold 24 fat hogs to Holbrook & Emmett last Saturday. The hogs made a total weight of 4950 pounds and at 7c a pound brought Mr. Lohman a check for $346.50.—Kendrick Gazzette.

N. and S. Highway Now Open

The North and South highway is now open from Grangeville to Weiser and will remain so during the summer. Construction at several points will be continued, but will be handled so as not to interfere with traffic over the highway.—Kamiah Progress.

Attend Initiation

About thirty members of the local Modern Woodmen lodge autoed to Genesee last Saturday night to attend the initiation services. Albert Snoen of this place and two candidates from Genesee were put through the grilling ordeal of Woodmanship. Following the initiation, a banquet was served which was thoroughly enjoyed by the Troy members at least, and they report a fine time while at the sister city.—Troy News.

Gets Honors In Music

Miss Elsie Wieber, one of Uniontown's daughters, now residing in Spokane, recently won the highest honors at the State of Washington Musical festival held at Bellingham, 15. She won the first prize over all Seattle and coast entrants and also received special mention from the judges. She has been engaged to sing in concerts at Seattle and Vancouver, B. C., where she will spend the summer.—Uniontown Journal.

For New Cars Only

Many automobile owners are under the impression that if they wait until August 1 they will be entitled to the one-half license fee charged on and after that date. This one-half license fee applies only to new cars and if your car has ever been licensed the assessor at Grangeville has the necessary information by which he can tell when you took possession of your car. Many car owners are also under the impression, that if they leave their cars in the garage all summer they will not be required to take out a license. This is true, but where the car owner fails to buy a license for his car the machine will be assessed as personal property.

It is also stated that all cars operating with dealer's license are subject to assessment and tax the same as personal property. The license plate on a privately owned car is in lieu of all taxes.—Cottonwood Chronicle.

Has Two Narrow Escapes

Mrs. Thomas Balderson was taken to the Bovill hospital for surgical treatment Wednesday evening after having participated in two serious accidents within an hour. The first mishap took place at the Mesic hill, where she and her husband driving in their car met another car. It seems that Mr. Balderson was compelled to crowd to the side of the road where his car hit a stump. Mrs. Balderson was pitched forward through the windshield and painfully cut about the face by broken glass. The car being damaged they borrowed another and were hurrying to Deary for the doctor when in making a turn they collided with another automobile and the accident was duplicated, Mrs. Balderson being again thrown through the windshield. Dr. Faust was not at home when they finally reached Deary and they went to the Bovill hospital after W. E. Gorrie had administered first aid. It was necessary to take fourteen stitches in one of the cuts on Mrs. Balderson's neck near the jugular vein. The cuts were not deep but were painful and bled profusely. In event of no complications they should heal quickly. The driver of the car with which they collided did not even stop to see if any one had been hurt. — Deary Press.

Nelson Draws Large Crowd

Announcement of the fact that George Nelson, son of Mr. and Mrs. Jas. Nelson, would sing at the Genesee opera house last Saturday night, drew one of the largest crowds that has ever attended a picture show in this city, the "S. R. O." sign having been hung out early in the evening.

And when the time came for Mr. Nelson to sing the expectations of his many friends and admirers were fully realized as was shown by the prolonged applause given him. He has a full deep bass voice and his expression is good—and, another thing, one can tell what he is singing about—which always gives added pleasure to the listener.

While the News man is not a judge of high-class music, yet we predict for Mr. Nelson a career that will land him at the top.

Getting All Dolled Up

The fronts of the rooms occupied by the City Market, Shork's jewelry store and Sampson's barber shop are receiving a new coat of paint.

WHEAT AND POTATO INSPECTATION FOR CERTIFICATION

County Agent O. S. Fletcher has received word from E. R. Bennett, who is in charge of the inspection of potatoes for certification as seed in Idaho, stating that all applications for certification must be made by July 15. Latah county farmers who have not applied for inspection and who wish to have potatoes inspected this season should apply to County Agent Fletcher at Moscow before that date. The inspection fee this season is $4.00 for five acres or a fraction thereof, and fifty cents additional for each acre over five acres. Fifty percent of the inspection fee must accompany the application.

In applying for certification, farmers should give their names and addresses, community, variety of potatoes and number of acres to be inspected.

Wheat Inspection

The county agent has also received a communication from C. B. Ahlson, state seed commissioner, stating that the application for certification of grain must be filed with the county agent by July 15.

General rules and regulations for grain certification this year are as follows:

1. Those desiring inspection of grain for the certification shall send their application accompanied by a fee of two dollars for each variety to the county agent, not later than July 15.

2. There will be one field inspection made before harvest.

3. A ten-pound representative sample shall be sent to the state seed commissioner immediately after threshing.

4. A representative five-pound sample shall be sent to the state seed commissioner after cleaning, which shall be the basis for final inspection, a check for two dollars to accompany this sample.

5. If the seed meets the requirements, the bags must be inspected and sealed by a representative of the pure seed department.

6. Fees received for the inspection work shall be used to defray the expenses of such work.

7. A flat rate of two dollars shall be charged for field inspection, two dollars for sample inspection, and a charge of three cents a bag for seals and tags.

8. Providing the fields do not pass the field inspection, the grower is under no obligation to send in the threshed samples.

All farmers desiring to have grain inspected for certification should apply to County Agent Fletcher at once.

Vets Ready for Employment

During the fiscal year just ended, the employment service of the United States Veterans' Bureau in Washington, Oregon, Idaho and Alaska developed many hundreds of employment opportunities, which made it possible to place in positions all but a few of the 955 disabled veterans who completed their training courses during this period. During the next six months 730 more injured ex-service men will finish training under the direction of the government and be ready to fill responsible positions in a variety of occupations.

The job of putting this most important touch on the vocational rehabilitation of injured war veterans of this district is being tackled with untiring zeal, according to District Manager L. C. Jesseph. Employers of the Pacific Northwest are urged to cooperate with the Veterans' Bureau even more earnestly than in the past in this campaign of placing in employment rehabilitated ex-service people. The load of training completions is now at its height and quick action is necessary in order that hundreds of war veterans of this district, who are scheduled to complete their courses soon, will be taken care of. Employers should get in touch with the nearest office of the Veterans' Bureau located in Seattle, Portland, Spokane or Boise.

Chambers of commerce of the largest cities in the district and members of the West Coast Lumber association are actively supporting the drive to stimulate employment of these men who have learned new occupations to replace the ones they lost because of war service. Governors of Washington, Oregon and Idaho recently issued statements urging the people of these states to meet this just plea for employment.

Rebekah's Entertain

A very pleasant dinner party was given by the members of the local Rebekah lodge at Smolt's Wednesday evening in honor of Mrs. Hattie Fry of Boise, assembly president of the order, and Mrs. Maud Morgareidge of Moscow, assembly warden, who visited the local lodge. Miss Boyd of Lewiston was also a visitor.

Rebekah's Entertain

The Rebekah's surprised Mrs. Carl Osmundson very pleasantly last Friday at her home. A pick-up lunch was served, and a very pleasant time had. Mrs. Osmundson was presented a Rebekah pin as a rememberance. Mr. and Mrs. Osmundson will soon leave for Los Angeles, Calif., where they expect to make their home.

Need More Money

Readers of The News have probably noticed that the city council has called a meeting to be held at W. W. Burr's office on Monday evening, July .16, for the purpose of considering an additional tax levy for the purpose of running the city, at which all qualified electors are entitled to express their approval or dissapproval to the levy.

Heretofore the city has been authorized to make the necessary levy up to 20 mills, but the last legislature passed a law providing that cities of the class that Genesee is in cannot levy a tax exceeding 10 mills for city purposes, which, according to the present valuation, would yield only $2649.29, which is insufficient to pay city expenses as has been done in the past and in case the necessary levy is not granted it will be necessary to curtail where it can be ill afforded. The difference between the estimated need of the city and the actual return from a 10-mill levy is $2351.00. And in case the city runs short of funds it may be necessary to curtail the lighting of the town or dispense with the city marshal—who also looks after the streets.

Can we afford to take any chances on either one? or suspending work that really should be attended to in order to conserve what has already been done? Not by any manner of means. The few cents difference on your tax statement will amount to but little and may mean a lot to the town.

Think well before you say no.

Building Character

Some of our vegetarian friends have advanced the hypothesis that the character of the food eaten reflects in the character of the eater. The man who eats beef, they say, becomes bovine. The man who eats pork becomes hoggish and so on and so on.

This appears to be implanted in the minds of savage races, who think by eating strong victims they adopt and assume the strength of the dead man.

With fully as much plausibility they claim that the work a man does affects his nature. We have heard it claimed in all seriousness that breeders of Jersey cattle are more highstrung and nervous than breeders of beef cattle.

The assumption has this much truth in it. The nature of a man's occupation is reflected in him, but not the materials with which he works. A man cultivating nuts does not become nutty nor does a man raising onions peel off in layers.

If we refer back to the fourth chapter of Genesis we discover that the meek, lovable Abel was keeper of flocks and herds, while the sullen, savage, murderous Cain was a cultivator of fruits. This does not mean that owners of apple orchards are all potential homicides.

The care and skill necessary to the proper production of livestock develops certain qualities in men, but they are not the qualities of the animals. Animal life is improved by wisdom and great patience and kindness, and these qualities we find best in the breeders.

The effect of diet on the human mind is indirect. A well nourished body is apt to have the same kind of mind is indirect. A well nourished nourish the body and that is all. The tiger eats lambs but does not become lamblike. We may eat ham for years and never lay an egg.—Western Breeders Journal.

An Advantage

"I should like to sell you a patent dishwasher."

"We don't need one. We have a maid to do that work."

"But the machine I am offering you has a distinct advantage over the maid; it doesn't attempt to sing while doing its work."

For Your Summer Comfort

Oil Stoves

New Perfection and Mars-wells Stoves. The burner Is the Important Part of Any Stove.

The "Kerogas" burners on the Mars-wells stoves produce an intensely hot double "flame within a glass," and yet consume a minimum of oil—and you can regulate it perfectly—the merest turn of the small control wheel gives you instantly the exact degree of heat you want: Intense heat, moderate heat, or a low "summer" heat.

Just what you want Angler

If you are going fishing this summer, remember that your catch depends upon the kind of Fishing Tackle you use. We have a large assortment of flies, lines, rods, etc—and anything else you may want.

Bielenberg-Schooler Post
The American Legion
Meets Each
First Wednesday
In June, July and August

The Fifth Annual Convention of the Idaho department of the American Legion will be held at Coeur d'Alene, Idaho, August 9, 10, 11, 1923.

The convention will be held in the pavilion situated in the City park, which is on the shore of Lake Coeur d'Alene—one of the most beautiful sites in Idaho. The entertainment will consist of regatta sports, which will include surf-board riding, water polo and motor boat racing; also track and field sports, a beach party on the shores of the lake, a boat ride and barge dance to St. Maries, the famous "Shadowy St. Joe River" and many other events.

The 40-8 of Lewiston will put on a real initiation for those who desire to again "cross the submarine infested seas" and "go over the top." Captain Edward J. Eivers, national head of the Forty and Eight, will be in attendance with the idea of securing some of Lewiston's unique initiatory features for the national work. It is expected that this feature of the convention will be conducted beyond the three mile limit.

Coeur d'Alene is making preparations for a large delegation from all parts of the state, and there will be ample accomodations to take care of any number of delegates and visitors. Coeur d'Alene boasts of many fine hotels and lodging places. For those who desire to imitate the primitive there is an auto tourists' camp with conveniences second to none in the entire Northwest.

The main feature of the convention business will be the selection of officers, the choosing of the next convention city and the selection of delegates to the national convention in San Francisco this fall.

It is the desire of the department officers that as many of the delegates as possible go to the convention in autos or caravans. South Idaho is planning a large caravan headed by the Boise 40-8 band.

Masons Hold Picnic

The Masons and their families spent last Sunday picnicking at Asotin park. The time was spent pleasantly in eating, playing tennis, and swimming. Everyone reports a good time. Those present were: Mr. and Mrs. F. C. Shork, Mr. and Mrs. Mahlon Follett, and daughter, Mr. and Mrs. Leon Follett and niece, Helen Isenhammer, Dr. and Mrs. F. B. Evans and children, Mr. and Mrs. Nels Lande, Mr. and Mrs. Jas. Nelson and family, Mr. and Mrs. Ira Hanson, James Hanson, Mr. and Mrs. Fred Hove and Miss Ella Hove, Mr. and Mrs. Jack Barnes and Jack, Jr., Mr. and Mrs. Fred Perkins, and daughter Pearl, Mr. and Mrs. F. S. Casebolt and family, Miss Grace Willoughby, Mr. and Mrs. Watson and daughter and Miss Clarice Hickman all of Spalding, Dr. and Mrs. R. I. Witty and daughter, Mr. and Mrs. Fred Shirrod.

Sustains Sprained Ankle

Young Bill Lawson had the misfortune to sustain a sprained ankle Thursday morning when the horse he was riding "skidded" and fell on a cross walk as he was rounding a corner at too great a speed, the horse falling on young Lawson's ankle.

He was taken to his home where the injury was looked after and he is getting along very well at this time.

Parents of Daughter

Mr. and Mrs. G. D. Rosenau are the parents of a little daughter who arrived at their home Friday, July 6. Mother and babe are reported as doing nicely.

MY LADY'S MONEY

An Episode in the Life of a Young Girl

By Wilkie Collins

INSTALLMENT NO. 9.

The lawyer respectfully remonstrated. "Really, Lady Lydiard," he began.

"It won't do, Mr. Troy. I know how you look at me on ordinary occasions, and I see how you look at me now. You are a very clever lawyer; but, happily for the interests that I commit to your charge, you are also a thoroughly honest man. After twenty years' experience of you, you can't deceive me. You bring me bad news. Speak at once, sir, and speak plainly."

Mr. Troy yielded, inch by inch, as it were. "I bring news which, I fear, may annoy your ladyship." He paused, and advanced another inch. "It is news which I only became acquainted with myself on entering this house." He waited again, and made another advance. "I happened to meet your ladyship's steward, Mr. Moody, in the hall—"

"Where is he?" Lady Lydiard interposed, angrily. "I can make him speak out, and I will. Send him here instantly."

The lawyer made a last effort to hold off the coming disclosure a little longer. "Mr. Moody will be here directly," he said. "Mr. Moody requested me to prepare your lady ship—"

"Will you ring the bell, Mr. Troy, or must I?"

Moody had evidently been waiting outside while the lawyer spoke for him. He saved Mr. Troy the trouble of ringing the bell by presenting himself in the drawing room. Lady Lydiard's eyes searched his face as he approached. Her bright complexion faded suddenly. Not a word passed her lips. She looked and waited.

In silence on his side, Moody laid an open sheet of paper on the table.

The paper quivered in his trembling hand.

Lady Lydiard recovered herself first. "Is that for me?" she asked.

"Yes, my lady."

She took up the paper without an instant's hesitation. Both the men watched her anxiously as she read it.

The handwriting was strange to her. The words were these:

"I hereby certify that the bearer of these lines, Robert Moody by name, has presented to me the letter with which he was charged, addressed to myself, with the seal intact. I regret to add that there is, to say the least of it, some mistake. The inclosure referred to by the anonymous writer, of the letter, who signs 'A Friend in Need,' has not reached me. No five-hundred-pound bank note was in the letter when I opened it. My wife was present when I broke the seal, and can certify to this statement if necessary. Not knowing who my charitable correspondent is (Mr. Moody being forbidden to give me any information) I can only take this means of stating the case exactly as it stands, and hold myself at the disposal of the writer of the letter. My private address is at the head of the page.

"SAMUEL BRADSTOCK.

"Rector St. Anne's, 'Deansbury, London."

Lady Lydiard dropped the paper on the table. For the moment, plainly as the rector's statement was expressed, she appeared to be incapable of understanding it. "What, in God's name, does this mean?" she asked.

The lawyer and the steward looked at each other. Which of the two was entitled to speak first? Lady Lydiard gave them no time to decide. "Moody," she said, sternly, "you took charge of the letter; I look to you for an explanation."

"I undertook to deliver the letter at its address," he said. "I found it sealed, on the table. Your ladyship has the clergyman's written testimony that I handed it to him with the seal unbroken. I have done my duty, and I have no explanation to offer."

Before Lady Lydiard could speak again, Mr. Troy discreetly interfered. He saw plainly that his experience was required to lead the investigation in the right direction.

"Pardon me, my lady," he said, with that happy mixture of the positive and the polite in his manner of which lawyers alone possess the secret. There is only one way of arriving at the truth in painful matters of this sort. We must begin at the beginning. May I venture to ask your ladyship a question?"

Lady Lydiard felt the composing influence of Mr. Troy. "I am at your disposal, sir," she said, quietly.

"Are you absolutely certain that you inclosed the bank note in the letter?" the lawyer asked.

"I certainly believe I inclosed it," Lady Lydiard answered. "But I was so alarmed at the time by the sudden illness of my dog that I do not feel justified in speaking positively."

"Was anybody in the room with you in ladyship when you put the inclosure in the letter, as you believe?"

"I was in the room," said Moody. I can swear that I saw her ladyship put the bank note in the letter, and the letter in the envelope."

"And seal the envelope?" asked Mr. Troy.

"No, sir. Her ladyship was called away into the next room to the dog before she could seal the envelope."

Mr. Troy addressed himself once more to Lady Lydiard. "Did your ladyship take the letter into the next room with you?"

"I was too much alarmed to think of it, Mr. Troy. I left it here on the table."

"With the envelope open?"

"Yes."

"How long were you absent in the other room?"

"Half an hour or more."

"Ha!" said Mr. Troy to himself, "this complicates it a little." He reflected for a while, and then turned again to Moody. "Did any of the servants know of this bank note being in her ladyship's possession?"

"Not one of them," Moody answered.

"Do you suspect any of the servants?"

"Certainly not, sir."

"Are there any workmen employed in the house?"

"No, sir."

"Do you know of any persons who had access to the room while Lady Lydiard was absent from it?"

"Two visitors called, sir."

"Who were they?"

"Her ladyship's nephew, Mr. Felix Sweetsir, and the Honorable Alfred Hardyman."

Mr. Troy shook his head irritably. "I am not speaking of gentlemen of high position and repute," he said. "It's absurd even to mention Mr. Sweetsir and Mr. Hardyman. My question related to strangers who might have obtained access to the drawing room—people calling, with her ladyship's sanction, for subscriptions, for instance, or people calling with articles of dress or ornament to be submitted to her ladyship's inspection."

"No such persons came to the house, to my knowledge," Moody answered.

Mr. Troy suspended the investigation, and took a turn thoughtly in the room. The theory on which his inquiries had proceeded thus far had failed to produce any results. His experience warned him to waste no more time on it, and return to the starting point of the investigation—in other words, to the letter. Shifting his point of view, he turned again to Lady Lydiard, and tried his questions in a new direction.

"Mr. Moody mentioned just now," he said, "that your ladyship was called into the next room before you could seal your letter. On your return to this room did you seal the letter. On your return to this room did you seal the letter?"

"I was busy with the dog," Lady Lydiard answered. "Isabel Miller was of no use in the boudoir, and I told her to seal it for me."

Mr. Troy started. The new direction in which he was pushing his inquiries began to look like the right direction already. "Miss Isabel Miller," he proceeded, " has been a resident under your ladyship's roof for some little time, I believe?"

"For nearly two years, Mr. Troy."

"As your ladyship's companion and reader?"

"As my adopted daughter," her ladyship answered, with marked emphasis.

Wise Mr. Troy rightly interpreted the emphasis as a warning to him to suspend the examination of her ladyship, and to address to Mr. Moody the far more serious questions which were now to come.

"Did any one give you the letter before you left the house with it," he said to the steward, "or did you take it yourself?"

"I took it myself, from the table here."

"Was it sealed?"

"Yes."

"Was anybody present when you took the letter from the table?"

"Miss Isabel was present."

"Did you find her alone in the room?"

"Yes, sir."

Lady Lydiard opened her lips to speak, and checked herself. Mr. Troy having cleared the ground before him, put the fatal question.

"Mr. Moody," he said, "when Miss Isabel was instructed to seal the letter, did she know that a bank note was inclosed in it?"

Instead of replying, Robert drew back from the lawyer with a look of horror. Lady Lydiard started to her feet, and checked herself again on the point of speaking.

"Answer him, Moody," she said, putting a strong constraint on herself.

Robert answered very unwillingly. "I took the liberty of reminding her ladyship that she had left her letter unsealed," he said. "And I mentioned as my excuse for speaking"—he stopped and corrected himself—"I believe I mentioned that a valuable inclosure was in the letter."

"You believe?" Mr. Troy repeated. "Can't you speak more positively than that?"

"I can speak positively," said Lady Lydiard, with her eyes o nthe lawyer. "Moody did mention the inclosure in the letter, in Isabel Miller's hearing as well as in mine." She paused, steadily controlling herself. "And what of that, Mr. Troy?" she added, very quietly and firmly.

Mr Troy answered quietly and firmly on his side. "I am surprised that your ladyship should ask the question," he said.

"I persist in repeating the question," Lady Lydiard rejoined., "I say that Isabel Miller knew of the inclosure in my letter, and I ask. What of that?"

(To Be Continued.)

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Claiming he has been on the job long enough, Roland W. Boyden has resigned as unofficial American representative at the reparations commission at Paris.

Henry Ford will be urged as a third party presidential candidate at the farmer-labor party convention and political minorities conference, opening Tuesday in Chicago.

If shipments of bananas from Nicaragua continue at the present rate, trade experts estimate the present month will see 1,000,000 stems arriving in the United States.

Ireland's deficit for 1923-24 will be about $100,000,000, as compared with a deficit of some $20,000,000 last year. It is largely the result of her civil war, and will probably be met by borrowing at home.

A tense situation has arisen between the Vatican and the French government over the pope's recent letter regarding French occupation of the Ruhr. A reception planned for the Vatican at the French embassy has been indefinitely postponed.

In the Huelva district of Spain the average income of the people is about $1 a day. So they can't afford automobiles. Yet quite a few buy them. The reason is that possession of an auto makes a grandee of the owner. The car is used, generally speaking, only on feast days and Sundays because they can't afford gasoline.

George E. Buchanan, of Detroit, head of the "On to Alaska with Buchanan" movement, will have 52 boys and 24 adults or members of the boys' families when he personally conducts his party from Vancouver July 18 via Canadian Pacific "Princess" steamer. Buchanan thinks, with President Harding, that a trip to Alaska is a liberal education to any boy who takes it. He puts up one-third of the expense, the boy earns one-third and the boy's parents put up the remaining third.

A superfluity of liquor—yes, superfluity—is embarrassing ocean liners arriving at New York, and is giving government officials some trouble in checking it all up. The Cowlitch liner, President Wilson, was reduced to providing free beer for its 1096 passengers, and even then 20 barrels had to be tossed overboard outside the three-mile limit. Liquor over the prescribed medicinal quantity is being seized when the ships arrive in New York.

Speeches attacking Great Britain "in terms which it is impossible to print" were delivered aboard the Leviathan on her trial trip, according to a dispatch the Daily Mail prints from its New York correspondent. "Lasker, official host, listened with evident approval to a tirade of abuse against everything British from W. F. Gibbs, the naval architect who reconditioned the Leviathan," the Mail says. It quotes Gibbs as saying that: "I've learned every crooked trick there is from British steamship owners. Now I am going to drive them off the seas."

WASHINGTON NEWS

The city council of Malden adopted resolutions to construct a reservoir instead of repairing the tank and bids will be called soon on a 300,000-gallon reservoir, to cost about $3000.

There are 194,000 acres of land open to entry in the Yakima district, according to Register R. B. Milroy. Most of this is good for stock raising with a 640-acre limit for each entry. There are some desert, timber and stone entries available.

F. A. Wiggins, of Toppenish, was recently elected a member of the executive committee of the American Association of Nurserymen, which was held in Chicago, June 29. Mr. Wiggins was the only western man to be elected to this committee.

Judge Ralph Kaufman of Bellingham was elected president of the newly-organized Yakima Valley Reclamation league. The league has as its object to urge a more aggressive campaign for reclamation units of the Yakima valley. About 60 representatives from towns in the valley were present.

Bearing on one side a picture of Cleopatra and on the other a reproduction of King Tut-Ankh-Amen, according to experts who have examined it, Simon De Yak of Vancouver, Wash., prizes highly a valuable souvenir of old Egypt and the Nile. DeYak says the coin has been in his family for generations and is at least 3000 years old.

The Publicity-Tourist bureau of the Spokane Chamber of Commerce has started plans whereby Spokane and the Inland Empire will be advertised this fall in Detroit when the Gonzaga university football squad plays the Detroit university in that city. It is believed by the committee that this will be a wonderful opportunity to advertise this section in the east.

Roy V. Perringer, of Belmont, was recently elected president of the Washington Wheat Growers' association, at their annual meeting held recently in Spokane. J. H. Smith, of Ephrata, was elected vice-president, and C. A. Adams, of Spokane, secretary-treasurer Walter J. Robinson, of Spokane and Pomeroy, was elected general manager of the organization.

More than 1500 persons were present at the Pioneer picnic held recently in Wilbur. The morning program was held in a theater building through the courtesy of P. Falberg. Hundreds spread their dinners in the grove adjoining the city. The Coolitch liner, President Wilson, was reduced to providing free beer for its 1096 passengers, and even then 20 barrels had to be tossed overboard outside the three-mile limit. Liquor over the prescribed medicinal quantity is being seized when the ships arrive in New York.

Four pretty school teachers from North Dakota have been camped at Prosser for the last week and are working in the cherry orchards. They are on their way to California with a Ford touring car and state they are enjoying every minute of the trip. When they left home their first objective was Prosser, where they expected to work in the orchards for a time. They were not disappointed, for they have found all the work they want, and, incidentally, have met many former Dakotans during the evenings while at their camp. The young women are Miss Helen Peterson of Bisbee, N. D.; Miss Bess Day, of Bates City, Mo.; Miss Viola Craig of Bottineau, N. D., and Miss Anna Johnson, of Upham, N. D.

An elaborate program has been arranged for the entertainment of merchants visiting Spokane during Market week, August 14 to 16, it was announced recently by W. P. Romans, secretary of the agricultural bureau of the Chamber of Commerce, who is in charge of the Market week program. An effort has been made to arrange the business and entertainment features of the convention, so that the visiting merchants may have the greatest possible opportunity to transact business. There will be no forenoon or afternoon sessions, leaving the mornings and afternoons available for excursion parties and purchasing trips.

The many "rolls of papyrus" that were found in King Tut's tomb in Egypt have turned out to be rolls of linen, apparently loin cloths.

Don't curtail production, but make every animal on the farm do its best.

NATIONAL WHEAT COUNCIL FORMED

Will Make Scientific Study of Wheat Problems and Publish Its Findings.

ENDORSE CO-OP MARKETING

Split on Governmental Price Fixing on Wheat—Farm Bureau Delegates Are Opposed.

The National Wheat Conference held in Chicago, June 1 and 20, voted to set up a wheat council of the United States to be organized at once, in which all interests shall be represented. This council, according to the resolutions, "will make a thorough, scientific study of the wheat problem and enlist in co-ordinated efforts of all interests to give publicity in every way to its findings, and to develop and apply aproved methods by which equilibrium between domestic products and assumption can be established and price stabilized on American price level."

The conference declared that such a council is necessary "in order that we may co-ordinate all intelligent efforts to increase the consumption of wheat and wheat products; that we may glorify the commodity in its essential goodness, healthfulness, and economy; that we may recognize the part wheat plays as the great vehicle of the other farm products such as meat, lard, poultry, dairy products, fruits, vegetables, sugar and cotton; and especially that we may obtain prices for the American wheat farmer justifying the standards of American living to which he has been accustomed and is rightfully entitled."

The organization committee which will set up the wheat council of the United States is composed of the following: O. E. Bradfute of Chicago; Charles S. Barrett of Georgia; S. J. Lowell of New York; Alexander Legge of Chicago; H. S. Helm of Minneapolis; F. B. Wells of Minneapolis; Julius Fleischman of New York; A. L. Taggart of Indianapolis; Sydney Anderson of Minnesota; George C. Jewett of Minneapolis; Harvey Sconce of Sldell, Ill.; Dan A. Walace of St. Paul; Judge Bingham of Louisville; T. Edson White of Chicago; H. E. Byram of Chicago.

Co-operative Marketing Endorsed.

The conference also went on record in support of co-operative grain marketing.

The conference split on the question of government price fixing. Representatives of the American Farm Bureau Federation in the conference voted against any proposal to fix a definite price on the wheat crop through governmental agencies.

IDAHO GOVERNOR IS BOOSTER FOR FORESTS

"I would like to see a tree planted for every one cut out of Idaho's forests," said Governor C. C. Moore recently, in the Idaho Statesman, upon returning from north Idaho. The governor had been away about ten days, attending commencement exercises at north Idaho educational institutions, and also making an inspection of the state's timber resources.

"I didn't get a chance to make as thorough an investigation as I intend to when I go north again," he said, "early in July. But I did get some idea of the enormity of these vast resources which the state possesses. What I am thinking about is, what will happen when all these trees are cut down and manufactured into lumber?

"These trees represent a resource as they now stand on the land, and as long as there are trees there will be prosperity for north Idaho, but what after the trees are gone?"

Taxicabs in Rome?

The old biblical maxim that there is nothing new under the sun is once more proven by a passage in the works of Vitruvius, the great architect of the first century before Christ.

It appears that even the taximeter was known to the Romans, together with the lift and open plumbing. Vitruvius says that in ancient Rome there were cab stations.

The horse chariots were furnished with a device which dropped into a box a small, white ball every thousand steps, and that the cost was figured by counting the number of balls thus released.

Brother—Where is the paint remover?

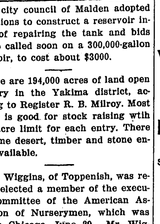
Mother—Why?

Brother—Sister wants something to wash her face with.—Ex.

Here is the idea of a confirmed pessimist:

A guy who complains because his roll is so big it breaks the stitches of his wallet.—Ex.

Offers Billion for U. S. Merchant Fleet



John W. Slack, President of a manufacturing plant at Silver Creek, N. Y., offers the government $1,061,000,000 for the entire U. S. merchant fleet. "Too much," says retiring Chairman Lasker. It is hinted Henry Ford had a hand in the bid, although Mr. Slack will neither confirm nor deny the report.

IDAHO

The Craigmont Commercial club, at a meeting held recently, started a move whereby all roads leading to Craigmont will be posted with signs making it easier for travelers, according to word received in Spokane.

For the first time in the history of the Inland Empire the electric system reduced week-end fares from Spokane to Colfax, Moscow and intermediate points. A rate of one and one-half fare for the round trip will be given with tickets on sale Saturday and Sunday and good returning Monday.

A tract of land 300x600 feet was purchased by a group of Weippe business men from the Clearwater Improvement company last week for public park purposes. The land is situated just north of the Weippe grammar school and is now being cleared for a ball park. It will also be used for picnics and community purposes. A subscription was taken up among the business men with which to make the purchase.

Triplet bear cubs were found in a tree near Grangemont by Ed Brunning recently. He told the mill crew, who cut down the tree and took the three little cubs back to the camp for pets. As the mother bear did not attack the men she was not molested. The cubs are little brown fellows about the size of large house cats. They drink milk readily and are quite friendly with their captors, prancing about on their hind legs and chattering when called.

A post believed to have been used as a mile post when the Idaho and Washington territories were surveyed in 1873 was found recently by Robert Lang, timber cruiser, a few miles east of the state line near Hauser Lake. The post is of yellow pine, hand hewn, about five inches square and three feet long. Carvings on its four sides read: "Mile post 95," "Idaho territory," "1873," and "Washington territory." It is planned to add the 50-year-old post to the collection of the state historical society at Boise.

Charging that the state educational system has been ruthlessly wrecked by actions of the last legislature, Dr. E. A. Bryan, state commissioner of education, issued a formal statement to the press, giving the reasons why he could and would not accept the proposal of the North Idaho chamber of commerce to continue the work in his office. One of the acts of the last legislature was to refuse to appropriate funds for Dr. Bryan's salary after July 1 of this year. Recently, at a meeting of the North Idaho chamber of commerce in St. Maries, a proposal was made to raise $10,000 from personal subscriptions to pay the state official's salary for the two-year period.

Irene Welch Grissom of Idaho Falls has been honored by Gov. C. C. Moore with the appointment as poet laureate of Idaho. Mrs. Grissom, the first citizen to hold this position, has published 100 excellent poems of Idaho and the west and two short novels. The appointment was made by the governor after earnest solicitation by the women of the state and the State Federation of Women's clubs and after careful investigation of the ex-ception merit of her productions. No politics or creed was considered in choosing Idaho's first poet laureate, but meritorius writing by a gifted woman of the state who has done much to prevent the pioneers going to their graves unhonored and unsung.

Sunday School Teacher—What was the first thing Noah did when he was in the Ark?

Willie—He went fishing.

Sunday School Teacher—How long?

Willie—About five minutes, because he only had two worms.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

Wash Dress.

It is important in selecting this problem that you should study your figure and select lines that are becoming. The following should be considered: Both the design of pattern and design of material. In selecting the pattern and material consider the fundamentals that vertical lines give height, as striped material, pointed neck and panels. Horizontal lines give width and suggest roundness. Ruffles, tucks, spotted materials, plaids, and prominent belts should be worn only by the slender girl, or very carefully placed if used by the girl who is slightly stout.

Material: Gingham, poplin, devonshire, galatea, percale. The amount of material will depend on pattern selected. Be sure to select simple design.

Color is an important thing to consider in selecting material. Select a color that when held to the face brings out the good features and minimizes defects, that brings out color of eyes and makes complexion look more clear.

Directions for Making: Place pattern on material according to instructions given.

Seams: Follow general directions for making perforations, pinning, basting and finishing seams.

Fit waist testing neck size and armseye. Adjust under arm and shoulder seam. Always rebaste and try on after making alterations before stitching. The kind of seam used will depend on type of material and style of dress. French seams should be used for most thin materials; for heavy materials a plain seam may be used finished with overcasting.

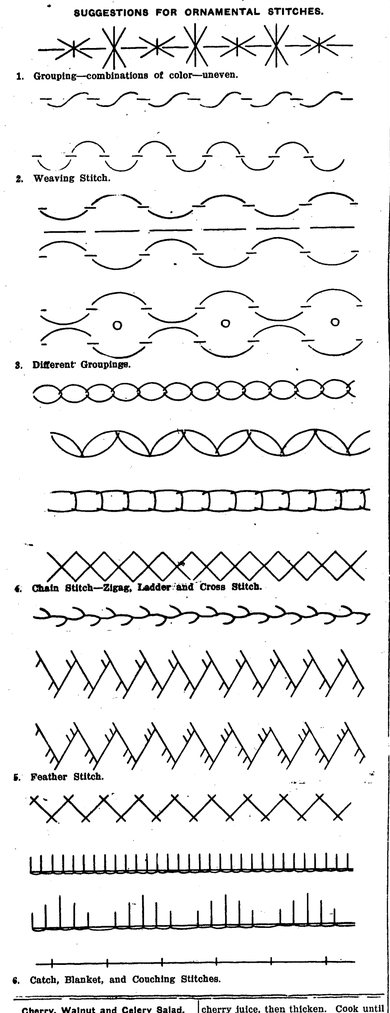
Pin sleeve into armseye according to notches, bringing sleeve seam to lower side of armseye. Be sure sleeve does not draw and if there is any fullness distribute gathers evenly between notches over upper half of armseye.

Baste carefully, holding sleeve toward you, stitch and finish raw edges with overcasting or bias binding.

Skirt: Baste side seams and allow about nine inches for placket. Gather top of skirt with double row of gathering and sew skirt on to belting. Pin back and front and side seams into position. Use continuous placket. Hang skirt according to directions given for Princess Slip in Problem II.

Attach collar and cuffs according to directions on pattern.

SUGGESTIONS FOR ORNAMENTAL STITCHES.



1. Grouping—combinations of color—uneven.
2. Weaving Stitch.
3. Different Groupings.
4. Chain Stitch—Zigag, Ladder and Cross Stitch.
5. Feather Stitch.
6. Catch, Blanket, and Couching Stitches.

Cherry, Walnut and Celery Salad.

Drain cooked cherries, remove the stones and fill with small pieces of celery and walnut meats; mix with 1-2 c. ripe olives which are stoned and chopped and serve on lettuce with mayonnaise.

Cherry Pudding.

1 T. sugar, 1-4 c. butter, 1-2 c. milk, 1 egg, 1 1-2 c. flour, 1 t. baking powder, 1-2 c. cherries drained. Put into buttered molds and steam 2 hours. For sauce add small amount sugar to cherry juice, then thicken. Cook until clear.

Dried Cherries.

Wash, stem and pit the cherries, put 1 layer deep on plates and set out in hot sun for a day. Cover with cloth which is clamped down. Turn the cherries once a day and leave out until thoroughly dried. These may be used in pudding, etc., instead of raisins and are very satisfactory.

Good laying hens must have vigor and breeding.

Bride of Aged Coca-Cola King

Mrs. May Little Ragin, mother of two children, is the new bride of Asa G. Chandler, Sr., millionaire Coca-Cola king. She was a public stenographer in the Chandler Building at Atlanta, Ga., and is scarcely half his age.

Solves Parking Problem.

The question of "where we will park our cars," which is said to be vexing American more than all the European crises put together, was partially solved by an itinerant Wallingford in Los Angeles.

He chose a long alley in the heart of the business district for his operations one evening. A strict city ordinance prohibits parking in alleys, even at night, but that didn't bother him.

He hung up a sign, "Park Here—25 cents" and the parking space sold out like hot cakes. After he had disappeared, a triffic officer arrived and tagged all cars. It cost each of the auto owners $5 to straighten it out with the judge the next morning.

Better Health Service

Public Health Is Public Wealth.

These Articles Compiled by the Public Health League of Washington

WALKING TO KEEP WELL

The physical organism requires exercise in order for it to maintain itself in good health. The most rugged individual would soon lose his health were he to discontinue a minimum amount of exercise. All muscle fibers must be used, in order to prevent degenerative processes from taking place in them, processes which, when carried far enough, destroy their functions entirely. All those activities which have to do with locomotion and the use of the organism in an independent, intelligent and self-responsible manner by the individual, are connected with the voluntary muscular system. If this system is to be kept up in good shape, the individual must do it himself. He can sit in an office or at home and permit his muscles to become flabby, soft and weak, and nature has placed no guard against his doing so. However, sooner or later, such a course is followed by an impairment of the person's activities.

One of the means of preventing such a deleterious result is walking. Walking is a natural exercise. The infant's first attempts at muscle co-ordination and muscle control lead directly to the walking stage. The act of walking is not so simple as it may at times appear to be. When the muscles of the legs contract, they squeeze the blood out of the lower veins upwards towards the heart. Also there is an increase in the amount of arterial blood sent from the heart to the legs. This calls for greater activity on the part of the heart, which is followed in turn by a greater demand from the system for oxygen, with a corresponding increase in respiration. The nutrition of the lungs is improved. The circulation in the abdomen is increased, partly by the pumping action of the heart, partly by the greater action of the diaphragm and the abdominal muscles, with the result that all the abdominal organs share in the beneficial effect. There is a larger exchange of fluids between the blood and the tissues; general digestive processes are improved; and the entire body is benefited.

Now, the proper amount of exercise varies in different people, and even in the same person under different circumstances. In general, it runs from one-half hour to two or three hours daily. It should be less in advanced life than in the young. The same is true concerning the rate of walking. The old cannot walk as fast as the young. Very corpulent people must take a slower gait than those who are thin. The former may be unable to go faster than one to one and one-half miles an hour, while the latter may make as high as three and four miles an hour. When the individual is in fairly good health, increased benefit is obtained by including hills and uneven ground in the walk.

Another point is regularity in walking. When in good health, this exercise should not be interrupted by so-called bad weather. With proper clothing and protection no harm is done. The body soon becomes accustomed to all kinds of weather. Those of sedentary occupations find, in addition to the above, that a long walk, once a week, of from three to six hours' duration is an advantage. During such a walk it is advisable to partake of only a small amount of fluids and solid food.

There appears to be an idea among some that increased exercise has a tendency to wear the body out sooner than rest. This is entirely wrong, provided that the exercise is adjusted properly to the individual. As a matter of fact, the opposite is the case, because it enables the body to rid itself of deleterious waste materials in the cell structure and to replace them by new material. When a person is in ill health, other rules and regulations must govern, but that is a subject which is outside the limitations of this paper.

There is a mental phase to this question which is important. To walk without an object in view, or to have one's mind immersed in business or professional cares, domestic worries, etc., is to defeat to a certain extent the benefits to be derived therefrom. The walk should be regarded as an important thing in itself and should not be interrupted by outside considerations. It is more beneficial when taken in the open air. Dogs often make it more interesting. Even a slight knowledge of botany, geology, architecture, or an artistic sense capable of enjoying the beauties of the scenery are very valuable. While it is true that many people do not possess these desirable accomplishments, nevertheless they can be cultivated. A very little reading of elementary treatises on such subjects, together with a development of the power of observation, will enable almost anyone to change a dull, uninteresting walk into a most enjoyable pastime.

"Now do you understand?" shouted the angry professor as he hurled an ink-bottle at the exasperating pupil.

"I think I have an inkling, sir," responded the despattered student.—Ex.

Etiquette

What & When to do it

By A. Leda.

Any questions on etiquette will be gladly answered in this column if addressed to Aleda, care of this newspaper.

Crossing Streets—(1) When a boy is walking with a girl should he always help her across the street or just when a vehicle is approaching? (2) Who should get on the trolley car first, the man or the woman? (3) Does the same rule apply when leaving a car?

Henry R. V.

Ans.—Yes, a young man should always offer his assistance to a lady at a crossing. Just touching her elbow with his hand is courteous and is sufficient. (2) The woman. (3) No. The gentleman leaves first—this in order that he may help the lady off.

Hat Etiquette.—In a letter I am asked some questions on hat etiquette. The letter reads, "upon entering the theatre or movies when should a man remove his hat? (2) Is there any special place a man should put his hat during the performance? (3) Should one wait till outside the theatre to put it on again? (4) What is the hat etiquette in an elevator? Thank you.

Ans.—A gentleman should remove his hat as soon as he enters the lobby of a theatre where the tickets are sold. (2) Yes. Under the seat there is usually a rack for men's hats. (3) Yes. (4) If a man is in a private elevator such as an apartment house, hotel, department store, etc., whether there are ladies present or not, he should always remove his hat. However, if it is a business elevator, the man (regardless of any ladies present) need not remove his hat.

During the month of April the number of foreign birds imported into the United States under permits from the Biological Survey of the United States Department of Africulture amounted to more than 17,500, of which approximately 14,000 were canaries.

Fads and Fashions of Today

By DOROTHY PHILLIPS.

Distorted ear-lines have banished the exotic spirit which has been guiding the designers of recent atrocities which have been offered us in the name of "art jewelry."

For a time it seemed that the heavier and vivider the earring, the more it fascinated the woman who prided herself in dressing up-to-the moment. Barbaric accessories in the line of cumbersome necklaces of huge beads reaching to the waistline and numberless (the more the merrier) bracelets naturally conformed to the lead of ear ornaments and oftentimes in addition we found gem encrusted girdles and great stoned finger rings.

Then came the horrible discovery that the weighty 'gypsy" earrings were playing havoc with women's ear lobes. They were becoming elongated in a most unsightly fashion. What was worse stil, neither masseuse nor dieting could remedy the defect as had been the case with enlarged waistlines which had followed the fad for going without corsets.

Women have always worn earrings, of course. Dainty little affairs they had been, of a single gem or frivolous conceits which even the smallest of ears could suport without being overburdened.

Not so the 1923 variety—extraordinary ornaments were these, often weighing two, three and more ounces! That was really more than even the sturdiest ear could support and retain its normal lines. Flesh and muscle didn't break with the strain—but they surely did stretch; they stretched into ugly triangles which were neither beautiful nor artistic.

Ears are ears! Some are ugly—few are beautiful. And we can as easily change their contour as the color of our eyes. Hence we don't pay much attention to them. This is the reason that the gypsy earring triumphed so long. Naturally the ear lobe doesn't stretch easily like a piece of elastic; it only very gradually yielded to the pull which was put upon it through the constant drag—16 hours out of the daily 24—of such a tortuous weight. Thus it came to pass that the damage was done before it became mendable.

So milady has withdrawn her ears from the destructive fantasies of the jewelry craftsmen, and while she still wears earrings they are of the more delicate designs such as the one shown in the sketch. This is of fine links of platinum which weave together three medium sized cut jet beads next the ear itself, branching out in three short chains which are based with a simply chased design from which depend two matching jet beads and a tassel of seed pearls.

For the unfortunate elongated ear-lobe there is, sad to say, no help. They are a warning to those who have not so far yielded to these fascinating vampish adornments. However, every woman wants to discover for herself the effect of each new fad and to such I would suggest that she select such a medium as amber (the real amber is very light; whereas the imitation is glass and very heavy) strands and fringes of small pearls, tiny beads of jade, or platinum studded with diamond chips. If she is determined to have her vampish moments, let her wear the heavy balls and plaques of crystal and jade and solid gold occasionally—but let the occasions be rare ones.

A last word of warning. Ears are coming out into the open next fall without a doubt and all deformities will be exposed to cruel scrutiny. It's so long since we saw each others' ears that they will come in for extraordinary attention!

MENU FOR THE WEEK

SATURDAY

Breakfast.
Cherries with Powdered Sugar
Dry Cereal Sugar Cream
Bacon Scrambled Eggs Milk Toast
Coffee

Lunch.
Baked Beans

Dinner.
Macaroni and Cheese Boiled Asparagus
Combination Salad Rolls Butter
Cherry Pie

CHERRY RECIPES

Sun Preserves.

Wash, stem and pit the cherries. Then add same amount sugar (in weight) as you have fruit. Let this stand overnight, which will draw out the juice. The next morning set on the stove and boil six minutes, then put in shallow pans, cover with a cloth and clamp it down with snap clothes pins. It usually takes 12 hours of good hot sunshine to finish the preserves. When a rich thick syrup has formed it is ready to be put in glasses.

Cherry Tarts.

Make the tarts out of pastry which has been cut with round cookie or doughnut cutter.

Cook cherries with flour and sugar, and when thickened set aside to cool. Place cherries on pastry and place another piece of pastry the same shape over it, press edges together and prick holes in top crust and brush over with milk. Bake in moderate oven until crust is brown.

Cherry Pie.

About 1 quart ripe cherries, 1 yolk egg, 3 T. cream, and 1-2 cup sugar. Wash the cherries, stem and place in colander over dish to catch the juice. Place thin layer of dough (made as follows) on shallow pan, sprinkle top with bread crumbs. Spread stoned cherries over evenly. Sprinkle with sugar and cinnamon. Beat yolk well, add cream and cherry juice and pour over all. Bake in hot oven until well browned at bottom.

Dough: 1 T. fat, 1 c. flour, 1-2 t. B. P., 1-4 c. sugar, 1 egg. Mix dry ingredients. Work in fat with finger tips; add egg; mix. Toss on slightly flowered board and roll to 1-4 in. thickness. This makes enough dough for a large oblong pan.

Olive Cherries.

Wash the cherries, leaving stones and stems in them, pack in jars and pour a brine made of 1 heaping tablespoon salt to 1 cup water over them and seal.

Cherry Blanc Mange.

Put 1 quart of milk and 1 T. fat in saucepan or stove, mix 1 cup corn starch with 1-2 c. cold milk; when milk boils stir in corn starch and stir 10 minutes, then add 2 T. sugar and 1 t. vanilla. Stew 2 c. cherries until tender with 1-2 c. water and 2 T sugar. Rinse out a mold with cold water, arrange a few cherries in bottom, then put in blanc-mange, then rest of the cherries mixed with corn starch. Turn out when firm. Serve with cream.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

The Lutheran church will hold their annual Sunday school picnic on Sunday, July 15, at the Henry Koster home. Bring your lunch and stay all day.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Church School at 9:45 a. m.

Morning worship at 11o'clock. Music by young people's choir. Sermon by Rev. Pendleton—"Have Christian People Anything In Common With the Ku Klux Klan?"

Sunday evening service in the City park, with another illustrated lecture—"Beyond the Rio Grande" or "Our Neighbor to the South." These services are becoming increasingly popular and there is always room for more people.

The big Sunday school picnic will be held at Pine Grove on Wednesday, July 18.

Vacation Bible School a Success

Monday morning before 9 o'clock the boys and girls were at the church ready to enroll in the Vacation Bible school. From the minute the piano began the march, till they were dismissed at 11:30 the interest never lagged. Tuesday morning two more pupils reported and the time was all too short for the many things there were to learn and do.

The school will continue for ten days, including Saturday of this week, and closing Friday, July 20. The entire school will go to the Sunday school picnic next Wednesday. Friday of this week the children will take their lunch and go to Sullivan's grove from where they will go to Mr. Lorang's to see his wonderful collection of curios from the Holy Land.

Sunday evening, July 28, the children of the vacation school will give a pagent, "The Victory of the Cross" in the City park.

Children may enroll any time up to Tuesday for the remainder of the school.

A Job For County Officers

It has been brought to the attention of the News man that there are several cars running in this community without a 1923 license. Again the fact remains that one man has no more right to run without a license than another.

It might be a good idea for Sheriff Keane or Prosecuting Attorney Moore to make a note of this most flagrant violation of the state law. The News man pays a fee of $20 per year for the privilege of using the roads and we don't figure that our neighbor, no matter who he may be, has any more right to run a car without a 1923 license than we have and we respectfully call the attention of the county officers to this fact.

Semi-Annual Election

At the last regular meeting of the Rebekah lodge the newly-elected officers were installed and will guide the destinies of that organization for the ensuing six months.

The new officers are: Gertrude Sampson, noble grand; Edith Winegardner, vice grand; Lula English, receiving secretary; Metta Herman, financial secretary; Ruth Martinson, treasurer; Katherine Steltz, chaplain; Anna Hanson, R. S. to N. G.; Lizzie Boliou, L. S. to N. G.; Esther Martinson, R. S. to V. G.; Eliza Gray, L. S. to V. G.; Margaret Sampson, conductor; Irene Mullaley, warden; Cinma Hirselberger, inner guard; Sarah Mochel, outer guard.

Has Feet Injured

Harriet Evans, daughter of Dr. and Mrs. F. B. Evans, is suffering with badly cut feet, sustained while wading in Asotin creek at the park last Sunday. She had gone to Asotin with her parents and during the afternoon had donned her bathing suit and gone into the creek, stepping on a pile of broken glass, cutting her feet quite badly. Her father attended to the injury at once but she suffered the loss of considerable blood in the meantime. She is getting along nicely but is still confined to her bed.

A Splendid Medicine for the Stomach and Liver

"Chamberlain's Tablets for the stomach and liver are splendid. I never tire of telling my friends and neighbors of their qualities," writes Mrs. William Vollmer, Eastwood, N. Y. When bilious, constipated or troubled with indigestion, give them a trial. They will do you good.—For sale at Clark's Drug Store.

Carl Tidemann Returns Home

Carl Tidemann, a well known Genesee boy, arrived in Moscow, Thursday evening after nine months spent in the Orient and in Alaska, says the Star-Mirror. He shipped from Seattle for the Orient as a sailor and had an opportunity to spend several days on shore at the various ports, visiting Japan, China and the Philippines. He states that while it is all new to the American who visits the countries of the Orient, he would have no desire to remain in either China or Japan, and that most of the whites in these countries would be glad to return to the United States.

After returning to the Pacific coast, Mr. Tidermann made a trip to Alaska and spent some time investigating the resources of that part of Uncle Sam's domain. Alaska appeals to him more than the Orient and he believes that there are excellent opportunities there.

It is the young man's intention to remain on his father's farm near Genesee for the summer, after which he expects to take another trip and see some other parts of the world.

Sun Again Shines

Farmers and townspeople are again smiling and trying to make friends with the weather man in order that the sun may keep on shining, because it's just what is needed to make one of the largest grain crops that this section of the country has seen for many years—if ever.

The wind and hard rains of last Thursday and Friday did some damage to fall grain, but most farmers say that the amount of damage will be small and that as a rule where it is damaged in one place it has helped in another, which naturally evens matters up.

Here's hoping the weather man keeps on his good behavior.

Many Celebrants

It is estimated that the towns in this section of the Palouse that observed the Fourth drew in the neighborhood of 15,000 people—taking Winchested, Asotin, Kendrick and Lenville into consideration. At any rate all those places enjoyed a large crowd and a splendid time was reported by those who attended these celebrations—and nearly all of Genesee went one place or another.

Improved Property

Mrs. H. M. Warren has made many substantial improvments on her boarding house and has put things in shape for the harvest season. Two new screened porches have been added and other betterments made which add materially to the appearance and convenience of the house.

Fractured Knee

Leon McAlister, son of Mr. and Mrs. E. O. McAlister, fell and split one of his knee caps one day last week. It was necessary to take several stitches in the wound.

Piano Lessons

I am prepared to give music lessons in the English or German languages. Also instruction in German, French, Latin or Italian languages. Mrs. Wm. Hordemann. 49-tf

"A Western Demon"

Out of the depths of New York's slums and into the great open west, where men's hearts beat true as steel, one day arrived out of a side-door Pullman one of its rarest products. To use his own language, "he put on a nose bag," and approached a cattleman and asked for work. He was at once engaged as cook on the B. B. ranch, the foreman of which was Joe Dalton, the clever scoundrel in "A Western Demon." The cook was none other than Billy Franey himself, the man who was born to make the world laugh, and when you see him making one of his many trips to the "old crow's nest," as he does in this production, we are sure you will agree with us. Mr. Franey is known the world over as a comedian who has been a star in his own comedies for the past six years, and at great expense he was secured to play the comedy part in "A Western Demon."

PRICES FOR THIS SHOW — 15 CENTS AND 25 CENTS

McCORMICK - and - DEERING

Harvesting and Haying Machinery

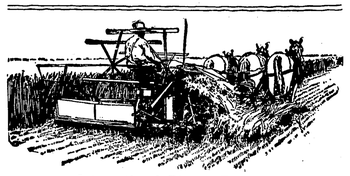
YOU farmers with years of experience in grain growing know that the binder plays an important part in making small grain crops profitable. To insure the safety of the crop, your binder must work efficiently and without delays in the short harvesting season.

McCormick and Deering Binders

Thousands of farmers have depended upon McCormick and Deering binders, and the increasing popularity of these machines shows that their faith has been well placed. In lightness of draft, ease of operation, and accuracy in getting all the grain under varying conditions, these binders have made good under the severest tests of time.

Come in and see them and talk with us about your harvesting problems.

We have a large stock of repairs for all makes of harvesting machinery, including John Deere. Order your repairs early.



International Binder Twine—
Sisal, Standard, Manila

We have a large stock of the Pure Oil company's PURE PENNSYLVANIA OIL. A grade for every auto, truck or tractor.

Beginning at Once

All merchandise strictly cash with the exception of farm machinery, tractors, threshers, trucks and other large equippment.
