THE GENESEE NEWS

VOL. XXXIV | GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JANUARY 5, 1923. | NO. 27

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Three Judge Lees In Idaho

After inauguration day at Boise there will be two judges of the Idaho supreme court by the name of William Lee. William A. Lee of Blackfoot is a hold-over member and William E. Lee of Moscow was elected in November to a seat on the state's highest tribunal. A third member of the Lee clan sits on the district bench of the Eleventh judicial district and resides at Burley.—Kamiah Progress.

Somewhat Balled Up

Since we have had our January freshet in December, we shall very likely get the heavy February snow in January. This would bring the March winds in February, the April showers in March and the May flowers in April; all of which, of course, while entirely possible, is scarcely probable. Our winters average up pretty much the same—it is only in the way they perform while here that makes them seem different; that, and the fact that we nearly always forget just what kind of a winter the last one was.—Deary Press.

Legion Defeats Genesee

The Genesee town team and the local Legion team clashed in a basket ball game Thursday night, the Troy boys coming out victorious. For the first few minutes of play the game was evenly played but the Legion team soon jumped into the lead and had things their own way. The first half ended 20 to 7. In the second half, with the score 26 to 11 against them, the Genesee boys became dissatisfied with some referee decisions and left the floor. The Genesee boys made only two field goals, the balance of their score resulting from free throws. Truman Myklebust did the refereeing and did splendid work. A good crowd turned out for the game. —Troy News.

Stricken With Sleeping Sickness

The many friends of Rev. C. J. Atkins, pastor of the Juliaetta Methodist church, will regret to learn that he is in a Spokane hospital suffering from sleeping sickness. Rev. Atkins was stricken with the disease last week and became almost blind within a short time. He went to Lewiston and consulted an eye specialist, but the affliction proved to be one which he could not diagnose. He returned home and his condition gradually grew worse when he was taken to the Deaconess hospital at Spokane Thursday morning. Word has been received that states the hospital physician pronounced his trouble as sleeping sickness. His wife is with him.—Juliaetta Record.

Splendid Seed Corn

E. L. Whisler of Cedar creek went to Moscow Tuesday to deliver a package of certified seed corn to County Agent Fletcher, who will send it to the state seed show at Twin Falls. Mr. Whisler has raised some wonderful corn this year of the Rustlers' White Dent variety; also some very good sweet corn. He took several prizes this fall at the Boise State fair. On a five-acre patch he harvested an average of 75 bushels of Rustlers' White Dent to the acre. It was well matured and the ears nicely filled to the tips. This is the variety of field corn that is recommended by the University of Idaho to be particularly well adapted to the soil and climate of north Idaho.—Kendrick Gazette.

The Arbuckle Case

The Arbuckle episode isn't important and is without interest, but it has been made an issue. There are worse people than this comedian on the stage, doubtless, and nothing is thought about it. But as for giving him a chance, and all that, that is beside the mark. The question is as to giving him the particular sort of chance he seeks, before the footlights and in the glare of public exploitation. Otherwise, he need not ask anyone's permission to "come back." People are coming back every day in retrieving the consequences of error, folly, sin, shame or misfortune. The world is kind and welcomes them, but they have not thrust themselves upon public attention in working their way out. Arbuckle's profession is against him in this instance, and it can not yet be said whether he will be able to overcome the prejudice attached to the peculiarly low and revolting nature of his offense which is apart from the death of which he was acquitted. It is not a moral question so much as it is one of elemental decency. We think everyone would very much prefer not to have the circumstances confront them, as it probably will do, but otherwise it makes little difference to anyone what the actor does or makes of himself.—Lewiston Tribune.

Gave Birthday Party

A birthday party was given at the home of Mrs. Victor Hasfurther on Tuesday evening, January 2, in honor of Miss Madeline Hasfurther's birthday anniversary. Dancing and games furnished entertainment. A delicious lunch was served and every one reports a good time.

John B. Useless, Esq.

Election Results Run True to Form

It was to be expected. In the hard times of the early nineties the farmers of the middle west turned Populist when the price of wheat dropped to 50 cents a bushel; now they blame the republicans, vote for the non-partisan, democratic or farmer-labor candidates and sit down to await results. When these results fail to arrive they'll vote republican again.

It is true the republicans didn't accomplish much during the last two years, but no legislation could have lifted the price of wheat, corn and beef. The price of these commodities is fixed by the condition of the world market and this market will remain low while Europe is sick. And for the disease that afflicts Europe no man or party has yet prescribed an effective remedy.

Analyzing the results of the election, it becomes apparent that in those regions where busiess was poor the ins were ejected and the outs invited to enter. The far West, for instance, went democratic only in the mining states; it is true that Senator Poindexter of Washington was replaced by a democrat even though the lumber industry is booming, but Senator Poindexter's home is in Spokane and his main strength lay in the grain and alfalfa districts of eastern Washington, which failed to support him because they blamed him for low prices.

A more aggressive part in world reconstruction, a bolder foreign policy will do more for the Harding administration than a dozen tariff and bonus laws.—January Sunset.

New Saet Officers Take Oath

According to a news dispatch from Boise dated January 1, nearly 1000 persons crowded the gallery of the house of representatives' chamber in the capitol there at noon of that day to witness the inauguration of Charles C. Moore, governor-elect, and other state officials. The new executive made no inaugural address.

Alfred Budge, incoming chief justice of the state supreme court, administered all oaths of office in the absence of John C. Rice, whose term expired this year, and who was unable to attend the ceremonies because of the sudden illness of his wife.

Members of the supreme court and officers assembled in the office of the governor at 12 o'clock and a few minutes later were escorted into the house chamber by Harry T. Lewis, adjutant general, who led Chief Justice Budge to the speaker's seat.

Following the invocation, the presiding officer called for the presentation of William E. Lee, newly-elected to the supreme tribunal. He was introduced by Justice C. P. McCarthy and the oath was administered. David W. Davis, retiring state executive, then introduced his successor. Applause greeted the presentation of each official after the oath was taken.

In their order, the following officials were introduced and stood before the chief justice before the administration of the oath of office:

Justice Lee, Governor Moore, H. C. Balbridge, lieutenant governor; F. A. Jeter, secretary of state; A. H. Conner, attorney general; E. G. Gallet, state auditor; Dan F. Banks, state treasurer; Elizabeth Russum, state superintendent of schools, and Stewart Campbell, mine inspector.

In cases where officials were reelected there was no introduction. In all other cases the retiring officer introduced his successor.—Star-Mirror.

Try a want ad. for results.

WHAT HAPPENED HERE TWENTY YEARS AGO

Mr. and Mrs. Gilbert Crawford are again visitors at Genesee.

W. J. Mervyn took a large bunch of cattle to Lewiston Saturday.

Louie Uhre left Saturday for Ruby creek to spend the winter with the two Louies.

Nagel & Bomberg today sent to the Spokane market a car of fat cattle and two cars of hogs.

R. Vollmer, after an absence of nearly three months in the Ruby creek mining district, returned to Genesee Sunday.

Word reached here this week that Joseph Wells, well and favorably known to nearly all Geneseeans, had succumbed to the charms of a Weippe school teacher and was married on December 11.

If you must drink, drink Genesee beer. If you must smoke, smoke Smolt's cigars. If you use flour, ask for Genesee brands. Take your cream to the Genesee creamery. In short, patronize Genesee institutions.

A maiden fair, with sun-kissed hair, came tripping down the street; her face serene, her age 16—gee whiz, but she was sweet. On the sidewalk slick she came down quick, with a jolt that shook her curls, but the words she said must be excused—for she's one of the nicest girls!

The Genesee coal consumers have just complaint to make against the railroad company for their failure to get coal in here in a reasonable length of time. For nearly two weeks there has not been any on the market and the novelty of burning wood in coal stoves has about worn off.

We don't have to engage a "circulation liar" to convince advertisers that the News thoroughly covers its territory—we can show them. The number of people of this valley who are not regular readers of this paper would not make a corporals' guard.—(And the same may be truthfully said of the News of today.)

Are Doing Nicely

A short note from the John Kimbel family, who have been residing at Puyallup, Washington, for the past few years, is to the effect that they are getting along nicely and that the weather in that section is very warm for this season of the year.

Regular California Weather

The weather has been all that could be desired for this or any other part of the country. During the past week the weather man has been on his good behavior and those who are in a position to know say there is no need of going to California—and there isn't!

A Daughter Arrives

Mr. and Mrs. Fred Taylor are entertaining a little stranger at their home in the form of a little lady who put in her appearance on Thursday, December 28. She tipped the scales at just nine pounds.

Will Give Social Evening

The Pythian Sisters will given a social evening and card party at their hall on Friday evening, January 19. Refreshments will be served. An admission of 50 cents per couple will be charged. 27-

Has Moved Shoe Shop

Cecil Bumpass has moved his shoe repair shop to the rear of the F. E. Lambert store, where he may be may be found in future.

MANY MILLIONS DISTRIBUTED TO DISABLED VETS

More than $5,000,000 was distributed among disabled war veterans of the Pacific Northwest during the year 1922, according to an estimate given out by the Seattle district office of the United States Veterans' bureau. This includes vocational training pay and straight compensation expenditures but not hospitalization expense or administrative costs. A total of 6312 new and amended compensation awards were granted during the year and 1255 disabled World war veterans were rehabilitated vocationally, it was announced.

There are at present 2750 injured veterans in Washington, Oregon and Idaho taking vocational training at the expense of the government, a decrease of 415 under the number enrolled January 1, 1922. A total of approximately 4200 veterans are receiving compensation checks every month. Of this number 74 are permanently and totally disabled and a large portion of the balance totally disabled for a temporary period. Records show that a total of 15,154 veterans of this district have filed formal applications for either compensation or training to date.

With approximately $150,000,000 of war risk insurance held by ex-service people of the district, the Pacific Northwest leads all other bureau districts of the entire country in percentage of its World war veterans protected by government insurance. More than $1,500,000 worth of war insurance was reinstated or converted into permanent forms during the last four months of 1922.

Ninety-five per cent of the 864 veterans hospitalized in this district are being treated in veterans' hospitals or wards. The number of hospital cases not being handled by government physicians reduced from 320 to 44 during 1922. Records for December show an increase of approximately 50 hospitalized World war veterans. The employment section of the bureau has found work for 244 rehabilitated veterans since its formation last August. These men receive an average of $130 a month, a material increase over their pre-war occupation pay.

Will Construct Big Dam

The Grangevill Electric Light and Power company, owned by W. C. Sivyer and associates of Spokane, has filed with the state of Idaho for the water power rights at Bruce's eddy on the north fork of the Clearwater river, four miles above Ahsahka. Engineers will be sent at once to make surveys with a view to constructing an 88-foot dam, capable of generating 10,000 horsepower.

Business Is Business

Two brothers were owners of a chain of stores when the World War broke out. The younger of the brothers, Abe, was fortunate enough to become a member of the selective draft and sent overseas to do his bit in order that democracy might prevail. One night as he was about to "go over the top" he received a cablegram from his brother, Maurice, which read as follows: "Store No. 1 burned down; fully covered by insurance; how's your health?" Several days later he received a similar dispatch: "Store No. 2 burned down; fully covered by insurance; how's your health?" By this time Abe was in a dilemma and not wishing to be without facts, cabled back to Maurice as follows: "Never mind how's my healh, keep the home fires burning."—Ex.

Gave Delightful Party

The home of Mr. and Mrs. Louis A. Herman was the scene of a very delightful party last Friday night, December 29, when his mother, Mrs. H. J. Herman, invited in neighbors and friends to a good time. The event was planned as a surprise for Miss Louise Herman, who has been down from Spokane spending the holidays with relatives.

The evening was spent with dancing and cards. At midnight all frolicking was ceased while a splendid lunch was served to the joy-makers. After lunch dancing and card-playing was resumed and kept going until the early hours of the morning.

Those present were Mr. and Mrs. Chris Scharnhorst and children and cousins, Misses Mary and Gertrude Schmidlkoser of Nez Perce; Mr. and Mrs. Harry Sampson and children, Mr. and Mrs. Ingle Halverson and children, Mr. and Mrs. H. B. Jones and children, Mr. and Mrs. Ed. Putnam and daughter Mildred and sons Orville, Archie and Lester, Mr. and Mrs. W. C. Jenkins, George Scharnhorst, Carl Scharnhorst, Miss Marie Scharnhorst, Roy Fish, Anthony Weber and sisters, Misses Bernadette and Viola, Louis Berger and Will Burger, Mr. and Mrs. K. Uhre and daughter, Inger, and son, Francis, Mr. and Mrs. Walter Herman and children.

Poultry Show Postponed

Because of the Spokane Poultry show being held January 22-27, inclusive, the Panhandle Poultry show, which was to have been held on January 25-27, inclusive, is postponed. The new dates for the show will be January 30-31 and February 1. This will give the poultrymen who wish to show at Spokane an opportunity of showing at the Panhandle show the next week. The premium lists will be out within a week and any one interested may secure them by writing the secretary, H. W. Hulbert, Moscow, Idaho.

Much interest is being shown from all parts of the Inland Empire. Liberal cash prizes and cups are to be offered. All poultrymen are invited to exhibit. Prof. R. V. Mitchell of the Washington State college will judge the show.

Federated Missionary Society

The missionary society of the Federated churches met with Mrs. G. A. Bumpass on Wednesday afternoon, January 3. Rev. Pendleton delivered a book review on "The Trend of the Races," on the question of the negro problem in America.

The following were guests: Mrs. F. J. Niemann, Mrs. Fred Perkins and Mrs. J. H. Jackson.

The next meeting will be with Mrs. Chas. Jain on January 31.

L. Jain Still In Hospital

Word brought from Moscow is to the effect that the condition of L. Jain is not improving as his many friends here would like to have it, but it is thought he is about holding his own.

Word reached here that two of Mr. Jain's brothers had passed away last week in the east. One of them, Rudolph Jain, had visited here some three years ago.

Ladies' Aid Will Meet

The ladies' aid of the Federated churches will meet with Mrs. George Follett on Wednesday, January 10. Mrs. Fred ePrkins and Mrs. Fred Hampton will assist Mrs. Follett in entertaining.

JULIUS E. NORDBY WEDS SPOKANE GIRL

Julius E. Nordby, well-known stockman of the Genesee district, member of the firm of Nordby Brothers, now associate professor of animal husbandry at the University of Idaho, was united in marriage at Spokane on Wednesday evening, with Miss Josephine Barstad, an accomplished young woman of that city, says Saturday's Moscow Star-Mirror.

The following account of the wedding was taken from Thursday's Spokane Chronicle:

"The marriage of Miss Josephnie Barstad and Julius E. Nordby was solemnized last evening at the home of the bride's parents, Mr. and Mrs. J. S. Barstad, S2704 Manito boulevard, before 60 relatives and intimate friends. The ceermony took place before an improvised altar in the living room, large baskets of yellow and white chrysanthemums flanking either side of the altar, which was backed with palms and high tapering candles.

Miss Barstad's gown was of white ivory satin with a heavy crepe train. Her veil was held in place with a Grecian band of orange blossoms. The double ring ceremony was used.

She was attended by her sister, Miss Amy Barstad, and Shirley Ann Grimm acted as flower girl. Richard Westover of Moscow, Idaho, was best man.

Miss Mabel Stone played the wedding march. Before the ceremony, Miss Elizabeth McClung sang "Because," and after the ceremony, "O Promise Me." Directly after the ceremony a tray supper was served.

The young couple left on a honeymoon trip to the coast. They will reside after the first of the year in the Hodgin apartments, Moscow, Idaho.

The bride attended the Spokane public school, Spokane college and Cheney normal. She is an accomplished musician and well known in musical circles here. The groom attended the Universities of Illinois and Idaho and is now associate professor of agriculture at the University of Idaho.

"Among out-of-town guests present were Mr. and Mrs. M. H. Nordby of Clarkston, Wash.; Mr. and Mrs. Oscar Nordby, Mr. and Mrs. Rudolph Nordby, and Mrs. Lilly Larson of Genesee, Idaho; Mr. and Mrs. Leslie Scroggins, Mr. and Mrs. Jonas Peterson, Spirit Lake, Idaho; Miss Winnie Rodgers of Colfax, Wash.; Miss Dorothy Melgard, Miss Ella Olsen, Miss Lillian Roise of Moscow, Idaho; Mr. and Mrs. Roy Roller, Reardon, Wash., and Miss Pearl Leonard."

Norwegian Dinner a Success

The diner given by the ladies of the Genesee Valley Lutheran church proved to be a great success. The dinner was very largely attended, they having served between three and four hundred people. All the Norwegian dishes that the ladies of that parish know so well how to serve were given to those who were fortunate enough to attend—and to say they were all enjoyed is putting it very mildly.

There was a fish pond for all who cared to try their luck at "casting," and numerous other attractions.

A large number went out from town and pronounced it one of the best dinners it had ever been their pleasure to partake of.

The table waiters were dressed in Norwegian costumes.

Had Ribs Broken

On Saturday, December 30, Nels Swenson had the misfortune of having his arm and several ribs broken while getting ready to come to town. It seems that while harnessing his team one of the horses became frightened and kicked Mr. Swenson through the barn wall. He was taken to Lewiston where medical attention was given him. He is said to be getting along nicely.

E. W. Vanock is holding himself rather straight these days from the fact that he allowed his feet to travel just a trifle too fast and when he lit he found that he had collided with the sharp end of a step several feet below where it should have been and as a result he has a cracked rib.

Now Ready for Bowling

The Knights of Pythias have been putting in some hard licks during the past week preparing the basement of their castle hall for a club room.

Several years ago two bowling alleys were purchased and put in place —and after they had been used for a short time that was the end of it—and as a consequence the alleys have been idle.

Last week a floor was put in place and the pool and billiard tables put in the basement and the bowling alleys put in shape and already teams are trying out preparatory to joining the "league" which it is said is in the forming.

Tuesday Club Entertained

The Tuesday club met with Mrs. Fred Nagel on Tuesday, January 2. Mrs. Fred Sirrod won the honors of the afternoon. The invited guests were Mrs. Fred Shirrod, Mrs. Johanna Christenson, Mrs. Mahlon Follett, Mrs. Jack Barnes, Mrs. Nellie Haymond, Mrs. Sarah Elliot, Mrs. Lena Ouse, Mrs. Elmer Vanouck and Mrs. A. E. Elver.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 25.

"Profoundly modest," said the master; "perhaps not equally ingenuous. You told me yesterday my power was fallen with my father's death. How comes it, then, that a peer of the realm flees under cloud of night out of a house in which his fathers have stood several sieges? that he conceals his address, which must be a matter of concern to his gracious majesty and to the whole republic? and that he should leave me in possession, and under the paternal charge of his invaluable Mackellar? This smacks to me of a very considerable and genuine apprehension."

Pursued Speech.

I sought to interrupt him with some not very truthful denegation; but he waved me down and pursued his speech.

"I say it smacks of it," he said, "but I will go beyond that, for I think the apprehension grounded. I came to this house with some reluctancy. In view of the manner of my last departure, nothing but necessity could have induced me to return. Money, however, is that which I must have. You will not give with a good grace; well, I have the power to force it from you. Inside of a week, without leaving Durrisdeer, I will find out where these fools are fled to. I will follow; and when I have run my quarry down, I will drive a wedge into that family that shall once more burst it into shivers. I shall see then whether my Lord Durrisdeer will choose to buy my absence; and you will all see whether, by that time, I decide for profit or revenge."

I was amazed to hear the man so open. The truth is he was consumed with anger at my lord's successful flight, felt himself to figure as a dupe and was in no humor to weigh language.

"Do you consider this entirely wise?" said I, copying his words.

"These twenty years I have lived by my poor wisdom," he answered, with a smile that seemed almost foolish in its vanity.

"And come out a beggar in the end, if beggar be a strong enough word for it," I said.

"I would have you to observe, Mr. Mackellar," cried he, with a sudden, imperious heat in which I could not but admire him, "that I am scrupulously civil; envy me in that, and we shall be better friends."

Stayed at Durrisdeer.

For the matter of three weeks we continued to live together in the house of Durrisdeer; the beginning of that most singular chapter of my life —what I must call my intimacy with the master. At first he was somewhat changeable in his behavior; now civil, now returning to his old manner of flouting me in my face; and in both I met him half way.

I should say the Indian was continually traveling to and fro in the house. He never spoke, save in his own dialect and with the master; walked without sound; and was always turning up where you would least expect him fallen into a deep abstraction, from which he would start to mock you with one of his grovelling obeisances.

It was one very wild night, after supper, and when we had been making more than usually merry, that the blow fell on me.

"This is all very fine," says the master, "but we should do better to be buckling our valise."

"Why so?" I cried. "Are you leaving?"

"We are all leaving tomorrow in the morning," said he. "For the port of Glasgow first; thence for the province of New York."

I suppose I must have groaned aloud.

"Yes," he continued, "I boasted; I said a week, and it has taken me not 30 days. But never mind; I shall make it up; I will go the faster."

"Have you the money for this voyage?" I asked.

"Dear and ingenuous personage, I have," said he. "Blame me, if you choose, for my duplicity; but while I have been wringing shillings from my daddy, I had a stock of my own put by against a rainy day. You will pay for your own passage, if you choose to accompany us on our flank march; I have enough for Secundra and myself, but not more; enough to be dangerous, not enough to be generous. There is, however, an outside seat upon the chaise which I will let you have upon a moderate commutation; so that the whole menagerie can go together, the house-dog, the monkey, and the tiger."

"I go with you," said I.

"I count upon it," said the master. "You have seen me foiled, I mean you shall see me victorious. To gain that, I will risk wetting you like a sop in this wild weather."

"And at least," I added, "you know very well you could not throw me off."

"Not easily," said he. "You put your finger on the point with your usual excellent good sense. I never fight with the inevitable."

"I suppose it is useless to appeal to you," said I.

"Believe me, perfectly," said he.

"And yet if you would give me time, I could write—" I began.

"And what would be my Lord Durrisdeer's answer?" asks he.

"Ay," said I, "that is the rub."

"And at any rate, how much more expeditious that I should go myself!" says he. "But all this is quite a waste of breath. At seven tomorrow the chaise will be at the door. For I start

"I will find out where these fools all fled to. I will follow; and when I have run my quarry down, I will drive a wedge into that family that shall once more burst it into shivers."

from the door, Mackellar; I do not skulk through woods and take my chaise upon the wayside—shall we say, at Eagles?"

My mind was now thoroughly made up. "Can you spare me quarter of an hour at St. Bride's?" said I. "I have a little necessary business with Carlyle."

"An hour, if you prefer," said he. "I do not seek to deny that the money for your seat is an object to me; and you could always get the first to Glasgow with saddle-horses."

"Well," said I, "I never thought to leave old Scotland."

"It will briskon you up," says he.

"This will be an ill journey for some one," I said. "I think, sir, for you. Something speaks in my bosom; and so much it says plain, that this is an ill-omened journey."

"If you take to prophecy," says he, "listen to that."

Violent Squall Off Solway.

There came up a violent squall off the open Solway, and the rain was dashed on the great windows.

"Do ye ken what that bodes, warlock?" said he, in a broad accent; "that there'll be a man Mackellar unco sick at sea."

When I got to my chamber, I sat there under a painful excitation, hearkening to the turmoil of the gale which struck full upon that gable of the house. What with the pressure on my spirits, the eldritch cries of the wind among the turret-tops, and the perpetual trepidation of the massed house, sleep fled my eyelids utterly. I sat by my taper, looking on the black panes of the window where the storm appeared continually on the point of bursting in its entrance; and upon that empty field I beheld a perspective of consequences that made the hair to rise upon my scalp. The child corrupted, the home broken up, my master dead or worse than dead, my mistress plunged in desolation—all these I saw before me painted brightly on the darkness; and the outcry of the wind appeared to mock at my inaction.

MR. MACKELLAR'S JOURNEY WITH THE MASTER.

The chaise came to the door in a strong drenching mist. We took our leave in silence; the house of Durrisdeer standing with drooping gutters and windows closed, like a place dedicate to melancholy. Upon our mounting the long brae from Durrisdeer, as we walked side by side in the wet, he began first to whistle and then to sing the saddest of our country tunes, which sets folk weeping in a tavern, "Wandering Willie." The set of words he used with it I have not heard elsewhere, and could never come by any copy; but some of them which were the most appropriate to our departure linger in my memory. One verse began:

"Home was home then, my dear, full of kindly faces;
Home was home then, my dear, happy for the child."

And ended somewhat thus:

"Now, when day dawns on the brow of the moorland,
Lone stands the house and the chimney-stone is cold.
Lone let it stand, now the folks are departed,
The kind hearts, the true hearts, that loved the place of old."

He looked in my face when he had done, and saw that my eyes watered.

"Ah, Mackellar," said he, "lo you think I have never a regret?"

"I do not think you could be so bad a man," said I, "if you had not all the machinery to be a good one."

"No not all," says he; "not all. You are there in error. The malady of not wanting, my evangelist." But methought he sighed as he mounted again into the chaise.

All day long we journeyed in the same miserable weather; the mist beating us closely, the heavens incessantly weeping on my head.

It was decided we should travel on all night; and it was singular, once the dusk had fallen, my spirits somewhat rose. The bright lamps, shining forth into the mist and on the smoking horses and the nodding post-boy, gave me perhaps an outlook intrinsically more cheerful than what day had shown; or perhaps my mind had become wearied of its melancholy. At least, I spent some waking hours, not without satisfaction in my thoughts, although wet and weary in my body; and fell at last into a natural slumber without dreams. Yet I must have been at work even in the deepest of my sleep; and at work with at least a measure of intelligence. For I started broad awake, in the very act of crying out to myself,

"Home was home then, my dear, happy for the child,"

stricken to find in it an appropriateness, which I had not yesterday observed, to the master's detestable purpose in the present journey.

Close to Glasgow.

We were then close upon the city of Glasgow, where we were soon breakfasting together at an inn, and where (as the devil would have it) we found a ship in the very article of sailing. We took places in the cabin; and, two days after, carried our effects on board. Her name was the "Nonesuch," a very ancient ship and very happily named.

By all accounts this should be her last voyage; people shook their heads upon the quays, and I had several warnings offered me by strangers in the street, to the effect that she was rotten as a cheese, too deeply loaden, and must infallibly founder if we met a gale. From this it fell out we were the only passengers; the captain, Mc-Murtrie, was a silent, absorbed man with the Glasgow or Gaelic accent; the mates ignorant, rough seafarers, come in through the hawsehole; and the master and I were cast upon each other's company.

The "Nonesuch" carried a fair wind out of the Clyde, and for near upon a week we enjoyed bright weather and a sense of progress. I found myself (to my wonder) a born seaman, in so far at least as I was never sick; yet I was far from tasting the usual serenity of my health. Whether it was the motion of the ship on the billows, the confinement, the salted food, or all of these together, I suffered from a blackness of spirit and a painful strain upon my temper.

After the first week out, we fell in with foul winds and heavy weather. The sea was high. The "Nonesuch," being an old-fashioned ship and badly loaden, rolled beyond belief; so that the skipper trembled for his masts and I for my life. We made no progress on our course. An unbear-

The "Nonesuch," being an old-fashioned ship and badly loaden, rolled beyond belief.

able ill-humor settled on the ship; mon, mates and master girdling at one another all day long. A saucy word on the one hand, and a blow on the other, made a daily incident. There were times when the whole crew refused their duty; and we of the afterguard woer twice got under arms (being the first time that ever I bore weapons) in the fear of mutiny.

In the midst of our evil season sprung up a hurricane of wind; so that all supposed she must go down. I was shut in the cabin from noon of one day till sundown of the next; the master was somewhere lashed on deck. Secundra had eaten of some drug and lay insensible; so you may say I passed these hours in an unbroken solitude. At first I was terrified beyond motion and almost beyond thought, my mind appearing to be frozen. Presently there stole in on me a ray of comfort. If the "Nonesuch" foundered, she would carry down with her into the deeps of that unsounded sea the creature whom we all so feared and hated; there would be no more Master of Ballantrae, the fish would sport among his ribs; his schemes all brought to nothing, his harmless enemies at peace.

(To be continued.)

Almost Perfect Food.

"Eggs contain so much of fuel, energy and tissue building materials as to be almost a perfect food in themselves," says Mary Sutherland, State college nutrition specialist.

"Eggs are rich in phosphorous, calcium and iron in organic combination. Protein in the form of albumin is found in the white. Fat in a finely emulsified form, similar to the fat in milk, is found in the yolk. The protein contains sodium chloride (common salt), potassium salts, and sulphur, all necessary to perfect health. The iron compound forms the material from which the hemoglobin of red blood corpuscles is made."

WASHINGTON NEWS

A movement to split Chelan county is now under way.

The Northern Pacific railroad will spend $500,000 next spring in installing automatic block signals from Spokane to Pasco to complete its main line safety apparatus.

A total of $65,000 of a fund of $100,000 to purchase seed wheat for eastern Washington farmers has been pledged by the Spokane clearing house and Spokane milling interests, according to J. K. McCornack.

Fifteen thousand feet of fir logs have been purchased and will be hauled to the county farm to be sawed up by able-bodied workers without employment, in return for aid given themselves and their families by Chelan county.

Erastus Brainerd, formerly editor of the Post-Intelligencer and long a leader in public life in this state, died December 25.

Approximately 130 high schools in central and eastern Washington and in northern Idaho have been invited to enter basketball teams in the competition for the fourth annual Inland Empire interscholastic tournament to be held in Spokane March 1.

District managers and salesmen of the National Builders' bureau gathered in Spokane December 27 for their first annual convention.

Ku Klux Klan officials are organizing campaigns in Washington and 11 other states for enactment of compulsory public school attendance bills, which would eliminate parochial and other private schools for children under 16 years.

The Northwestern Fruit Exchange up to December 9 had remitted to its shippers in the Wenatchee-Okanogan territory, on the Jonathan variety, more than $211,000.

The tentative itinerary for the 44th annual coast tour of the Men's Glee club of the State College of Washington includes Millwood February 16, Okanogan 17, Everett 18, Tacoma 19, Aberdeen 20, Olympia 21, Mount Vernon 22, and a joint concert with the university at Seattle February 23.

Next September 5030 new refrigerator cars will be available for moving the fruit crop of the northwest, according to W. R. Skey, general agent for the Union Pacific system.

Gustav A. Welch, football coach at Washington State college during the 1919-1920, 1921 and 1922 seasons, tendered his resignation as grid tutor to the athletic council at W. S. C.

An alleged conspiracy to steal thousands of dollars' worth of government property from the United States navy yard at Bremerton, Wash., has been uncovered by federal agents.

POULTRY

S. O. Watson, proprietor of the Henbee Farm, Bonners Ferry, Idaho, keeps an accurate record of his income each month from his flock of thoroughbred chickens. His report for November, covering a flock of 340 pullets, 240 hens and 12 cocks, showed receipts of $270.70, with a profit of $136.02. Fifty-five per cent of his pullets are now laying.

A novel stunt in the handling of major poultry exhibitions has been put over by the show committee of the Great Falls poultry show and the Judith Basin show, two of Montana's great poultry exhibitions, in the moving intact of all cooping equipment and 800 birds from Great Falls to Stanford, Mont., where the Judith Basin poultry and rabbit show was held.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

An attempt to fly around the world will be started next June by Captain Pedro Zanni, Argentine army aviator, it was announced recently.

Fire at Winnipeg on December 25 caused property damage amounting to $250,000.

Henry Ford's decision to construct a $6,000,000 plant near Chicago is only a step in a gigantic program on the part of the Ford Motor company "that will rank as one of the greatest industrial developments the world has ever seen," it is reported.

The amateur radio station of Herbert Hoover Jr. at Washington, D. C., was heard by amateurs in Switzerland recently.

Fire December 21 destroyed the Dearborn street railroad station at Chicago, valued at $300,000.

Sir Keith Smith, British aviator, virtually completed plans at Washington recently for crossing the western hemisphere on a 23,000-mile airplane flight around the world, which he announced he would start in London next April.

The coasting steamer Vintilis foundered early December 21 with the loss of nine men of the crew after having been rammed and cut in two by the Norwegian freighter Asturias off St. Nazaire, France.

Lord Carnarvon, titled explorer, recently unearthed the tomb of Tutenkhamun near Luxor, Egypt, and found in it treasure said to be worth at least $40,000,000. Tutenkhamun was one of the kings of the 18th Egyptian dynasty who reigned about 1350 B. C.

If France and Italy fail to ratify the Washington naval treaty, an agreement for carrying it out might be arranged among England, America and Japan, said Vice Admiral Ide of Japan recently.

Three men were injured, one perhaps fatally, recently in the explosion of a number of salvage shells which they were loading into a trailer at the Benicia, Cal., government arsenal.

A great roving band of hungry timber wolves has devoured three men, according to meager reports sifting in recently from the snow covered trails of the Sturgeon river country.

Fire destroyed the historic $1,000,000 Notre Dame church at Quebec December 22.

Emile Arnsten, formerly of Shreveport, La., assistant pipe-line superintendent of the Mexican Gulf Oil company, was shot and killed from ambush December 21 on the road between Toteco and Zacamixtle, state of Vera Cruz.

The schooner Rosa Ferlita, battered by wind and wave for 80 days, was towed into New York harbor.

In view of constant train wrecking in Ireland, the Irish government will establish along the railroads a system of blockhouses similar to those erected by the British during the South African war, it is reported.

Tempests of the sort known only to seasoned mariners of the North Atlantic against the howling power of which huge ocean liners are but flimsy cockleshells, have raged through the past week, according to wireless dispatches to New York.

DAIRY

Ten pounds of powdered skim milk added to 90 pounds of water makes 100 pounds of normal skim milk. A test by the Minnesota College of Agriculture the past summer showed that calves could be fattened as satisfactorily on the powder product as the fresh.

"May Walker Ollie Homestead," a Holstein cow owned by the Minnesota Holstein company at Austin, Minn., has broken the world's record for a year's production of butter. Her figure for 365 days ending at midnight, December 18, was 1217.27 pounds of butterfat, the equivalent of 1521.6 pounds of butter.

The Benewah, Idaho, creamery was placed in the third class of competitive butter makers in the November contest held in Salt Lake City by the educational butter and cheese scoring of the western office of the dairy division of the United States department of agriculture. The St. Maries butter ranked 93.5 while the winner received a score of 94.5 per cent perfect.

Rome was not built in a day, neither was a good herd. Dairy improvement involves a long-time investment, yet those who are willing to make this investment are the ones who will derive the most benfit.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and Lincoln R. Lounsbury, Agricultural Extension Editor, State College of Washington.

(Continued from last week.)

SLEEVES.

Follow the same general principles outlined for waists in making sleeves longer or shorter, narrower or wider. Cut or fold the pattern about 4 inches above or 4 inches below elbow for long sleeve. (Fig. 10).

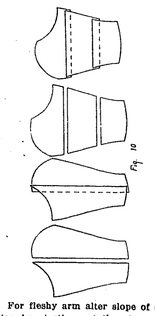

Fig. 10

For fleshy arm alter slope of seam line by starting at the top of the sleeve seam and carrying the line downward, gradually letting it run off to nothing as it nears the elbow. (Fig. 11.)

Fig. 11

SKIRTS.

To increase both waist and hip, cut the pattern on each gore from waist to hem and separate the pieces the desired amount. (Fig. 12).

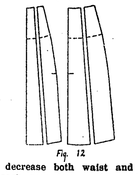

Fig. 12

To decrease both waist and hip, fold each gore from waist to hem, taking out from each the amount desired. (Fig. 13).

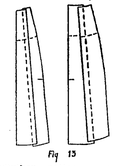

Fig. 13

To lengthen pattern, cut gores across 12 inches from waist and separate the desired amount. (Fig. 14).

Fig. 14

(Other skirt alterations, and pattern placing on plaids and stripes, will conclude these directions):

(To be continued.)

Pears Bring in Money in Western Washington

At Startup, Snohomish county, is a 200-acre pear orchard. This is probably the largest pear orchard in western Washington. Western Washington's climate is ideal for pear raising and so far is free from diseases and pests prevalent in other states.

By ROBERT B. MILLER

The Bartlett pear can be raised at a fair profit for canning purposes, but late fall and winter pears will give very much better returns—if the acreage planted is large enough to yield carload shipments. The climate of western Washington is ideal for pear raising and the district is, so far, free from the diseases and pests which are doing so much damage to the industry in other localities and states.

There are hundreds of different kinds of pears, but very few commercial varieties. There are not over half a dozen that could be planted here with any assurance of success, and out of this number I would eliminate three. Pollination, maturity, irregular bearing, keeping qualities of the fruit and susceptibility to scab are such important factors and are so influenced by locality that the selection of varieties requires the utmost care.

In the orchard which I have established of approximately 200 acres, I have three main varieties. These are the Anjou, Bosc and Bartlett. The Anjou is not altogether self-sterile but requires cross-pollination to insure a crop. The Bartlett is self-fertile but it has been proven that cross-pollination in its case also stimulates greater production. These two varieties I have planted together in rows for mutual benefit, as they bloom at the same time in this locality.

Is Self-Fertile.

The Bosc is self-fertile, and should be planted by itself, as its influence on some other varieties is detrimental. The Bartlett, Bosc and Anjou seems into bearing in the order named, and are in my opinion the varieties best adapted to western Washington conditions.

The great problem that confronts the people of western Washington is the development of the farming of the logged-off land along the lines for which it is best adapted and at a pace which will more nearly keep up with the rapid disappearance of the timber.

For the average man to attempt to clear a 40-acre tract, even if he has an oversupply of brains and muscle, without the assistance of capital, is more than can be done in a lifetime. To borrow what little would be loaned on such security to assist him in clearing, is only adding to his misery.

On 20 acres he may succeed, if he is really energetic, but he will feel pretty old when it is cleared.

On 10 acres, by working out occasionally, so that he can buy the necessities of life which cannot be raised on the place, he will in a few years have his own home, and, with moderate labor if it is properly applied in the right direction, a good, comfortable living for his family. Last but not least he will be independent.

The more uncleared land a poor man owns over 20 acres, the worse off he is. The mere ownership of this kind of land does not constitute wealth; but being in the position and having the ability to enjoy what you own is real riches.

The most desirable development from many standpoints, would be one of small holdings within the reach of any man to acquire. To assist him in establishing his home and independent living as rapidly as possible, is the duty of the people of western Washington and the state to the end that they themselves may share in the general prosperity that is bound to follow.

Crystallization of Problem.

How best to furnish this assistance is the crystallization of the problem. The legislature has failed utterly to find a way. Praiseworthy attempts have been made by chambers of commerce and logged-off land associations, by holding conventions which were monopolized by politicians and smothered by politics. There is one way by which, I believe, it can be done, and it is plain and practical, namely, the sale of powder by the state to the farmer at cost. There has been a merited demand for a soldiers' bonus, which has been granted and not paid by this state.

I venture to assert that the man without capital, who has the courage to tackle the clearing of a farm out of logged-off land is a hero and deserving of a bonus. Our congressional leaders are dinning into our ears the necessity of subsidizing the Merchant Marine. It is just as logical and more so for the state to subsidize the logged-off land settlement, and the furnishing by the state of powder to the bona fide settler free of charge would be far from unreasonable.

To the owner of the small tract the question of what to plant on his land, as it is desired to sell quick returns, is all-important. If the soil and location are adapted to it, greater returns can be obtained from fruit raising than any other line of farming, with a minimum of tedious labor. Very close study of nature is required, but in western Washington nature is mainly in alliance with man along the lines of horticulture, and failure would be almost entirely due to ignorance and neglect.

Berries of various kinds, which yield in superabundance, would give the quick returns, and in conjunction with a limited amount of poultry would form the nucleus of the farm.

On tracts of 10 acres or more the planting of a few acres in fruit trees would be advisable. Outside of a few trees for family use, apples, plums, prunes and summer pears should be shunned. We cannot compete with eastern Washington in apples. Plums, prunes and sweet cherries are nearly every year badly damaged by the rains, and there is little demand for summer or early fall pears except for canning.

LIVESTOCK

Feeding sheep and lambs for slaughter increased about 20 per cent this year over 1921, with the largest numbers being prepared for market in the western irrigated region, the division of crop and live stock estimates of the United States department of agriculture announced recently.

Reports from Colfax state that the time has come when concerted action should be taken along the lines of improving and stimulating the hog industry in Whitman county.

Through the efforts of the county agents of Clark and Fremont counties Idaho, 10 head of purebred Hereford bulls will be exchanged by stockmen of the two counties.

TIMELY HINTS TO FARMERS

By EXTENSION SERVICE SPECIALISTS

Agriculture.

Obtain bulletins from the extension service of the state college on bees and read them during the months.

Dairy.

Use all of the dairy products you can because several things which you buy in foods are cheaper in dairy products than in other foods.

Plant Diseases.

Feeding smutty corn fodder helps to spread the disease. Burn all corn smut.

Herd of Llamas in Peru.

Big Things In Peru

(Prepared by the National Geographic Society, Washington, D. C.)

Peru, which has been celebrating the hundredth anniversary of its independence from Spain, in the presence of commissioners officially representing the United States and other nations, is far enough out of the beaten path of most North Americans to be but vaguely known to them. It is often thought of, no doubt, as a little republic clinging to the sides of the lofty Andes lest it slip and be lost in the Pacific. But in area and interest Peru is by no means negligible; and if it has failed to take an important place in world affairs, either commercial or political, it may well be that that fact is due, not to lack of size and resources and potential wealth and power, but rather to immaturity.

Peru has every climate under heaven, together with many of the products and conditions that go with them. It has the sand dunes of the Sahara; the fertile, sun-bathed, irrigated valleys of California; the dry grazing lands of Australia; the productive mountain valleys and uplands of Kashmir; the bleak plateaus of Tibet; the snowy peaks of Switzerland; and the tropical jungles of Central Africa and Brazil. And off its shores, tropical in latitude but mild in temperature, the waters, so cold that often they are uncomfortable for bathing, are alive with the sea life of the near-antarctic.

Much of Peru is occupied by the towering Andes, with few passes less than 15,000 feet high, and with numerous peaks exceeding 21,000 feet. These great ramparts are chiefly responsible for the diversity of Peru's climatic conditions. They precipitate the moisture of the Atlantic winds and so create the tropical jungles that stretch from their bases toward the interior of the continent; thrust slopes and plateaus up into the cool regions of the upper air; and cut off the Pacific coast section from the moisture-laden winds, making much of it a desert.

Coast Strip Has Rivers but No Rain.

Although the strip of Peru between the Pacific and the western foothills of the Andes is devoid of rain and largely desert, many streams from the mountains break across this region to the sea, and the relatively narrow valleys, irrigated from their waters, constitute the most fertile land of the country.

Most of the desert land between the parallel rivers is not so from lack of fertility but because of the absence of life-giving water. This is a most unusual region lying within the tropics and adjoining the sea, where normally vegetable growth would be abundant. If it could be viewed from a distance of a thousand miles through a telescope it would probably appear much as the supposed canals of Mars have been described as appearing to some observers—dark, roughly parallel lines of vegetation on a drab, verdureless background. Some of the bench lands have been reclaimed for considerable distances from the rivers, and projects have been considered to impound the waters that rush down from the melting Andean snows and bring under cultivation practically the whole coast region.

Peru has an area of about 700,000 square miles and is therefore only slightly smaller than Mexico and well over a quarter the size of the United States exclusive of Alaska. If Peru could be laid down on the surface of the United States so that its southernmost point coincided with the southernmost projection of Texas its northeastern corner would lie near Peoria, Ill., and its northwestern extremity near Cheyenne, Wyo. The rough triangle would cover practically all of Texas, Oklahoma and Kansas, half of Nebraska, parts of Illinois, Missouri, Colorado, Iowa and South Dakota, and fragments of New Mexico and Wyoming.

Where the Incas Flourished.

Just as the United States was settled from the Atlantic coast and developed first its coastal strip, leaving as an unknown region for generations the country to the west beyond its mountains and deserts, so Peru has developed in the reverse direction. The European conquerors of its Inca empire entered the country from the Pacific coast, and it is along this strip of coast land that European blood and culture have made themselves most strongly felt.

To the east rise the three towering ranges of the Andes, their slopes, peaks and intervening valleys and plateaus constituting the "Sierra," the second of the three great geographic divisions of Peru. In this lofty region the Inca civilization held sway with a marvelously intricate but efficient governmental machine, before the Spanish came. Cuzco, the capital of the Inca empire, was situated in a fertile, protected valley of the Sierra region, and remains today one of the important Peruvian towns. Its population now, however, is only 15,000, about one-tenth that of the city when it was the Babylon of the western hemisphere.

In the almost inaccessible country to the northwest of Cuzco, and less than 60 miles distant, hidden away among the mountains, was Machu Picchu, the secret city where the forerunners of the Incas, almost destroyed by barbarians, nursed their civilization and culture for centuries before going out into the valleys and founding their great empire. This old city, whose existence had been only a tradition for hundreds of years, was discovered in 1911 and uncovered in 1912 by expeditions of the National Geographic society and Yale university.

The Sierra, or region of mountains, valleys and plateaus, is still the land of the heirs of the Incas. In this portion of Peru lives the largest single element in the population, the civilized Indians, descendants of the Incas. Though the population of Peru is not known accurately, it is estimated to be about 5,000,000. The Indians of the Sierra number close to 2,000,000.

Immense Mineral Resources.

In the Peruvian Sierra, too, are the mining developments. Peru's mineral resources are almost inexhaustible. Gold and silver are the minerals on which most emphasis was placed by the Spaniards. Fortunes in both were removed from the country, but rich deposits remain. In recent years copper has led other minerals in the value of production. The copper mines at Cerro de Pasco are among the richest in the world. Almost every mineral substance known is believed to have been compounded in nature's great Andean laboratory. The list of products from Peruvian mines covers much of the alphabet from antimony to vanadium. Of great importance are the petroleum wells of the northern coast, whose production is next in value to the country's copper output.

To the east of the Andes, cut off from the more developed portion of the country, lies the third geographical division, the region known as the Montana, Peru's land of the future. This part of the republic is made up of the wooded landward slopes of the Andes, grassy foothills, and the heavily timbered jungles and forests that spread out to the east for a thousand miles or more along the broad valley of the Amazon and its tributaries. Because of the heavy rainfall the growth of vegetation in this part of Peru is believed to be as heavy as anywhere else in the world. Even at midday in some of the forests the light is no brighter than at twilight in open country. In a glade, with dense vegetation on all sides, one feels that he has been dropped down into the bottom of a deep green-lined pit.

The country on the eastern slopes of the Andes and on the foothills before the dense forest is reached has been settled very sparsely; but over thousands of square miles of the jungle the foot of civilized man has never trod. A few tribes of uncivilized Indians roam through these forest depths.

Many large rivers rising on the eastern slopes of the Andes, flow across the Montana region of Peru, into Brazil, and finally find their way into the Atlantic 2,000 miles away, through the mighty Amazon. Ocean vessels ascend the Amazon to Iquitos, the metropolis of eastern Peru, nearly 200 miles within Peruvian territory; and by river boats the journey may be continued to within 200 miles of the Pacific. Along many of the rivers in eastern Peru are towns of some importance, which are the outposts of Peruvian civilization, commerce and government in this isolated trans-Andean empire.

IF I WERE A HORSE.

I think I would rather spend my days in Norway or Sweden or Denmark than in any other country I have seen. Whether it is the result of the wisdom that knows it pays to treat a horse well, or whether it is the innate kindness of the Scandinavian people—we believe it is the latter—that accounts for it, certainly the horses of these lands are a fine lot. Well fed, well groomed, well driven, with scarcely an exception, this could be said of the hundreds seen. No binders. No checkreins. Indeed, binders are rare except in France and England. German teaming horses looked exceptionally well. The poor cabmen, only a few of them, relatively, left to compete with the taxi, looked as poor as their horses, and we doubt not often go as hungry. The checkrein, so far as our observation went, is a rarity on the continent.

Community meetings not only let you know what's new in agriculture and home economics, but give you another chance to rub elbows with your neighbor.

Children are worth fully as much as livestock, then why not givin them equally as much attention as the purebred breeder does his stock.

The rich man can afford luxuries, but how about the dairyman and his scrub cow.

Teacher (to scholar)—What are you laughing at? Not me?
Scholar—No, sir.
Teacher—Then what else is there in the room to laugh at?

A small fire extinguisher in the barn and another in the house may save money.

Must Fruit Men Resort to Water Transportation for Freight Relief?

The recent refusal of railroad officials whose lines serve the apple producing sections of the northwest to consider granting the application of growers and shippers for an emergency rate, brings forcibly to mind the question of what is to be the future of this great industry, says the Yakima Valley Progress editorially in its December issue.

"Statistics on file in this office show that since 1913 freight rates have been pyramided to an alarming and almost ruinous degree," the writer continues. "From 85 cents per hundred to St. Paul and $1.00 per hundred to Chicago, New York and Memphis in 1914, the rates have been steadily increased until today, after a 10 per cent reduction in January, 1922, the freight charge is $1.28 to St. Paul and $1.50 to Chicago, New York and Memphis.

"Then, too, the minimum carload in 1914 was 30,000 pounds. This was increased on November 27, 1918, to a minimum of 31,000 pounds for cars having an inside length of 32 feet 9 inches. This minimum is in effect to date. The result of raising the minimum was to increase the number of boxes per car from 630 to 756.

Heater and refrigeration tariffs have likewise climbed upward. In December, 1914, the heater charge to Minneapolis was $20. We find no listing of Illinois and eastern points. In 1915 the heater charge to Minnesota points was $24, and to Illinois points $27, there being no heater tariff east of Chicago. The heater rate was changed on Febvuary 28, 1920 to 7c per hundred to Minnesota points and 8c per hundred to Missouri, Kansas and Illinois points. There is no provision for heater charge east of Illinois. The 1913-1915 icing charge was $50 per car to Minnesota points, $60 to Illinois, $70 to Tennessee, $65 to Buffalo, N. Y., and $70 to New York City. This charge was raised February 28, 1920, to $75 per car to Minnesota points, $80 to Memphis, Tenn., $80 to Illinois, $90 to Buffalo, N. Y., and $95 to New York City.

In view of these facts, is it any wonder that many orchardists, after a decade of toil and privation to bring their trees to full production, now become discouraged when confronted with the thought that their long-expected profits for declining years are merely to be handed over to transportation lines?

"It is not at all unusual for this carrier toll to amount to $400 per acre, and in years like the present, with a big crop throughout the nation, about all that is left to the northwest producer is the core of the apple he has grown, after the meat and skin have been carefully picked off.

"Pacific slighted growers and shippers of northwest boxed apples see the only relief to their freight burdens in water transportation, with new markets in the Near East and the Orient and with cold storage along the Atlantic seaboard to receive intercoastal shipments.

FARMERS' UNION MAP OUT LARGE PROGRAM

Kick on Suzzalo's Salary Raise—Re-Elect Adams President and Cross Secretary.

A definite program of activity was adopted at the 14th annual convention of the Farmers' Union of Washington at Spokane recently. Resolutions were also adopted requesting the dismissal of the board of regents of the state university because of its action in increasing President Henry Suzzalo's salary $6000 a year. The convention ended with the election of officers for the ensuing year.

J. Q. Adams, Spokane, was re-elected president of the state organization, and A. D. Cross, Spokane, was re-elected secretary. H. H. McMillan, Sandpoint, was chosen vice president and one of the trustees. Other trustees elected were Almor McCurtain, Davenport, and A. C. Moore, Walla Walla.

In the resolution adopted demanding the dismissal of the university board of regents the convention insisted on a legislative investigation of the circumstances leading up to the advance in salary given President Suzzalo.

Tax reductions through the lifting of specified tax levies, a 5-cent tax on gasoline and state aid for farm-to-market roads were among the planks adopted.

Here is the program adopted:

Reductions in statutory levy limits—state general, from 5 to 2 1-2 mills; county current, from 8 to 6 mills; schools, from 10 to 8 mills; roads and bridges, from 4 to 2 mills; road district levy, from 10 to 8 mills.

Repeal of Donohue road law.

Constitutional convention called by 1923 legislature, or authorization of adequate amendments, for revision of tax system.

Permanent highway levy optional for counties.

Repeal of 1 mill public road levy.

State income tax under supervision of tax commission of three members.

Legislative investigation of $6000 increase in salary for President Suzzalo of the University of Washington and dismissal of present board of regents.

National issues handled:

Indorsement of Columbia basin project.

Repeal of Esch-Cummins bill.

Against cancellation of European debts.

Muscle shoals to be developed by Henry Ford.

Action by the 1923 legislature to help farmers in drought area of the Big Bend to obtain seed wheat.

Budget law to make officials personally responsible for over-expenditures.

All elections to be held in November.

Further consolidation of departments of state government.

Repeal of 1-2 mill levy for capitol building fund.

Repeal of 1-2 mill levy for reclamation revolving fund, with provision that fund be turned into state general fund, except amount required for hydraulic engineer.

Survey of school expenditures and submission of plan to legislature for revision of school finance; reorganization of school system for economy and provision for direct state aid for relief of needy school districts.

SAYS TRAMPING MUD MASCULINE PASTIME

Tramping mud through the housewife's workshop, the kitchen, is the popular practice of the men and boys on the farm at this time of the year. Not that they mean to do it, but just can't be helped, for there is only one back entrance, and that directly into the kitchen.

This might be avoided, claims Miss M. Minerva Lawrence, extension home management specialist of the State college, by using one or two methods. One way would be to have a back hall, with a door leading into the kitchen and another into the washroom, or making the entrance hall a washroom. Whether this washroom be off to one side, or the entrance hall built large enough for a hall and washroom, it should have sufficient space to hang all work clothes and take care of the dirty boots.

Another way would be to have two back entrances into the kitchen. One for the housewife, the other leading into a washroom and then to the kitchen, for the men of the house. The washroom should have a place for a wash basin or running water where possible, so the men could clean up before entering the kitchen. The kitchen should not be the dividing place for the mud of the farm and the comfort of the home, but this should happen before reaching the housewife's worshop.

MARKET TERMS OF HOGS.

Terms used in market quotations on hogs are not generaly understood. Here are the common definitions or distinctions:

Prime Light—Not conforming to Wiltshire standard, but of smooth fleshing and finish; weight 160 to 210 pounds.

Smooth Heavies—Any type of smooth fleshing and finish; weight 210 to 260 pounds.

Rough Heavies—Of rough conformation, any weight.

Feeders—Any type of smooth conformation; unfinished; weight 160 pounds and under.

The Wiltshire standard requires jowl and shoulder light and smooth, back from neck to tail evenly fleshed, side long, medium depth, dropping straight from back, ham full, good general finish, no excess fat; weight 160 to 210 pounds.

Its Double Purpose.

"What's that there little shack you're putting up over back of the spring?" inquired a resident of the Ozarks.

"If some of them tourists come along and want to rent it, it's a bungalow," replied the citizen addressed. "If they don't, it's a smokehouse."

Production of potatoes this year in 16 countries is estimated to be 675,000,000 bushels more than last year and 40,000,000 more than the average production for the five years 1909-1913, according to figures compiled by the United States department of agriculture. The total acreage for which estimates are available was 20,261,000 acres.

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possesions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

First Bank of Genesee

A. E. CLARKE, Pres. N. S. VOLLMER-HOPKINS, V.-P.
F. J. NIEMANN, Cashier

School Notes

Wilma Casebolt

The semester exams will begin next week.

The boys' basket ball team will compete with Colton on the local floor tonight (Friday) at 7:15. A return game will be played Saturday, anthing di Colton. Two of the best games of the season may be expected. We not only want the people to support us at the local game, but all students are urged to accompany our players to Colton as rooters.

The girls' basket ball team of the high school has scheduled a game with the girls of Johnson for tonight (Friday). Since the game is to be a double-header, the admission will be 25 and 15 cents.

Too Valuable To Keep

"I want a wife," said the French Count, "with golden hair, ruby lips, teeth of pearl, a silvery voice and eyes that sparkle like diamonds."

"Yes," replied his American friend, "and if you get her it's ten to one her friends will find her in a pawnshop before the honeymoon is ended."

Pinochle Party

The home of Mr. and Mrs. Thos. H. Herman was the scene of a very pleasant pinochle party Wednesday night when a few friends and neighbors gathered for a social good time. A delicious luncheon was served at midnight.

Those present were Mr. and Mrs. Mahlon Follett and Mrs. Follett's friend, Miss Hazel Nogden, Mr. and Mrs. Ray Edwards, Mr. and Mrs. Harry Schooler, Mr. and Mrs. W. W. Burr, and Miss Floy Hummel, who is visiting with Mrs. Herman.

Will Give Program

A program of readings and musical numbers will be given in the opera house, Friday evening, January 26, by Mrs. W. D. Woodward, assisted by her daughters. A complete program will be printed later. 27-1

All Dolled Up

The school in District No. 39, known as the Lincoln school, is all dolled up with a new coat of paint which was applied last week.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
FRED ROGERS, Church Elder
CONRAD CALDWELL, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Prayer meeting Friday evening at 7:30 o'clock.

Sabbath school Sabbath (Saturday) at 10 a. m.

Missionary Volunteer society for young people, Sabbath at 12 o'clock.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

January 7 will be the date for our first quarterly meeting. A dinner will be served in the Social house at the close of the morning service, followed by reports from all officers of the church and department heads.

Church school Sunday at 9:45 a. m.

Morning worship and communion at 11 o'clock.

No Junior society next Sunday on account of quarterly meeting.

Young people's meeting at 7 p. m.

Monday at 7:30 at the F. S. Casebolt home the monthly meeting of church workers will be held.

Tuesday at 4 p. m. the Pioneers will meet.

Wednesday the ladies' aid will meet with Mrs. George Follett.

Friday at 7 p. m. the Boy Scouts will meet at the Social house.

The last night of the old year was fittingly observed with a five-hour program.

Christian Endeavor Notes

The Junior Endeavor held an enjoyable meeting Sunday afternoon, led by Wilma English and her committee. Special music was given by Esther Hickman in the form of a vocal solo. It was announced that the meetings would begin at 2:30 from now on.

The watch night meeting was a great success and was enjoyed by every one. Orland Mayer led the Christian Endeavor meeting, the topic being "The Psalm of Life." This part of the meeting was made attractive by several numbers of special music, a duet by Jesse Gray and Wilma Casebolt, a trio by Olive Jain, Alfreda Hampton and Wilma Casebolt, and a quartet by Alfreda Hampton, Wilma Casebolt, Lester Bumpass and Conrad Caldwell.

The main event of the evening was an address by Dean Eldridge of the University of Idaho, who gave a short address on "The Leading of the Light," after a short song service, his address putting every one to thinking.

After Dean Eldridge's talk the young people went caroling, and then to the Community house for games and refreshments. Rev. Pendleton conducted the quiet hour meeting. A number of testimonies were given by the quiet hour comrades concerning their work.

Dean Eldridge was in charge of the final song service and the making of the New Year resolutions. Then Happy New Year greetings were exchanged while the old year was rung out and the New Year in by the church bell.

Pine Grove News

Ira Fuson came down from Spokane to spend the Christmas holidays with the C. H. Spurbeck family, with whom he formerly made his home.

Loraine Lambert came out from Genesee and spent the holidays with his grandparents, Mr. and Mrs. R. F. Lambert.

Bessie Sams came up from Juliaetta, where she is attending high school, to spend the Christmas holidays with home folks.

Mrs. Saterfield and daughter from Deary spent several days visiting with Mrs. Blaine Sams and Mrs. Ernest Sams, who are Mrs. Saterfield's daughters.

Mrs. Pearl Lambert and Miss Marguerite Spurbeck spent vacation with their parents, Mr. and Mrs. C. H. Spurbeck.

Several attended the party at Will Gray's on Saturday evening where the time was very pleasantly spent in dancing and playing pinochle.

Most of the neighbors gathered at the home of F. G. Miller on Sunday evening to watch the old year out and the New Year in.

Winter may not trouble however to knock at our doors. It can always slide in between the cracks.

ATTENTION!

DO NOT neglect your battery. This time of the year it requires more attention than ever. If it is weak bring it to us and have it charged, or if it needs to be repaired we will do it at a reasonable price.

PERSONAL MENTION

Dr. Witty was a Uniontown passenger on Thursday.

Mrs. F. E. Lambert spent Tuesday visiting friends in Lewiston.

Mrs. Nathan Edwards was a Thursday morning passenger for Spokane.

Chas. Grieser left Saturday morning for Moscow on a short business trip.

Mr. and Mrs. B. J. Pleiman spent New Years with friends at Uniontown.

E. O. McAlister was a Tuesday morning passenger for Spokane on business.

Mrs. Erwin Peterson arrived Sunday for a week's visit with Miss Irene Mulalley.

Mrs. T. L. Neeley and son, Perry, of Johnson are visiting at the home of Mrs. Willoughby.

Mrs. Erwin Peterson returned to her home at Spokane Thursday after a visit here with friends.

Frank Willoughby and son, Fred, returned home Monday after a short business trip to Johnson.

Chas. Esser returned to Uniontown Tuesday morning after a visit with Mr. and Mrs. Chas. Grieser, jr.

Miss Floy Hummel returned home to Spokane Sunday after a visit with Mrs. T. H. Herman and family.

Miss Florence Fite returned to her home at Colton Sunday after a visit at the John Broemmeling home.

Sidney Yager is over from the University of Idaho to spend the holidays with his friend, Walter Casebolt.

Irene Gutzinger and Miss Harriet Lydon were visitors on Saturday at the home of Miss Isabelle Hasfurther.

Miss Louise Herman returned Monday morning to Spokane where she is attending Northwestern Business college.

Miss Hazel Ouse left Sunday morning for Spirit Lake, after spending the holidays with Mr. and Mrs. Fred Nagel.

Madeline Hampton of Spokane is a visitor at the home of Mr. and Mrs. Arthur Hampton, having arrived on Friday.

Robert Post, David Hickman and Frank Montague returned to Kellogg Sunday after spending Christmas with home folks.

Mr. and Mrs. Chas. Smith returned home Sunday after spending the Christmas holidays with Mrs. Smith's mother at Spokane.

Miss Johnson, who teaches the Jain school, returned home Sunday after spending the Christmas holidays with her parents at Troy.

Miss Hazel Noglen left for her home at Spokane after spending the Christmas holidays with her friend, Mrs. Mahlon Follett, and family.

Mr. and Mrs. Loren Bumpass returned home Sunday after spending Christmas with Mrs. Bumpass' parents, who live at Uniontown.

Miss Grace Crossett returned Wednesday afternoon from a few days' visit with her sister, Mrs. John Cameron, who lives near Palouse, Washington.

Mr. and Mrs. J. N. Guerrettaz were Thursday morning passengers for their home at Kennewick, Washington, after a visit with Mr. and Mrs. Mike Reisenauer.

J. H. Wicks left Saturday morning for Moscow to spend New Years with his family. His son, Guy, came over from Moscow in the morning, returning with his father in the afternoon.

Mrs. Clarence Flower and little daughter from Walla Walla are visiting with Mr. and Mrs. Milton Rader.

Jas. Montague returned last week from an extended stay at Dillon and Butte, Montana.

Gave Tea Party

Mrs. Jack Barnes on Friday entertained a group of ladies in honor of Mrs. Betzold of St. Louis, Missouri, who is visiting her daughter, Mrs. R. I. Witty, and family. Needlework furnished entertainment for the afternoon. The color scheme was in red and white.

The Misses Wilma and Helen Casebolt served tea and also furnished music consisting of songs and piano solos.

Those present were Mrs. Betzold, Mrs. R. I. Witty, Mrs. F. S. Casebolt, Mrs. J. H. Jackson, Mrs. Leon Follett, Mrs. George Follett, Mrs. W. E. English, Mrs. F. K. Bressler, Mrs. Ira Hanson, Mrs. F. C. Shork, Mrs. Johanna Christenson and Mrs. Fred Shirrod.

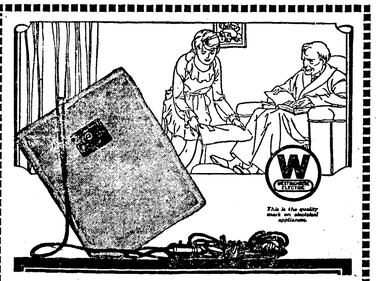
Roads Badly Cut Up

The state road between Genesee and Lewiston is very badly cut-up and dished-out from heavy travel when it should have been "clear." Idaho is unquestionably deficient of laws to protect the roads and as a result they are ruined by heavy and constant travel at a time when they should be kept clear.

Washington has a law that the road commissioners can keep stages and trucks off the highway at their discretion—and that is just what Idaho needs. Until that time, the roads will be cut up and almost impassable at the time they should be preserved.

Progressives Meet

Mrs. Fred Nagel was hostess to the Progressive club on Thursday, December 28. The afternoon was pleasantly spent with fancy work and social converse. Refreshments were served by the hostess, who was assisted by Mrs. Lena Ouse and Miss Hazel Ouse. The invited guests were Mrs. J. H. Jackson, Mrs. Sarah Elliot, Mrs. Nellie Haymond, Miss Floy Hummel of Spokane, Mrs. R. I. Witty, Mrs. Betzold of St. Louis, Mo., Mrs. Leena Ouse and Miss Hazel Ouse.



Our January Special
Westinghouse Electric Warming Pads

Soft Warm Soothing **$6.95** Three Degrees of Heat

Each month we present some electric convenience of standard quality at much less than the regular price.

During the month of January our special will be the famous WESTINGHOUSE WARMING PAD. It does away with the old Hot Water Bottle. Buy one for the sick room, for baby's crib, for grandma's or grandpa's back. But buy it now while the price is reduced from $9.50 to $6.95.

We receive shipments of fresh vegetables twice-a-week and Holsum bread fresh every day. Coffee cakes every Saturday.

Follett Bros. Mercantile Co.

Coyotes Boldy Attack Deer in Idaho Mountains

Harry Walrath, deputy state game warden for Clearwater county, Idaho, holds the view that coyotes in the mountain districts have developed the instinct for pack hunting. Deer are facing a new menace. Recently he brought to Lowiston the mutilated carcass of a deer that had fallen a victim to coyotes on Whisky creek, about nine miles from Orofino. Five coyotes were devouring the carcass when discovered. The snow was 18 feches deep.

Coyotes usually hunt their prey singly or in pairs and have never been considered a menace to grown deer, the latter even being able to protect the fawns.

Mr. Walrath states that during the winter of 1921-1922, when snow was unusually deep in the Clearwater mountains, many deer perished and there were evidences that large numbers were victims of coyotes, enabled by the depth of the snow, to successfully attack in packs. They developed a ferocity similar to that shown by dogs, the latter rarely singly attacking a sheep to kill, while in bands it is not uncommon for dogs to carry out a slaughter.

Mr. Walrath states that the mountain coyote, selecting his habitat in the edge of the timber areas, while of the same strict blood lines of the prairie coyote, has developed into a larger animal. He is distinguished also by prominent black markings on the head. Mr. Walrath avers that data gathered during the year convince him that the loss of deer in the Clearwater district during the winter of 1921-1922 reached 25 per cent of the total. He accredits this condition largely to the coyote.

He reports evidence of a marked increase in the number of coyotes and believes that, considering the menace to agricultural interests, independent of the game feature, the counties of the northern section of the state should make a special tax for a bounty of $2.50 to be added to a like sum now paid under the state predatory animal tax.

CLARKSTON, LEWISTON WANT GOLF COURSE

Twin Cities Plan on One of Finest Links in Northwest—Would Replace Fairgrounds.

A movement is under way that promises to give Lewiston and Clarkston one of the finest golf links in the northwest. The project embraces securing a lease on 200 acres from the Lewiston-Clarkston interstate fairground. It is in the northern section of the city, extending to the banks above the Snake river. The contour affords ideal golfing areas. It is the view that the improvement company will not be adverse to leasing the tract for this purpose, as it embraces ground now in part devoted to alfalfa growing.

Links located here could be reached after a walk of a few hundred feet from the street car line and the west line of the tract is not more than a mile from the center of Lewiston's business district and a half mile from Clarkston's center.

Lewiston golfers realize, that because of encroachment of the residence district on their course on Normal hill, a new site must be secured. An area of 120 acres would provide an 18-hole course, with space left for tennis courts and other purposes.

CLEANING POTS AND PANS.

Where it is necessary to scour metal, whiting as a scouring substance will give the metals the least wear, says Miss M. Lawrence, Home Management specialist. The acid of common foods, such as rhubarb, tomatoes, lemons, or oranges will often remove discolorations.

Whiting moistened with any food acid such as mentioned above is good for aluminum. Washington soda should not be used as the alkali it contains darkens the metal.

A weak soda solution will remove grease from brass, and whiting and a dilute acid will remove tarnish; brass may be polished with rotten stone and sweet oil, and dried with a soft cloth.

Copper may be cleaned in the same way. Kerosene will remove rust and grease from iron. It may also be boiled in a strong solution of washing soda.

Home Management.

A shoe scraper on the back porch will leave the winter's back yard and barn dirt where it belongs rather than on the kitchen floor for mother to clean up.

Livestock.

If your breeding ewes are thin, give them one-half pound daily of oats, bran and linseed oil meal, 6-3-1 parts each by weight for the last two weeks before lambing.

Poultry.

This is a good time to look over your brooder equipment, clean and disinfect the house, sprinkle quicklime over the yards and put in shape.

Horticulture.

Start the pruning early if there is much to do.

Sure Sign.

"He's a new driver."

"What makes you think so?"

"He hasn't got over arguing with the traffic cop yet."

Famous cows in history include, the cow that jumped over the moon; the cow that started the Chicago fire and the cow that laid out the streets of Boston.

IDAHO

Coach E. E. Goldberg of the Coeur d'Alene high school has resigned.

Ice is being taken from the St. Maries Ice company. It measures from 8 to 12 inches. It is unusual to be able to store ice from the rivers at St. Maries so early in the season.

A fuel famine has hit Lapwai. Inhabitants have been burning boxes, old lumber, fence posts and furniture.

Bids for the contract of the Lapwai Valley highway, which will follow the west side of the railway tracks the entire distance from Lapwai to Spalding, will be opened early in January.

A tract of white pine timber near Weippe, Idaho, has been bought by the Ohio Match company from Henry Turrish, Duluth lumberman, for a reported consideration of $200,000 cash.

The Rev. Dr. Clarence J. Atkins, pastor of the Methodist church at Juliaetta, Idaho, was recently stricken partially blind presumably from sleeping sickness.

A car of seed potatoes grown by Censky and Haney of Winchester Idaho, recently were shipped by A. E. Wade.

The poultry department of the college of agriculture recently received a gift of 80 purebred Single Comb White Leghorn hens from Mr. Archie Larsen of Weiser.

Teton county farmers are considering the organization of a cooperative barn building association.

Ride Treacherous Waters of Snake

Riding the treacherous waters and rapids of the Snake river from Weiser to Lewiston, is the feat Leigh Lint, a Weiser boy, 20, and his companion, Lon Ensign, are attempting. They left Weiser recently and expect to make the trip safely in a new boat built especially for the occasion. The winter months will be spent in trapping along the stream. Lewiston should be reached early in the spring when they hope to have a rich haul of pelts.

The distance of this trip is 222 miles. It will carry these two adventurers through one of the deepest and mightiest gorges to be found in the west. Lint is an experienced boatman. He has been in the service of the geological survey and has navigated some of the greatest rivers of the country.

At some points in the Snake river canyon, the gorge is 7000 feet deep. Few people have ever made the trip. The mighty Snake river after traveling west through southern Idaho turns directly north and cuts its way through southern Idaho, turns directly north and cuts its way through mountain range after mountain range. The canyon walls are narrow, the falls along the river dangerous and the current of the stream swift.

Matching Wits.

Shipments of sheep and lambs back to the country for feeding showed an increase during the first nine months of this year of 355,000 head, or more than 21 per cent, over the corresponding period of last year, although there was a decrease in market receipts of 2,206,000 head, or nearly 13 per cent, according to a report of the United States Department of Agriculture.

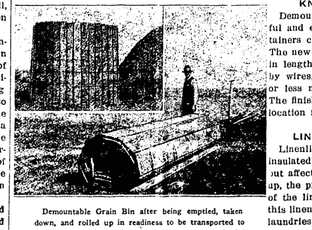
Your child underweight? If so, get the nutrition specialist or county nurse busy and help build him up.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

KNOCKDOWN GRAIN BINS OF WIRED BOARDS

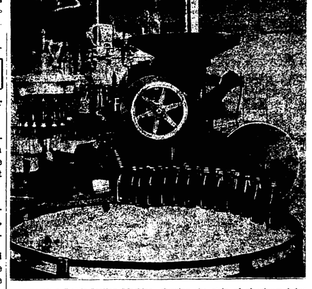
Demountable wooden bins have been introduced as a successful and economical substitute for the light galvanized-iron containers commonly used by the grain growers of the Northwest. The new bin is made up of 1 by 8-inch boards, from 6 to 8 feet in length, which are placed side by side and fastened together by wires, which are stapled to each unit. By using a greater or less number of boards, bins of any capacity may be built. The finished product may then be readily set up in any desired location for the reception of grain.



Demountable Grain Bin after being emptied, taken down, and rolled up in readiness to be transported to the storehouse. Insert shows the bin set up ready for use.

LINENLIKE COLLAR CLOTH IS EASILY CLEANED

Linenlike collar cloth, every thread of which is permanently insulated against stains and dirt so that these do not penetrate but affect the surface only, is a new development. When made up, the product appears to have all the desirable characteristics of the linen and semi-stiff tailored collars. Sample batches of this linenized cloth have been thoroughly tested in various steam laundries, with the result that stains, of the kinds ordinarily the most troublesome to be removed, have been taken out without difficulty or injury to the material.



Automatic Bottle-Sealing Machine, showing the strip of aluminum being fed from the coil at the rear, while, at the top of the outfit, may be seen the large hopper for the cork or paper disks.

BOTTLES CORKED AND SEALED BY NEW MACHINE

Corking and sealing bottles at these come from the automatic filler at the rate of 6,000 an hour, is possible with the use of a recently produced machine. Large hoppers on the outfit are filled with thin disks of cork or paraffined paper, and a strip of aluminum is fed from a coil. In operation, the machine places the cork or paper disk on the bottle, after which the aluminum seal is fastened on the containers, everything being done automatically.

An international chain of weather stations along the arctic circle is being proposed by the United States government. Experts say that the stations would increase the range of reliable forecasting to two weeks, practically doubling the efficiency of the service.

The first official disclosure that President Harding is negotiating toward an international conference for the consideration of European economic problems was made by Senator Lodge of Massachusetts, republican floor leader, during debate in the senate December 27.

The Fun of Picking Up 50 or 60 Nickels a Day

If I should tell you where you could pick up from 10 to 100 nickels every winter day would you be interested; I am not even going to wait for you to ask, says W. J. Green, Spokane County Boys' and Girls' club agent. These nickels can be picked up each winter evening right on your own farm. But you will have to have patience, perseverence and a willingness to follow directions.

Purchase Day-Old Chicks.

Second, purchase from 50 to 500 White Leghorn day-old chicks between the middle of March and the first of May. Good ones will cost from 16 to 20 cents each. By the time these pullets are seven months old you should have the fun of picking up from 10 to 15 eggs every day which would be worth at present retail prices 5 cents each. From the 500 chicks you should raise 200 pullets and these, with good management should, at seven months old, be producing 100 or more eggs per day.

Of course some of these 100 nickels will have to go for feed and some for interest on your investment, but after these bills have been paid you should have a good many nickels left. Twenty-five nickels each day should pay your feed bill for 200 hens. You should be able to sell the fertilizer to father for his orchard for more than enough to pay the interest on the investment, in stock and equipment, which would amount to from 12 to 16 cents per hen per year. According to information from the Washington State college, the fertilizer produced by a White Leghorn hen in one year, is worth, compared to commercial fertilizers, 26 cents.

There's Fun in This.

But think of the fun in it for all, for there is a lot more fun in gathering eggs that are worth a nickel a piece from your own hens then there would be scrambling after a handful of nickels thrown in the road. It's more fun because you are aware that you have produced something worth the nickel. It is more fun because the more you use your brains and attend to business the more nickels you will find in the nests each evening. With 200 hens, a willingness to work and use his brains a boy or girl should be gathering a small water pail full of white eggs every winter evening worth a nickel apiece. After he has paid his bills he should have 50 or 60 nickels left.

What could you do with 50 or 60 nickels a day, boys and girls? Why, you could buy all your own clothes. Have a little spending money when you wanted it without having to ask father. You could put considerable in the bank with which to go to college or enlarge your poultry project for next year so you could gather more nickels every evening.

LOOK SERVICE MEN OVER

Veterans' Bureau Makes Efforts to Adjudicate Claims.

In an effort to have every compensation claim of hospitalized war veterans of the Pacific Northwest adjudicated before January 1, a campaign has been started by the Seattle district office of the United States Veterans' bureau to make a survey of all service men in hospitals and push the claims of those who are able to connect their disabilities with war service.

There are now 856 ex-service people in hospitals of this district. This is an increase of about 40 in the last 10 days. Forty more entered hospitals who took the places of others who were discharged during the same period of time. Increased hospitalization is expected during the next two or three months.

More than a billion and a half pounds of butter was produced in the United States department of agriculture. This is an increase of 10 1-2 per cent over the production in 1920. Consumption increased more than production of 20,000,000 pounds, the difference being taken care of by imports and butter withdrawn from cold storage.

His Ambition.

"Sometimes I get to thinking I'd like to move to town," admitted the gaunt mountaineer. "If I could get hold of a nice little place down night the public square and bring in three, four cows, a passel of chickens, a few ducks, a scattering of guinea hens and so on, for wife to 'tend to, and two, three old wagons, a corn sheller, and such as that, for me to tinker with when I got lonesome, and could get acquainted with a bunch of the the right sort of gents to argy politics with, and so forth, I reckon I'd be happy and contented if my rheumatiz didn't get to hectoring me too bad."

Uncle Cy, from up North, says he can remember when it was so cold his grandfather had to get up early winter mornings and go down on Hobbs' Hill with a crowbar and pry the sun up to get it started. He hopes it won't be so cold this coming winter.

Qualified.

Negro rookie—I'd lahk ta have a new pair o' shoes, suh.

Sergeant—Are your sohes worn out?

Rookie—Worn out! Man, the bottoms of mah shoes are so thin Ah can step on a dime and tell whether it's heads or tails.

Deer Tow Men Caught in Snow

Six California mountaineers, caught by an early, heavy snowfall in the Sierras, captured 12 wild deer, harnessed them together to an improvised drag and broke a trail back to civilization.

The men were working early in November building a summer camp at Gold lake, a point far up in the mountains. When a heavy snow storm came up unexpectedly, they found themselves with only a few provisions and without snow shoes or skies. Help could not reach them, they knew, before several days.

Steve Pezzola, the leader of the crew, immediately set about making sets of skiis for himself and his men using such lumber as was available. In the meantime the snow continued to fall until more than five feet covered the roads and trails.

On the second night of the storm, a herd of deer, fleeing before the snow, sought refuge in the camp. Grasping the opportunity, Pezzola and his companions herded the animals in one of the uncompleted rooms.

The next morning the deer were harnessed to a drag and the six castaways, mounted on home-made skiis and hanging to the drag, started off towards civilization. The deer were successfully guided until they had broken a road through the deepest parts of the snow-covered forest and had arrived almost at the edge of the tableland where the road starts down out of the mountains.

There the animals were treated to the last sugar in the men's supplies and were turned loose to return to the forests. A few hours later the men, continuing on foot, met a team and sleigh loaded with supplies, making slow progress up the hills to the camp.

AN ODE TO BALING WIRE

A freight train stopped outside our town, not many months ago, to make repairs to cars broke down so that the train might go. The train crew scampered all around and searched the neighb'ring muck, to find the thing they wanted most to fix a damaged truck. They soon returned with happy smiles—they found it to be sure —a bit of baling wire, you see, to mend and make the cure.

All hail, the piece of baling wire! He who invented it, in Hall of Fame should have a place; his name would surely fit. And if he's dead, there is no doubt he's gone to that dear place where no repairs there are about to stare him in the face. No other thing conceived in years such aid to folks has lent. It's used for many things, you know, for which it wasn't meant.

Designed to tie up cattle's grub, its work is just begun. The farmer totes it with him as the soldier totes his gun. To mend a severed singletree or broken strap restore, he ties it on his wagon bed and straightway frets no more. The farm machinery must be kept in working shape the while, and baling wire on plow beam sleeps till need brings forth its smile.

While lots of folks declare they know what twas that won the war, I think that baling wire, by gum, was helping near and far. It kept munition plants at speed when some machine did break, and helped the farmer mowe his grain with haste for mercy's sake. The modern motor truck ofttimes is met with accident, so now a bit of baling wire in tool box lies content.

But oft we hear a follow cuss when wire his foot entwines. It lies along the roads of life in almost all the climes. Let cusser cease his vile remarks—a little blessing quote. Who knows when baling wire must serve as buttons on hos coat?

An investment in a purebred sire yields dividends with every calf.

Farm accounts make the farm of more account.

THE SELECTING OF YOUR WALL PAPER

Wall Paper Has Renaissance—Shun Shoddy Things—Watch Color.

(Article No. 8—Continued.)

Wallpaper possesses human qualities because of the human thought and brain power put into its production, for it matters not whether it is wallpaper or any other everyday article, whatever it is, it shows exactly the amount of gray matter put into its creation. It is this value that you pay for. Do not insult your family or your own intelligence by using anything but that which shows well directed thought in its creation. When selecting wallpaper let this feature be your unerring guide. Shun the thoughtless, shoddy things that are thrown on the market on commercial basis only as you would shun a disease, for such things are morally harmful to your children and leads to a lack of respect and pride in the home.

Other details to keep in mind in making your selections are design, color, texture, decorative ensemble, utility, furnishing power and unity of detail. Treating these details in a few words separately, under the head of designs also comes purity of motif. The design should in the first place be well drawn and thoroughly tied up with a completeness of detail without being fussy. Its component parts should form a continuity. A floral design should be free from the defects of disconnected stems, detached leaves and flowers.

Figs do not grow on thistles in Wallpaper any more than they did 2000 years ago in the parable. If they do they are abortions and are dumped on the market to be sold to the unsuspecting seekekr after something-for-nothing class. Architectural designs should show proper perspective, proportion and balance and appear on a good foundation. Don't buy a paper showing a house set on a tree.

(Continued next week.)

Boys' and Girls' Farm Club Work

Free trips to the Carnation stock farm, Seattle, Wash., next spring are the prizes awarded to the 20 live stock club boys and girls of Oregon who made the best live stock exhibits of dairy breeds at the Pacific International Live Stock exposition at Portland recently. E. A. Stuart, president of the exposition, is the donor. Carnation stock farm is one of the largest and most perfectly equipped breeding establishments of dairy cattle in the west.

Club boys and girls in the state of Washington, transacted a business amounting to $153,141.11, and made a net profit of $67,898.44 during the year 1922, according to reports received from Extension Service of the State college.

Eleven Awarded Scholarships.

Eleven club boys have been awarded scholarships to the State College of Washington by the Union Pacific system. The boys include: George Sisters, Ritzville; Everett Terrill, ennewick; Harlan Shepardson, Kelso; Robert Polson, Montesano; William Scott, Renton; Frank Knizek, Dryad; Edwin Kroph, Eatonville; Roy Taylor, Olympia; Benson Smith, Walla Walla; Eugene Harms, Pullman, and Ray Hinds, Selah.

These scholarships amount to $75 each and free transportation over the lines of the Union Pacific railway. The awards were based upon rank in club work, activities in community affairs and standing in high school.

INTIMATE SKETCHES OF THE BIG BEND

I Nearly Kill a Horse

The fourth day out my standing with the men sank another twenty-five per cent. Thus I was fifty per cent below their original estimate. I had toiled through the first three days, keeping up with the best of them, pitching my share of the load and holding my turn under the header spout. The first night I was dead tired; the physical agony I suffered was terrible; the muscles of my arms and legs and back were thoroughly worn out that day, and muscles which I had never dreamed were in my body were sore as boils. The second day was as bad as the first. The third day I began to notice a change; the work was not nearly so strenuous, and I did not ache so much at the end of the day.

It was on this third day that the men really began to consider my sojourn seriously; when they first saw me some of them thought I might last three days. Others were doubtful. On the third day, however, the stacker watched me pitch for a few minutes and then remarked, "I don't see where the little devil gets his strength. You sure wouldn't think it was in him to look at him."

Moved to Another Ranch.

That same evening our outfit moved to the Hanson ranch nearby to cut a sixty-acre tract. I rolled in my blankets that night with the knowledge of a day's work well done and the pride of being elevated a little higher in the crew's estimation.

Next morning at daybreak we rolled from the hay, fed our horses, tied to our respective header-boxes, and went in to eat breakfast. As I was the first one to leave the field the day before I was the first to go under the spout that morning. I was still having difficulty harnessing my horses; as a consequence that morning at breakfast I hurried through so that I might get away and get hooked up in time to start with the leader.

As I rose from the table the men looked up in surprise: I was generally the last one to leave the table. One of them called out, "What's the matter, kid? Haven't lost your appetite, have you? Hard day ahead; better eat some more." To which I paid no attention. I stepped outside and hurried to my horses.

A Green City Kid.

As I was harnessing I heard the spike-pitch telling the owner of the ranch that I was a green city kid and that I had probably left the table so soon so that I might get hooked up in time.

I was struggling with the hames. It seemed everything was going wrong. We had laid our harness on the ground behind the horses the night before. I found I had not placed my harness back far enough and it was thoroughly scattered after the horses had finished tromping over it. Finally I got two harnesses on properly. Then I started harnessing Barney. I got the collar on in the correct fashion; then I stood on my tiptoes and shoved the harness over his back. I attempted to tighten the hames strap. I found it absolutely refused to tighten even to the first hole. This surprised me; the morning before I remembered distinctly that I had no such trouble. I struggled and sweated. Then I called upon my newly acquired vocabulary. All to no avail.

I pulled and tugged and twisted and nearly yanked Barney off his feet. By this time I was nervous and excited and terrified that I would not get into the field in time. The other two drivers were hooked up and already on their way to the field. With a super-human tug motivated by despair the strap pulled to the first hole.

Steeled to Bantering.

With a sigh of relief and thankfulness I boarded the header-box and drove to the field. I arrived in time to start the first load. The loader could not resist asking questions about the delay. I did not hear him: I had reached the stage where I kept still when the men tried bantering.

Well, for about two hours we worked. Then I noticed that Barney began coughing a trifle. This did not interest me: people coughed often, why shouldn't a horse? It did not occur to me that anything might be wrong with the animal. As we progressed the coughing grew worse and worse. Finally the loader asked me what was the matter with Barney. I told him I didn't know. The spike-pitch asked me the same thing when I drove to the stack. He thought possibly it was the cold and inspected the animal with that in mind. No result. As I drew up to the header for another load the puncher noticed Barney tottering a trifle and yelled to me, "What's the matter with that horse, kid?"

"I don't know, Paul," I replied. "I can't tell."

Barney Grows Weaker.

He crawled from his saddle and slouched over to my team. He looked at Barney; he was growing weaker every moment. The animal could scarcely stand. Paul unhooked him and led him a few feet away. Barney was just about ready to topple over. Paul looked again, then tugged the hames strap loose and roared, "Say, kid, can't you even harness a horse yet?" I was so scared that I could not answer.

He lifted off the harness, turned it inside out and threw it on the horse—all neatly and quickly; the hames strap cinched with no trouble. I had nearly choked the horse by putting the hames on wrong side out. The men bore this episode in mind for several days.

The wheat we cut on the Hanson ranch averaged about ten bushels to the acre; this was considered a medium crop. The grain stood low and the header ran nearly touching the ground, thus necessitating a special watchfulness for rocks. The dust and chaff, of course, were blinding. A cloud rose from the header and the chaff from the spout swept into our faces when the wind blew right. And how that Big Bend wind can blow! Some days we would start, the air being dead calm. And then out of a clear sky it would break. We could see it coming several miles away and it came with such startling speed that we scarcely sighted it before it was upon us. Then it was a matter of looking ahead the best we might to follow our swath and avoid rocks. There was hardly a day that the wind did not blow some, and it was a matter of only a few minutes after we united the field before none of us was recognizable. Added to the dirt the sun was so hot that it drew sweat streamers across our faces.

Shorty, the writer of these articles, is shown here with a harvest beard. By this time he is becoming accustomed to the bantering of the members of the leading crew.

Although he has been four days on the job he still is not acquainted with all of the intricacies of harnessing a horse. Then to add to this the loader and he have a slight misunderstanding which results in an unexpected ending.

Speaking of the Big Bend wind the writer says: "Some days we would start, the air being dead calm. And then out of a clear sky it would break. We could see it coming several miles away and it came with such startling speed that we scarcely sighted it before it was upon us. Then it was a matter of looking ahead the best we might to follow our swath and avoid rocks."

Dreamed of Shady Boulevards.

Often we hit a rock; this necessitated repairing a guard tooth; often something else happened to the machine; whenever anything went wrong there was a welcome delay (welcome to me). I generally seized these golden moments to slump down in a shady corner of my header-box for a good rest. I particularly remember the wheat which had sifted through the hay and lodged in the cracks and holes of the wagon.

This I would pick up, blow the chaff away and consume with a relish. At times our delays were for only a few minutes; other times they lasted a half hour or an hour. On these latter occasions I soon became drowsy and underwent a delicious stupor, during which I dreamed of shady boulevards and cool swimming tanks and gallons and gallons of ice cream. But always my dreams would be rudely broken into by the loader crawling into th obox and announcing that it was time to go

Was Tromping Load.

This loader I soon began to believe was tromping my load. When the spike-pitch and I began pitching it off he told me my load was harder than the other loads and that the loader was probably tromping it. Now this spike-pitch was somewhat of an Iago himself (John, you remember, of the duck-hunting episode)—he wanted to start some trouble. I had heard him remark to one of the other men that the follow was not a real loader and had probably driven box the year before some place and had come up here this year thinking he could break in the first thing as a loader. He did not like the man. So I watched the loader and the more I watched the more wrathy I grew. I could see (or I thought I could see) that he was deliberately tromping my load.

The Loader Quits.

I pondered the situation and in time hit upon a way to get even: I would drive so that the hay would come from the spout just far enough ahead to be out of his reach. He would thus be required to make an unusual effort to load. This trouble developed about a week after our run began and I could handle my horses well enough to perform the desired feat. I hoped that eventually this wearing-down attempt of mine would cause the man to quit. I told the spike-pitch what I was doing and the next time the loader was close he told him, "You can tromp the kid's load all you want, but he's got you now. He'll get you, just watch."

Well, I was so small that the loader could not start a fight. The feud lasted about three days. On the morning of the fourth day when we went to breakfast we found the loader had asked for his time. Paul drove to town immediately and brought out another loader, an I. W. W. we later learned.

This man had some interesting stories; incidentally he was the one who caused me a little latter to tip my header-box over on a steep hill side.

The A.B.C. of Good Tea

THIS diagram shows clearly one reason for the superior flavor, strength and aroma of RIDGWAYS TEA.

In order to get the very choicest pickings, only those leaves marked "A," "B" and "C" are gathered for Ridgways. These tender, young tip-leaves give to Ridgways Tea that rare quality of flavor which distinguishes the famous Ridgway blends.

The leaves marked "D," "E," "F" and "G" are coarser and less flavory and therefore *are never used by Ridgways.*

This carefully guarded Ridgway quality also assures more cups to the pound. When you buy Ridgways Tea you not only get the best tea, but actually more of it than is possible from inferior tea. As an example of rare good tea we suggest that you order Ridgways (GOLD LABEL) the *Genuine* Orange Pekoe.

How Yakima Handles More Than 1,300,000,000 Red Apples

By H. M. GILBERT

From all over the Northwest—from the wheat fields of eastern Washington—from the big cities and the small cities and the little hamlets—every fall come Fords with families to pick a billion three hundred million apples!

Many women and men average over a hundred boxes per day. At five cents per box, the usual wage, the husband and wife make ten dollars per day, and the children various amounts in addition.

Young women and girls wrap every apple with paper, size the apples accurately and place them in the box, often packing one hundred and fifty to two hundred boxes per day. For this they receive five cents per box, or from five to ten dollars per day.

To do this each girl must pick up, one at a time, and wrap separately about 20,000 apples per day of ten hours.

With many people, apple-picking time is a sort of picnic seasou—October days in the Yakima valley are the finest in the world and many workers camp in the orchards.

Girls from the best families and girls from all kinds of families adorn themselves suitably and engage in sorting and packing, developing wonderful muscles and being rewarded with the real out-of-doors, red-apple beauty on their cheeks. Not least, though, in their minds is the big weekly pay-check for two or three months, which buys their winter clothes, helps pay for a home, or quite generally buys a new Ford.

In the early days at Yakima, hop picking in early September was the gala time and called the red Indian and the society lady to the great out-of-doors for health and some spending money. Now it is the Yakima Red Apple—the most beautiful of all earth's fruits, which every October calls all to the great out-of-doors, where Health is King.

If you want to see Yakima at her best—come in October; see the millions of red Wineaps in their setting of green.

In twenty-four years I have seen the sage-brush and jack rabbit vanish from our hills, and Wineaps, Delicious, Jonathans and Rome Beauties grow up and crown these same hills with an ever-increasing splendor.

I have lately seen the olive orchards on a thousand hills in southern Spain, lemons in Italy, oranges in Palestine and in our own California, apricot forests in Damascus—but none of them are comparable in beauty and usefulness to mankind to the apple orchard of Yakima.—Union Pacific Magazine.

Raise the heifers from your best cows, it costs less in the end.

PUBLIC SALE

REGISTERED BIG TYPE POLAND CHINA

BRED GILTS

AT NORTHWEST LIVE STOCK SHOW GROUNDS, LEWISTON, IDAHO, AT 1 O'CLOCK P. M.

Thursday, January 18

I will sell at public auction at my third annual mid-winter bred gilt sale, 20 head of the choicest gilts I have ever had the pleasure of offering to the public.

These gilts are all bred to real boars with lots of scale and are blue ribbon winners, and sired by such hogs as Funke's Ranger Rob, a son of Walters Wonder and a grandson on the dam's side of Montana Bob, and Funke's "Big Wonder," the grand champion boar of Washington State fair, and are out of my grand champion and blue ribbon sows and are bred to boars gleaned from my many years' experience that could be employed in mating these hogs.

Plan to attend this sale and if you can not be in attendance, wire mail your bids to me in person or to Harry C. Cranke, sales manager and auctioneer, and they will be handled in a straight-forward and business-like manner.

Terms of sale cash, or bankable paper drawing 10 per cent, payable September 1, 1923.

JOHN FUNKE, Owner, Cottonwood, Idaho
HARRY C. CRANKE, Auctioneer — N. A. LITHERLAND, Clerk, Grangeville and Moscow — Cottonwood, Idaho

IMPORTANCE OF MINERALS FOR LIVE STOCK

A very timely article from the pen of Louis F. Dilger, Lucerne, Switzerland, appeared in the Breeders' Gazette on the value of mineral for livestock.

The importance of limestone is clearly kept before our eyes, and our attention is drawn to its significance in regard to the physiology and pathology of assimilation. A deficiency of lime in animals' organs increases their predisposition to disease, and a surplus enhances their vitality. It is therefore important to consider lime and its relation to live stock husbandry. Limestone is rich in lime and so are limestone water, limestone grass and limestone clover. Consequently animals obtain far more nourishing feed where limestone is in abundance than they do in districts poor in limestone, unless the land is artificially enriched with liberal amounts of the substance. Feed lacking lime eventually brings about a run-down condition of the body, and animals have less endurance and weakened powers of resistance. In the absence of lime, sheep sometimes eat their wool and fowls eat their feathers. This is easily explained for feathers, wool and hair contain comparatively liberal amounts of lime. This condition of animals is known as "lime-hunger." It is not only common in the lower-animal world, but it also occurs among human beings, and in plant life. Kentucky is rich in limestone, and this accounts for its excellent horses, cattle, sheep and swine for which the state has an international reputation.

A striking example is afforded of the connection between lime and vitality by the conditions which prevail at the foot of the Vosges mountains. There is a village called Forbach, and the soil of which consists chiefly of sandstone. There is no limestone in the immediate neighborhood. In this village observations have been made on animals and inhabitants. As a rule the children get the rickets, have crooked limbs and at four years old are unable to walk. Expectant mothers are unable to walk without the assistance of crutches, because they have softening of the bones. The cows in the neighborhood frequently break their legs. Within a half mile of the village conditions are different. The inhabitants are well developed physically, mothers and children are well and hearty, and the animals are healthy and lively. First-class oats are grown. The inhabitants, the animals and the plants thrive and the prosperity is attributable to a great abundance of lime.

When the well-developed Swiss Simmenthaler cattle are sold to go into the district which is poor in limestone the breed gradually deteriorates. The breed possesses by nature large bones, and its anatomical structure is massive. An animal of this type requires a great deal of lime. Cow's milk, for instance, is rich in lime, and for a well-defined purpose. The calf is an unusually rapid-growing animal and has large bones. It therefore requires considerable lime, which is obtained principally from the milk of its mother.

It has been observed that in districts which are rich in limestone tuberculosis is practically unknown, and that certain European cattle do not have the disease. That the country of their origin is rich in limestone is the only accountable reason for this singular occurrence, and this is a theory which today remains unchallenged. Within the last few years a new breed of cattle known as the Blue Albion, has come to light in England, and its exponents claim the breed is immune to tuberculosis. These cattle come from the county of Middlesex, which is, so far as I know, rich in limestone. The large Hungarian ox is also a breed which is supposed to be free from this disease; in fact, it is described by many European authorities as being immune to tuberculosis. There is another breed of cattle called Franken. Its geographical distribution is confined to parts of Alsace-Lorraine and Germany. This breed is known to be tuberculosis-free to a certain degree. Since tuberculosis is a disease affecting most tissues of the body, and thereby causing the wasting away of the tissue cells, it is reasonable to assume that when the body absorbs a liberal and normal amount of lime to sustain the various organs of life there is a perpetual process of keeping up the vitality of these cells through the constant supply of lime. It is an established fact that an insufficiency of lime is the cause of a weak constitution.

That lime increases prolificacy and has a decided influence on the progeny is a fact which cannot be disputed. A well-known European professor has made some remarkable experiments in this direction which deserve attention. Many years of observation have established beyond a doubt that a liberal diet of lime has an influence upon the propagation of mice, guinea pigs and rabbits, and that by feeding calcium chloride the number of litters as well as the number of young in individual litters could be considerably increased. In the experiment which proved this, five cages were under observation. In one cage the mice were fed calcium chloride bread, corn meal and hempseed in the second, sodium chloride was substituted for the calcium chloride, and in the third calcium chloride was given; in the fourth magnesium chloride; the fifth cage contained a control lot. A dose of calcium chloride was added to the food in the proportion of .1 of a grain for every kilogram of live weight of the mice. By feeding calcium chloride and magnesium chloride propagation was apparently influenced but little. Sodium chloride, on the other hand, showed more favorable influence on propagation, but diminished the weight of the mother animals. The increase in the number of young when feeding mice on calcium chloride amounted in satisfactory cases to 128 per cent, with guinea pigs to 106 per cent and rabbits 61 per cent. The highest number per litter was ten, which is rare, and it was only realized when the animals were fed calcium chloride. The average individual weight of the animals fed on calcium chloride was comparatively less than that of the young in the control period.

Some remarkable experiments have been made with hens. The hen lays nearly every other day. The shell of the egg consists chiefly of carbonate of lime and weighs on the average of about 6 grams. Every day three grams of carbonate of lime must be consumed, which passes through the vessels of circulation. It is remarkable that arterio-chlorosis is unknown among hens. In the case of a hen with a broken bone, the bone healed, but during this period the hen laid eggs without shells. The lime given to the hen in her feed was entirely consumed by the body and nothing remained to form the shell of the egg.

These experiments should induce agriculturists and breeders to give earnest attention to the use of lime, and to carry on experimnets with horses, cattle, sheep and swine by means of a lime diet, or to feed their breeding animals on feed stuffs which contain a high percentage of lime in order to bring the stock up to the highest possible standard of vigor and health. In this way breeding sows could be made to produce larger and stronger litters and cows calves whose constitutions would make them less susceptible to disease has been practiced for some years in Europe, and it has a greater future than was at first anticipated.

The mineral reserves of animals can best be built up and maintained by growing them largely on leguminous roughage or on forags and pasture containing an abundance of legumes, which contain a high mineral content of all of these elements. Sunshine and muscular activity increases the affinity of bones and tissues for these mineral salts and these with a close contact with mother earth seem to, through some process of electrifying sensibility, give animal life a tone and tonic that can be had in no other way. If animals cannot be fed a sufficient amount of leguminous roughage, particularly cattle during advanced pregnancy and during heavy lactation, and if there are reasons to believe that a sufficient amount of bone food is lacking, then bone meal or crude calcium phosphate should be supplied. Along with this should be given reduced iron and sulphur, and a small amount of potassium iodid might well be added to this mixture, supplemented by some of the potassium salts and sodium chloride. The best dosage of bone meal is approximately two and a half ounces per day, the other ingredients may be mixed in proportion to their known therapeutic requirements. This mixture may well be given with the grain, but it is possible that a combination may be found that will permit these ingredients to be consumed by animals by allowing them free access to the preparations.

Jus Plain Radicals

At a recent convention of the so-called "Progressive National Party" at Cleveland, Ohio, it came out for government operation of railroads, public control of water power, nationalization of coal mines, direct election of the president and vice-president, protection of civil liberties and rghts of organized labor and the enactment of a soldiers' bonus law through funds secured by the re-enactment of the excess profits' taxes. Numerous other planks in their platform were discussed. The aim of the new party is similar to that of all previous radical or semi-radical political movements, in that it is attempting to combine the support of labor organizations, farmers' organizations, cooperative societies, liberal political parties and other organizations and groups who are in accord with radical and socialistic policies.

Resolutions were passed requesting "progressive" United States senators and representatives to organize a "people's bloc" in the new congress.

By sailing under the title of "progressive" instead of "radical" the new party hopes to gain votes which it could not otherwise secure.

Bird of a Slam

A man who believed he knew all about parrots undertook to teach what he thought to be a young mute bird, to say "Hello" in one lesson. Going up to its cage, he repeated that word in a clear voice for several minutes, the parrot paying not the slightest attention.

After a considerable time the man apparently realized his defeat and gave up the attempt.

At the final "Hello!" the bird opened one eye, gazed at his would-be teacher and snapped out, "Line's busy!"—Ex.

Increase Milk Flow

Corect malnutrition, stop abortion and sterility, eliminate paralysis and rickets in your cattle, horses, swine and sheep with Vitaminerals.

The original Dr. A. T. Peters' formula containing dried yeast "vitamines" with strength giving minerals.

I absolutely guarantee Vitamineral to increase milk flow. Cost is small. You can check results in a week's time. Telephone me for information regarding Vitamineral.

Notice to Delinquent Stockholders

Genesee, Idaho, December 20, 1922.

Notice is hereby given that there is delinquent upon the following described stock, on account of an assessment levied on the first day of August, 1922, for five (5) mills per share, being Assessment No. 19, the several amounts set opposite the names of the respective shareholders, as follows, to-wit:

Name	No. Shares	Amt.
J. C. Cogswell	1000	$5.00
Orlie Cogswell	500	2.50
Edith Freeman	1000	5.00
Geo. Morscheck	11500	57.50
Irma Nisbet	1000	5.00
Dave Snyder	2265	11.33

And, in accordance with law, so many shares of each parcel of such stock as may be necessary will be sold at the office of the Company, in the City of Genesee, Idaho, on the 10th day of January, 1923, at the hour of 2 o'clock p. m. of said date, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

G. E. TABER,
Secretary-Treasurer Rapid River Mining and Milling Co., Ltd. 26-2

Notice of Annual Meeting

The annual meeting of the Latah County Farmers' Mutual Fire Insurance Co. will be held in the I. O. O. F. hall at Troy, Idaho, January 9, 1923, at 1 o'clock p. m. to elect three directors for the term of three years, and special business will come before this meeting. All members are requested to be present.

Dated at Troy, Idaho, this 26th day of December, 1922.

J. H. VEDVIG, Secretary.
26-2

Notice of Stockholders' Meeting

Notice is hereby given that the annual meeting of the stockholders of the Genesee Exchange Bank will be held at the banking house on Tuesday, January 9, 1923, at 2 o'clock p. m., for the purpose of electing directors for the ensuing year, and transacting any other business that may come before the meeting.

Genesee, Idaho, December 11, 1922.
24-4 C. P. WHALEN, Cashier.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JANUARY 12, 1923. — NO. 28

GOV. MOORE DELIVERS MESSAGE—MUST REDUCE COSTS

Governor C. C. Moore delivered one of the shortest and most concise messages to the state legislature of Idaho that has ever been given. He urges a 25 per cent reduction in state appropriations and many other reforms that will meet with the approval of all interested in an efficient and economic state government. His message in full follows:

"It is needless for me to call your attention to the great necessity for relief now confronting not only Idaho, but all producing sections. In recent contact with the people from every county, I found positive demand for economy.

"The people have been practicing economy privately. The state, counties, school districts and all local bodies should do the same.

"The key-note of all party platforms was economy. The watchword of this administration is economy. The constant aim of the legislature should be economy. Efficiency in the conduct of the state business, however, must not be sacrificed. Nor must the efficiency of our educational or other institutions be impaired; and our natural resources, particularly our water resources, must be amply protected against exploitation and depletion. We realize that this is not a time for false optimism. Neither must we permit our hope and enthusiasm for the future to be overshadowed by the stern realities of our present problems. Idaho's wonderful resources are still intact, our people are still the same solid citzenry, who have developed this state to its present high position. With hope, optimism tempered with judgment, and the experience of the past as our guide, we must confidently face the future.

Idaho as a Producing State

"The problems of the producer are the greatest and also the last to receive attention. For the first time, the east has assisted in legislation that is aiding western industries and stock interests. While our railroads are making extensive improvements, including tracking, freight rates are still unusually high; and until the producer has the benefit of reasonable rates on his products and a workable credit arrangement, there will be no relief for the man who holds the plow. Excessive freight rates must be reduced. This reduction can be expedited by the determined and united effort of all the people of the intermountain section working through the utilities commissions.

Dairying Possibilities

"The farmer is ready and anxious to advance. Diversity of crops, and reducing his products to a more compact form before shipping will help to reduce freight rates. A reciprocal demurrage law should give relief from car shortage. Idaho has natural dairying possibilities second to no other state. The financing of dairy herards, and the organization of districts for better herds and better animals to head herds, should be promoted. Better marketing conditions can be brought about by a more orderly marketing arrangement for grain. The building of cheese factories and creameries would stimulate prices through competition, and, so far as possible, price discrimination should be prevented by legislation.

"The farmer both buys and sells at the other man's price. A plan of marketing should be developed in which the producer has a voice.

"The cow, the pig and the hen must redeem Idaho's mortgages and to that end Idaho's financial interests should cooperate with outside capital.

"All police powers over agriculture should be centered in the state department of agriculture.

Finance and Taxation

Tax levies are made to raise the amount of money necessary for governmental purposes, and there can be no economy and no reduction of taxes without reducing the appropriations and curtailing expenses. Each year, since the peak of expenditures caused by the great war, there has been a material reduction in state levies, and we must continue this downward trend. We must keep down appropriations. Every tax dollar that is collected by any taxing body in the state of Idaho represents severe sacrifice, and in many cases, almost the life blood of our people. These tax dollars are stored, and in their expenditure, we must fully realize the struggle and self-denial that they represent. With the many demands for retrenchment, you will find as many demands for extension. These two demands cannot now be reconciled, much as we may desire it, and necessary as it may seem. We must put on the brakes and turn deaf ears to pleas requiring increased expenditures. Local requests for improvements, progress and expansion should be consistently held down for the common good of all our people. Our highways must be properly maintained, but there should be n new construction, except where the need tained, but there should be no new new issue of state bonds, no new bridges, no new counties, no new judicial district, no new bureaus or commissions, no new institutions and

(Continued on last page)

PROSPECTS FOR AGRICULTURE IN 1923

The following is a New Year's statement and resume of agricultural conditions and prospects from Secretary of Agriculture Wallace:

Twelve months ago most of the six million farmers of the United States were starting on the long hard climb out of the valley of economic depression. They have not yet attained the heights which are in the grateful sunshine of prosperity. Some, indeed, have fallen by the way. Others are still in the valley. Nevertheless, as we stop a bit and look backward we can see that very considerable ground has been gained by the great majority and we enter the New Year with renewed hope and with that courage which comes from the realization that we are really making progress.

A year ago, when speaking of the prospects for farming in 1922, I said that while there was no reason to expect boom times for the farmer in the near future, there was promise of better times, both for the farmer and for those whose business is largely dependent upon him. The year has brought fulfillment of that promise. Speaking generally; times are better, much better, than a year ago, both for agriculture and industry.

Crops have been good, on the whole. Prices of the major crops are mostly considerably higher. While there has been a corresponding advance in the prices of the things the farmer must buy, the total sum which farmers will receive for the crops of this year is greater by a billion and a half dollars or more than that which they received for the crops of 1921. This will certainly mean better times on the farm, and farm folks in most sections of the country will be able to ease up a little on the grinding economy they were forced to practice the preceding year.

The labor cost of producing the crops of 1922 was still further reduced. There were some substantial reductions in freight rates. Much helpful legislation has been enacted and more will be written. Interest rates are lower and the credit strain has been eased. This has made it possible for many farmers who were rather heavily involved to refund their obligations and get themselves in condition to win through.

There are still some dark spots. In some sections weather conditions were unfavorable and crops were short, and farmers in those sections are having a very hard time of it. Freight rates are still too high, especially for those who must pay for a long haul to market.

Taxes are high, but this is largely due to the increase in local taxes, over which farmers themselves must exercise control.

There has been gratifying growth in farmers' cooperative marketing associations, and more of them are being organized on a sound business basis.

Aside from the help which has been given by legislation and by administration activities, strong economic forces are at work to restore a more normal relation between agriculture and other industries.

The pessi in the agricultural depression is more keenly realized by other groups than ever before, and on every hand a sincere desire is being evidenced to do what can be done safely to help the farmer better his condition.

Everything considered, we have good reason to expect still better things for agrictulture in the year 1923.

Read the ads—keep posted.

D. SWEENEY PASSES AWAY AT HOME IN GENESEE

Dennis Sweeney passed away at his home in Genesee on Sunday, January 7, 1923, at 2:20 a. m., after an illness extending over several weeks. The immediate cause of his death was dropsy and complications.

Dennis Sweeney was born near Bantry, Ireland, on November 11, 1854. At the age of 17 years he came to America, landing at Washington, D. C. In 1881 he went to California where in 1878 he met and married Miss Mary Lucey, the marriage taking place at San Francisco. To this union ten children were born, all of whom, with his widow, survive him. They are John, Ed, Cornelius, Francis, Michael, Nell and Agnes Sweeney of Genesee; Josie Sweeney, who is teaching school at Dudley, Idaho; Sister Alphonsia of Cottonwood and Sister Dominica of Greencreek. All the children were present at the funeral with the exception of Josie, who could not be reached on account of the condition of the wires which were torn down by the recent storm.

Mr. Sweeney came to the Genesee country with his family in 1892 and resided on a rach east of town until two years ago, when they moved to Genesee, where he and his faithful wife and younger children have since lived.

Mr. Sweeney was a faithful member of St. Mary's Catholic church and was loved best by those who knew him most intimately. He was of a quiet and unassuming disposition and was always ready to do unto others as he wished to be done by—which is all that need be said of anyone.

Funeral services were conducted Tuesday morning at 9 o'clock from St. Mary's church, Rev. Fr. Godschalx officiating, with interment in the St. Mary's cemetery.

The pallbearers were John Weber, John Braumeleg, John Tobin, John Johann, Arthur Linehan and William Cunningham.

Entertained at Sunday Dinner

Mr. and Mrs. F. C. Shork entertained Dr. and Mrs. R. I. Witty and Mrs. Witty's parents, Mr. and Mrs. J. Betzold of St. Louis, Mo., in honor of Mr. Betzold's birthday anniversary.

Mr. and Mrs. Chas. Smith had as dinner guests on Sunday the Misses Ruth and Esther Martinson and Mrs. Geo. Bolioo.

At dinner on Sunday Gladys and Elmer Stovall entertained Mr. and Mrs. J. H. Jackson and son, Harold, and John Hagan.

Mr. and Mrs. Glenn Sampson and daughters, Gertrude and Margaret, Mr. and Mrs. F. J. Niemann and son, Fritzie, Jas. Hanson and Maxine Lambert were dinner guests at the home of Mr. and Mrs. Ira Hanson.

Puts In Large Generator

Contracts were awarded recently by President D. L. Huntington of the Washington Water Power company for a new turbine water wheel and general electric generator having a capacity of 22,500 horsepower, to be installed at the Long Lake plant. This will bring the Long Lake plant to its maximum capacity of 30,000 horsepower on which scale it was planned when the original construction was started in 1911.

Will Give Social Dance

The American legion will give a social dance in their hall on Friday night, January 12. The D. O. K. K. orchestra from Lewiston will furnish the music.

WHAT HAPPENED HERE TWENTY YEARS AGO

Miss Maud Burdic is quite ill with inflmmatory rheumatism.

Wheat is being shipped out of here now at the rate of about a trainload a day.

John Kempf has added to his blacksmith shop a new eight-horse Fairbanks-Morse gasoline engine which works like a charm.

Sleighing for the winter is in all probability out of the question now, the ground being practically bare since the chinook of Friday and Saturday.

John Kempf was the successful guesser of the sealed number at the Quillen store and walked off with the blankets. His guess was 1199, and five others guessed 1200.

W. N. Gibb was the purchaser of the gentry farm, the sale of which was mentioned last week. Mr. Gibb, who was already the owner of 500 acres of land east of town, can now count his holdings as 700 acres, which is worth at least $25,000.

There will be a meeting of the Chamber of Commerce in Mr. Burr's office Wednesday evening, January 14, at 7:30 o'clock to discuss the question of obtaining lower insurance rates, securing the location of a packing house, and other matters of importance.

Thursday evening of last week Mrs. C. H. Meyer met with an accident which may cripple her for life. She slipped on a crosswalk near the Catholic church and as a result of the fall broke her right hip bone. Dr. Ehlen was called and administered all possible relief. Being well along in years her recovery will be slow.

Follett Bros. & Larrabee, in a little less than four years in which they have been in business, have by good, honest, upright business methods built up a trade which has grown and grown their present quarters, therefore the old landmark, the store which they now occupy, and one of the first buildings in Genesee, must give way to a more commodious and modern building. This week work was commenced getting out rock for the foundation for their new building which will be 50x80 feet with a basement 30x50. The store will have two entrances—one from the corner and the other from Main street. The front on Main street will be of glass and 16 feet back on the side street. The ceiling will be 16 feet high. Sixteen feet in the back part of th store will be cut off for a warehouse. This warehouse will be floored over and the space above will be used for a ladies' suit department. The entire structure will be of brick and it is the intention of the firm to heat this building with a hot air furnace. The old building will be moved onto the side street to allow the building of the new and business will be carried on as usual.

Severe Wind Storm

The severe storms that the Genesee section experienced Saturday and Sunday proved disastrous to several small buildings, trees, light and telephone wires.

The front was blown out of the old Miller garage, on East Main street; the street lights were put out of commission, several telephone poles were blown down and trees blown over. Reports from Pullman stated that several windows were blown out of the W. S. C. buildings.

Two of Geltz & Edwards wagons were blown loose from their moorings and took a hike down the hill. One was slightly damaged and had to be taken to a wagon hospital.

COUNTY OFFICIALS ASSUME DUTIES—FOUR DEMOCRATS

The newly-elected officers of Latah county were inducted into office Monday forenoon, without pomp or ceremony, other than the administering of the oath. The officers are all elected for two years, with the exception of the county auditor, who holds for four years.

The members of the board of county commissioners, Columbus N. Clark, John Cone and Elmer Paulsen, first assembled early Monday morning to clean up the unfinished business from 1922. The salary claims were allowed and other details looked after, following which the oath of office was administered to Harry A. Thatcher, county auditor, and the commissioners entered into session as a new board, organizing with Elmer N. Paulsen as chairman, succeeding Columbus N. Clark in that capacity. Mr. Clark then administered the oath of office to the other county officials and their deputies, the bonds being officially approved before the oath was administered.

Officers and Deputies

The officials who were inducted into office Monday, and their deputies, follow:

Commissioners—John Cone, first district; Elmer N. Paulsen, second district; Columbus Clark, third district.

Auditor and recorder — Harry A. Thatcher; deputies, Mrs. Emma Sayles and Mrs. Bessie Babcock.

Assessor — E. J. Gemmill; deputy, George Vinnigerholz.

Sheriff—James J. Keane; deputies, Grant Robbins and W. F. Morgaridge.

Treasurer—Mrs. Audrey Herington; deputy, D. C. Burr.

Probate Judge—Adrian Nelson.

Superintendent of Schools — Ellen Petersen.

County Engineer—Victor Pearson.

County Attorney—Frank L. Moore.

Coroner—Glen Grice.

Judge Edgar C. Steele, of the district court, took office the first Monday in January, forwarding his oath of office to the secretary of state at Boise.

The only officials who have not held office before in Latah county are Mrs. Audrey Herington, county treasurer; Ellen Peterson, county superintendent of schools, and Victor Pearson, county engineer. All the others are veterans. The county commissioners, county auditor, assessor, probate judge, and coroner, were elected to succeed themselves. Frank L. Moore, county attorney, James J. Keane, sheriff, democrats, have each held the same offices in the county before, Mr. Moore being prosecuting attorney for two terms some years ago, while Mr. Keane was one of the county's early-day sheriffs. The other democrats in the court house are Mrs. Herington and Mr. Pearson. This gives an even break between the democrats and republicans in the court house, aside from the county commissioners.

The retiring officers are John L. Woody, sheriff; Miss Ione Adair, treasurer; Miss Lillian Skattabo, county superintendent, and Harvey J. Smith, engineer.

John L. Woody, retiring sheriff, has held that position for three terms. Prior to that he was a member of the board of county commissioners for eight years and previous to that he was chairman of the Idaho state grain commission, being appointed during the term of the late Governor Brady. It is his intention to move to his farm on American Ridge after the close of the present term of school.

John Nisbet, who has been prosecuting attorney for the past six years, will again take up his law practice, in partnership with Judge Warren Truitt.

Miss Lillian Skattabo, county superintendent for the past two terms, has been elected principal of the Irving school, succeeding her successor in the office of superintendent in that capacity. Miss Skattabo was not a candidate for renomination.

Miss Ione Adair, county treasurer for the past two terms, has not decided upon any definite line of work for the future, but will remain in Moscow.

Harvey J. Smith, retiring engineer, is city engineer, and in addition has a large amount of private work. He will remain in Moscow.—Star-Mirror.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Craigmont Farm Brings $59,800

The largest farm land sale of many months was reported Monday from Lewiston, when Mrs. George Stellman sold to Claus J. Breier, Lewiston merchant and principal owner of the Hub chain of stores, 920 acres four miles north of Craigmont for $50,800, or $55 an acre. The place is well improved.—Lewis County Register.

Called to Moscow

Mrs. J. E. Reilly was called to Moscow Sunday morning owing to the serious illness of Mrs. E. A. Keane. Reports have since been received in the city that the lady is holding her own in a hospital there. Mrs. Keane will be remembered by many in Cottonwood, having at different times visited the Reillys and during those visits made numerous friends here who hope for a speedy recovery to normal health.—Cottonwood Chronicle.

Rev. Father Carey at Thorncreek

Rev. Father B. J. Carey of Boise, Idaho, was in the city last week as a guest of Father Loeffler. Father Carey has been assigned to the Thorncreek parish and took up his duties last Friday. He succeeds Rev. Father Rompe who has recently been sent to a parish at Rome, Indiana, after serving as pastor of the Thorncreek church for a number of years and where he made a host of friends who regret his departure. Father Carey is a young man with a pleasing personality and will undoubtedly soon feel at home in his new surroundings.—Uniontown Journal.

Mrs. A. E. Carlander Passes

Mrs. A. E. Carlander passed away Friday morning at 3:30 at her home on East Eighth street, after a lingering illness. She was born February 9, 1859, at Limbersberg, Sweden, and came to the United States in 1880, making her home at Moorehead, Minnesota.

In 1912 the family moved to Moscow and have since resided here and at Genesee. She is survived by her husband, A. E. Carlander of Moscow, and two sons, Rudolph Carlander of Portland, Oregon, and Regner Carlander, of Bismarck, N. D. Two sons preceded her to the great beyond.

The funeral was held Tuesday afternoon at 2 o'clock from the First Lutheran church. Rev. A. Andre conducted the services.—Star-Mirror.

Road Contract Let

Last week saw the mile of road northeast of Kendrick finished. This week at a meeting of the Kendrick Highway commissioners the contract was let for the construction of a highway from the limits of Kendrick to the boundary of the Kendrick Highway district, which is about half way between the two towns. This road will be made standard width and surfaced with seven inches of crushed rock. Work will be pushed as fast as the weather will permit and it is believed the two-mile stretch will be finished early in the spring.

In connection with this work the Latah county commissioners have promised to finish the road from the boundary of the Kendrick Highway district to the Nez Perce line, a distance of approximately four miles—and then it is up to Lewiston to finish it on to Arrow Junction.—Kendrick Gazette.

Lewiston Is Favored

From the eastern office of the Standard Oil company last Friday there came an announcement that the price of gasoline would be reduced two cents a gallon, effective last Saturday in all Washington, California and Oregon, thereby bringing the wholesale price down to 24½ cents in those states. The drop taking place Saturday in the states mentioned has been enjoyed in the same all over the state of Washington with the exception of Clarkston and other towns that are served through the Idaho agencies, necessitating a wide variation of facilities being lacking to Washington points.—Lewiston Tribune.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 26.

Down I went upon my knees—holding on by the locker, or else I had been instantly dashed across the tossing cabin—and lifting up my voice in the midst of that clamor of the abating hurricane, impiously prayed for my own death. "O God," I cried, "I would be liker a man if I rose and struck this creature down; but Thou madest me a coward from my mother's womb. O Lord, Thou madest me so, Thou knowest my weakness, Thou knowest that any face of death will set me shaking in my shoes. But lo! here is Thy servant ready, his mortal weakness laid aside. Let me give my life for this creature's; take the two of them Lord! take the two, and have mercy on the innocent!" In some such words as these, only yet more irreverent and with more sacred adjurations, I continued to pour forth my spirit; God heard me not, I must suppose in mercy; and I was still absorbed in my agony of supplication when some one, removing the tarpaulin cover, let the light of the sunset pour into the cabin. Secundra Dass, who had slept off the effects of his drug, stood in a corner not far off, gazing at me with wild eyes; and from the open skylight the captain thanked me for my supplications.

"It's you that saved the ship, Mr. Mackellar," says he. "There's no craft of seamanship that could have kept her floating; well may we say: 'Except the Lord the city keep, the watchman watch in vain!'"

"Ah, Mackellar," said he, "not every man is so great a coward as he thinks he is—nor yet so good a Christian." He did not guess how true he spoke! For the fact is the thoughts which had come to me in the violence of the storm retained their hold upon my spirit; and the words that rose to my lips unbidden in the instancy of prayer continued to sound in my ears. With what shameful consequences, it is fitting I should honestly relate; for I could not support a part of such disloyalty as to describe the sins of others and conceal my own.

Sea Hove Higher.

The wind fell, but the sea hove ever the higher. All night the "Nonesuch" rolled outrageously; the next day dawned, and the next, and brought no change. To cross the cabin was scarce possible; old, experienced seamen were cast down upon the deck, and one cruelly mauled in the concussion; every board and block in the old ship cried out aloud; and the great bell by the anchor-bitts continually and dolefully rang. One of these days the master and I sat alone together at the break of the poop. I should say the "Nonesuch" carried a high, raised poop.

About the top of it ran considerable bulwarks, which made the ship unweatherly; and these, as they approached the front on each side, ran down in a fine, old-fashioned, carven scroll to join the bulwarks of the waist. From this disposition, which seems designed rather for ornament than use, it followed there was a discontinuance of protection; and that, besides, at the very margin of the elevated part where (in certain movements of the ship) it might be the most needful.

It was here we were sitting; our feet hanging down, the master betwixt me and the side, and I holding on with both hands to the grating of the cabin skylight; for it struck me it was a dangerous position, the more as I had continually before my eyes a measure of our evolutions in the person of the master, which stood out in the break of the bulwarks against the sun.

Chose Graceful Posture.

He was quite capable of choosing out a graceful posture, even with no one to behold him but myself, and all the more if there were any element of peril. He sat now with one knee flung across the other, his arms on his bosom, fitting the swing of the ship with an exquisite balance, such as a feather-weight might overthrow. All at once I had the vision of my lord at the table with his head upon his hands; only now, when he showed me his countenance, it was heavy with reproach. The words of my own prayer—I were liker a man if I struck this creature down—snot at the same time into my memory. I called my energies together, and (the ship then heeling downward toward my enemy) thrust at him swiftly with my foot. It was written I should have the guilt of this attempt without the profit. Whether from my own uncertainty or his incredible quickness, he escaped the thrust, leaping to his feet and catching hold at the same moment of a stay.

I do not know how long a time passed by: I lying where I was upon the deck, overcome with terror and remorse and shame; he standing with the stay in his hand, backed against the bulwarks, and regarding me with an expression singularly mingled. At last he spoke.

"Mackellar," said he, "I make no reproaches, but I offer you a bargain. On your side, I do not suppose you desire to have this exploit made public; on mine, I own to you freely I do not care to draw my breath in a perpetual terror of assassination by the man I sit at meat with. Promise me—but no," says he, breaking off, "you are not yet in the quiet possession of your mind; you might think I had extorted the promise from your weakness; and I would leave no door open for casuistry to come in—that dishonesty of the conscientious. Take time to mediate."

With that he made off up the sliding deck like a squirrel and plunged into the cabin. About half an hour later he returned; I still lying as he had left me.

Mackellar while on board the ship "Nonesuch" attempts to shove the master overboard. He fails, however, and promises he will make no such false moves again. The ship arrives at New York and the master bids him farewell with "Now you go among my enemies, where all your former prejudices will revive."

"Now," says he, "will you give me your troth as a Christian and a faithful servant of my brother's that I shall have no more to fear from your attempts?"

"I give it," said I.

"I shall require your hand upon it," says he.

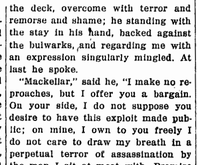
"You have the right to make conditions," I replied, and we shook hands.

Sat in Same Place.

He sat down at once in the same place and the old perilous attitude.

"Hold on!" cried I, covering my eyes. "I can not bear to see you in that posture. The least irregularity of the sea might plunge you overboard."

"You are highly inconsistent," he replied, smiling, but doing as I asked. "For all that, Mackellar, I would have you to know you have risen 40 feet in my esteem. You think I can not set a price upon fidelity? But why do you suppose I carry that Secundra Dass about the world with me? Because he would die or do murder for me tomorrow; and I love him for it. Well you may think it odd, but I like you the better for this afternoon's performance. I thought you were mag-



I were liker a man if I struck this creature down.

netized with the Ten Commandments; but no—God damn your soul!" he cries, "the old wife has blood in his body after all! Which does not change the fact," he continued, smiling again, "that you have done well to give your promise; for I doubt if you would ever shine in any new trade."

"I suppose," said I, "I should ask your pardon and God's for my attempt. At any rate I have passed my word, which I will keep faithfully. But when I think of those you persecute," I paused.

"Life is a singular thing," said he, "and mankind a very singular people. You suppose yourself to love my brother. I assure you it is merely custom. Interrogate your memory; and when first you came to Durrisdeer, you will find you considered him a dull, ordinary youth. He is as dull and ordinary now, though not so young. Had you instend fallen in with me, you would today be as strong upon my side."

Not Ordinary.

"I would never say you were ordinary, Mr. Bally," I returned; "but here you prove yourself dull. You have just shown your reliance on my word. In other terms, that is my conscience—the same which starts instinctively back from you, like the eye from a strong light."

"Ah!" says he, "but I mean otherwise. I mean, had I met you in my youth. You are to consider I was not always as I am today; nor (had I met in with a friend of your description) should I have ever been so."

"But, Mr. Bally," says I, "you would have made a mock of me; you would never have spent ten civil words on such a square toes."

Perhaps, there was truth in the man's last vaunting word to me, uttered on the second day of July, when our long voyage was at last brought almost to an end, and we lay becalmed at the sea end of the vast harbor of New York in a gasping heat which was presently exchanged for a surprising waterfall of rain. I stood on the poop regarding the green shores near at hand, and now and then the light smoke of the little town, our destination. And as I was even then devising how to steal a march on my familiar enemy, I was conscious of a shade of embarrassment when he approached me with his hand extended.

"I am now to bid you farewell," said he, "and that forever. For now you go among my enemies, where all your former prejudices will revive. I never yet failed to charm a person when I wanted; even you, my good friend—to call you so for once—even you have now a very different portrait of me in your memory, and one that you will never quite forget. The voyage has not lasted long enough, or I should have wrote the impression deeper. But now all is at an end, and we are again at war. Judge by this little interlude how dangerous I am; and tell those fools"—pointing with his finger to the town—"to think twice and thrice before they set me at defiance."

PASSAGES AT NEW YORK.

I have mentioned I was resolved to steal a march upon the master; and this, with the complicity of Captain McMurtrie, was mighty easily effected, a boat being partly loaded on the one side of our ship and the master placed on board of it, the while a skiff put off from the other, carrying me alone. I had no more trouble in finding a direction to my lord's house, whither I went at top speed, and which I found to be on the outskirts of the place, a very suitable mansion, in a fine garden, with an extraordinary large barn, byre, and stable all in one. It was here my lord was walking when I arrived; indeed it had become his chief place of frequentation, and his mind was now filled with farming. I burst in upon him breathless, and gave him my news; which was indeed no news at all, several ships having outsailed the "Nonesuch" in the interval.

"We have been expecting you long," said my lord; "and indeed of late days, ceased to expect you any more. I am glad to take your hand again, Mackellar. I thought you had been at the bottom of the sea."

"Ah, my lord, would God I had!" cried I. "Things would have been better for yourself."

"Not in the least," says he, grimly. "I could not ask better. There is a long score to pay, and now—at last—I can begin to pay it."

I cried out against his security.

"Oh," says he, "this is not Durrisdeer, and I have taken my precautions. His reputation awaits him, I have prepared a welcome for my brother. Indeed, fortune has served me; for I found here a merchant of Albany who knew him after the '45 and had mighty convenient suspicions of a murder; some one of the name of Chew it was, another Albanian. No one here will be surprised if I deny him my door; he will not be suffered to address my children; nor even to salute my wife; as for myself, I make so much exception for a brother that he may speak to me. I shall lose my pleasure else," says my lord, rubbing his palms.

Bethought Himself.

Presently he bethought himself, and set men off running, with billets, to summon the magnates of the province. I can not recall what pretext he employed; at least it was successful; and when our ancient enemy appeared upon the scene, he found my lord pacing in front of his house under some trees of shade, with the governor upon one hand and various notables upon the other. My lady, who was seated in the veranda, rose with a very pinched expression and carried her children into the house.

The master, well dressed and with an elegant walking sword, bowed to the company in a handsome manner and nodded to my lord with familiarity. My lord did not accept the salutation, but looked upon his brother with bended brows.

"Well, sir," says he, at last, "what ill wind brings you hither of all places, wheer (to our common disgrace) your reputation has preceded you?"

(To be continued.)

IDAHO

A deal was recently closed whereby the Lewiston state normal school increases its campus area by approximately four acres, bringing the total to more than 22 acres.

Two are dead and one is slightly injured as the result of an automobile skidding and turning turtle on the icy Dry Creek road near Boise January 3. The dead are: Roy Carson, 43, Boise, electrician; F. A. Newell, 72, father-in-law of Mr. Carson.

All eyes are on the Spirit Lake high school five which has opened the basketball season by winning its first eight games when competing against the best in its class in north Idaho.

The eighth grade debaters took the honors from their elders in a debate with the community club team at Lacede recently.

Mrs. Sarah Estes, age 91, an early pioneer of Latah county, died January 2 at her home at Moscow.

Nearly 1000 persons crowded the gallery of the house of representatives' chamber in the capitol at Boise January 1 to witness the inauguration of Charles C. Moore, incoming governor, and other state officials.

Idaho has the unique distinction of standing at the head of the list of the few states in the United States which show a surplus of receipts over expenditures in the enforcement of the Volstead act.

Woodrow Wilson, former president, is the foremost living American statesman, and Charles E. Hughes, secretary of state, is a close second in a vote taken by students of the American history department at the University of Idaho.

Ore having a value in excess of $100 to the ton has been exposed in the face of the drift on the property of the Richmond Mining, Milling and Reduction company at Adair, Idaho, according to an official report.

The injunction issued by Judge Raymond L. Givens in the district court for Ada county restraining the state tuberculosis hospital commission from proceeding with the construction of two hospitals in the state was declared null and void December 30 when the supreme court revised the lower court's order.

No deaths resulting from contagious or infectious diseases contracted in Boise were reported during the calendar year of 1922, it is shown by the annual report issued by R. H. Pratt, city health officer.

THE COMPLETE HOLSTEINER.

(He Dreams of One in Heaven.)
With a far-away look
In the pedigree book
He ponders the deep-riddled scroll;
And the murmur that slips
From his rapturous lips
Is "Pontiac Korndyke DeKol."

He searches the skies
With inquiring eyes
As he goes for a star-spangled stroll,
Ah!—not for the Bear;
The Crab nor the Chair—
But for Pontiac Korndyke DeKol.

The planets that wheel
Seem intent to reveal
As they dance round the heaven's Maypole,
The soft Milky Way
As the lacteal spray
Of Pontiac Korndyke DeKol.

And the moon never beams
Without bringing him dreams
Of her beautiful black-and-white poll;
And the stars never rise
But he feels the bright eyes
Of Pontiac Korndyke DeKol.

And I see him at last,
Earth's trials all past,
As he wings to his heavenly goal,
An arm round the spook
Of the valuable mooc—
Ow, Pontiac Korndyke DeKol.

MACHINERY RAPIDLY REMOVED AND INSTANTLY INSTALLED

A remarkable instance of what can be done by systematic preparation occurred recently in moving machinery from one automobile plant to another sevveral miles away. A group of cylinder-block machines were kept running in their old location until the truck backed up to move them. Then the machinists checked out, and took street cars to the new location. The car lines were somewhat tortuous, but, even so, the men were surprised when they reached their destination to find their machines already installed, with everything ready for setting up a piece of work and starting operations.

Transfer Beavers Okanogan County

Transplanting beavers from one locality to another proved highly successful in Okanogan county, according to Clay Fruit, chairman of the Okanogan county game commission, who has conducted a series of experiments along this line during the past few years.

Along the Okanogan river beavers have become a nuisance in many localities where they have been allowed to propogate without interference, and have become destructive to orchards. In these cases they have been trapped by the game commission and taken further back into the mountains and planted in mountain streams where they immediately go to work constructing dams, which soon become a big factor in water conservation.

Just recently new colonies of beaver have been planted on the south fork and north fork of the west branch of Salmon creek, west of Conconully. Each foundation colony consists of one male and two females. The animals were taken from the Okanogan and Twisp rivers at points where they had begun making depredations. Chas Haley of Tonasket, in the employ of the game commission, caught the animals and conducted them to their new homes, where it is expected they will soon become engaged in their usual work of dam construction and make themselves at home.

Mr. Fruit states that the commission has transplanted some seventeen beavers within the past year.

Let's Have More Courtesy.

Some day, let us hope, there will be a more general appreciation of the value of courtesy. It requires no more effort to be polite over the telephone or across the counter than it does to affect the tone and mannerisms of the much maligned bear with a sore head. Business executives can hold no one but themselves responsible for lack of courtesy among their subordinates. Whenever the policy is definitely fixed that courtesy will be rewarded, just as other types of merit, and that discourtesy will bring the same fate as incompetency, we shall begin to have more politeness in business.

The executive who allows the good will of his company to be kicked into the middle of next week by the gruffness of employes who come in contact with the general public is a round peg in a square hole.

Do you stand up all day in the kitchen—try a high stool and rest.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

A report received by custom officials at New York December 28 from Nassau, Bahamas, of a $1,000,000 liquor robbery on the high seas was taken by customs officials as proof of reports that pirates were raiding rum runners off the Atlantic coast.

The budget to be introduced in the Japanese diet provides for a reduction of 1,300,000 yen, or 10 per cent, in the expenditure, compared with last year.

"Tell the American people that I shall return to the stage next Wednesday night" (January 3), said Sarah Bernhardt to the Associated Press recently in the first interview she has granted since her collapse during the rehearsal of a new play three weeks ago.

On December 30 the senate passed the $325,000,000 naval appropriation bill.

Plans are in the making for the marriage of the prince of Wales and an Italian princess, according to the London Daily News. The newspaper says the question of the prince's marriage will be settled during the next few months.

Sadie Lecointe, the French aviator, January 1 made four circuits of a kilometer course at an average speed of about 216 miles an hour.

The bill passed by the senate, appropriating $100,000 for a survey of the Columbia basin irrigation project, came out of the house committee on irrigation January 3 amended in such form as to endanger any favorable action by this congress.

Secretary Fall of the interior department will resign his office on March 4, it was announced recently at the White House.

High on the rocks off the Race Point coast guard station near Provincetown, Mass., the two-masted British schooner Annie L. Spindler, out of Yarmouth, Nova Scotia, broke up December 29 under a fierce northeast gale.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and Lincoln R. Lounsbury, Agricultural Extension Editor, State College of Washington.

(Continued from last week.)

To shorten pattern, lay a fold in the pattern across each gore, 12 inches from waist and shorten it the desired amount. (Fig. 15).

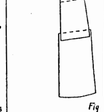


Fig. 15

To increase waist, add the necessary amount to each gore at the top, letting the line slant from the new points made for waist to hip. (Fig. 16).

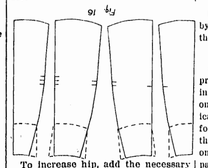

Fig. 16

To increase hip, add the necessary amount at hip line and draw a new line from new hip point to waist and from hip to bottom of pattern. (Fig. 17).

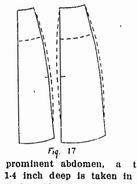

Fig. 17

For prominent abdomen, a tuck about 1-4 inch deep is taken in the back of the side front gore at hip, tapering to nothing as it nears the front. This will throw the fullness into the front side of the gore and prevent the whole skirt from pushing forward at the bottom. It is often necessary to add to the top of the front and side front gores, sloping to less at the back of the gores. The waist measures must also be increased. (Fig. 18).

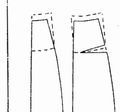

Fig. 18

Reduce fullness at bottom of skirt by taking off the desired amount on the bias side of each gore.

Placing Pattern.

Many standard patterns are now provided with a guide chart to help in placing the pieces of the pattern on the material in the most economical way. If there is no chart to follow, try different arrangements of the pieces until the most economical one is found. Lay all pieces of the pattern on the cloth with regard to grain of material. Do not pin the pattern in place until an economical placing has been found.

The nap in wool materials should run toward the bottom of the skirt, while with velvets, plushes, and corduroys, the pile should run upward. The one exception is panne velvet.

An irregular plaid can rarely be used on the bias without great waste of material.

All plaids and stripes should be matched. This usually takes more material, but is absolutely essential in order not to break the design of the fabric.

Up and down patterns should be noted and all pieces placed the same so as not to spoil the design.

Warp threads should run up and down in skirts, waists and sleeves and around in belts, bands and cuffs.

QUESTIONNAIRE SHOWS THE RETAIL BUSINESS TREND

Here Are Some of the Questions

Is the buying power of your community better than last year?

Do your customers display any opposition to current prices?

Is the consumer satisfied with wages in his particular line?

In a questionnaire recently sent out by the Washington State Retailers' association to its entire membership a variety of data was brought forth. This data shows the trend of retail business. On some of the questions, under general remarks, a great many merchants took the opportunity of giving the views most uppermost in their minds.

While averages are sometimes deceiving, nevertheless, one will find much of interest and guidance in the answers compiled from returns. The questions and summaries follow:

Question: "Is the buying power of your community better than last year?"

Sixty per cent of the retailers in the following lines answered "Yes"—Shoes, furniture, hardware, lumber and automobiles; 55 per cent of those representing the following lines replied "No"—Clothing, dry goods, jewelry, grocery, meat, drugs, fuel and general stores.

Question: "Do your customers display any opposition to current prices?"

It was interesting to see just how the merchants in the different lines answered this question. Some merchants reported that customers were satisfied on prices in their own lines but not on other lines. Prices on foods came in for less criticism by custstuffs came in for less criticism by customers. The majority of clothing, dry goods, jewelry, shoe, hardware, meat and grocery stores included their own lines on which there was consumer price opposition. Furniture dealers weer an exception. The majority claimed their customers were satisfied with furniture prices.

Question: "Is the consumer satisfied with wages in his particular line?"

Druggists, dry goods, fuel, furniture and groceries reported "Yes," and clothing, shoes, hardware and jewelry reported "No." From this we can see that customers were more apt to open up and unburden themselves on the subject of wages whenever an opportunity presents itself, such as when buying articles of personal nature.

Question: "Is the consumer satisfied with current prices on products he raises?"

While there were a number of affirmative answers by dry goods and drug stores, an overwhelming majority of merchants in all trades answered "No," showing that growers in all lines are dissatisfied with prices on their production.

Question: "Give comparison in percentage, of your business this year with that of last year."

The following figures are given: Clothing 102 per cent, druggists 96 per cent, dry goods 94 per cent, fuel 106 per cent, furniture 124 per cent, general stores 93 per cent, lumber 115 per cent, meat 86 per cent, shoes 94 per cent, hardware 90 per cent, jewelry 88 per cent, groceries 94 per cent, automobiles 112 per cent, and miscellaneous 92 per cent.

Question: "What is your average net profit in per cent?"

To obtain accurate figures on net profit is a most difficult matter. Some merchants give 15 per cent, 20 per cent and as high as 25 per cent, evidently their gross profit. All figures over 12 per cent were eliminated in our calculation so that we believe a pretty good average has been obtained. This was shown to be: Clothing 6 per cent, druggists 8 per cent, dry goods 5 per cent, fuel 5 per cent, furniture 7 per cent, general stores 6 per cent, lumber 8 per cent, meat 8 per cent, shoes 7 per cent, hardware 6 per cent, jewelry 7 per cent, groceries 5 per cent, automobiles 6 per cent, miscellaneous 6 per cent. These figures may seem a trifle too high in some lines. No doubt this is because some of the small town merchants neglected deduction of their own salary, thus the high percentage.

Question: "Do you anticipate good fall business?"

The majority of merchants were optimistic. Meat, hardware and implements were not. On the holiday business a majority of retailers in the following lines answered "Yes," clothing, dry goods, shoes, jewelry. Those answering "Fair" were grocery, furniture and general stores.

Question: "Will the amount of your advertising for fall exceed that of last year for the same period?"

Retailers' advertising is certainly looking up, for 43 per cent answered that it would exceed last year, and 57 per cent stated it would not. Of these only 12 per cent were reducing their advertising, leaving 45 per cent continuing on last year's basis.

Question: "Can you give in percentage how the money for your advertising is spent, newspapers? %; direct mail? %, bill boards? % (including window display).

The "bill board" classification includes, in a number of the trades money spent for window displays. There should have been presented a separate classification to cover window displays, a form of advertising extensively used.

	Newspapers	Direct Mail, Letters, Booklets, Etc.	Bill-boards and Window Display
Department stores	64%	8%	28%
Clothiers	70%	14%	16%
Drugs	66%	26%	8%
Dry goods	84%	10%	10%
Fuel	85%	7%	8%
Furniture	68%	25%	7%
General stores	55%	30%	15%
Lumber	75%	8%	17%
Shoes	74%	19%	7%
Hardware	64%	29%	7%
Jewelry	75%	20%	5%
Groceries	70%	20%	10%
Automobiles	60%	18%	22%
Miscellaneous	68%	26%	6%

Question: "Have newspapers reduced advertising rates during the past twelve months?"

Practically all retailers, with two or three exceptions out of over four hundred, replied that there was no decrease.

Question: "Have you reduced wages of your employees this year?"

The number of merchants reducing wages, from 10% to 25%, follows: Department stores, 28%; clothiers, 20%; dry goods, 25%; shoes, 60%; drugs, 30%; fuel, 50%; furniture, 10%; general merchandise, 30%; groceries, 25%; hardware, 15%; automobiles, 40%; jewelry, 10%; lumber, 10%; meat, 10%; miscellaneous, 10%.

Question: "Have you reduced the number of employees?"

The following answered "No": Clothiers, 60%; dry goods, 50%; fuel, 75%; furniture, 90%; general merchandise, 55%; groceries, 65%; hardware, 55%; jewelry, 90%; lumber, 100%; meat, 70%; miscellaneous, 65%; shoes, 85%; automobiles, 55%; drugs, 25%.

Question: "To what other trade association do you belong?"

Clothiers: 70% to the clothiers' association; department store, 88% to dry goods association; drugs, 85% to druggists' association; fuel, 72% to the fuel dealers' association; furniture, 87% to the furniture dealers' association; shoes, 50% to shoe retailers' association; groceries, 54% to the grocers' association; hardware, 84% to the hardware dealers' association; jewelry, 60% to the jewelers' association; lumber, 90% to lumbermen's association.

Question: "Are merchants in your community enforcing the state board of health rerun goods ruling?"

A variety of opinions received. Seattle taking the lead in the affirmative. More replies, however, in the negative; these from various parts of the state, such as "Impossible of Enforcement"; "Competition of Mail Order Houses"; "Lack of Unity"; "Afraid of Losing Business"; "Government by Commission."

Question: "Is there any standard merchandise you buy on which the catalog house price is lower than the wholesale price?"

Many answers on this question were not specific enough. Quite a number replied "Yes," but failed to name the merchandise. Those who had some experience along this line, were in the order named: (1) Grocery, hardware (including paint), clothing, dry goods, drugs and garages.

Question: "Have you experienced any shortage in piece goods measurement?"

This question, prompted by several complaints, opened up a new angle to many merchants. Therefore, very little data received.

Booze Question---"Law or Disorder?"

Over 300 law enforcement officers will meet January 19 at Portland to discuss the greatest problem of the United States today—booze.

Repeal of the Volstead act, or drastic amendment, will be discussed by officers from every part of the Northwest at the meeting of the Northwest Association of Sheriffs and Police.

Sheriff Long, of Spokane county, received word of the proposed action, in a communication from L. S. May, president of the association.

"The liquor question is undoubtedly the most serious one before the American people today," Sheriff Long stated. "The cost of maintaining county law enforcement offices has been doubled in a vain effort to dike the flood of illicit booze. With scarcely a day passing that some person in this state is not poisoned by bad moonshine, it is time for every thinking man and woman to face this question squarely."

"Make Hay" While Snow Falls.

While the heavy snow is on the ground in the county, moonshiners are "making hay." Officers from the sheriff's office are unable to get to the stills hidden away in inaccessable parts of the hills. When the roads again become passable in the spring, the wiley 'shiners who have made hundreds of gallons of moonshine, will tear down their stills, bury the whiskey in safe hiding places, and begin the business of distributing in the cities and small towns of the state. The sheriff's squad will find only a few broken parts of stills, or a few barrel stays, or perhaps the circular stone base that served as a crude furnace over which still cruder whiskey was "cooked."

Nine out of 10 of the moonshiners taken by the Spokane county Sheriff's force have been foreigners from the southern part of Europe—Greeks, Italians, Austrians. Now and then a Russian is caught making whiskey. Very few persons who were born in this country are in the "business."

Bootlegging Is Business.

The term "business" as applied to moonshining is an appropriate one, for a business it has come to be, and the tricks of the trade would furnish material for a weekly "Moonshiners' Trade Journal."

Quart Bottle in Watermelon.

Varied methods are used to bring the whiskey to the points of distribution. In several cases the sheriff's force have found jugs of moonshine in milk cans, with milk poured in on top of them. A popular method at the present time is to distribute the liquor in boxes of apples. During the summer, a quart of moonshine was discovered in a watermelon.

Two men work together, as a rule. One of them is the "cook"; the other the peddler. However, it is not unusual for a group of peddlers to band together, set up a big still in the country, run off enough whiskey to last for several months, tear down their still, and return to sell the liquor.

These "cooperative," though shortlived "clubs," make the work of the law enforcers difficult. They gather together supplies and a still, make a dash for the woods, and in a short time have completed their operations. The sheriff's office only too often hears of the still after it has been destroyed by the moonshiners themselves.

Hit 'Em Hard in Summer.

During the summer Sheriff Long and his active force of raiders "put a crimp" in the whiskey making business in this county, but since the roads have become all but blocked by heavy snow and mud, raids have become less frequent. It is a fact that much of the whiskey sold in Spokane county is made in adjacent counties and in Idaho.

The large scale upon which some of the moonshiners operate can readily be appreciated when the operations of a gang at Long Lake are described. A mammoth "plant," with an estimated capacity of more than 30 gallons of liquor a day, was raided early last summer by the county officers, but due to its strategic position, no arrests were made during the raid, though several arrests were made later on evidence secured.

Located under a steep bluff, in a wooded and brushy place close to the lake shore, little chance of discovery was offered to prowling officers. The finding of the still was made only after evidence of its existence had been found following arrests of peddlers in the city.

No road was within several miles of the place, the moonshiners transporting supplies, and removing the finished liquor in a high-powered launch. An entire day was needed by the sheriff's force to locate the well-hidden distillery. And then—no one was found near the place although the still was warm, and indications showed that the 'shiners had left but a short time before, taking with them all their liquor.

Still Was Enormous.

The Long Lake still was more than 15 feet in circumference. The coils were one inch through, and water for them was pumped from the lake by a gasoline motor pump that had been

"Just before the battle, mother---"

The battery of stills shown above could produce in a short time enough moonshine whiskey to "float a battleship." The intrepid deputies, under Sheriff Long of Spokane county, faced death in the haunts of desperadoes to capture these poison-producing outfits. The picture was taken at the county court house following a series of successful raids during the summer. The "catch" shown does not represent the number of raids made by the force, for in many cases the moonshiners get "tipped off" before the arrival of the sheriff's men, and completely destroy their equipment, or carried it to some other hidden spot. In a few cases the sheriff is given false reports concerning stills, and his deputies return after an all-day hunt, empty-handed. When in a still hunt, the deputies dig under stacks of hay, drag the beds of ponds, dig up ground that appears to have been recently disturbed, ransack houses, barns, milk houses, and chicken sheds, and beat up the brush for miles about the place where a still is believed to be in operation. If a still is to be found, they find it.

Pend d'Oreille Creamery Shows Great Returns

The Pend d'Oreille creamery in Bonner county, Idaho, has a history of wonderful growth. Starting in 1914 the business had grown to such an extent that three years ago it was found necessary to erect another creamery at Plains.

The figures of the Pend d'Oreille creamery show that cream checks aggregating $205,304 per year are distributed among some 1400 customers, the bulk of them being in the territory within a hundred mile radius though some of them are 150 miles or more away. The largest checks run up to $175 per month and the average is around $30 per month. Even then there were shortages in cream shipments and in order to supply the trade that desired Pend d'Oreille butter the creamery found it necessary to purchase from other sources to cover these temporary shortages.

515,000 Pounds Bulter.

From the cream received there was manufactured 515,000 pounds of butter, 90 per cent of which was wholesaled to customers in north Idaho, eastern Washington and western Montana. The sales territory covers about 300 miles east on the Great Northern, 200 miles east on the Northern Pacific, to the Canadian border on the Spokane International, the Great Northern and the Milwaukee branch north of Newport. The Coeur d'Alenes and Missoula are reckoned in the sales territory for the local product, as are also towns south and southwest of Spokane. Altogether there are probably 500 buyers of the product on a wholesale basis.

The butter is shipped both by express and parcel post. It might surprise many readers to know the extent to which butter goes by mail, shipments of 500 to 1,000 pounds to various customers being not uncommon. The creamery spends for postage fully $2,000 per year.

In addition to the more than half a million pounds of butter there was 26,700 pounds of ice cream manufactured and sold within the creamery sales territory, some of it invading the territory of other creameries.

There should be public shooting galleries where people who habitually shoot off their mouths could gather and practice on each other.

Bedding saves the liquids, keeps the cows clean and adds to the value of the manure.

"What a touchy man Jones is."

"Yes, he is one of the best little borrowers I know."

Good hog shelter in winter saves extra feed and lowers losses.

Federal Officers Active.

Federal officers, who have been active in the death of officers as well as moonshiners, have taken place in the heavily wooded mountain country. All the wiles of the old Kentucky and Tennessee distillers have been brought into play. Some of these desperadoes would rather be killed than captured, and it is only because of the precaution taken by enforcing officers, that death during the raids is an exception rather than the rule.

The mountain distillers very often place armed men at points of vantage about the seat of operation. These outpost guards are desperadoes who will not hesitate to kill any man they suspect of being an officer.

The care with which the stills and equipment of the whiskey makers is camouflaged, and the care with which the trails to the stills are hidden, go to show that the criminals are taking no chances of capture that may be prevented.

On the west side of the state agents discovered one of the most cleverly concealed stills ever found in the west. From the top side of a giant pine that had fallen in a storm, the 'shiners had cut away the branches, forming a trail along the tree trunk. The still was unapproachable from any other side.

At Long Lake the stills and vats had been covered over with brush, and the tent in which the men slept, had been oiled, and rolled in dust, so that it resembled the huge boulders of the cliff against which it was pitched. Officers hunting for the place stumbled into it almost by mistake.

By-Products' Use Varied.

Dairy by-products are now being used in various new ways as a result of investigations by the United States department of agriculture.

Good results have been obtained particularly in the manufacture of dried whey. From 100 pounds of the whey were obtained 4 pounds of crude sugar and 1½ pounds of dried whey containing about 30 per cent of albumin. The dried whey was sold to a laboratory making baby food, at a price which resulted in a satisfactory return for the whey.

Dried whey and dried buttermilk are being fed experimentally to laying hens at one of the department farms. In the first half of the 12-month experiment the pen of hens receiving dried whey produced eggs at a rate comparing favorably with results obtained with other kinds of feed.

Wow! these days are cold. How about one hot dish for the school lunch.

LIVESTOCK

In 1921, Kittitas county stood fifth of all the counties in the United States, in the matter of securing signers to the government pledge to use only good, purebred sires. The bankers of that county have subscribed $65 to be awarded in prizes to communities making the best showing in scrub and grade sire eradication, in 1922.

Organization of a 10-block Holstein bull association has been completed in Teton county, Idaho, and 10 bulls of good individuality and backed with records of more than 500 pounds of butterfat have been purchased in the Boise and Payette valleys.

819 Herds Tested.

During October, in the state of Washington, 819 herds, numbering 8,554 head of cattle, were tested for tuberculosis by state and federal inspectors, resulting in 118 reactions. Washington now has 120 accredited herds, numbering 2,866. There are 7,535, once free tested herds, numbering 63,937 cattle.

There are 7,988 herds now under supervision, containing 66,446 head. The tuberculosis eradication work in the state is under the supervision of Dr. J. C. Exline, representing the U. S. bureau of animal industry, and Dr. L. C. Pelton, representing the state department of agriculture. Both have headquarters in Olympia.

"Yes, sir!" eagerly said the worried-looking person. "A man can make a nice, comfortable living on ten acres of land located near some good town and stocked with poultry."

"Where can I find such a place?" asked the interested hearer.

"I'll sell you mine for less than it cost me."

Once there was a man who said something of consequence through a megaphone.

Has Typhoid

Word has been received by Genesee friends from Mr. and Mrs. W. E. Smith, who now reside near Trempealeau, Wisconsin, that their youngest son, Elwin, is ill of typhoid. Their many friends here hope for his complete recovery.

Porter State Finance Commissioner

Acording to advices from Boise E. W. Porter of Julnetta has been appointed state bank commissioner by Governor Moore, to succeed J. G. Fralick who was appointed commissioner by Governor Davis two years ago.

Condition Not Improved

Word from Moscow is to the effect that Grandpa Jain's condition is gradually growing worse and his many old-time friends here are grieved to learn of his serious condition. His son, Walter Jain, is with him.

When predicting that the millennium will be her some day you are taking desperate chances of being proven a prevaricator. It may come in the night.

Dryest Year Since 1911

The year 1922 in Moscow was the dryest year since 1911 and the third dryest year in the history of the cooperative weather bureau station, established in 1892, according to the monthly meteorological report issued by F. L. Burkart, co-operative observer at the University of Idaho agricultural experiment station. The total rainfall for 1922 was 15.69 inches.

In 1911 Moscow experienced her lowest amount of rainfall, 12.66 inches, and in 1904, there were but 15.45 inches of rainfall. The year 1922, therefore was a close contender for second honors in the comparison of dry years, says the Star-Mirror.

The average annual rainfall in Moscow for 30 years is 22.24 inches.

During the month of December, 1922, there were three clear days, nine partly cloudy days, and 19 cloudy days. The average temperature of the month just closed was 24.6 degrees with a maximum of 29.6 degrees and a mean minimum of 19.7 degrees. The highest temperature of 47 degrees came on December 24, and the lowest temperature was 11 degrees below on December 12. There was 20.51 inches of snowfall during the month.

Much Water on Lands

Three inches of water falling on Inland Empire lands in December, practically all of it soaking into the ground is likely to mean much more to this district than thirty-one days of straight sunshine would have meant. With the forecast of higher prices for 1923, the farmers of this region can face the new year with smiles on their faces.

School Notes

Wilma Caseholt

The third meeting of the Parent-Teachers association will be held on Monday evening, January 15. Following is the program:

Music by Glee club.

Piano solo by Margaret Becker.

Vocal solo by Marie Ingle.

Community singing.

Paper, "Needs of the School," by Miss Mathews.

Piano duet by Wilma and Helen Caseholt.

Vocal solo by Mrs. Niemann.

Address by Attorney Thomas H. Feeney.

Music by Glee club.

Community singing.

The examinations for the first semester were given on Wednesday, Thursday and Friday of this week.

Bernadine Hasfurther has been absent from school this week due to illness as a result of her operation for appendicitis.

Dr. Perkins Leaves Genesee

Dr. J. N. Perkins left Monday, via Lewiston for the east, the doctor going direct to Washington, D. C., where he has secured an appointment in the U. S. Veterans bureau. Mrs. Perkins and the children accompanied him as far as St. Paul where she will visit with a sister until the doctor makes arrangements for them to join him at Washington.

Dr. Perkins and family have been in Genesee for about six months and have made many friends who are sorry to see them leave but who wish them success in their new home.

Johnny Roberts "Gum-Shoeing"

Johnny Roberts, who guides the destinies of the Genesee Bullet, was seen up town again last Monday—the first time for many moons. It was passed around that he had again been soliciting passengers for the Bullet—and without a lisence, too. He called at the News office and offered us "hush" money but we informed him that "the law would have to take its course." It was said that he was even taken for a bootlegger or a federal prohibition officer?—and the way the "guilty" got to cover wasn't slow.

K. P.'s Install Officers

At the regular meeting of the Knights of Pythias lodge Tuesday night the following officers were installed for the ensuing term: F. W. Loncosty, C. C.; Mahlon Follett, V. C.; Milton Rader, prelate; J. H. Jackson, M. of W.; A. G. Mayer, K. of R. and S.; F. E. Dicus, M. of F.; R. E. Emmett, M. of E.; Dewey Wardrobe, M. at A.; Nels Liberg, I. G.; Isaac Isaksen, O. G.

New Engineman and Fireman

A new engineer and fireman is now helping Johnny Roberts run his Genesee Bullet. They have been coming in on time for the past two weeks and Johnny is all swelled up over the fact. The engineer is A. F. Lentz and the Fireman is Rhodes James—but Johnny says the latter is no relation to the famous Jesse and Frank.

Held Stag Party

The Knights of Pythias held a stag party at their hall Tuesday evening. Coffee, doughnuts and weiners were served and a good time is reported.

This is only one of a series of stag parties and smokers the Knights are putting on this winter and a good time is always on hand.

Held Quarterly Meeting

The quarterly meeting of the Federated churches was held at the Social house on Sunday, January 7. The members took their dinners and a good social time was enjoyed by all.

A Daughter of the House

Mr. and Mrs. Milton Rader are the proud parents of a little daughter who arrived at their home on Wednesday, January 10. The little miss tipped the scales at eight pounds.

Taken to Moscow

Bernadine Hasfurther was taken to Moscow Tuesday for medical treatment and is reported as getting along nicely. She is staying at the Dan Burr home.

Being Redecorated

The interior of Smolt's confectionery is receiving a new coat of paint which adds greatly to the appearance of the rooms.

Hard Times Dance

A hard times dance will be given at the Ingle school house tonight (Friday, January 12). Everyone is invited to attend.

A. MOSMAN, SR., DIES SUDDENLY AT SPOKANE

People of Uniontown were shocked this afternoon to learn of the sudden death of A. Mosman, sr., which occurred at Spokane at 4 p. m. today (Thursday, anuary 4). Mr. Mosman went to Spokane this week to visit a daughter and until about 30 minutes before the time he expired had apparently been enjoying the best of health. Heart failure, it is stated, was the cause of his death. Members of his family will go to Spokane and return on Saturday with the remains.

The deceased was born in Holland, June 12, 1859. At the age of 15 he came to America, locating in Chicago where he lived for a number of years. He later went to South Dakota, where he met Miss Crescence Semler, who became his wife in 1882.

In 1888 he came to Uniontown with his family and has since made this city his home. He opened and conducted the first tailoring establishment in Uniontown, embarking later in the hotel business. A few years ago he took the Hazelwood cream agency here which he conducted until about a year ago, when he retired. His pleasant manner at all times made him popular with his business associates and to a great extent was responsible for his successful business career.

Mr. Mosman is survived by his wife and eight children now living, three brothers, three sisters and several grandchildren. The children are Mrs. A. Noeller of Spokane, Wm. Mosman of Genesee, Mrs. Henry Schumacher, Albert Mosman, Mrs. H. A. Bonk, Misses Louise and Mildred, and Geerald Mosman of Uniontown.

Uniontown has lost one of its good citizens, a man who was a devout Christian, a loving husband and father, a thoughtful neighbor and a kind friend to all.

The bereaved family has the sincere sympathy of the entire community, which feels that it is sharing the loss.—Uniontown Journal.

Christian Endeavor Notes

Connie Caldwell led th Christian Endeavor meeting Sunday evening. The topic under discussion was "The Guide Board Psalm," and some very good talks were made upon the subject. New year resutlions were given by all the members.

Special music was given by Oma Castle.

The Christian Endeavor will hold their regular monthly social Friday evening (tonight). Every one is invited to come and bring books and magazines for the new public library.

Monday Bunch Met

The Monday Bunch met with Mrs. F. C. Shork—on Monday." Needlework furnished "amusement" during the afternoon.

W. J. HERMAN CO.

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possesions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

Win and Lose

The basketball teams of the Genesee High school made a very good showing at the games Friday night on the local floor when both the boys' and girls' teams played.

The H. S. girls' team played an interesting game with a girls' team from Johnson. The local team was in the lead the first half but fouling allowed the visitors to get in the lead, the score ending 12 to 10 in favor of the Johnson girls.

The boys proved a little more successful when they met the fast Colton team the same evening on the local floor, capturing the game by a score of 22 to 21.

Some good playing was done on both sides and both games were clean and much enjoyed.

A return game was played on the Colton floor on the following evening —Saturday—when both the first and second teams of the Genesee High school went to Colton to do battle. One of the Genesee players, Hartzel Edwards, hurt one of his ankles and was put out of the game which is said to be the contributing reason for Genesee's defeat, the score ending in 18 to 8 in favor of Colton. The second team was also beaten.

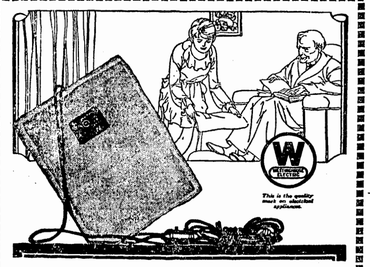
Although the weather and roads were bad a number of rooters went with the local team to cheer them.

A game has been scheduled with the Moscow High school team, which will be played on the local floor Saturday night. This should be one of the best games of the season as Moscow has one of the strongest teams in the Inland Empire, they having defeated the Lewis and Clark and North Central high schools of Spokane during the holidays. You are assured of a good game. Don't miss it.

Pussy Willows Out

The Puget Sound country hasn't anything on this section of the country just at this time—either for rain or warm weather. There has been a-plenty of both during the past two weeks—but if the weather had been made to order it couldn't have been better for fall sown grain, and the more installments of that "million-dollar rain" that come the better it will be, just so long as it all goes into the ground.

R. F. Lambert brought to the News office on Tuesday a bunch of as pretty pussy willows as one ever gathered in March, or any other season of the year, and they are now on display at the News office. Herr Von Smith, pig specialist of the Genesee schools, tried to make the News man belive that he had captured some of the little willows, and we tried to find out where he got the stuff that made him see things like that at this time of the year. But it must be a fact, as we have some of them to show.



Our January Special

Westinghouse Electric Warming Pads

Soft Warm Soothing **$6.95** Three Degrees of Heat

Each month we present some electric convenience of standard quality at much less than the regular price.

During the month of January our special will be the famous WESTINGHOUSE WARMING PAD. It does away with the old Hot Water Bottle. Buy one for the sick room, for baby's crib, for grandma's or grandpa's back. But buy it now while the price is reduced from $9.50 to $6.95.

PERSONAL MENTION

J. W. Mosman was a passenger for Uniontown Thursday morning.

Wm. Cummings was a Wednesday morning passenger for Kendrick.

Jesse Myers was a Uniontown passenger Sunday for a short stay.

Mr. and Mrs. P. J. Scharbach of Colton were Genesee visitors on Tuesday.

Chas. Grieser, sr., was a Saturday morning passenger for Moscow on business.

Mrs. Joe Reil and son, Clarence, were Sunday morning passengers for Pullman.

Helmer Rossebo was a Pullman passenger Sunday to continue school work at W. S. C.

Fred Hampton was a passenger for Pullman Thursday morning for a short stay.

Mrs. Henry Craft and son, Lester, went to Pullman Saturday morning for a short stay.

Mrs. W. W. Burr was a Tuesday morning passenger for Spokane for a visit with relatives.

Mrs. E. L. Phipps arrived Sunday from Spokane for a visit with the W. W. Burr family.

Mrs. Nathan Edwards returned Sunday from Spokane where she had been for the past few days.

Wilfred Cameron, who has been working at Clarkia, is visiting his mother, Mrs. L. C. Cameron.

Mr. and Mrs. John Friedericks were Thursday morning passenger for Uniontown for a short visit.

Mr. and Mrs. E. Percy returned to their home at Spokane Tuesday after visiting with Mr. and Mrs. F. E. Lambert.

Esther Clark returned to Colton Sunday after a visit over the holidays with her parents, Mr. and Mrs. Grant Clark.

Edna Grieser returned to Uniontown Sunday after spending Christmas with Mr. and Mrs. J. J. Broemmeling.

William Gunther returned to Pullman Saturday morning after a visit with his parents, Mr. and Mrs. Joe Gunther.

Mrs. Ida Wheeler returned Sunday from Harrison, Idaho, where she had been for a week's visit with her son, Howard, and family.

Leon Larrabee, who is now engaged in the mercantile business at Harrington, Washington, was in Genesee for a time on Wednesday shaking hands with old acquaintances. He went from here to Lewiston and expected to return home from there.

Mr. and Mrs. C. L. Flomer and little daughter are visiting at the home of Mr. Flomer's parents, Mr. and Mrs. Henry Flomer. Mrs. Flomer arrived several days ago, Mr. Flomer coming up from Walla Walla to join her on Sunday. They will return to their home in about two weeks.

Follett Bros. Mercantile Co.

THE SELECTING OF YOUR WALL PAPER

Wall Paper Has Renaissance—Shun Shoddy Things—Watch Color.

(Article No. 8—Continued.)

Tapestries should show texture, which is the feeling quality of any material. It is possible in this day to select papers of this class that simulate the woven goods so closely that clients will try to pick out the threads with a pin. These fabric effects are sought when you desire plain effects which avoid fatness. They are also produced in figured goods, the over printing softening the outline and toning down the color. This over printing often produces a depth of coloring not obtainable in any other way, and it sometimes covers up a bald design.

Texture papers are valued by the decorator, and are a distinct addition to his offerings. Color is a detail on which we might profitably expend a longer time than the rest of this article will grant us. A good design is often spoiled by bad colorings. Many a good disposition is ruined by it and many a lawyer has collected a fat fee for a divorce suit because of bad coloring. No doubt some murders have been perpetrated because of it, or at least ought to have been.

So, when selecting your wallpaper ask the salesman why the relation of one color to another in that particular selection. If he can not tell you, then go to someone that can. Also be assured of what the effect will be in the various lights to which your selection will be subjected, for color changes under various lighting conditions.

(To be continued.)

Farm Crops.

Plan to sow your clover and alfalfa seed this spring after carefully treating with the proper nitrifying bacteria culture.

The man who utters flapdoodle continually as if it were a fundamental principle of life seldom does anything else.

POULTRY

"Lady Jewel," world's champion egg producer, finished her yearly production of 335 eggs, on October 31, just in time to be shipped to the Pacific International Poultry show, where, placed in a coop with space on all sides, she was the center of a crowd of admirers the week through. "Lady Jewel" looks no different from millions of her breed scattered over the United States—just an everyday industrious White Leghorn hen—but they do say among the talent, that her owner, H. M. Leathers, of Woodland, Wash., values her at $2,000.

At the table poultry exhibition of the Chesapeake & Western railway, held in Harrisonburg, Va., the first pen of Light Brahmas won $500 in cash and a $600 trophy.

Five hundred birds were handled in four culling demonstrations given in Starrh's Ferry, Claremore, Bella and Declo communities in Cassia county, Idaho, and 123 were found to be culls.

Harrah, Washington, ranchers are mourning the loss of their prospective Christmas dinners and the foundation of their turkey flocks for the coming season. Thieves, with at least one truck, stole practically all the turkeys within a radius of six miles from Harrah.

WORLD NEWS NOTES.

The Franco-German non-war pact, proposed by Germany to France through the mediation of a neutral power, has been rejected by Premier Poincare.

Twenty-one passengers were injured when train No. 2, the C. P. R. Vancouver-Montreal express, was wrecked one mile west of Bassano, Alta., early January 2.

Two men were killed and 40 persons were reported injured when a car on the British Columbia Electric railway was struck by a Great Northern railway freight train at a crossing in Vancouver, B. C., December 28.

Benedict Crowell, assistant secretary of war under the Wilson administration, and six "dollar a year" men associated with the council of national defense were indicted at Washington December 30 by the special grand jury involving war frauds on charges of conspiracy to defraud the government in construction of war-time army camps and cantonments.

The last of the three East-West games for 1922 was annexed from the University of Pennsylvania by the University of Southern California by a 14-to-3 score. The other two games were won by eastern teams.

With the subchaser Hansen, "federal dry navy" of the port of New York, tied up at the Battery with engines disabled, the narrows was left unguarded December 30 long enough for 15 rum runners to slip into port with nearly $7,000,000 worth of liquor for New Year's.

During 1922, 1,482,716,970 meals were served to children and adults in Russia by the American Relief administration.

Foreseeing millions of listeners, most of them of college age, the National Radio Chamber of Commerce is developing a plan to establish radio extension courses in American colleges and universities.

How angry an unimportant man becomes when his name is spelled wrong in the newspaper!

The Dairy Cow Depends Upon First Few Months

The making of a good dairy cow very largely depends upon how she is handled during the first few months of her life, believes Paul P. Stewart of Fayette county, Iowa, according to a recent number of Wallace's Farmer. Mr. Stewart has achieved a distinct success with Holsteins largely because of his policy of treating each calf as a potential grand champion and each young heifer, coming into her first lactation period, as a future thirty-pound cow.

Neighbor breeds of Mr. Stewart are free to admit that his calves are larger for their age than any others in the section. Other breeders, as well as Mr. Stewart, have found out that calves raised on this plan unquestionably develop into high-class mature animals, and while Mr. Stewart has concentrated his efforts on the breeding of pure-bred Holsteins, his methods are to a large degree practical for the average dairyman or farmer who may own but a grade herd.

Paul Stewart believes that if a calf is worth raising it deserves the best possible care. He has observed that the highest-producing cows develop from heifers which receive especial attention with respect to feeding and milking. Adherence to these principles has helped Mr. Stewart to build up a herd of outstanding producers.

As might be expected, the purebred calves on this farm are given a whole milk ration for a somewhat longer time than the average farm-raised calf. According to the Stewart plan, the calf is fed whole milk for the first thirty days. During the next thirty days the change from whole to skim-milk is made gradually. One of the critical periods in the life of a calf is just after it is started on skim-milk alone. The breeder must then take particular pains to prevent scours and milk bloat in the calves. Mr. Stewart insists on clean pails for handling the milk for the calves and he is careful to feed at as nearly as possible at the temperature at which it comes from the cow. Skim-milk feeding is continued until the calves are eight to ten months old.

Removes Foam.

Another point which Mr. Stewart stresses is the removal of foam from the milk before feeding the calves. He has hobserved that if the separator foam is not poured off before feeding, the calves become bloated and paunched. Such calves never thrive and are a prey to diseases. He is careful to let the milk settle long enough to allow the foam to be removed.

For a number of years, Mr. Stewart has fed his calves their grain ration in a self-feeder. He generally discontinues the practice when the calves are about six months old, as he finds that they waste considerable feed after that time. The sleek and growthy calves in the Stewart herd are a tribute to the success of the method, and Mr. Stewart reports that he had never had any ill results with the self-feeder. His experience recalls the experiments conducted by Professor McCandlish at the Iowa station, wherein self-feeding of dairy calves was found to give excellent results.

The common grain mixture allowed the Stewart calves is composed of equal parts of corn and cob meal, ground oats and bran. A little oil meal is also fed. Ground barley is frequently substituted for the oats. Mr. Stewart does not agree altogether with the popular theory that whole grains are preferable to ground for calves. His experience with the ground grains mentioned has been highly satisfactory. He believes that a calf can not be taught to eat grain too soon, and calves on the Stewart farm are given grain when they are ten days old.

Mr. Stewart makes little distinction between alfalfa and red clover hay for his mature cows. For calves, however, he prefers to use clover, considering it a safer roughage in its effect on the digestive system. His calves are early accustomed to silage, generally receiving it for the first time at about three months of age. Mr. Stewart relies very little on pasture for the calves because of several disadvantages which attend pasturing.

Watch the Flies.

"Hot weather and flies ruin a great many calves," says Mr. Stewart, "and in fact that it is advisable to protect the young animals very carefully during the fly season. Spring calves are never allowed to pasture the first summer, but are kept in shaded pens away from the heat and flies. Fall calves are not allowed pasture during the hot days, but I frequently turn them out at night into small paddocks or exercise pens. The calves' grain ration is affected but little, as I never force them to get much of their living from the grass. Unless the calf is getting plenty of grain, washy grass may do it more harm than good."

Mr. Stewart's ideal arrangement for handling his calves is to stable them during the day and let them run at night into small pastures or exercise pens. The fly menace is given particular attention by using sprays and burlap blankets. Manure is never allowed to accumulate more than a few days, thus discouraging fly breeding.

While the Stewart calves are carefully handled, they are not pampered. The second winter of their lives the heifers run in a shed. They are fed silage and clover hay liberally and receive about a pound of grain per hundred pounds of live weight. The grain mixture is oats and bran with a little corn and from half a pound to a pound of oil meal per head daily.

The heifers are bred to calve at about two years of age. Mr. Stewart's methods of handling the heifers before and during their first lactation period have had much to do with putting the herd in the front rank of production.

"I find that if a heifer is to develop into a heavy milker, she must be milked four times a day after her first freshening," says Mr. Stewart. "Frequent milking and careful feeding are essential because the first lactation is the most critical period in the cow's production life."

Furnishes Examples.

A number of examples of the advisability of frequent milking of heifers are furnished by Mr. Stewart. Irene Butter Maid De Kol, one of the Stewart heifers, made over 900 pounds of butter as a junior two-year-old, milked four times a day. She is not now on test, but is averaging 70 pounds a day on two milkings. Lady Memnon Butter Girl, a 909-pound junior three-year-old, is another instance of the wisdom of the Stewart policy.

Mr. Stewart feeds his heifers with particular care during the three months immediately preceding freshening, using feeds, such as oats, bran and clover hay, that are high in mineral and bone and muscle-producing material, in order to put the heifers in the best possible condition for calving and for subsequent milk production. The ration is reduced for the few days before and after calving. Mr. Stewart then gradually brings the heifers to full feed, requiring nearly a month to bring them to a maximum ration.

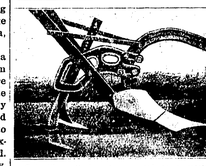
FAITHFUL DOG DIES AT COYOTE BULLET

The case of a single bullet from a hunter's rifle killing a coyote and mortally wounding the hunter's dog so that it had to be killed is a strange incident being related at Juliaetta, Idaho.

About four miles below Juliaetta the Albright brothers have a farm in the Big Potlatch canyon. Coyotes are numerous in this district. A coyote was being hard pressed recently by the Albright brothers and a prized Airedale dog. The dog caught up to within a few yards of the nearly exhausted animal. The hunter fired. The bullet, of the softnose variety, passed through the body of the coyote, killing the animal immediately. The bullet then struck a rock and glanced. One piece of the shattered missile pierced the side of the dog and wounded him so severely that it was necessary for the men to kill their four-footed companion, which they valued highly.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

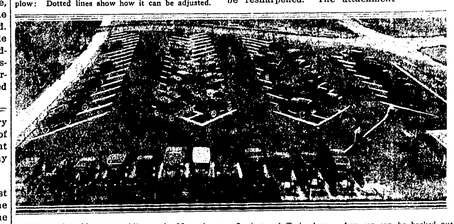


Subsoiling attachment connected to a steel-beam plow: Dotted lines show how it can be adjusted.

SUBSOILING ATTACHMENTS FOR ANY KIND OF PLOW

Attachments for breaking up the subsoil, which can be connected to any standard right or left-hand, wood or steel-beam walking plow, as well as to sulky plows, are now on the market. For connection to a steel-beam plow two U-bolts, and two bolts are required. The subsoiling is done with two steel blades, which can be detached to be resharpened. The attachment is adjustable so that the subsoiling can be done to any desired depth.

The discovery of an alloy termed "ureum," said to have the brightness, durability, and inoxidability of gold, has recently been announced by a French chemist, who also claims that these qualities will permit its substitution for gold in jewelry and other similar manufactures.



System of parking automobiles at the Massachusetts Institute of Technology: Any car can be backed out readily from the spaces outlined in white for them upon the gravel of the parking yard. To the right is the space specially reserved for motorcycles with their side cars.

ANY CAR EASILY REMOVABLE

At the Massachusetts Institute of Technology, at Cambridge, many of the students have automobiles, and a system of parking them has been evolved by which any car can be driven away quickly at any time of the day. For each car a space is outlined in white upon the gravel of the yard reserved for parking. These lines are laid out at an angle so that a car can be backed out readily from its berth into the ample space that is left between the rows of cars. A separate space is reserved for motorcycles.

WASHINGTON SHOULD HAVE THOROUGHBREDS

Association Would Have State as Well Known for Horses as It Is for Cattle.

Why shouldn't Washington be bringing millions of dollars a year to breeders of the state? Why should not Washington be as well known for its draft horses and mules as it now is for its fine dairy cattle? These questions are asked by the Washington Thoroughbred Association, which answers by saying that all that is needed to start the state toward this distinction and profit is to give the horse-breeding industry a little encouragement and the next legislature is to be asked to give official recognition.

In a statement recently issued by the association these statements are made:

"Washington is producing some fine horses, as well as fine cows, bulls and other live stock; but hundreds of thousands of dollars go out of the state every year for horses and other live stock that ought to be spent in this state for animals bred in this state. Conditions in Washington favor stock raising. Five breeds of draft horses and five breeds for other uses are now bred in Washington. There is no reason why the breeding industry should not become one of the foremost industries in this commonwealth. The example of Kentucky as a horsebreeding state is in point.

Millions Pour Into Kentucky.

Millions of dollars annually pour into Kentucky on account of the vast and consequential breeding interests of the Blue Grass State. At the Saratoga sale of yearlings in 1921 the average price paid per yearling was $2,884.77 and Kentucky breeder furnished 7 per cent of the yearlings sold in this great market for American breeding farms. There is a shortage of thoroughbred horses and it is going to take a number of years of intensive breeding activity to catch up with the demand.

"Col. H. C. Whitehead, chief of the United States army remount service, discussing the situation a year ago, said: "The breeding of light horses is in a critical state," and he made a strong appeal to jockey clubs, horse associations, public-spirited citizens and legislators, both state and national, to continue to lend encouragement and assistance to the breeding of light horses.

"In view of these facts, when considered in connection with ideal breeding conditions in the state of Washington, the Washington Thoroughbred association is firmly convinced that the time is ripe for this state to enter upon the breeding of horses on an enormous scale. We ought to produce and can produce the finest horses in the world in this state and by doing so we could bring annually millions of dollars into the state, besides keeping in the state the vast sums that now yearly go out of the state for horses of all kinds. All we need to do is to give the breeding industry a little encouragement, and we can do that by increasing popular interest in the horse."

HOW TO MEASURE HAY

When it is impossible to determine the actual amount of hay in a stack by weight, the amount is sometimes estimated by measurements, says a farm crops expert of the State College of Washington, replying to a question from a Snohomish farmer who wanted to know the number of tons in a stack of mixed timothy and alfalfa 60 feet long 3 feet above the ground, 14 feet wide and 32 feet over the stack.

A common rule for measuring hay, he says, is known as the Frye-Bruhm rule in which the width, length and over measurements are used. The "over" is the distance from the ground on one side over the stack to the ground on the other. The width is subtracted from the over, the result divided by two, then multiplied by the width, and the product multiplied by the length. This will give the approximate cubic feet in the stack, and is divided by 512 to get the number of tons.

Another rule sometimes used is "width plus over, divided by four and squared, then multiplied by the length and divided by 512." A smaller number of cubic feet are required to make a ton in a large stack than in a small one, and one that has completely settled weighs heavier for a given volume than a new stack. The character of the hay may also be a factor.

The stack for which the measurements were given, according to the first rule would have 7,560 cu. ft., this result being obtained thus: 32 minus 14 divided by 2, times 14 times 60, equals 7,560. Dividing this by 512 gives 14.8 tons. Using the second method of computing 7,935 cu. ft. is the number obtained, as follows: 14 plus 32, divided by 4, equals 11.5, and 11.5 times 11.5 times 60, equals 7,935. This divided by 512 gives 15.5 tons. If it is desired to divide the stack in more definite quantities, more trustworthy results may be secured by dividing it vertically than horizontally.

Teaching Auto Repairs.

Three courses in auto repairs, a fortnight each, will begin at the State College of Washington the first, third and fifth Mondays after New Year as a part of the winter short course. Anyone interested in obtaining a more thorough knowledge of the practical operation and repair of automobiles and trucks is eligible to enroll.

Various garages in the Northwest are furnishing men expert in handling ignition and carburetor troubles who will be added to the faculty of the automobile engineering department for these courses, under the direction of Professor A. C. Abell, mechanical engineer.

LAW ENFORCERS OF NORTHWEST TO EXPRESS OPINIONS ON LIQUOR LAW

Should the Volstead act be strictly enforced or should it be repealed or amended?

Whether the prohibition law, as in effect, is capable of satisfactory and adequate enforcement, or whether it would be more advisable under existing conditions to repeal it entirely, or amend it to permit government vending of all liquors, or the sale of only light wines and beer, is a question which will be thoroughly discussed by the second annual convention of the Northwest Association of Sheriffs and Police then over 300 law enforcement officers meet in Portland, January 18, 19 and 20. Resolutions will be passed, as the association will go on record as either favoring the law in its present form or for a proposition for amendment.

Word to this effect was recently given out by L. S. May, president of the association.

Haynes Will Speak.

Mr. May announced that Federal Prohibition Commissioner Haynes has decided to accept the association's invitation to attend in person, and will make a special trip from Washington, D. C., to attend the conference.

"It seems a difficult question, May said, "when the full and impartial enforcement of the prohibition law is considered. We know there is a wide diversity of sentiment as to the possibility of its successful enforcement.

"The general bootlegger evil is a growing menace, and a most serious problem which the law enforcer must face daily. Aside from its moral and physical effects, it is a problem that demands speedy solution.

"While we don't imagine that the law enforcers themselves represent public opinion, we do feel that by virtue of their position in immediate daily contact with all law enforcement problems, they are in the best position to pass judgment on the feasibility of the enforcement of any particular law.

Will Discuss Fully.

"The prohibition question is one that will bear discussion from all angles. After representatives of every department in the Northwest, including American and Canadian officers, have been heard from, the association will pass resolutions accordingly and will go on record as favoring either the one proposition or the other."

Full enforcement of the narcotic laws, new ways and means of cooperating with government and state in a concerted effort to eradicate the dope evil and for the compulsory rehabilitation of addicts, is another subject that will be given a prominent place in the discussions at the convention.

"Step Aside, I'm Champ"

Owners of the big producing apple trees in north central Washington are asked to step aside and make way for the latest claimant to championship owners. C. J. Dunhamel of Knapps Coulee, near Wenatchee, enters a 42-year-old Willow Twig and is willing to back it up against all comers. The tree produced 62 packed boxes of commercial fruit on two alternate years, 1910 and 1921, says Mr. Dunhamel.

During the "off years" the tree "lays off" and does not bear any fruit to speak of. In addition to the packed boxes there are usually a dozen boxes of culls. The trunk of the tree is two and one-half feet in diameter and the uppermost branches 35 feet high and have a spread from side to side of over 50 feet. Very little pruning has been done to the tree and it seems to be growing uniformly. The trees were set out by some old-timer who located at Knapps Coulee many years ago.

How Shall I Keep My Boy on the Farm?

How to keep the boy on the farm is a subject that has been much talked and written about, but it seems the problem is not yet solved, because the boys are still drifting to the city, says J. E. Allensworth in a recent issue of Hoard's Dairyman. Having been raised on the farm, among the hills of eastern Ohio, I know from my own experience some of the things about farm life that appeal to the boy, and I also very well remember the things that I thought took the joy out of farm life.

In the first place I believe there are a great many farmers who do not go at this problem in the right way. They try to persuade and often compel the boy to stay on the farm, and yet do nothing to make farm life attractive and interesting to them. I do not believe any boy should be compelled to choose farming as his occupation unless he is interested, for very few people are successful at any occupation or business that they have not a liking for. Whenever farmers do more to make farm life attractive and interesting, then there will not be so many boys leave the farm and go to the city. Now let us consider a few things that are attractive and interesting to the boy.

There is more truth than poetry in the old saying that "all work and no play makes Jack a dull boy." Do not work the boy from daylight to dark, but give him time for recreation. You will not lose anything by it, as the boy who has some fun along with his work will do more work than the boy who has nothing to think about but work. Where is the boy who will not work hard to get the crops planted if promised a fishing trip?

Carry Out Promises.

And when you make the boy a promise see that you carry it out, because if you disappoint him a few times you will lose his confidence. Provide some outdoor games such as croquet or tennis and let them play baseball. Croquet is an old game but it is a game that both young and old enjoy and anybody can afford this game. Provide plenty of good books and magazines for the boy to read and no home is complete without some musical instruments, which do so much to make the home cheerful.

After you have made sure that the boy has enough time for recreation, then give him something that will give him an interest in the farm. Give him a pig or a calf and make him feel he is your partner.

Give him a pig or a calf with the understanding that if he does not take care of it himself you are to get it back, but you need not figure in getting it back on those conditions. Or better yet, get the boy into a calf or pig club if there are any in the community. Let the boy show the calf or pig at the county fair or state fair. The inspiration he gets from this, especially if he gets a blue ribbon, will do much towards interesting him in good live stock. And never let the boy say that "his calf became Dad's cow."

Let the boy do some of the buying and selling and give him more responsibility. The boy who is not trained to shoulder responsibility will never make a very big mark in the world.

No More Drudgery.

Then you should have as much of the latest improved machinery as you have need for. So much of the farm work that used to be drudgery is a snap now with up-to-date machinery. This is doing much toward making farming a more pleasant occupation. Let the boy run the machinery even if he can not do as good work at first as you can. The time to let the boy learn to do things is when he is young and wants to learn. The boy who does not learn how to do things when he is young, very often does not want to learn whe nhe gets older. Boys always want to be doing something and of course often get into mischief, but I would not give much for the boy who has not enough "pep" to get into mischief once in awhile.

Is Not Surprised.

When I go into a community where there is no social center or any kind of amusement and there is no place to go to but an old one-room church where the services are about as inspiring as a funeral, I am not surprised that there are few young people in the community who have been contented to stay there any longer than they had to and I can not help but wonder what the few boys and girls who go to church think when the congregation sings the third stanza of the popular old hymn "Onward Christian Soldiers," which starts out with "Like a mighty army moves the Church of God." Whenever the country people in the modern churches and schools and social center for recreation and amusement, then they will see more and better young people in the country.

Then it does the boy good to get away from his own community once in awhile. One of the biggest weeks of my boyhood life was when I spent a week at the state fair. This was the first time I had been very far away from Dad's coat tail and also my first trip to the state fair. I saw so many things that week that I thought were wonders, and I went home feeling that in that week I had seen and learned more than in the previous five years. I was especially interested, of course, in the fine horses, cattle, hogs, and other live stock, and thought it would make anybody interested in the farm if they could have that kind of stock to work with.

When the boy makes a trip to the fair then he will want to take a course in agriculture at the state university. This was true in my case at least. Where there is a will there is always a way, so see to it that the boy has a chance to take an agricultural course. He will learn things at the agricultural college in a short time that probably Dad did not know and it would have taken him several years to find out by his own experience.

Experience Good.

Experience is often a pretty high-priced instructor, too. When I went to the state university and started to study scientific agriculture, the first thing I found out was that I did not know very much about it. When I began to learn how plants grow by using the nitrogen, phosphoric acid, and potash that is in the soil, how the legumes store up nitrogen in the nodules on their roots and so many other things that I had never understood before, then I began to realize how much there is to learn about agriculture. It makes agriculture an interesting study when you begin to learn the "how and why" of things. It is certainly a great benefit to any boy to have the advantage of a course in agriculture.

Then, when the boy has taken an agriculturel course and wants to work out some of his new ideas, let him go ahead and do not be like the farmer who sent his boy to the state university to study agriculture and when he came home he would not listen to him but insisted that everything should be done the way grandfather did it. Grandfather's way was probably the best way in his day, but we have learned better methods since his time. If your boy tells you that it would be best to work into pure-bred live stock and get rid of the scrub stock, you had better listen to him. When you see the kind of scrub stock there are on some farms you can easily guess one reason why the boys are not interested.

Suitable Name Helps.

Another way to make the farm a little more dignified and attractive is to give it a suitable name. Do not be too sentimental in choosing a name, but choose the name that really suits the farm. This will not only add a little dignity to the farm but it will pay in a business way. Have your farm name on your envelopes and letterheads. It always pays to advertise.

Last, but not least among the ways of interesting the boy on the farm, let us do all we can to beautify the farm and home. A little paint on the buildings will do wonders toward making the place attractive. Spend a day once in a while in cleaning up all the trash that always accumulates around the farm. It pays to have a place for everything and everything in its place, even the trash, which should be on the dump pile at some secluded spot on the farm. If possible have a large front yard with plenty of shrubs, flowers and trees in it.

These are things that everybody can afford and it is impossible to have a beautiful home without them. Make the home a place that the boy will be proud of and not ashamed of. When farmers will take more interest in making the home attractive and the farm work more interesting, give the boy some time for recreation and a chance to develop physically, mentally and morally, then there will be less of the boys leave the farm because they will realize that farm life is a more independent and happier life than city life can ever be.

Here are some of the scenes so common to the farm. In speaking of the problem of keeping the boy on the farm the author of the accompanying article says:

"I believe there are a great many farmers who do not go at this problem in the right way. They try to persuade and often compel the boy to stay on the farm, and yet do nothing to make farm life attractive and interesting to them. I do not believe any boy should be compelled to choose farming as his occupation unless he is interested. Whenever farmers do more to make farm life attractive and interesting, then there will not be so many boys leave the farm and go to the city."

RAISE THE TYPE OF HOGS THE MARKET DEMANDS—The hog market for the past two years has proven conclusively that the packers and the consuming public both want a hog of the meat type. The day of the big, fat, lardy hog is past and gone and the demand is now and will continue to be for a hog which dresses out a superior quality of fine textured meat. HAMPSHIRES ARE THE ONLY MEAT TYPE BREED AND ARE CONSISTENT MARKET TOPPERS. They have won the Grand Championship over all breeds, all ages and all weights of hogs in the carload lots, at the International Livestock Show for the last four years in succession—1918, 1919, 1920, 1921—in the hands of average farmers. No experts needed to make Hampshires win. IT IS DOUBLY IMPORTANT TO RAISE THE KIND OF HOG WHICH THE MARKET DEMANDS WHEN THAT IS THE KIND WHICH WILL BRING THE MOST PROFIT TO THE MAN WHO CARRIES THE SWILL PAIL. Hampshires are the greatest of all forage hogs—making the highest priced pork out of the cheapest feeds on the farm. Active, vigorous and healthy, they raise exceptionally large litters. At the International, they have shown almost without exception, the heaviest spring pigs of any breed, carrying always the heavy, high-killing lean meat type. FOR FREE HAMPSHIRE INFORMATION and for names of breeders in your neighborhood, address DEPARTMENT 22, AMERICAN HAMPSHIRE SWINE RECORD ASSN., E. C. STONE, SEC'Y, PEORIA, ILL.

More "Grandstanding"

Senator La Follette, during the past year, has attacked the integrity of the United States supreme court, he has started another "investigation" of the oil industry, claiming it is an illegal combination for the purpose of robbing the consuming public, and to wind up the year he now launches a vicious attack against the "Big Five" packers, accusing them of robbing the people by unlawful combinations" and demands an investigation of the proposed packing company merger.

Senator La Follette has stayed in the limelight all his life by constantly attacking some person or corporation. His line of reasoning is destructive. He appeals to the hatred and antagonism of the masses by pitting them against organized industrial activity or our established form of government.

It is constant agitation of the brand La Follette peddles that keeps the country in an unsettled industrial condition.

Senator LaFollette is undoubtedly the headliner in American political vaudeville, with Bill Borah and Hi Johnson as assitants, and can keep more people fooled all the time in favor of voting for him than any other politician in the United States.

With his scalping knife under the hide of the United States supreme court, the oil industry and the packing industry in 1923, the public will wait to see whether he can hang these trophies on his belt during 1923.

In the past he has been able to wave his political knife at those he wishes to attack and thus get great publicity beneficial to himself but he usually fails to "bring home the bacon" for the public.

There is no question but what many of the large corporations need "curbing" but can La Follette, Borah and Johnson do the work the way the general public would like to have it done, aside from the minority of radicals?

May Establish Factory

The establishment of a work garment factory in St. Maries and the bringing of 50 additional families into that place was proposed by the Manning-Wyman company of Butte, Montana, according to J. P. Manning, connected with the firm, who was visiting in the west recently. The manufacturing man visited St. Maries the first week in January and looked the situation over and held a conference with the business men of that city.

Notice of Sale of Real Estate

Notice is hereby given, that in pursuance of an order of the probate court of Latah county, state of Idaho, made the 6th day of January, 1923, in the matter of the estate of James W. Day, insane, the undersigned, guardian of the said James W. Day, insane, will sell, at private sale, to the highest bidder, for cash, subject to the confirmation of the said probate court, on Saturday, January 27th, 1923, at the office of W. W. Burr, Genesee, Idaho, all the right, title and interest of the said James W. Day in the following described property:

One half interest in the south half of block ten (10), North Addition to the City of Genesee, Idaho.

Terms and conditions of sale: Cash on date of sale.

January 10th, 1923.

IDA SMITH,

GOV. MOORE DELIVERS MESSAGE—MUST REDUCE COSTS

(Continued from first page)

no new buildings for any institution, except where to deny would result in retrogression. We should hold fast to all we have that is good, eliminate all frills and theories, and consolidate wherever possible consistent with good government and efficiency. With these things in mind, with an eye turned toward the goal and future of our great commonwealth, we can get back to our former prosperity. In a state of such great resources, so greatly favored of God, and with such splendid people as we have, we can put behind us this unparalleled period of hard times which came about through no fault of ours or of our state.

Tax Penalties

The only object of tax penalties is to induce prompt payment of taxes. Penalties should not be wholly dispensed with, but the present penalty, plus the high rate of interest on delinquent taxes, approaches confiscation in many cases. I would suggest your earnest consideration of this matter with a view of giving some relief.

Budget

As required by law, the outgoing administration prepared a budget containing an estimate of moneys that will be required by the various departments and institutions during the next biennium. This I will presently submit to you, together with my recommendations.

At this time, however, your attention is called to the fact that the income of a large percentage of our tax payers has been cut at least 50 per cent, due to economic conditions. You, as individuals, have found it necessary to trim your sails accordingly, and the state and local taxing bodies must do the same. While it may be impossible at this time to reduce appropriations in proportion to the losses sustained, cuts should be made for the coming biennium so as to reduce the sum total of appropriations and levies at least 25 per cent. I urge each of you to carefully study the budget, and as individuals to refrain from asking any particular or additional appropriations, and make it your personal business to bring about a substantial reduction.

Taxation

In furtherance of the earnest desire to reduce taxation, I recommend that the maximum levies and bonding limits fixed for local taxing bodies be materially reduced. If reduced maximum would prevent fulfillment of existing contracts, or the doing of things absolutely necessary, it should be provided that an additional levy could be made by a two-thirds vote of the tax payers affected.

Consolidation

There are certain changes that can be made in the executive departments of the state by the elimination of some and the consolidation of others, which will result in a substantial saving. The proposed changes will be taken up with you later either through the medium of special messages or bills which will be prepared and presented to you for your consideration.

Federal Cooperation

The engaging in activities in cooperatin with the federal government and the matching of moneys appropriated by the federal government is, to say the least, of questionable propriety, and it is therefore recommended that you make no appropriation in this connection simply because by so doing it will get us federal money. Evidently the people must pay regardless of the governmental agency from which comes the money. If the object is worthy, and one for which you would ordinarily appropriate funds without promise of federal cooperation, then you should make such appropriations within the limits of the ability of our people to pay and consistent with the benefit to these people. Without doubt there are too many governmental agencies and too much interference with the everyday life of the people.

Education

Education is the great means of advancement of our people and the hope for the future. Economy requires a simplification of the courses taught at our educational institutions at the public expense. Only useful and necessary subjects should be taught.

Highways

Highways have heretofore been built by all the tax payers, but our roads should be maintained by those who use them, including tourists; and this can be accomplished by a gasoline tax. Economy demands that the highways already constructed be maintained at the lowest possible cost, and construction limited to imperative needs on projects under way. Ample finances for the program can be provided by the gasoline tax in addition to the money received from licensing automobiles and trucks. The gasoline tax should apply only to vehicles used on the highways.

Nominations

The present plan of nominating state and congressional officers should be continued. The law for selection of nominees for county offices should be amended and strengthened so as to preserve party integrity.

Public Safety

The state constabulary law should be repealed, and provision made for a fund for the chief executive to use in enforcing the law in emergencies only, without the necessity and heavy expense of calling out the militia or declaring martial law. While I am governor the law must and will be enforced.

Soldiers' Relief

The state veterans' welfare commission for the ex-service men and women of the World War has done splendid work and has been economical and should be continued.

Railroad Passes

An act should be passed prohibiting the issuance of passes by common carriers to all public officials of every class.

Our Unfortunates

Let us not neglect the moral and physical welfare of those who are placed in our charitable or penal institutions. We owe to the former the comforts of life and to the latter surroundings and care that will better their morals, protect them physically, and prepare them to face life after being discharged.

Conclusion

In conclusion may I remind you that you are here as representatives of the people of Idaho. The economic situation that confronts us is so much more critical and serious than our political differences that I urge upon you all to forget your political differences and factional quarrels, if there be such, until a solution of the bigger problem of economy in government is reached. In furtherance of this program of economy, I urge that you pass only needed legislation, repeal unnecessary laws, speedily transact your business and adjourn at the earliest possible date. For my part, as governor of the state, I pledge my best efforts now and throughout the biennium to minimize expenses in every department, and shall expect from those under my control close application to duty.

The executive department invites the counsel and cooperation of the members of this legislature at all times.

GOV. MOORE DISCONTINUES TWO STATE DEPARTMENTS

According to a published statement in the Idaho Statesmen of Boise, Gov. C. C. Moore has discontinued the department of immigration and the state constabulary, to take effect by January 15.

The resignation of all highway employes has been asked for on or before January 20 and they will be effective January 31. The bureau will be reorganized and reappointments made between January 20 and 31.

Activities of the state constabulary and the department of immigration, labor and statistics cease January 15. In a statement issued by Governor Moore he said he will ask for no appropriation to carry on these two offices for the coming two years.

The change in the highway bureau affects the entire personnel of the burau from patrolmen to director. Authority for the laying off of the employes while pursuing a course from the governor, was contained in a circular letter issued Wednesday by D. P. Olson, director, under instructions from W. J. Hall, state commissioner of public works. It follows:

"Owing to available state funds having been practically all allotted to projects now under contract, the amount of work in progress will gradually become less. It, therefore, will be necessary to so reorganize and shift the employes of the bureau as to properly meet the new conditions.

"With this end in view, it is thought best to call for the resignation of all employes, effective January 31, 1923, on or before which date the necessary reorganization and transfers will have been decided upon.

"The district engineers and motor transport engineers will, therefore, call upon all employes under their supervision to tender their resignations and forward same to Boise office, to arrive there not later than January 20. Reappointments will be made to fit the new conditions between January 20 and January 31."

The Wallace platform provided for the abolishment of the constabulary and it is known that the continuation of this office after January 1 has caused the governor no little worry. His order of Wednesday says that W. H. Hiatt, chief of constabulary, shall clean up the business of the office so that it may be closed January 15. Governor Moore indicated that the work of the bureau of identification, or keeping of finger prints, which was carried on by Mr. Hiatt, might well be placed in charge of the warden of the state penitentiary.

The abolishment of the department of immigration, labor and statistics came as no great surprise to state officials as many have predicted that the personnel of this department would be relieved. O. H. Barber, commissioner, has been requested by the governor to close the office January 15.

The office is a constitutional one and the governor has suggested that the immigration work, be carried on by the department of agriculture and the labor end of the department by the industrial accident board.

No indication has been made by the governor as to what his idea of reorganizing the highway bureau is.

It has been said by several state officials that northern members of the legislature will not stand for the entire crippling of the highway bureau because of their desire to have completed the North and South highway and other important work in the north.

Also the Wallace platform regarding highways is to the effect that the administratin should maintain in good condition what highways have already been built and construct new roads only where it is absolutely necessary.

Should Be Quiet

Doctor: "There's absolutely nothing the matter with you, madam. You should seek quiet for a while."

She: "But, doctor, look at my tongue!"

Doctor: "The same applies to your tongue."

Notice to Creditors

Estate of Goswin Sievert, Deceased.

Notice is hereby given by the undersigned executor of the estate of Goswin Sievert, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within 10 months after the first publication of this notice, to-wit, December 22, 1922, to the said executor at Genesee, Idaho, the same being the place for the transaction of the business of said estate, in Latah county, state of Idaho.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JANUARY 19, 1923. NO. 29

COW TESTING ASSOCIATION DO YOU WANT ONE?

During the last 20 years dairying has been developed all over Europe; this is due to the cow-testing associations. In 1895 the first association was organized in Denmark with 13 herds entered. The growth has been very rapid and at present there are something over 3,000 associations in Europe. In these organizations there is a trained tester employed, who spends one day each month with each of the herds in the association. Arriving at the farm in the afternoon he weighs and samples the milk from each cow at milking time. He furthermore weighs the concentrates given to each cow and also the roughage which several cows get and then estimates the amount that each cow gets. The following morning this is repeated after which the samples of the milk are tested for butterfat. From this day's record he computes the milk and fat production and the cost of feed for each cow for the current month. While these records are not as exact as if the milk was weighed at every milking, a careful study shows that the results are within two per cent of the actual production of the cow. The tester not only makes these records but he studies the local feed market and aids the dairyman in working out the most economical ration for his herd. Many men that have only a few cows would not go to the trouble of testing the cows themselves but they are glad to secure some one for a very small cost per cow to do the testing and calculating for them.

The improvement wrought by these associations is marvelous. In Denmark, largely due to this work, the average annual yield per cow has been increased from 112 pounds of butter in 1884 to 224 pounds in 1908. In ten years the association in Sweden increased the annual production 109 pounds of butter fat per cow.

While the cow testing associations are yet in their infancy in this country, they have already accomplished much good. In 1914 the total number grew from 100 to 163. Today many more associations and they are being organized every day and all are getting results as those before them.

Without a doubt the question of whether or not your cows are paying for their feed comes to every farmer in this community. Just because your cow gives a large flow of milk, is no sign that she is paying her way, especially if you are making butter or selling cream. Are you feeding your cows the most economical feeds that you could—I mean by that, are you feeding the feeds that will produce the most milk for each dollar expended for feed? Because you are feeding cheap feeds you may not be feeding the most economical feeds. How would it seem to you to take your neighbor's checks a year from now and point out just how many dollars this cow or that cow made for you last year. If you had a cow to sell, could you come nearer getting what she was really worth if you had down in black and white just what she did the year before or if you could only say that that this is the cow that I am offering for sale. I do not know what her milk tests are or how much she gives, but the oldest boy milked her last year and he said she gave a pail full. The man who is content to buy usually knows that there are different sized pails, especially if he has purchased many cows.

The question of whether or not we can have an association in this community and have our cows tested and records kept on each of them for a year is up to us and no one else. If your are interested in the welfare of the word in such a scheme call or write Chas. W. Smith of the Genesee High school and find out how this can be done.

Annual Telephone Meeting

The annual meeting and election of officers of the Home Telephone company was held last Saturday afternoon, when the following officers were elected for the ensuing year: Directors—for a term of three years, G. E. Taber, Fred Nagel and R. S. Sullivan. M. S. Wilson was chosen to fill out the unexpired term of Theo. Schlueter, deceased. In addition to the above the board of directors has Walter Jain, A. C. Linehan, Ernest Becker, Ira Hanson and Wm. Schluter as members.

Arthur C. Linehan was chosen president, Walter Jain, vice-president, and R. S. Sullivan, manager.

Card of Thanks

The family of the late D. Sweeney wish to express their heartfelt thanks to the many kind friends and neighbors for their aid and expressions of sympathy during their late bereavement.

Ominous

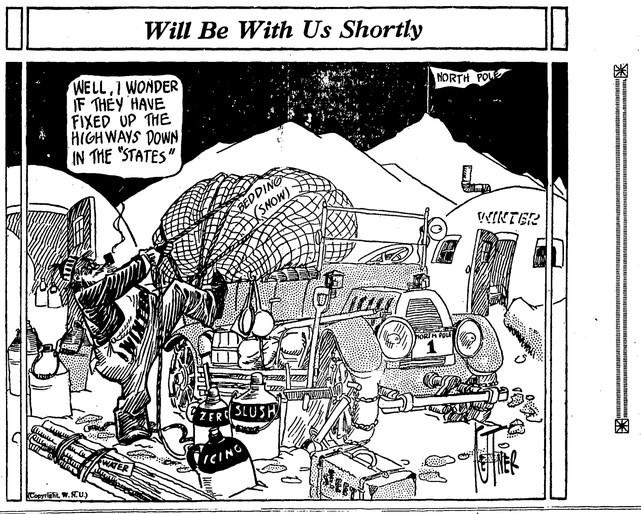
Overheard and reported by an enemy-friend of the bride:

"Her fourth venture?"

"Yes, and she's just as superstitious about it as she can be. She just knows it won't turn out well. Her husband gave the minister $10."

"Well, why not?"

"Well, it seems her three former husbands each gave $1, and that makes 13."



SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Plowing In Kamiah Section

A good many farmers on the bench lands and some on the prairie sections are plowing these days, and find "that it goes pretty good." There is no frost in the ground and fall grain is growing; pastures, too, are getting green and yield considerable feed, which is quite welcome in the face of $30 hay. Some climate we have in north Idaho.—Kamiah Progress.

Three carloads of hogs were shipped from Cottonwood, Tuesday morning, the shipment having been made up of hogs delivered here by the farmers to the Farmers Union Warehouse company who in turn sold them to Ben Shaw for $8.15 a hundred weight net to the farmers. The shipment brought approximately $4,200. Eleven carloads were shipped from the "hill" Tuesday. Farmers in this section are getting back into the hog industry rapidly.—Cottonwood Chronicle.

More Marriages Than Divorces

More than six times as many people were married in 1922 over the number of people divorced, according to a report from the office of Harry A. Thatcher, Latah county recorder and auditor.

There were 144 marriage licenses issued during the year just closed and 22 decrees of divorce were granted in the same period in the district court. The number of marriage licenses was a decrease of 22 over the number of licenses issued in 1921, when 166 couples were issued marriage licenses.—Star-Mirror.

Warm Weather—Wonderful Rains

It has been a good many years since the country has enjoyed such splendid and abundantly warm rains thr ughout the greater part of December, and of January so far, as those in the Palouse lands, in most part, are in a condition to absorb every bit of it, as there has been no frost in the ground for a long time. Fall-sown grain is growing in good shape, and during the past week a number of farmers have made the statement that their wheat looks as well right now as it has during the past two or three years in May. That certainly sounds good, for the farmer for the past three years has not been favored with proper moisture and other conditions for producing very large crops. May such favorable conditions continue; the country needs the prosperity that a bumper crop would bring to the agricultural sections in all parts of the country.—Asotin Sentinel.

Gannon Made Cashier

According to a dispatch to the Spokesman-Review George H. Gannon for a year assistant cashier of the Pullman State bank, was made cashier of that institution at the recent meeting of the board of directors. Mr. Gannon is a son-in-law of Fred K. Bressler, president of the Genesee Exchange Bank and is quite well known in this little city. He is said to be the youngest cashier of a bank in the Inland Empire—a fact that he and his estimable wife should be justly proud of.

Ladies' Aid Will Meet

The ladies aid of the Federated churches will meet at the home of Mrs. Fred K. Bressler on Wednesday, January 24. Mrs. Arthur Hampton and Miss Adda Mathews will assist in entertaining.

WHAT HAPPENED HERE TWENTY YEARS AGO

Wheat is still 60 cents.

It is now unlawful to spit on the Lewiston sidewalks.

Chas. Spurbeck and George Follett left Tuesday for Pendleton to make final proof on their timber claims.

Frances Jenkins of this county aspires to be leader of the house during the present session of the legislature.

LaRue Tice has a large amount of wood now on hand, having received nearly a train load the first of the week.

Chas. Ebel has agreed to accept as damages for a right-of-way through his farm in road district No. 4, $204.50.

Albert Carbuhn, son of Matt Carbuhn of Uniontown, has taken up a permanent residence on the farm southwest of town.

Mrs. Keane's residence, in the western part of town, is nearing completion. In size it will be 22x28, story and a half high, and will contain five rooms and pantry.

George Hunter came over from Troy the first of the week, work at the mill be temporarily suspended. He says the smallpox situation is causing considerable uneasiness.

Christian Hanson has disposed of his 170 acre farm north of town to Jens T. Miller, receiving $6,100 for the same. Mr. Miller a few years ago sold his 80-acre farm to George Tegland.

The Moscow Mirror, under the management of W. D. Smith, promises to be an improvement over anything Moscow has previously had. The paper will be enlarged and greatly improved.

John Friederichs of Breckenridge, North Dakota, is a recent arrival and is stopping with Joseph Moersch and family, Mr. Friederichs and Mr. Moersch having been raised together in Wisconsin. The visitor is well pleased with Idaho and has determined to remain and will probably invest in a farm.

During the past 18 months W. M. Thompson has paid the growers of this section upwards of $34,000 for baled hay. The amount represents shipments of about 370 cars. There still remains a large amount of hay in the hands of the farmers, many of whom believe that they will get a higher price than that quoted at present—$11 for timothy and $9 for grain hay.

Dance Was Success

The hard-times dance given at the Ingle school house last Friday night was a great success. There was a good attendance and a splendid time was had. Refreshments were served and a neat sum was realized for the benefit of the school. Miss Johanna Dwyer is the teacher.

Birthday Party

Bernice Bumpass, daughter of Mr. and Mrs. C. A. Bumpass, celebraed her eighth birthday anniversary on Sunday, January 14. A small group of her young friends were invited to help her celebrate the event. Refreshments were served and a good time was reported by all.

Nez Perce Board Cuts Wages

According to word received from Lewiston, the Nez Perce county board of county commissioners has cut the wages of road overseers from $4 to $3.50; road laborers, $3.50 to $3; team hire, $3 to $2, and deputy clerks, $4 to $3.50.

UPRIVER SHEEP MEN USE 200 TONS FEED

More than 12 tons of corn were transported to the sheep camps along the upper Snake and Salmon rivers last Wednesday by the gasoline boat Idaho, of the Brewik & Sittkus line, which returned to her moorings in this city yesterday, making approximately 200 tons of feed carried out from Lewiston thus far this winter to the ranges.

So far as can be learned the magnitude of the shipments of feed for range stock this year are the heaviest known for a long time, and how long these shipments will continue to be made cannot be estimated for the sheep owners at this time. Of the 200 tons sent into the upper river country about two-thirds have been in corn and the remainder in cotton seed cake. Since the first day of the year more than 88 tons of corn have been sent into the range country.

Good range country is hard to obtain this year, according to statements made by those engaged in the sheep industry, and the reason for corn and cotton seed cake being shipped in preference to hay is that the latter commodity is too bulky to transport in any large quantity.

The sheep ranges on the Snake and Salmon rivers start about 10 miles above Lewiston, and extend for about 100 miles up the Snake river and then on into the Salmon river section. It is estimated that at this time there are 85,000 sheep grazing, the principal bands being those of Dobbin & Huffman, Johnson Bros., Kemp & Bettinson, the Brownlees, the Nez Perce Sheep company and the Kemp Brothers.—Lewiston Tribune.

The Progressives

The Progressive club met with Mrs. Fred K. Bressler on Thursday afternoon. The annual election was held and the following officers were chosen: Mrs. Fred Perkins, chairman; Mrs. Glenn Sampson, vice-chairman, and Mrs. Fred Nagel, secretary and treasurer.

The afternoon was spent with needlework and in social converse and at 5 o'clock a splendid luncheon was served by the hostess. The invited guests were Miss Lela Patch, Miss Esther Martinson, Miss Vaughn, Miss Rockwell, Miss Russell, Miss Collins, Miss Winegardner and Mrs. E. T. Jukes and daughter, Eda Belle, of Lewiston.

The next meeting will be held with Mrs. F. S. Casebolt on January 25.

Spring Weather Continues

Spring weather still continues in the Genesee section and farmers have done considerable plowing in the Rimrock section, south of town.

It is also reported that considerable plowing has been done in other sections of the county—all of which goes to show that it is not necessary to go to California for climate—not this year, at any rate.

Birthday Party

A birthday party was given Friday night at the Jain school house in honor of Lawrence Kraut's birthday anniversary. Dancing and games furnished entertainment and a good time was had by all present. Refreshments were served.

Dance Enjoyed

The dance given by the American Legion in their hall last Friday evening was fairly well attended and was very much enjoyed by those in attendance.

MEN AND MOONSHINE—BOYS AND CIGARETTES

Last week Prosecuting Attorney Frank L. Moore notified all the pool halls in Latah county that no more "hickeys" were to be used for card or pool games—and quoted the law covering the matter, going from Wisconsin to Colorado, settling on the land Agricultural college at Boulder. Owing to the ravages of grasshoppers and drought the family again joined a wagon train for Oregon, spending the year 1877 in Indian valley, near Willowa, coming to the Genesee valley in 1878, settling on the old home place east of town, where they lived until moving to Genesee several years ago, where they resided until the death of Mrs. Jain, February 7, 1917, at San Diego, California, where they had gone to spend the winter. They had celebrated their golden wedding anniversary just a year previous to her demise—February 14, 1916—which was indeed a joyous occasion and one which they requested to take part in as principals. The vows of 50 years previous were again entered into and with as much meaning—and even more—than those taken in early life.

There are left to mourn their loss three sons, Walter and Charles Jain of Genesee and Clarence Jain of Moscow; seven grandchildren and one great-grandchild, besides two brothers, William Jain of Waldo, Kansas, Ferdinand Jain of Vevay, Indiana, and a sister, Mrs. Anna Taylor of Madison, Indiana. Two brothers, Benjamin and Rudolph, passed away within the past month.

Deceased was a member of the Odd Fellows lodge for more than 35 years and was also a member of the old Congregational church of Genesee for many years and in the affiliation with both these organizations he was ever true to his trust, living up to their teachings as he saw them and was always willing to do his share and more than his share of work, more hard or when demanded of him. He was known to nearly every man, woman and child in this community and was held in high esteem and respected by all. While he had not resided in Genesee for the past six years, yet he made frequent visits here and his kindly smile always assured him a welcome that was genuine.

Funeral services were held in Moscow Tuesday morning at 9 o'clock and at Genesee in the afternoon at 2 o'clock from the Federated church, Rev. James N. Pendleton, pastor of the church, officiating, and interment was made in the I. O. O. F. cemetery. The floral offerings were numerous and very beautiful. The singing was by a quartet composed of Leon Follett, W. E. English, Mrs. W. W. Burr and Mrs. Arthur Springer. Mrs. Burr also sang a solo.

All three of the sons and all the grandchildren with the exception of Mrs. Al. Burtch of Boise, were present at the funeral, as was also a brother-in-law of deceased, Thomas Mabbott of Clarkston, Washington.

The pallbearers were George Mochel, George Follett, Paul Cann, Leon Follett, Frank Willoughby and Wm. Gray, Jr.

Words cannot express our gratitude to the many kind friends who so willingly aided us in our hour of need and we wish to extend to all our sincere thanks for their comforting words and the many beautiful floral tributes.

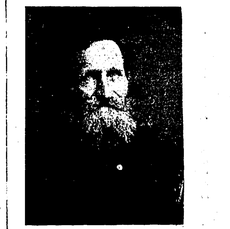
DEATH OF L. JAIN

Was One of Early Pioneers of Genesee Section—Funeral at Federated Church Tuesday

Lewis Jain was born near Lausanne, Switzerland, of French parentage, September 23, 1843, and passed away at Moscow, Idaho, January 15, 1923, aged 79 years, three months and 22 days.

Coming to America in 1847 the family first settled in New York state, later removing from that state to



LEWIS JAIN

Wisconsin where he grew to manhood and where he met Miss Adelia Farwell at Masomania, Wisconsin, who, together with their two daughters, Grace (Mrs. W. C. Cox of Everett, Washington), and Carrie, aged 15 at the time of her demise, have preceded him to the great beyond.

Mr. and Mrs. Jain in 1872 joined a wagon train and crossed he plains with an ox team, going from Wisconsin to Colorado, settling on the land Agricultural college at Boulder. Owing to the ravages of grasshoppers and drought the family again joined a wagon train for Oregon, spending the year 1877 in Indian valley, near Willowa, coming to the Genesee valley in 1878, settling on the old home place east of town, where they lived until moving to Genesee several years ago, where they resided until the death of Mrs. Jain, February 7, 1917, at San Diego, California, where they had gone to spend the winter. They had celebrated their golden wedding anniversary just a year previous to her demise—February 14, 1916—which was indeed a joyous occasion and one which they requested to take part in as principals. Surprise the Hansons

The home of Mr. and Mrs. Ira Hanson was the scene of a very pleasant surprise party last Thursday night when a group of friends gathered to spend the evening. The party took lots of eats and although they were not expected they were made welcome by Mr. and Mrs. Hanson.

The self-invited guests were Mr. and Mrs. F. E. Dieus and son Fred, Mr. and Mrs. G. E. Sampson and daughters, Gertrude and Margaret; Mr. and Mrs. Chas. W. Smith, the Misses Patch, Esther Martinson, Vaughn, Collins, Winegardner, Russell, Rockwell, Viola Lorang and James Winegardner. A good time was reported by the invaders.

In Spokane Hospital

Mrs. James N. Pendleton is in St. Luke's hospital, Spokane, where she recently underwent an operation. She is reported as getting along nicely.

Jazz continues to remain popular with people whoes minds are the same..

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 27.

"Your lordship is pleased to be civil," cries the master, with a fine start.

"I am pleased to be very plain," returned my lord; "because it is needful you should clearly understand your situation. At home, where you were so little known, it was still possible to keep appearances; that would be quite vain in this province; and I have to tell you that I am quite resolved to wash my hands of you. You have already ruined me almost to the door, as you ruined my father before me; whose heart you also broke. Your crimes escape the law; but my friend the governor has promised protection to my family. Have a care, sir!" cries my lord, shaking his cane at him: "if you are observed to utter two words to any of my innocent household, the law shall be stretched to make you smart for it."

"So This Is the Advantage!"

"Ah!" says the master, very slowly, "and so this is the advantage of a foreign land! These gentlemen are unacquainted with our story, I perceive. They do not know that I am the Lord Durrisdeer; they do not know you are my younger brother, sitting in my place under a sworn family compact; they do not know (or they would not be seen with you in familiar correspondence) that every acre is mine before God Almighty—and every doit of the money you withhold from me, you do it as a thief, a perjurer, and a disloyal brother!"

"General Clinton," I cried, "do not listen to his lies. I am the steward of the estate, and there is not one word of truth in it. The man is a forfeited rebel turned into a hired spy; there is his story in two words."

It was then that (in the heat of the moment) I let slip his infamy.

"Fellow," said the governor, turning his face sternly on the master, "I know more of you than you think for. We have some broken ends of your adventures in the provinces, which you will do very well not to drive me to investigate. There is the disappearance of Mr. Jacob Chew with all his merchandise; there is the matter of where you came ashore from with so much money and jewels, when you were picked up by a Bermudan out of Albany. Believe me, if I let these matters lie, it is in commiseration for your family and out of respect for my valued friend, Lord Durrisdeer."

There was a murmur of applause from the provincials.

"I should have remembered how a title would shine out in such a hole as this," says the master, white as a sheet; "no matter how unjustly come by. It remains for me to die at my lord's door, where my dead body will form a very cheerful ornament."

"Away with your affectations!" cries my lord. "You know very well I have no such meaning; only to protect myself from calumny and my home from your intrusion. I offer you a choice. Either I shall pay your passage home on the first ship, when you may perhaps be able to resume your occupations under government, although God knows I would rather see you on the highway! Or, if that likes you not, stay here and welcome! I have inquired the least sum on which body and soul can be decently kept together in New York; so much you shall have, paid weekly; and if you can not labor with your hands to better it, high time you should betake yourself to learn! The condition is that you speak with no member of my family except myself," he added.

Master Very Pale.

I do not think I have ever seen any man so pale as was the master; but he was erect and his mouth firm.

"I have been met here with some very unmerited insults," said he, "from which I have certainly no idea to take refuge by flight. Give me your pittance; I take it without shame, for it is mine already—like the shirt upon your back; and I choose to stay until these gentlemen shall understand me better. Already they must spy the cloven hoof; since with all your pretended eagerness for the family honor, you take a pleasure to degrade it in my person."

"This is all very fine," says my lord; "but to us who know you of old, you must be sure it signifies nothing. You take the alternative use of which you think that you can make the most. Take it, if you can, in silence; it will serve you better in the long run, you may believe me, than this ostentation of ingratitude."

"Oh, gratitude, my lord!" cries the master, with a mounting intonation and his forefinger very conspicuously lifted up. "Do at rest; it will not fail you. It now remains that I should salute these gentlemen whom we have wearied with our family affairs."

And he bowed to each in succession, settled his walking-sword, and took himself off, leaving every one amazed at his behavior, and me not less so at my lord's.

We were now to enter on a changed phase of this family division. The master was by no manner of means so helpless as my lord supposed, having at his hand and entirely devoted to his service an excellent artist in all sorts of goldsmith work. With my lord's allowance, which was not so scanty as he had described it, the pair could support life; and all the earnings of Secundra Dass might be laid upon one side for any future purpose. That this was done I have no doubt. It was in all likelihood the master's design to gather a sufficiency, and then proceed in quest of that treasure which he had buried long before among the mountains; to which, if he had confined himself, he would have been more happily inspired.

He chose, in a poor quarter of the town, a lonely, small house of boards, overhung with some acacias. It was furnished in front with a sort of hutch opening, like that of a dog's kennel, but about as high as a table from the ground, in which the poor man that built it had formerly displayed some wares; and it was this which took the master's fancy and possibly suggested his proceedings. It appears, on board the pirate ship, he had acquired some quickness with the needle enough at least to play the part of tailor in the public eye; which was further required by the nature of his vengeance. A placard was hung above the hutch, bearing these words in something of the following disposition:

James Durie
Formerly Master of BALLANTRAE
Clothes Neatly Clouted.

SECUNDRA DASS
Decayed Gentleman of India
Fine Goldsmith Work.

Underneath this, when he had a job, my gentleman sat withinside tailor-wise and busily stitching. I say, when he had a job; for such customers as came were rather for Secundra, and the master's sewing would be more in the manner of Penelope's. He could never have designed to gain even butter to his bread by such a means of livelihood; enough for him that there was the name of Durie dragged in the dirt on the placard, and the sometime heir of that proud family set up cross-legged in public for a reproach upon his brother's meanness.

And in so far his device succeeded, that there was nothing in the town and a party formed highly inimical to my lord. My lord's favor with the governor laid him more open on the other side; my lady (who was never so well received in the colony) met with painful innuendoes; in a party of women, where it would be the topic most natural to introduce, she was almost debarred from naming needle-work; and I have seen her return with a flushed countenance and vow that she would go abroad no more.

In the meanwhile, my lord dwelt in his decent mansion, immersed in farming; a popular man with his intimates, and careless or unconscious of the rest. He laid on flesh. Yet he went little abroad, and his day was very fully occupied; indeed there was but a single period, and that pretty early in the morning while Mr. Alexander was at his lesson-book, of which was not certain of the disposition. It should be borne in mind, in the defense of that which I now did, that I was always in some fear my lord was not quite justly in his reason; and with our enemy sitting so still in the same town with us, I did well to be upon my guard. Accordingly I made a pretext, had the hour changed at which I taught Mr. Alexander the foundation of ciphering and the mathematics, and set myself instead to dog my master's footsteps.

Took Gold-headed Cane.

Every morning, fair or foul, he took his gold-headed cane, set his hat on the back of his head—a recent habitude, which I thought to indicate a burning brow—and betook himself to make a certain circuit. At the first his way was among pleasant trees and beside a graveyard, where he would sit a while, if the day were fine, in meditation. Presently the path turned down to the water-side and came back along the harbor front and past the master's booth. As he approached this second part of his circuit, my Lord Durrisdeer began to pace more leisurely, like a man delighted with the air and scene; and before the booth, half-way between

So these two brothers would gaze upon each other.

that and the water's edge, would pause a little leaning on his staff. It was the hour when the master sat within upon his board and plied his needle. So these two brothers would gaze upon each other with hard faces; and then my lord move on again, smiling to himself.

In this chapter the fortunes of the Master of Ballantrae are changed, and we find him working at the tailor's trade, aided by Secundra Dass, who takes up the trade of goldsmith, in order partly to support himself, and as a reproach upon his brother. That he fails in both is admitted by himself when at last he exclaims:

"Fancy I have for once made a false step, and for once you have had the wit to profit by it. The farce of the cobbler ends today; and I confess to you (with my compliments) that you have had the best of it. Blood will out; and you have certainly a choice idea of how to make yourself unpleasant."

It was but twice that I must stoop to that ungrateful necessity of playing spy. I was then certain of my lord's purpose in his rambles and of the secret source of his delight. Here was his mistress; it was hatred and not love that gave him healthful colors. Some moralists might have been relieved by the discovery, I confess that I was dismayed. I found this situation of two brethren not only odious in itself, but big with possibilities of further evil; and I made it my practice, in so far as many occupations would allow to go by a shorter path and be secretly present at their meeting.

Struck With Surprise.

Coming down one day a little late, after I had been near a week prevented, I was struck with surprise to find a new development. I should say there was a bench against the master's house, where customers might sit to parley with the shopman; and here I found my lord seated, nursing his cane and looking pleasantly forth upon the bay. Not three feet from him sat the master stitching. Neither spoke; nor (in this new situation) did my lord so much as cast a glance upon his enemy. He tasted his neighborhood, I must suppose, less indirectly in the bare proximity of person; and, without doubt, drank deep of hateful pleasures.

He had no sooner come away than I openly joined him.

"My lord, my lord," said I, "this is no manner of behavior."

"I grew fat upon it," he replied; and not merely the words, which were strange enough, but the whole character of his expression shocked me.

"I warn you, my lord, against this indulgence of evil feeling," said I. "I know not to which it is more pertinous, the soul or the reason; but you go the way to murder both."

"You can not understand," said he. "You had never such mountains of bitterness upon your heart."

"And if it were no more," I added, "you will surely goad the man to some extremity."

"To the contrary; I am breaking his spirit," says my lord.

Every morning for hard upon a week my lord took his same place upon the bench. It was a pleasant place, under the green acacias, with a sight upon the bay and shipping, and a sound (from some way off) of mariners singing at their employ. Here the two sat without speech or any external movement beyond that of the needles or the master biting of a thread, for he still clung to his pretense of industry; and here I made a point to join them, wondering at myself and my companions. If any of my lord's friends went by, he would hail them cheerfully, and cry out he was there to give some good advice to his brother, who was now (to his delight) grown quite industrious. And even this the master accepted with a steady countenance; what was in his mind, God knows, or perhaps satan only.

(Continued next week.)

CUT IT OUT SERIES

By J. NIELSON BARRY.
"TWO BITS," ETC.

Newcomers to this part of the country are often puzzled at the expression "two bits" and "six bits" without realizing how very much of interest is connected with the terms. Three hundred years ago when the central Atlantic ocean was known as the Spanish Main because of the sea power of Spain, the influence of that country was predominant in the regions of the West Indies, and their little silver coin called the "real" was what was most commonly used. At that period the Hollanders were the great navigators and in their trade with the Spanish-American countries they used a large silver piece called a "Joachimsthaler" from the valley or "thaler" of Joachim in Bohemia, from which the silver was mined. These "thalers" were exactly equivalent to eight of the Spanish reals, so the English sailors who were not familiar with either the word Real or Thaler used to call the large coins "Pieces of Eight," which is so associated with Robinson Crusoe and the buccaneers of the Spanish Main. The thick tongues of the Hollanders pronounced the word Thaler as though it were spelled "dollar," and that is the way we spell it now.

Our dollar mark is undoubtedly the figure eight with a line drawn through it to cancel it just as the first letter of the word cent, with a cancellation line is the symbol for cent. In those days people wrote with a quill pen and the figure eight was made with two strokes, the first similar to a letter "s" and the second connecting the two ends. . It is instructive to split a quill tooth pick and see by actual experiment how the present dollar mark was evolved. To prevent confusing it with an ordinary number it was written a little above the line until the invention of the typewriter and the linotype machine which has also altered the form as to obscure its origin.

The Spanish eight-real piece was called a dollar during the time of our Revolution, and this Spanish eight-real dollar was adopted as the standard by the United States, only it was divided into tenths and hundredths instead of less than eighths as formerly.

When American miners went to California they did not carry much small change, so used the Spanish reals which they found in use there, they contemptuously called these little silver pieces "bits" and so in the west we have the expression, "two-bits," "four-bits," etc

How many people stop to think that the expression "red cent" referred to the period before the Civil war when the "coppers" were made of copper and were reddish in color and large. The first small sized cents were white and made of nickel, but are now made of bronze. How many people have seen the first issue of the 1909 cent with the initials of the designer, V. B. D., or know that the older style is not an Indian head, but little Sarah Keen, daughter of the designer, with a Sioux Indian head dress to represent an American liberty cap. This was first used on the white cent in place of the flying eagle.

The older generations of this paper will remember the little silver half dimes and the tiny three-cent pieces, as well as the bronze two-cent pieces and the nickel three cents and also the "tokens" similar to the cent which were authorized during the Civil war, it is well to preserve any of these little interesting curiosities. The half-cent used to be in common use, but is now seldom seen, as well as the little silver 20-cent piece and also the one dollar and the three-dollar gold pieces.

Sometimes we still hear the term "penny," although there have been none in this country since the time of Washington, and the term "shilling" is still sometimes used, as well as "levvy." The Spanish coin "picayune" used in New Orleans was half the value of a real or "bit," six and a quarter cents, it is still remembered in the expression "Not worth a picayune" in the same way as the old paper money issued by the Continental congress during the Revolutionary war "Not worth a Continental."

During the Civil war paper money was issued in place of small coins and were known as "shin plasters." Since the writer has been in the west instances have occurred of dishonest persons passing Confederate money upon unsuspecting people.

The Indians in the eastern part of America used beads made of sea shells in the place of money, and called Wampum, while in this part of the country they used a little seashell called a tusk-shell from its shape, which are still found in Indian graves.

It is surprising that no jokes are current about the size and color of the "mill" of which we hear so often whenever taxes are mentioned. People talk of them as they do of dimes and dollars, but none has ever been coined, so that the most remarkable of all United States coins is the one that is not and never has been.

Taxes, Taxes, little Mill,
Taxes, Mill and Taxes still
Mill and Taxes till I die,
Never saw you with my eye.

WASHINGTON NEWS

Bids for the erection of the proposed new county-city building in Wenatchee to cost in the neighborhood of $350,000 are being advertised throughout the state now. Extensive inquiries and investigations have been made by the architects in the effort to produce the best, according to reports.

Approximately 200,000 bushels of wheat has been shipped from Walla Walla in the past ten days due to the advance in prices, according to figures received in Spokane. During the holidays 32,910 sacks were sold. The report made by the grain agent estimates that approximately 10 per cent of the 1922 crop is still in the warehouses.

During the holiday season a large massmeeting was held in Walla Walla where plans for a grand historic pageant were launched. Committees in charge of the arrangements for this pageant which is to depict the striking historical scenes of the Pacific northwest have decided to stage it in June. A fund of $15,000 will be needed and the latest reports from the committees state that approximately one-half of that amount has been underwritten.

There were 41,623 carloads of produce shipped from the Yakima valley in 1922, according to summaries prepared by railroad agents. This is equivalent to 114 cars daily. It is estimated that the value of the crops loaded to be $28,622,926. This is about 16 per cent less than the 1921 season's crop.

Two United States reclamation projects, the Tieton and Sunnyside units, with 107,000 acres under water, produced $6,838,744 in 1922, according to the report of J. L. Lytel, project manager.

Farmers in the Palouse and other wheat-growing districts of the state agree that most of the moisture which has fallen in the wheat country during the past few weeks has soaked into the ground and that it is being conserved in a way which will insure a good wheat crop this year.

The Sunnyside National Farm Loan association is the largest of its kind in the United States, according to Fred Langford, secretary. The association has a membership of 329, and 349 loans were made during the year just closed. The loans totaled $1,068,050, an average of $3070 each.

Milling reports given show that sixteen mills are operating in Washington, the greatest number of any state in the section, and that they produced 384,034 barrels in November, 1922, against 359,851 barrels in October, 1922. None of the other states has as high an output of milled products as Washington.

Incorporation of the Tebb Lumber corporation with capital stock of $25,000 brings together men well known on the harbor for a number of years. A. S. Hoonan was sales manager of the Western mill, C. R. Apple was chief accountant for that concern, and A. C. Tebb was office manager of the Grays Harbor Shingle company. They will enter the wholesale lumber business.

Wanton shooting of love darts by Dan Cupid is indicated in King county marriage and divorce statistics for the last five years. Out of 48,000 couples whose hearts were pierced by the love god's arrows, 11,670 sought to extract the fatal shaft through the divorce courts. Marriage licenses granted by Joe Kennedy, deputy county auditor, in 1922 dropped below the number issued in 1921. With the closing of business last night, 4075 certificates had been issued, compared with 4242 in the preceding year. Divorces virtually held their own, 2011 having sought to sever the matrimonial bond in 1922, as compared with 2028 in 1921.

The Aberdeen Kiwanis club, with a record of having planted 300 Norway maple trees along parking strips in their city, announce that in their plans for the coming year they include that of planting 1000 trees of the same variety.

For the first time in 16 years the Aberdeen Pioneer association has not lost a member by death in the full 12 months of a calendar year, S. K. Bowes, president, announces. The association will hold its annual meeting, election of officers and discussion of plans for the pioneer home in Stewart park at a get-together dinner in February.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Two Atlantic liners, crossing from South America to Southampton recently, kept together throughout a distance of 7000 miles.

Europeans over the age of 35 stand the climate of the Gold Coast better than do younger men, it is stated in an official report.

A postoffice and police station have been established on Craig island, the most northerly island in the world, 50 miles from the pole.

OTTAWA. — The highest yield of wheat in the dominion since 1915 was reported by the bureau of statistics recently for 1922. It totaled 391,435,000 bushels, from an estimated 22,420,693 acres. The yield per acre was 17½ bushels, also the highest since 1915, when 15,109,415 acres yielded an average of 26 bushels per acre.

Former King Constantine of Greece died at Palermo, Sicily, last Thursday. A cerebral hemorrhage is responsible. Constantine was twice deposed as king of Greece.

HONOLULU.—Ira Sparks, who arrived as "freight" in a wooden box on a Jap steamer, is proving a great deal of worry to customs officers. He can't be classed as an alien and deported, as he is an American citizen; he's not a vagrant, as he has $15 and carpenter tools; he can't be called a passenger of the boat because he was listed as freight, and the authorities hesitate to send him back to San Francisco, as the duties haven't been paid. Ira says he is on his way to the Holy Land to take up the work of Moses.

LAUSANNE.—One million Greeks and Turks will be forced to move their belongings and take up residence in another part of the world as a result of an agreement reached at the Lausanne conference by which Turks living in the Hellenic peninsula must go back to Turkey while Greeks living in Turkey must emigrate to Greece.

PARIS.—Speaking in the chamber of deputies Premier Poincare declared France invaded the Ruhr "only to exact our right, to make it respected and to defend our common interest." Referring to the withdrawal of American troops from Germany, Poincare said it would be inexact to interpret this as a slur. He characterized it as a coincidence.

BERLIN.—As an added protest to the seizure of the Ruhr district by France, Germany has recalled her ambassador from Paris and her ministers from Brussels, but does not intend the move as a diplomatic rupture. Germany has notified all allies that coal seized by them in the Ruhr will be considered as having been requisitioned, and the allies must pay for it.

Boys' and Girls' Farm Club Work

"Now, young fellow, we will see what club work has done for you," said Guy Taylor of the South bay community, Olympia, Wash., as he and his son, Roy, entered the Thurston county potato show in competition with each other.

And see they did, for Roy won from his father in four out of six classes. He won the chamber of commerce potato digger offered for the best 10 pounds of table stock; first prize for certified Burbank seed, sweepstake and potato competition, second on uncertified White Star seed, and second for best 32 tubers of Burbank table stock.

Roy joined the club in 1920, and entered the southwest Washington fair in 1921, winning district potato championship. He went to Yakima that year to enter the state potato contest and lost by one point.

The Fife clubs head the Pierce county (Wash.) list for 1922, showing a production over and above expenses of $1983.34; Puyallup takes second place with a showing of $1315.20; Connell's Prairie, with its 11 members, follows with a close third and a production of $1287.34, and McKenna with only five members takes fourth place, due to the consistent and splendid work of Alma Ocklen, who has the distinction of being our first $1000 girl.

Other clubs follow in the order named: Weyerhaueser, Marion, Alder, Woodland, Parkland, Thrift, Midland, Alderton, Loveland and Kirby.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER I.
The Getaway.

"At this rate we'll never get to the club," smiled pretty Lucy Durant. "We'd make better time by getting out and walking."

"Sorry, Lucy, dear," young Stanbury grinned. "This old buss won't make over ninety."

But just to satisfy the girl he loved, the young man "stepped on it" and the roadster seemed to almost soar into the air. Young Stanbury, nicknamed "Speed" for many obvious reasons, had always done about what he pleased, and at present he was pleased to be in love with Lucy. In fact, the pleasure was mutual.

As the motor whizzed up to the club veranda in a cloud of dust, another young couple arose and gazed with interest.

"Looks like Lucy Durant has the inside track with my young cousin, 'Speed'," grinned Edwin Stanbury. "That makes you an added starter, eh?"

"Being an added starter is not so bad," Vera Harper answered, attempting to hide a look of displeasure, "with you in the paddock, Edwin."

As the happy young couple approached, Edwin managed to draw Lucy to one side and show her his new set of golf sticks. Vera was not slow about seizing the opportunity for a chat with "Speed."

"Why are you so cold, 'Speed'?" she asked. "What have I done? Why should you wound my heart so cruelly?"

"Don't make me laugh, Vera," "Speed" replied. "I once thought you had a heart—but I found that your heart is a bit too accessible to be precious."

At that moment, Lucy was left alone by Edwin, so the young cousin rejoined her, leaving Vera Harper biting her lip angrily. Edwin had been called to the phone and there was a worried look on his face as he heard the message. "I'll be right down," was his answer.

Arriving at his father's bank, Edwin Stanbury sought Johnson. The latter explained that the auditors were coming and something had to be done immediately.

"And you got it all, Ed Stanbury!" he finished excitedly. "All that Jim Sprague and I got for keeping quiet was promises. I tell you, one of us has got to beat it, and beat it quick!" An idea suddenly came to him. "I've got it!" Johnson exclaimed. "How about Jim? He being poor and everything will make it look regular. Beside, you've hinted often that you've got something on him."

At that moment Jim Sprague, the cashier, entered. Stanbury gave Johnson a sly glance out of the corner of his eye. Then he suavely explained the situation to Sprague, finishing up with the fact that Sprague would be the logical man to flee.

"Jim," Stanbury said, "remember what I saved you from in college, and what I've promised. Now you've got to help me! While they're chasing you, I'll dig up the money, replace the securities and the whole thing'll blow over. Then you'll come back to a bigger job and more money."

Threats, cravings and appeals to loyalty followed. Stanbury promised to care for his wife and baby. In the end Jim Sprague gave in. Edwin hastily drew a time table from his pocket.

"All right, then," he said, "you get a train at 11:30 for Philadelphia. Your steamer for South America will sail in the morning."

That night "Speed" Stanbury was summoned to the home of the banker, J. J. Stanbury, his uncle and guardian. In the hallway he encountered Edwin pacing nervously back and forth.

"Say, 'Speed'," Edwin asked, "can you loan me twenty till tomorrow?"

"Sure," his cousin replied, "I'm just going to get some more out of your Governor if I have to shake it out of him."

Edwin took the proffered bill and "Speed" walked into the next room where old J. J. Stanbury awaited him. He arose sternly as the young man approached.

"I've been wanting to see you for some time, young man," the elder Stanbury declared. "You've overdrawn your allowance by two months and as trustee of your fortune I don't intend that you shall squander it. And also remember your father's will stipulates that if you do anything to disgrace the Stanbury name the bulk of your fortune will go to my son, Edwin."

"That's all bunk," exploded "Speed." "That money is mine and I'm spending it in a decent, fun-loving American way. I'm not here to listen to your sons o' sixpence with a dime bank accompaniment. Dough is the only note you and I can sing in harmony."

"Speed" usually won his arguments and this one was no exception. At about eleven o'clock, he tripped gaily down the steps of the Stanbury mansion, leaped into his roadster and started down the street. A short distance ahead of him he saw Jim Sprague walking swiftly carrying a handbag.

"Hello, Jim!" he shouted. "Whereaway?"

"Going to Philly for a couple of days," Sprague answered guiltily. "If you don't mind, I'll take a hitch to the station."

The next morning "Speed" was awakened from a healthy sleep by the excited entrance of his valet. The little Frenchman held a newspaper in his hand which he waved wildly and then thrust under "Speed's" sleepy eyes. The young man read the headlines:

BANKER ATTACKED AND ROBBED IN HOME

J. J. Stanbury Found Unconscious Before His Safe and is Now Hovering Between Life and Death.

Eighty Thousand in Negotiable Securities Missing, Stephen ("Speed") Stansbury, Banker's Nephew, Is Accused.

"Pack zee bags? Tickets for China?" sputtered Gaston.

"Of course not, you poor fish!" "Speed" grinned. "I've got to go over and see the poor old duffer—fond of him in a way."

Gaston wrung his hands and hastened to prepare breakfast. "Speed" had finished dressing when he again entered, all excitement.

"Hurry M'sieur!" he shouted. "Two detectives coming! I saw zem from zee window!"

"Speed" assured himself that his valet was right. Then, after a few directions, he mapped out a plan to elude the minions of the law.

"Where is young Stanbury?" asked Hagerty, the detective, as he entered.

Gaston looked around amiably and answered: "He has fenish breakfast and gone out."

"Come on, Hagerty," the other said, "there's nothing doing here. Let's return to the Stanbury house and report."

Meanwhile, "Speed" Stanbury was on the way to his guardian's house himself. He had eluded the two detectives by a few acrobatic swings from his own fire-escape to the one next door, and then dropped to the ground. And again, it was no easy matter to enter old "J. J.'s" home. The grounds were guarded carefully, but by strategy, "Speed" managed to enter. In the hallway he encountered Edwin.

"You!" exclaimed the latter. "Father is sure it was you. He says you pretended to leave but didn't—that you sneaked up behind him and—"

"Rot and piffle!" "Speed" interrupted. "The papers say your servant admits Uncle was O. K. at eleven o'clock, and I left here ten minutes before that."

"How can you prove that? Where were you at eleven?"

"With Jim Sprague—taking him to the station. He's gone to Philadelphia for a few days. Oh, I know you don't believe me—you haven't the proper shaped head for belief in anything."

Edwin Stanbury's reply was interrupted by the entrance of Hagerty and his companion. Taking in the situation at a glance, they seized "Speed" before he was able to make a move.

"Never mind any of your funny stuff," Hagerty warned. "we're going to hold you until you can prove an alibi."

"Listen, fellows," "Speed" answered slowly, "I take more holding than a week-end." And before the detectives knew what had happened he had wrenched himself from their grasp, shoved them both headlong down the stairs and made his own getaway from a nearby window.

"Speed" had no idea where he was going—his one idea was to keep out of sight until he could get in touch with Jim Sprague. He glanced quickly over his shoulder and saw that Hagerty and the entire force of men guarding the estate were taking up the chase, raising a hue and cry as they came. He saw a motorcycle standing by the curb. In another moment he was in the saddle and speeding away. Hagerty and his men saw this and quickly commandeered a passing automobile.

"Speed" suddenly came to a street where some painters were at work on a scaffold, high up on the building. Thinking quickly, he caught hold of the ropes which hung down, and, letting his cycle speed out from under him, he swung in a great arc on the rope, up like a great pendulum and landed on the second story fire-escape. Looking down, he saw that his pursuers were close behind him. Some climbed to the fire-escape, while others rushed into the building for the elevator.

Young Stanbury was far less what to do. He scrambled upward, reached the roof and looked about him. Suddenly a door opened and he saw his pursuers. They, however, had not seen him. "Speed" sprung to a superstructure, on which was a smokestack large enough to hold six men. A splendid place to hide! On another roof he had climbed into this strange place of refuge.

While the detectives were searching the roof, "Speed" was having a difficult time to keep from suffocating. He put out his head for air but quickly withdrew it as he saw the detectives below. The smoke was getting stronger and stronger.

Finally, unable to cling to the sides any longer, "Speed" let go his grip and started to slide slowly down the stack.

(To be continued.)

Poets are born, nobody knows why.

POULTRY

"Fine feathers do not make fine birds" is an old saying that is sound when applied to humans, but it does not apply to poultry, for it has been demonstrated that fine feathers have an important part in making fine birds. That is, a good coat of well-developed feathers indicates a good bird. Feathers are just as much a part of poultry as feet. So in judging poultry the novice should take note of feathers. They need not be fine in the way of individual perfection, such as judges at shows take into consideration, but the coat should be evenly grown and look as though it was made to fit the bird and not have the appearance of having come from a second-hand store.

Can a laying hen have too much food?

One of the leading poultrymen of the east answers this question by saying that there is never an hour of the day when his hens can not help themselves to all the feed they want, yet they do not get too fat for satisfactory egg production. But hens cooped up and gorged with food, with no opportunity to exercise and pick up stuff they like to eat, will not keep up production.

Fred Starkey of Prosser, has lately returned from Honolulu and reports another large order for chickens placed with him while in the islands. They will be shipped next week. Eight hundred of his hens will be included and the balance will go from the Queen City hatchery in Seattle.

Reorganization of the inactive Tacoma Poultrymen's association was effected at a meeting recently in the Coast cities, and plans have been made for an active winter and spring program. By-laws and articles of incorporation are soon to be filed with the secretary of state and the association will meet on the first Friday of each month in the chamber of commerce rooms.

Sixty-six hens in a Gem county, Idaho, flock laid only one egg in a recent period of five days, according to County Agent Fred L. Williams. These were hens that had been culled out of a flock of 149. The 83 good hens that remained were laying an average of 20 eggs a day.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Apiculture.

An inferior queen may lay a few hundred eggs in a day when a good queen would lay two or three thousand. Place your order for a good queen now.

Clothing.

Take good care of your hats by brushing and keeping in a covered hat box when not in use.

Dairy.

Feed hay in small quantities and frequently so the cows will waste less and consume more.

Farm Management.

Close your farm record book; summarize, analyze and study, and then secure a new one for 1923.

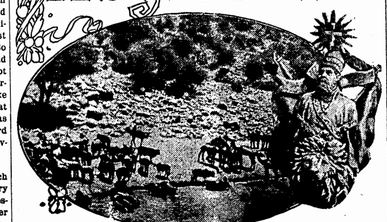
Home Management.

Bargain days are here. Keeping accounts will prevent you from buying things you don't need.

Horticulture.

Plan to have the pruning done early by making use of all the good weather. Clean up all old orchards.

Independent Abyssinia



Cattle and Camels at a Fero.

(Prepared by the National Geographic Society, Washington, D. C.)

A Christian nation when our ancestors were floundering in paganism, now as for centuries an African empire—one of the three or four remaining empires of the world—and the only bit of land on the great continent of Africa, with the exception of the little republic of Liberia, which has not been made a possession or a protectorate of a European power—such is Abyssinia, little heard of in the world's affairs, but possessing a history and a promise of future economic importance which make it deserve a different fate.

The country owes its independence in large part both directly and indirectly to its geographical environment. Set upon a great plateau, it is a natural fortress; and while the natives of most other sections of tropical Africa dwell in enervating jungles or inhospitable deserts, the people of Abyssinia, thanks to their altitude, fertile soil and temperate conditions in general, have an invigorating climate and a land literally of "milk and honey." A situation near Arabia and Palestine, too, has drawn Arabian and Jewish blood to Abyssinia and has given the country a racial advantage which the African tribes of pure negro blood have not had.

But while geographical situation has in many ways been an advantage to Abyssinia, it has brought its disadvantages also. Without access to the sea for centuries, the Abyssinians, held to their inland tablelands without contact with the outside world, failed to make the most of their possession of a lofty religion and an early start toward civilization, and have remained a semibarbaric people. It is perhaps remarkable that, isolated as they were, they maintained their Christianity in any recognizable form. Observers marvel at the fact that the principal tenets and observances of the faith are practically pure rather than at the growth beside them of certain superstitions and laxities.

Cut Off From Sea and Nile.

As the situation now stands, Abyssinia is entirely cut off from the sea and the Nile by the colonies of European powers; Italian Eritrea, French Somaliland and British Somaliland on the north; Italian Somaliland on the east; British East Africa on the south and the Anglo-Egyptian Sudan on the west. But this is a mere holding of the gates by new keepers; since the rise of Mohammedan power in the Near East the country has been cut off almost equally as effectively by various Mohammedan tribes. Those people of Arabian blood were able to take possession of the low desert lands, but on their invigorating highlands the Abyssinians were, with rare exceptions, masters.

Abyssinia is more than twice the size of the German republic and of about the area of California, Oregon and Nevada together. The country lies in the same latitude as Venezuela and the southern islands of the Philippines, well in the tropics; but because of its general high elevation it has, like Mexico, a much cooler and more healthful climate than its proximity to the equator would indicate.

These highlands are from 5,000 to 8,000 feet above the sea. Their rolling prairies are well watered and have a good growth of grass. The climate on these uplands is superb, and if one desires cooler surroundings there are mountain chains rising from the plateau in almost all sections of the country. Some of these mountains reach a height of 15,000 feet and are topped by perpetual snow. Irrigation could be practiced in Abyssinia to great advantage, but the utilization of the abundant water supply in that way seems never to have entered the minds of the natives.

Canyons and Deep Valleys.

The great amount of water which runs down from the Abyssinian mountains has carved gigantic gorges through the tablelands, some of which, in depth at least, rival the Grand canyon of the Colorado. The gorge of the Blue Nile flows for more than half its length through Abyssinia is from 5,000 to 6,000 feet deep in places. The material washed from this remote chasm has played an important part, incidentally, in the history of the world. Ground into silt and deposited through the centuries and millenniums in the lower valley of the Nile, it produced there a garden spot and made possible the growth of one of the world's earliest civilizations.

In the bottoms of these deep valleys, some of which are fairly wide, and in other depressions, tropical conditions prevail, so that the possible products of Abyssinia range from those of the tropics to those of the northern temperate zone. Little has been done toward the development of agriculture beyond its primitive stages. The raising of cattle, sheep and goats for their milk, flesh and skins is the more popular pursuit.

The Abyssinian has been described by one American as "rather an independent, easy-living, battle-loving, raw-meat-eating, sensual, devil-may-care chap." Socially, the people are living in feudal times. The various reigning princes of the provinces owe allegiance to the emperor and must furnish soldiers to support him in time of war. The land is theoretically owned by the emperor and those who make use of it are his tenants. "Justice" is administered personally by the rulers and their representatives. When a person is accused of a crime the first step is to confiscate his property. Decision as to his innocence or guilt can follow in due time. Because property has been unsafe for a long period people of wealth have buried what they could for safe keeping. Vast quantities of gold, silver and ivory are believed to lie underground at the present time, the latter, of course, deteriorating.

Good Roads Are Scarce.

One great drawback to the commercial development of Abyssinia has been the lack of roads leading up to the high plateau and over its surface. The routes of travel which have been used for more than a thousand years are mere trails, and the burdens have been carried on mule and camel back since the days of the great Queen of Sheba, who, the traditions of the Abyssinians say, was the queen of Ethiopia. The royal line claims descent from her and Solomon. Some years ago the French began constructing a railroad from their port of Jibuti, just below the mouth of the Red sea, toward Abyssinia. The Abyssinians permitted this to be extended into their country and in 1917 it reached Adis Abeba, the capital. Over this road a large part of the hides, coffee, beeswax and ivory, which constitute the chief exports of the empire, are shipped.

Specialists in various fields who have visited the country believe that this is but a small part of the products that could be shipped to the world, and that the people are enjoying but a fraction of the prosperity that they might enjoy if they developed their resources along modern lines.

As the only African people which has been able to maintain its independence in modern times in a war with a European power the Abyssinians have become rather conceited and are inclined not to recognize the superiority even of Western civilization and culture. Their victory was won over the Italians in 1896 at the battle of Adowa where the pick of the Italian army was cut to pieces. The Abyssinians have bought large quantities of modern rifles in recent years and could probably put in the field in case of war an army of 250,000 well-equipped soldiers, a large part of them mounted.

Tested the Saw.

Mr. Biggs was planning to build a motor shed in his garden, so he bought an expensive saw. He left his office early the next afternoon, with the intention of starting the job. Putting on a pair of overalls, he went out into the garden. An hour or so later he came into the dining room and flung himself down into a chair in disgust.

"What new saw I bought isn't worth 2 pence!" he stormed. "Why, the thing wouldn't cut butter!" His small son, Harry, looked up in surprise.

"Why, yes, it would, daddy," he exclaimed earnestly. "Why, Ted and I sawed a whole brick in two with it this morning."—London Answers.

Diabolical Joke.

Ted—Tom is a great practical joker. He made himself up as a ghost and appeared before a professional medium.

Ned—Yes, and as it was the first ghost she'd ever seen it threw her into convulsions.

GOVERNMENT AIDS PACIFIC WALRUS

Uncle Sam Stops Slaughter of Northern Monster to Save Eskimos.

There dwells along the Alaskan coast, ranging from Behring sea as far north and east as Point Barrow, the strangest and most diabolical land animal to be found in North America. This monster of the north is the Pacific walrus. In the past, this strange animal was the very life of the American Eskimo, but of late years the walrus has so diminished in numbers that Uncle Sam has had to come to the relief of the poor Eskimo, who otherwise would disappear from the earth.

Formerly, the walrus was food, light, heat, clothing, and nearly all the other necessaries of life to the Eskimo. This animal also furnished the material for their boats, or wiaacs, material for their sledges, harnesses for their dogs, and many other articles and implements. But now this useful animal has n

Harness Oiling

The harness oiling season has arrived and our Dipping Vat is now working. We are prepared to turn out this work at the old price of $1.00 a set.

Our method consists of dipping the harness and letting the oil soak in where it is needed. Not merely getting the outside oiled, but completely saturating all parts, the work being done in a steam heated room where the best results are obtained.

If you want to do the job yourself, we will sell you the harness oil for $1.00 a gallon, put up either in gallon cans or in bulk.

Don't use Petroleum Oil for Harness Oiling. It does more harm than good. We use a Neatsfoot Compound Harness Oil especially adapted for the work, and buy it in sufficient quantities to enable us to sell it at the low price of $1.00 a gallon.

CASEBOLT, The Harness Man

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possesions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

School Notes
Wilma Casebolt

Miss Bernadine Hasfurther returned home from Moscow last Sunday after a brief visit with the doctor concerning her previous appendicitis operation.

The senior domestic art girls are studying the principles of household furnishings.

An exciting basketball game was played on the local floor last Saturday night with the Moscow High school team. Moscow has won a game from each Lewis and Clark and North Central High schools of Spokane, so we do not consider the score—28 to 17—such a disgrace to our high school. A game will be played here on Friday night with the Johnson team. A return game will be played at Johnson on the following evening.

The four high school classes have elected their officers for the last semester.

A literary program will be given this (Friday) afternoon, at 2:10. The following program has been prepared by the Alpha society:

Piano solo by Madeline Hasfurther.

Debate—Resolved: That the laws to enforce the national prohibition amendment are too drastic."

Piano solo by Marguerite Spurbeck.

Who's Who in Genesee High, by Olive and Sylvia.

Piano solo by Ethel Nelson.

Play—"Fuss and Feathers"—Characters:

Officers of the law.

Elsie Heliotrope—Wilma Casebolt.

Georgiana Wrenn—Carrie Mae Hickman.

Miss Henessey—Bertha Gash.

Breakers of the law—

Ima A. Fuss—Jesse Gray.

Andsois Feathers—Madeline Hasfurther.

Offya Head—Walter Thomas.

Jack Blowinsky—Albert Anderson.

Harry Frill—Robert Parks.

Piano solo by Grace Jain.

Some courses have been changed for the second semester work.

Civics will replace American history. Twenty-five students are enrolled in the course.

Economics will replace sociology; 18 are enrolled.

Eleven students will take commercial arithmetic instead of commercial law.

All freshmen are required to take civic biology instead of general science.

Farm management will replace dairying.

The county examinations were given this week; 18 students took geography and United States and Idaho history. Arithmetic, penmanship, spelling, civics, grammar and reading were taken by fewer students.

Our high school has adopted the following rule: "All students who have failed in one subject and have averages below 80 in other subjects will be permitted to carry three subjects only during the second semester. No student will be allowed to carry less than three subjects.

As a result of the semester examinations two students were sent home and eight others placed on probation.

It is felt this ruling will eliminate many failures and will promote a higher standard of work.

There is no reward here for having brains, but there is for using them.

Christian Endeavor Notes
(By Robert Parks)

LeRoy Harris led the Christian Endeavor meeting Sunday night. The topic was "The Word of God."

The attendance was far above the average, showing that many were trying to start the new year right. The special music consisted of a vocal solo by Alfreda Hampton and a piano duet by Connie Caldwell and Catherine McMahon.

After the regular session a business meeting was held and plans were laid for raising money for the new library and to finance the trip to the Pullman convention, which will be held February 3 and 4.

PARENT-TEACHERS MEETING WELL ATTENDED

A very interesting and enthusiastic meeting of the Parent-Teachers association was held at the high school building Monday evening, when some 50 patrons and friends of the school gathered to listen to the splendid program that had been prepared.

Following is the program rendered

Song—America—by audience.

Piano solo by Margaret Becker.

Music by Glee club.

olo by little Miss Marie Ingle.

Paper by Miss Adda Mathews.

Piano duet by Wilma and Helen Casebolt.

Vocal solo by Mrs. F. J. Niemann.

Address by Attorney Thomas A. Feeney.

Music by Glee club.

Song—Auld Lang Syne—by audience.

The program was interesting from first to last, but perhaps the most interesting part was a paper by Miss Mathews and the address by Mr. Feeney. The former pointed out many defects and needs of our local school and the points were well taken. The latter bore more particularly on what the speaker termed "misfits" in the school world—that is, many children are being educated for professions or trades for which they are entirely unsuited and for which they have no natural talent. Both papers were well prepared and were well received by those present.

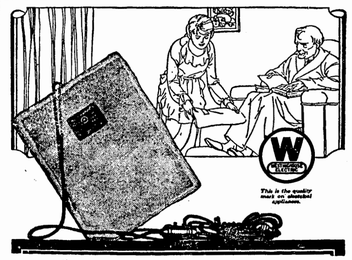
Supt. Frank H. Thomas stated that there is a movement on foot at Boise, to help carry out Gov. Moore's economy movement, to withhold the appropriation for the continuance of the Smith-Hughes work in public schools of the state, which would cause much grief in the local public school as it would withdraw support of state and government and might cause the local school to lose the teacher of agriculture and home economics, which would indeed be a great handicap. A committee was appointed to draft a resolution and forward to our state representatives at Boise asking them to give their support to the appropriation.

The meeting adjourned to meet the third Monday evening in February. All patrons and friends of the school are asked to please bear this in mind and be present. You can be home by 9 o'clock—and you are sure to learn something to your advantage.

Knights of Columbus, Attention

Genesee Council No. 1554 will give an "old-time dance" on Wednesday, January 24, 1923. Old time dances will be the main feature of the evening's amusement. Music will be furnished by "Currin's orchestra."

House slippers at cost; hankies at cost; house aprons and dresses, $1 to $3.50. Ida Wheeler. 29-2



Our January Special
Westinghouse Electric Warming Pads

Soft Warm Soothing **$6.95** Three Degrees of Heat

Each month we present some electric convenience of standard quality at much less than the regular price.

During the month of January our special will be the famous WESTINGHOUSE WARMING PAD. It does away with the old Hot Water Bottle. Buy one for the sick room, for baby's crib, for grandma's or grandpa's back. But buy it now while the price is reduced from $9.50 to $6.95.

PERSONAL MENTION

Jesse Myers returned from a visit at Uniontown Sunday.

Dr. R. I. Witty was a passenger for Uniontown Friday morning.

Mrs. John Kambitsch was a Pullman passenger Tuesday morning.

A. Rach was a Uniontown passenger Friday for a short visit.

Mr. and Mrs. Ed. Snelson were Monday morning passengers for Spokane.

Mrs. W. D. Woodward went to Pullman Tuesday morning for a short stay.

Mr. and Mrs. Perry Shirrod came up from Lewiston Tuesday on a short business visit.

Miss Elaine Heitfeld of Lewiston is visiting at the home of Mr. and Mrs. Ray Edwards.

Leon Larrabee returned to his home at Harrington, Washington, Saturday after a visit here.

Mrs. Guy Brown was a passenger for Pullman Monday morning for a visit with friends.

Mr. and Mrs. Chas. W. Smith spent the week-end with Mr. and Mrs. H. C. Halley at Lewiston.

Wilfred Cameron went to Spokane Tuesday morning for a visit with friends and relatives.

Mrs. Frank Willoughby was a Monday morning passenger for Uniontown for a visit with friends.

Mrs. G. A. Bumpass went to Lewiston to visit for a few days with her daughters who live there.

Miss Eula Vaughn of Lenore is visiting with her sister, Miss Vaughn, a teacher in the Genesee schools.

Henry Phipps returned to Wenatchee, Washington, after a few days' visit here at the W. W. Burr home.

Miss Florence Bielenberg was a Wednesday morning passenger for Colton for a visit with her sister, Mrs. Reisenauer.

Mrs. L. Kline and nephew, Boyd Erikson, were Saturday morning passengers for Moscow to visit with Mrs. Kline's sister, Mrs. J. E. Moore, and family.

Miss Selma Tidemann returned to her school work in Spokane Monday morning after a visit with her father, S. M. Tidemann, and other relatives.

Rev. Jas. N. Pendleton was a Wednesday morning passenger for Spokane to be with Mrs. Pendleton, who is in St. Luke's hospital recovering from an operation.

Mr. and Mrs. Betzold left Wednesday evening for their home at St. Louis, Missouri, after an extended visit with their daughter, Mrs. R. I. Witty, and family. Dr. and Mrs. Witty took them overland to Lewiston and they will go by way of Salt Lake City on their way home.

EARLY PRUNING MOST IMPORTANT

Especially Vital That Growers Get at It Soon as Possible This Year.

"Do your pruning early" is always good advice but it has a special significance this year. Cover crops grown in a great majority of our orchards last summer must be disced into the ground this spring and the small number of tractors available will have to be in the field at the earliest possible date to complete the work. The grower who has his pruning done and the brush cleared away by the time the ground is dry enough to work will have first call on the neighborhood tractor.

A second and equally important consideration is the oil spray. Most of the unsatisfactory results obtained with the oil during the last two or three years have been due to unfavorable weather conditions. Good weather for spraying is likely to be as scarce this spring and it behooves every grower who intends to use the oil to have his pruning out of the way when the first clear, calm days of spring come.

Watch for Weak Trees.

The physical condition of the trees in many orchards is below normal. The hard winter of two years ago left the trees in a weakened condition and some have not yet entirely recovered. Such trees should be pruned so as to encourage vigorous wood growth and not fruit production until they regain their natural vigor.

Opinion differs among growers in the state as to the best means of stimulating these weak trees. It has long been thought that severe heading back produced vigorous wood and rejuvenated the tree. However, we believe now that severe pruning of our bearing trees for two or more years has weakened them rather than made them more vigorous. Orchards that have been moderately pruned in the past are in better condition now than those that have been cut back consistently. If a tree is already in a weakened condition it should not be expected to stand the shock of a severe cutting. Better to remove only those branches that have died and leave as much leaf area as possible for the elaboration of plant food from the roots. No one should prune his orchard this winter without careful consideration of the weaker trees.

Make Your Spraying Easier.

Control of the leaf-roller is still far from an accomplished fact. Recent inspections in several orchards show that the eggs are abundant and that they are much more numerous in the tops of the trees. It is evident that some very effective work can be done against the pest by pruning. Those high branches in the top center of the tree should come out wherever they can be spared from the tree. They are carrying more than their share of eggs and are most likely to escape both the oil and the lead spray later. Much time and expense can be saved by eliminating some of the hardest part of the tree to cover with the spray and better results will be certain.

The vogue of heavy pruning gave many inexperienced men a chance to make good wages by contracting pruning. They were paid by the tree and soon learned to make one large cut with the saw take the place of many smaller cuts with the pruning hook. Instead of trimming out the top of a main scaffold limb the entire limb was removed by one operation. The entire centers of some trees were lifted out with the excuse that the light must be admitted into the tree. As a result the remaining limbs are exposed to excessive sunlight and cankers are developing in the bark. In the place of a large area of fruiting wood in the center of the tree capable of carrying a heavy load of fruit there now appear great numbers of watersprouts to sap the vitality of the tree and return nothing to the grower.

In order that a tree may be pruned to yield a reasonable crop the fruiting wood remaining on the tree must carry more than its normal load. This condition existed in many orchards last summer and the results are apparent now. The trees are spread to the ground on all sides and many limbs are broken.

To repair the damage done by one or two seasons of this sort of pruning is a slow process. The tree itself starts out bravely by producing a profusion of water-sprouts on the main limbs and below each cut. From among these a few must be selected to develop into limbs that will replace those taken out. Any sprouts left should not be cut back the first year. During the second season they will branch out and then the new limb can be developed. It is a peculiar characteristic of such wood that it retains its rank, vigorous growth habit for several years and is reluctant to form fruit spurs and begin bearing.

The severe cutting that has recently become common should be strongly condemned. The results are far from desirable. If it becomes necessary to remove a large portion of the tree it should be done over a period of years. Trees that are pruned carefully every year will never need to be radically altered in one year.

For really satisfactory work each grower should do his own pruning. Lack of experience need not deter anyone. The man who has spent even one summer working among his trees and has a personal interest in them is better qualified to prune them than a stranger ,who may be a carpenter or shopman temporarily out of work, no matter how impressive his experience may sound. The owner who is otherwise employed and must hire the work done should especially be careful in securing help. It would be better for him to hire an inexperienced man who can be depended upon to carry out his instructions than a professional pruner who will not consider his suggestions.

A Few Pointers.

Certain facts in regard to this year's pruning are well worth remembering. All pruning is an attempt to strike a balance between fruit production and wood growth that will result in the most profit over a period of years. Remember, too, that all those high center branches that are left will have to be sprayed, thinned, and picked before the summer is over. Time spent in careful pruning now will be saved in other operations later in the season.

Cleaning up the main scafford limbs should be avoided. If they have no fruit spurs or small fruiting twigs now a few of the water sprouts should be left on them. The smaller sprouts are most likely to develop into fruiting wood if left. And finally, five minutes' careless work with the saw can do more damage than can be repaired in five years. Those workmen who have dealt so severely with the trees in some of our orchards might do well to ponder on the words of that poet who admitted that—"Poems are made by fools like me, But only God can make a tree."

Chins resting on palms, and elbows on desks, those of us with wrinkled brows, apparently lost in reverie, but in reality wondering how they are going to reduce taxes, increase appropriations and keep everybody sweet humored. Some insist that it can't be done, but others are facing the situation more cheerfully.

CEREALS FOR CHILDREN

A well cooked cereal should form an essential part of a child's breakfast. There are 15 different kinds of cereals that may be cooked so that a child need not tire of these. If children do not like them, it is usually because they have not been properly cooked and served. They need long, slow cooking over boiling water or in a fireless cooker. The cereal may be cooked the night before, and reheated in the morning in a double boiler or by setting in a pan of hot water.

Directions for cooking cereals: Stir the cereal into the right amount of boiling salted water and cook over direct heat until the cereal thickens, stirring constantly. Then set into boiling water or the fireless cooker and cook as long as directed without further stirring. Proportions are as follows:

One cup of cornmeal, 6 cups water, 1 to 2 teaspoonfuls salt, cook three hours.

One cup of wheat preparations, 4 to 6 cups water, 1 to 2 teaspoonfuls salt, cook one hour.

One cup hominy, 4 cups water, 1 teaspoonful salt, cook three hours

One cup rolled oats, 2 to 2 1-2 cups water, 1-2 teaspoonful salt, cook two to three hours.

Safe and Sound.

Japers—My brother has been in Africa for the last year, and has just come home. He has been hunting tigers.

Bubbs—How exciting! Did he have any luck?

Japers—Rather—Rather! He never met any tigers.

A campaign against bootleggers in the capitol building at Washington has been ordered. That is very proper. Our senators and representatives should not be subjected to bad influences while so far away from home.—Tacoma Ledger.

Cobb—He is a touch-and-go sort of a fellow.

Web—Yes, but he never remembers to return.

We can't name the 12 greatest women in America. But we suspect that the other eleven have red hair, also.

May—Is Frank a close friend of yours?

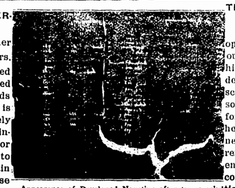
Ray—I'll say he is—so close that you can't "touch" him.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

NEW METHOD OF DECIPHERING BURNED RECORDS.

Acting upon requests to decipher illegible documents and papers, particularly those that have passed through fire without being burned to ashes, the Bureau of Standards has worked out a method that is very effective and comparatively simple. It is based on the principle that a photographic plate or film, besides being sensitive to light, is also sensitive to certain gases or vapors. Some of these have the property of fogging or rendering developable such portions of the plate as are exposed to their action, while others partially or completely desensitize the plate. The specimen under investigation is placed between two photographic plates and kept in intimate contact with the sensitized coating in the dark, for a period of two weeks in the case of fast plates. On development in the usual manner, a perfect copy of the writing and printing is obtained; from which it is evident that the charred paper gives off gasses that fog the plate, and that, where ink is present, there is little or no effects, the ink apparently acting like a screen and preventing the emanation of gas. It is interesting to note that the writing on both sides of the charred paper appears, that on the back being fainter than that on the face, indicating that the ink penetrates the paper to such a depth that its residue reduces the amount of gas escaping from beneath the ink.



Appearance of Developed Negative after two weeks' contact with charred paper: Writing on both sides of the paper is visible.

We require the best of care and feed for our livestock, why not for our

Combined Potato Digger and Loader drawn by a tractor and so arranged that the potatoes can be dug and loaded simultaneously into an accompanying wagon: This combination, moving at a speed of three miles an hour, can dig and load approximately 800 bushels in a 10-hour day.

TICKLESS CLOCK OPERATES ON NEW PRINCIPLE.

A clock that is tickless, because it operates without the usual lever, was one of the specimens recently exhibited by a German scientist in demonstrating, before a group of scientists and other interested persons, a new form of energy transformation. By this principle, which he discovered while studying the manner in which oscillating radio currents transmit energy to one another, energy of motion in one direction is converted directly into energy of motion in another direction, and the waste energy such as occurs in reciprocating machinery is eliminated. It is said to promise many important results when applied to high-speed engines, airplanes, the propulsion of ships, and other energy-utilizing devices.

COMBINING POTATO DIGGING AND LOADING IMPLEMENTS

In potato harvesting, by connecting a loader to the rear of a digger, both being hauled by a tractor, the potatoes can be dug and loaded simultaneously into a horse-drawn wagon moving alongside the combination. One of the two potato elevators of the loader is arranged to dump the potatoes into the wagon. These elevators are constructed with separated steel slats so that any dirt left on the potatoes will fall to the ground. The elevators are driven by a system of sprockets and chains in connection with the wheels of the loader.

NEW RECORD SET FOR APPLE SALE

Last Year's Shipment in Excess of Two and Quarter Million Bushels.

Three thousand and thirty-five carloads of apples were produced in the Spokane Valley during the past season, according to figures compiled by the Spokane office of the United States Bureau of Markets. Figured in boxes this makes a total of 2,294,460 boxes. These figures include 2135 carloads of apples shipped by December 1, 1922, and about 900 carloads in storage at that time. Besides these apples that were shipped or stored for shipment there were thousands of boxes sold locally.

If accurate figures could be compiled showing all apples sold locally, the probable total of all apples produced in the valley this year would be far in excess of the two and a quarter million boxes shown in these figures.

The 3035 cars produced in the valley during the 1922 season is 148 carloads in excess of the total shipments for 1921, and 729 carloads greater than the total shipments for 1920. This puts 1922 in the lead for production of apples in the Valley.

U. S. FOREIGN TRADE NEARS WORLD'S HIGHEST

United States exports established a new high record in November, the value of our exports in that month amounting to $382,000,000. This was an advance of $12,000,000 over October and $90,000,000 more than in November, 1921.

The United States is rapidly approaching the position of possessing the largest foreign trade of any nation on earth, even exceeding that of the United Kingdom. Our resources are such as well enable us to hold a commanding place in the future development of international life. We have over one-half of all the known coal of the world and two-thirds of the world's cotton. Stated in another way, while we have only 7 per cent of the world's land and only 6 per cent of the world's population we produce over 50 per cent of the word's supply of basic raw materials and grains.

Foreign merchandising differs from domestic trade in many respects, most notable of which is the seven competition of other countries in foreign markets through their trained representatives abroad. These foreign sales and distribution representatives are the products of training systems which have been maintained for nearly a century. On the other hand, the United States enters these foreign markets in most instances with untrained representatives, unskilled in foreign trade diplomacy, unfamiliar with foreign merchandising economics, and many times unsuited temperamentally for the important tasks assigned to them. In spite of these adverse conditions, however, our foreign trade is growing in leaps and bounds.

The men who are to be responsible for maintaining the high position this country now occupies in international trade, and to carry it on to greater development and achievements, must be trained men. This training must be an effective one, and must be capable of sustaining itself in competition with the great trading countries of Europe, who have specialized in this sort of development of their foreign representatives.

A Leaning Tower in Asia.

Describing the city of Mosul in Mesopotamia, E. Alexander Powell writes in the January Harper's Magazine:

"The only building of importance is the Great Mosque, whose remarkable leaning minaret forms a landmark which can be seen by approaching travelers long before the low-roofed city comes in view. I was unable to obtain the measurements of the minaret, but it is certainly considerably more than 200 feet in height, and, to an untrained eye, appears to be as much out of the perpendicular as the Leaning Tower of Pisa. If it were in Europe, instead of an inaccessible city of inner Asia, it would be visited by thousands of tourists and picture postcards of it would be seen everywhere."

Red-Blooded.

Jenks was an enthusiast for the great outdoors, and his mania at last became so pronounced that he insisted on taking his 10-year-old son on a camping trip in the dead of winter. Moreover, he refused to take a tent, preferring to sleep under the trees.

One bitter night he returned to the camping place to find that his son had made a huge snowball for a pillow. He kicked it from beneath the lad's head.

"No effeminacy, boy," he rebuked very sternly.

IDAHO

The establishment of a work garment factory in St. Maries, and the bringing of 50 additional families into that place, was proposed by the Manning-Wyman company of Butte, Mont., according to J. F. Manning, connected with the firm, who was visiting in the west recently. The manufacturing man visited St. Maries the first week in January and looked the situation over and held a conference with the business men of that community.

The annual report given by H. B. Garrison, superintendent of the Idaho state fish hatchery above shows the output of that establishment for 1922 to be as follows: 1,000,000 rainbow trout, 800,000 eastern brook trout, 200,000 brook trout fingerlings and 500,000 Lake Erie whitefish. The fry have been planted in every section of North Idaho and have proved to be a success in every case.

The chamber of commerce of Moscow has decided to petition the state legislature to memorialize congress to pass a guaranteed minimum price of $1.25 a bushel on wheat.

The mining industry in the Coeur d'Alene district is giving employment to about 5000 men, according to Geo. T. Edminston, manager of the mines employment office at Wallace. This includes 2500 in the Wallace region, 1200 at Kellogg and the remainder in various prospects.

Carscallen Bros., Coeur d'Alene contractors, have completed the construction of a new 220-foot steel bridge over the St. Maries river at St. Maries, Idaho. It contains one 90-foot and two 60-foot steel spans and has a 18-foot roadway and a five-foot walk on the downriver side.

Marion E. Kiger, of Kootenai, has been chosen speaker of the house of representatives for the present session of the legislature.

The clerk of courts in Nez Perce county reports that 35 divorces were granted in that county during the past year.

Winter conditions have not checked investigations by prospective purchasers in the Clearwater white pine belt. Statement is made that two crews of cruisers, engaged in the Big Island district of the country, are in the employ of Fred Herrick, who operates mills at Coeur d'Alene, Harrison and St. Maries, the plant at the latter place formerly being known as the Lane Lumber company mill. Herrick operates under the name of the Coeur d'Alene Lumber company.

The E. G. Greenup sawmill, operating three miles west of Rathdrum eight years, has been dismantled and will be shipped to Chewelah, Wash., where it will be installed 10 miles up Chewelah Creek.

Dr. George E. Price, sleeping sickness specialist, of Spokane, has been called to Coeur d'Alene in the case of Robert Wilson, 50, lumber mill blacksmith.

Who Wants War?

In 1914, we, the people of the United States, out of our very pockets, spent $241,000,000 for our army and navy. This year, we, the same people, are having taken out of our pockets by our representatives, $630,000,000 for military purposes. Meanwhile we are hearing constantly that we are desperately in need of an "adequate" army and an "adequate" navy, and that more money should be spent for an "adequate" air service, and for heaven knows what else, so that we may be ready for war.

Who wants war? Not the people of any nation on earth. Who will start it if they keep on? The militarists and those whose business is fighting, and those to whom war means personal wealth.

Man Wanted.

Her Roommate—Why do you always look under the bed to see if a man's hiding there? You'll never find one.

Miss Oldsmith—No, I suppose not. I never was lucky.

Cheerful.

Ray—Well, I am going over to the hospital to be operated on tomorrow.

May—Good luck to you. I hope everything comes out all right.

Sometimes.

Anthony—It's the unexpected that happens.

Adele—Yes, especially when we are expecting good luck.

Quite True.

"Why is 'E' an unfortunate letter?"

"I have no idea, Mr. Tambo."

"Because it's never in luck and always in debt."

Fixing Blame.

"Can you keep a secret, Peggy?"

"I can; but it's just my luck to tell things to other girls who can't."

Six tons of cranberries were burned in a New York fire. Cooking steadily it would take 100 brides two weeks to burn this many.—Ellensburgh Record.

Senator Brookhart proposes a subsidy for all "producers." Might as well put a tax on all of us to pay a bonus to the rest of us.—Olympia Chronicle.

The hookworm is merely a case of old-fashioned spring fever that has managed to grow a tail.

There are two ways of feeding cows, one so they produce milk, the other so they exist.

OTHER WAYS TO USE CRANBERRIES

Cranberry pie may be made by using 1 1-2 cups of split cranberries (raw), 1-2 cup seeded raisins and 1 cup water. Place on stove and bring to boil. Add 1 cup sugar and 1 1-2 tablespoons cornstarch moistened in cold water. When thickened remove from fire, pour into pie crust, place strips of pastry over the top and bake in moderate oven.

Cranberry Roll may be made by using a roll of biscuit dough about one-half inch thick. Put on a layer of uncooked cranberries and a layer of sugar. Roll. Cut into half-inch slices and bake in a hot oven.

Baked Cranberry Preserve—Use large berries not overly ripe. Wash berries, add equal parts of sugar, stir well and bake in oven until clear.

Singin'.

When I'm a-drivin' way out where
They ain't a soul in sight
I like to let the reins go slack
An' sing with all my might.
The hosses act like they was pleased;
The road ain't half so long
When I can loose behind their back
A-singin' of a song.

Wisht I could sing like that at home
With other folks around;
But somehow, there, seems like my voice
Gives a plumb different sound!
Hit's "Whar's that calf a-bawlin'?"
An' "Git the doctor, Sue!"
Folks don't appreciate my songs
The way the hosses do.

An important development of Coast industries is the salting, January 17, of the passenger and express steamship President Hayes for the east coast of South America, with a big cargo of Pacific northwest products loaded at sound ports. Included in the cargo are 10,000 boxes of Washington apples. Thhere are 14 Puget sound passengers who will visit the ports as far south as Rio de Janiero.

Next to the United Kingdom, Italy is the largest importer of American wheat, having received over 32,000,000 bushels in 1920, according to the United States department of agriculture. France ranks next, with 26,000,000 for the same year.

The alfalfa acreage of Michigan increased over 200,000 acres this year following alfalfa campaigns conducted the past winter by agricultural extension workers in that state, according to reports to the United States department of agriculture.

"Airplanes are coming down," says a manufacturer. Yes, we notice that. What we want is a plane that will stay up.—Centralia Chronicle.

In Holland, more than 10,000 acres are devoted to the cultivation of tulip bulbs.

INTIMATE SKETCHES OF THE BIG BEND

SYNOPSIS OF PRECEDING CHAPTERS

A young man from the city enters the Big Bend harvest fields for the first time. He is as "green as they make 'em." He shows the members of the heading crew how green he is when he can not harness a horse and can not even drive them after they are hooked to his header box.

The first day in the field he is dubbed "Kid." Soon after this he nearly kills "Barney," a lazy reprobate of a horse over twenty years old, who seems to consider it his duty to make the younger horses do the work.

Then Shorty has a slight altercation with the loader that results in the man calling for his time. The new loader appears the next morning with Paul Metcalf, the header puncher.

Combine Rigged and Ready to Go.

Before I speak of the new leader causing me to tip over my header-box on a steep hillside I wish to tell you something of the man and how he came to us.

As I have said Slim, our first loader, called for his time early one morning and Paul Metcalf immediately drove to town for a new man. In the meantime the rest of us made out cutting as best we could.

We saw Paul coming some distance off at about seven o'clock. The small roustabout automobile plowed through the dust ruts and behind it hung a narrow line of dust. As the car drew up to the header we turned with eyes and mouth agape to see the new leader. In the back of the cart we first saw a big brown canvas packsack. Then the man himself climbed out of the wagon. He was of medium weight and stature. But his clothes were what attracted me. No wore what I later learned were stag pants (cut off just below the tops of his heb-nailed boots). He wore also a stag shirt. He was neither presumptuous nor ill at ease. He acted as if this was simply another job in a lifetime. Yes, it was just one more job.

There Were No Greetings.

He climbed into the first box and the header moved away. There were no greetings from either side; the man had come, he acted as if he knew what was expected, and with scarcely a ripple the work continued. When I drove under the spout he looked at me in an odd fashion; but he did not say a word. By this time I had been in the field about a week and a half and considered myself a good driver. I wanted to impress this newcomer that I was an old hand. In my desire to do this I became overly eager. And he recognized straightway that I was inexperienced.

He did not load my wagon heavily, merely toyed with the hay as it rolled into the box. Then he tapped on the spout with his fork, the driver stopped, and the loader crawled out and climbed into the next box. I was overjoyed as I drove to the stack. Why this would be a snap pitching this load off, I thought, there was hardly a thing to pitch. And fairly choking with the subject I said to the spike-pitch, "This is great; this fellow's a good loader; look how he leads—just a little."

Good Loader, Huh?"

"Good loader," he yelled, and glared at me. "Good loader, huh?" That was all.

So we pitched off the load and as I drove to the header once more I found I was just in time; the box ahead had already been filled. This surprised me; generally there was a few moments' wait before I drove under the spout.

As I drove to the stack (a little faster this time) with another small load it dawned on me: I was doing a powerful lot of driving but I was carrying no hay. The other drivers were doing the same. I saw them turn from the stack and start for the header on the dead run. This time I laughed to the spike-pitch but in a different accent, "Do you think our horses will hold out, John?" I said.

"Dunno, kid, he replied as we rolled off a double forkful. "Get back, there, get out of here and get back." I got.

Proud to Show His Card.

Instead of doing better we had done worse. This man did not know loading from swamping. He had just come down from the woods, he was an I. W. W., and he carried his red card and was proud to show it (after he had been with us a few days).

We were then cutting on Tom Clancy's father's farm. (Tom was one of our box drivers, you know,) On this ranch was a quarter section which was particularly hard to cut, for straight down the center of it for a half mile was a steep ridge which we must traverse.

The rest of the crew had instructed me about driving on a hillside: they said if I always kept my horses headed uphill I would never tip over. Then they told me of former tipping-over episodes. Two boxes had tipped over, they said, on this very hill. The night before we cut the hillside I dreamed wild, fanatical dreams of header-boxes tipping over.

Started Out Well.

About the middle of the next morning we were nearly half way up the hill. My turn came to go under the spout. So far I had followed instructions and had kept headed uphill. But so far the hill had not been steep. I drove under. Together the header and I moved along. I sidled to the top of the box so as to add all possible weight. If a horse lagged I yelled at it frantically. We moved along perfectly for the first half of the trip. Then I felt that something was going wrong.

The lower wheels suddenly dropped a few inches and the wheels skidded frightfully. (Later I learned the wheels had struck a dead furrow). But I kept the horses headed uphill, gritted my teeth and clung to the top corner of the box.

Further and further we tipped. It seemed we were just ready to go over. I glanced around for an instant and saw the loader clinging to the lower side of the box! His proper station, of course, at such a precarious moment, was at the high side to help control the balance. He was supposed to be holding to the spout. But there he was at the low side, and he was ready to jump!

Over She Goes!

With a wild despairing look I turned again to my horses. Them we started. I could feel the box tip gently; then it gradually gained momentum.

The loader jumped and was halfway down the hill before I had even time to think of starting. I jumped as the lower side of the box struck the ground, staggered through the hay, and scurried down thp hill. I drew up alongside the loader as he turned to watch developments. Together we looked; there the box was, comple ely turned over.

We ran back to see if the horses were hurt. The header-puncher was off his saddle by this time and the rest of the crew had come running up to see what had happened. The horses showed only a mild interest at the unlooked-for delay. One of them would turn around inquiringly every once in a while. But not a move did they make. We unhooked them and with the help of the header horses righted the box. An hour's loss of time was the total damage.

As I look back upon that experience I can still see that loader jumping and sprinting down that hill. Seven million devils could not have stopped him. He had a clear track and he was running it full speed. He, of course, was responsible for the accident, although I did not know it at the time.

Lifted Hay With Leg.

All along I had been having trouble with bolls. This trouble began about three days after the run started. I had never been troubled before with bolls, but now that they finally came they really came. Often I would lay awake half of the night when I should have been sleeping, these devilish things throbbing, throbbing, throbbing. I would get up in the morning fighting every minute to make myself move. The things came on my hands and arms. My hands were so sore I could scarcely harness my horses. And my arms hurt so much that I had the greatest difficulty to pitch off my loads. At times I was forced to hold the handle of my pitchfork on my knee and lift with my leg.

These bolls grew worse. In all I had eight of them; no sooner would I get rid of one than another would come. But I hung on: I had told my father I could stand the work and I was determined to do so.

Hay Like Molten Lead.

For two long bitter weeks we harvested—two "ringers" we called them (two weeks with not a day or even a quarter or a day off). The heat was terrific. The hot winds fairly burned the hay: it poured from the spout like molten lead from a furnace.

On Friday of the third week (I remember it as distinctly as if it were yesterday) there appeared a small sore on the little finger of my right hand. This sore hurt even worse than the bolls. The finger began to swell and took on a greenish tinge. I knew what this meant, and that the safest way to prevent blood poison was to return to the city and see a good doctor. On Monday morning I left. The men were out in the field when Mr. Metcalf drove me to the station.

That was the end of my first summer's harvest. But what I learned that summer proved very valuable for the following summers.

LIVESTOCK

Twice as many hogs were received at the Spokane Union stockyards for use by local packing plants in 1922 than in 1921, and the general carlot receipts were 17 greater than the preceding year, it was stated today by managers of Spokane packing plants. The increase in carlot arrivals is indicative of a healthy condition among the packing industries, it was commented.

A thousand men interested in wool growing from all parts of the United States will gather in Spokane January 24, 25 and 26, to attend first convention the National Wool rowers' association has ever held outside of Salt Lake City. The conventions have been held there for 20 years.

More cattle were registered by the American Hereford association in 1922 than in any other year since the organization was founded. The total number of Hereford registrations during 1922 was 108,420, or approximately 17,000 more than the registration by any other beef breed association.

According to figures gathered by the United States department of agriculture, in 14 of the leading horse-producing states, while the total number of stallions in service in the United States has decreased 60 per cent since 1915, the number of jacks has increased gradually until 1921, when there was a slight decrease. Of the stallions and jacks registered for service in 15 states in 1921, 29 per cent were jacks. The number of light stallions has decreased more than the number of draft stallions.

Money Memory.

"Have you forgotten that $5 you owe me?"

"By no means. Didn't you see me try to dodge into that doorway?"

DAIRY

Here are maxims that every farmer knows are sound but will bear repeating: it takes plenty of good milk-creating feed for a profitable yield and to maintain a cow in good condition. She should have warm, dry, sanitary stabling. This means a clean bed and good air to breathe. A shivering cow can not properly assimilate her ration or function as a milk-producer. Kind treatment is as important as good food. Fear of her master affects the operation of milk production. This has been proved in many tests. The farmer can ignore these common sense facts and still produce milk and "get along," after a fashion, with his operations. But he never will be on a sound foundation until he adopts and follows them.

The King county dairymen, through the efforts of County Agent A. B. Nystrom, have worked out a program and goal for the coming year. This goal includes the replacing of 25 grade bulls by purebreds; placing of 13 registered females; building 14 silos; organize 2 dairy clubs for boys; build or remodel 6 milk houses; sign up 4800 cows for tuberculosis test; secure 18 dairymen to adopt balanced rations; build one new barn; reorganize two cow testing associations and hold two tours in each association.

Plans are being completed by County Agent E. E. Hupp to help the dairymen of Pend Oreille county import from Coast counties, high class heifer calves with known production records.

Over 9,450,000 pounds of meat cured, 2,600,000 pounds of lard, and 3,900,000 pounds of sausage made in 1921 in farm homes where none had been made before are reported to the United States department of agriculture as the result of demonstrations in meat conservation by home demonstration agents.

Woodward Entertainment

The following entertainment will be given in the opera house on Friday, January 26, by Mrs. Amy Woodward, assisted by her daughters. The program will commence at 8 o'clock:

Piano solo—
"Il Travatore"—Edouard Dorn Op. 39
Thelma Woodward

Reading—
"When Pa Begins to Shave" .....
..... H. D. Robbins

"A Boy's Mother" .....
..... James Whitcomb Riley
Mrs. Amy Woodward

Song—
"Li'l Liza Jane".....Ada De Lachan
Bonnie and Pat Woodward

Reading—
"Brier Rose" ..... D. R. Locke
Mrs. Amy Woodward

Piano solo—
"Robin's Departure"...Leander Fisher
Thelma Woodward

Piano solo—
"Man In the Moon"....Elmer Wallace
Bonnie Woodward

Musical Reading—
"The Moo Cow Moo" .....
..... Edward Vance Cook
Mrs. Amy Woodward

Vocal Solo—
"The Little Sick Dolly" .....
..... Frank L. Bristow
Pat Woodward

Piano solo—
"The Dying Poet" ..... A. Gottschalk
Thelma Woodward

Monologue—
"Gossip and Cards" ..... G. A. Cowles
Mrs. Amy Woodward

Song—
"I Ain't Nobody's Darling" .....
..... Elmer Hughes
Bonnie and Pat Woodward

Pianologue—
"I've Got a Pain In My sawdust"...
..... Henry C. Warner
Thelma Woodward

Reading—
"The First Settler's Story" .....
..... Will Carleton
Mrs. Amy Woodward

Reading—
"A Little Girl's Surprise" .....
..... A. H. Donnel
Pat Woodward

Piano solo—
"Robin's Return" ..... Leander Fisher
Thelma Woodward

Reading—
"How Ruby Played".....Jud Browning
(Gives a description of Rubinstein's playing)
Mrs. Amy Woodward

Piano Solo—
"Sand Man" ..... Elmer Wallace

"Sleepy Song" .....
.....Laurence Gardner Op.
Bonnie Woodward

Farmers Union Meeting

There will be a meeting of the Farmers Union at the American Legion hall on Saturday, January 20, at 1 p. m. All members are urged to be present.

PURPOSE OF THE IDAHO STATE SEED LABORATORY

(By Jesse C. Ayres, State Seed Analyst)

The purpose of the Idaho state seed laboratory is primarily educational. It is a place where the farmer can be instructed in growing good quality seed; where he can have seeds and weed seeds identified; where he can be informed what to demand of the hullers; where he can learn the importance of taking a representative sample; where he can have his sample tested for purity and graded; where the seedsman may receive aid when selecting their stocks for Idaho trade, thus insuring compliance with Idaho laws and assisting in the production of good seed.

Small seed growing has now become a real industry in Idaho. Her winnings on Red clover, Alsike clover and Timothy seed at the International Hay and Grain show recently held in Chicago is proof of high quality. Her climate produces the best colored field seeds in the world. On account of this fact, Idaho seed is used for blending with old seed and eastern-grown seed of bad color in order to bring up its quality. Eastern seedsmen cannot afford to use our high quality seed for straight retail trade because of the high price is commands.

Idaho seeds are increasing in purity. This year's record of the state seed laboratory show only 26 per cent of the samples received were condemned, as compared to 54 per cent in 1920 and 43 per cent in 1921. Red clover and alfalfa seed must be at least 95 per cent pure and contain not more than 27 noxious weed seeds per pound. Dodder and green fox-tail are the two noxious weeds we have. The latter is sometimes found in Red clover up to 35 per cent.

The gradual climb toward higher quality of seeds is attributed to education and not to the policing force of the state seed department. During the past two growing seasons field work has been carried on by the state seed commissioner and his assistant. This work consists largely of talks on weeds to the farmers and of identification of weeds found in different fields. Farmers who call at the state seed laboratory are benefited by having pointed out to them impurities in their individual samples and also by being shown specimens of the new weed pests as they come into the state. Grading systems used by the state and by selling organizations have shown many growers the true meaning of quality. A statement of percentage of purity means very little. For example, first class screenings of alfalfa seed, termed "seconds," have been found to be 99 per cent pure as to kind but often composed of immature seeds, shriveled and brown, indicating poor growing qualities and containing the maximum of 27 noxious weed seeds per round, which throws it into the "no grade" class.

It is a splendid sign to have growers call and talk over weeds and ask for weed seed mounts for home study. It is unfortunate that more of the counties in the seed-producing sections do not make use of the state seed laboratory. The enforcement of this law is dependent upon the people themselves through their county commissioners. The purity of seed is a large factor in securing good prices for growers.

To be a successful grower one should thoroughly understand the nature of every weed found in his fields. Much progress has been made in the elimination of dodder, but quite often other noxious weeds, such as some of the mustards, have been permitted to flourish. These pests are early seed producers. Many other weeds not often bear inseparable seeds, as green fox-tail and docks, thus causing many lots of otherwise splendid seed to go down in quality.

Comparison of the relation between quality and prices is interesting. When there is so great a demand for seed as to call many buyers into the field, farmers receive big prices, many times, regardless of quality. During such buying conditions some growers make the mistake of keeping screenings and poorer lots for home planting, thus insuring poor quality seed for the following two years. When competitive buyers are few prices are usually low. Buyers are more particular and often demand state tests before bidding. The state seed laboratory receives a greater number of samples during those years. In 1922 many dodder-infested lots of red clover and alfalfa seed were sold to competitive buyers at high prices. We warn growers not to allow this good fortune to overcome their judgment and cause them to produce other than high quality seed.

Near Enough

The curator of the museum was classifying Egytian curios. He observed a perplexed expression on the face of his young assistant.

"What is the matter?" he asked. "Is there anything you don't understand?"

"Yes, sir," answered the helper. "Here is a papyrus on which the characters are so badly traced that they are indecipherable. How shall I classify?"

"Let me see," said the curator, examining the piece. "Just call it a doctor's prescription in the time of Pharaoh."

Double Adornment

Mrs. Toggerblossom: "Vain man! Did you ever observe that designers take a woman's head to adorn many of your coins?"

Mr. Toggerblossom: "No; but I have observed that designers take many of my coins to adorn a woman's head."

BEANS AND BOSH— WHO PAYS LONG PRICE?

"We don't raise beans enough," says a writer in the news service sent out weekly to the American press by the department of commerce at Washington, D. C. "That pound of beans you just bought may have done some traveling before it got as far as the grocery store, for this nation has become such a country of bean eaters that the world markets are searched by American importers, the domestic supply not keeping up with the demand."

The word "bosh" is a fit if futile answer. His reference to American importers and their search of foreign markets is the only truth contained in this writer's statement. He ought to be "beaned" with a stuffed club and awakened to the facts, which are fairly exampled in the experience of one Columbia county, Oregon, farmer during one year of the late war. This farmer, assuming that in 1917 our 2,000,000 boys enroute overseas would need a lot of beans, planted five acres. He paid 25 cents a pound for the best seed, and planted it in well fertilized soil. His two boys had been taken by the war—one to France and the other to sea, and he was obliged to hire all the work done. But at this time farm wages had not advanced and so he was able to get help at $2.50 per day. We have had a look at this man's books. The five acres of beans, when threshed, had cost him $8 per hundred pounds. He figured that if he could get 10 cents a pound he would be satisfied, although beans were retailing at the grocery store at 18 cents a pound and wholesalers were offering 13 cents a pound for so-called "California Whites." He came to Portland and canvassed almost every wholesale house and the highest offer he got was 7 cents. Puzzled over the newspaper market quotations of 13 cents a pound for beans correctly labeled "California Whites" he went to a retail grocery store and asked to buy some California white beans. The grocer said he had white beans at 18 cents a pound for sale, but not those where they were raised. "What is the difference in your price for Oregon white beans and California white beans?" the farmer asked. "I don't know," the grocer replied. "They all come out of the same bin so far as I am concerned."

The farmer at length got from one Portland jobber an offer of 7 cents a pound and he took it. The beans brought the farmer less than he had paid to produce them. Perhaps this supplies one reason why this great nation of "bean-eaters" do not always know how far the beans have traveled before they reach the consumer. The importers and their sources of supply in game of distribution are searching the world's markets for cheap beans instead of giving their attention to the idea of paying the home farmer cost and a reasonable profit for growing American beans. The outrageous spread between $7 per hundred paid the producer and $18 per hundred paid by the consumer is a very good reason for the alleged shortage of an American bean supply if such shortage exists—which we doubt. — Western Breeders Journal.

Wool Growers' Association

A thousand men interested in wool growing from all parts of the United States will gather in Spokane on January 24, 25 and 26, to attend the first convention the National Wool Growers association has ever held outside of Salt Lake City. The convention has been held there for the last 20 years.

"The meeting will be primarily a business session," R. A. Balch, of the Rockrock Land and Livestock company, who is making arrangements for the convention stated. "Among the topics that will take a leading place on the program will be the proper financing of agriculture and live stock industries, the Truth in Fabric bill, taxation and marketing problems."

Improving Railroads

The Northern Pacific Railroad company is planning to spend more than $500,000 in ballasting work in the state of Washington during 1923 as well as laying new rails in many places along the lines, according to A. V. Brown, general superintendent of Seattle,

Extra gangs using about 300 men will be put at work on the Milwaukee railroad in the Spokane territory as soon as the weather conditions will permit making the usual track improvements. The work will be started in the neighborhood of St. Maries.

More Light Needed

It was a sleepy village and its fire company was anything but up to date.

One night a fire was announced by the violent ringing of the alarm bell, and the sleepy fire fighters arrived at the scene of action to find the building wreathed in curling black smoke. No flames were visible from the outside.

The captain of the company made a careful survey and then calmly lit his pipe.

We'd better leave it alone and let it burn up a bit," he said, "then we will be able to see what we are doing."

Within the Law

A salesman-like looking inspector stopped over night at a small Kansas town hotel and was surprised to find a dirty roller towel in the washroom. Indignantly he said to the landlord:

"Don't you know that it has been against the law for years to put up a roller towel in this state?"

"Sure I know it," replied the proprietor, "but no ex post facto law goes in Kansas, and that there towel was put up before the law was passed."

An Ideal Companion

A woman inserted the following advertisement in a newspaper:

"Wanted, companion for a lady; must be a total abstainer; must be cleanly in her habits and know a little about nursing. Comfortable home; no salary."

A few days later she received by express a basket containing a tabby cat. An accompanying note said:

"In reply to your advertisement, I recommend Tiger. She is a total abstainer, cleanly in her habits and knows a little about nursing, having brought up a large family. She will be pleased to accept comfortable home and requires no salary."

Idaho Fish Hatchery

The annual report given out by H. B. Garrison, superintendent of the Idaho state fish hatchery, shows that the output of the establishment for 1922 to be as follows: 1,000,000 rainbow trout, 800,000 eastern brook trout, 200,000 brook trout fingerings, and 500,000 Lake Erie whitefish.

The fry have been planted in every section of north Idaho and have proved to be a great success in every case.

Will Build Retaining Wall

The Lewiston council has ordered the erection of a retaining wall at the intersection of First street and the Snake river, preliminary to widening that thoroughfare and permanently improving the Snake river grade. This step will eliminate one of the most dangerous curves in the city.

Embarrassing Moments

When you walked into the wrong room at a hotel.

When your best girl heard you swearing.

When you were the entertainer of a crowd and your wife remarked, aloud, said: "Well, I would continue to make a fool of myself if I were you."

When her little baby brother insisted on getting on your lap while you were dressed in your best suit and waiting for her to come down stairs.

The first time you met her father.

When she was unable to go to the theater and you had to take her little sister and you heard some fellow say: "Well, that fellow is certainly a cradle robber."

Notice of Sale of Real Estate

Notice is hereby given, that in pursuance of an order of the probate court of Latah county, state of Idaho, made the 6th day of January, 1923, in the matter of the estate of James W. Day, insane, the undersigned, guardian of the said James W. Day, insane, will sell, at private sale, to the highest bidder, for cash, subject to the confirmation of the said probate court, on Saturday, January 27th, 1923, at the office of W. W. Burr, Genesee, Idaho, all the right, title and interest of the said James W. Day in the following described property:

One half interest in the south half of block ten (10), North Addition to the City of Genesee, Idaho.

Terms and conditions of sale: Cash on date of sale.

January 10th, 1923.

IDA SMITH,
Guardian of the Estate of James W. Day, Insane. 28-2

Notice to Creditors

Estate of Goswin Sievert, Deceased.

Knew How to Get It

A child who had swallowed a quarter was taken to the Christ Hospital, Cincinnati. Dr. Tangeman, the specialist, told the parents they should have taken the boy to Dr. Robinson, the financial secretary, adding, "because he certainly knows how to get money out of people."

The radio craze is still a craze, but it is confined principally to those who want to make money out of it.

Farm Sales

If you want your sale cried by an auctioneer who is a rancher and understands the ranchers' problems, give me a chance to show you what I can do. I have been crying sales for many years and know the game from start to finish.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, JANUARY 26, 1923. — NO. 30

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Weather Mild Along Potlatch

There has been little change in the weather conditions of the past week in the Juliaetta section. It has been warm and accompanied by frequent showers, which are filling the ground with moisture. Some think the conditions this winter point to a more favorable outlook for good crops next season than for several years past.—Juliaetta Record.

Ships Spuds by Mail

Fifteen hundred pounds of famous Uniontown grown potatoes were shipped by Dick Dahmen Tuesday morning through the local postoffice. The shipment was made up in 30 sacks filled to weigh 50 pounds each and 54 cents in stamps were attached to each one. The "mail" was addressed to a point on the Snake river above Lewiston known as the Brockman ranch.—Uniontown Journal.

Entertains at Dinner

Mrs. J. E. Moore entertained on Sunday at her home on South Almond street at an enjoyable dinner in honor of her sister, Mrs. F. W. Wilkinson, of Twin Falls, who is a guest at the Moore home. The guests included Glenn Wilkinson of Twin Falls, a son of the guest of honor, who is in Moscow attending the University of Idaho, and Mr. and Mrs. Edgar Evans, Mr. and Mrs. Roy Evans, Mrs. L. Kline, Harold Hallman and Boyd Eriksin of Genesee; Mr. and Mrs. Oscar Anderson and their son, Kenneth, and daughter, Audrey, Mr. and Mrs. L. E. Clark and daughter, Arta Clark, of Moscow. After the sumptuous dinner the afternoon was spent socially.

Don't Be a Weather Prophet

Dr. W. A. Rathwell, who is now the pioneer resident of Kendrick, stated this week that the mild weather experienced in the Potlatch so far this winter does not mean anything to him. He has a picture on the wall of his office that was taken on the first of March a good many years ago. It shows a frozen waterfall that came from the old mill race near where the flour mill used to stand. Several people were sitting on this huge cake of ice. The temperature on that particular day was 12 below zero and ice houses were being filled with eight-inch ice. Two weeks prior to the day the picture was taken buttercups were out in full bloom along the slopes of the Potlatch.—Kendrick Gazette.

Abolishes County Agent Job

The county commissioners of Idaho county the first of the week voted to abolish the office of county agent and release Carl M. Grayson, who has done such satisfactory work for the farming interests of the county this past year. A petition asking for this action was presented to the commissioners and although many other requests were made by farmers for the retention of the service, the board listened to the cry of the objectors and dismissed Mr. Grayson. He will serve another month to finish up what work he can, but with all the activities he has set in motion in the past few months, there will be many projects that will have to be dropped without accomplishing the purpose for which they were started.

The Progress is quite certain that the Idaho county commissioners have shown poor judgment and a lack of foresight in the best interests of the county in this action. Mr. Grayson has already done the county a world of good in promoting the dairy, poultry and gneral farm interests of the county. We venture the assertion that the increase in poultry profits alone, directly due to his efforts, would very nearly pay his salary for a year, while his work in building up dairying would in time result in many times his cost. Kamiah farmers will be sorry indeed to have this service discontinued for Mr. Grayson had made a host of friends over this way and had proved his value in many ways.—Kamiah Progress.

It is plain to be seen that the governor of New York is no politician. He used $8,000 of his salery to pay strike bills.

JACOB TONNING DIES AT SANDPOINT—BURIAL HERE

Jacob Tonning was born at Aaslund, Norway, March 17, 1847, and passed away at Sandpoint, Idaho, January 21, 1923, aged 75 years, 10 months and 14 days.

Deceased came to America in the latter 60's, later going to Iowa where, in 1871 he met and married Miss Metta Maria Toskey. From Iowa the newly-weds went to Mankato, Kansas, where they resided for eight years, coming to Idaho in 1880 and had made their home in and near Genesee until the death of Mrs. Tonning some eight years ago, the deceased later going to Sandpoint to reside.

To this union 10 children were born, six of whom survive. They are Gus Tonning of Sandpoint, Henry Tonning of Grandview, Washington, M. P. Tonning of Weiser, Mrs. C. N. Herman, Mrs. Chas. Ingle and Mrs. Ira Hanson all of Genesee, and 15 grandchildren. All the children were present at the funeral with the exception of Henry Tonning, who was prevented by the illness of his wife. Mrs. M. P. Tonning of Weiser was also in attendance.

The deceased was married the second time to a Mrs. Hood at Sandpoint July 26, 1918, and they had resided in that city since that time. The widow was unable to be present at the funeral on account of indisposition.

Mr. Tonning, while resident of Genesee, was a faithful member of St. John's Evangelical Lutheran church and after his removal to Sandpoint he affiliated with the Norwegian Lutheran church at that place and had led a Christian life as he interpreted it. He leaves many old-time friends in Genesee who will mourn his passing.

Funeral services were held from the Lutheran church on Wednesday, January 24, at 10 a. m., the services being in charge of Rev. A. F. Wolff, pastor of the church. There was special music by the church choir.

The pallbearers were Wm. Rosenau, sr., A. Rach, Paul Cann, B. B. Caldwell, Henry Hanson and J. H. Jackson.

Interment was made in the Genesee Valley Lutheran church cemetery, north of town.

The family of the deceased are very grateful to the many kind friends and neighbors for their assistance and words of cheer during their late bereavement.

Card Club Meets

The card club met with Mrs. W. M. Herman on Monday, January 23—cards furnishing the entertainment for the afternoon. Mrs. J. H. Jackson was awarded the ladies' honors after having cut the cards with Mrs. Johanna Christenson, Mrs. A. E. Elver and Mrs. Fred Nagel. The invited guests were Mrs. Johanna Christenson, Mrs. Fred Shirrod, Mrs. A. E. Elver, Mrs. Chas. W. Smith, Mrs. Nellie Haymond, Mrs. T. H. Herman, Mrs. F. E. Lambert, Mrs. R. S Sullivan, Mrs Will Cunningham, Mrs. Elmer Vanouck and Mrs. F. J. Niemann.

The next meeting of the club will be with Mrs. J. H. Jackson on Tuesday, January 30.

Earning Own Way

According to reports from statistics compiled from questionaires issued to 1374 men, 84 per cent of the male students at Washington State college are earning all or part of their expenses. Of this number, 74 per cent are paying their way through college with funds earned during the summers. Sixteen per cent of the men enrolled are being put through school by money that they did not earn themselves. These include vocational students, whom the government is sending to school. Thirteen per cent of the men must earn their entire way through school.

Rebekahs Eat

Before their regular lodge session Wednesday night the Rebekahs gave a supper in their hall which was attended by the members and a few invited guests. One of those times such as only the "Beckys" know how to have was enjoyed.

WEATHER AND ROADS— BUT PRINCIPALLY ROADS

The weather has been excellent for the past several weeks, considering the time of year, but the roads are in very bad condition. Not only are the dirt roads badly cut up, but the state highway is practically ruined in many places, the ruts being almost as deep as if there never had been any gravel put on them. Unless different traffic rules are made in Idaho—especially in this section—the four inches of gravel that is to be placed on the road from the Washington line to Moscow will do little good.

It is very plain that the roadbed was not made heavy enough in the first place for this soil, but that is a thing of the past and the only thing that can be done is to keep putting gravel on until it stops "going down" and that will never be as long as the county commissioners, or road commissioners, allow loads such as have been hauled during the past two winters.

A Lewiston truck went out of here recently with a load of household goods that would have been a good load for two ordinary trucks and the large chained wheels cut and dug at every revolution. The stages that ply between Moscow and Lewiston, via Genesee, are also a detriment to the roads and will do the state highway more damage in one month than all the rest of the traffic put together. Last Saturday evening they came through our little city with eight passengers in one car and the running-board piled with baggage. Together with the heavy loads and the speed they travel, it is any wonder that the roads are almost impassable at places? While they accommodate a few people, they are a very expensive luxury to the tax payers and they should not be allowed to run while the roads are soft. Whitman county, Washington, stopped all stages long ago—and the same thing should be done in Latah county.

Are those who have the power to prevent going to allow this destruction of the only road of egress and ingress mined, just to accommodate a few—the majority of whom have no interest in this section of the country only to get through it as quickly as possible?

It is high time something was being done. It is a splendid way to reduce taxes and save the roads.

Linger Longers Entertain

The Linger Longers met with Mrs. T. H. Herman on Wednesday, January 17. Refreshments were served and a social afternoon enjoyed. The invited guests were Mrs. Thos. A. Feeney, Mrs. Henry Lorang and Mrs. Alanzo Murphy.

The Linger Longers entertained their husbands at the home of Mr. and Mrs. Mahlon Follett on Monday evening, January 22. Pinochle furnished the evening's entertainment. Mrs. Jas. Magee won the ladies' honors and Harry Schooler the men's. Refreshments were served during the evening. The invited guests were Mr. and Mrs. Chas. W. Smith and Mr. and Mrs. Thos. A. Feeney. The regular meeting of the club will be with Mrs. Virgil Samson on Wednesday, January 31.

Surprise Party

The home of Mr. and Mrs. Dave Spurbeck was the scene of a pleasant celebrate Mrs. Spurbeck's birthday anabout 40 friends and neighbors gathered to spend the evening and help celebrate Mr. Spurbeck's birthday anniversary. Games, cards and dancing furnished entertainment for the evening.

The self-invited guests brought well filled baskets and one of those good old-fashioned times was had.

Was Great Success

The old-time dance given by the Knights of Columbus in their hall Wednesday evening was one of the very pleasant affairs of the winter season. There was a large attendance and the old-time dances with old-time music by Currin's orchestra were featured. The dances were old, the music was old and most of those in attendance were leaning that way—but they had a delightful time just the same.

We print stationery of all kinds.

CONTINUE FIGHT AGAINST GROUND SQUIRRELS

Arrangements have been completed by the Latah County Farm bureau, cooperating with the county agent, to purchase strychnine alkaloid and saccharine cooperatively for the continuation of the campaign against the Columbian ground squirrel. These supplies will be purchased through the extension division of the University of Idaho and the Bureau of Biological Survey of the United States Department of Agriculture, and distributed at cost to cooperating farmers. The prices per ounce to those who order and pay for their supplies in advance will be: Strychnine alkaloid, $1.20, and saccharine, 15 cents. &All farmers of Latah county are invited to take advantage of this opportunity to secure poisoning supplies at cost and take part in the squirrel control campaign. The supplies will be delivered early in the spring at community squirrel control meetings.

Committeemen have been appointed in the various communities of the county to receive orders for poisoning supplies. All orders must be given to the committeemen not later than February 5. Those receiving orders in communities tributary to Genesee are: Genesee—R. E. Norby, John Lorang, Wm. Schlueter. Blaine—Thos. Abrahamson, Harry Christenson. Fix Ridge—B. H. Weatherby, Oliver Clark.

The Same Old Story

To save his life, Alfred Tournier, a despondent woodsman, was placed in jail the other day by Patrolman Bert Bucholz, according to testimony given by the office in police court, says the Spokesman-Review.

"Tournier walked up to me with his eyes filled with despondent tears and begged me to take him to the police station," the policeman testified. "If you don't lock me up quick I'll kill myself," the officer testified Tournier declared.

From further testimony of the officer and Tournier, it was revealed that the husky woodsman, fresh from the forests, came to town with a bankroll of $1,000. In nine days it had all gone to the call of wine, women and song. Heartbroken when love freely given while the money lasted turned cold when his funds were gone, Tournier feared he would kill himself, he said. He was kept in jail over night and was released on a 15-day suspended sentence.

Dismiss Charges Against Henry

On motion of Prosecuting Attorney J. L. Phillips the action against Clarence Henry, high school youth of Pullman, Washington, and son of W. D. Henry, farmer and grain dealer of Johnson, Washington, charging involuntary manslaughter, was dismissed last Wednesday in the district court, says a dispatch from Lewiston.

Henry, on September 15, was driving a car up the Lewiston hill when a collision occurred with a car driven by Edward Thyfault, Genesee farmer. Thyfault died later from his injuries. Henry was first held under $10,000 bond and later $2,500.

In moving dismissal the prosecuting attorney said there was lack of evidence to show Henry was responsible for the accident and that further to prosecute him "would not be in furtherance of the aims of justice."

Suffer Defeat

In the game of basketball between the Johnson team and the local high school team last Friday night our boys lost by a score of 18 to 16.

The following night both the boys' and girls' teams went to Johnson where return games were played, and again the local team was doomed to disappointment for they lost by a big score. Both games were hard fought and although they lost they were much enjoyed.

Is Convalescent

Felix Mulalley, who was taken ill with violent hiccoughing last week is reported as making satisfactory progress at this time. The hiccoughs lasted for several days but were finally stopped after a physician had been called.

Get your letters heads printed now.

FISH AND GAME ASSOCIATION MAKES SUGGESTIONS

The Latah County Fish and Game Protective association, at a meeting held in the Farmers' Union hall recently discussed at some length the controversy of several years' standing between the Wool Growers' association and the state game department, and acted upon some suggestions for legislative action in connection with the game laws, says the Star-Mirror.

C. J. Hugo, who was a member of the fifteenth and sixteenth legislative sessions, gave to the association the facts in connection with the controversy between the Wool Growers' association and the fish and game department and made some explanations regarding the real reasons for the propaganda published from time to time with a view to prejudicing the farmers against the game laws.

Mr. Hugo told of his own personal knowledge where the state game warden and the fish and game committee of the last legislature cooperated thoroughly and efficiently with the sheep men, as far as lay in their power and helped them to accomplish the things which they asked for in the way of legislation. The real trouble, he said, was that the legislature was not willing to give them laws which they should not have. Mr. Hugo also stated that if there are any sections of the game laws which in any way proves a hardship to any resident of the community, the remedy lies with the legislature, and not with the game warden, as he can only enforce the laws as they are, and as the duties of his office demand.

A letter from the Lewiston Fish and Game association, setting forth action taken at a meeting of the organization at that place last month, was read and commented upon, and some changes in the things asked of the legislature by the Lewiston organization suggested.

It was suggested that the limit of fish catch remain as it now is. That the open season for birds in Latah county be as follows:

From October 15 to October 30, both dates inclusive: A bag limit of three Chinese pheasants, prairie chickens, or short tail grouse, blue or dusky grouse, or a mixed bag of a total of three of these species. Hungarian pheasants or wood pheasants the bag limit be six of either or a total of six for a mixed bag of the two varieties. That the quail season be kept closed in Latah county.

From November 1 to November 15, both dates inclusive, that our bird season be the same as that of Nez Perce county.

That the recommendations of the Lewiston meeting for the open season on white tail deer be made to include black tail or mule deer.

It was also voted to ask the legislature to continue the present two-dollar resident fish and game license; also that some provision be made for a temporary hunting and fishing license for tourists passing through our state; also that in addition to the non-resident hunting license an added tax be placed on big game when killed by non-residents.

The meeting also voted to ask the legislature to continue the present alien gun law.

An endorsement of the work of L. E. Brooks, local deputy state game warden, was voted, with a recommendation that he be continued in his position.

Farm Bureau Meeting

The annual meeting of the Latah County Farm bureau will be held at the Farmers' store in Moscow on Wednesday, January 31, at 1 p. m. The projects, or lines of work, for the coming year will be decided upon and project leaders and officers will be elected. Legislation and other matters that may regularly come before the organization will be considered. There may also be an address by a competent speaker.

All farmers, whether farm bureau members or not, are invited to attend the meeting.

Entertained at Dinner

Dr. and Mrs. R. I. Witty entertained at dinner Tuesday evening Mr. and Mrs. Fred Perkins and daughter, Pearl, Mr. and Mrs. W. D. Woodward and family and Mr. and Mrs. F. C. Shork.

WHAT HAPPENED HERE TWENTY YEARS AGO

Miss Anna Tonning, who has been employed as telephone girl at Wallace for several months, arrived in Genesee last Friday for a two weeks visit with home folks.

School Notes: Out of a high school of 42 there are 17 in the A grade; Miss Anna Tonning, of the class of '02, was a high school visitor Tuesday afternoon; Mae Herman, who has been teaching in Miss Burdick's room the past two weeks, is with us again.

Yesterday Messrs. Reed, Smolt, Cobbs, Brewer, Lawen, Thatcher, Sheldon, H. C. Tweedt and son, and Mrs. R. H. Russell left for La Grande, Oregon, at which place they will prove up on their claims situated on the Powder river. Several of the crowd will visit Boise before returning.

The annual meeting of the stockholders of the Genesee Exchange Bank was held at the banking house Wednesday. Messrs. Dwyer, Brewer, Bressler, Ehlen and Herman are the directors elected. The bank is in a flourishing condition and the business is daily increasing.

Last week we made mention of the fact that Albert Carbuhn had taken up a residence on his farm southwest of town. The item was correct as far as it went, but it didn't go far enough. He was very particular not to let us know that he did not intend to reside alone, but the truth will out. The lucky woman is the one who won in the week, where he purchased a marriage license to wed Miss Florence Payne, a young lady who for the past several years has been a resident of the neighborhood. The ceremony took place Wednesday afternoon of last week at the home of Judge Payne, Rev. Eyrich officiating. The best wishes of all will follow these young people through life.

Last Saturday afternoon Lyon Post, G. A. R., Department of Idaho, met at their headquarters in joint session with the members of the W. R. C. for the purpose of installing their officers which had been elected previously. The following officers of the G. A. R. were installed into the offices to which nated: J. J. Owen, commander; J. Kambitsch, senior vice commander; P. Ryan, junior vice commander; S. Bulph, chaplain; Wm. McMahon, surgeon; Chas. Murphy, chaplain; L. Jain, quarter-master; John E. Reed, adjutant; G. W. Daggett, sargeant-major; T. Miller, officer of the guard. The officers of the W. R. C. were installed into the offices to which they had been duly elected: Mrs. Brant, president; Mrs. McMahon, senior vice commander; Mrs. Hollister, junior vice commander; Mrs. Jain, chaplain; Miss Ida Follett, treasurer; Mrs. Pickering, secretary; Mrs. Larrabee, conductor; Mrs. Owen, guard; Mrs. Herman, assistant conductor; Mrs. Murphy, Mrs. Nulph and Mrs. Swank, color-bearers.

Poultry Institute

Arrangements have been practically completed for the poultry institute which will be conducted as a special feature in connection with the Panhandle Poultry show to be held in Moscow on January 30 and 31 and February 1. The institute will be in charge of O. S. Fletcher, county agricultural agent. The program is as follows:

Tuesday, January 30, 2 p. m.—
Feeding for Egg Production, by Prof. R. T. Parkhurst, head of the department of poultry husbandry, University of Idaho.
Discussion.
Wednesday, January 31, 10 a. m.—
Housing, by Prof. R. T. Parkhurst.
Discussion.
Thursday, February 1, 10 a. m.—
Milk Production as Correlated with Egg Production, by Prof. F. W. Atkeson, head of the dairy department of the University of Idaho.

The sessions of the institute will be held at the auditorium of the Farmers' store in Moscow.

Pythian Sisters Initiate

At the last meeting of the Pythian Sisters lodge Mrs. Sim Currin was initiated into the mysteries of that order. After the initiation the party went to Lambert's Cafe where refreshments were served.

We have a nice line of birth announcements—and they are kid finish.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 38.

All of a sudden, on a still day of what they call the Indian summer, when the woods were changed into gold and pink and scarlet, the master laid down his needle and burst into a fit of merriment. I think he must have been preparing it a long while in silence, for the note in itself was pretty naturally pitched; but breaking suddenly from so extreme a silence and in circumstances so averse from mirth, it sounded ominously to my ear.

"Henry," said he, "I have for once made a false step, and for once you have had the wit to profit by it. The farce of the cobbler ends today; and I confess to you (with my compliments) that you have had the best of it. Blood will out; and you have certainly a choice idea of how to make yourself unpleasant."

Never a word said my lord; it was just as though the master had not broken silence.

"Come," resumed the master, "do not be sulky, it will spoil your attitude. You can now afford (believe me) to be a little gracious; for I have not merely a defeat to accept. I had meant to continue this performance till I had gathered enough money for a certain purpose; I confess ingenuously I have not the courage. You naturally desire my absence from this town; I have come round by another way to the same idea. And I have a proposition to make; or if your lordship prefers, a favor to ask."

"Ask it," says my lord.

"You may have heard that I had once in this country a considerable treasure," returned the master: "it matters not whether or not—such is the fact; and I was obliged to bury it in a spot of which I have sufficient indications. To the recovery of this, has my ambition now come down; and as it is my own you will not grudge it me."

Makes No Opposition.

"Go and get it," says my lord. "I make no opposition."

"Yes," said the master, "but to do so I must find men and carriage. The way is long and rough, and the country infested with wild Indians. Advance, me only so much as shall be needful: either as a lump sum, in lieu of my allowance; or if you prefer it, as a loan, which I shall repay on my return. And then, if you so decide, you may have seen the last of me."

My lord stared him steadily in the eyes; there was a hard smile upon his face, but he uttered nothing.

"Henry," said the master, with a formidable quietness, and drawing at the same time somewhat back—"Henry, I had the honor to address you."

"Let us be stepping homeward," says my lord to me, who was plucking at his sleeve; and with that he rose, stretched himself, seized his hat, and still without a syllable of response, began to walk steadily along the shore.

I hesitated a while between the two brothers, so serious a climax did we seem to have reached. But the master had resumed his occupation, his eyes lowered, his hand seemingly as deft as ever; and I decided to pursue my lord.

"Are you mad?" I cried, so soon as I had overtook him. "Would you cast away so fair an opportunity?"

"Is it possible you should still believe in him?" inquired my lord, almost with a sneer.

"I wish him forth of this town," I cried. "I wish him anywhere and anyhow but as he is."

"I have said my say," returned my lord, "and you have said yours. There let it rest."

Bent on Dislodging the Master.

But I was bent on dislodging the master. That sight of him patiently returning to his needle-work was more than my imagination could digest. There was never a man made, and the master the least of any, that could accept so long a series of insults. The air smelled blood to me. And I vowed there should be no neglect of mine if, through any chink of possibility, crime could be yet turned aside. That same day, therefore, I came to my lord in his business room, where he sat upon some trivial occupation.

"My lord," said I, "I have found a suitable investment for my small economies. But these are unhappily in Scotland; it will take some time to lift them, and the affair presses. Could your lordship see his way to advance me the amount against my note?"

He read me a while with keen eyes. "I have never inquired into the state of your affairs, Mackellar," says he. "Beyond the amount of your caution, you may not be worth a farthing, for what I know."

"I have been a long while in your service, and never told a lie, nor yet asked a favor for myself," said I, "until today."

"A favor for the master," he returned, quietly. "Do you take me for a fool, Mackellar? Understand it once and for all; I treat this beast in my own way; fear nor favor shall move me; and before I am hoodwinked, it will require a trickster less transparent than yourself. I ask service, loyal service; not that you should make and mar behind my back, and steal my own money to defeat me."

"My lord," said I, "these are very unpardonable expressions."

"Think Again, Mackellar."

"Think once more, Mackellar," he replied; "and you will see they fit the fact. It is your own subterfuge that is unpardonable. Deny (if you can) that you designed this money to avert my orders with, and I will ask your pardon freely. If you cannot, you must have the resolution to hear your conduct go by its own name."

"If you think I had any design but to save you—" I began.

"Oh, my old friend," said he, "you know very well what I think! Here is my hand to you with all my heart; but of money, not one rap."

Defeated upon this side, I went straight to my room, wrote a letter, ran with it to the harbor, for I knew a ship was on the point of sailing, and came to the master's door a little before dusk. Entering without the form of any knock, I found him sitting with his Indian at a simple meal of maize porridge with some milk. The house within was clean and poor; only a few books upon a shelf distinguished it, and (in one corner) Secundra's little bench.

"Mr. Bally," said I, I have near five hundred pounds laid by in Scotland, the economies of a hard life. A letter goes by you ship to have it lifted: have so much patience till the return ship comes in, and it is all yours, upon the same condition you offered to my lord this morning."

He rose from the table, came forward, took me by the shoulders, and looked me in the face, smiling.

"And yet you are very fond of money!" said he. "And yet you love money beyond all things else, except my brother!"

Fears Old Age.

"I fear old age and poverty," said I, "which is another matter."

"I will never quarrel for a name. Call it so!" he replied. "Ah, Mackellar, Mackellar, if this were done from any love to me, how gladly would I close upon your offer!"

"And yet," I eagerly answered, "I say it to my shame, but I cannot see you in this poor place without compunction. It is not my single thought, nor my first; and yet it's there! I would gladly see you delivered. I do not offer it in love, and far from that: but as God judges me—and I wonder at it too!—quite without enmity."

(To be continued.)

Boys' and Girls' Farm Club Work

Potato clubs were organized through the extension service last year with 119 boys and girls enrolled and 79 reporting. These club members raised a crop valued at $4298 and made a profit of $3659.98.

McMillin, Wash., has every boy and girl over ten years of age signed up in boys' and girls' club work for the year 1923.

William Bischoff of Lind has offered to give 20 settings of White Wyandotte eggs to poultry club members in his neighborhood. These eggs come from a good flock of chickens and are given on the condition that each boy will exhibit either one cockerel or one pullet at the county fair next season. Mr. Bischoff has also offered a $5.00 prize for the best cockerel and best pullet raised from his eggs and shown at the fair.

And the Angels Drive Taxis.

Little Willie had been hearing his father boast to his friends of his new car and its ability to take the steepest hills on high. At the Sunday supper table he suddenly astonished the company by demanding:

"Dad, does the Lord Almighty own a car, too?"

"Great Scott, no, my son. Whatever put that idea into your head?"

"Well, at Sunday school we had a hymn that went, 'If I love Him, when I die, He will take me home on High!'"

NORTHWEST NEWS

Road Building in Northwest.

During the year 1922 the forest service, United States department of agriculture, made allotments of $448,308 for the construction of 664.19 miles of roads in the North Pacific district, comprising the states of Washington and Oregon, according to a report just issued at the district forestry office.

The report shows that during the year $43,648 was allotted for road maintenance, $158,732 for trail construction and $59,674 for trail maintenance in the district. Figures just received from Washington, D. C., show that during 1921 the forest service constructed 724 miles of minor roads at a cost of $540,868 and 2959 miles of trails at a cost of $519,429.

Students Pay Own Way.

According to reports received at Spokane from statistics compiled from questionnaires issued to 1374 men, 84 per cent of the male students at Washington State college are earning all or part of their expenses. Of this number, 74 per cent are paying their way through college with funds earned during the summers. Sixteen per cent of the men enrolled are being put through school by money that they did not earn themselves. These include vocational students, whom the government is sending to school. Thirteen per cent of the men must earn their entire way through school.

Great Northern to Spend Big Sum.

Three million dollars for automatic block protection, double tracking and new phone lines will be spent by the Great Northern railroad in Washington and the Rocky mountain section this year as a part of the $12,0000,000 program outlined in the 1923 budget. This announcement was made recently by C. O. Jenks, vice president of the organization, who was in Spokane.

"Most of our work this year will be the usual maintenance work," he said. "But we will complete the block system in this state by finishing the 76 miles between Spokane and Wenatchee at a cost of $400,000.

"A new phone line is to be built from here to Seattle at a cost of $25,000, and new message phones will be installed at a cost of $35,000.

"East of Spokane in the Rocky mountain section we will spend $1,250,000 in double tracking and will equip 170 miles of road with block signals."

Farmers last year entered over 194,000 cows in cow-testing associations to determine their standing as butter-fat producers through demonstrations by agricultural extension workers, according to reports to the United States department of agriculture.

It would require approximately 3,000,000,000 men to do what is done in the United States every day, if we had no machinery or electric or steam power.

Miss Thelma Harrell, 17 years of age and a resident of Savannah, Ga., passed a bar examination in July and is the youngest lawyer in the United States.

Some men die natural deaths, and others are elected to the vice presidency.

Must Raise Peas Free From Weevil

The necessity of Inland Empire farmers growing peas that are free from weevil, is shown in a letter recently received by the Washburn & Wilson Seed company of Moscow, Idaho, from a well-known Minneapolis seed firm.

This firm writes that it shipped a carload of Moscow peas containing weevil to a customer, after having cleaned the peas the best the could, but that as soon as it was discovered that there was weevil in the peas, the customer notified the shipper that the car could not be accepted, and the Minneapolis firm was compelled to take it back and ship another car.

In concluding, the letter to the Washburn & Wilson company, the Minneapolis firm writes:

"We are not writing this letter to complain in any way, as you are not to blame, for we knew the peas we bought from you contained weevil, as, on account of the scarcity of peas this season, we took on some containing weevil. It goes to show the stand we took originally not to buy peas with weevil was the correct stand. If the farmers in your particular section can not raise peas free from weevil, they will eventually have to stop raising peas, or else sell them at a big discount."

LIVESTOCK

More than 500 farmers and breeders raising all kinds of domestic animals answered questions sent out by the United States department of agriculture and from these replies it has been determined that these men consider pure breds 40 per cent better from a utility standpoint than common stock. They say that offspring of pure breds are worth practically 50 per cent more in sale value than the offspring of grades and scrubs. Also, pure breds were found in nearly all cases to be more readily salable.

One way to catch coyotes is to place traps for them on sheep driveways just after the flocks are started down from the summer ranges. Almost immediately the coyotes that follow sheep bands are caught. One of the inspectors of the biological survey, United States department of agriculture, recently made a catch of ten coyotes in seven days in this way.

Potatoes are considered the most valuable of any of the root crops for hog feed, and if a kettle is available to cook them many spuds that would ordinarily go to waste can be turned into good feed at a small cost. The low protein content of potatoes makes it advisable to feed them in connection with feeds that are relatively high in protein content. When so fed, from 350 to 450 pounds of cooked potatoes have a feeding value equal to about 100 pounds of corn, while from 500 to 600 pounds of raw potatoes are required to equal 100 pounds of corn. Raw potatoes may cause scouring.

Records Wanted.

There is a great need for phonograph records for the veterans' hospital at Steilacoom, the American legion auxiliary members at Seattle have been informed.

Farmers Overlook Chance By Not Raising Capons

By Jay Todd, Queen City Hatchery, Seattle.

Poultry people of the northwest have been overlooking one of their best bets in that they have neglected their opportunity to make a little extra money from capons.

During the last two or three years there has been a very decided increase in the demand for capons until this year it may be truthfully stated that a real market has been established. Capons sold at as high a price as turkeys and there was nothing like sufficient number to meet the demand.

A capon will attain twice the usual size of the ordinary bird. Those who raise them claim that the consumption of food is less. They should be kept until about 10 to 12 months of age, at which time they should weigh from 12 to 14 pounds. If those engaged in the poultry industry in a small way would buy the heavy breeds as R. I. Reds and Barred Rocks, and caponize their cockerels, we believe they would be much more profitable than White Leghorns. In the first place the White Leghorns during the early part of the season sell for only about 10c to 15c per pound and weigh on the average about 5 lbs., while the Reds and Rocks should average at least 6 lbs. and very seldom sell for less than 25c, making a difference of over $1.00 in the carcass. This would be equivalent to 5 dozen eggs laid in the summer time. In addition, the Red and Rock cockerels could be either sold as broilers, at which time they would bring pretty nearly twice as much as the leghorn cockerel of the same age, or they might be caponized and an additional $1.00 or $1.50 profit made on each one of them.

Of course there would be some labor attached to taking care of them, but they are less trouble than hens, as they do not need anything like as careful attention and consume much less food than the ordinary cockerel.

Capons also make excellent mothers for broods of small chicks. A capon will take care of from 25 to 40 baby chickens during the late spring and summer months. The Red and Rock hens lay practically as large a number of eggs as the White Leghorn. The Reds particularly are more apt to be of standard size. Many of the Barred Rocks lay rather small eggs. Those who have been watching the recent egg laying contests will have observed that some of the very highest egg records made in the last two or three years have been made by Rocks. Reds can be made to lay equally as well. The advantage in extra weight, standard size eggs and possibility of profit from caponizing the young cockerels make the heavy breeds more desirable for small flocks than Leghorns.

Every state in the Union has its own individual star in Old Glory, and its place in the field of blue is fixed by law and executive order. Washington's star is the second in the sixth row.

Spokane is an Indian name meaning "Children of the Sun"—hence "Sunny Old Spokane."

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER II.
Nerve.

Edwin Stanbury and Vera Harper were in deep consultation when Detective Hagerty was announced. The next moment he rushed breathlessly into the room.

"Speed' Stanbury got away from us!" Hagerty gasped. "There's no telling what he'll do now because the papers are full of the fact that your missing cashier is headed for South America."

"The deuce!" Edwin ejaculated, "what—"

"And," interrupted the detective, "as Jim Sprague is the only man who can aid 'Speed,' it's dollars to doughnuts that 'Speed' will be looking for him on the 'New York,' the only boat sailing this week."

"Post men along the docks!" Stanbury instructed, "post some around 'Speed's' home, and also watch the house of Lucy Durant. He must not get away!" Hagerty waited no longer. He rushed from the room to carry out his orders.

Meanwhile, "Speed" Stanbury was wondering how he could enter the apartment of Lucy without being taken by the detectives. With the greatest difficulty he had succeeded in climbing from the chimney, and even then was forced to use strategy to elude the men who had pursued him to the roof of the building. The chase had taken him to the East River and two different tug boats had aided his escape. He had doubled back successfully and was now ready to present himself to the girl he loved.

But the question before him now was how he could enter Lucy's home. Keeping well out of sight, he managed to make his way to the back of the building, where he again resorted to the fire-escape. Arriving on the roof, he sought another fire-escape and was soon pounding on Lucy's window. After an affectionate greeting and many explanations, the girl drew his attention to some headlines in the paper. "Speed" read:

BANK EXAMINERS FIND SHORTAGE

Cashier Missing, Believed to Have Fled to South America.

Edwin Stanbury, Manager for J. J. Stanbury, His Father, Accuses Sprague, Absent Official, of Defalcation.

"Jim Sprague missing!" "Speed" exclaimed. "The only man in the world who can help me prove an alibi! Lucy, we've got to get Jim Sprague! Listen—the 'New York' sails this afternoon. Get tickets for three—yourself, me and my valet. I'll meet you aboard somehow. They've probably plastered the town with detectives to pick me up."

True to her word, Lucy Durant secured passage—but only for herself and Gaston. "Speed" could bunk with the Frenchman after he succeeded in getting aboard. His two allies were at that moment on the promenade deck, searching the wharf with their eyes, anxiously trustily that "Speed" would succeed in eluding his enemies.

"Oh, Gaston, he's not here," the girl said, "something must have happened to him."

"Yes, mademoiselle, but I do not worry for him," Gaston assured. "I worry for anyone who tries to stop him."

At that moment, Edwin Stanbury and Vera Harper were coming up the gangway. Hagerty suddenly dashed out of the crowd and waved to Edwin.

"Everything's O. K.," he shouted. "He's not aboard—must have run afoul of one of my men some place."

But Hagerty was not entirely right. For at precisely the same time "Speed" Stanbury was on the shed of the wharf waiting for the giant steamship to pull out so that he could swing out on it unobserved. Soon the blowing of many whistles announced that the vessel was to sail. "Speed" measured the distance, took a secure hold on a hoisting rope and swung out over the ship. In the excitement, his feat was only noticed by two people—Lucy and Gaston. Both of them ran to the stern of the ship where young Stanbury was keeping well under cover.

"It's better, perhaps, that I couldn't secure accommodations for you, as Edwin and Vera are aboard," Lucy announced, after a fond embrace. "I think the best plan would be for you to hide in a lifeboat on the upper deck. Gaston and I will keep you supplied with food—and we'll stick close to our cabins in the daytime."

"You're a darling, Lucy," "Speed" smiled at the seriousness of her plans. "That'll suit me fine. I guess now is a good time for me to pick out the hiding place."

After "Speed" had disappeared into the life boat and Gaston had lashed down the tarpaulin, Lucy instructed the young Frenchman as to the times when both were to bring food. To avoid suspicion, they were to visit the fugitive alternately and to keep well out of sight of Edwin Stanbury and Vera Harper.

But Vera was the most suspicious woman alive—and that's saying something! Edwin could not convince her that "Speed" had surely been left behind. Hagerty had also taken passage, under Stanbury's instructions, and he, too, was on the lookout for anything that would point to "Speed's" presence on board.

"I could swear that I saw Lucy Durant disappear into the port passageway on the boat deck," Vera informed Edwin one day.

"Oh, that's all bosh, old dear," he expostulated. "This trip is getting on your nerves, that's all." But Vera was unconvinced.

As for "Speed," all had gone well—far beyond expectations. His food had been forthcoming at the proper times, and Lucy's visits were golden moments to him. His two allies had been caution personified. Any number of times Lucy got out of sight just as chance encounter with "Speed's" enemies semed imminent.

But the day the "New York" was to dock at the southern port something happened. The wife Hagerty urged on by Vera, stationed himself on the upper deck. A grin of satisfaction passed over his wolf-like face at something he had witnessed. Waiting a moment to assure himself that he had seen right, he hurried below where he found Edwin and Vera.

"Well, I've found our friend," he calmly announced.

"Who!" demanded Edwin, scarely believing his ears.

"Our friend," repeated Hagerty, "Speed.' He's in a life boat up on the boat deck—a stowaway. Now we've got every reason in the world to put him in irons and have him shipped back to the States."

"Fine!" exclaimed Edwin. "I think the first move will be to pay a little call on the captain. We must get him on our side of the argument before we take any real action."

The next move was a hurried consultation with the vessel's chief officer. Calling his chief bos'n and a number of deckhands, the old skipper followed Edwin and Hagerty above to the boat deck.

Fortunately, "Speed" Stanbury had decided to take a few breaths of the fresh morning air at the time his enemies were approaching. Seeing Hagerty suddenly appear at the top of a ladder, he thrust back the tarpaulin and leaped from the small boat to the ship's deck. Then he turned tail and fled forward to the forecastle.

In a few moments, the entire ship was thrown into the throes of excitement. The passengers grouped themselves in convenient places and watched the man-hunt with intense interest, wondering all the while what it was all about. Lucy and Gaston had rushed to the bridge, where they could watch young Stanbury without being observed.

When "Speed" reached the forecastle of the vessel, he hardly knew which way to turn. Stumbling over the anchor chain he reached the rail and looked about for someplace of refuge. There was none—he was trapped. With the murmurings of a mob the deck force pressed nearer, urged on by Hagerty. "Speed" edged along the port side, decided to climb the rattlings which led to the forward masthead. In this way, he figured, he could delay things at any rate. But the seadogs all clambered up the ladder after him. Then, realizing that the ship was not far from shore, "Speed" decided to take a chance. He made a beautiful dive from the mast to the turquoise colored sea. But a strange cry was heard echoing from the passengers aboard the ship:

"A shark! A shark!"

(To be continued.)

A Bar to Bigamy.

"Boys," interrogated the Sunday school teacher, "can any of you quote a verse from Scripture to prove that it is wrong for a man to have two wives?"

"Well, Thomas," encouraged the teacher as a bright boy raised his hand.

Thomas stood proudly up.

"'No man can serve two masters'," he quoted.—Orchard and Farm.

NEW POWDER HELPS FARMER

Prof. Dehn of University Invents Explosive Which Costs Half Present Price.

WANTS STATE TO MAKE IT

Estimates Savings to Farmers at Half Million a Year—Safe and Easy to Handle.

Farmers of this state will reap the benefits of a new and inexpensive explosive invented on the campus of the University of Washington by Prof. William M. Dehn of the department of chemistry, if a bill which will be introduced in the state legislature is adopted.

This powder is manufactured from sawdust and ammonium nitrate, and can be retailed for 5 1-2 or 6 cents a pound, considerably less than half of the price of other powders in use. It can be employed successfully in clearing of land and stump blasting, and in the construction of roads.

In the bill which the legislators will be asked to consider, Dr. Dehn is offering to turn the manufacture of the explosive over to the state, if $100,000 is appropriated for the construction of state-owned factories at strategic points throughout the state. Farmers would be able to purchase the product from the factories without paying the high cost of transportation by rail. Each factory, according to Dr. Dehn, would cost less than $10,000.

The plan suggested would return to the treasury of the state the $100,000 initial expenditure in three years, by charging a half cent a pound for every pound manufactured. This item would be included in the 5 1-2 or 6 cent manufacturing expense. The explosive would be sold to farmers at cost.

The powder which Dr. Dehn has invented has several advantages over other explosives, he says. It is not affected by low temperatures, and so does not require thawing. It does not give off fumes of nitroglycerine which causes headaches with men working with dynamite. It is exceedingly safe to handle, being less combustible than pure sawdust. No mechanical jar will explode it. It can be set off only by regulation caps. If the 15,000 acres of land cleared each year in this state were cleared solely by the use of explosives, this powder under a system of state manufacture and sale at cost would save the farmers of Washington more than $500,000 a year, Dr. Dehn estimates.

TIMELY HINTS TO FARMERS

By EXTENSION SERVICE SPECIALISTS

Agriculture.

Sort out the imperfect combs now and replace with frames containing full sheets of foundation.

Clothing.

If you are selecting your hat, consider the purpose for which it is to be worn.

Dairy

Clip the hair off the udder and flanks of the cow and wipe the udder with a wet cloth before milking.

Farm Crops.

Select with care the seed of the different kinds of garden crops which will be needed for the garden. Get plenty of variety.

Farm Management.

It is not too late to begin your farm account for the year.

Home Management.

Schedule your time for each day's work so you will have more time to do some of the things you want to do.

Horticulture.

If you are going to use a commercial fertilizer, find out now where it may be obtained and price.

Livestock.

Pregnant gilts should be furnished a good mineral mixture to insure size, vigor and bone in the pigs.

Plant Pathology.

Clean the seed wheat and oats for it helps to prevent saut.

Poultry.

If the kale for the chickens is frozen, thaw it out in cold water.

Some Service.

"Now, suh," said the colored bellhop at the Southern inn, "when you-all wants t' be called in th' mohnin', jes press de button at de head ob yonah bed an' we'll come up an' call you!"—Orchard and Farm.

CUT IT OUT SERIES

By J. NELSON BARRY.

The snow outside the little cabin was piling in drifts and the young man stormbound had watched it until he was weary. The desolate scene outside did not seem more dreary than the prospect of having to remain indoors with nothing to do. The cheerfulness of the old miner irritated him. Finally he raved and complained at the irksomeness of it all. The old miner removed his pipe and pointed to the state map on the wall. "All them names is stories." Then the old man chuckled. "Yer don't know ther langidge o'ther name Nagrom or Retsil or Lebam." The young man admitted his ignorance of the meaning. "Well then jess spell them names backward and see eff yer doant find a gufferner among them."

The young man did find that old map filled with stories, and many old appearing names were found to be opposites, Hatton being composed of part of the name of the Postmaster Hackett and Sutton, father of the state senator. Lisabeula is a combination of Elisa and Beulah. Mrs. Louisa Ann Connor is hardly recognized in the French sounding name of Lanco. Just as Mabel Anderson is disguised in Mabana, Mrs. Samuel Hill was named Mary, as was also her mother and her daughter, so Klickitat county has the town of Maryhill. One can find Buckley, Coulter and David in Bucoda, and Rhodes, Appell and Ernest Company in Racoo in King Co., as well as the initials of five mines in Covada. Another such composite name is Arietta.

One would not expect to find any reference to Robinson Crusoe in the map of Washington, but some employe of the Hudson's Bay company found that the name of the Sandwich Islander employed at the post was difficult to pronounce so he called him Friday after the devoted servant of Robinson Crusoe, and from this incident Friday harbor took its name.

The pathetic poem of Evangeline suggested the name Arcadia in Mason county, while the inspiring music of the old but still popular tune of Dixie originated that name in Walla Walla county. There is a memory of Barnum's circus in Jumbo mountain in Snohomish county, while the lowly, but useful swine are forever commemorated by the joke of the railroad builders who have left us a flavor of their menu in Bacon, Grant county.

The soft breezes of flowery Honolulu are recalled in Ahola, the greeting used in those romantic isles. Bear-lake, Bear river, Deer flat, Loon lake and Curlew are good names with a meaning, which like Buffalo in New York will survive after the game has been exterminated. Artesian, Bluestem, Appledale and Alfalfa tell their story. Bonita, the Spanish word for pretty or graceful, is a relic of the war in the Philippines. A steamboat landing on the Pend Oreille river gave the appropriate name for the town, Newport, which accomplished a feat that most towns could never do, and that is move from one state to another. Mount Si in King county has a name which can always be used to start new comers guessing as to its meaning, it having taken its name from Josiah Merrit. Cape Labelle creek has an apparent geographic mixture, but on the pronunciation of the old Indian woman Kate La Belle who lived there. A similar memory of the difficulty the Indians had in pronouncing French is found in Pe-Eli in Lewis county, that being originally Pierre, the name of a half breed. Pinnock mountain in Okanogan county would naturally suggest the famous fowl, but again the difficulty of the noble red man with the foreign language was the cause. John Picard, the halfbreed who discovered a mine on that mountain, appears to have had his own method of pronouncing his French name. The new ideas inculcated by the early missionaries have left in Alpowa a new meaning from its original "spring creek," the effect of earnest exhortations having resulted in the notion that Alpowa means "Sundays go to church," which indicates that the Indians did remember something that was taught.

When Lewis and Clark came to this country they found in one Indian village a pet woodchuck, and that little incident will be forever remembered by the Indian name for that animal Moonax in Klickitat county.

In Extenuation.

"So your nephew has been sent to the legislature?"

"Yes," replied Farmer Fumblegate. "But I hope you'll believe me when I tell you that all the time he was living with us he never stole anything."—Country Gentleman.

Resignation.

"Dorothy," cried mother, "if you aren't good you will have to leave. Think of that!"

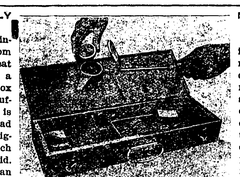
"Oh, well," answered Dorothy, "I've been to the circus and the chautauqua already. I can't expect to go everywhere."

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

SOLDERING IRON CHEMICALLY HEATED.

A small soldering iron just introduced into this country from Germany is supplied with heat evolved from the reaction of a mixture of chemicals. A tin box holding a measured quantity sufficient to last 10 minutes, is placed in a cavity cast in the head of the iron, and the mixture is ignited by means of a special match inserted through a hole in the lid. The resulting reaction produces an intense white glow, sufficient to heat the iron ready for use in seven seconds. It is not expected to replace the iron and torch used by mechanics, but to be a handy device for workmen who have to make quick repairs. The idea is on the order of the thermit-welding process, although it is understood to have an improvement in that the proportion of chemicals to produce a given amount of heat has been determined. It is planned to extend the application of this principle to many other interest-ing purposes.



This Soldering Iron is supplied with heat from the reaction of chemicals.

FREE MEDICAL ADVICE SENT TO SHIPS BY RADIO

Free medical service by radio for ships at sea has recently been established by the United Fruit company to assist vessels that do not carry surgeons. The service is also at the disposal of ships carrying medical officers, who may, in the case of an obscure malady or in other emergencies, desire the benefit of consultation with other physicians.

Left: Electrical Incubator with its upper half closed, showing the triangular contact breaker that acts as a thermostat to maintain a uniform temperature of 103 de grees. Right: Upper half with its cover down, showing the heating lamp, and the bright-metal concave reflector with cotton-batting insulation.

NEW METHOD OF CLEANING GASES AND VAPORS

An improved process for removing dust, tar, and other foreign matter from gases employs a filter composed of a hollow wrought-iron ring of rectangular cross section subdivided by partitions into several compartments. Inside this, and concentric with it, is a rapidly rotating ventilator wheel, having clearance between it and the filter proper. The compartments of the filter are fitted with either organic or inorganic materials, depending upon the kind of substance to be separated. On the upper lid is a sprinkler.

ELECTRICAL INCUBATOR VERY SIMPLE IN CONSTRUCTION.

A new electrical incubator, wired to connect to any lamp socket, is in the form of a box, 16 1-2 inches square, 12 inches high, and weighing empty only 22 pounds. It has a capacity of 50 eggs, which are placed upon a layer of sand in the bottom of the lower half of the box.

The upper half, hinged to the lower, has mounted inside it a large, bright-metal concave reflector, insulated with cotton batting, and facing the lower half of the box when closed. A thin metal plate covers the upper half of the box, and has on the side facing the reflector a socket for an electric lamp, and wired to this on the other side, a novel contact breaker, triangular in shape, the point of which curls up when overheated, cutting off the circuit, so that the incubator never exceeds the proper hatching temperature.

Moisture in Air, Not More Heat, Need in Heating

Why won't a slice of bread satisfy your thirst?

That sounds like a fool question, and it is, but many people spend the winter looking into the innocent face of a stove, or the cavernous mouth of a furnace, and feel like saying: "Here I feed you fuel until I'm broke, why won't you keep me warm?" And, if the stove or furnace could talk, it would truthfully answer: "The air I heat doesn't need more heat. It is thirsty and needs more water. More heat only intensifies that thirst."

Folks, strange as it may seem, that is exactly what has been discovered to be wrong with most of our winter heating systems. We increase the temperature of the air, 20, 40 and oftimes, 60 and 80 degrees, without any regard for its moisture content. And then trouble begins. With a room temperature of 70, 75 and 80 degrees, we are often uncomfortable. Our skin feels cold. We know we ought to be warm at such temperature, but actually we are cold. We get cold, sneeze, cough and get chapped hands and cracked lips. You are cold, but the air in that room is warm, often too warm. Air always contains water. Outdoors air, at 20 degrees, will contain ordinarily, twice the amount of water it would contain at 70 degrees. At 40 degrees it will contain twice as much as at 20, and so on up. Each 20 degree increase will be normally accompanied by a doubling of the moisture content.

If you locked your horse up with lots of fine oats to eat, and no water to drink, the horse would eat a while, but not long, but pretty soon he would start hunting water. Eventually, a matter of hours, and he would be maddened to the point of kicking away the side of the barn, and if you were to come in then he would probably attack you in his quest forwater.

You wouldn't blame the horse, would you?

Again. You shut yourself up in a house in the winter along with a nice family, furniture, and all the rest of the space is filled with air. Then you heat the air, which increases its need of moisture (makes it thirsty), and what does the air do?

Just exactly like the horse, only more systematically, more relentlessly, more fearsomely, it attacks the walls, floors, furniture, piano, etc., and sucks the moisture from them. And you, an organism of 90 per cent water! It most certainly attacks you! You feel cold. Your lips, throat, nostrils get dry! Because the dry air is evaporating moisture from you, and with that moisture goes your vitality and resistance to disease.

Here are a few ways to combat this situation:

Stove Heated Homes—Keep pans, with a large surface of water, uncovered, on all stoves, constantly. The tea kettle helps, but it is nowhere near enough.

For Hot Water and Steam Plants—Keep pans of water, as above, on radiators. It is a good idea to lay towels or clothes along the radiators with one end in the water pan. The towels act as wicks and increase evaporation.

For Hot Air Furnaces—It is an easy matter to set or suspend pans or pails of water in the registers so that the water is heated and evaporated into the air. As a matter of course, always keep the water pan in the furnace filled, but it won't do it all. An automatic device, installed in the top of hot air furnaces and feed-water as needed, is on the market, and is a convenience. Where there is sickness such as tonsilitis, pneumonia, bad cold, flu, etc., the sickroom may be intensively humidified by placing a collapsible clothes-rack, covered with wet cloths, near the register of stove. If no clothes racks is handy, old chairs covered with wet sheets serves the purpose.

As to the amount of moisture. For each room, each day, every 20 degrees increase in temperature should be accompanied by the evaporation of at least one, and preferably, two quarts of water. The 40 and 60 degree increases usual in this climate should also up close to one gallon, per room, per day.

To secure this amount of evaporation is not easy, but it is worth while. You will feel better, be more comfortable, and prevent many colds and much winter sickness. And here is some really good news, you will burn less fuel because you will keep the house temperature 5 to 10 degrees lower than before, and still feel warmer. As one authority tersely puts it: "If you are not comfortable at 68 degrees, the air doesn't need more heat, it needs more moisture."

Folks, let's burn up more water in our homes. It is cheap medicine and cheap fuel.

Not Unlikely.

Weary Willie—I may be poor now, but when I was young I had me own carriage.

Leary Louise—Yep, and yer maw pushed it.

Before the war a Russian ruble was worth fifty-one and one-half cents. At the present time an American dollar is equivalent to 7,000,000 paper rubles.

In many small towns there is an ancient man whose only claim to distinction is that once upon a time he shot a pelican.

Make one resolve for the new year—Equip the farm home as well as the farmstead.

WASHINGTON GROWS FIFTH OF APPLES

State Production Less, National Greater, Yet State Maintains Good Ration of Total.

The state of Washington produced nearly one-fifth of the commercial apple crop in the United States during 1922, according to estimates of G. S. Ray, agricultural statistician of the department of agriculture in Spokane. The crop in this state is more than 10 per cent less than during 1921, although the total crop in the United States increased more than 60 per cent in 1922 over 1921.

The state produced 21,312,000 boxes of apples in 1922 with 24,900,000 boxes in 1921, and 17,203,000 boxes in 1920, while the country produced 11,716,000 boxes in 1922, with 64,670,000 boxes in 1921, and 93,270,000 boxes in 1920.

Mr. Ray's report shows that the 1922 potato crop of Washington increased from 8,100,000 bushels in 1921 to 9,425,000 bushels in 1922, and that the yield per acre increased from 135 bushels to 145 bushels. The corn yield also increased, the 1921 yield having been 2,560,000 bushels in the state and the 1922 yield 2,747,000 bushels, while the per acre yield increased from 40 to 41 bushels.

The price of potatoes did not keep pace with the increased production, the report shows. In 1921 the price average was 99 cents and only 45 cents in 1922. Corn increased from 36 cents to $1.05 a bushel.

Chicago Expert Coming to Lecture on Children

Many organizations are cooperating by helping to provide the funds for bringing Dr. Caroline Hedger, Chicago child specialist, to Spokane county in February. Women's clubs, dairy companies, Parent-Teachers' associations, Anti-Tuberculosis leagues, Red Cross and fraternal organizations are interested and helping in this work.

Lectures will be held in Spokane and at Deer Park, Fairfield, Cheney, and at some place, in the Spokane Valley to be decided later.

To Lecture on Children.

Dr. Hedger will lecture on problems in the care and training of children of pre-school age and of school children with attention to the adolescent period of the child's life. Her keen wit and sound judgment make her a very interesting speaker. She has a wonderful message for both fathers and mothers.

Dr. Hedger has given lectures in many parts of the United States and spends half of her time in this way, giving help to thousands of parents in all parts of the country.

IDAHO

Idaho should prepare for the entry of blister rust into the white pine stands in this state, according to Dr. Henry Schmitz of the faculty of the University of Idaho school of forestry. He said proper care would delay its entry from one to several years, and that each year would be worth thousands of dollars to the state.

One hundred students are enrolled in the non-resident instruction courses at the university, according to Miss Bernice McCoy, former state superintendent, who is the secretary in charge of this work.

E. S. Isaacs, of Walla Walla and Tacoma, and associates are engaged in renewing options on 24,000 acres of timber in the Craig mountain district. This information became known today. The original options expired on January 1.

Benewah county people are much interested in the appropriation bill in the legislature calling for $11,320 for Heyburn park. This park is in Benewah county and is visited by many people. It can be made one of the beauty spots of northern Idaho.

The Idaho State Seed show recently in Burley was a pronounced success, according to word received here from several University of Idaho agricultural experts who attended.

The Pan-Handle Poultry show, the big event of the year among northern Idaho poultry raisers, will be held at Moscow, January 30-31 and February 1. Many exhibitors from the Palouse country of Washington are expected to be present with their birds.

The $40,000,000 American Falls reservoir project carried by a vote of six to one at the election last week. The plan brings 250,000 acres under ditch.

Snowbound in the high mountains of Idaho county, and virtually without mail service throughout the long winter, eighten men employed by the Marshall Lake district, keep in touch with the outside world by means of radio. A receiving set has been installed at the camp, and every night the men listen to news reports, concerts and speeches caught from the air.

The annual meeting of the Idaho Woll Growers' association was held in Boise, January 22 and 23. Sheep men from all parts of the state were in attendance, partly due to the fact that this meeting falls immediately before the session of the National Wool Growers' association at Spokane.

Among the new subjects being added from time to time by the University of Idaho department of economics, will be that of income tax accounting, which will be listed among the regular curricula courses in economics after February 1. The announcement was made by Professor H. C. Dale, head of the department.

Word comes from the ridges in the southern part of Latah county that farming is in progress, with teams and tractors and that the ground is in excellent condition to work. Considerable plowing was done in the Moscow district late in December.

Establishment of a soap factory in Priest River is contemplated by the Spokane Soap company. The factory will employ 40 girls and 10 men to start.

Yes, How Do You?

An American in dear old London was bragging about his auto. He ended his eulogy by declaring:

"It runs so smoothly you can't feel it, so quietly you can't hear it, it has such perfect ignition you can't smell it, and as for speed—boy, you can't see it!"

"But, my word, old dear," interrupted the Briton, anxiously, "how do you know the belly thing is there?"

Wasting Energy.

Herbert had spent the first four years of his life in an apartment house where pets were unknown, but he had had experience with motor cars. So when he was visiting his aunt

Harness Oiling

The harness oiling season has arrived and our Dipping Vat is now working. We are prepared to turn out this work at the old price of $1.00 a set.

Our method consists of dipping the harness and letting the oil soak in where it is needed. Not merely getting the outside oiled, but completely saturating all parts, the work being done in a steam heated room where the best results are obtained.

If you want to do the job yourself, we will sell you the harness oil for $1.00 a gallon, put up either in gallon cans or in bulk.

Don't use Petroleum Oil for Harness Oiling. It does more harm than good. We use a Neatsfoot Compound Harness Oil especially adapted for the work, and buy it in sufficient quantities to enable us to sell it at the low price of $1.00 a gallon.

CASEBOLT, The Harness Man

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possessions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

1,000,000 GERMAN MARKS FOR $50 IN U. S. MONEY

It took just $50 in United States money today (January 17) to become a maillionaire in German marks. Theoretically the American dollar could buy 20,000 marks in the foreign exchange market, but practically little or no business was transacted in less than 1,000,000-mark lots. At pre-war prices 20,000 German marks would have been worth $4760.

The above quotation for the mark, which was technically given as .005 cents, represents an extreme low record and compares with .01395 cents on the first of the year; 08 cents last September, and last year's high of .6025 cents. The pre-war price of the mark was 23.9 cents each.

Bankers report that little new German commercial business is being transacted in marks, German exporting and importing firms having adopted foreign currencies as a medium of exchange months ago. Sterling, Swiss francs and the Scandinavian exchanges are used almost entirely, although considerable German business was done with French francs before the reparations crisis became acute. Transactions in marks now largely represent old obligations and maturities payable in that currency. Speculation has been very light in recent weeks.

Most of the banks decline to do business in less than 1,000,000-share lots and some even refuse orders to buy or sell that amount because the business is unprofitable.

International bankers declare it is a waste of energy to attempt to predict what will happen to the mark. Measures which would have helped to stabalize the mark months ago, they said, would not be effective now, while coerrective remedies that could be applied now might be useless in two or three months from now if the depreciation is continued. Until the German government takes some action to balance its budget and stop the inflation of marks, circulation of which has now passed the trillion mark, international financiers assert that prophecies are valueless.

School Notes

Wilma Casebolt

A basketball game is scheduled with Troy on the local floor next Friday evening, February 2, when a double-header will be played. The American Legion players of Troy will compete with the local town team and their high school team will play the local high school boys.

A basket social will be given at the school building tomorrow (Saturday) evening at 7:30 for the benefit of the athletic association. Every lady from the walking age to the age of 100 is requested to bring well-filled baskets for the occasion. A program consisting of a short one-act play and both vocal and instrumental music will be furnished by the high school students.

Christian Endeavor Notes

(By Robert Parks)

The Junior Endeavor was led by Rev. Pendleton, the topic being "Foundations."

The Senior Endeavor was led by Thelma Woodward, the topic being "Evangelistic Missions at Home and Abroad." A very good talk was given by the leader. The lives of different foreign missionaries were given by several of the members, which was of much interest to all. Special music was furnished by Helen and Wilma Casebolt.

A Bible contest was held which was won by Ethel Nelson. The girls were much better at finding verses than the boys.

Card Party a Success

The card party given by the Pythian Sisters last Friday night proved to be one of the most pleasant affairs of the kind given this season. A good crowd was in attendance and a splendid time is reported. D. L. Bressler won the men's honors and Mrs. A. E. Elver the ladies' honors of the evening. After the card party refreshments were served.

Don't feel embarrased, sister, when your little brother "spills the beans." A hungry matrimonial fish rises quickly to the bait.

McCormick-Deering
Primrose Cream Separator

Service Day

By special arrangement with the International Harvester Company, a factory expert on Primrose Cream Separators will be at our store on

Wednesday, Jan. 31

This man will repair, adjust and instruct in the use of Primrose Cream Separators. If your machine needs attention bring it to us on that day and have it placed in first-class order by a factory man.

No Charge for This Service

There is no charge for this service to Primrose owners. Repairs used will be charged at the regular price. If you contemplate investing in a new cream separator, you will want to hear what the users of Primrose Cream Separators say about their machines. Come in and see the new McCormick-Deering Primrose on our display floor. *Remember the date—Wednesday, January 31.*

The Coyote Club

Again the Coyote club has been in eruption—eruption is the word—for they always have to have a "jangle" before they sally forth, to see who is to be captain for the day—and about other unnecessary things. It seems that last Sunday morning a few of the faithful gathered at Fat's place and decided to go after the wily animals. They finally got started after trying to depose Captain Cody Radey and put Corporal Fat Sampson in his place, which they didn't succeed in doing, but the latter came very near being reduced to the ranks for "insubordination" in office—whatever that means.

After reaching the jungles of the canyons a few miles south of town much excitement was occasioned by the sighting of a coyote or two and the bombardment began. After the smoke of battle had cleared away it was found that Dick Van had actually killed one and it is said that Carl Osmundson, being unable to kill one with his rifle, had chased one of the animals into the creek and held it there until it was completely drowned. It is understood that Carl is to be courtmartialed for cruelty to animals, or something like that.

Capt. Cody (alias Buffalo Bill) says he is figuring on making a number of changes in the club. He says that if he doesn't he won't be able to get any coyotes himself as the rest of the bunch shoot so much that he doesn't get a chance and that just as soon as he finds one sitting some of the bunch shoots and scares it before he gets a chance. Besides, his coke and gas gun hasn't been working very good so far this winter owing to the low quality of gasoline.

Bridal Shower

A surprise shower was given at the home of Mrs. Dale Lanphier on Wednesday afternoon, January 24, in honor of Mrs. Lanphiers' sister, Miss Rosalia Hasfurther, who is soon to become the bride of Lawrence Olson. Some 20 friends and relatives were present and the afternoon was spent informally.

Little Myra Lanphier, niece of the bride-to-be, brought the gifts in in her doll buggy and upon being opened many beautiful remembrances were found, consisting of cut glass, linen and silverware.

Refreshments were served and a pleasant afternoon was spent by the ladies.

PERSONAL MENTION

G. E. Taber was a Spokane passenger Thursday morning.

A. Rach was a Uniontown passenger Friday on business.

Ray Willoughby was a Johnson passenger Saturday morning.

John Lawen was a Wednesday morning passenger for Kellogg.

J. W. Mosman was a Thursday morning passenger for Uniontown.

W. F. Jain was a Spokane passenger Tuesday on a short business trip.

Mrs. Weign Sides was a passenger for Moscow Tuesday for a short visit.

Mrs. Ben Jain was a Spokane passenger Tuesday morning for a short stay.

F. L. Wicks of Lewiston is visiting with his brother, J. H. Wicks, for a few days.

Mrs. Henry Craft and son were Colton passengers Thursday morning for a short stay.

Rev. Fr. L. C. Godschalx was a Saturday morning passenger for Uniontown for a short visit.

Mrs. Arthur Springer and children left Saturday morning for Lapwai for a visit with her parents.

Miss Florence Bielenberg returned home from Colton Friday after a visit there with her sister, Mrs. Reisenauer.

Gus Tonning returned to his home at Sandpoint Thursday morning after attending the funeral of his father, the late Jacob Tonning.

Mrs. Cecil Woods and children were Friday morning passengers for Pullman for a visit with her parents, Mr. and Mrs. J. L. Wiggins.

Esther Clark returned to school at Colton Monday morning after spending the week-end with her parents, Mr. and Mrs. Grant Clark.

Mr. and Mrs. Sam Lange and Miss Nora Hanson came over from Moscow Sunday and spent the day with Miss Hanson's parents, Mr. and Mrs. Henry Hanson.

Mrs. C. E. Vandenburg returned to her home at Troy Friday after visiting at the home of her grandmother, Mrs. Mary E. Cunningham, and with other relatives.

Mr. and Mrs. Wm. Smolt returned home from Spokane Sunday, where they had spent the past few weeks. Mr. Smolt has been incapacitated by a severe attack of sciatic rheumatism.

Lela and Weign Hawkins, W. L. Hawkins and son, Ed., left Thursday morning for their home at Bremerton, Washington, after an extended visit at the home of Mr. and Mrs. Dave Spurbeck.

Will Give Social

The members of the Seniear Endeavor society will give a basket social at the Social house on Thursday night, February 1. Everyone is invited to attend and all girls are requested to bring well-filled baskets. 30-1

After Inventory Sale

Lasting Two Weeks

At the close of our inventory we find we are overstocked in some lines and are making the following price reductions, on seasonable merchandise. Do not think it is too late to buy winter goods and that spring has come because we have had a few warm days, for we may still be shivering around in our winter clothes and wishing for spring to come after the fifteenth of March.

Blanket Specials

Follett Bros. Mercantile Co.

Dynamite Digs Quarter Mile Ditch in Split Second

The increasing use of dynamite on the farms of the Northwest for stump blasting, ditch digging and other land clearing, and for road building and other public works, is causing that article of commerce to come into prominence most favorably.

But there are people who still hold dynamite in that superstitious fear with which gasoline was greeted, and while the deadly and high-powered gasoline has been tamed and rendered a useful adjunct to society, the less dangerous dynamite is still regarded with terror because the public lacks the familiarity with it which has come with the general use of gasoline.

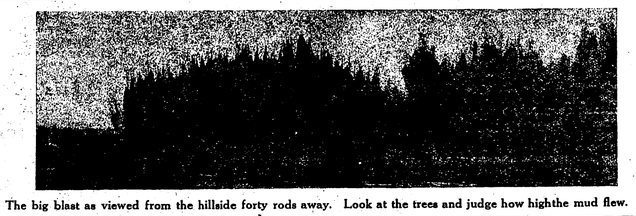
Parts of two articles of more than usual interest from a single issue of the Du Pont magazine are herewith reproduced, in order that readers may familiarize themselves with the possibilities of dynamite and the proper method for its use.

Hauling Dynamite.

Explosives should always be used with care—because they are explosive. That is reasonable and obvious. If "safety first" should ever be observed, surely it is by those who have to do with the transportation and use of a commodity whose function is to explode. Yet modern dynamite, especially of the kind ordinarily used for stumping, boulder blasting, road construction and similar classes of work, is no more dangerous than a number of other commodities in common use, and the fear of it is usually exaggerated.

Particularly in rural districts, the fear of explosives is so strong in the minds of the people that it amounts almost to superstitious horror. Say "dynamite" to some of them and their faces turn white. Exhibit a stick of 20 per cent dynamite in their presence and they beat a hasty retreat. Some people apparently believe that if you look at dynamite, an explosion is imminent; if you move it from place to place, you are flirting outrageously with Death; and if you attempt to use it, you are courting the attentions of the undertaker. It is unreasoning fear, of course.

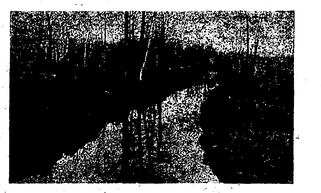
Dynamite is no longer the unstable, erratic, touch-and-go-off product that it originally was. It is at once stronger, more dependable, and less sensitive, not because the nitroglycerin used in its manufacture is one whit less explosive than Nobel's original product of sixty years ago, but because today's dynamite is more scientifically made and better adapted for use. In fact, few commercial products have been improved more during the last fifty years than has dynamite; but the improvements are changes in chemical composition of the powder and they do not show in the outward form of the cartridge. It is not yet fool-proof and never will be, but under ordinary conditions dynamite will not explode unless it is purposely set off. It is less inflammable and less likely to explode from contact with flame than the vapors of gasoline or benzine.



The big blast as viewed from the hillside forty rods away. Look at the trees and judge how highthe mud flew.

One out of every eleven people in the United States owns an automobile and while most car owners know better than to smoke while filling the tank, few of them ever think of gasoline as an explosive; it is just "the juice that keeps the old bus running." Likewise, many a farmer who would not touch a stick of dynamite will sit calmly by and watch his wife pour kerosene on the kitchen fire to make it burn quicker, or clean his clothes with gasoline beside an open lamp.

Two years ago at the Ohio State fair, the state fire marshal and the Columbus fire department staged a three-room exhibit in the interest of preventing fires. Placards in each room set forth various fire hazards and drew attention to some statistics compiled by Fire Marshal Dykeman. Printed on one card was the statement:



Who could ask for a better looking ditch than this?

"Three gallons of gasoline equals 240 pounds of dynamite. Ohio had many deaths due to 176 explosions last year. Gasoline vapor will explode from open lights, open stoves, sparks or static electricity."

Makes Stump Digging Easy.

Thousands of farmers will sweat and swear digging out stumps with pick and shovel, knowing all the while that a stick of dynamite judiciously placed and fired, will do the work more efficiently in a fraction of the time and at a fraction of the cost of the older method; and it isn't because the farmers get a thrill by using those time-honored tools either, nor because they are not keen to cut time and labor costs. They abandoned the cradle for the harvesting machine; they scrapped the flail for the threshing machine; they lighted their homes with the explosive acetylene gas; and they have become friendly with the power tractor. But when it comes to dynamite the average farmer is apt to say, "Let the other fellow try it. If he wants to fly out to the cloud banks and fuss around with a harp and a halo. Understand, I am not particularly skittish, but just think what might happen if I should accidentally drop a stick of dynamite or grab my toe while carrying it around—and a fellow might do that."

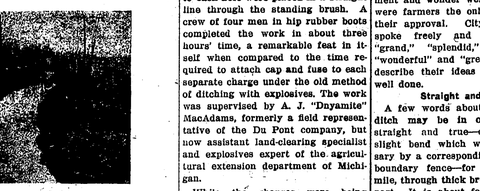
The chances are that nothing more serious would happen to the farmer than the inconvenience of picking up the fallen stick, or himself, although it is admitted that with a sufficiently violent shock an explosion might take place. Still, dynamite isn't really half so sensitive to ordinary shocks as some people imagine. If it were, explosive users would not have to buy blasting caps to set off their charges; they would simply clap their hands or yell "Shoot" and the detonation would immediately take place.

"Swamp—Boom—Ditches!"

An example of the proper use of dynamite in ditch digging is contained in the story of how dynamite dug a quarter mile ditch in a split second in the state of Michigan.

The biggest, most spectacular ditch blast ever fired in the state of Michigan, and perhaps in the whole United States, served as a fitting opening for the ten weeks' series of Land-Clearing Short Courses conducted early last summer in the upper peninsula. When E. G. Quamme, president of the Federal Land Bank of St. Paul, and honor guest of the day, touched a match to the fuse that fired the monster blast on the Charles Selewsky farm near Menominee, Michigan, he proved conclusively that the new low-freezing dynamite is the quick and economical long-desired solution of the various drainage problems that farmers have to face.

In the words of one of the six hundred or more interested spectators who gathered to view the miracle, "She sure was some shot!" Still another farmer vied with the late Elbert Hubbard in descriptive brevity by telling the whole story in just three one-syllable words: "Swamp—boom!—ditch." And that, in brief, tells the whole story, for before the air had cleared of smoke and flying mud and water, and by the time the anxious spectators were permitted to crowd close to view the result, water was racing in mill-stream fashion through a trim, straight, near-sided ditch, liberating some two hundred odd acres of swamp and flood land for agricultural purposes.



Dynamite ripped out the hardpan and this clean-cut ditch resulted.

Trial Shots Necessary.

During the morning a few trial shots were fired to test local conditions and to determine the depth at which charges should be placed for best results. Conditions were found to be ideal for dynamite ditching, the mucky nature of the partially submerged land guaranteeing the success of the "propagated blast," in which a series or string of shots are fired by the transmitted concussion from a single cap and fuse attached to a centrally located detonating charge.

Such obstacles as brush, stumps, down timber, stones, and even the old logs, long imbedded in the muck of the swamp, were easily overcome in the trial shots, and indicated that the "big shot" would readily surmount the same obstacles. Nor did the hardpan and rock-studded clay, encountered in part of the swamp, interfere with the efficiency of the dynamite, though here somewhat more of the explosive was required to insure propagation.

This practice of placing a few trial shots before the real work is commenced is highly recommended by the experts who have found that it is cheaper and better to learn by doing than to learn by guessing. No two swamps are just alike, and the depth and spacing of charges differs under different conditions. In this instance the test shots indicated that charges placed eighteen inches apart and eighteen inches deep in a single line gave best results, probably because a comparatively solid "bottom" underlying the swamp gave increased lifting power when so placed.

Three Hours to Set.

Beginning shortly after noon, the charges of a single half-pound stick to each hole were placed in a straight line through the standing brush. A crew of four men in hip rubber boots completed the work in about three hours' time, a remarkable feat in itself when compared to the time required to attach cap and fuse to each separate charge under the old method of ditching with explosives. The work was supervised by A. J. "Dynamite" MacAdams, formerly a field representative of the Du Pont company, but now assistant land-clearing specialist and explosives expert of the agricultural extension department of Michigan.

While the charges were being placed, a small temporary dam was constructed to hold back the water in another section of ditch feeding into the swamp. Then the centrally located detonating charge was placed in position. For this purpose a single stick of the new explosive was primed with an ordinary No. 6 cap attached to a length of fuse which was soaped to aid in waterproofing. Another stick was tied to the primed charge to give additional "kick," then the two sticks were placed midway between two charges in the middle of the quarter-mile-long line. Beside each of the immediately adjoining charges another stick or "bumper," as the experts call it, was placed to insure that propagation get well started. Then everything was ready.

After the impatient crowd had been "herded" back to a safe distance, and in the hushed silence as MacAdams shouted "Fire!" Mr. Quamme stepped forward to do his official duty. Scratching a match, he touched it to the split end of the fuse, then scurried away in dignified haste to a point well removed from the scene. A pause of only a minute seemed like an hour to the anxious crowd. Then a dull, heavy jarring of the ground and a muffled roar. Instantly the whole swamp seemed to rise. For a moment the air was dense smoke black with rocketing mud, dirty water, fragments of roots and broken stumps, rocks and even small trees and brush soaring to a height of 300 feet or more. Then, out the new ditch, was blown out by a second shot. The heavy head of backed-up water, released by this shot, immediately rushed through the newly made channel to remove any loose residue remaining.

Awaiting the "all clear" signal from the dynamite crew with ill-restrained impatience, the curious and enthusiastic crowd hastened down from the hillside vantage point into the swamp, ignoring mud and water that played havoc with holiday footwear, to view the result. Exclamations of amazement and wonder were the rule; nor were farmers the only ones to voice their approval. City folks likewise spoke freely and frankly, using "grand," "splendid," "remarkable," "wonderful" and "great" to variously describe their ideas of the big job well done.

Straight and True.

A few words about the completed ditch may be in order. It runs straight and true—except for one slight bend which was made necessary by a corresponding curve in the boundary fence—for a full quarter-mile, through thick brush for the most part. It is about four and one-half feet wide and three feet deep. There is a notable absence of heaped-up dirt paralleling its course. Spoil banks are always an objectionable, but unavoidable, feature of ditches that are dug by "shovel power" or with ditching machines. So widely was the soil scattered that it seemed to have disappeared entirely, leaving level banks on both sides and a strong flow of muddy water racing through a clean channel between. Perhaps the cleanest cut, even banks drew more favorable comments than any other single feature.

POULTRY

Clean and disinfect the poultry house thoroughly for winter; replenish litter and nesting materials; make any necessary repairs and improvements; get the roosting compartments, nest boxes, feeding and watering appliances arranged in the most practical manner and where they will be permanent. Be especially careful to go over the roofs of the houses. A leaky roof is an abomination.

Poultrymen of Whatcom county started a plan this month to eliminate losses in the raising of chicks, by adopting the accredited hatchery system, providing for the inspection of all breeding flocks.

Many poultry raisers, ambitious to have large flocks, cannot bring themselves to discard a single bird. This is one of the most common and costly mistakes in the business. It constitutes a burden which few growers can carry for any length of time. It has caused many failures and will continue to cause failures.

Sumnyside is at present the biggest egg producing district of the Yakima valley and the increase in poultry has been great this season. Production is due for large increases above last year.

Good results in egg production can not be obtained when the flock is confined during the entire year, according to tests that have been made by the United States department of agriculture. The department has kept a pen of 50 Rhode Island Red pullets and one of 50 White Leghorn pullets confined in poultry houses throughout the year, giving them a good variety of feed, including sprouted oats, and alfalfa meal, the latter being used in the mash. These trials have extended over three years and the result has always been the same—top egg production and excessive mortality.

A flock of 310 pullets in the college pens gave an average production of 62 per cent for the month of November (an egg a day being considered as 100 per cent for the reckoning). The birds were hatched April 28 from eggs donated to the college by the Hen Acres breeding plant at Prosser. All were fed and cared for by the students in poultry classes under Prof. Mitchell.

"My idea of Hades," writes a motorist, "is a continual detour through a mire, with a good road in full view the other side of the fence."

Household

A Pippin Fraise.

Here is an apple recipe from an old, old cook book just presented to the library. Nowdays we would have to use cider instead of the "sack." Many of these recipes of two centuries ago call for wine, ale, sack, etc.

Pare a dozen pippins, cut them in thick slices, and fry them in clarified butter; when they are tender, lay them to drain; keep them as whole as you can; then make a batter as follows: Take 5 eggs, leaving out 2 whites, beat them up with cream and flour, a little salt, some sack, and sugar; make it the thickness of pancake batter, and put in melted butter; pour half your batter into your pan, and place your apples all over it, then pour in the other half of your batter; bake it thoroughly, and of a fine color; strew over it some powdered sugar and serve.

Pippin Tarts.

Here is another apple recipe from the same source—189 years old. It sounds good and not at all impossible in its ingredients.

Take two small oranges, pare them thin, and boil them in water till they are tender; then shred them fine, and pare 20 apples, quarter and core them, and put to them so much water as will boil them enough; then put in half a pound of sugar, and take the orange peel that is shred, and the juice of the orange, and let them boil until they are pretty thick; then set them by to be cold; make your tarts and put them in, and bake them in a gentle oven.

The tarts, I suppose, should be made of short piecrust.

Another Apple Tart.

Take your fairest golden pippins; quarter and core them, and to every pound put three-quarters of a pound of white sugar; put them in a stew pan with water to cover, with a stick of cinnamon; cover your pan very close, and let them stew softly until they come to a color; turn them sometimes and when they are enough they will look very red and clear; then take them off the fire and put them in a dish; and when they are cold, fill your tarts, and stick them with candied orange peel and candied citron. Serve as a side-dish or garnish your baked meats, or other rich tarts with them.

Cake 200 Years Old.

Two hundred years ago they used to make in England what was known as a "Wood-Street" cake, which must have been extremely rich and toothsome, judging by the ingredients. It is described in Howard's Cookery, published in London in 1733 and presented recently to the State College of Washington library. In those days evidently they did not have the convenient cake mixers now known to housewives, as the recipe indicates that it be "beat well with your hand." Also Volsted makes the "glass of sack" required an impossibility within the law. Here is the description:

Take a quarter of a peck of fine flour, dry it in the oven, pour into it some cloves, mace, nutmeg, and salt; wet it with a pound of good butter, a pint of cream, melt it together and beat it well with your hand with a pint of good yeast, and nine eggs, leaving out half the whites; put in a blass of sack, and some rose-water; mix it up soft and lay it by the fire to rise; then work in four pounds of flour, two pounds of sugar, and citron candied, and three pounds of sugar; bake it in a hoop, ice it over with the whites of three eggs, and froth it with a whisk.

In noting the large quantities called for in these old-time recipes, one should remember that it was common to have anywhere from ten to sixteen children in a family, and candy was not so common as now, so the sweet-tooth propensities had to be met by cakes and "conserves."

HOW TO MAKE APPLE FLAME

To make Apple Flame, use a half cup of tapioca, 2 cups boiling water and a pinch of salt. Boil till tapioca is clear. Pare and core six apples, arrange in baking dish, fill center with any kind of red jelly or jam and pour tapioca mixture around the apples. Bake till they are tender. Serve hot or cold and with or without whipped cream. This is a wholesome dessert.

Motorizing the Language.

A little girl from the city had been visiting in the country, and was being questioned as to what kind of time she had. Finally someone said, "I bet you don't even know how to milk a cow."

"Bet I do," she said.

She was pressed for particulars, and explained: "You take the cow into the barn and give her some breakfast food and water and then you drain her crankcase."

There are two sides to every question, my side and infernal foolishness.

DAIRY

Here are some facts to consider. During the past year there have been no bank failures in communities ranking high in dairying. The regular monthly cream check supplies the farmer with needed cash and long-time credit from merchants is not necessary. Another thing of vital importance is the question of soil fertility which a dairy herd makes possible.

June is usually the ideal month for production. Usually June conditions in January, as nearly as possible, and the milk flow will probably surprise your cows, as well as yourself.

That human failing of hoping to get something for nothing is too frequently found among dairymen. To get a good yield of milk the cow must be provided with plenty of good food. It she doesn't deserve this sort of generosity, she is not good enough to keep.

The value of individual cows and blood lines should properly be based on lifetime performance rather than on one weekly, monthly or yearly performance. Too many fine cows are being ruined by forcing. This results in an everlasting loss of purple blood which should have been used in uplifting the breed average.

The dairy bull is not a toy, nor a bosom friend, but a necessary evil and a potential assassin. Put a child-like faith in his innocence and see how long your health remains robust.

The man who fails to recognize that milk production is a function of motherhood and that motherhood feeds and thrives on patience, gentleness and affection quite as much as on silage, roots, hay and grain, will never develop into a first class caretaker of dairy cows.

Getting Better.

For years she heard her husband say: "Can't you make bread like mother used to make?"

At last she cried: "Of course I can, you jay.
When you make dough like father used to make."

The people of the United States consume almost one-fourth of the world's sugar supply.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Europe is again drawing near the verge of war as a result of the French invasion of Germany. The Russian soviet government has decided to mobilize part of its troops with a view to aiding German resistance, according to a Riga dispatch.

A Bradstreet report shows that 1922 established a new building record in the United States, a total expenditure of two and a half billions being made for new buildings during the year.

German marks reached a new low point recently when they sold at the rate of $50 to the million. The circulation has now reached the trillion mark.

Mayor Rolph, of San Francisco, speaking on a radio recently, asked for greetings by telegram from distant points hearing his voice. Within two days he paid for telegrams from every state in the Union.

The increase in values of the stock of the Standard Oil companies that were segregated from the old Standard Oil company of New Jersey when it was ordered dissolved by order of the supreme court in 1911 is shown by the fact that an original share of the old company, which carried with it on dissolution of the parent company fractional shares of 33 subsidiary companies, has increased in value from $600 in 1911 to around $3000 today.

Hugo Stinnes, the German industrialist, has obtained from a group of London banks a credit of 2,000,000 pounds sterling for buying coal, of which he wants 1,500,000 tons, according to the Daily Telegraph.

Judge Alton B. Parker, democratic candidate for president in 1904, and Miss Amelia Day Campbell were married at the Hotel Berkeley last week.

There is a general belief in political circles today that William Gibbs McAdoo, son-in-law of former President Woodrow Wilson and formerly secretary of the treasury, has a presidential campaign quietly under way. He has been pounding out democratic sentiment regarding the advisability of making government ownership of railroads a 1924 democratic plank.

A request that the board of directors of the United States Steel corporation help him in eliminating the 12-hour day from the life of the steel worker has been made by Elbert H. Gary, chairman. He scathingly denounced the interchurch world movement's report of the steel strike of 1919.

Policeman James Scott of Brighton, England, won a ton of ice as first prize in the full-uniform race at the local carnival, but the ice melted before Scott could get it stored.

30 TO 80 MILES AN HOUR SPEED OF BIRDS

Certain species of hawks have a speed of 200 feet a second, or about 136 miles an hour, says the biological survey of the United States department of agriculture. This might be a suitable rate for a racing airplane. The canvasback duck can fly from 130 to 160 feet a second, but its usual rate of 60 to 70 miles an hour would be pretty fast to be enjoyable in a plane making a pleasure trip.

The crow is the least rapid of a list of 22 migratory birds, flying an insignificant average of 45 feet a second, or 30 miles an hour. Of course this speed maintained steadily in an automobile would mean a very fair rate of progress, defying the speed laws in many communities. Most of the birds listed, however, do better than the crow. Curlews and jacksnipes can fly 55 and 65 feet a second, while quails, prairie chickens, and ruffed grouse can make 75 feet. The dove can reach a speed of 100 feet a second, or 68 miles an hour, although its usual rate is less. Redheads, blue-winged teals, green-winged teals, Canada geese, and different varieties of brant can fly over 100 feet per second, ranging in speed from 68 to 98 miles an hour, but usually fly at a much slower rate.

The Word Wanted.

A man walked into a garage where his car was being repaired and was heard to reprimand the garage owner for telling him how to run his own car, saying: "This is my car, and what I say goes."

A moment later a tired, greasy mechanic looked up from under the car and said: "For goodness' sake, say 'engine!'"

Female of the Species At the Bargain Counter

A philosopher observed one winter that when he put out a small quantity of bread crumbs to feed the birds, the feathered foragers were very good and harmonious about going "share and share alike," but when he put out a large supply of provender which was more than the creatures could possibly consume, they became quarrelsome. As soon as his "'tummy" was full, one bird would be seen to leave a large crumb and begin brawling with his neighbors over the possession of a smaller portion.

According to Miss Helen Burns, a Spokane society girl who waits on many types of women garment buyers at "The Economy Shop," the same principle holds true among human beings. Those who are best supplied with this world's goods usually prove the most exacting and hardest to please, she states, while laundry girls and others whose salaries allow very slight margins for luxuries, are as modest in their demands as the income from which the price is paid. These small-salaried workers frequently pay a deposit on a garment and then call as regularly as pay-day comes and make their payments until the title is theirs.

Miss Burns believes that these traits are the best signs of true worth in womankind, for when shopping in a store where all styles, sizes and colors are to be had, the female of the species bares her true nature to the world. At least, she bares it to that part of the world which acts as audience while she is making her selections, for when a woman starts bargain-hunting, almost anything may happen.

In the first place, the lady shopper seldom asks to see what she really intends to purchase, her interest being equally divided between seeing the entire stock, and giving authoritive advice on how each garment could be improved upon. She even discourses at times on how she would manage the shop, if she were the proprietor.

Externally, this type of shopper is an habitual pessimist, and were the saleslady to accept the suggestion implied in her remarks, she would be prompted to apologize for venturing to have anything for sale.

Happily, this description does not apply but to a portion of the women buyers. There is the over-anxious customer who more than makes up for the class just mentioned. She has usually made up her mind to buy whether the color is becoming, the garment her style, or not. The fact that she is obtaining a New York or Paris model which may have been worn but twice by the original owner and then discarded because of some whim or other, is enough for her. She may go so far as to attempt convincing the saleswoman that she has always worn a "thirty-six," when that is manifestly not her size, because she feels that she will be able to mingle without embarrassment with her more prosperous friends, and if this result is accomplished, who knows or cares where the dress was bought?

This class of purchasers along with the wage-earners, make the young lady in behind the counter feel that in supplying women of limited means with their clothes she is rendering a real service to her community and what she sees makes the world the more colorful to her gaze.

Bashful But Not Lost.

A drummer was "making" Ottawa, Kansas, from Wichita one day when he suddenly realized that he was off the main road. Not being able to find his way again he drew his car up to a farmhouse and inquired for the main road of a bushful farmer boy who loitered there. The following uncomfortable situation developed:

"Which is the way to Ottawa," my lad?"

"—I don't know."

"Which is the way to Topeka, then?"

"—I don't know."

"Well, can you tell me how to get back to Wichita, then?"

"—I—I don't know."

By this time the drummer was quite impatient and said to the boy: "Say, you don't know very much, do you?" to which the lad retorted:

"No! But—but I ain't lost!"

After the First Cost—What?

"It isn't the first cost that counts."
"That's right. You can get a marriage license for a dollar."

Human Mind Is Peculiar Thing; Takes Queer Turns

An interestig sidelight on that shocking New Jersey crime was the craze for souvenirs evinced by a morbid public. A veritable plague of curiosity-seekers haunted the scene for weeks and weeks. They cut down the tree beneath which the bodies were found and chopped its branches up for souvenirs. Not satisfied, they raided the houses of the principals in the case. The home of the murdered woman was stripped of its pictures, bric-a-brac and small objects. Only the heavy furniture was left—and that because it could not be carried away readily. This peculiar trait of the public mind forms a significant study. A noted psychologist, one who declines publicity by refusing to have his name mentioned, explains that after all crimes the morbid-curious are drawn to the scene by a vicarious enjoyment both of the crime and what led to it.

"Unconsciously the visitor to such a place puts himself in the place of the victims or the avengers, or in the place of both," he says. "This is scientific fact. Horror is the lure, but the horror is largely made up of envy —unconscious envy in most cases, but envy just the same. The visitor is quick to condemn the victim, or the slayers, or both. Why? Because the victims or the slayers dared to do something the visitor might like to do but dares not. Taking away relics of a murder serves to keep the thing fresh in the visitor's mind. It is a search for thrills, but a search definitely inspired by morbid envy."

In this connection it is interesting to note that crimes which receive undue publicity invariably attract "confessions" by innocent persons. In a single instance several hundred men and women confessed to a crime they had not committed. They were either so fed up on the case by reading yellow journals that they imagined themselves guilty, or they purposely sought publicity. Nowadays it is almost as hard for authorities to prove such people innocent as it is to fasten the crime on the guilty. The only solution to the problem lies in not giving crime so much notoriety. The public would be better off if it confined its readings to things worth while.

A little girl in one of the lower grades of the Washington schools the other day, on being called on by her teacher to tell some "current event," started to give a lurid account of this New Jersey murder scandal. That was the item that was uppermost in her mind; she had not herself read the papers but she had overheard her parents and others gloating over all the disgusting details. She had absorbed that nasty, wicked piece of "news," in preference to everything else going on in the world, and the morbid memory of it will be with her in her conscious or unconscious mind till her last breath. Wounds thus made are never healed.

It is too bad that parents will deliberately take into their homes papers that are filled full of such poison. The worst of it is that this poison is fixed up in most attractive form; it should bear the skull and crossbones but it doesn't; the criminals who make the yellow journals are adepts at that work; they seize on every sensation and magnify it to the limit. No wonder the little girl was more interested in this revolting crime than in the legitimate and wholesome news of the day.

The psychology of the public mind shows that it is no different today than it was hundreds of years ago when executions were public functions and were regarded as social diversions. In those days such an affair was made the occasion for box parties such as are now witnessed at theaters and to the public at large it was a form of entertainment. It is safe to say that if a public execution were advertised to take place on a public square in any American community today it would attract just as large a multitude as any similar affair would have done back in the dark ages. Our morbid curiosity remains unchanged throughout the ages.

GOOD BOOKS ON MARKETING.

A list of good books on marketing suggested by Prof. E. F. Dunmeier of the State College of Washington, includes Cooperative Marketing, by Wm. W. Cumberland (Princeton University Press); the Marketing of Farm Products, by Weld (Macmillan); Agricultural Marketing, by Hibberd; Price of Milk, by Clyde L. King, and especially these two: Efficient Marketing for Agriculture, by Theodore Macklin (Macmillan), and Agricultural Economics, by James E. Boyle (Lippincott).

Says Skinny Simpson.

I don't suppose I've got a chance,
And blame' if it is fair!
I'd give a hundred dollar bill
To be a millionaire!
—Tennyson J. Daft.

Demand Dry-Picked Fowl; Scalded Bird Unsanitary

"Demand dry-picked fowl; birds scalded for market absorb 14% filthy water, and are otherwise undesirable," said Prof. R. V. Mitchell, head of the poultry department at the State College of Washington, giving a demonstration of dry-picking at the open house of the department Saturday night, attended by many farmers and farm women, poultrymen and townspeople interested in the newest methods and equipment.

"A scalded bird, as ordinarily handled, is in worse condition inside of two days than a dry-picked bird that has been shipped 1,000 or 1,500 miles to market," continued Mr. Mitchell.

An exhibit of dry-picked capons ready for market was displayed, in proof of the fact that it is exceedingly difficult for even an expert poultryman to distinguish between the bird killed yesterday and one kept in cold storage a month or more if properly dry-picked.

Facts and Near Facts

A Kentucky railroad plans to equip one of its trains with a radio receiver for the entertainment of its passengers. It has been found that the speed of the train does not interfere with reception of the music.

Over 1,000 girls in the United States have tramped across the country from ocean to ocean.

HAMPSHIRES 1-2-3-4-5
FOR 5 YEARS IN SUCCESSION Hampshires have won grand championship over all breeds, all ages, and all weights of hogs in the carload lots, at the International Livestock Show, 1918-1919-1920-1921-1922.
FOR 5 YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this Show.
HAMPSHIRES ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their meat type—their grazing qualities—their activity, health and vigor—their highly developed mother instinct and milking qualities—their early maturity and economical gains—AND BECAUSE THEY ARE RECOGNIZED MARKET TOPPERS.
For information about Hampshires or for names and addresses of breeders near you address:

Pine Grove News

Mrs. R. F. Lambert is spending the week in town with relatives.

Mrs. Fred Miller has been spending a few days with her sister, Mrs. Leo Miller.

A large crowd turned out for the community "feed" at the school house last Saturday night.

Ed. Hawkins of Stites, who has been visiting here, is on his way to Bremerton, Washington.

Wm. Hawkins of Bremerton, Washington, has been visiting at the home of Mr. and Mrs. Dave Spurbeck.

Lela and Wayne Hawkins are returning to Bremerton with their uncle after a several months' visit with their sister, Mrs. Dave Spurbeck, and husband.

About 40 Pine Grove neighbors and friends went to the home of Mr. and Mrs. Dave Spurbeck last Wednesday evening as a birthday surprise. The evening was very pleasantly spent in playing cards and other games after which refreshments were served. The surprise was also in the nature of a farewell to Lela and Wayne Hawkins.

Make Coeur d'Alene Summer Resort

To make Coeur d'Alene the biggest summer resort in the entire Northwest is the intention of Coeur d'Alene business men, who already are studying plans for improvements which would bring the desired result. The completion of the Appie way, giving a paved highway from Spokane to the Lake city, removed the last barrier, according to George C. Reeder, editor of the Coeur d'Alene Daily American.

Summer is on it's last legs and winter is beginning to toddle.

Reminder

It is reported that over $400,000,000 of the VICTORY 4¼'s, which were called for payment December 15, 1922, interest ceasing on that date, have not been received by the Treasury Department for payment.

We advise all our customers to look over their Victory notes carefully and if they have any of the Series lettered A. B. C. D. E. or F, to present them at any bank for redemption immediately, as otherwise the holder will be losing interest on the money.

WALLACE REID, MOVIE HERO, DIES FIGHTING DRUGS

Wallace Reid, hero of romantic film plays, lost his life in fighting to overcome the narcotic habit, the end coming early last Thursday afternoon at a Hollywood sanitarium where he had been under treatment for over a month. He had been unconscious for nearly two days, during all of which his wife, Dorothy Davenport, was at his bedside.

The direct cause of his death, according to Mr. Reid's physician, was congestion of the lungs and kidneys, which resulted from the actor's collapse when he endeavored to break off the use of narcotics. Reid, who was six feet tall and whose normal weight was 185 pounds, lost 60 pounds before the end came. Up to a about a week before his death relatives said he was improving and would be able to resume work in the studio of the Famous Players Lasky corporation by July at the latest.

"I'm winning the fight, mamma," was his invariable greeting to his wife when she called on him. Mrs. Reid said her husband contracted the drug habit during an illness nearly two years ago. He was working on a picture early in November when he suddenly collapsed. He was advised to take a long rest and started on a mountain trip with Mrs. Reid, Teddy Hayes, his trainer, and H. H. Muller. On his return to Los Angeles, his condition showing no improvement, he went to the sanitarium. Shortly before Christmas his family made public the cause of his breakdown, Mrs. Reid declaring she believed the information might aid in arousing the American people to the necessity of suppressing the narcotic traffic.

Reid, at the height of his career as a motion picture actor, collapsed several months ago and after two months' absence from the studio on what was reported to be a nervous breakdown and eye trouble, the family made a sensational announcement just before Christmas that he was a victim of drugs and under treatment in a private sanitarium.

The announcement by his mother-in-law was to the effect that more than a year before, while working in studios in New York under a strain of illness, he used drugs for stimulant to hold him up through production of a picture which later gained fame as one of his best. This was revealed later to have set the drug habit upon him and finally last fall he broke down at the Hollywood studios and went under a physician's care.

Reid was born in St. Louis, Mo., in 1892 and educated in New York. His stage career began in vaudeville with his father in "The Girl and the Rangers," and later he entered the motion pictures in the early days of this industry, associating with Selig, Vitagraph and Universal.

His entrance was as general utility man and he wrote, acted and directed. He was later employed by D. W. Griffith in the production of "The Birth of a Nation" and entered the Lasky employ in Geraldine Farrar's "Carmen."

His ascendency in the motion pictures then was rapid and he became one of the best liked actors in Hollywood and New York.

Reid was remarkably versatile. He was a deep student and lover of books. He was deeply interested in chemistry and psychology and was an accomplished musician, the violin and stringed instruments, as well as the saxophone, ranking among his favored interpretative instruments.

He was married to Dorothy Davenport, motion picture actress, whom he met years ago when she was starring at Universal City and he was an assistant director and utility man. They had one child and adopted a second.

Wallace Reid was a favorite at the local picture-play house and was the best-liked of any actor whose pictures were shown here and his clever acting in the silent drama will be greatly missed by local picture fans.

Farmer's Dollar Worth 66 Cents

Although the American farmer is said to be the most efficient in the world, none is in a more difficult position than that he has occupied during the last three years, O. E. Bradfute, president of the American Farm Bureau federation, declared in an address at the annual meeting of the federation at Columbia, Mo., recently.

Agricultural depression, Mr. Bradfute asserted, is largely attributable to overproduction of farm products with no adequate or profitable demand for the surplus, inadequate transportation which is, he said, ruinously costly, and a financial credit system not sufficiently flexible.

For general exchange in other commodities, he asserted, the farm products dollar is worth only 66 cents.

Will Build Picture Studio

Construction of a large motion picture studio at the upper end of Priest Lake is to be started by Miss Nell Shipman, popular motion picture actress, as soon as weather permits, it was announced recently. About it will be constructed a score of artistic buildings which will compose a complete motion picture colony, with laboratories, indoor stage, executive office, projection rooms, dark rooms and power plant.

Sold Two-Years Crop of Wheat

The principal wheat sale of recent weeks was closed recently at Walla Walla when Wiley Wagner sold a two-year crop amounting to 20,000 bushels to the Vollmer-Clearwater Grain company. The price range on grades was $1 to $1.05—the best price quotation of the winter.

Organize Ku Klux on Prairie

A man, whose name we were unable to learn, and who is stated as giving his address as Lewiston, Idaho, spent Thursday in Cottonwood in the interest of the Ku Klux Klan movement.

Efforts were made by him to organize a branch of the Klan in Cottonwood but with what success he met we were unable to learn. All of his movements were made in secrecy. It is reported that his trip here was not as successful as was anticipated. Reports are also in the air that such an organization is now a reality at Grangeville and that those interested in the Klan movement are trying to organize in every town on the prairie.—Cottonwood Chronicle.

"Safety First"

There will be a home talent play at the Upper Cow Creek school house on Saturday night, February 3, entitled "Safety First." A general good time is promised. A small admission will be charged. 30-2

In the Probate Court of Latah County, State of Idaho.

In the matter of the estate of Lewis Jain, deceased.

Pursuant to an order of said probate court, made on the 23rd day of January, 1923, notice is hereby given that Monday, the 19th day of February, 1923, at 11 o'clock a. m. of said day at the court room of said court, at the court house in the county of Latah, has been appointed as the time and place for proving the Will of said Lewis Jain, deceased, and for hearing the application of Walter F. Jain, Clarence L. Jain and Charles F. Jain for the issuance to them of letters testamentary, when and where any person interested may appear and contest the same.

Dated this 23rd day of January, 1923.

ADRIAN NELSON, Probate Judge.

H. R. Smith, Moscow, Idaho. Attorney for Petitioners. 30-3

Ten Reasons Why You Should Use Vitamineral

1. VITAMINERAL is an honest product and is producing the results claimed for it.
2. Our product has stood the ACID TEST and many of the most prominent veternarians in the country can vouch for it.
3. The heavy charge of yeast vitamines which it carries is not found in any other product on the market.
4. It requires 3½ to 4 pounds of regular bakers' yeast to make one pound of our concentrated vitamines.
5. Our yeast is dried through a new scientific manner which does not kill the yeast germ.
6. The breeder demands results. VITAMINERAL produces results beyond any question or doubt.
7. VITAMINERAL is an honest product. It does not contain any salts, drugs or filler of any kind.
8. By using VITAMINERAL you help your own personal reputation in your community as a stock man.
9. VITAMINERAL is sold only through the veterinary profession. We protect you and your interests.
10. VITAMINERAL is nationally advertised and has a reputation among the more prominent stock men of the country.

I absolutely guarantee Vitamineral to increase milk flow. Cost is small. You can check results in a week's time. Telephone me for information regarding Vitamineral.

Dr. T. A. ELLIOT, Phone 44-2 . Genesee, Idaho.

Birds Help eKep Down Pests

Birds help keep down many insect pests even when they are not sufficiently numerous to exterminate them over a large area of infestation, and there are many instances where the saving of a crop appears to be entirely the work of birds. When the Mormons emigrated to Utah, says the Biological Survey, United States Department of Agriculture, in a recent compilation of instances where birds have been beneficial, the short-winged grasshopper, commonly known as the black, or Mormon, cricket, came and devoured the crops. Fields of wheat as promising as possible in the morning would be as bare as a man's hand at night.

The second year they came again, but providentially, or miraculously, as it was thought by the Mormons, vast flocks of California white gulls suddenly appeared and destroyed the crickets, eradicating them for the time being.

The remainder of the crop on which the Mormons had to rely for food the next season was saved. Since that time these birds have been held almost sacred in Utah. A monument commemorating their valuable aid stands in Salt Lake City.

Are Protected by Quarantine

The livestock producers of the United States are protected against the dangers of various plagues of domestic animals existent in other countries by quarantine regulations enforced by representatives of the Bureau of Animal Industry. Never in our history has this country been so menanced by foot and mouth disease as in the last few years. It has existed in European, Asiatic, and South American countries and still exists in many of them, but our inspectors keep a close watch and hope to prevent another entry. Other serious diseases of domestic auimals that have been kept out are contagious pleuropneumonia, rinderpest, surra, and Malta fever.

A Sign of Spring

Boys were seen playing catch on the way home from school this week —which is a sure sign of spring—so far as the boys are concerned, at least.

Office Hours, 9 a. m. to 3 p. m.

No Charge for Examination

The doctor in charge is a regular graduate in medicine and surgery and is licensed by the state of Washington. He visits professionally the more important towns and cities and offers to all who call on this trip consultation and examination free, except the expense of treatment when desired.

According to his method of treatment he does not operate for chronic appehdicitis, gall stones, ulcers of stomach, tonsils or adenoids.

He has to his credit many wonderful results in diseases of the stomach, liver bowels, blood, skin, nerves, heart, kidneys, bladder, bedwetting, catarrh, weak lungs. rheumatism, sciatica, leg ulcers, and rectal ailments.

If you have been ailing for any length of time and do not get any better, do not fail to call, as improper measures rather than disease are often the canse of your long standing trouble.

Remember above date, that examination on this trip is free and that his treatment is different.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, FEBRUARY 2, 1923. — NO. 31

LOCAL COMMITTEE SENDS LETTER TO GOV. MOORE

The undersigned committee have sent to Governor Moore the following open letter, which is self-explanatory:

We of the Genesee district note with interest your message to the Seventeenth session of the legislature of het state of Idaho. We agree that the program of economy is the proper and only course to follow, and especially at the present time. We do not feel, however, in complete accord with all items of your message, and wish to take this occasion to inform you of our viewpoint. We can only hope that you may find time to earnestly consider our statements.

Cooperation is one of the keynotes of social progress. Without it all government would cease. During that period in our national life when we were governed by the more or less loosely constructed Articles of confederation, cooperation was the exception rather than the rule. That was a period of state rights held in greater esteem than national rights. The system was wrong—it failed to function—and was changed. We do not feel that the cooperation with the federal government in the matter of matching moneys appropriated by the government is, in any sense whatever, "of questionable propriety." It is simply a question as to whether or not the state, as a social unit, may or may not profit or progress from or because of these cooperation with the federal government. We certainly know who contributes to these federal funds, and as one of the forty-eight, or more, contributing units, we feel that we are rightfully entitled to our share in the re-distribution of these funds. Otherwise our share in the national holdings would go as "charity" and we feel that Idaho is in no position to build up the interests of the other states while receiving no benefits herself.

Ours is an agricultural community. Our state's agricultural interests are wide, varied, and of no secondary importance. We feel that any stimulus, aid, or cooperation that will now, or at any time, help the farmer deserves our hearty support. Accordingly, we feel somewhat concerned when those benefits which we have enjoyed in the past seem to be endangered and recommended for complete removal from our budgets. We refer to those advantages known professionally as the Smith-Huges state and federal appropriations for vocational agriculture, home economics and address and industries. We sincerely hope that it was not your intention to remove these benefits completely from your recommendations to the legislature in preparing the budget for the next two years' work in Idaho. We feel that we are entitled to a share in the benefits of these funds, since we consider ourselves to be, in a degree, contributing factors towards their creation.

Where the work under the direction of the vocational directors of agriculture in our state has been given a fair and honest trial we are sure that the farmers are enthusiastic supporters of the idea. We know this is the case in our own community, and many of the farmers have personally expressed sincere concern when informed of the tenor, or aparent trend, of affairs in Boise at the present time. What more endorsement could we ask than the hearty approval of the sturdy farmer, and especially those who have come in contact with the actual application of this form of eduction? The only regrettable feature we can find with this work is that it was necessary to limit and to confine it for the past few years to some 28 or 30 schools in the state of Idaho.

If economy and curtailment is the program, as it should be, we believe that the agricultural interests of our state, in so far as the Smith-Hughes funds or appropriations are concerned should bear their proportionate share of the reductions, on the same percentage basis as cuts are made elsewhere, if the cuts are to be made in all departments. This fund should not be eliminated.

We do not ask that we be given any special preference or privileges but that we be given equal consideration with the other state activities. We ask for a "square deal." We expect to share our responsibilities, our duties and our obligations with the rest.

(Continued on last page)

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Will of Lewis Jain Filed

The will of the late Lewis Jain and a petition for its admission to probate has been filed in the probate court. Mr. Jain died in Moscow, January 15, 1923, and left surviving as his heirs three sons, Walter F., Clarence L. and Charles F. Jain, who are named as executors in the will. The estate consists of personal property of the approximate value of $10,000. The hearing upon the petition has been set for February 19.

Seems Sure of Big Mills

A Juliaetta man, who was in Moscow this week, informs us that while there he talked with a friend of his who is an expert machinist, and has assisted in installing the machinery of many big mills over the country and he told him that he had just received a letter from the Weyerhaeuser company offering him $12 per day for his services in assisting in installing the machinery of the big mill at Lewiston. We have no reason to doubt this statement as it comes from a reliable person and it seems evident that Lewiston is to see work started on this long-looked-for enterprise early this spring.—Juliaetta Record.

Heavy Shipments of Lumber

Heavy shipments of lumber are now being made from the Potlatch mill and the surplus stock in the yards is being rapidly reduced. The planer is running day and night. The car situation is greatly improved, and trainloads of lumber are being put via Palouse and Bovill to markets east and west. While no public announcement has been made, it is reported that the Potlatch mill will start full time by February 15. Work in the woods will probably start about the same time or sooner, beginning with the loading crews and gradually increasing the forces until all departments are running full strength. The general impression is that this is going to be a mighty busy year for lumbering in this section.—Deary Press.

Buttercups Out Early

Tuesday morning Will Entel brought to this office a buttercup in full bloom that he found beside the road west of town while driving in with his father.

Buttercups in January are almost unprecedented in the Palouse, although some 26 years ago the same conditions existed. One wonders if these hardy flowers are not doomed to be frosted heavily pretty soon.

And speaking of early blossoms, C. Rauber found one small limb on a cherry tree in his yard in town that had a couple of blossoms on it.

Here's hoping that the real spring will not be winter with zero weather, but that these flowers are the harbingers of an early spring, a good crop and also good prices.—Colton News-Letter.

Gave Attractive Party

Mrs. John E. Reilly was hostess Wednesday afternoon at a delightful 500 party, which was enjoyed by 30 guests. Mrs. H. C. Matthiesen and Mrs. T. C. Keith were the prize winners. The refreshment tables were attractive with green and white decorations, including cricket favors and nut baskets. Lovely spring flowers decorated the rooms. The following ladies were present: Mesdames H. C. Matthiesen, Frank Simon, H. J. Greve, Fred Simon, Geo. Medved, T. C. Keith, A. J. Barth, N. A. Litherland, Bart Simon, George Poler, jr., J. D. Shinnick, Lloyd Turner, Herman Funke, Edgar Wortman, R. A. Nims, Verne Dye, Fred McKinney, W. F. Orr, J. F. Jenny, Helen Eckert, M. A. Pierce, Barney Tacke, John Hoene, H. T. Agnew, Wm. Kelsey, C. A. Johnston, C. O. Perrenoud, Lora Hale, W. C. Frick and Riley Rice.—Cottonwood Chronicle.

New Telephone Directories

The new telephone directories for the Home Telephone company were delivered last Saturday and are now being handed out by Manager Sullivan. It is requested that all patrons of the company use the new directories—and that they use the numbers instead of the names.

WHAT HAPPENED HERE TWENTY YEARS AGO

Miss Edith Mervyn is the possesor of a new piano.

A petition is being circulated asking that the saloons be closed on Sunday.

Congressman-elect Burton L. French has passed a successful examination before the supreme court and is now a full-fledged attorney.

We are reliably informed that within a few days the old train service will be re-established on this run, that is, the Genesee train will only run to Pullman and return.

John Broemmeling and Frank Terhaar left Monday morning for northern California, expecting to be away for two or three weeks. They may possibly file on timber claims.

Joe Kane and Joe Lorang were recent arrivals from Salmon river. On their return home they were accompanied by Pete Kane and T. H. Lorang. Mr. Lorang states that they visited all points of interest in that section and found stock in excellent condition. At the Vincent Lorang home they found a new daughter.

Many are of the belief that the climate of south Idaho is milder than that of this vicinity. But that is a mistaken idea. On our recent visit to that section we observed that the harvesting of ice was about completed and the article put up is nearly a foot in thickness. At Weiser, Payette, Caldwell and other points along the O. S. L., sleighing has been fairly good. But things are quite the reverse here. There has not been a time during the winter when ice to exceed three or four inches could be cut anywhere, and whether or not any is gathered during the coming month remains to be seen.

The Tuomys Heard From

Word has been received from Dr. and Mrs. C. F. Tuomy to the effect that they have located at Glendale, California, and that the doctor has been fortunate in receiving three appointments in three large clinics in Los Angeles and gives half a day a week to each of them. One is the public school clinic, one the University of Southern California and the other in the county hospital of Los Angeles county.

They stated that on Tuesday, January 23, they expected to attend the Idaho picnic and expected to see many of their old Genesee friends.

The many Genesee friends of Dr. and Mrs. Tuomy will indeed be pleased to learn of the doctor's success in the Golden State and wish them the very best to be had in the land of sunshine.

Linger Longers Meet

The Linger Longer club met with Mrs. Virgil Sampson on Wednesday, January 31. The afternoon was spent in needlework and social converse. At 5 o'clock delicious refreshments were served by the hostess. The invited guests were Mrs. Leo Edwards, Mrs. G. E. Sampson and Mrs. Thos. A. Feeney.

The next meeting will be with Mrs. Harry Schooler.

Pleasantly Surprised

Joe Green was pleasantly surprised last Thursday evening when his daughter, Mrs. Matt Tonning, and some friends and relatives arrived with a prepared supper and all partook and thoroughly enjoyed the repast. Everything one could think of was ready to eat and a good time was had by all.

Needlecraft Shop Moves

Miss Pauline Steltz has moved her Hemstitching and Artcraft Shop from the Sullivan building to the room just west of the postoffice. The transfer having been made Wednesday evening. The room has been thoroughly renovated, painted and papered and makes a very inviting appearance.

Have Calendars for Distribution

The First Bank of Genesee has a large supply of calendars which they will be glad to hand out to any adult who will call at the bank.

Dance at Ingle School

The dance given at the Ingle school house last Friday night was a success from all angles and a genuine good time was had by all in attendance.

SUDDEN DEATH OF INFANT DAUGHTER

Marguerite Mary, infant daughter of Mr. and Mrs. Henry Lorang, died very suddenly in Genesee on Saturday, January 27, 1923, of enlargement of the thymic gland, aged two months and seven days.

The little one had been afflicted with the peculiar ailment from birth but it being an unusual affliction the real cause of its seeming illness was not known to the parents, although their physician was aware of the condition of the child. In such cases death is always sudden and is caused by the thymic gland becoming so enlarged that it closes the heart valves and is always fatal.

Mr. and Mrs. Lorang had brought the little one to town and were going to take her to Lewiston for treatment when death occurred suddenly.

The body was taken to Lewiston Saturday and was laid to rest Sunday morning.

We wish to extend our sincere thanks to the many kind friends and neighbors who so willingly aided us during our late bereavement.

Mr. and Mrs. Henry Lorang.

Legion Will Give Radio Concert

Arrangements have been completed whereby the American Legion members, together with the auxiliary, or, rather, the women entitled to membership in the Legion auxiliary, will be the guests of the post at a radio concert to be conducted next Wednesday evening by William Bailey of the Moscow post.

The Legion members will hold a short business session beginning at 7:30 p. m. At 8:30, Bailey will begin to receive from the air grand opera, crop reports, fox trots, and current news.

The officers for the new year will be formally installed at the business session. The new officers recently elected are: Thomas A. Feeney, post commander; Nels Liberg, vice commander; Chas. W. Smith, adjutant; Jack Barnes, finance officer; James Winegardner, historian, and Harry Schooler, sergeant-at-arms.

Signs of Spring

B. F. Lackey brought in a big bean sprout Wednesday (of last week) which he picked up in his garden, it being one of a number of volunteers which have taken this weather at its word and begun their season's work. The bean is of the frost resisting variety and is making a fast and healthy growth. Mr. Lackey and some other gardeners are seen these days and some gardeners are sowing various seeds for early vegetables. Merchants all have their seed racks open and report sales as quite brisk. And the way the weather hangs on makes one more and more optimistic that it is here to stay.—Kamiah Progress.

Gets Oranges from California

Mrs. J. H. Jackson the first of the week received four fine large oranges from her daughter, Mrs. Benjamin Martin at Los Angeles. The four weighed 4½ pounds and the largest one measured 13½ inches around the small way. She also received a "mess" of new carrots—tops and all.

Basketball Game

There will be a basketball game at the opera house Saturday night—between the town team and the local high school team.

The game scheduled with Troy for that evening was cancelled by the visitors.

Don't Miss It

You are asked "not to forget to remember" the home talent entertainment at the Upper Cow Creek school house tomorrow (Saturday) night. A small admission fee will be charged merely to defray expenses.

The U. of I. Glee Club

The University of Idaho Glee club will give an entertainment in the opera house Saturday evening, February 10. Full announcement will be made next week.

Rebekah ladies' minstrels are on the way. Watch for date. 31-1

HASFURTHER-OLSON NUPTIALS WEDNESDAY MORNING

On Wednesday morning, January 31, at 9 o'clock, Rosalia Kathryn, daughter of Mr. and Mrs. Joe N. Hasfurther was united in marriage to Lawrence Clifford Olson at the parsonage of St. Mary's Catholic church, Rev. Fr. L. C. Godschalx officiating.

The bride was beautifully attired in a blue poiree twill Balkan suit, with hat and gloves to match. She wore a corsage bouquet of rose buds, freezee and ferns, the gift of the groom.

Bernadine Hasfurther, sister of the bride, was bridesmaid. She was beautifully attired in brown velvet and pasley lace. Victor S. Casebolt, a friend of the bride and groom, acted as best man.

The beautiful and impressive service was witnessed only by the near relatives of the bride and groom, the only out-of-town guest being Andrew S. Olson, father of the groom.

After the ceremony the wedding dinner was served by the bride's mother. The table decorations were of sweet peas and ferns and a large bride's cake.

Mrs. Olson is the daughter of Mr. and Mrs. Joe N. Hasfurther, pioneer residents of Genesee, and was born and reared here. She belongs to one of the most highly respected families, her father having been in business in Genesee continously for many years. She has a large circle of near friends. Mr. Olson is a prosperous young farmer of near Moscow and is a young man of excellent qualities.

Mr. and Mrs. Olson left Wednesday afternoon for the coast for a short wedding trip. After February 15 the newly-weds will be at home to their many friends on the farm near Moscow.

The Genesee News joins in wishing these deserving young people everything that will bring there comfort, wealth and happiness in life.

Winter Here Again

Poor little Miss Spring, with her dainty costume and spring flowers has been decidedly frostbitten during the past few nights—in fact, she was known to have shivered quite severely Monday night when the mercury dropped to five degrees above zero—and at various other times it has hovered around the 14 and 16-degree above mark.

A real snow also fell last Saturday morning and caused many automobiles and several Fords to hang up and give way to sleds.

Ha ha and N. B.—Since the above was put in type the mercury dropped to one degree below zero—on Thursday morning—thus causing little Miss Spring to catch a very severe cold.

Woodward Entertainment

The Woodward program given at the opera house last Friday evening proved to be a success in every way and a rare treat to lovers of good readings and music. The readings were given by Mrs. Woodward and were very interesting and showed a great deal of preparatory work on her part. The piano solos and songs, given by her daughters, Thelma, Bonnie and Pat were well executed and thoroughly appreciated by the large audience. The program was unusual as it was an entire "family affair."

Mrs. Woodward and daughters will go to Johnson on Wednesday, February 7, where they will give their delightful entertainment.

ends Cocoanuts to States

Mrs. Geo. Boliou on Tuesday received two large cocoanuts, in their original outside hull from Miss Ethel Richmond, who was formerly a teacher in the Genesee High school, but who is this year teaching at Lihue, Kauai Island, Hawaiian Islands. The nuts are to be presented to the Rebekah lodge with Miss Richmond's compliments. The name and address had been written on the outside hull and the stamps affixed, no wrapping whatever having been used.

Federated Ladies Aid

The Federated ladies aid will meet with Mrs. W. W. Burr on Wednesday afternoon, February 7. Mrs. Virgil Sampson and Mrs. Sumner Stucker will assist in entertaining.

PROSECUTING ATTORNEY TO DRAW LINES TIGHTER

"It is my purpose to proceed against the patron of the bootlegger as well as the bootlegger himself," said Frank L. Moore, prosecuting attorney of Latah county, the other day when discussing the question of prohibitory law enforcement with a representative of The Star-Mirror. Mr. Moore believes that if the people take an interest in the methods of the rumrunner and his patrons the importation of intoxicating liquor to Moscow can be stopped within 30 days.

Mr. Moore said he was going to ask the public to take an interest in the enforcement of the law regarding the sale of cigarettes and tobacco to minors, and the law prohibiting minors from frequenting pool halls.

When asked if the restrictions he had placed upon card playing in the pool halls and card rooms throughout the county was to continue, Prosecuting Attorney Moore replied:

"Yes. It is not so much the pecuniary injury resulting from this card playing that I am trying to reach, it is the disrespect for the law and law enforcement that it engenders, that is the great evil to be contended with. There seems to be a marked disposition upon the part of the individual to keep aloof from the enforcement of the law so long as its enforcement does not affect him, but the method pursued in this instance has demonstrated that the people will, if their attention is brought to the matter, take an interest in the enforcement of the criminal law."

When asked what position he intended to take upon prohibition enforcement, the county attorney said: "The laws of Idaho provide that it shall be unlawful for any person, firm, company, corporation, or agent, to have in his or its possession, any intoxicating liquors of any kind, for any use or purpose except the same shall have been obtained and is so possessed under a permit authorized by law. This provision has been held constitutional by the supreme court of Idaho and the supreme court of the United States in the case of Ed. Crane, which arose in Latah county in 1915.

"In passing upon this act, the supreme court of Idaho said: "No man can drink intoxicating liquor without having it in his possession.' If then, an individual is found in an intoxicated condition, it is evidence that he has recently had in his possession intoxicating liquors, and he can be prosecuted for the offense of having intoxicating liquors in his possession, and it is my purpose to proceed against the patron of the bootlegger as well as the bootlegger himself.

"The bootlegger, or rumrunner, has developed a system that almost absolutely prevents detection. He starts from his base of supply and before reaching Moscow, telephones ahead to some one of his patrons that he is in the road. This party immediately interviews other patrons and they agree upon the quantity of intoxicants they desire, and have the purchase price all collected, they themselves, congregating at some favorable point, usually a business house on a main street, and when the rumrunner arrives, all he need do to complete a sale of his liquor is to find the individual holding the fund, collect his money, ascertain and drive to the place of delivery, make his delivery and immediately leave town. As a consequence, it is not necessary for him to remain in Moscow to exceed 15 minutes.

"His patrons then divide up the consignment and slip away to their places of business or place of abode. The individuals who are thus patronizing the rumrunners are known and it is only a question of time when they will be caught. In number, they do not exceed 20. Of course, there is a small quantity of intoxicating liquor coming from local stills, but its use is so dangerous to health and life that there is not much demand for it in the city.

"Now, if the people will take an interest in the methods of the rumrunner and his patrons, we can stop the importation of intoxicating liquor to Moscow within 30 days. If they will take the same interest in the patrons of the rumrunners that they did in the closing of the card games, all of

The Constable Is a Desprit Man

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 29.

"Ah," says he, still holding my shoulders and now gently shaking me, "you think of me more than you suppose." "And I wonder at it too," he added, repeating my expression and I suppose something of my voice. "You are an honest man, and for that cause I spare you."

"Spare me?" I cried.

"Spare you," he repeated, letting me go and turning away. And then, fronting me once more: "You little know what I would do with it, Mackellar! Did you think I had swallowed my defeat indeed? Listen. My life has been a series of unmerited cast-backs. That fool, Prince Charlie, mismanaged a most promising affair; there fell my first forune. In Paris I had my foot once more high upon the ladder; that time it was an accident, a letter came to the wrong hand, and I was bare again. A third time, I found my opportunity; I built up a place for myself in India with an infinite patience; and then Clive came, my rajah was swallowed, and I escaped out of the convulsion, like another Aeneas, with Secundra Dass upon my back. Three times I have had my hand upon the highest station; and I am not yet three-and-forty. I know the world as few men know it when they come to die, court and camp, the east and the west; I know where to go, I see a thousand openings. I am now at the height of my resources, sound of health, of inordinate ambition. Well, all this I resign; I care not if I die and the world never hear of me; I care only for one thing, and that I will have. Mind yourself; lest, when the roof falls, you too should be crushed under the ruins."

Great Ship Arrives.

As I came out of his house, all hope of intervention quite destroyed, I was aware of a stir on the harbor side, and raising my eyes, there was a great ship newly come to anchor. It seems strange I could have looked upon her with so much indifference for she brought death to the brothers of Durrisdeer.

The same night there was brought to us from the ship a little packet of pamphlets. The next day my lord was under engagement to go with the governor upon some party of pleasure; the time was nearly due, and I left him for a moment alone in his room and skimming through the pamphlets. When I returned his head had fallen upon the table, his arms lying abroad among the crumpled papers.

"My lord, my lord!" I cried as I ran forward, for I supposed he was in some fit.

He sprang up like a figure upon wires, his countenance deformed with fury, so that in a strange place I should scarce have known him. His hand at the same time flew above his head as though to strike me down. "Leave me alone!" he screeched; and I fled, as fast as my shaking legs would bear me, for my lady. She too lost no time; but when we returned he had the door locked within, and only cried to us from the other side to leave him be. We looked in each other's faces, very white; each supposing the blow had come at last.

"I will write to the governor to excuse him," says she. "We must keep our strong friends." But when she took up the pen, it flew out of her fingers. "I can not write," said she. "Can you?"

"I will make a shift, my lady," said I.

"That Will Do."

She looked over me as I wrote. "That will do," she said, "when I had done. "Thank God, Mackellar, I have you to lean upon! But what can it be now? What, what can it be?"

In my own mind, I believed there was no explanation possible and none required; it was my fear that the man's madness had now simply burst forth its ways, like the long-smothered flames of a volcano; but to this (in mere mercy to my lady) I durst not give expression.

"It is more to the purpose to consider our own behavior," said I. "Must we leave him there alone?"

"I do not dare disturb him," she replied. "Nature may know best; it may be nature that cries to be alone; and we grope in the dark. Oh, yes I would leave him as he is."

"I will then dispatch this letter, my lady, and return here, if you please, to sit with you," said I.

"Pray do," cries my lady.

All afternoon we sat together, mostly in silence, watching my lord's door. My own mind was busy with the scene that had just passed, and its singular resemblance to my vision. I must say a word upon this, for the story has gone abroad with great exaggeration, and I have even seen it printed and my own name referred to for particulars. So much was the same; here was my lord in a room, with his head upon the table, and when he raised his face it wore such an expression as distressed me to the soul. But the room was different, my lord's attitude at the table not at all the same, and his face, when he disclosed it, expressed a painful degree of fury instead of that haunting despair which had always (except once, already referred to) characterized it in the vision.

Door Opened.

At last, as the night fell and I was lighting a lamp that stood there trimmed, the door opened and my lord stood within upon the threshold. The light was not so strong that we could read his countenance; when he spoke, methought his voice a little altered but yet perfectly steady.

"Mackellar," said he, "carry this note to its destination with your own hand. It is highly private. Find the person alone when you deliver it."

"Henry," says my lady, "you are not ill?"

"No, no," says he, querulously, "I am occupied. Not at all; I am only occupied. It is a singular thing a man must be supposed to be ill when he has any business! Send me supper to this room, and a basket of wine; I expect the visit of a friend. Otherwise I am not to be disturbed."

And with that he once more shut himself in.

The note was addressed to one Captain Harris, at a tavern on the portside. I knew Harris (by reputation) for a dangerous adventurer, highly suspected of piracy in the past, and now following the rude business of an Indian trader. What my lord should have to say to him, or he to my lord, it passed my imagination to conceive; or yet how my lord had heard of him, unless by a disgraceful trial from which the man was recently escaped. Altogether I went upon the errand with reluctance, and from the little I saw of the captain, returned from it with sorrow. I found him in a foul-smelling chamber, sitting by a guttering candle and an empty bottle; he had the remains of a military carriage, or rather perhaps it was an affectation, for his manners were low.

"Think shame to yourself—this is bairnly conduct."

"Toll my lord, with my service, that I will wait upon his lordship in the inside of half an hour," says he, when he had read the note; and then had the servility, pointing to his empty bottle, to propose that I should buy him liquor.

Although I returned with my best speed, the captain followed close upon my heels, and he stayed late into the night. The cock was crowing a second time when I saw (from my chamber window) my lord lighting him to the gate, both men very much affected with their potations and sometimes leaning one upon the other to confabulate. Yet the next morning my lord was abroad again early with a hundred pounds of money in his pocket.

I never supposed that he returned with it; and yet I was quite sure it did not find its way to the master, for I lingered all morning within view of the booth. That was the last time my Lord Durrisdeer passed his own inclosure till we left New York; he walked in his barn or sat and talked with his family, all much as usual; but the town saw nothing of him, and his daily visits to the master seemed forgotten. Nor yet did Harris reappear, or not until the end.

Much Oppressed.

I was now much oppressed with a sense of the mysteries in which we had begun to move. It was plain, if only from his change of habitude, my lord had something on his mind of a grave nature; but what it was, whence it sprung, or why he should now keep the house and garden, I could make no guess at. It was clear, even to probation, the pamphlets had some share in this revolution; I read all I could find, and they were all extremely insignificant, and of the usual kind of party scurrility; even to a high politician, I could spy out no particular matter of offense, and my lord was a man rather indifferent on public questions.

The truth is, the pamphlet which was the spring of this affair lay all the time on my lord's bosom. There it was that I found it at last, after he was dead, in the midst of the north wilderness; in such a place, in such dismal circumstances, I was to read for the first time these idle, lying words of a Whig pamphleteer declaiming against indulgency to Jacobites: "Another notorious rebel, the M——— of B———e, is to have his title restored," the passage ran. "This business has been long in hand, since he rendered some very disgraceful services in Scotland and France. His brother, L——d D———r, is known to be no better than himself in inclination; and the supposed heir, who is now to his own aside, was bred up in the most detestable principles.

"In the old phrase, it is six of the one and half a dozen of the other, but the favor of such a reposition is too extreme to be passed over." A man in his right wits could not have cared two straws for a tale so manifestly false; that government should ever entertain the notion was inconceivable to any reasoning creature, unless possibly the fool that penned it; and my lord, though never brilliant, was ever remarkable for sense. That he should credit such a rodomontade, and carry the pamphlet on his bosom and the words in his heart, is the clear proof of the man's lunacy. Doubtless the mere mention of Mr. Alexander, and the threat directly held out against the child's succession, precipitated that which had so long impended. Or else my master had been truly mad for a long time, and we were too dull or too much used to him, and did not perceive the extent of his infirmity.

Recognized Harris.

About a week after the day of the pamphlets I was late upon the harbor-side, and took a turn toward the master's, as I often did. The door opened, a flood of light came forth upon the road, and I beheld a man taking his departure with friendly salutations. I can not say how singularly I was shaken to recognize the adventurer Harris. I could not but conclude it was the hand of my lord that had brought him there; and prolonged my walk in very serious and apprehensive thought. It was late when I came home, and there was my lord making up his portmanteau for a voyage.

"Why do you come so late?" he cried. "We leave tomorrow for Albany, you and I together; and it is high time you wear about your preparations."

"For Albany, my lord?" I cried. "And for what earthly purpose?"

"Change of scene," said he.

And my lady, who appeared to have been weeping, gave me the signal to obey without more parley. She told me a little later (when we found occasion to exchange some words) that he had suddenly announced his intention after a visit from Captain Harris, and her best endeavors, whether to dissuade him from the journey or to elicit some explanation of its purpose, had alike proved unavailing.

THE JOURNEY IN THE WILDERNESS.

We made a prosperous voyage up that fine river of the Hudson, the weather grateful, the hills singularly beautified with the colors of the autumn.

The boat having passed by Albany I thought at first we should have left the town. But no such matter. My lord

I was now much oppressed with a sense of the mysteries in which we had begun to move. It was plain, if only from his change of habitude, my lord had something on his mind of a grave nature; but what it was, whence it sprung, or why he should now keep the house and garden, I could make no guess at. It was clear, even to probation, the pamphlets had some share in this revolution; I read all I could find, and they were all extremely insignificant, and of the usual kind of party scurrility; even to a high politician, I could spy out no particular matter of offense, and my lord was a man rather indifferent on public questions.

The truth is, the pamphlet which was the spring of this affair lay all the time on my lord's bosom. There it was that I found it at last, after he was dead, in the midst of the north wilderness; in such a place, in such dismal circumstances, I was to read for the first time these idle, lying words of a Whig pamphleteer declaiming against indulgency to Jacobites:

WASHINGTON NEWS

That 84 per cent of the men students at the State College of Washington are earning all or part of their expenses is shown by a report of Graduate Manager H. M. Chambers, who compiled statistics from an enrollment questionnaire filled out by 374 men.

State Treasurer C. L. Babcock last week announced distribution to various state funds of $217,686 interest which the balances in these funds earned in the year ending January 15. The general fund received the largest amount, $55,309, the remainder being distributed among 35 funds.

Property in Walla Walla county owned by the Portland Flouring mills, bankrupt, was sold in Walla Walla at auction recently for $65,000. Walter McCameron of Portland, representing the Security Savings & Trust company of that place, bid in the property for his clients who hold a mortgage for this amount.

Exports of flour from Puget Sound ports to foreign countries during 1922 totaled 2,686,641 barrels, an increase for the last twelve months of 349,480 barrels. The total wheat export for the last year was 5,930,480 bushels.

The three-days' session of the Washington State Editorial association, held at the university last week, closed with a dinner composed of Alaska products given to the 200 visiting editors and wives and several hundred invited guests at the university commons Saturday evening. The articles composing the dinner were donated by various communities in Alaska under the inspiration of the Alaska committee of the Chamber of commerce. Governor Scott C. Bone of Alaska and Lieutenant Governor Coyle of this state were guests of honor. Governor Bone predicted better days for Alaska and said Alaska can easily support a million people from its varied products. The government railway is proving a wonderful developer and the prospective oil development gives promise of greater prosperity for the territory.

Boys' and Girls' Farm Club Work

The boys' and girls' pig club members of St. John put over a community hog show in connection with a community gathering. Four hundred farmers and their families were out for the occasion. Prizes amounted to $75 were awarded to the club members.

Wonderful Year's Work.

When livestock club members averaged $131.60 per member for their year's work, it makes the canning, cooking and clothing club members wonder where they make anything. This is not true, for while there is a value placed on the work of the 3082 club members in these three projects it is a higher value than money can give.

Enrolment in the three branches of club work mentioned includes: Clothing with 2048 members enrolled and 1137 reporting the value of their work at $11,345.96 and a saving to themselves and their families of $6,619.05 on the 5233 garments and articles made.

The 343 canning girls reporting out of the 699 enrolled, canned 28,420 quarts of food products exclusive of jellies. This included 19,943 quarts of fruit; 10,366 quarts of vegetables and 614 quarts of meats and soup. Besides these products they canned 9034 jars of jellies and jams. The total value placed upon their work amounted to $14,627.95 or a saving if they would have had to purchase the canned goods of $8,766.50.

Cooking club girls, which included bread making and meal preparation, report the baking of 212 loaves, 75 dozen biscuit, 202 cakes, 69 dozen cookies and 55 pies. Besides this baking of foods, 1935 meals were served to a young army of 6016 persons.

Such work as that mentioned above can not be figured in dollars and cents to match up against the livestock club members, but it takes such training for the future which will make successful livestock and breeders and farmers.

Ready for Action.

Ray, a very small boy with a very large gun, was standing in a country road.

"What are you hunting, bubs?" asked a passerby.

"I dunno," little Ray replied frankly. "I ain't seen it yet."—"Topics of the Day," Films.

A Grand Champion Cow from Kentucky

"Lady Woodford" won her honors at the American Royal Livestock Show in Kansas City recently. Breadth, front, thick and even flesh marked her for distinction as the ideal type for beef cattle. She is owned by Sen. J. N. Camden, of Versailles, Ky.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

LARGE STEEL SCOWS FOR USE ON THE LAKES OF MAINE

As the endless-tread tractor has supplanted horses for long distance hauling in the lumber woods of Maine, so has the steel scow of from 20 to 40 tons' capacity, propelled by a gasoline motorboat, taken the place of the small wooden craft, whose load capacity did not exceed three or four tons, and which was driven through the waters by rowboats in taking fall supplies across the lakes to camps.

The first of these scows has just been put into operation on Moosehead lake, in the Rangeley region. It is 38 feet long, 15 feet wide, and has a load capacity of 30 tons. It is pushed through the water by a powerful motorboat astern. The bow of this motorboat rests against a specially constructed steel bumper, while heavy poles, for all the world like a pair of buggy shafts, extend from the end of the scow along the sides of the motorboat to which they are lashed. In calm weather the motor craft will drive the loaded steel scow at the rate of six miles an hour.

HARD SYNTHETIC WOOD MADE FROM CELLULOSE.

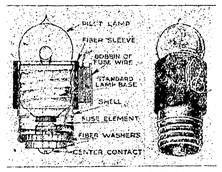
Cellulose, a compound of carbon, hydrogen, and oxygen that forms the fundamental cell structure of all plants, is a main constituent of a vast number of textiles, in the manufacture of which it does not have to be hardened. In the past it has been hardened sufficiently to produce substances used in many industries, and now, in Germany, a textile expert has discovered a process by which it can be hardened sufficiently to produce synthetic woods that will serve as substitutes for oak, mahogany, walnut, indeed for any hard wood—even, it is said, for ebony. Moreover, the material can be dyed homogeneously in any color from bright yellow to deep black, and can then be polished and made to look exactly like natural wood.

Bundle of grass with samples of the synthetic wood made from this cellulose material. The broken sample shows how it is formed of layers of cellulose pressed to gether. It can be molded into any shape, and is hard as oak, or even ebony.

This synthetic product will be much cheaper than real wood because it is made from vegetation available in large quantities, much of which is of otherwise little or no value, such as straws of all kinds, banana and other leaves, and any kind of grass. In all i ts characteristics it resembles hard wood, not being brittle like many other cellulose products, and being easily cut and machined. Moreover, it can be molded into any shape, such as boards, clabs, and parts of any inlaid pattern, thus saving a large amount of labor. It has other advantages, for it is not so inflammable as wood, and it has wonderful insulating qualities against both electricity and high or low temperatures.

PLUG-TYPE RENEWABLE FUSE HAS INDICATING LAMP.

Plug-type renewable fuses, having indicating or pilot lamps, are a protection against annoying delays when using electric irons, washing machines, ranges, vacuum cleaners, and similar household appliances. The fuse is designed to fit in any standard distribution panel or fuse block. When a fuse "blows," its lamp lights, showing instantly just where the trouble lies. Any novice may then unscrew the pilot lamp, insert a new fuse wire, of which a supply is wrapped on a bobbin at the side of each fuse, replace the lamp, and thus quickly restore the interrupted power.



At the left is a sectional view of the Plug-Type Renewable Fuse which contains an indicating lamp. Right: General view of fuse.

A trio of 11-passenger flying boats have maintained a four-trip daily service between Detroit and Cleveland, without a single accident or fatality among the 2,521 passengers carried during the present season. The traveler makes the 90-minute trip in a luxurious cabin that excludes noise and wind.

Point Barrow, the largest Eskimo village in Alaska, has seven white people and 600 Eskimos.

MACHINES FOR FLAX-PULLING TO SUPERSEDE HAND LABOR.

One of the most costly and tedious of the processes in connection with the manufacture of linen is the pulling of the flax, which hitherto has had to be done by hand. New attempts are now being made in Europe to do this mechanically, and several tests have recently been made of different flax-pulling machines. The most successful seems to be one that is now running in Ireland. This machine like others tried in England, France, Russia, and Canada, fundamentally consists of a comblike arrangement that grasps the flax stems, and by the resitsance of the seed capsules of the fiber plucks them from the ground. All weeds growing among the flax slide through the puller and are not plucked. After being pulled, the flax is thrown into a binding arrangement similar to that used in grain harvesters. It is then bound and shocked, also like sheaves of grain. The flax puller is hauled by horse or tractor, and only a driver and an operator on the puller are needed to operate the machine, which will harvest about 10 acres a day.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Lily Francis, of Belfast, Ireland, 18 months old, was burned to death while a boarder sat in the same room reading a newspaper. He was deaf and near-sighted.

Ah Sing Ching, of Ewa, Oahu, Hawaii, a 14-year-old boy of Chinese extraction, won first place in the American school children on the subject, "How Can the American Legion Best Serve the Nation?" The contest results were announced by Garland W. Powell, director of the legion's national Americanization commission.

Pairs of shoes made in the United States during the last business year numbered 318,424,917, or about three pairs for each person in the country.

What is believed to be the oldest specimens of canned beef in the world have been discovered by excavators in the tomb of King Tutenkhanum, at Luxor, Egypt. While it was not wholly palatable, being 3350 years old, the meat is in an excellent state of preservation.

A resolution to abolish the state legislature of Nevada and substitute a commission of seven for it will be introduced at once in the state senate at Carson, Senator Fitzgerald of Nye county gave formal notice recently.

Dr. Edward B. Morgan, of Paterson, N. J., who recently grafted portions of a pig's eye to the eye of Alfred Leunaowicz in an effort to restore the 17-year-old boy's sight, pronounced the operation a success. The youth declared he could distinguish between light and darkness.

POULTRY DEMAND EXCEEDS SUPPLY

Poultry Products Worth Billion a Year Not Enough for Country's Needs at Present.

Although America's poultry production exceeds a billion dollars annually, ranking the industry in importance with wheat, oat or cotton crops, the supply is insufficient to supply domestic demands, and large quantities of eggs are imported annually, it is stated in a recent poultry bulletin.

"Eggs and poultry will always remain necessary elements of human food on account of their high food value," the bulletin continues. "Nowhere in the United States has the limit of profitable production been reached, and on the Pacific coast and intermountain district the industry is still in the stage of thrifty growth.

"Poultry raising is an outdoor work. It is healthful, profitable, and useful. It provides a maximum amount of healthful exercise, although involving no manual labor that requires excessive efofrts or strength. Women as well as men succeed in this business. It supplies the best food for the immediate family if the flock is small and raised on a limited space, or it can be made a profitable sideline on every farm, while to the large commercial poultryman or breeder it becomes a highly remunerative specialized business.

"Now, are you sure this is genuine crocodile skin," she inquired critically examining a neat little satchel.

"Quite, madam," was the reply. "You see, I shot the crocodile myself."

"It looks rather dirty," remarked the customer, hoping to get a reduction in terms.

"Yes, madam," replied the shopkeeper, "that is where the animal struck the ground after it fell off the tree."—London Telegraph.

Pedestrians are getting so particular, they want to be run over by an expensive car not a cheap car.—Flushing (N. Y.) Journal.

Our own opinion is that the kangaroo is just one of Nature's abhorrive efforts to produce a safe pedestrian.—Baltimore Sun.

Leads French Army In Germany

Gen. Degoutte is in immediate command of the French troops now in control of the Ruhr district of Germany. At certain points he has thrown his troops beyond the basis boundaries and invaded neutral territory.

Household

Inexpensive Cream Puffs.

Cream puffs have often been considered a luxury because most recipes contain such quantities of butter, eggs and cream that the average family can not afford to serve them except on gala occasions. The experimental cooking department of the W. S. C. of home economics declairs, however, that:

When I my husband would beglaire,
And win from his nibs an extra smile,
I hie to the kitchen, turn up my cuffs,
And proceed to make some fresh cream puffs.
And the method I then pursue
Is what, if you please, I will tell to you.

One cup of water while boiling hot
I pour out from my little tin pot.
Into this stir one-half cup of butter,
And let it boil without fuss or flutter,
Then add of flour a good big cup
And stir very brisk till it comes smoothly up.

Now be patient; the task is nearly done—
Take from the stove and add 4 eggs, one by one.
Then this mixture drop light in the pan,
Keeping them oven and round as you can.
Then bake in an oven quite hot and brisk,
Though of burning you must run no risk.
That's the method, and if of their goodness you have the least doubt,
Just try it yourself, and you'll find out!

If you are of an economical turn of mind you do not need to use butter, for experiment has shown that other fats make equally good cream puffs. If used in proper proportion and have salt added for flavor. The butter puff requires a half cup, nut margarine one cup, but any oils, such as Mazola or Wesson, take but a third of a cup. Snowdrift and Crisco, too, seem to have greater shortening power. Though each takes but a half cup, it weighs, in the former instance 26 grams less than the butter, and in the latter 16 grams less, butter being 116 grams to the half cup.

Experiment has shown that, when rightly made, the products of these various shortenings is so similar that it is difficult for even the maker to distinguish between them. Texture, flavor, and looks are the same, and when filled an expert was unable to tell them apart.

The prime secret of making good cream puffs is to make them until they are thoroughly dried out. This prevents their falling and losing crispness when removed from the oven.

If you have been unable heretofore to make the light, crisp, crunchy cream puffs one sometimes finds in good delicatessen shops, but have found yours soggy and sad, try the directions in the verses above, which translated to tables are as follows:

1 cup water (256 grams)
1 cup flour (108 grams)
1-2 cup butter (116 grams)
1-2 teaspoon salt (2.6 grams)
4 eggs, whole.

The variants in butter substitutes is as follows:

Snowdrift, 1-2 cup (90 grams)
Mazola, 1-3 cup (73 grams)
Nut Margerine, 1 cup (116 grams)
Crisco, 1-2 cup (100 grams)

A teaspoonful of salt should always be used when these substitutes are employed.

All the pedestrians it is predicted, will become motorists sooner or later.

Perhaps if they don't become angels first.—Nashville Tennessean.

VETERANS MAY HAVE CLAIMS RE-OPENED

Bureau Asks Those Who Think Claims Valid to Press Them If New Evidence Warrants.

War veterans of the Pacific northwest whose claims for compensation have been disallowed, but who still feel that their disabilities are of service origin and should therefore be compensated are being urged by the Seattle district office of the United States Veterans' bureau to press their claims. This can be done by furnishing additional evidence tending to show war connection of the injury, it was stated.

Announcement was made that letters are now being written to some 6000 veterans of this district who made claim for compensation shortly after the war, but who failed to submit enough proo fto secure an award, requesting them to have their cases reopened if they feel that their claims are justified under the law. Most of these claims were made before the formation of the Veterans' bureau and the claim material is on file at Washington, D. C. If a claim is reopened, however, request will be made immediately that the case be decentralized to this district and the veteran will deal directly with the nearest office of the bureau.

A total of 186 compensation awards were made to hospitalized veterans of the district during a special campaign of claim adpudication conducted during the latter portion of November and the entire month of December. It was announced that 3,904 such awards were made in the entire country, this district ranking among the first considering the number of hospitalized veterans.

LIVESTOCK

"Crops such as barley, wheat, corn, peas, etc., all suitable for hog feeds, are grown successfully in this state," says Prof. Howard Hackedorn of the State College of Washington, discussing the problem of increasing pork production to meet consumption demands of Washington. "At the main experiment station, Pullman, the average yield of barley for the last six years has been 3115 pounds per acre, which is 634 pounds mor than the average for spring and winter wheat for the same period. Barley and wheat have a feeding value practically equivalent to that of corn. Corn, as a grain crop, is grown successfully in some of the irrigated sections. Alfalfa and peas are used extensively as forage crops and aside from furnishing a superior forage for hogs, the aid in conserving nitrogen in the soil."

Animals to be slaughtered, especially hogs, should not be fed for at least twenty-four hours before killing. Give the animal plenty of water during this time and this will tend to empty the animals stomach and intestines of food and help the amateur butcher considerably in removing these organs. To withhold feed also helps to get the animals to bleed properly, as an animal gorged with food has been found to bleed poorly. This is especially important in the curing of meats, for the meats that have small amounts of blood in the veins keep better and cure more rapidly than others. Hogs, when being prepared for slaughter, should never be excited and then killed after they are warmed up, as it tends to spoil the meat. If they have been chased about in being prepared, it is a good plan to allow them to rest before killing.

Newport—Dairymen in Pend Oreille county are completing plans to import dairy stock from the coast counties of the state. This stock will be obtained from cow testing association members and consist of high class heifer calves with a known production back of them.

NEW MARKET PLAN AIDS NORTHWEST

Orderly cooperative marketing of wheat has made the northwestern farmer, according to George C. Jewett, general manager of the Northwest Wheat Growers' associated.

"In 1921, our first year of cooperation, the northwest price was 98 against 100 in the middle west, while before the war the northwest price was 88 against 100 in the northwest," Mr. Jewett said.

"Last year the northwest price was 102 against 100 in the middle west. These are percentages, not the actual price. This change shows the effect of two years of orderly marketing."

Stabilization of prices is aiding the cooperative movement, which is now stronger than ever, he declared.

Mr. Jewett also declared that he has written his official indorsement of Senator Miles Poindexter for secretary of the interior, Walter J. Robinson, manager of the Washington wheat growers having taken like action.

They Grow 'em Big In North Dakota

John Aasen, 24 years old, of Minot, N. D., didn't know what to do with his 8 feet 9 inches and 450 pounds until the screen star, Harold Lloyd, sent out a distress call for a giant to help him on an unfinished film. Now he is in the movies—and he has made good.

DAIRY

Every time you abuse or frighten a cow, you throw her milk and butter machinery out of gear.

In raising calves, ground flaxseed added to skim milk makes an ideal feed.

In case a calf should fail to eat all its feed within a reasonable length of time, take it away and make the next feed very light.

For scrubbing the surfaces of milk vessels a good brush should be used. There is nothing more objectionable for this purpose than a cloth, particularly the cloth that has been used for washing dinner dishes or the pots or pans. A good hand brush can be purchased for a few cents.

Dairying plays an important part in the successful rotation of crops, and no better means can be found for turning all kinds of grain and fodder into valuable manure, so adding to the fertility of the soil, than by feeding them to dairy cows.

The farmer must raise something else in addition to wheat, according to a statement made today by E. Marcy, prominent farmer of the Moscow section, who farms 320 acres of Palouse land. From five ordinary grade milk cows properly cared for, without all the conveniences, a dairy farmer hopes to have Mr. Marcy has received in a period of nine months a cash value of more than $500. Like many farmers of the section the farmer must raise something besides wheat to prosper," said Mr. Marcy. "To me the meaning of having cows is a well fed and clothed family; work enough for all 12 months of the year; a bunch of nice pigs for market; a few well nourished calves; a market for alfalfa; and a few dollars all the time that no interest is paid on."

In purchasing milk or cream bottles, it is important to purchase standardized bottles, and when buying these insist upon having that kind of a bottle. The standard size bottle may cost a little more, but it is business to have only the best.

A 365-day test just completed on Eminent Jims Owl, the star Jersey cow at the Glen Tana ranch, Spokane, makes her the second Jersey in the world in milk and butterfat production, according to T. S. Griffith, owner. For the last year this cow produced 19,999.9 pounds of milk and 806 pounds of butterfat, equivalent to 926 pounds of commercial butter averaging close to three pounds a day for the year. The world record of 20,626 pounds of milk was set a few months ago by a Pennsylvania cow. Eminent Jimps Owl was twice grand champion at the Western Royal Stock show and for three years running was first at the Pacific International at Portland in the register of merit class. She is nine years old. Her best previous year's record was 16,085 pounds of milk.

AUTO NEEDS SPECIAL CARE THROUGHOUT THE ENTIRE WINTER

A Series by Prof. A. R. Nottingham, State College of Washington.

I. THE COOLING SYSTEM

Winter is hard on automobiles if special care is not given them. Every car owner should go over his car and see that it is in good shape before cold weather comes on; but he should not stop there. He has made an investment in an expensive piece of machinery, and should be able to use it when necessary in winter as well as in summer.

There is no reason why good service should not be gotten out of any well-made modern car if it is properly maintained during the cold weather. Deterioration is much greater during winter than at any other time; but this is true whether the car is used or not. If an owner has a use for the machine there is no reason why he should not get the good of it even in very cold weather.

The radiator should be cleaned out. The flushing plug which is usually found at the bottom of the radiator should be removed and the whole radiator washed out thoroughly with a stream of water from the hose. See that the drain cock is clean and works easily. It is also possible on many cars which have only one drain to run a small rod or steel wire to the end of the pan or to some external place on the machine where it can be turned to open the cock and drain the radiator. The handle of this should hang downward when the cock is closed. By pulling endwise on this and turning, the cock will turn freely and the radiator may be drained without soiling the hands or lifting the hood.

For ordinary city driving the fan may be stopped entirely and cardboard put behind the radiator or in front of it. Some men prefer to put a cardboard in front of the radiator just wide enough to slip in under the shell that covers the radiator core and paint it black. If there is enough room one can slide also a cardboard behind the core in front of the fan and the two can be fastened together by means of a cord sewed through both cardboards and the radiator. If the distance between this and the fan is sufficient, the fan can be run or not, as desired. For short drives in a small city the fan would not need to be run at all. For longer drives it should be run and the cardboard brought up to such height that the amount of cooling would be just sufficient to keep the engine from overheating and keep it at a good operating temperature. Use the robe or hood cover when the car is parked.

A car not having an automatic thermostat or a water pump can be operated with water alone in the radiator provided it is properly cared for. Where a person can fill the radiator readily with hot water, it is a desirable thing to do and the inconvenience of filling the radiator every morning is overbalanced by the gain in economy and smoothness of operation from the proper consistency and insure lubrication.

have to be watched closely. If it is allowed to stand during freezing weather, it is not unlikely that enough ice will be formed in the pump so that the pump shaft will be twisted off. If such a car is operated in the freezing weather, it is desirable to turn it over carefully with the hand crank before attempting to spin the engine. If a thermostat is used the circulation will be so slow that there will be danger of the radiator freezing in the more remote portions, although usually the top half will be safe enough even though it is exposed as indicated above. The louvers of the hood may be closed by cardboard to advantage for light driving.

It is not sufficient that the radiator be free from ice when the car is started, for even if the radiator be filled with boiling hot water, if a person drives steadily on a level road, the chances are that the bottom of the radiator will become colder and colder until it may freeze and burst the lower section, even though the engine seems to be running normally. This is a common experience during zero weather. In any event, if the radiator is not properly protected the engine will run much colder than it should. For an anti-freezing solution consult your instruction book or garage man. (Further directions on this point will be given in another article.)

Driving the car with engine pulling a moderate load when it is too cold is sure to result in diluted oil and improper lubrication of the engine unless the oil is changed very frequently. If zero weather or below is anticipated the oil should not be too thick. It will of course dilute until it is entirely too thin to lubricate properly, if the pistons do not fit perfectly. The average operator must operate between two extremes, either of which mean poor lubrication. If medium to light oil be used and the engine warmed up by filling the radiator with hot water, or by running the engine before the car is driven on any appreciable pull, condensation of the gasoline and dilution can be reduced.

When the thermometer goes much below zero the average oil becomes about as thick as vaseline. If in doubt about the condition of your oil, pour a sample of it into a clean bottle, set in an exposed place in the garage and leave over night. By examining this every morning when you come in the condition of the undiluted oil may be readily ascertained. This thickening is more pronounced in the rear axle and in the transmission, which are filled with a thick grease and become so thick that even starting this is accomplished with difficulty in extremely cold weather. The lubricating quality is poor; also the power lost is considerable. For this reason, these chambers should be filled with a thin oil so they will come to the proper consistency and insure lubrication.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Agriculture.—Don't sell your honey below cost of production. See Bulletin 88, Extension Service, to determine cost.

Clothing.—Before selecting a hat, the wardrobe should be carefully looked over to see with what clothes the hat is to be worn.

Dairy.—Curry and brush the cows frequently enough to keep their hides in good condition. A daily brush is good practice.

Farm Crops.—Test all garden seeds for germination with a dinner plate filled with moist sand, using a second plate as a cover.

Farm Management.—Use the financial record of your farm account book as a basis for figuring income tax.

Horticulture.—Make arrangements now to have the orchard sprayed. If you own spraying machinery, put it in condition now.

Livestock.—Fifty pounds each of bone meal and charcoal, together with 25 pounds of salt, forms a good mineral mixture for hogs.

Plant Pathology.—Your potato seed should be free from disease.

Home Management.—Plan your regular housework so as to have time for spring sewing.

Poultry.—The good rooster must be well fed. Provide a small grain hopper just high enough to be out of the hen's reach so he may have the grain.

Facts and Near Facts

It has been estimated that on a mature maple tree of vigorous growth there is one-half acre of leaf surface exposed to the sun.

If we were to make a model of the human brain, using for the neurone fibers, wires so small as to be barely visible to the naked eye, in order to find room for all the wires the model would need to be the size of a city block on the base and corresponding-ly high?

If a man stood on top of the highest mountain on earth and aimed a level gun in any direction, the bullet, if it could be given sufficient velocity to counteract the influence of gravity, would go around the world and hit him on the back of the head.

If light were sufficiently deflected by gravitation to follow a level line around the earth, the man looking through a level telescope in any direction could see how his hair was combed in back.

There are in the United States one sixth as many Canadians as in Canada and enough Irishmen to make four Dublins.

Holstein-Friesian Meeting.

The annual meeting of the Washington State Holstein-Friesian association will be held at Seattle on Tuesday, February 6. The meeting will be called to order at 10:30 a. m. at the Frye hotel.

Bee Men Get 3,000 Queens.

As a result of demonstration work conducted among the beekeepers of the state by the extension service of the State college, 3,003 pure bred queens were introduced. This means that 2,003 colonies of bees will be able to increase their honey production next year.

Harness Oiling

The harness oiling season has arrived and our Dipping Vat is now working, We are prepared to turn out this work at the old price of $1.00 a set.

Our method consists of dipping the harness and letting the oil soak in where it is needed. Not merely getting the outside oiled, but completely saturating all parts, the work being done in a steam heated room where the best results are obtained.

If you want to do the job yourself, we will sell you the harness oil for $1.00 a gallon, put up either in gallon cans or in bulk.

Don't use Petroleum Oil for Harness Oiling. It does more harm than good. We use a Neatsfoot Compound Harness Oil especially adapted for the work, and buy it in sufficient quantities to enable us to sell it at the low price of $1.00 a gallon.

CASEBOLT, The Harness Man

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possesions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

OMAR'S GARDEN, GIVEN BY LEWISTON K. P.—FEB. 5-6-7

"The most successful results I have ever had with any cast." Such was the remark made last night in Lewiston by J. W. Evans, who is producing "The Garden of Omar," the stupendous and elaborate musical comedy to be staged on Monday, Tuesday and Wednesday nights of next week—5th, 6th and 7th—at the Temple theater in Lewiston.

The production is under the auspices of the Knights of Pythias and D. O. K. K. and Mr. Evans, the director, will be remembered as the man who so successfully produced "O, You Mary Jane" and "The Whirl o' the Town" in Lewiston.

The "Garden of Omar" requires a large stage and a large cast. The scenery is exceptionally fine and all parts give a wonderful opportunity for talent.

When given on Tuesday, January 16, at Yakima, Washington, it scored a great success, the Herald of that place commenting as follows:

"For gorgeous spectacle, elaborate costuming and good dancing, there has never been an amateur performance in Yakima to equal "The Garden of Omar" put on last evening by the Valley Shrine club. The oriental settings were lovely, the gowns rich and colorful, and some of the massed effects, with nearly a hundred brightly arrayed persons on the stage at once, were striking in their brilliance and quite out of the amateur class. There were caliphs and shieks and pashas, all fiercely mustached and voluminously robed, and fan-waving black slaves and all the oriental paraphernalia carried out to the letter."

In accordance with Mr. Evans' plans rehearsals have been very successful, the lines all learned, dances perfected and the work of preparation carried through with the same whirlwind of enthusiasm that characterized the former productions given here under his direction by the Knights of Pythias. "A thousand laughs in two hours."

Reservations are to be had at the Owl Drug Store, Lewiston.

Christian Endeavor Notes
(By Robert Parks)

The Junior Endeavorers held a Chinese meeting Sunday afternoon. Grace Jain had charge and acted the part of an American teacher while the "pupils" sat on the floor as Chinese children.

Jack Whitted led the senior Endeavor Sunday evening, which was one of the snappiest meetings held in a long time. The topic was "What are the rightful claims of our church upon us." Many good talks and arguments were given upon the subject. Two numbers of special music were given—a piano solo by Grace Jain and a vocal solo by Wilma Casebolt.

A large delegation will go next Saturday to the Pullman convention.

Card Club Entertained

The card club met with Mrs. J. H. Jackson on Tuesday afternoon of this week. Pinochle furnished entertainment for the afternoon. Mrs. J. J. Tupker, Mrs. W. W. Burr and Mrs. F. C. Shork cut for honors, Mrs. Tupker being the lucky one.

Mrs. W. W. Burr sang a solo entitled "A Dream," which was very much enjoyed by the assembled ladies.

The invited guests were Mrs. A. E. Elver, Mrs. Johanna Christenson, Mrs. Jack Barnes, Mrs. F. J. Niemann, Mrs. F. H. Thomas and Mrs. T. H. Herman.

The next meeting will be with Mrs. Glenn Sampson on February 13.

An Embryo Fire

The towns was aroused to action Thursday morning when the fire bell sounded an alarm and the people turned out in a flock to help pull the hose cart to the scene of the conflagration, which proved to be at the Charley Geltz home, but the fire was extinguished before any particular damage was done.

It seems that Mr. Geltz had been thawing out pipes and the sawdust in which they were packed caught fire between the double floor, making quite a blaze which, however, was easily extinguished.

PERSONAL MENTION

Joe Brakebill left onday, via Lewiston, for Portland.

Clement Shafer of Lewiston spent the week-end visiting at the Chas. Jain home.

Mr. and Mrs. Joe Reil left Thursday morning for Lewiston for a two-weeks visit.

Phil Burtch arrived Wednesday morning from Clarkia, where he has been working.

George Follet was a Wednesday morning passenger for Pullman on a short business trip.

Mr. and Mrs. Wm. Cunningham were Friday morning passengers for Spokane for a short stay.

Mr. and Mrs. W. M. Herman went overland to Moscow Monday, returning home Tuesday morning.

Mother Superior of Cottonwood, who has been visiting here, left Thursday morning for Colton for a short stay.

Mrs. J. G. Wilkins returned to her home at Tacoma Wednesday after a visit at the home of Mr. and Mrs. Pete Isaksen.

Mrs. Bryan Trail arrived from Spokane last week to spend a couple of weeks with Mr. and Mrs. Carl Osmundson.

Mr. and Mrs. Ingraham and children were Friday morning passengers for Everett, where they will make their home.

Mr. and Mrs. Fred K. Bressler, accompanied by Mr. and Mrs. W. W. Burr, drove to Lewiston Tuesday evening to attend the musical comedy, "Oh Look."

Mr. and Mrs. W. J. Harlow and family left Tuesday for Clarkston, where they will make their home. Mr. Harlow will be employed by the Troy Lumber and Manufacturing company.

Progressives Meet

The Progressives met with Mrs. F. S. Casebolt on Thursday, January 25. The afternoon was spent with fancy work and the hostess served delicious refreshments, assisted by her three daughters, Helen, Wilma and Kathryn, and Emma Lou Sullivan and Pearl Perkins.

The invited guests were Mrs. Geo. Follett, Mrs. Nellie Haymond, Misses Ruth and Esther Martinson, Lela Patch, Edith Winegardner, Irma Russell, Hortense Rockwell, Vaughn and sister of Lenore, Idaho.

On the evening of February 8 the club will entertain their husbands at the home of Mrs. Fred K. Bressler. All members are urged to be present.

Probably a Chiropractic Did It

If old man Winter had his back broken early in December, he sure must have had a husky chiropractor working on him for he seems to be about as husky as ever.

School Notes
Wilma Casebolt

The basket social given for the benefit of the Athletic association last Saturday night at the school building proved to be quite a success. A short program was given after which the baskets were sold, bringing the sum of $26.25. A good time was shared by all and the Athletic association is that much ahead.

The Troy-Genesee basketball game has been postponed, but the town team will compete with the high school team tonight at the opera house.

The junior class has earned the Roosevelt picture for the highest average attendance throughout the school during the past month.

The sixth grade boys had no absences in the past month and the girls had but one half day's absence.

The Senior English class has been writing essays. The following was written by Norris Sather, whose theme was one of the best: It was entitled "Bluffing."

"Bluffing is used by all people at some time. In school some students come to class with unprepared lessons and instead of telling the teacher that they don't know the lesson they put up some big bluff. These students know something about the question when they begin, but after finishing, they are farther away from the real facts than they were at the start. Such a practice does no one any good. It only takes up time that could be used otherwise. Bluffing might pass by unnoticed a few times, but if it is kept up it will have bad results. In the world bluffing does not bring a person anything, but only gets him into trouble. Sometimes an individual bluffs to get to play the part of a friend, but when the truth comes out it means ruin for the person who tried to bluff. As a rule, bluffing does no one any good for it usually has disastrous results."

Groundhog Day

Friday, February 2 is groundhog day. If that pesky little animal happens to see his shadow in this section of the country the assistance of the Coyote club will be called for before another season rolls around and they will be asked to exterminate all the species round about.

An orchestra "never here" will appear with the ladies' minstrels. Come see. Watch for date. 31-1

House slippers at cost; hankies at cost; house aprons and dresses, $1 to $3.50. Ida Wheeler. 29-2

Little Topsy took sick, so delayed the ladies' minstrels. Watch for date.

The Washington State Soldiers' Home at Orting

By MATTIE T. CRAMER.

If you travel south from Orting, Washington, about one mile you will arrive at the State Soldiers' home, where some 343 veterans—men who have faithfully served our country through stormy periods of strife, and when the need was greatest—are now resting in peace and quiet and not burdened with a single thought of their livelihood.

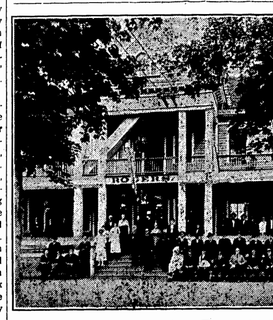
As it was 57 years ago since the close of the Civil war, many of the inmates of the home are between 80 and 90 years of age, while the youngest is 75. Even before you enter the grounds you will observe some pathetic-looking figures on the driveway leading to the home, taking their daily constitutional, and getting about with the aid of canes or crutches. Two of the inmates of the hospital are nearing the century mark. "Tommy" Bradshaw is 96 and Dr. Bishop, a recent arrival at the hospital, is 99.

The grounds and buildings are attractively beautiful. Giant trees, some of which have stood the elements for half a century and are still flourishing and furnishing generous shade, ornament the grounds here and there. Shrubbery consisting of rose bushes, bearing perfect buds in late November; lilacs, snowballs, flowering almonds, syringa, all these enhance the beauty of this ideal spot as well as does the wondrous flower garden. This past summer the flower garden has been exceptionally attractive and in dahlias alone there were more than sixty different kinds. Mr. Hardwick Brown, a Civil war veteran, has charge of the garden and proves his efficiency by results.

A fountain plays all summer long in front of the Washington building, and seats at frequent shady places make conditions ideal for rest outdoors. A new bandstand has been erected this summer and as the veterans are very fond of music, it becomes a joyous event when the Orting band goes out and gives them a band concert. The veterans sit or stroll about listening to the music, the martial airs of which carry them back to the days when they fought with Grant and Sheridan and life was all ahead of them. In the eyes of some tears will unbidden start.

Commander J. W. North, superintendent of the home, is a Civil war veteran and has personal supervision of the large farm and garden comprising 235 acres. Mr. North oversees all the cultivating, the harvesting, the building and all of the work that is carried on about the place. Mrs. North, wife of the commander, who is matron of the home, is an usually energetic and capable woman and takes the greatest interest in everything pertaining to the home and the inmates. In fact, she is like some good, thoughtful mother in the manner in which she plans, arranges, and works for the comfort and well being of her large family.

There are now 343 veterans on the roster. Of this number 300 are Civil war veterans, 35 Spanish-American war veterans and a few World war veterans, one or two of the latter are employed about the home. The men come from nearly every state in the Union and as a whole are a happy bunch, especially when recalling the days and scenes where their patriotism and valor counted for so much in the struggles of the nation.



Decoration Day, 1921

All the vegetables, pork, veal, and some of the beef used for the table, are a product of the farm. The 135 swine are a thrifty looking drove, and furnish the sweetest, juiciest pork imaginable. "And everything about the pig, even to its squeal, is used here," declared Mrs. North, "for when the menu contains pork daily, those who do not like it, squeal."

The dairy herd at the home numbers 17 Holsteins and these cows furnish all the milk used in the institution. The milk is not skimmed but the whole product is placed in pitchers on the table so that the veterans are not a skim-milk fed bunch.

Two years ago when there was no poultry on the farm, Mrs. North took 15 hens and one rooster to raise chickens on shares and so successful was she that the flock today numbers 900 of White and Barred Rock strain. Besides furnishing eggs the pens this year have furnished cockerels for three Sunday dinners (44 roosters for one meal) and Thanksgiving and there was enough left for Christmas dinner. William Bicknell, veteran from New York, has charge of the chicken pens and finds pleasure in caring for his feathered flocks.

The buildings at the home are all fine specimens of architecture and include the Washington building, the oldest, which is 33 years old, yet in excellent condition, and at the present time contains 33 beds for as many veterans. Then there are the Rogers, the McKinley, the Garfield, the hospital, the dining hall, the commissary building and a number of smaller buildings used for the tailor shop, the shoe shop, carpenter shop, etc. The interior of the Garfield building has recently been remodeled and the two large halls have been converted into 40 individual rooms. The barracks are equipped with reading rooms, pool rooms, and the fireplaces are an added comfort-giving feature. Here the veterans can "toast their shins" in the cozy warmth of the grate and under the witching firelight grow reminiscent of old camp-fire days.

There are quite a number of celebrities among the veterans. Mr. Lou E. Beach is the poet laureate. Mr. Beach has versified some beautiful thoughts —patriotic and otherwise—and published a book containing a large number of his poems. There is Mr. A. Galloway, whose bungalow baskets won much admiration and many orders when he exhibited samples of his handiwork at the Northwestern fair at Puyallup this fall. Mr. G. L. Jones, who has been a lecturer on spiritism and has written and published a book on the subject. Mr. W. F. Murray, 82 years of age, who is the shoemaker of the home and has a small building for his business. He not only repairs old shoes but has a hearty laugh for his patrons and sends them forth with good shoes and good cheer thrown in. Mr. J. C. Williams, 75 years old, is the official carpenter of the home, and this year built the large poultry houses and chicken runs and does all the repairing of furniture at odd times in his shop. These men are happiest when busy with their work and their hobbies, which help them through the tedium of many a day when they can not go out of doors with comfort.

Mr. H. A. Webber, another Civil war veteran, is the electrical engineer, and he has arranged many labor saving devices for the kitchen, among which are a potato peeler, bread mixer, dish washer, hasher, steamer, double-jacket preserving kettle, and lastly a bone grinder the prepare the bones for the poultry. Mr. Webber also makes good use of the engine of a tractor to grind feed and ensilage for the cows, pigs and chickens.

Of course great quantities of foodstuffs are consumed daily. It takes 50 loaves of bread, about 75 pounds of meat and vegetables and fruit galore, each day. Think of canning and preserving one and one-half tons of pears, one ton of apples, one-fourth ton each of prunes and plums, 500 pounds of rhubarb, 300 pounds of crabapples and 600 pounds of tomatoes. Mrs. North has done all this with very little help since July of the present year. You would agree that this alone was a big task could you look into the fruit room and there behold 600 gallons of fruit, 1000 glasses of jelly, and gallons and gallons of pickles and jams and fruit butter. All the fruit put up was produced in the garden and orchard of the home, though the fruit this year was not as plentiful, for there were only 79 boxes of apples stored for winter use, where last year there were 395 boxes stored.

A visitor went to the home this fall to see Mrs. North and found her in one of the small commissary houses leaving few records except patches of upturned earth and sometimes their bones. Then the soldiers, in their struggle with the red men, and a thousand farms are crossed by their trails along which occurred so many stirring episodes. And then came the pioneers, and these heroic men and women; yes, and little children too, were the people who have planted civilization, the abundant harvest of which is now seen in that glorious mountain encircled picture. Rolling hills, level valley, silvery water-courses and gleaming lakes making the back-ground of modern civilization, vast reaches of golden wheat, and oats, and barley, and other grains. Tons of thousands of tons of alfalfa, clover, hay, besides potatoes, beans, peas, corn, and almost everything that grows. Orchards with fruit so abundant that the trees break unless the fruit is thinned. Berries and sugar beets. The amazing fertility of the soil with the brilliant sunshine and wonderful climate almost realize the joke that if one were to plant toothpicks they would grow into fence posts. While fattening and thriving from these productions are cattle and dairy herds, horses and sheep, and every kind of hog except a thin one.

CUT IT OUT SERIES

By J. NELSON BARRY.

When we have an especially beautiful or valuable picture we like to frame it. That is just what has been done with eastern Washington. The Selkirk mountains on the north, the Idaho mountains on the east, the Blue mountains on the south and the Cascade mountains on the west form a frame around the land of sunshine. These mountains supply inexhaustible supplies of water, lumber and fuel from their illimitable forests, and coal and minerals and metals in great quantities. A fitting frame for such a picture as they enclose.

Ages ago the fertile loam which covers the region was deposited from which such luxurious crops are being raised. The rolling hills, the level plains, the winding rivers and streams, the multitude of lakes and ponds, and the constantly increasing irrigation areas, with the wonderful climate, the glorious sunshine and exhilarating healthfulness is rapidly fulfilling the motto of the state, "Alki," and has already created conditions which should make some different motto more appropriate. "Alki," by-and-by, was a suitable motto for the past, but now that the hopes have become realities, we should have another which expresses the idea that we have achieved and are still progressing, possibly some reader may suggest a suitable one. The fact that such a change is needed is itself a striking feature proof of the picture that forest-clothed frame encloses.

Few persons realize the romance and heroism of the past in this region, and many a farmer would find his property become a center of interest if it could be known what stirring events had taken place there in the past. The first travelers who penetrated into this far-off Indian country have left abundant records, and many volumes have been written since. The writer of this knows by experience how the discovery that the locality in which he resided was the very scene of events a century before first awakened an interest which not only resulted in discovering additional facts, but also aroused the entire community to appreciate and take pride in the romantic past. Some reader of this may find that his home is the site of picturesque or heroic episodes of which he had not known.

The first contact of civilization found here were horses branded by the Spaniards of the south and at least one person who had been a captive in California who brought memories of the ringing of a church bell. The Lewis and Clark expedition twice crossed this region and has preserved a great amount of interesting data. Then came the free trappers, who ranged fearlessly far from the extreme borders of civilization. Then came the fur traders, with the rivalry between the Americans and Canadians, the erection of fortified posts and the constant travel over every section. And few people appreciate the fact that the leaders were intelligent, well-educated men whose books and records have a fascinating wealth of interest. Then came the missionaries, who also gave a page of history filled with heroism and tragedy. Then the miners, singly and in groups searching for the precious metals, but third more. Some of the marriages contracted in the colony are real romances and the date of friendship of parties married within the last year or two, began away back in the early '60s. Here old age is pushed into the background and many an ardent groom of 70 or 80 winters has led his blushing bride to the altar and then they have settled down to connubial bliss in one of the picturesque cottages to be found here and there in what is known as the colony.

The Orting State Soldiers' home is reached on the Northern Pacific railroad and is 18 miles from Tacoma and about 35 miles from Seattle. The town itself is located in one of the most fertile and picturesque valleys of the Cascades with a wonderful view of the wondrous Mount Rainier. It has a population of about 1000 virtuous souls. Arriving here from some populous center where the din and speed and congestion is frequently bewildering, one can easily imagine he has reached some enchanted land inhabited by another race of people. The peace and quiet pervading even Pioneer road street, the principal street of the town, is soothing and restful. The inhabitants take life very slowly and comfortably and some of them are delightfully quaint and old-fashioned in their dress and customs.

Dr. D. A. Gove, an old resident of the town, is the physician for the home and colony and a very familiar figure in both places.

Affiliated with the work of the colony are several organizations including two G. A. R. posts, the Orting and Lawton; two W. R. C.'s, the Orting and Lawton, and the Ladies of the G. A. R. These auxiliaries are instrumental in carrying on social and charitable work among the veterans and their families which otherwise would not be so well done. They maintain halls in Orting and there hold their social and business meetings and give their monthly dinners, and at times conduct sales and bazaars.

Wow! Wow!

A big game hunter had just returned from the hills and was recounting some of his adventures.

"The most astonishing experience I had," he said, "was when I fired my last bullet at a bear and missed him."

"Did the bear give you a chase?" asked one of the listeners.

"No. You see he knew me by my reputation and was so surprised at my missing him that he fainted dead away."—American Legion Weekly.

Honk! Honk!

"The road to the police court," mused the motorist, "is paved with good pedestrians."—The Passing Show (London).

IDAHO

Construction of a large motion picture studio at the upper end of Priest Lake, Idaho, is to be started by Miss Nell Shipman, popular motion picture actress, as soon as the weather permits, it was announced recently. About it will be constructed a score of artistic buildings which will compose a complete motion picture colony, with laboratories, indoor stage, executive office, projection rooms, dark rooms and power plant.

To make Coeur d'Alene the biggest summer resort in the entire northwest is the intention of Coeur d'Alene business men, who already are studying plans for improvements which would bring about the desired result. The completion of the Appleway, giving a paved highway from Spokane to the lake city, removed the last barrier, according to George C. Reeder, editor of the Coeur d'Alene Daily American.

Improvements costing $70,000 on the Spokane & Eastern and the Spokane & Inland Empire railways, to be made during 1923, are provided for in the budget recently approved by F. B. Connors, general manager of the two lines. The total amount will be divided between the two railways.

First prize in the annual declamation contest at the State College of Washington was taken by Glenn F. Maughmer of Kootenai, Idaho, with Ingersoll's speech on "Riches and Happiness."

Details of the proposed establishment of a soap factory at Priest River for the Oil Soap Products company of Spokane were outlined recently at a meeting of the Priest River Commercial club. One hundred and ninety were present and listened to a talk by J. B. Aldrich. Following the discussion a committee consisting of A. W. Burleigh, V. C. Lathrop and L. E. Van Winkle, was appointed to investigate. Mr. Aldrich declared that much raw material suitable for soap making exists in the hills around Priest River, and laid stress on the importance of the industry in boosting general activities in the district.

"Work on the steel bridge across the Moyie river at the falls above Bonners Ferry will be started just as soon as the weather permits," Harry Nesbit, construction engineer with the Illinois Steel and Bridge company, stated recently. The bridge will cross the Moyie whirlpool at a height of 160 feet above the water. Work on the foundation was completed last fall.

At a meeting of the St. Maries Chamber of Commerce, members' forum and banquet here recently the question of paving was the principal topic of discussion. More than 150 citizens and their wives discussed the question at length.

According to the report of President Charles Wesely Tenney, who had just returned from Chicago for the opening of the second semester January 22, Gooding college was elected to membership in the Association of American Colleges at the regular meeting, which was held at the Sherman hotel last Saturday.

Judge W. N. Scales denied the petition of Weldon Orr and Angus McNeish that a receiver be appointed for the Deer Creek Mining company, with properties in Lewiston. Orr and McNeish have a second judgment against the company, and sale of the mining plant is scheduled for Friday to satisfy a judgment given P. P. Johnson. The two claims amount to more than $6000.

Dear, Dear, Dear!

Speedo—When a hunter is about it's worth money to a farmer to have his cow act like a deer.

Peppo—Yes and she's dear to the hunter who shoots her.—"Topics of the Day" Films.

Aptly Put.

"Pups, what is a pedestrian?"

"An individual, my son, that is always found in front of automobiles."—Le Rire (Paris).

THE CLOD---A MENACE TO GOOD CROPS

By Leonard Heganuer, Extension Specialist in Soils and Crops, State College of Washington.

A cloddy seed bed can never produce satisfactory results. The physical condition of a cloddy field is such that plant food can not be liberated fast enough nor in sufficient quantity to make crops profitable. The moisture and air relations in such a soil are so very poor that the work of the soil bacteria is greatly hampered and production is unavoidably low.

To make it possible for crops to get plant food promptly and in sufficient quantity, it is absolutely essential that the soil should be pulverized and in good tilth. It is just as important that a soil should be in a mellow friable condition as it is for that soil to have an abundance of plant food.

Clods Are Worthless.

Clods, when once formed, often require much time and labor before they can be made to crumble and become real soil again. So long gas the soil remains in the clod it is of no value whatever to the crop, but is a positive hindrance. It often takes a year or more to get rid of the bad effects of a cloddy condition.

A soil should never be allowed to get cloddy, or if it has gotten so, unreasonably it should be brought back again just as quickly as possible. Soils of the silt and clay types are those most likely to get out of condition. The greatest danger is always found in heavy soils—those that are made up largely of very fine particles.

Many fields have been injured through the tramping by livestock when the soil was wet. If plowing is done before the soil is sufficiently dry, a puddled condition is very apt to result and the soil will bake. If, on the other hand, the soil is allowed to go undisturbed too long, it will break up very lumpy and hard. In either case it requires an excessive amount of time and labor to get the ground in shape and in many cases it is almost impossible to get a seed bed of sufficient fineness.

Use Double Disc.

It is found desirable, as soon as the soil is dry enough, to double disc the ground before plowing. If this could be done on all ground where there is danger of having poor conditions, due to the causes mntioned above, it would help greatly in the preparation of a suitable seed bed. It will require much less work after plowing and the soil loosened and pulverized by the disc, will make it possible to get the seed bed firm underneath, so that moisture later on can come up readily from below. The soil will crumble and become fine and friable so that plant food will become available easily and plants will grow normally.

If for any reason plowing should be delayed, the disced ground can always be plowed later and the soil will not get too dry or out of condition.

Railroads with every modern convenience, trolley roads and automobile roads form a network which enables the farmer to market his produce and the family of the farmer to obtain everything desired. The telegraph and telephone and electric power lines already extend throughout the region with future development unlimited. The streams and lakes and neighboring forests afford fishing and hunting and recreation, while dotted over the country are the cities, towns and villages with modern conveniences and most up-to-date improvements. There are not jokes about backwoodsmen and country "rubes" in this section. The well-kept farms and comfortable modern homes with every requisite and improvement tell the story of prosperity and comfort, while probably the most striking characteristic is found in the educational advantages. In every town the most prominent buildings are the schools, while the state provides additional opportunities in normal school and college.

In this glorious land of health, fertility and sunshine, with prosperity and peace there is only one drawback —the people who live here NEVER WANT TO DIE.

"SPEED"

By Herbert Crooker

Copyright by Pathe Exchange, Inc.

CHAPTER III.

"Well, that's the end of 'Speed' Stanbury, Edwin," smiled Vera Harper. "Now that he's shark meat, it won't be necessary for us to exert ourselves to keep him from seeing Jim Sprague. This is going to be a pleasure jaunt after all."

But the fair lady was far from right. "Speed" had succeeded in putting the shark out of business with his keen pocket knife, and at that very moment was clinging to the logline of the ship. As soon as the excitement subsided he planned to work his way hand over hand up over the side of the vessel.

Consequently, when Lucy Durant walked sorrowfully past the huge ventilator on the after part of the ship, she was extremely surprised to hear the voice of the man she loved.

"All's kippy," "Speed" whispered, "when wo land, make immediately for the hotel—we'll hunt for Sprague from there."

Shortly after Edwin Stanbury and Vera had arrived at the hotel, Hagerty presented, himself, an expression of anxiety on his face.

"Say," he blurted, "that cousin of yours aint shark meat after all. He was seen makin' a getaway from the ship. And that ain't all—I've discovered his gal is stopping at this very hotel, and if that's the case why 'Speed' can't be far away."

Edwin Stanbury was about to reply when a strange, picturesque looking figure swaggered up and presented himself. The man was a Spaniard—a little man—but his face was cruel—cruelty in every line. Edwin looked at him and shivered.

"You—you are Pedro?" he stammered. "You have news of Sprague?"

"I am Pious Pedro, Senor," came the slow answer. "I trust you have enough gold to satisfy a man of my extreme piety. Your Americano dog is in my stronghold—the old fort on the Vicuna Road, six miles from here. I can assure you he is safe and comfortable."

As Pious Pedro finished, a figure slunk out of the dark corner of the plaza and hastened to the desk of the hotel.

"Give this note to Miss Durant," he said. "It is very important." And then "Speed" rushed for the hotel stables, seized a horse and dashed off in the direction of the old Vicuna Road.

Shortly after, Lucy Durant entered the hotel. Vera Harper spied her first and pointed her out to Edwin. Then an idea struck her. Turning to Edwin, she smiled ironically and said, for the ears of Pedro:

"Suppose Pedro here were to take Lucy Durant under his protecting wing? We could hold that as a club over 'Speed's' head and make him drop his search for Sprague?"

Pious Pedro needed no more suggestions. Nodding understandingly to his new friends he swaggered out toward the hotel lobby. But Lucy was busily engaged reading the note that 'Speed' had left.

"Got away from Hagerty," it said. "Have found out where Sprague is—in the stronghold of the bandit, Pedro—the old fort on the Vicuna Road, six miles from here. Follow fast with Gaston." The note bore the signature of "Speed."

"You are Americans?" asked the pious one, approaching Lucy and Gaston. "You wish a guide?" The two exchanged glances.

"Why, yes," smiled the girl, "we wish to go to this old fort up the Vicuna Road—the rendezvous of this bad man, Pedro. You will take us?"

The bandit grinned. "I will go," he replied, "but not all the way. I will take you within half a mile of the place and direct you the rest of the way." A bargain was struck and the trio galloped off. Not, however, until Pedro had received instructions to some of his band.

"Speed" Stanbury had arrived at the stronghold safely, and after nonchalantly knocking one of the guards on the head succeeded in entering. When the guard opened his eyes, he had presence of mind enough to do a lot of shouting. Consequently, "Speed" was in the midst of a very interesting scene just as he was about to lay his hands on Jim Sprague.

The latter cursed at "Speed" as though he had seen a ghost. But being assured that there was nothing supernatural about young Stanbury he joined sides with the Spaniards and led the attack. With a mad rush, "Speed" hurled himself at the natives, swept them off their feet and leaped for his quarry—the one man who could clear him and prove his alibi. But at the same time, the drawbridge opened and Pedro and Lucy galloped in, followed by a cavalcade of the bandit's men.

Lucy took the scene in at a glance. She had had a trying time of it. Hardly had they been on the outskirts of the city when, Pious Pedro proved the irony of his name by knocking little Gaston from his horse and urging his own steed forward after seizing the bridle of Lucy's horse. The girl had struggled to get away, but in vain. And now that she was in his stronghold, she wondered how she could effect an escape, and how she could aid "Speed" Stanbury.

"Speed" had not seen the girl he loved yet—he had not had time. All he knew was that the cavalcade had suddenly entered the courtyard and that he would have to extricate himself from the mess he had plunged into and do it very quickly. It was annoying to think that he could have easily made away with Sprague, had not this cavalcade appeared.

The pecns were now struggling to their feet and rushing at the Americano bent on revenge. Sprague had been knocked down twice, but now that he saw his captors were coming, he summoned new courage. His captivity had not been pleasant, but it was better to be a prisoner of Pious Pedro with certain privileges than be carried back to the States and face the charges that had piled up against him.

"Speed!"

The young man heard the shout and could scarcely believe his ears. Then, he fancied he could make out the face of Lucy on horseback, with Pedro clinging to the bridle. The girl thought quickly. Then, digging the spurs suddenly into the sides of her splendid steed, she jerked the bridle from the hands of the surprised bandit and dashed toward "Speed." The young man dealt another fierce blow to Sprague, felling him, and then sprung up on the horse back behind Lucy. Together they rode swiftly up a stairway to the low roof of the fortress, galloped along until they came to the moat and then plunged below, clinging to each other and endeavoring to remain on the horse's back.

With a shout, Pedro led his men back to the gate and after the two young people. But "Speed" and Lucy had the start on them and were already disappearing down the road in a cloud of dust.

"I'll get off, dear," "Speed" whispered. "They'll catch us sure if I stay on. Wait for me over the hill by the railroad tracks—I'll take care of our pursuers and meet you."

"Speed" slid from the horse's back while Lucy galloped on. Two horsemen were coming down the road—then one turned off, thinking the pursued had taken a short cut. "Speed" climbed to an overhauging branch of a tree, under which the horseman would have to pass. He waited and leaped directly on the back of the native. The struggle was brief. He hurried on to overtake the girl.

Lucy had arrived at the railroad track in safety. Seeing a box car on a siding, she decided to seek refuge inside until "Speed's" arrival. But the girl was suddenly surprised to feel the car moving slowly downgrade. She turned the brakes—but in vain. They would not move. She ran to the rear platform of the car and shouted. A horseman in white was fast approaching. It was "Speed."

The young man had heard the girl's cries and urged his horse after the moving box-car. It was swiftly gaining momentum, but he had no difficulty in overtaking it. In a few moments he had swung from the horse's back to the rear of the car.

"I can't stop it, 'Speed'!" the girl cried.

"Speed" rushed to the brakes and tugged—they would not move. Faster and faster the car speeded as the grade was becoming steeper. Around a sharp turn they whizzed, and then dead ahead of them they saw a deep chasm—and then the track ended, as the bridge was broken. Before either could make a move, car and all plunged down into the rushing waters below.

(To be continued.)

1923 CATALOG

now ready. This is a very valuable book for reference. Pages 4-5-56-125 and 126 are specially interesting. All varieties of vegetable and field seeds suitable to this section are illustrated and described. Eight full pages given to shrubs and nursery stock.

See page 55 for certified seed potatoes.

Growing What You Eat
Prepared by the Extension Service, State College of Washington

Planning the Home Garden.

A successful home garden should be planned to provide a variety of fresh vegetables for table use. In the planning consideration should be given to raising not only what a person likes, but also the vegetables which may be grown to help balance the family ration.

There are three essentials in selecting a good garden site: Sunlight at least six hours of the day; a sufficiently fertile soil and good drainage, if in a wet place. This garden is being planted far table use, so try and have it as near to the house as possible and at the same time complying with the three essentials.

The size of the garden in the city depends upon the available back yard space, while in the country it should be large enough for the cultivation to be done by a horse. Where horse cultivation is used, plant the rows three feet apart and length wise of the garden, except in the case of vines and tomatoes where the rows will be planted wider.

The vegetables should be planted so as not to over-shadow the smaller ones. The following list of vegetables is given in sufficient quantity for a family of four, allowing a surplus for canning. In the list, the vegetable, the variety recommended, amount of seed required and space to plant are given in order named:

Beans, snap, Stringless Green Pod or Golden Wax, 1 quart, 100 ft.; beans, pole, Kentucky Wonder, 1-2 pint; beets, Early Egyptian or Early Eclipse, 3 ozs., 150 feet; cabbage, early, Early Jersey Wakefield, 1 packet, 100-150 feet; cabbage, late, Late Drumhead or Danish Ballhead, 1 packet, 100-150 feet; carrots, Early Short Horn or Chantenay, 1-2 oz., 50 feet; cauliflower, early, Early Snowball, 1 packet, 50 feet; late cauliflower, Autumn Giant, 1 packet, 50 feet; corn, Golden Bantam, 1-4 to 1-2 pound, 100 hills, 200 feet; cucumbers, White Spine, 1-2 oz., 20-40 feet.

Lettuce, leaf, Grand Rapids, 1-4 oz., 40 feet; lettuce, head, Boston or Hanson, 1 packet, 20 feet; onions, Yellow Danvers or Red Weathersfield, 1 oz., 100 feet; onion sets, any kind, 4 to 6 quarts, 200 feet.

Parsnips, Hollow Crown, 1-2 oz., 75-100 feet; peas, early, Alaska or American Wonder, 1 quart, 100 feet; late climbing peas, Telephone or Champion of England, 1 quart, 150 feet; radish, Scarlet Breakfast or Icicle, 1-2 oz., 50 feet.

Spinach, Victoria Round, 2 ozs., 200 feet; Squash, Bush Scallop or Hubbard, 1-2 oz., 10 hills, pumpkin, small Sugar or Large Yellow, 1-2 oz., 10 hills; tomatoes, Earliana, 24 plants, 100 feet; turnip, Early Purple Top, 1 oz., 75 feet.

December produced one of the largest monthly records for carlot shipments of fresh eggs out of western Washington since the movement started two years ago. During the month a total of 60 carloads of fresh eggs was shipped to points outside of the state. The bulk of the shipments went to New York and three cars were shipped to Alaska. Seattle shippers, loaded out 26 cars including one by express. Outside shipments amounted to 31 carloads. In November 48 cars were rolled and with the 60 cars in December the total for the two months is 108 carloads. This is a strong beginning for the new 1922-23 shipping season.

Now that airplanes can travel 248 miles an hour, pedestrians ought to be glad that one can not walk on air.—Daily American Tribune.

There is something about the Trat Tavern in Spokane that draws the crowds from this vicinity.—Adv

Genuine
What IS Genuine Orange Pekoe?
"ORANGE PEKOE" is simply an Oriental term to denote one of three distinct gradings of tea:
Flowery Orange Pekoe (tea of the very finest quality)
Broken Orange Pekoe (tea of very choice quality)
Orange Pekoe (tea of average quality)
The first two grades are very much superior to ordinary Orange Pekoe. Ridgways Genuine Orange Pekoe is the finest tea procurable, because it is composed only of the Flowery and Broken Orange Pekoes.
Some teas marked "Orange Pekoe" have a very small proportion of Orange Pekoe. Right there is the value of getting Genuine Orange Pekoe.
The way to make sure of Genuine Orange Pekoe, without any doubt about it, is to insist firmly upon Ridgways Genuine Orange Pekoe. Then you are certain to enjoy the superb flavor, the exquisite bouquet you should rightfully expect in this superior tea.

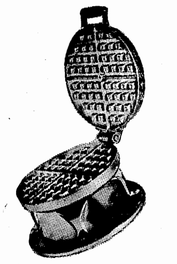
Waffles

FEBRUARY SPECIAL

Wells Electric Waffle Iron

$10.85

Serve delicious waffles at regular meals, or at any time between, with a Wells Electric Waffle Iron---it only takes a jiffy. Cook them right at the table---no running around and no hot stove to stand over.



Everybody Likes Waffles

For the month of February we have selected the Wells Electric Waffle Iron, which is very beautiful in appearance, and a wonder at baking delicious, crisp, brown waffles, and is thoroughly guaranteed by this company. The regular price of this iron is $14.50, but during the month of FEBRUARY ONLY we are reducing the price to $10.85.

PUBLIC SALE

Registered Big Type Duroc Jerseys, bred sows and gilts (bred to my grand champion boar), at the Frank P. Busch farm, adjoining the town of Johnson, Washington, eight and one-half miles south from Pullman, 13 miles southwest from Moscow, and 22 miles north from Lewiston, on the Lewiston-Spokane highway, commencing at 1:30 p. m., sharp, on Thursday, February 15, 1923, I will sell in this, my first annual mid-winter sale of bred sows and gilts, 40 head of magnificent Duroc Jerseys.

These sows and gilts are just in good farm condition, with lots of bone, stretch and scale and will go out and make the farmers money. At the five principal shows of the Northwest during the fall of 1922, my herd won 26 firsts, 23 seconds, 21 thirds, 11 champions, five grand champions and the trophy cup for the best spring litter.

TERMS OF SALE—The terms of sale will be cash. If necessary, make arrangements with your local banker for needed funds.

If you cannot attend this sale in person, write or wire your bids to Harry C. Cranke, auctioneer and sales manager, in my care, and they will be handled strictly confidential.

Buyers from Spokane points can make connections with the noon train at Pullman, and the train will stop at the farm; buyers from Camas and Nez Perce prairies and Clearwater points will be met at Lewiston depot by auto.

FRANK P. BUSCH, Owner
HARRY C. CRANKE, Auctioneer.
Grangeville and Moscow, Idaho.
WILLIAM M. PORTER, Clerk,
Pullman, Washington.
Earl Harper and H. P. Willard will consign a few outstanding bred sows at this sale.

For catalogues write Mr. Busch or Mr. Cranke.

The Whitman County Duroc Jersey Swinebreeders' association will hold their first annual sale at Garfield, Washington, on February 16, the day following.

"YEAST FOR HEALTH"

And What Is Good for Human Beings Is Certainly Good for Livestock

It is almost three years now since a big yeast company began telling the world about "Yeast for Health."

National campaigns in magazines and newspapers have made this yeast a regular part of the diet of millions. Sales have jumped ahead steadily.

But of course there are still thousands of people who would benefit by eating yeast—and yet have never tried it. So this winter the manufacturers of this particular yeast are going after them with heavy artillery.

In the first place, the research work which is constantly going on in famous laboratories all over the country has revealed some surprising facts about yeast. The true nature of its action —just how and why it helps—is now more clearly understood than ever before. And scientists now say that yeast, eaten regularly, accomplishes three very definite results:

First, it "tones" and builds up the whole system by supplying the elements which may be lacking in the regular diet. That's why people who are rundown, nervous, irritable, suffering from indigestion or headaches, find yeast so valuable.

Second, it helps the body to clean out the poisons that accumulate in the intestines. It takes the place, in other words, of cathartics and habit-forming drugs. Through its use, thousands of people have found relief from constipation.

Third, it actually increases the number of white corpuscles in the blood. These white corpuscles are the police force of the body, and when enough of them are on the job, they clear up boils and other skin troubles in short order. That's why yeast is so good for the complexion.

These three discoveries are all being featured in the advertising. No matter which of the three classes of people mentioned, the reader belongs in—whether he is run down, or constipated, or suffering from skin troubles—he is a prospect for yeast.

A novel note is struck in the advertising by the introduction of some of the thousands of unsolicited letters which this particular company is daily receiving. The constant stream of such testimonials, coupled with ever-increasing sales, are the best proof in the world of the real value of "Yeast for Health."

Vitamineral Contains Yeast

The very same kind of yeast that is used by famous yeast manufacturers and sold to many millions of human beings is used in Vitamineral.

This yeast is the highest form of strength-giving, health-making vitamins.

For humans it is served fresh daily in small cakes wrapped in tinfoil. It is in moist form and must be consumed within practically a few hours after it is made or the yeast begins to grow—that is, it gets moldy—which is a form of plant life.

In Vitamineral, in order to keep the yeast from growing and make unnecessary the shipping out of daily packages, we have perfected a system of drying this yeast, retarding its growth for the time being, making it impossible for it to grow until subjected to water or moisture.

In preparing Vitamineral for cattle it is possible to either "set" the Vitamineral the night before, forming a yeast mash, or it may be served dry, with other foods, to the animals. The water the animals drink combined with the juices in the digestive system short the growth of the plant life in the yeast vitamines.

What we are particularly anxious for you to bear in mind at all times is the fact that the yeast in Vitamineral is exactly the same kind as that recommended to, and used by, millions of human beings. Drying this yeast increases its strength which makes necessary the feeding of only a small amount of Vitamineral to each individual animal every day.

A good mixture for stock in pasture is equal parts of Vitamineral and stock salt.

LOCAL COMMITTEE SENDS LETTER TO GOV. MOORE

(Continued from first page)

We ask for life, for the privilege to progress, even if very slowly, and would urge that a "body blow" be not struck at this very important and progressive bit of education. Vocational agriculture in Idaho should not become an "extinct species"—it should be vital and alive. We sincerely hope that the blame for its elimination in our state may not be laid at the feet our Governor C. C. Moore.

We are watching with intense interest and with much concern the outcome of the activities of the seventeenth session of the legislature of the state of Idaho.

Respectfully and sincerely submitted for your consideration.

Very truly yours,
FRANK H. THOMAS,
Superintendent of Schools and President North Central Idaho State Teachers' Association.
F. E. DICUS,
Chairman Board of Education.
MRS. RUTH PERKINS,
President Parent-Teachers' Association.

F. S. CASEBOLT,
Mayor of the City of Genesee.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, FEBRUARY 9, 1923. — NO. 32

RETURN OF SOLDIERS FROM RHINE FULFILLS POLICY

The ordering home of the last detachment of the American army of occupation stationed in Germany completes the movement started early in the present administration to withdraw all our armed forces from European territory.

At the time the republicans came into power there were approximately 15,000 men in the American army on the Rhine. In October, 1921, Secretary of War Weeks announced this force would be cut to one brigade of infantry and the necessary auxiliary troops, making a total of approximately 5,000 men.

In February, 1922, it was announced that a further reduction of 203 officers and 3,000 enlisted men would be made. This left in Germany only 2,000 enlisted men and 169 officers.

Upon both occasions this policy met with the approval of the American people. Some notable exceptions were leading democratic papers like the Baltimore Sun, which denounced very bitterly the policy of reducing the American army.

On March 20, 1922, orders were issued by Secretary of War Weeks for the return of all remaining United States troops from Germany. The order read as follows:

"Some months ago the president directed that the troops in Europe, at least in excess of 2,000 officers and men, should be returned to the United States. He has now directed that this service be continued until all of the troops have been brought to the United States, which would mean that before the end of the fiscal year the entire force will have been returned."

This order stood until May, 1922, at which time the force had been reduced to about 1,200, which was its strength at the time of the execution of the order. In May, 1922, it was announced that the return of all troops would be held in abeyance.

Although no reason was officially assigned for the change of policy by the United States government, it was known to be due to the representations made to this government by Great Britain, France, Belgium and Germany. All four of those nations requested the United States government not to withdraw the small detachment of American soldiers which were quartered in German territory. Each nation assigned the same reason, namely, that the presence of United States troops, even though small in number, served to stabalize conditions along the Rhine and fear was expressed that their withdrawal might prove hurtful. It was in view of these representations, and as a result of them, the order of March 20 was indefinitely suspended.

The American army was first stationed upon the Rhine under the terms of the Armistice pending the negotiations of the peace treaty. At that time more than 200,000 soldiers were assigned to the American army of occupation. This army in conjunction with British, Belgian and French troops, occupied German territory under terms of the Armistice in order to compel an observance by the German government of the Armistice pending final peace by terms of treaty.

The Versailles treaty provided for armies of occupation to remain on the Rhine until the indemnities assessed against Germany by terms of this treaty were paid. It is under the terms of this treaty, which Germany signed, that France, England and Belgium have maintained and still maintain armies in German territory.

With the rejection of the treaty by the United States senate th eright of the United States government to maintain soldiers in Germany no longer existed by any legal authority. Had Germany objected to their presence it would have been necessary for this government to recall them, but the German government was insistent upon the continuation of an American army in the occupied territory and it was largely in deference to this feeling that the troops were permitted to remain. With the conclusion of the treaty between this country and Germany, legal authority for the retention of armed forces in the occupied territory was revived, as under the terms of the treaty the United States retained all rights which she had under the Armistice, and, as between this country and Germany, all the rights given to this country under the terms of the treaty of Versailles.

It has cost the United States government something in excess of $256,000,000 to maintain her army in German territory. The United States is the only government maintaining armed forces in Germany since the Armistice that has not received any compensation. All other nations having armed forces along the Rhine have been compensated for the cost of such maintenance.

Statements frequently appear in print that our failure to receive any money covering the cost of our army of occupation is due to Germany's defaulting in her payments. This is not true. Our failure to be compensated for the maintenance of an army along the Rhine is due to trickery and sharp practice by the allied powers represented on the reparations committee.

(Continued on last page)

And Is Still Sein' Things

The following item regarding Dr. Daniel Healy was clipped from the News of 20 years ago, which shows that he was seein' things 20 years ago just the same as he is now—only it was wolves, then:

Dan Healy reports that a gray wolf of huge proportions was killed on his ranch west of town last Thursday. It in some manner got into his hog-tight fence inclosure and was easily cornered and shot. For two or three years tracks equaling in size those of a bear have been noticeable in that neighborhood and since the capture of this animal all is clear what made them. Mr. Healy is a man who does not drink and is considered truthful, so we will venture some of the dimensions as given to us: It stood something over three feet in height, equally well proportioned, in length, would measure 15 inches across the back and had a neck like a stag. In life he had been a "good liver" for Mr. Healy informs us that there was fully an inch and a half of fat on his ribs. His hide was sent to the carcass, and after dressing the same is tanned, will make a beautiful rug for Daniel to alight upon these chilly mornings.

Must Have 1923 Licenses

Moscow automobile owners are warned that they are liable to arrest and fine unless they purchase new 1923 auto licenses immediately. The local county authorities are not disposed to set any date other than January 1 as a dead line when auto owners must purchase licenses to operate their cars, it was learned at the courthouse today.

"Automobile owners who have not yet taken out their 1923 licenses are liable to arrest at any time," was the statement given out this afternoon from the Latah county assessor's office There have been to the present date 245 licenses issued from the local office, which number, it was stated, was practically the same as last year.

In a news item reaching here from Lewiston today, it was stated that all persons in Nes Perse county who had not procured their new plates by Monday would be prosecuted. Officials in Whitman county, Washington, have intimated that no leniency would be shown there to drivers from Idaho who did not display a 1923 tag. Like action toward Washington drivers is expected here. —Star-Mirror.

Funeral of Mrs. Hill

The following item, clipped supposedly from a Sacramento paper, and sent to Genesee friends by Mrs. J. S. Larrabee, will be of interest to some of the older residents of Genesee as Mrs. Hill is said to have at one time resided here:

"Funeral services for Mrs. Sarah Hill, 81, a resident of this county for a number of years, will be held late today at the residence of James R. Garlick, 1517 Eleventh street. Mrs. Hill leaves her husband, A. N. Hill; a daughter, Mrs. G. A. Cebell of North Sacramento, and a son, Charles Hill, of Fresno. She was a native of Marion, Ohio. Interment was in Odd Fellows' Lawn cemetery."

Car In Ditch

A Chalmers sedan, driven by an elderly man, left the road near the slaughter house, just west of town, Tuesday evening and landed in the ditch. It was necessary to summon help and the car was towed back to town. An axle was so badly bent that it was necessary to put in a new one, but no other damage was done and no one was hurt.

WHAT HAPPENED HERE TWENTY YEARS AGO

Wheat, 65 cents.

Mrs. Phipps of Uniontown has been visiting Agent Smith and wife this week.

Carrol Conant, Will Gray and Roy Burr left Monday morning on a sightseeing trip.

Miss Maude Burdic has recovered from her recent tussle with inflammatory rheumatism.

Fred Nagel and J. C. Nordby returned Tuesday from LaGrande, where they made timber filings.

Messrs. Herman, Dickson and Mrs. Cool are improving the appearance of their Main street property by putting in the regulation 16-foot sidewalks.

Jim Qualey and wife are the happy parents of a big boy, born Friday. This makes a boy and a girl in the family and the parents are jubilant.

Saturday morning Chris. Steitz, C. W. Hanson, Henry Meyer and John Friederichs left for LaGrande, Oregon, in search of timber claims. They expect to be located by Harve Bundy.

The Herman building, which is now being torn down, is the first store building of any size to be erected in Genesee. The first was a shed-roofed affair erected by Cameron Bros. & Larrabee, who later erected the "iron" building now occupied by Arthur Harris. The removal of this land-mark will make room for a substantial brick which Mr. Herman will certainly build at some future time.

The following have by the commissioners been chosen to serve as jurors during the year 1903: Thorn Creek—C. C. Carpenter, Ditlef Smith, James A. Peterson, Julius Christenson, Hubert H. Manderfeld. East Genesee—Lewis Jain, Sherman Wahl, John H. Schutte, Joseph Mersch, Fred C. Spencer, David R. David, George Jamison, C. E. Delbow, Wm. F. Gibb, Leon Follett, Wm. W. Gray. West Genesee—George Mochel, C. E. Hibbs, Victor Hasfurther, Henry Meyer and C. E. Wood.

Last Tuesday afternoon a very pleasant surprise was given at the home of Miss Brennan in honor of her birthday anniversary. All came with well-filled baskets and a pleasant time was reported. Those present were Grandma Keane, Mr. and Mrs. Welch, Mr. and Mrs. Nagel, Mesdames Fowler, Herman, Platt, Hickman, Phipps, Smith, Mertes, Burr, Larrabee, Biram, McMahon, Driscoll, T. Keane, J. W. Keane, Daggett, Bomberg, Geiger, Misses Ida Larrabee, Mary Burr, Mabel Biram and Mollie Keane; Thomas Keane, Ed. Keane and Master Willie Hickman. Miss Brennan was the recipient of many nice presents.

Rimrockers Ball Tonight

The "Rimrockers Ball", the big dance event of the season, will be given in the American Legion hall tonight (Friday) and if you miss it you will miss one of the best dances of the season. John Roach will be floor manager, and if you don't dance he is liable to place you on the block and sell you at auction—just any old way to get the money. John's a goin' houn' and you'll have to watch your step.

Death of Father

F. G. Haas of Troy, father of B. V. Haas, publisher of the Troy News, passed away at a Moscow hospital on Wednesday of last week from kidney trouble following an attack of influenza, at the age of 62 years. The body was taken to Troy for burial.

Editor Haas has the sympathy of the newspaper fraternity in his hour or trouble.

NEZ PERCE SQUIRREL CAMPAIGN STARTS MARCH 5

The squirrel campaign in Nez Perce county starts Monday, March 5, at Peck, with a series of meetings in each community for the distributin of poison at cost, according to the statement of County Agent Skuse. Although the cost of chemicals is a little higher than last year, the same deposit of $1.25 per ounce of strychnine alkaloid will be required, and any balance remaining at the close of the season will be prorated back to the purchasers.

One ounce of poison is sufficient to treat eight quarts of oats, and this amount of poison mixture is ordinarily figured as sufficient for eighty acres of land with the average infestation of squirrels.

Deposits can be made with the community leaders of the rodent project or at the county agent's office in the post office building at Lewiston, personally, or by mail.

It is necessary that the funds to cover the cost of poison be in Boise before the chemicals will be shipped out. All deposits must, therefore, be from committemen or farmers who have sent in deposits direct, be in the hands of Mr. Skuse not later than February 28, so that the poison may be shipped in time to be on hand for the series of distribution meetings.

The deposits made at this time should be sufficient to cover the entire amount of poison needed for the year, as it is doubtful about getting it later in the season.

The rodent control committee for the various communities are as follows: Baker community, E. Chambers. Renfrew: Culdesac community, J. F. Scully, Slickaroo and James O'Moroc, Culdesac: Gifford community, F. T. Myers, Gifford; Lanwai community, L. L. Buchanan, Lanwai; Lenore community, J. M. Hanks, Lenore; Laland community, H. M. Miller, Juliaetta, and Avg. F. Wegner, Cameron: Lewiston Orchards community, W. S. Thornber, Lewiston Orchards; Lewiston: Melrose community. John H. Berry, Peck; Peck community, J. H. Corn, Peck; Rimrock community, Harry Emerson, Genesee: Southwick community, Glen Betts, Southwick.

Probably Saw His Shadow

There has been considerable speculation this week as to whether that pesky varmint known as the groundhog, saw his shadow last Friday or not, or whether he might have been a trifle sleepy and stayed in his hole until after the sun went behind a cloud. At any rate, we will probably have some kind of weather, whether he did or didn't.

Quite a large delegation of the Coyote club went out last Sunday ostensibly to hunt coyotes, but in fact they were hunting for the groundhog. Capt. Rader says "there ain't no such animal" in these parts—just because they couldn't find him. Private Pat Sampson says there is but that the captain's eyes are in an eclipse aboue four-thirds of the time and that he couldn't hit it if he seen it, while Brigadier General Carl Osmundson says that neither one of them could hit it—that he has the only real gun in the outfit and that he is the only one that knows how to shoot. So there, believe it or not.

Was Success

The play and dance given at the Upper Cow Creek school house last Saturday night was well attended and thoroughly enjoyed by all.

A Crowd to Be Avoided

In the daily papers of Saturday were two very important news items though neither was on the first page. One was a detailed statement of the agreement between Loyd George on behalf of England and statesman of Greese, whereby England was to furnish money and Greese soldiers for a campaign against Turkey, the spoils of war to bedivided between these two countries, and Turkey afterward to be assessed when peace was made so that she paid for her conquest. On another page was a London dispatch stating that Germany has formed a military agreement with Russia, so that she can utilize the resources of the big country, reorganize their army and supply armaments and soldiers so the joint forces can crush Poland, annex it to Russia and form an alliance formidable to the world. Russia is said to be already in alliance with the Turks, who in turn were assisted and financed by the French in their recent great struggle. Both France and England seem to have played traitor to each other, and to have violated their solemn treaty agreements. England is flirting with Germany and France with Turkey,and Russia and Germany with any and every nation that promised temporary or permanent aid. This seething mass of intrigue and selfish scoundelism we are asked to feed, finance and protect, asking nothing but gratitude, getting nothing but kicks.—Aurora (Nebr.) Register.

Cut In On Line to Palouse

After a number of preliminary tests the new power line from Lind to Calfax, Washington, forming a part of the "ring" circuit or duplicate service to the Palouse country, has been cut in by the Washington Power company. The length of the line placed in service is 52 miles, but the completed line will run to Pullman and Moscow, a total distance of around 100 miles.

Nearly 200 linemen were still employed on the power line construction by the company. Part of the men are on the line from Pullman to Moscow and two camps have been established in Chelan county on the extension to the Okanogan country.

"Juice" users of the Genesee section sincerely hope the opening of these new lines will have some bearing for the better on the continued flow of juice as they certainly have been seorely tried and annoyed by a lack of electricity at times when it has been most needed.

Weather and Roads

The weather clerk has been acting fairly well for the past few days, although he has managed to miss the sunshine plug for some time. Last Friday morning the mercury stood at four below—but recently it has been hanging around 20 to 40 degrees above.

The roads have been fairly good for the past week, but recent thawing and a little rain has put them in rather bad condition although the are passable in most places.

Injured by Horse

Lester Gray was quite severely injured last Friday when he was kicked by a horse. It seems the horses were fighting among themselves in the barn and Mr. Gray went out to see what the trouble was and in some way got too close and was kicked through the side of the barn and injured internally, but is reported as getting along nicely at this time.

Read the want ads.—keep posted.

MEETING OF LATAH COUNTY FARM BUREAU

Farmers representing practically all sections of Latah county attended the annual meeting of the Latah County Farm Bureau, which was held at the farmers' store in Moscow on Wednesday, January 31. In the absence of Erick Oller, president, A. S. Lyon of Moscow was elected chairman of the meeting.

County Agent O. S. Fletcher reported on farm bureau and extension work that had been done in the county during the past year. Special stress has been laid on the livestock, grain improvement, soils and crop rotations, poultry, and pest control projects, and some work has been done with potatoes, women's work, and other projects. The county agent also outlined plans for the coming year.

Farmers from all communities represented were called upon by the chairman and reported progress of the past season in their respective communities. George Sievers reported for Moscow community, following which he gave a talk on the benefits to be derived from the farm bureau, county agent work, and cooperation in in general. He pointed out that unless the farmers will pull together, and continue to do this, no real progress can be made in bettering conditions in agriculture.

Lines of Work Adopted

The meeting recognized the importance of marketing as a part of farm bureau work and selected this as a project for the coming year. George Sievers was elected county leader of this project. Women's work was also adopted for the first time as a project, and the executive committee was authorized to select a county leader for this line of work. Other projects adopted were the ones that have been carried on for a number of years. These projects, and the county leaders elected for these lines of work are as follows: Pest control, Frank Benscotter, Kendrick; grain improvement, Crawford Patton, Palouse; soils and crop rotations, A. N. Rognstad, Kendrick; livestock, R. E. Nordby, Genesee; weed control, F. M. Gustafson, Moscow; poultry, J. C. Hamil, Juliaetta; potatoes, Iver Dragstadt, Troy; beans, George Davidson, Kendrick; crop reporting, W. A. Fiscus, Potlatch.

The following officers were re-elected for the ensuing year: President, Erick Oller, Moscow; secretary, Geo. L. Davidson, Kendrick; treasurer, F. M. Gustafson, Moscow. A. S. Lyon was elected vice president. Elmer M. Paulson, member of the board of county commissioners, was elected as an executive committeeman at large.

Resolutions Adopted

The meeting unanimously adopted a resolution presented by the program of work committee complimenting County Agent O. S. Fletcher and endorsing him and the work that he has done during the past season by the county agent and the farm bureau.

G. P. Mix of Moscow moved that the Latah County Farm bureau go on record as endorsing the work of the extension division of the University of Idaho and that the state legislature in session be asked to make a liberal appropriation for the maintenance of the extension division. This motion carried unanimously.

Ladies' Minstrel

The Rebekah lodge has secured the best talent in the town and will give a real darky minstrel show on Saturday night, February 17, at the opera house, and you're going to miss one of the best home-talent shows that has ever been put on in Genesee if you are not there.

Special choruses, with fancy costumes and spot-lights, are being featured. Four end-men are busy securing the latest jokes on yourself and your neighbor—and you'll never know just how nice or how mean you are unless you are there to hear it.

The Green-Burr-Wilson trio will present some of their best numbers. Also the services of a noted local "actor" have been secured to direct the "never heard" orchestra. Their instruments have been imported direct from the junk pile.

The whole show is full of pep and you will enjoy it from start to finish.

Basketball Tournament

The annual Idaho state interscholastic basketball tournament will be held at the University of Idaho March 16 and 17, according to announcement from the athletic department. This program to determine the state high school hoop champions is fostered by the state interscholastic association, of which M. C. Mitchell, superintendent of public schools at Twin Falls, is president. District meets to select the sectional representatives to the state tourney will be held March 9. The scheme of districting followed last year, which provides for six different sections, will re retained.

Had Splendid Time

The Knights of Columbus gave an oyster feed to the lodge members on Tuesday evening and all report one of those real pleasant times that the Knights always have on those occasions. Quite a delegation came up from Lewiston to attend the "stew" party —but it was all oysters.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT NO. 20.

Harris bore a villainous reputation, and he had been tampered with in private by my lord; Mountain, the trader, proved, upon inquiry, to be another of the same kidney; the errand they were all gone upon being the recovery of ill-gotten treasures, offering in itself a very strong incentive to foul play; and the character of the country where they journey promised impunity to deeds of blood. Well, it is true I had all these thoughts and fears, and guesses of the master's fate. But you are to consider I was the same man that sought to dash him from the bulwarks of a ship in the mid-sea; the same that, a little before, very impiously but sincerely offered God a bargain, seeking to hire God to be my bravo.

Had Melted Somewhat.

It is true again that I had a good deal melted toward our enemy. But this I always thought of as a weakness of the flesh and even culpable; my mind remaining steady and quite bent against him. True yet again that it was one thing to assume on my own shoulders the guilt and danger of a criminal attempt, and another to stand by and see my lord imperil and beswitch himself. But this was the very ground of my inaction. For (should I any way stir in the business) I might fail indeed to save the master, but I could not miss to make a by-word of my lord.

"I think I must be the devil, and you Michael Scott," I said to him one day. "I have bridged Tweed and split the Eildons, and now you set me to the rope of sand."

He looked at me with shining eyes and looked away again, his jaw chewing, but without words.

"Well, well, my lord," said I, "your will is my pleasure. I will do this thing for the fourth time, but I woud beg of you to invent another task against tomorrow, for by my troth, I am weary of this one."

"You do not know what you are saying," returned my lord, putting on his hat and turning his back on me, "is is a strange thing you should take a pleasure to annoy me. A friend—but that is a different affair. It is a strange thing. I am a man that has had ill-fortune all my life through. I am still surrounded by contrivances. I am always treading in plots," he burst out. "The whole world is banded against me."

No Nonsense.

"I would not talk wicked nonsense if I were you," said I; "and I will tell you what I would do—I would put my head in cold water, for you had more last night than you could carry."

"Do you think that?" said he, with a manner of interest highly awakened. "Would that be good for me? It's a thing I never tried."

"I mind the days when you had no call to try, and I wish, my lord, that they were back again," said I. "But the plain truth is, if you continue to exceed, you will do yourself a mischief."

"I don't appear to carry drink the way I used to," said my lord. "I get overtaken, Mackellar. But I will be more upon my guard."

"That is what I would ask of you," I replied. "You are to bear in mind that you are Mr. Alexander's father; give the bairn a chance to carry his name with some responsibility."

"Ay, ay," said he. "Ye're a very sensible man, Mackellar, and have been long in my employ. But I think, if you have nothing more to say to me, I will be stepping. If you have nothing more to say?" he added, with that burning, childish eagerness that was now so common with the man.

"No, my lord, I have nothing more," said I, dryly enough.

"Why Am I Not Happy?"

"Then I think I will be stepping," says my lord, and stood and looked at me fidgeting with his hat, which he had taken off again. "I suppose you will have no errands? No? I am to meet Sir William Johnson, but I will be more upon my guard." He was silent for a time, and then, smiling: "Do you call to mind a place, Mackellar, why I am never happy now?"

"My lord," said I, "if you would drink with more moderation you would have the better chance. It is an old byword that the bottle is a false comforter."

"No doubt," said he, "no doubt. Well, I think I will be going."

"Good morning, my lord," said I.

"Good morning, good morning," said he, and so got himself at last from the apartment.

In his cups, he was more excessive. I will give but the one scene, close upon the end, which is strongly marked upon my memory to this day, and at the time affected me almost with horror.

I was in bed, lying there awake, when I heard him stumbling on the stair and singing. My lord had no gift of music; his brother had all the graces of the family, so that when I say singing, you are to understand a manner of high, caroling utterance, which was truly neither speech nor song. Something not unlike is to be heard upon the lips of children, ere they learn shame; from those of a man grown elderly, it had a strange effect.

He opened the door with noisy precaution; peered in, shading his candle; conceived me to slumber; entered, set his light upon the table, and took off his hat. I saw him very plain; a high, feverish exultation appeared to boil in his veins, and he stood and smiled and smirked upon the candle. Presently he lifted up his arm, snapped his fingers, and fell to undress. As he did so, having once more forgot my presence, he took back to his singing; and now I could hear the words, which were those from the old song of the "Twa Corbies" endlessly repeated:

"And over his banes when they are bare
The wind sall blaw for evermair!"

No Logical Succession.

I have said there was no music in the man. His strains had no logical succession except so far as they inclined a little to the minor mode; but they exercised a rude potency upon the feelings, and followed the words, and signified the feelings of the singer with barbaric fitness. He took it first in the time and manner of a rant; presently this ill-favored gleefulness abated, he began to dwell upon the notes more feelingly, and sunk at last into a degree of maudlin pathos that was to me scarce bearable. By equal steps, the original brightness of his acts declined; and when he stripped to his breeches, he sat on the bedside and fell to whimpering. I know nothing less respectful than the tears of drunkenness and turned my back impatiently on this poor sight.

But he had started himself (I am to suppose) on that slippery descent of self-pity; on the which, to a man unstrung by old sorrows and recent potations, there is no arrest except exhaustion. His tears continued to flow, and the man to sit there, three parts naked, in the cold air of the chamber. I twitted myself alternately with inhumanity and sentimental weakness, now half rising in my bed to interfere, now reading myself lessons of indifference and courting slumber, until, upon a sudden, it shot into my mind; and calling to remembrance his old wisdom, constancy, and patience, I was overborne with a pity almost approaching the passionate.

In his cups, he was more excessive. I will give but the one scene, close upon the end, which is strongly marked upon my memory to this day, and at the time affected me almost with horror.

I was in bed, lying there awake, when I heard him stumbling on the stair and singing. My lord had no gift of music; his brother had all the graces of the family, so that when I say singing, you are to understand a manner of high, caroling utterance, which was truly neither speech nor song. Something not unlike is to be heard upon the lips of children, ere they learn shame; from those of a man grown elderly, it had a strange effect.

fast asleep; and the first thing he did the next morning was to sit down and begin a letter to my lady; a very tender letter it was too, though it was never finished. Indeed all communication with New York was transacted by myself; and it will be judged I had a thankless task of it. What to tell my lady and in what words, and how far to be false and how far cruel, was a thing that kept me often from my slumber.

My lord's mind throughout this interval dwelt almost wholly in the wilderness, following that party with whose deeds he had so much concern. He continually conjured up their camps and progresses, the fashion of the country, the perpetration in a thousand different manners of the same horrid fact, and that consequent spectacle of the master's bones lying scattered in the wind. These private, guilty considerations I would continually observe to peep forth in the man's talk, like rabbits from a hill. And it is the less wonder if the scene of his meditations began to draw him bodily.

• • •

It is well known what pretext he took. Sir William Johnson had a diplomatic errand in these parts; and my lord and I (from curiosity, as was given out) went in his company. Sir William was well attended and liberally supplied. Hunters brought us venison, fish was taken for us daily in the streams, and brandy ran like

(To be continued.)

It is unnecessary for one to take his magazine with him when he goes to the park in Fargo, N. D., because boxes are nailed to the trees in the parks with magazines in them.

A new match holder has been invented that can be fastened to a windshield, the matches are held in place by vacuum cups.

not for my master alone but fer the sons of man.

At this I leaped from my place, went over to his side and laid a hand on his bare shoulder, which was cold as stone. He uncovered his face and showed it me all swollen and begrutten like a child's; and at the sight of my impatience partially revived.

"Have Done With This."

"Think shame to yourself," said I. "This is bairnly conduct. I might have been snivelling myself, if I had cared to swill my belly with wine. But I went to my bed sober like a man. Come; get into yours, and have done with this pitiable exhibition."

"Oh, Mackellar,' said he, "my heart is was!"

"Wae?" cried I. "For a good cause, I think. What words were these you sung as you came in? Show pity to others, we then can talk of pity to yourself. You can be the one thing or the other, but I will be no party to half-way houses. If you're a striker, strike, and if you're a bleater, bleat!"

"Cry!" cries he, with a burst, "that's it—strike! that's talking. Man, I've stood it all too long. But when they laid a hand upon the child, when the child's threatened"—his momentary vigor whimpering off—"my child, Alexander!"—and he was at his tears again.

I took him by the shoulders and shook him. "Alexander!" said I. "Do you even think of him? Not you! Look yourself in the face like a brave man, and you'll find you're but a self-deceiver. The wife, the friend, the child, they're all equally forgot, and you sunk in a mere log of selfishness."

"Mackellar," said he, with a wonderful return to his old manner and appearance, "you may say what you will of me, but one thing I never was—I was never selfish."

"I will open your eyes in your despite," said I. "How long have we been here? And how often have you written to your family? I think this is the first time you were ever separate; have you written at all? Do they know if you are dead or living?"

Braced His Nature.

I had caught him here too openly; it braced his better nature; there was no more weeping, he thanked me very penitently, got to bed and was soon

water. We proceeded by day and encampel by night in the military style, sentinels were set and changed; every man had his named duty; and Sir William was the spring of all. There was much in this that might at times have entertained me; but for our misfortune, the weather was extremely harsh, the days were in the beginning open, but the nights frosty from the first. A painful keen wind blow most of the time, so that we sat in the boat with blue fingers, and at night, as we scorched our faces at the fire, the clothes upon our back appeared to be of paper.

Solitude Surrounded Steps.

A dreadful solitude surrounded our steps; the land was quite dispeopled, there was no smoke of fires, and save for a single boat of merchants on the second day, we met no travelers. The season was indeed late, but this desertion of the waterways impressed Sir William himself; and I have heard him more than once express a sense of intimidation. "I have come too late, I fear; they must have dug up the hatchet," he said; and the future proved how just he had reasoned.

Our advance into this savage country had thus uneventfully proceeded for about a week when we encamped for a night at a place where the river ran among considerable mountains clothed in wood. The fires were lighted on a level space at the water's edge; and we supped and lay down to sleep in the customary fashion. It chanced the night fell murderously cold; the stringency of the frost seized and bit me through my coverings, so that pain kept me wakeful; and I was afoot again before the peep of day, crouching by the fires or trotting to and fro at the stream's edge, to combat the aching of my limbs.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER IV.

The Quagmire.

Fortunately "Speed" Stanbury and Lucy Durant were on the forward part of the car when it plunged off the broken bridge into the rapids far below. The force of the plunge hurled them through the air well away from the spot where the box-car buried itself. "Speed" was the first to come to the surface. He had the feeling of a man who has suddenly awakened from a bad dream, and who sits up in bed to gaze about and wonder where he is. A bit of white a small distance down stream caught his eye—it was Lucy.

The current was extremely strong and "Speed" had to put very little effort behind his strokes to catch up with the girl. As he reached her, she was just returning to consciousness. Gathering Lucy in his arms, "Speed" attempted to assure her that everything was all right, and at the same time battled with the rushing waters.

It seemed to the young man that the current was getting stronger and stronger. A warning roar ahead of him told of a possible water-fall. He was suddenly aware that he would have to struggle to save the girl he loved and himself. "Speed" no longer attempted to swim upstream. He put all his efforts into an attempt to reach the nearest shore.

Nearer and nearer he drew. A short distance ahead he saw a small branch of an overhanging tree jutting out. Too frail for both of them, but strong enough to hold the girl, he thought. Then, as they drew nearer, he instructed Lucy to seize the branch, and giving her a shove toward it he saw the girl grasp the branch and cling to it, while he was whirled onward down the rapids.

Like a wisp of straw "Speed" suddenly felt himself whirled through the air and downward—then oblivion—but not for long. He had been carried over the falls. A crash on his left side seemed to awaken him and open his eyes he saw that he was being bumped against one of the cliff-like sides of the stream at the bottom of the falls. Summoning all his strength, he managed to climb up to a place of safety. Then he determined to make his way back to the spot where Lucy Durant had been separated from him.

When "Speed" arrived at the place at the top of the falls, he looked over the side of the cliff—but there were no signs of the girl. Searching the immediate vicinity he encountered an old charcoal burner.

"Did you see anything of a young lady around these parts?" he asked.

"Ah, yes," came the grinning answer. "A damp Senorita—she has gone in the direction of the fortress with one of Pious Pedro's men."

Meantime Lucy was having a trying time. She felt extremely uncomfortable in Pedro's fortress, and doubly so when the covetous eyes of the bandit glanced in her direction. Pious Pedro was conferring with his men, and had little time to speak to the girl—something for which she was grateful.

"I am charmed, Senorita," he grinned, finally turning to her, "I am charmed to again be your host." At that moment there was a knock at the door. Pedro answered with a tone of annoyance in his voice.

"Most pious one," came a voice, "we have a prisoner—the Americano. We seized him while he was attempting to gain entrance to your stronghold."

The sudden hope which filled the girl's heart was quickly squelched by Pedro's next remark.

"I do not wish to be disturbed," he replied, "the American girl is with me. Throw the American pig into the lower dungeon." He then turned to the girl. "You see," he smiled, "I am all powerful here. Why do you resist me? A queen can be my queen—the queen of Pious Pedro. I will be kind to you, but I will kill you if you show signs of treachery."

The girl shrank back into one of the corners of the small room while the bandit chuckled at her discomfiture. "Come, come!" he smiled, "would it not be better for you to give in to me?"

"The soldiers—the soldiers from the barracks!"

Pious Pedro rushed to the small barred window. The courtyard was filled with his men, rushing to the parapets and gathering arms to defend the stronghold from the sudden attack. Again a welcome interruption had saved the girl, thanks to the wisdom of Gaston, "Speed's" valet, who, fearing for his master had sought protection from the soldiery.

Pedro rushed to the door and threw it open. He suddenly collided with Jim Sprague, the man "Speed" sought. Sprague, hearing the noise, stared at Pedro quaking with fear lest he be made a prisoner and his identity discovered.

"Do not worry, Senor," smiled Pedro calmly, "we can get out of here through the underground passage, and we can flood these chambers so it will be impossible for them to follow." Calling his aide, he ordered that the levers which controlled the floodgates to be thrown open. Then hurrying Lucy and Sprague before him, he started down the secret passageway.

They had almost reached the exit when Pedro's aide overtook them. He seemed highly amused at something and hastened to tell his chief.

"What!" exploded Pedro. "The Americano is being drowned in the dungeon! I wanted to hold that man Stanbury—not to kill him!"

"Oh!" gasped Lucy. "Please—please prevent this!"

Pious Pedro was weak where women were concerned. "Turn off the water!" he commanded.

"But—but if we stop the water and let it out, those soldiers can follow us!"

"I have spoken, Enrico! Go back to the fort. When the soldiers have left, find out whether that India-rubber devil-cat was drowned or not."

"Speed" Sanbury was having a trying time of it. When the waters had first begun to enter his place of imprisonment he rushed from one wall to the other, attempting to find a means of escape. A secret door—or something! But he was trapped! The waters were already above his waist and were rapidly filling the dungeon. Swimming on the surface he found a steel door in the wall. But it was impossible for him to open it.

Everything seemed hopeless. "Speed's" mind began to be filled with torturous thoughts. What of Lucy? Had she escaped or was she still in the hands of the cruel Spaniard? The water was almost to the ceiling now and "Speed" Stanbury knew he could not hold out much longer. Suddenly an odd sound reached his ears—a sound of metal creaking. The water had stopped pouring in. A shaft of light spread itself into the dungeon for a moment and then there was the rush of water. "Speed" felt himself carried in its midst like a log he was crashed against one side of the dungeon only to be torn from the spot and hurled toward an opening—the steel door which he had been unable to open. Through this outlet and toward the sea he was swept.

When "Speed" regained himself, he saw that he was only a short distance from the fortress. Seeing that there were no lookouts in the parapets, he cast discretion to the winds and swam back to the fortress of Pedro. It was completely deserted. He thought he could make out the soldiers from the barracks disappearing up the road. Young Stanbury also noticed a horse standing nearby. He thought he recognized it as belonging to Pedro. He would not attempt to guide it, but let it pick its way hoping that the steed would lead him to the bandit's hiding place and Lucy.

The girl, meanwhile, had been taken to a small shack in the woods. Pedro had thrown her into a tiny room while he conferred with Jim Sprague and a few of his men. Lucy looked about her and saw that there was one small window—barred. Outside, the wind howled dismally and it was pouring rain. Darkness had come, which added to the unpleasantness of her situation. She glanced back and searched the tiny room for a weapon of some kind. A cry of exultation passed her lips as she saw a small axe lying in one corner of the room. Seizing it the girl began an attack on the rusty bars of the window.

Thanks to the noise of the tropic storm, Lucy's captors were unable to hear her efforts to escape. First one bar was removed—then the next—and the next. After leaning the small cot up against the door, the girl climbed out of the tiny window and braved the storm, hoping to find "Speed."

Pious Pedro had finished his business. After lighting a cigarette he decided to make another attempt to charm the girl. The barred door filled him with consternation, but he was like an enraged animal when he discovered she had escaped.

"Juan! Juan!" he shouted. "Quick! Scour the woods! The girl is gone!"

(To be continued.)

Who Can Tell?

Specdo—I wonder what makes people have wavy hair?

Poppo—Perhaps they have water on the brain.

Our First Twenty-Five Years Control of Tropical Islands

Trade of the United States with its insular possessions in the first quarter century of our occupation totals about 5 1-2 billion dollars against a little more than one-half billion in the 25 years preceding our occupation.

It was on July 7, 1898, that the United States congress adopted the resolution annexing the Hawaiian islands in accordance with the expressed wishes of their people; on August 12 of the same year the protocol providing for the cession of Porto Rico to the United States was signed; and on December 10 of that year was signed the treaty with Spain ceding the Philippines to the United States. Guam, formerly a Spanish island, was also occupied by the United States in the same year, while the tiny Samoan Island, Tutuila, with the best harbor in all the South Pacific, passed completely under our control in 1899 after several years in which we had cooperated with certain other countries in the control of the Samoan group.

Thus the year 1923 marks distinctly our first quarter century of control of these tropical islands, with a population of about 12 millions. The record of our trade with these islands in the 25 years since occupation is in marked contrast with that of the quarter century prior to our control, while their total trade is also several times as much since our occupation as that of the preceding 25 years. Our total purchase of their products in the past 25 years has been $3,360,000,000 against $502,000,000 in the 25 years preceding our occupation, and our sales to them $2,038,000,000 against $134,000,000 in the 25 years prior to our occupation. Of course, our purchases from them were more than they took of our products, for in the islands there are only 12 million people to feed and clothe while we have a population of 108 millions, all wanting tropical products.

The United States supplies a very large proportion of the imports of all these islands, 65 per cent of those of the Philippines, and over 90 per cent of those of Porto Rico and Hawaii. We take about 60 per cent of the exports of the Philippines, 90 per cent of those of Porto Rico, and 75 per cent of those of the Hawaiian group.

Sugar, tobacco and Manila hemp are our chief imports from the Philippines; sugar and pineapples from Hawaii; and sugar, tobacco and tropical fruits from Porto Rico. To all of the islands we export manufactures of every sort and also limited quantities of food, especially flour and meats.

Champion American Butter Cow

May Walker Ollie Hempstead, a 7-year old Holstein, of Austin, Minn., is the U. S. champion butter cow over all breeds and ages for 1922. She produced 1218.56 lbs. of butter fat or 3100.6 lbs. of milk.

A City Man's View of the Farmer's Problems

Extracts from a speech made by Thomas B. Hill, Assistant Secretary, Seattle Chamber of Commerce, and Director of Research, Washington State Chamber of Commerce, at the State Farm Bureau Federation Convention.

From time immemorial we have heard of the farmer's problems. We people in the city have not known much about them, and we have cared less. In the old days we were led to believe that the chief problem of the farmer at home was the lightning rod salesman and the get-rich-quick fake, and the green goods man when he came to the city. If we were influenced by the cartoons and comments in the city papers, which, in truth, was inevitable, we must have believed that securing a sufficient supply of straws upon which to chew was a very important problem of the farmer.

How to act and talk, when he came to the city, was a matter which gave him much concern, we know, and while he was entitled to our patronage and our sympathy, we did not see that his problem was anything which should cause us to lie awake nights. Of course we knew that the farmer was always complaining. He never was satisfied with the prices we paid him for his produce, and he always objected to the price we charged him for his supplies. He was always borrowing money and always complaining about the interest rates he was required to pay. We accounted him a bit queer in matters of mind on the ground that he was a congenital grouch, and also because of his ignorance of business. We city people should not be criticized too severely for these conclusions, when editors of papers published in agricultural communities, dependent solely upon the farmers for their existence, said that the farmer should give his whole attention to the production of his crops, because he was not fitted by heredity, tradition, training, or environment to carry on his marketing or financing operations, and that those should be left to the city man trained to the business.

It's Different Now.

But in recent years we city people have been a good deal disturbed about the farmer. He has been doing a good many things that have made us very nervous. A few years ago the farmers of an entire state arose as one man and resented a little joking remark made by a city man. They had been told in a light, care-free way to go home and slop their hogs. Instead of following this advice as formerly they went out and raised hell. This was but one of the instances where the farmer insisted on doing the thing he was not expected to do. He has been showing a wholly unwarranted curiosity about what becomes of his crops after they leave his hands. He has been making inquiry into transportation, storage and handling charges. He has even had the nerve to question the profits that are made, and he is even demanding that he have something to say about the price that he shall receive. He is going pretty far for a man whose intellect doesn't know anything about these things, and whose sole ambition in life should be to raise two bushels of spuds where only one grew before.

But the farmer has just about reached the limit in effrontery. Swelled with the pride and assurance of the little local conquests, he has gone down to the seat of our national government, and he has established the "farm bloc," whatever that means, and if he doesn't get what he wants, he sees to it that all other legislation is held up, and so we must humor him and let him have some of his class legislation, in order that the other legislation that is good for us all may be enacted into law.

Farmer Is "Unreasonable."

But the most unreasonable thing about the farmer is this: That in spite of all the sympathy and patronage and advice we have showered upon him, he is leaving the farm and coming to the cities to compete with us for our business and our jobs—coming in such numbers that there are 1,500,000 fewer farmers today than ten years ago, and he has whined and complained so much about his unhappy and unprosperous condition, that he is keeping prospective settlers out of the country, and we are finding it mighty hard to sell our speculatively held lands, and I am afraid that if the farmer does not listen to reason and mend his way, many of us will have to take a severe loss.

But we city people have some problems of our own and we are beginning to worry about them. Each month when we receive our bills for food, clothing and shelter, we spend a very unhappy season. We have occasion to lie awake nights and wonder. And when we practice the most rigid economy, and get along without many of the things we would like to have and some of the things we really need, and the next month rolls around and conditions are a little worse instead of better, we begin to realize that something is wrong somewhere.

And Also "Unappreciative."

A few years ago when the farmer was receiving 10 cents a pound for his beef on the hoof, and 18 to 23 cents a pound for pork at the pen, and $40 a ton for spuds in the pit, and $2.50 a bushel for his wheat in the car, and so on, we knew our high living costs would not continue and we looked into the future with hope, and did not complain so very much. Then, too, we knew that thousands of people were going to flock out from the cities, and come from that unfailing source of everything, "the East," and settle upon our potentially productive lands, and by providing a steadily increasing surplus of food products, keep down the prices. And we viewed with much optimism the general prospect that was spread before us.

But something has gone wrong with our calculations. Things are not working out the way we expected. The much needed deflation in agriculture took place, and it knocked the inflated prices of farm products galley-west. It knocked a good many other things in the same direction. One of the first noticeable results was in the use of ink. The red kind, which had become more or less of a curiosity, was now in constant demand by the farmer, who was sufficiently enlightened to keep books. We city people waited expectantly for the farmer's loss to be translated into our gain, and we are still waiting. Our monthly bills not only refused to come down, but they have shown a steady tendency to go higher. Not only that but the farmer again showed the unreasonableness of his nature, by refusing to buy. The farmers' purchasing power fell off to almost nothing, and this hurt us city folks. We had kept on buying from him during the season of high prices, but he was so unappreciative that he refused to buy from us, when his prices went down.

Who's to Blame, Anyhow?

We people in the city hear that there is heavy over-production of many staple crops. Government reports would seem to indicate that this is true. The natural result of overproduction is cheap prices for staple food products, and yet our living costs are not appreciably lower. We have always felt that when food prices were high that the farmer was profiteering, but there are many evidences to show that that is not the case. Well, then, the middleman must be exacting an exorbitant toll, so we get used to it. If lumber were thus affected we could find a substitute. But when food is thus affected, we are compelled to think of the serious consequences. If there were a possibility of water or air being restricted in supply we would not hesitate long in making an effort to correct the difficulty. Anything that affects the food supply is just as serious, only the results are not felt so quickly. The problem would be exactly the same, the only difference lies in the degree.

The city man has begun to ask some questions with regard to the supplies and supply of food. He is compelled to come to some conclusions that make him uneasy. He finds that the farming industry is the source of his food supply. If anything should happen that would cut off this supply, the city man would be the first to suffer. If the transportation system should break down, or the costs of distribution become prohibitive, the result would be the same—the city man would suffer first and most severely. The farmer upon the soil could go on producing enough to keep him and his family alive, while the city people would be starving. When the city man looks at the situation from this viewpoint, the problem assumes a different aspect. He begins to realize that this thing that has been called the farmer's problem through all these years is primarily the city man's problem.

Here, through our indifference to a problem which we thought was entirely the other fellow's, we have permitted a situation to develop which affects not only our prosperity, but which threatens our very lives, and now we do not know what to do with it. Some of us think that by passing some long delayed laws we are going to reach a solution. Let us give the farmer a little credit and a little tariff, and a little something else, and then let him work his way out as best he can.

The Cities' Problem.

I do not know the solution of this problem, but I am convinced of two things: First, there must be an appreciation by the city man that this is his problem more than it is the farmer's, and, second, that only by the combined co-operative efforts of the city man and the farmer can this problem be solved.

The first step in this movement should not be very difficult because as I have pointed out our utter dependence upon agriculture is gradually being forced upon us. Already the city man is beginning to appreciate the importance of the agricultural industry, and there is almost daily instances of this awakening understanding.

The second step will be more difficult. In the first place there must be a common understanding and agreement as to the causes of the agricultural problem. There must be a determination as to whether the conditions of which we now complain are only temporary or whether there has been a permanent change in social and economic conditions, to which society as a whole must readjust itself. It is probably safe to say that the majority of the people living in a city and a good many country people believe that we are passing through a period of depression from which we shall emerge for a long era of general agricultural prosperity and that conditions under which we have lived in the past will again prevail.

I would like to set forth my own belief on this point as clearly as I can. I believe that even if nothing is done conditions will improve for a time, due to a general improved industrial condition and to a steady recovery of the European countries. This means an increased purchasing power, expanding markets and rising prices. This will give an appearance of general prosperity and the belief will arise that agriculture is again on a stable foundation. The net result will be but to delay the general readjustment necessary to place agriculture on a basis that will assure an adequate supply flowing steadily and economically to the constantly increasing populations.

Only One Solution.

There is only one general solution, and that is a more economical system of distribution. The first step in this direction is a realization that food products must be marketed in an orderly manner, with some regard to the law of supply and demand, and not in the haphazard chaotic manner which now prevails. I am not a farmer or a marketing man, so I cannot go into technical details. I am not a marketing engineer, limited solely to being assured an adequate supply of food at a price I can afford to pay.

I am not endeavoring to offer a solution of the problem, but merely to demonstrate that the city man is as vitally interested as is the farmer. In my judgment the city man has a good deal more at stake, and should enter into its study in full co-operation with the farmer.

The Joint Congressional Commission of Agricultural Inquiry made the most searching investigation into the agricultural problem that has ever been made, and presents some facts and figures that compel attention. This inquiry brought out the fact that of every dollar spent by the consumer for food only 20 cents goes to the farmer, 17 cents to the manufacturer, 14 cents as profits to the manufacturer, wholesaler and retailer, and 49 cents to the cost of selling and distribution. The farmer tells us that unless he receives more than 20 cents of every dollar he cannot remain in business. The consumer says that if his dollar does not buy more of food he will have to restrict his consumption to bare necessities. This means that hunger is only a short distance ahead of him.

Not Much Overproduction.

It should be perfectly obvious to every city man that it is of first importance to place agriculture on so profitable a basis that there will be a constant expansion in food production. It should be equally obvious to every farmer and city man that prices to the consumer should be on that level which will induce the greatest possible consumption.

There may have been overproduction in the past, but I am of the opinion that there has not been nearly so much overproduction as most people believe, and especially in recent years. I think that the trouble has been, and especially now is, underdistribution. It is my firm belief that if there were an efficient and economical distribution of foodstuffs it would be exceedingly difficult to obtain an overproduction under present conditions or those which will obtain in the future.

So long as there were millions of acres of free and easily developed lands overproduction was a natural result. During this period of easy development there was also a tremendous advance in the invention and use of efficient, labor-saving farm machinery and equipment. This helped in overproduction.

The Farmer's Troubles.

We shall always have an improvement in the methods and machinery of production, but against these we have some factors that will off-set them. In the first place where a man could engage in farming a few years ago with practically no capital investment he must now invest somewhere between $200 and $2,000 an acre, depending upon the kind of farming he intends to engage in. Every new farm that is developed in the future must be reclaimed, and it does not matter whether it be arid, cut-over, swamp and overflow lands or abandoned farms, the development cost, based on productive value, is appreximately the same. The high initial capital investment required will prevent rapid expansion of agriculture, even under the most favorable circumstances.

The increase in pests that attack food crops is calling for steadily increased efforts to combat them, which adds materially to the cost of operation. This is another deterrent to overproduction in the future.

Every crop that is taken from the soil takes something from its productive capacity. The time must come when the cost of fertilization and rehabilitation of the soil will be one of the major factors in production. I think it should be so considered now. Here again is a deterrent to the rapid expansion of agriculture, and a factor that will work against overproduction.

Agriculture should be expanded in exact proportion to the demand of increasing populations. This increase in population will naturally tend to become more rapid.

With the expansion of agriculture more difficult and the increase in population more rapid the problem of a food supply will become more and morp acute.

I am not presenting these facts as an argument for the immediate and forced settlement of waste lands in an effort to compel the rapid expansion of agriculture. I am presenting them as basic facts which must be considered in a co-operative spirit.

The First Step.

I maintain that the first step toward an expanding program of reclamation and settlement is establishing the present American agricultural industry upon a stable and profitable basis. I further maintain that the first step toward bringing about this condition is to reduce the proportion of the dollar that goes for selling and distribution. When city men and farmers are agreed upon these facts it will not be so very difficult to work out a co-operative plan for the solution of the problem.

I have not attempted to offer a solution of the problem but merely to point out "The Relation the Consumer Bears to the Agricultural Problem of Securing a More Economic Distribution." Surely it is obvious that the consumer should be more vitally interested in the solution than even the farmer.

DAIRY

It was shown by a report received from County Agent A. W. Holland's office that the Clallam County Cow Testing association cows averaged 341 pounds of butterfat per cow for the past year. This is 161 pounds of butterfat more than the yearly average of the entire state.

It has long been a rule on well-managed dairy farms to milk and feed the cows at the same hours every day. Regularity was always thought to have a beneficial effect on production. However, experiments carried on by the United States department of agriculture on the government farm at Beltsville, Md., have shown that cows of average production milked at the same hours every day produced but slightly more milk and slightly less butterfat than those milked at random, provided the feeding was done at regular times. When the feeding as well as the milking was done at random hours the cows produced about 5 per cent less of both milk and fat.

Facts and Near Facts

During the fiscal year that closed on June 1, the Wenatchee valley shipped 16,000 car loads or one apple for every inhabitant in the world.

Forty million dollars are being spent on good roads in Canada this year.

Vedic hymns of India were probably sung repeatedly for 1000 years before committed to writing.

SAWDUST DYNAMITE PROVES EFFECTIVE

New Product of University Chemist, Made Principally of Sawdust, Makes Good in Test.

Practical experiments carried on in stump lands near Tacoma have proven conclusively that the new "sawdust dynamite" is much superior to ordinary dynamite or blasting powder for the removal of stumps.

The product is the result of more than two years' experimentation by Prof. William M. Dehn of the chemistry department at the University of Washington. The chief value of the new dynamite for blasting purpose lies in the fact that it develops a slow burning gas of great expansive power.

Ordinary dynamite or powder, because of its sudden, sharp explosion, has a tendency to break off the stump, leaving much of it below the ground to be dug out later by hand. The new dynamite with its slow action, does not snap off the stump, but, with its powerful expansive power, lifts it out of the ground.

The new powder can be manufactured and sold at a cost of approximately six cents a pound, where ordinary dynamite and powder cost 16 cents a pound. The new product is made of digested sawdust, the air spaces of which have been saturated with ammonium nitrate. Set off by a detonator, the combination of the nitrate and the wood causes a powerful gas, which forces loose the stump and its roots.

While the article is now out of the experimental stage, and has proven successful under actual conditions, it has not yet been placed on the market. When it is made available to Washington farmers, it promises to be of material benefit to them and to the state in the reclamation of waste and logged-over lands.

POULTRY

Sweepstake prizes for the best birds shown in the Spokane Poultry Breeders' show were won recently by White Wyandottes entered by Spokane people. N. Sabadin won the sweepstake prize for females with a White Wyandotte pullet.

Double Yard for Poultry.

Double yarding, or the practice of shifting the poultry from one yard to another and planting the old yard for some green crop, has sound basis, because plowing the used yard turns the manure under and turns up clean soil, and the crop grown assimilates the manure in the soil and thus aids in cleansing it so it will be healthful for the flock when turned back into it. But to do this requires twice as much ground as is needed for the size of the flock where only one yard is used. The backyard raiser, however, will find that if twenty hens are given special care to keep free from vermin and supplied with clean ground and abundant green feed they will yield more than twice that number crowded into a small area and kept year after year on the same ground. In addition to this manner of renovating the yard it is advisable to sprinkle slaked lime around the poultry house for a distance of twenty to thirty feet in the spring and fall before spading or plowing.

Points on Saving Eggs for Hatching.

Save eggs that are smooth shelled, even texture shell and not less than 23 ounces to the dozen.

Save eggs not longer than ten days for setting.

Keep eggs where they will not be chilled, exposed to a draft, not subjected to great warmth, as the last two especially causes excessive evaporation.

Use one cockerel to twelve hens or one cock to eight pullets for Plymouth Rocks, Rhode Island Reds and Wyandottes.

Eggs are fertile for about two weeks after males are removed from the flock.

Use one cockerel to fifteen hens in Leghorns and one cock to twelve pullets, and in flock mating, use three or more males.

Save eggs after males have been in the pens for ten days or more.

The Clallam County Guernsey club is arranging to foster a boys' and girls' calf club this year. Mr. J. L. Keeler offered $20 as prizes for members of the calf club while the Guernsey club has agreed to duplicate Mr. Keeler's offer.

Harness Oiling

The harness oiling season has arrived and our Dipping Vat is now working. We are prepared to turn out this work at the old price of $1.00 a set.

Our method consists of dipping the harness and letting the oil soak in where it is needed. Not merely getting the outside oiled, but completely saturating all parts, the work being done in a steam heated room where the best results are obtained.

If you want to do the job yourself, we will sell you the harness oil for $1.00 a gallon, put up either in gallon cans or in bulk.

Don't use Petroleum Oil for Harness Oiling. It does more harm than good. We use a Neatsfoot Compound Harness Oil especially adapted for the work, and buy it in sufficient quantities to enable us to sell it at the low price of $1.00 a gallon.

CASEBOLT, The Harness Man

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possesions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

School Notes

Wilma Casebolt

The returns from the eighth grade examinations were received last week. A very good report was made, the grades averaging from 71 to 98.

The high school basket ball team played against the Lewiston High school team last Friday night at Lewiston and were defeated by a score of 13 to 11, but we may well be proud of our team due to the fact that they were playing a team that has had many more advantages than ours.

The Genesee High school basketball team has a game scheduled with the Kendrick High school team tonight (Friday) at the opera house, beginning at 8 o'clock.

A taffy pull was enjoyed by the members of the sophomore class on last Saturday evening at the school house. The sophomore class advisor, Miss Martinson, and Miss Patch chaperoned the party.

A simplified version of the opera, "The Bohemian Girl," is being prepared by the Beta Literary society. The program is planned for next Friday afternoon.

Letters were presented to the football men of last season last Wednesday noon before the student body. All wearers of the "G" were entitled to them by playing a majority of the games of the season. The following boys are the proud owners of the new letters: Elmer Stovall, captain; Jack Whitted, Tom Platt, Vincent Hasfurther, George Miller, Lester Bumpass, Virgil Klemm, Stephen Johann, Alfred Hasfurther, Albert Anderson, Clarence Aherin, Leon Danielson, Marion Mayer.

The football players of the Genesee High school gave an elaborate banquet at Smolt's Wednesday evening at 6:30 o'clock. The color scheme was carried out very elaborately in blue and gold. A four-course dinner was served. The dessert symbolized the blue and gold emblem of the G. H. S. The favors were after-dinner mint baskets containing small footballs. Virgil Klem presided as toastmaster and toasts concerning football, the high school spirit and personal events were given by Coach Smith, Elmer Stovall, Tom Platt, Supt. Thomas, Jack Whitted, George Miller, Hartzel Edwards, Lawrence Kraut and Albert Anderson. George Miller was elected by the football squad as captain for next year. A pleasant little dance was indulged in following the dinner. Genesee may well be proud of her high school football team and the fine fighting spirit shown by each and every participant in the seven games played, in five of which the boys were victorious. This was the first football banquet in the history of the high school and its success was very pronounced. The following were present at the banquet: Supt. and Mrs. Frank H. Thomas, Mr. and Mrs. Chas. W. Smith, Mr. Winegardner, Miss Patch, Elmer Stovall, Irene Mulalley, Tom Platt, Grace Willoughby, Virgil Klem, Grace Jain, George Miller, Lillian Olson, Hartzel Edwards, Alfreda Hampton, Jack Whitted, Wilma Casebolt, Leon Danielson, Helen Casebolt, Albert Anderson, Olive Mulalley, Marion Mayer, Irene Hall, Archie Kane, Gladys Johnson, Alfred Hasfurther, Oma Castle, Lester Bumpass, Madeline Hasfurther, Lawrence Kraut, Fern Herman.

Pine Grove News

Mrs. Roy Sweet and son, Clyde, went to Clarkston on Friday for a visit with relatives.

Mrs. Spurbeck and Miss Cora Holle made a trip to Genesee on Friday evening, returning Saturday evening.

Mr. and Mrs. Hayden entertained the young people of the community last Wednesday evening as a surprise to Ora and Lester. Every one reported a good time.

Several from Pine Grove took in the dance at the Upper Cow Creek school house Saturday night and reported a very large crowd and a good time. Their belief evidently was "the longest way going is the sweetest way."

A large number were in attendance at the meeting of the sewing club at the home of Mrs. J. E. Sams last Thursday. The time was very pleasantly spent in needlework. The usual tempting lunch was served which is characteristic of these gatherings.

Organized Community Club

The ladies of the Gray Eagle neighborhood have organized a Community club and have made Thursday their meeting day. Meetings have been held at the homes of Mrs. L. E. Gray, Mrs. Sherm Wahl and Mrs. Fred Bershaw and the meeting this week was at the home of Mrs. Peter Isaksen. The objects of the club are to get together and get better acquainted and at the same time do something beneficial for others.

At the last meeting a patch quilt was finished and packed to be sent to the orphans' home. On this Thursday another one was ready.

So far the ladies have been well chaperoned for there always has been enough husbands along to make a pinochle party.

(The News hopes the ladies will furnish a report of their meetings each week.)

Given Shower

A shower was given at Mrs. Wheeler's shop Tuesday afternoon in honor of Miss Melvina Cameron, who is soon to become the bride of Ed. McClain. The afternoon was spent in social converse and a delicious luncheon was served. Miss Cameron was presented many pretty and useful things, including china and linen.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Emmett & Boliou

JAP-A-LAC
Drainboard Enamel

Haven't you often wished for a beautiful porcelain sink and drainboard? You already have the sink, and two coats of Drainboard Enamel will make the drainboard look just like it. Anyone can apply it, and it dries hard overnight. Requires no undercoat, just a coat of Enamel each night for two nights. Use your sink in the meantime.

Do not confuse JAP-A-LAC Drainboard Enamel with anything else on the market, as it is distinctly different.

If you want to make your kitchen work easier, and have a drainboard that is not only beautiful to look at, but easy to take care of,

Take 90c to the

PERSONAL MENTION

Joe N. Hasfurther was a Spokane passenger Wednesday morning.

R. S. Sullivan was a Sunday passenger for Spokane for a short stay.

Miss Ida Johnson returned to school at Colton after visiting home folks.

Mrs. W. D. Woodward was a Friday morning passenger for Johnson.

C. Renchouser was a Tuesday morning passenger for Spokane to continue work there.

Mrs. E. Linehan was a Wednesday morning passenger for Spokane for a few days' visit.

A. E. Elver was a Tuesday morning passenger for Uniontown to receive medical attention.

Mrs. G. E. Sampson and daughters, Gertrude and Margaret, were Moscow visitors Saturday and Sunday.

Mr. and Mrs. George Rader arrived Friday afternoon from Kellogg for a visit with their parents.

Mrs. Chas. Herman and Mrs. Frank Qualey were Tuesday morning passengers for Lewiston for a short visit.

Mrs. Trail and daughter returned to their home at Spokane after a two-weeks visit at the Carl Osmundson home.

Rev. A. F. Wolff left Monday morning for Davenport, Washington, to attend a conference of the Lutheran church.

Mr. and Mrs. F. B. Hampton left Wednesday morning for Spokane, Seattle and other coast points on an extended visit.

Esther Clark returned to school at Colton Tuesday after spending a few days with her parents, Mr. and Mrs. Grant Clark.

Misses Maxine Ehlen, Amalia Lawen and Ruth Wolff, Orland Mayer and Jack Hasfurther spent the week-end with home folks.

Mrs. W. D. Woodward and children were Wednesday passengers for Johnson where they gave their entertainment that evening.

Mr. and Mrs. Jack Barnes and little son, Jack, went overland to Spokane Saturday for a short visit with Mr. Barnes' parents.

Mrs. Louis Stelts returned to her home at Moscow Friday morning after a week's visit at the home of her brother, Harry Schooler, and family.

Don Hollister Gannon returned to his home at Pullman Wednesday morning after a visit with his grandparents, Mr. and Mrs. Fred K. Bressler.

W. J. Harlow cam up from Lewiston to attend the Knights of Columbus oyster feed Tuesday evening, returning to the banana belt Wednesday morning.

Amand Kern was a passenger for Moscow Monday where he will enter the U. of I. He has been working on the forest reserve in the southern part of the state.

Christian Endeavor Notes

(By Robert Parks)

Sunday being the birthday of the Christian Endeavor society, part of the meeting Sunday evening was given over to the discussion of the progress that the Endeavor has made in its 42 years of existence. Talks were given by some of the older members about the church when they were young.

A piano solo by Wilma English was enjoyed by all.

Before the meeting was over a few of the delegates to the Pullman convention arrived and the latter part of the meeting was given over to them. They told of important sessions, but lack of time compelled the postponing of some of the reports until next Sunday. The Genesee society had the largest delegation in attendance.

The officers of the Whitman-Latah district are as follows: President, Earl Christenson, Pullman; vice president, Orland Mayer, Genesee; recording secretary, Gertrude Christen, Potlatch; corresponding secretary, Cleon Davidson, Pullman; treasurer, Blanche Farnham, Pullman; pastor councillor, Rev. William Snoddy, Moscow; intermediate superintendent, Wilena Couch, Garfield; prayer meeting superintendent, Colene Harris, Potlatch; lookout, Marian McCombs, Troy; extension superintendent, Robert K. Patterson, Pullman; quiet hour, Hope Michelsen, Genesee; tenth legion, Edna James, Juliaetta; missionary, Mary Duel, Moscow; social and recreation, Jess Wyant, Pullman; publicity, Leatha hetler, Garfield; evangelist superintendent, Rev. S. B. Kenoyer, Albion.

There were 90 registered delegates in attendance at the convention and 110 covers were laid for the banquet Saturday night.

Those in attendance from Genesee were Katherine McMahon, Carrie May Hickman, Esther Hickman, Alfreda Hampton, Grace Jain, Grace Willoughby, Ethel Nelson, Irene Hall, Marion Mayer, Orland Mayer, Jesse Gray, Roy Herris and Ted Parks.

Rev. Pendleton led the delegation and had charge of the quiet hour meeting at the conference.

U. of I. Glee Club Saturday Night

The University of Idaho Glee club will appear at the opera house tomorrow (Saturday) night and the occasion will be one of the rare treats seldom coming to Genesee. The club is composed of 75 members and will be accompanied by the violin instructor of the University so you are assured of one of the best entertainments that will visit Genesee this season.

Idaho Needs Same Thing

The Oklahoma senate has passed a law making it an offense to sell or advertise cigarettes in that state.

MAKE CONSTITUTION HARDER TO AMEND

Bill in Congress Would Make Future Amendments More Subject to Will of Whole People.

Senator Wadsworth, of New York, introduced a joint resolution in congress, looking to tightening up the process of amending the constitution of the United States. The judiciary committee, to which it was referred, has had hearings upon the proposal, and a favorable report is looked for.

The resolution provides that members of at least one branch of the state legislature ratifying a proposed amendment to the federal constitution must be elected after the amendment has been proposed, an dthat any state may require confirmation of the action of its legislature by a popular vote; and that any state may change its vote until the amendments has been ratified by three-fourths of the states.

The proposed change in ratification methods is particularly interesting at this time, when many suggestions are being made for amendments to the constitution. Representatives from many churches have just met in Washington to discuss plans by which federal control of motion pictures can be brought about. At present seven states have motion picture censorship laws, which are in the main not very satisfactory to either the motion picture industry, the picture house managers, or the public. Many ministers believe that national control is a necessity, but legislators as a rule see the proposal as an infringement of that freedom of the press and speech guaranteed by the constitution.

Mrs. Winifred Masen Huck, representative from Illinois, has introduced a bill in the house to amend the constitution, requiring a referendum before war can be declared. A new anti-child labor amendment to the constitution to replace the one declared unconstitutional by the supreme court, is to be put before congress.

With so many proposals in the air to amend, the fate of the Wadsworth resolution will be watched with interest.

"DIRT FARMER" IS DAIRY SPECIALIST

Farm Representative on Federal Reserve Board Was Prominent in Agriculture.

President Harding took eight or nine months to find a "dirt farmer" who would be acceptable to fill the position of representative of agriculture on the Federal Reserve board. Milo D. Campbell, of Coldwater, Michigan, has been nominated for the position. He is an outstanding dairy farmer, well known in dairy circles throughout the country. Mr. Campbell is president of the National Milk Producers' association, an office he has held ever since the association was started five or six years ago. For a time he was chairman and is still a member of the executive committee of the National Board of Farm Organizations. He owns and operates a large dairy farm in Michigan and at one time was a practicing lawyer. He also has been a prominent figure in Michigan politics and has had the united support of the Michigan delegation in Washington.

In choosing Mr. Campbell the president has recognized one of the greatest divisions of agriculture, dairying, and has chosen a farm leader from the middle west who has a comprehensive view not only of dairying but of all farm activities in the surplus producing states.

Mr. Campbell was recognized by the American Farm Bureau Federation as an outstanding farmer and was placed upon the Farmers' Dairy Marketing committee of eleven.

WORLD NEWS NOTES.

Daris Abarta, a Los Angeles newsboy acting as his own attorney in a township justice court, obtained a judgment for 65 cents from Louis Rado, whom he sued for nonpayment of a month's bill for delivery of a daily newspaper.

Figures just compiled show the theory that the war has lessened respect for life and increased murder is erroneous. England and Wales had 98 murders in 1912 and 100 in 1913. But there were only 107 in 1920 and only 85 in 1921.

A plea for funds to buy cats has been received by the American relief administration from its Kiev (Russia) office. According to the letter rats and mice are wiping out the food supply. Cats sell for 10,000,000 rubles and kittens are bringing half price.

IDAHO

C. W. Hungerford, plant pathologist at the Universit yof Idaho experiment station farm, has been elected a fellow in the American Association for the Advancement of Science, and commissioner on the advisory board of the American Phytopathological society for a three-year term. Mr. Hungerford's directorship will be for the entire district west of the Rocky mountains. The election of Mr. Hungerford to a fellowship in the American association, an honor bestowed only upon those making outstanding contributions to science, was in recognition of his valuable research work dealing with the stripe rust of wheat, the relation of moisture to the control of smut in wheat, and potato disease investigation.

Articles of incorporation of the Lewiston-Clarkston federation was filed recently by P. R. Parks, Vera Parks and P. S. Randall, Lewiston, and S. D. Steinnger and C. A. Foley, Clarkston, the capital being $20,000. The corporation on the first of February will take over the packing place and storage building of the Valley Fruit company, in Lewiston and will engage in the general fruit handling business. The company's operations will be affiliated wth the national federation fruit and vegetable growers.

Trustees of the Community Hospital Idaho association of Newport, Wash., have let the contract for a $13,000 modern hospital to be started about the first of February.

The state senate has passed a bill abolishing the Idaho state constabulary. This redeems pledges made by three parties at the last election.

The Oregon Packing company, conducting a large fruit, canning factory at Lewiston, announced today that it had closed contracts for the output of about 400 acres of cherry and peach orchards in the Lewiston Orchards district. The contracts demonstrate the confidence the packing company has in the stability of fruit prices.

Fifty residents of Elk City basin have petitioned the game warden to request the legislature to create a game preserve on the north side of Salmon river..

LIVESTOCK

The annual estimate of farm animals in Washington, as made by the crop reporting board of the bureau of agricultural economics, shows small decreases in the numbers of horses, mules, milk cows, and other cattle, but indicates a four per cent increase in the number of sheep and a ten per cent increase in the number of swine. In value per head, horses average $70.00, the same as last year. Mules average $83.00 against $88.00 last year; milk cows, $61.00 against $70.00 last year; and other cattle, $26.40 against $28.30 last year, all three classes showing a decrease in value per head. Sheep this year average $8.00 per head against $5.40 one year ago, while swine average $14.80, as compared with $10.00 last year. The total value of these six classes of livestock on January 1, 1923, was $52,683,000 as compared with $54,172 000 on January 1, 1922, a decrease of $1,789,000 or 3.3 per cent. On January 1, 1921, the total value was $62,792,000.

There are over $5,000,000,000 worth of farm animals in the United States with horses, milch cows and other cattle each forming a classification of which there are over $1,000,000,000 worth, according to the annual farm animal survey of the department of agriculture. It hogs keep on increasing in value at the rate shown by comparative tables for January 1, 1923, and the same date a year previously, they also soon will be able to form a billion dollar trust. From January 1, 1922, to January 1, 1923, the hog value of the United States increased from $581,810,000 to $736,839,000. The value of the 18,893,000 horses in the country was placed at $1,314,997,000 the first of this year, milch cows at $1,241,163,000 and other cattle at $1,076,163,000.

Up-to-Date.

Mile. Mayadele—What kind of a curl do you want, Miss?

Miss Cookie—Oh, I'd like one of those new crime-waves you hear so much about nowatimes.

Advance Information.

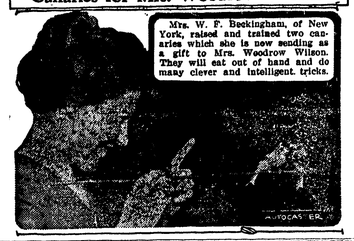
She—How did you know I was going to wear my hair curled this evening?

He—I saw it in the papers this morning.

Danger Ahead.

She rent the air with piercing note,
She found a hair upon his coat,
Her poor heart bled with grave concern,
The hair was red and wasn't her'n.

Canaries for Mrs. Woodrow Wilson



Mrs. W. F. Beckingham, of New York, raised and trained two canaries which she is now sending as a gift to Mrs. Woodrow Wilson. They will eat out of hand and do many clever and intelligent tricks.

FARM BUREAU ARGUES TO REMOVE $10000 LIMIT.

Gray Silver, Washington representative of the American Farm Bureau Federation, urged the house banking and currency committee to report out the Norbeck-Strong bill which provides for an increase in the amount of money which may be loaned to individuals by the cooperative farm loan associations. Mr. Silver stated that the time for renewing mortgage obligations is not far off and that a failure to report the bill will necessitate the renewal of mortgages at high rates and probably the payments of commissions. Answering the claim made by some members of the committee that the Federal Farm Loan system was created to help the "small" farmer or to assist the landless man to secure a small farm, Mr. Silver declared there were two schools of thought on this subject and that the present limitation of $10,000 was a compromise when the bill was originally passed.

Two Schools.

One school of thought claims that the farmer is a yokel and has an unhappy lot, that he must live in his misery because he has chosen farming as his business. The other school of thought maintains that the farmer is a business man, that agriculture is a calling and that farmers wish to raise their family on the farm and continue in the farming business. That is what the American Farm Bureau Federation has in mind when it requests that the loan limit of $10,000 be removed and that the limit of the loan should be determined by the size and quality of collateral offered.

Mr. Silver maintained that the economic farm unit used to be 160 acres, but with the changing conditions the unit now varies widely in different parts of the country. "There are hundreds of thousands of farms in the United States which are valued at more than $20,000. Among the states which have large numbers of such farms are California with 23,000; Idaho, 10,000; Indiana, 27,000; Illinois, 141,000; Iowa, 152,000; Kansas, 53,00; Kentucky, 10,000; Minnesota, 58,000; Missouri, 25,000; Nebraska, $41,000; New York, 10,000; North Carolina, 22,000; North Dakota, 24,000; South Dakota, 44,000; Texas, 23,000; Washington, 12,000; Wisconsin, 30,000. Every state in the nation has a large number of farmers operating units valued at more than $20,000.

What Removal Will Do.

"The removal of the loan limit would put the co-operative Farm Land banks on the same working basis as the Joint Stock Land banks, thus giving them the chance to function on an equality. This should be done so that the farmers who wish to obtain their money cheaply through the cooperatives may do so.

"It will require no more money to finance agriculture through this system than through any other and therefore it is only a question of whether congress will see fit to make it possible for the Federal Farm loan system to function the way in which the farmers believe it should. It is not financing agricultural production when you limit loans to $10,000.

"Unless agriculture is financed through this system it will continue to have to refloat its mortgage indebtedness every three to five years, pay high interest rates and commission. It does not help anybody to limit the size of loan made by the Cooperative Farm Loan association.

New Provisions Up.

Mr. Silver also approved of the other provisions of the bill which make it possible for the 12 Farm Loan banks to appoint agents who can make loans under the same provisions as the local cooperatives. When ten of these loans have been made in a locality the individuals may join in forming a cooperative farm loan association. It also provides for the lending of money to farmers to pay off debts which do not represent money owed on farm land. It also authorizes the appointment of boards of directors of the twelve Farm Land banks which will consist of three members elected by the local cooperative associations, three by the National Farm Loan board and the seventh by the other six members.

SMUT PROBLEM NEAR SOLUTION

Expert Says Few Years More Will See Last of the Menace.

"The smut problem in Washington wheat is at last on the road to solution," says E. F. Gaines, farm crops expert of Washington. "It may be 10 or 20 years before smut entirely disappears, but the end is in sight. From the many immune selections developed the one best adapted to a particular locality may replace the susceptible variety now being grown.

"The college has been working on smut resistance since 1914, and has tested more than 500 varieties. Many hybrids have been made and are now in progress of being selected and tested. Many are not fit. Perhaps a hundred thousand plants are discarded each year, but a few choice ones are preserved, and the development of these promise to revolutionize seed treatment practices.

"To be valuable for general production, a wheat must have a combination of many desirable characteristics in delicate balance that will breed true from generation to generation. Resistance to smut disease is a very important characteristic. It is this quality that has caused Turkey and Marquis to increase in popularity as they have the past three years.

"The breeding work at the college shows there are many kinds of resistance in wheat, each inherited independently of the others. This offers an almost infinite number of possibilities for producing a variety of wheat that will not smut and at the same time will have all the other desirable qualifications. Four strains being tested by the experiment station have shown for three years now that they were immune from smut, in spite of the most severe attempts to infect them.

"One of these, called Smutproof, seems to have commercial possibilities. It is winter hardy, of good milling quality, and yields well. It has been selected from a hybrid of Turkey and Florence made in 1915. This and many of its sister types are much more resistant than either of the parent types. During the past seven years this selection has never shown more than a trace of smut, even when seed was blackened with smut before planting. The average yield in the cereal nursery the past four years has been slightly more than 40 bushels per acre.

"The three other immune wheats were isolated by selection from comparatively susceptible types. They belong to the bread wheat class, but are not adapted to local conditions on account of weak straw and low yield. They may be valuable, however, for hybridizing with other varieties th stiff straw and high yield.

"Many varieties have been tested for yield, quality, smut resistance etc., at the experiment station, and a list of the wheats best adapted to a particular locality will be furnished upon request by the farm crops department."

Last year inspectors from the bureau of animal industry passed on the health of nearly 25,000,000 head of sheep with special reference to the presence of scabies, a parasitic disease that causes a great deal of loss to ranchers if it is allowed to gain headway in flocks. More than 8,000,000 of these sheep were dipped to destroy the parasites. The disease is quite prevalent in a number of the western range states, but the work of livestock health officials is resulting in improvement.

Feeble—Not going to bed, are you? Minded—No, stupid, just getting ready so I can dress in the morning.

Explanation of Whatcom County Accredited Hatchery Plan

The following hatchery plan for raising accredited chicks has been adopted by poultrymen of Whatcom county. It is given herewith for the benefit of poultry raisers of this vicinity who may be interested in something of a like nature.

The accredited hatchery plan, as outlined, does not contemplate inspection or certification of breeding flocks used exclusively by the farmer for producing chicks on his own farm, but it does involve the inspection and certification of every flock selling eggs to any hatchery in the county. The rules and regulations adopted are as follows:

1. A hatchery, to become accredited under the rules of the Whatcom County Accredited Hatchery, association must agree to sell no chicks except from eggs produced by accredited flocks.

2. It must furnish the extension office with a list of all flocks from which it receives hatching eggs, and a like list at the end of the season, of all parties to whom it sold chicks, and the number sold to each.

3. Fowls used for breeding must be healthy and vigorous. They shall have been culled according to standards recommended by the extension service of the State College of Washington.

4. Females must be at least 18 months old.

5. For the 1923 season, males shall be at least 8 months old. The breeding ratio shall be at least six cockerels per 100 hens or as near that as the size of the flock will permit.

6. Beginning with the 1924 season, all males shall be at least 9 months old. In addition, the dam and sire's dam of all males must have made a trapnest record of at least 225 eggs in 365 days.

7. Breeders shall have the privilege of satisfactory runs from November 1 to the end of the breeding season.

8. All breeders shall be fed at least as much grain as mash and a good supply of greens must be furnished. If fed in houses, the litter must be reasonably clean, dry and loose.

9. No artificial lighting shall be used during the 3 months prior to the breeding season. During the breeding season, artificial lighting may be used provided that the fowls are not given longer than a 12-hour day.

10. Eggs must be uniform in size, shape, color and shell texture. They must weigh 24 ounces or more per dozen with a minimum of 23 ounces per dozen. No washed eggs shall be used.

11. Eggs shall be delivered to hatcheries within 7 days and incubated within 11 days from time laid. Precaution shall be taken to prevent chilling or overheating.

12. No chicks shall be sold that are weak or deformed.

13. Each breeder or hatchery must pay at time of first inspection, a fee based upon both the number of breeding fowls and the capacity of incubators used to hatch eggs from accredited flocks. The amount of this fee shall be determined each year by members of this organization of accredited breeders and hatcheries. The fee so collected shall be used only to defray the expenses of the organization and any amount remaining in the treasury at the close of the year shall be returned proportionately to those paying the fees; or used to defray the expenses of the following year at the option of the members. The fee for 1923 shall be $1.00 per 100 hens used for breeders, and $1.00 per 1000 incubator capacity used for hatching eggs from accredited flocks.

14. All fowls and all equipment use din producing hatching eggs and baby chicks for sale shall be regularly examined by an inspector appointed by the extension service of the State College of Washington, and must be approved by him as fulfilling the above requirements in order to be, and remain, an accredited breeder or hatchery of Whatcom county.

15. All breeders used during 1923 season shall weigh not less than 3 1-4 pounds.

16. First inspection application will not be received after January 25, 1923.

Y. M. C. A. Offers Homesickness Cure

Were you ever homesick?

Most men have been. It usually occurs a few days after leaving home for the first time to go into a new place to live, or a larger city to work.

Some men try to overcome homesickness by dissipation. There are always plenty of places to go where a young man should "steer" clear of.

Other men overcome homesickness by attending evening school, studying in their room, mixing with a good group at a place where clean relaxation may be had, etc.

The best place may be found in Spokane. It is always open, and all men are at all times welcome. It is the Young Men's Christian association, located on the corner of Lincoln street and First avenue, just across from the Davenport hotel, Spokane.

A good clean swimming pool fitted with porcelain white water is at the disposal of men who desire it, always. Shower baths also.

The reading room is equipped with comfortable chairs and good magazines and reading matter where a profitable hour may be easily spent when you have nowhere to go or nothing to do.

The big gymnasium is efficiently equipped with plenty of exercising apparatus, a running track, hand-ball courts, etc., and gymnasium classes are held at intervals.

The dormitory, although usually filled, is a good place for a young man to stay from home in June. The rooms are comfortable, and may be secured by making written application.

Sunday afternoon religious meetings are held in the Y auditorium on the second floor each Sunday at 3:15 p. m., at which time a well known authority speaks on various subjects, and good music is a part of the program.

The educational department yearly turns out men better fitted to hold bigger jobs at better pay.

Why not, next time you are in Spokane, go to the Y building? Go up to the counter. Introduce yourself. You will be more than welcome to make it your headquarters while in the city.

There is usually an opportunity at the Y to get acquainted, get busy, and to forget your spell of homesickness. Men who are really worth while replace homesickness with study, healthful recreation and good company.

UNIVERSITY PROCESS REDUCES SOAP COST

Reduction of manufacturing costs of a chemical used in high grade toilt soaps, from $16 a pound to $1 a pound is the result of a new manufacturing process discovered by Waldo Semon, instructor in chemistry at the University of Washington.

The chemical, hydroxylamine hydrochloride, is used as a disinfectant in soap, replacing carbolic acid and creosote. It is greatly superior to these as it has no odor. It has been used in England in the manufacture of the very best grades of toilet soap, but its cost has been prohibitive of its use in cheaper products.

The new process, besides reducing the cost to one-sixteenth, shortens the time necessary for its manufacture from 48 to 4 hours. It can also be used in the manufacture of photographic developers and fine chemicals.

Favorable weather conditions and the $250,000 appropriation of the state legislature for seed wheat loans to Big Bend farmers will combine to give the Inland Empire a monster wheat crop this year, is the opinion of Spokane grain men. Reports say that the moisture conditions were never better at this time of the year and unless there is a heavy freeze or thaw the winter wheat crop will be very favorable.

What's a Farmer?

A farmer is—

A capitalist who labors.

A man who works eight hours a day twice a day.

A man who has every element of nature to combat every day in the year.

A man who is a biologist, an economist, and a lot more ists.

Who gives more and asks less than any other human being.

Who takes unto himself for his own sustenance and that of his family those of his products that other people will not utilize.

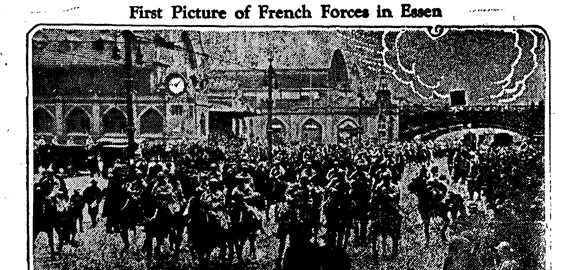
Who gives his boys and girls to the big cities to infuse red blood into a society that is constantly decadent and whose only salvation is the virility that it draws from the rural sections.

Who sells his products for what the other fellow cares to pay for them and who buys the other fellow's products at what the other fellow cares to charge for them.—Farm and Ranch Review.

Seed Wheat Treatment Increases.

Farmers in Adams county reported to County Agent N. C. Donaldson that 20,000 acres of seed wheat had been treated with copper carbonate. There are also many farmers in the district who have made machines for treating their spring wheat with this chemical.

First Picture of French Forces in Essen



It was exactly 1:45 P. M. when the French cavalry rode into Essen, if the clock of the railroad station at the left was correct. This exclusive picture is the first taken of the actual occupation of the German coal center by the French forces. Streets were crowded by Germans out to see the entrance of the invaders.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

FERTILIZING THE GARDEN

Every family should have a home garden. This garden may be large or small, but it should be of a size sufficiently large to meet the needs of the family. From the farming standpoint, the garden represents a piece of ground that is under very intensive cultivation. There must be a sufficient amount of plant food and it must be readily available. This means that it will pay to give it good fertilization and good tillage. For the home garden only the best of manure, free from straw and weed seeds should be used; and the addition of some commercial fertilizers to reinforce that manure can well be made.

This article was prepared by Leonard Hegnauer, extension specialist in soils and crops especially for gardening under irrigated conditions in this state.

In sections where sufficient irrigation water is available, it is comparatively easy to keep the garden in good condition for heavy production. Select a good piece of ground where drainage is good so that surplus water cannot stand. Never use a piece of ground in which an excess of alkali salts are found. Good conditions must be present in the garden if maximum returns are to be expected.

Manure should be applied at the rate of ten or twelve loads to the acre and uniformly distributed. Two hundred pounds of superphosphate or steamed bone meal might well be added to the above amount of manure and applied with it. As soon as the ground is ready, disk it thoroughly and later plow. Disking mixes the fertilizer with the soil and helps to make a better seed bed. If the garden is too small to plow, mix the fertilizer with the soil by shallow spading and later spading deeper.

Where the soil is deep the garden should be plowed or spaded to the depth of eight or ten inches. On shallow ground the depth of plowing must be proportionately less. The depth should be sufficient to permit all deep-rooted vegetables to develop normally. The ground should then be worked down to a fine mellow seed bed, with the under portion fairly compace. It should be in such a state of cultivation that there will be no air pockets and no clods.

NORTHWEST NEWS

Making his first suggestion and recommendations for action on the Columbia Basin project since his election to the United States senate, C. C. Dill recently suggested that some time in May or early in June the members of the house irrigation committee be brought to Washington by the Basin league, for a thorough and personal inspection of the entire project. "This will probably cost $4,000 to $5,000, but the results would be worth the spending 10 times that much in other ways," stated the senator-elect. "The senate committee has approved this appropriation once and will probably do the same again."

Samuel Gompers is for the Columbia Basin Irrigation project and has written Ren H. Rice, secretary of the Columbia River Basin Irrigation league, giving assurance of the cooperation of the American Federation of Labor. Other labor organizations are coming out for the project and are offering important support. "The American Federation of Labor is heartily in favor of any plan of irrigation that will benefit large numbers of people," the labor president said. "The legislative committee of the American Federation of Labor has standing instructions to do all that is possible to encourage reclamation legislation."

The annual meeting and banquet of the Colville Chamber of Commerce held recently advanced plans to have the various towns unite in an advertising campaign in the form of folders, to be issued in quantities and furnished tourists' headquarters and the railroad offices. Work on this folder will be started at once, and it is the plan of the Colville Chamber to make this folder as complete as possible.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

When the lace or muslin curtains have been freshly laundered, and the curtain rod protests at going through its proper runway and catches stubbornly in the material, put a little piece of cloth or even a little piece of firm tissue paper over the end of the rod. There will be no more balking on the part of the rod.

Women often wonder what colors they can wear, and to help them in selecting appropriate colors to go with their figures, Miss E. Belle Alger, extension specialist in clothing of the state college gives the following helpful suggestions: Warm colors such as yellow, red, and orange to increase one's size. Cool colors such as green, blue and blue purple are retiring colors and seem to decrease one's size. White appears to increase the size of the individual, while black appears to decrease the size. Very bright colors, except in sport costumes should be used in smaller quantities than the more subdued or grayed colors.

When callers drop in unexpectedly and you want to serve a dainty with the social cup of tea, just take two soda crackers, spread the lower one with a thin layer of cottage cheese, put the other on top, and cover with your favorite jam. It will be appreciated.

A Floor Polisher.

Hardwood floors require frequent polishing, as does the finish of a high-grade automobile. Special tools for the purpose are expensive and usually a makeshift device is necessary, or else the work is done by hand on bended knees.

If you have a dust mop of the usual type, this may be adapted to the purpose by dropping two or three ordinary flatirons over the handle and wrapping the mop up in an old rag. The irons give enough weight, and all that is necessary is to push it to and fro.

A special polisher can be made from odds and ends that will be better than the makeshift device just mentioned. It consists of a small wooden box with a two-inch partition through its center to which is hinged a handle cut from a two-by-four. Flatirons or other articles of heavy weight are carried in the two compartments.

The bottom is made ready for use by laying upon it several thicknesses of old newspapers, then covering this with an old bath towel, the edges being brought up on the sides and tacked. In use it will be found convenient to place a few drops of oil on a clean rag, place this on the floor and set the polisher over it. It will not slip from under while in use.

Never try to wash off grease from a wooden surface with hot water, since it melts the grease and makes it sink deeper into the wool. Use warm suds and rinse off with clean water.

Cornered.

"Mamma, why has papa no hair?"

"Because he thinks so much, my dear."

"But why have you so much?"

"Because—go away and do your lessons, you naughty boy!"

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

It costs 80 per cent more to live in London now than in July, 1914, when the world war broke out, say figures just compiled by the ministry of labor.

Building is booming in Japan. Her imports of Douglas fir lumber from the United States during October doubled September figures. Our wood makes the best framework for Japan's paper dwellings.

William H. Anderson, dry crusader and head of the New York branch of the Anti-Saloon league, is under examination by the district attorney's office in connection with alleged misappropriation of funds and doubtful financial transactions within the organization. District Attorney Banton refused to talk, but Anderson freely admitted the examination.

Erskine Childers, the Irish republican leader, was executed on a technical charge of carrying a revolver The revolver, it has just been learned was a gift to Childers from Michael Collins, former free state head.

Jean Millett, of Paris, was sentenced to death charged with murdering two women to get $10. On the eve of the execution he received news his aunt had died and left him $1500.

Police at Newport, England found two children eating grass because they had no other food. Judge fined their father $25 with promise of a bigger fine if he didn't feed them.

Seven missing ships in Admiral Stark's Russian refugee fleet from Vladivostok have been accounted for in advices reaching here from Manila. Feared lost, the vessels merely were delayed en route. Governor Leonard Wood agreed to an interview with Stark and it was believed probable the vessels will be allowed to remain there.

WASHINGTON NEWS

State officials will have the cooperation of farmers' organizations in administering the $250,000 wheat seed loans. John Q. Adams, state president of the Farmers' union, declared that the services of his organization are available to Dan Scott, director of reclamation, who will be in charge of the work. Walter J. Robinson, manager of the Washington Wheat Growers' association, also has offered his organization's cooperation with the state. The plan Mr. Scott is working out is understood to provide for a limitation of seed wheat furnished a single farmer of probably 230 bushels. The state will not buy the wheat but will arrange for the credit. Investigation will also be made of the land and stubble land, land that blows badly and other big crop risks will not be furnished wheat credit. The crop must also be free of all liens.

The American legion auxiliary plans to establish a memorial tablet and plant trees named after men from Okanogan county who died in war service. The county commissioners will be asked to complete work on the courthouse grounds to permit seeding a lawn. The grounds were piped for sprinkling a year ago.

Proposals for the construction of a series of dams on the Snake and Columbia rivers are contained in a report of United States engineers soon to be forwarded to Washington, D. C. The proposals are the result of a canalization survey started in 1917.

W. S. Egbers, new president of the Adams County National Farm Loan association, says that the report of the secretary shows that nearly $400,000 has been loaned to farmers in Adams county since the formation of the association. Other officers are: Vice president, John Wellsandt; secretary-treasurer, J. H. Perkins; trustees, W. J. Danekas, Ralph Gillis, William Horn and Hickman Newland.

Congressman Webster, from the committee on interstate and foreign commerce, reported a bill to extend the time for the construction of a bridge over the Columbia river, between the states of Oregon and Washington, at a point approximately five miles up stream from The Dalles.

The Horner orchards, southeast of Deer Park, long owned by W. A. Horner and D. R. Evans, Seattle men, have been sold to Michael Horcth, also of Seattle. The tract consists of about 75 acres, most of which is apple orchards, and is one of the best known places in the section. The reported consideration is $50,000. Mr. Horcth was in the Inland Empire recently looking at the property and states that he will conduct operations substantially the same as heretofore.

A proposal for 2,000,000 feet of airplane spruce to be shipped to a Baltic seaport for airplane construction has been submitted to Grays Harbor lumber interests and has been refused, as the lumber companies believe it is for German use.

Anybody found a perfectly good depot? The Seattle street railway is looking for one. Burglars carried off

Plowing at Walla Walla

Signs of spring are so numerous that many of the farmers near Walla Walla have started plowing months ahead of time. Farmers report that the wheat is in good condition and that little re-seeding will have to be done this year.

Try a Classified Adlet in The News If you have anything to sell or trade or exchange. You will get results. And the cost is small.

Reminder

It is reported that over $400,000,000 of the VICTORY 4¼'s, which were called for payment December 15, 1922, interest ceasing on that date, have not been received by the Treasury Department for payment.

We advise all our customers to look over their Victory notes carefully and if they have any of the Series lettered A. B. C. D. E. or F, to present them at any bank for redemption immediately, as otherwise the holder will be losing interest on the money.

RETURN OF SOLDIERS FROM RHINE FULFILLS POLICY

(Continued from first page)

The Treaty of Versailles, which officially brought peace and officially provided for the retention of armed forces in Germany until Germany had complied with all the provisions of that treaty, contained the provision that the cost of the upkeep of troops of occupation should be the first charge, or lien, upon the assets and revenues of the German government, and that these costs should date from the signature of the Armistice. It was provided that these costs should be paid by Germany to the reparations commission and paid in gold, instead of the depreciated German currency. The costs were assessed against Germany and Germany has paid them, but the reparations commission has never paid to the United States a red penny of the money collected from Germany to pay for the upkeep of foreign troops on German soil.

The United States government was fully aware that the reparations commission was collecting from Germany the costs for the armies of occupation, and was fully aware that other nations were being compensated for maintaining troops along the Rhine. Out of a spirit of charity and a desire to do nothing that might cause hard feelings or give rise to the charge that we were suspicious of the good faith of the reparations commission, the United States government made no protest against this condition until early in 1922.

Action by the United States government at that time was precipitated as a result of the conference of the allied premiers at Cannes. This conference was held in January, 1922, at the insistence of Lloyd George, who had several little schemes which he wished to "put over" in connection with European affairs. It was at this conference that a decision was reached among the allied premiers that in the division of reparations extracted from Germany the cost of the American army of occupation should be altogether ignored because the United States senate had refused to ratify the Versailles treaty. This was in face of the provisions of the Versailles treaty that these costs should be collected by the reparations commission and in face of the fact that the reparations commission had collected the costs. It was in the face of the further fact that while the United States had not ratified the Treaty of Versailles its army on the Rhine was being maintained at the special request of Great Britain and France who believed that so long as America kept armed forces alongside of theirs in Germany they would give the assurance that America sustained their contention.

As a result of this decision at Cannes to let the United States "hold the sack" in so far as the costs of her army of occupation was concerned, the state department immediately drafted and sent to the government of Great Britain, France, Italy, Belgium and Japan a very sharp note which informed those powers that the United States did not propose to submit to any such treatment. This note called the attention of those governments to the fact that the United States was not keeping an army upon the Rhine because of any interest it had in patroling German territory. Upon this point Secretary Hughes said very bluntly:

"The government of the Allied Powers will not be unmindful of the fact that the government of the United States has repeatedly and earnestly been solicited not to withdraw its army of occupation, and this army has been continued upon the basis of the right to be paid it's actual cost upon an equal footing with the Allies."

Secretary Hughes further informed the various countries that if our claim was not allowed by the reparations commission it would be due:

"Solely to the refusal of the governments of the Allied Powers themselves to permit the dicharge of an admittedly equitable claim and thus to seek to maintain in their behalf exclusively a first charge upon all the assets and revenues of the German government."

As a result of this note the allied governments disavowed any intention of "bilking" the United States out of money justly due it. Nevertheless, instead of paying any money to the United States to cover the cost of maintaining her army in Germany, they proposed to have a conference to talk it over and to find some means of "adjustment." This conference is now in progress.

Meantime, none of the money due the United States government for keeping an army in Germany from November 11, 1918, to the time of withdrawal has been paid by the allied governments, although they have collected from Germany under the terms of the treaty the costs of supporting the various armies of occupation in German territory. Great Britain has been paid $262,896,753; France has been paid $594,222,973; Belgium has been paid $100,925,666.

AMERICA "OWES" NOTHING TO THOSE WHO COME HERE

He was a typicel "soap box" orator, although he used a hall. Before him was a group of eager-eyed men of foreign birth. He was telling them what America owed them.

Every so often one hears how much America owes this race or that. It is foolish talk,and worse.

America owes nothing to any race or creed, that has not been paid back a thousand fold.

No man ever set out for this country with the idea in his head that he was going to benefit the country. Rather the country was to benefit him and increase his personal fortunes.

From the Pilgrim fathers, to the latest immigrant to stop ashore from Ellis Island, every last one of us, or our forefathers, came primarily to receive and not to give.

And the gift of America to all who have come here has been equal opportunity, a free government, and an abounding providence. Free public education, separation of state and church, constitutional government, the representative system, and the love of liberty-these are the beacons which shone into the remotest parts of the world.

And these are the gifts which every race has come to receive, and no ambitious, conscientious member of any race or class has been denied these things.

When the members of any class or nationality rise to declare how much a country owes to them, it is to laugh.—Elmira (N.Y.) Star Gazette.

Was the Real Thing

"John! John! wake up! You've got the nightmare! What were you dreaming about?" "Oh, it was all a dream. I thought I had a fortune sure, Maria." "You were puffing at a terrible rate. What were you dreaming about?" "I thought it was the Fourth of July, and I had lassoed an iceberg and pulled it into the harbor and was selling it at the rate of 10 cents a pound, and I was selling a ton a minute." "Oh, I wish I could dream of such luck, John!" You can, Maria. You can if you put your cold feet against your own back just as you had them against mine."

Will Store Huge Amount of Wool

Plans for an immense wool warehousing industry to handle 2,000,000 pounds of Yakima wool annually were announced recently. While the plan is to serve primarily wool growers in the Yakima valley, it will be at the disposal of all state wool growers on the same basis. The general plan is to make use of the numerous fruit warehouses in Yakima, which are always empty during the early summer months, when the wool clip is in need of storage prior to marketing.

Plowing Begun

Plowing has begun on the Cameron ranch, two miles south of Genesee, and will be pushed as rapidly as possible. Mr. Cameron has 1,000 acres in crop this year.

American Legion Meeting

Bielenberg-Schooler post of the American Legion held its regular meeting on Wednesday evening, February 7. The following committeeheads were named by the post commander: Auxiliary, D. L. Bressler; entertainment, Nels Liberg; ceremonials, George Post; finance, Jack Barnes, and membership, Chas. W. Smith.

Following the meeting the radio set, operated alternately by Bill Bailey of Moscow, R. S. Sullivan and D. L. Bressler, was put to the test. Early in the evening the broadcasting station at Washington State college, on account of its proximity to Genesee, monopolized the air. Later in the evening the operators tuned-in to San Francisco, Los Angeles, Calgary, Salt Lake City, Kansas City, Portland and other stations.

At the next meeting Mark Donaldson of the Lewiston post is scheduled for what should prove to be an interesting and instructive talk. Mr. Donaldson is the conductor of the Lewiston Voiture of the 40 and 8 and is a talented speaker.

Why do people persist in calling them "lost souls?" They know only too well where they are.

Notice to Creditors

Estate of Mary J. Wager, Deceased.

Notice is hereby given by the undersigned, executor of the estate of Mary J. Wager, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said executor at First Bank of Genesee, Genesee, Idaho, the same being the place for the transaction of the business of said estate, in Latah county, state of Idaho.

G. E. TABER,
Executor of the Estate of Mary J. Wager, Deceased.

Dated at Genesee, Idaho, February 8, 1923. 32-5

Notice for Publication of Time Appointed for Proving Will, Etc.

In the Probate Court of Latah County, State of Idaho.

In the matter of the estate of Lewis Jain, deceased.

Pursuant to an order of said probate court, made on the 23rd day of January, 1923, notice is hereby given that Monday, the 19th day of February, 1923, at 11 o'clock a. m. of said day at the court room of said court, at the court house in the county of Latah, has been appointed as the time and place for proving the Will of said Lewis Jain, deceased, and for hearing the application of Wesley P. Jain, Clarence L. Jain and Charles F. Jain for the issuance to them of letters testamentary, when and where any person interested may appear and contest the same.

Dated this 23rd day of January, 1923.

ADRIAN NELSON,
Probate Judge.

H. R. Smith, Moscow, Idaho.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, FEBRUARY 16, 1923. NO. 33

WHAT HAPPENED HERE TWENTY YEARS AGO

A daughter is reported at the home of Mr. and Mrs. Guy Payne, having arrived Tuesday.

Mox Rosenstein writes from Portland that Roy Burr, Will Gray and Carrol Conant are sojourning in that city.

Walter Jain is doing a land-office business with the coyotes in his neighborhood. During the past few weeks he has caught a dozen or more of the pests.

Louis Uhre came out from Ruby creek the first of the week. He reports Messrs. Jackson and Sorenson putting in good time on their mining claims.

Among the latest newspaper ventures is the Juliaetta Enterprise, the first issue appearing the fifth inst. It is bright and newsy and is worth the patronage accorded it.

John Kempf has this week added an important piece of machinery to his blacksmith shop—a trip hammer. This machine is to be used in sharpening plows and is a great time saver.

Dan Healy is receiving some fabulous offers for the hide of that big grey wolf he killed last week. We doubt whether money will buy it. A gentleman writing to Dan from Post Falls is real anxious to secure it for a robe.

The ice harvest for this year is about over. Joe Geiger completed gathering enough for his brewery early in the week, and Nagel & Bomberg, the butchers, finished Wednesday. The quality is nothing extra and in thickness it will average four or five inches.

Chas. Hanson, Henry Meyer and Chris. Steltz returned from Oregon Sunday. The two latter named made filings, but Mr. Hanson and Mr. Friederichs, who stopped off at Walla Walla enroute home, were not satisfied with what they saw and did not file.

Sunday morning Mrs. C. E. Wood, Mr. and Mrs. D. Spurbeck and Mrs. A. Scroggin left for Oregon to make proof on their timber claims. They were accompanied as far as Colfax by C. E. Wood and Iler. Enroute home Mrs. Scroggin expects to visit her sister at Cheney.

Thursday of last week L. Stoltz disposed of his 80-acre farm east of town, together with farm implements, stock, etc., to James J. Moore, the price being $4,800. A little more than a year ago Mr. Stoltz purchased the property from Walter Jain and by the transaction realized about $1,300 on his investment. The deal was closed Friday and Mr. Moore took immediate possession. Mr. Stoltz does not intend leaving Genesee or this valley, but for the time being has taken up his residence in the Jacobson house near the lumber yard.

Tuesday of this week a great change took place in the well known firm of Follett Bros. & Larrabee of this place, Messrs. Fred and Leon Follett having purchased Mr. Larrabee's interests. Mr. Larrabee states that for the past 15 years he has not had a month's vacation and he will now take a temporary vacation from business. As to his future plans he is undecided. As soon as matters can be arranged, together with his family, he will leave for California where they may possibly take up a residence. Their many friends trust that after a brief visit to other sections they will again return to Genesee to live among us.

Winter Here "Yet"

While a large part of the winter season has been very pleasant in this section, there has been enough of the real thing to satisfy the most exacting along that line. It is seldom that even this part of the country has two separate and distinct winters—as we have had—and it is feared that the dainty little buttercups and the pussy willows that put in an appearance a few weeks ago, will have a hard time "coming back" when the proper time comes for them to again make their appearance. If they do they will have to work over-time.

There has been a small amount of snow on the ground for the past week or more, but Saturday afternoon of last week the snow man got busy in earnest and didn't stop until Monday, when there was some seven inches of snow on the ground and on Tuesday morning the mercury stood at four above zero.

The fellow that went down the street the other morning whistling "The Good Old Summer Time" should be taken to Orofino for a spell.

K. of P. Annual Banquet

The annual aniversary banquet of the Knights of Pythias will be given in their castle hall on Tuesday evening, February 20, instead of February 19, to which all Knights of their families are cordially invited. All visiting Knights are also invited to be present.

In addition to one of those old-time K. of P. banquets a good program has been prepared—and there will be dancing, too, if you feel that way.

Is Local Insurance Agent

M. S. Wilson has been appointed local agent for the Nez Perce County Mutual Fire Nnsurance company and is in a position to handle the insurance business of that organization.

CERTIFIED SEED TO BE TAGGED AND SEALED

Farmers purchasing certified grain seed for the coming season's crop should be certain that the seed they are getting is certified, says L. W. Fluharty, director of the university extension division.

All bags of certified seed will bear a yellow tag issued by the state seed commissioner, giving the name and address of the grower, the per cent of purity, weight per bushel and such other information necessary to properly describe that particular lot of seed. In addition to the tag every bag will be sealed with a Tyden car seal, with a serial number, and also the words "Certified Seed, U. of I. Extension Division" stamped on the seal. So all buyers of certified seed this spring should see that the bags they purchase bear both the tag and the seal, as no other grain will be considered certified that does not.

Heretofore bags of certified seed have not been sealed. However, since the certified seed industry has developed into such a large one it is thought best to seal bags of certified seed in order to protect both the grower and the buyer. Only enough tags and seals will be issued to a grower to cover his amount of seed. If any doubt arises as to whether a lot of seed is certified legitimately, a buyer may check his serial numbers on the seals with the record on file in the seed commissioner's office.

Special care will be taken this spring to see that certified seed meets the requirements. Responsible persons in each county will be designated to inspect the bags before they are tagged and sealed. Probably the county agents will attend to this end of the work in most cases. Such a system should make the purchaser reasonably sure that he is getting what he bargains for.

A list of those growers throughout the state having seed eligible of certification has been compiled and may be secured upon request from C. R. Ahlson, State Seed Commissioner, Extension Division, State House, Boise, or from the county agents.

Have Registered Objections

There is a howl going up from the Rimrock section of Nez Perce county regarding the doing away with the county agent of that county, W. W. Skuse. While some of the ranchers of that section have signed a petition for the discontinuing of that office, it is understood that many signed who did not really understand the situation.

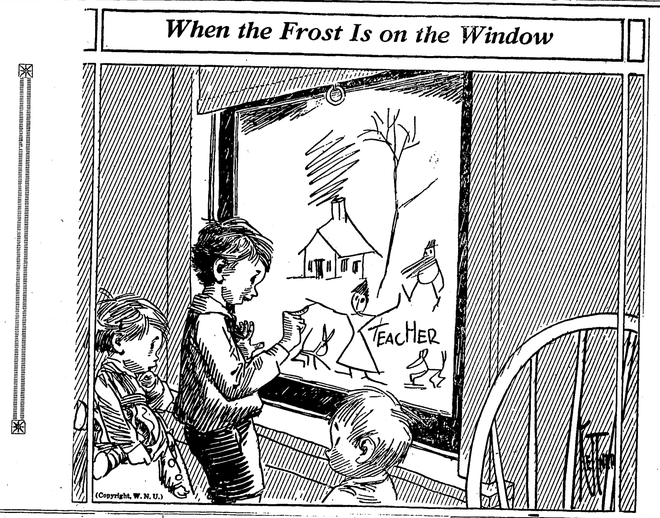
A rancher who is very much in favor of the retention of Mr. Skuse, stated that it cost the rancers only about $1 for each 100 acres of land to pay the salary of the county agent and that more than twice that amount had been saved for each 160 acres on the purchase of squirrel poison alone, to say nothing of other services rendered in a beneficial way to the grain farmer. It is a fact, also, that the U. S. government pays a certain portion of the county agent's salary, which reduces the cost to the rancher to a negligible sum.

The Latah county commissioners voted unanimously to retain the county agent, O. S. Fletcher, and they, as well as the ranchers, certainly felt that it would be money well spent—and it is.

New Arrival

Mr. and Mrs. Lester Gray are the proud parents of a little son, born Thursday, February 8. Weight, 7½ pounds. Mother and babe are doing nicely.

When the Frost Is on the Window



PROGRAM PARENT-TEACHERS MEETING, FEBRUARY 19

The regular monthly meeting of the Parent-Teachers association will be held in the high school assembly room on Monday night, February 19, commencing at 7:30 o'clock, sharp. It is hoped that all parents will be present if it is at all possible. If you are really interested in the welfare of the school, and your child or children especially, you will come out and at least take an interest in the proceedings, even though you take no active part. It will not only help you, but it will help the teacher to have a better understanding of what is really expected of him if you will bring your school troubles to this meeting.

The following program will be given:

Community singing.

Duet by Mrs. W. W. Burr and Mrs. R. I. Witty.

Paper—How Genesee May Become a Better and Cleaner Community"—read by Victor Casebolt.

Piano solo by Jesse Gray.

Quartet—Cecil Gray, Lester Bumpas, Wilma Casebolt and Grace Jain.

Twenty-minute talk by Rev. James N. Pendleton.

Piano duet by Thelma Woodward and Rowena Hanson.

Song by pupils of 20 years agomore or less.

Progressives Entertain Husbands

One of the most pleasant affairs of the season occurred last Thursday evening when the Progressive Needleworkers entertained their husbands at a 7 o'clock banquet at the home of Mrs. Fred K. Bressler.

Red hearts and cupids were used profusely throughout the rooms, in keeping with the valentine season. Two large vases of red carnations, the club flower, were used as centerpieces for the two long tables. The favors were small red baskets with cupids holding place cards.

After all had done full justice to the big feed and Glenn Sampson and G. E. Taber had acquitted themselves as "waitresses," the evening was enjoyably spent in "listening in" on the radio, which Mr. Bressler has recently installed. It was efficiently operated by R. S. Sullivan and D. L. Bressler and very good results were obtained. Music was heard from Moscow, Los Angeles, Long Beach and San Francisco. Pinochle was also played at several tables.

Covers were laid for Mr. and Mrs. F. K. Bressler, Mr. and Mrs. W. W. Burr, Mrs. Laura Phipps, Mr. and Mrs. F. S. Casebolt, Mr. and Mrs. F. E. Dicus, Mr. and Mrs. Ira Hanson, Mr. and Mrs. W. M. Herman, Mr. and Mrs. T. H. Herman, Mr. and Mrs. Fred Nagel, Mr. and Mrs. J. J. Tupker, Mr. and Mrs. G. E. Taber, Mr. and Mrs. Fred Perkins, Mr. and Mrs. F. H. Thomas, Mr. and Mrs. G. E. Sampson, Mrs. Nell Haymond, Mr. and Mrs. F. E. Lambert and Mr. and Mrs. R. S. Sullivan. D. L. Bressler was the only guest.

The next meeting will be held with Mrs. F. E. Dicus on Thursday, February 22.

The Ladies' Minstrel

About the best "nigger" show that has ever been pulled off in Genesee will be put on by the Rebekah lodge tomorrow (Saturday) night. There will be plenty doing from the time the show starts until the last nigger has gone off the stage.

By taking in this show you will be apt to find out just what colored folks think of "white trash" in general—and it may be that you will come in for your share. Come and see.

INTERNATIONALISTS VAINLY TRYING TO FOOL FARMERS

The efforts of the internationally minded to get the United States politically tied up with Europe have not ceased. Nor have the methods been greatly altered. There is the same disregard of facts which has marked the movement from the start.

Just now the concentration is on the farmer. He is told that he cannot find a market for his surplus except in Europe, and that Europe cannot buy until there has been a rehabilitation in which the United States must officialy participate.

The farmer is not as gullible as the internationalists suppose. He knows that keeping out of the political entanglements of Europe is the safest policy. Every days developments emphasize the wisdom of keeping out. Even the prospect of selling more supplies aboard would not enchant the patriotic American farmer.

But there is no such prospect. The American farmer is selling far more to Europe now than was sold during the pre-war period, in quantity and price. This is the only fair method of measurement. It is a patent absurdity to point to what was sold during the war, when millions of Europeans were taken from productive industry and employed in works of destruction. They were fed and clothed at the expense of their several governments far better than they ever fed and clothed themselves, and there was also much government aid of their dependents.

Instead of being consumers of American products, the surviving soldiers and others lately engaged in war making are now producers, competing with American producers. The fact that there is no surplus wheat from Russia, of course, gives better market for wheat elsewhere. But reliance upon such a market continuing would be disastrous to American wheat producers. The greater the progress of European rehabilitation, the smaller the market for foodstuffs from America.

Nor is the supposition that the exportable surplus fixes the price of the American wheat crop borne out by the facts. The joint commission of agricultural inquiry has gone into this matter and found that the prices of farm products in this country are chiefly affected by the quantity of domestic consumption. This consumption is not fixed, however. It varies with the activity of American industries, industrial prosperity meaning agricultural prosperity.—St. Louis (Mo.) Times.

Spent Pleasant Evening

The John Lorang home was the scene of a merry gathering Tuesday evening when a sleighload of friends went out to spend the evening. The time was enjoyably spent playing pinochle. A delicious luncheon was served during the evening by Mrs. Lorang and her daughters. Those present were Mr. and Mrs. Thomas A. Feeney, Mr. and Mrs. Jos Tobin and son, Jos. Jr. and Mrs. C. P. Whalen and children, Miss Ethel McMillen, and the Misses Gertrude and Margaret Sampson.

Public Library Open

The public library at the Social house will be opened for use next Saturday afternoon and evening. The state traveling library is here and there is a total of something like 200 books ready for service, as well as many magazines of different kinds.

AMERICA FRIEND OF EUROPE BUT NOT AN EASY MARK

Bread-a-plenty for starving Europe, but not another doughboy's life for the whole blooming continent! That is the whole American view in a nutshell.

Probably not since the death of Charlemagne permitted western Europe to slip down to the lowest depths of medieval ignorance and political chaos has Europe been in such a parlous state as at present. The years since the close of the world war have only added to the general economic dislocation and political disorganization arising from that terrific conflict. Three of the worlds great empires, Russia, Germany and Austria went to smash and nobody has been found capable of picking up the pieces. The other two great powers and a number of the near-great, were so rent and torn by the conflict that victory has seemed but little less disasterious than defeat. And nobody has been found capable of healing their wounds. Conference succeeds conference and each one leaves business a little more hopeless than the last. The"statesman"of Europe meet today without a saving idea and part tomorrow in confusion to go home and collect their scattered wits.

Why don't they fix the figure of the German reparations indemnity? Because they are hoping to persuade America to stand a large part of this indemnity by canceling the interallied debts-all of which is a childish dream! Hopelessly brainless!

No American in politics or out has enough influence with the American people to lead them into trans-Atlantic adventure of a apolitical nature. Our interests abroad are confined to the commercial and humanitarian fields and there we propose to keep them confined. We elected an average American citizen to the presidency in order that he might eschew world ambitions, reduce the enormous expense of the government, bring American industry and commerce back to a normal basis and liquidate our appalling war investment with as little loss as possible. He seems to be doing the job fairly well in the good old common-sense way by lopping off unnecessary expenditures and gently but firmly removing the governments finger from the business pie.

Interested in world peace? Yes, and have taken the only sane step in that direction that has been taken since the war by bringing about the four-power treaty that insures peace in the Pacific, and the naval disarmament treaty that will go a long way toward world peace, if France ever ratifies it. Interested in the fate of the people of Europe? Yes, we are giving rightly substantial evidence of it by pouring out hundreds of dollars every year to prevent them from starving. Interested in the jealosies and tortuous methods of European politics? Not a bit!—Russel M. Seds in Indianapolis Star.

Federated Ladies' Aid

The ladies' aid of the Federated churches will hold an all-day session at the Community house on Wednesday, February 21. The ladies are asked to bring a pick-up lunch and stay all day.

Underwent Operation

Clarence Aherin is in a Moscow hospital recovering from an operation for appendicitis which he recently underwent. He is reported as getting along nicely.

1,500 MEN ATTEND BIBLE CLASS EVERY SUNDAY

The February issue of Sunset Magazine contains an unusual account of an unusual Bible class. At first glance it might seem that a Bible class was a difficult thing to conduct in accordance with the modern gospel of "punch and pep," but a certain pastor in California is doing exactly that thing and, from all reports, doing it in a most up-to-date and satisfactory manner.

An abridged story of the class and how it is conducted follows:

Is it really so hard to induce men to go to church, to make religion a vital, active influence in their lives? Is it? Ask George. He's done it. He has organized and kept going a men's Bible class with a membership of twenty-six hundred, a Bible class so large that no hall, church or theater in town could accommodate it until the meetings were transferred to the municipal auditorium. And now even that building is showing signs of strain at the seams.

"George" is the Reverend G. P. Taubman, pastor of the First Christian church of Long Beach, suburb of Los Angeles. Everybody calls him by his first name—and he's proud of the distinction.

The Class Grows Fast

The Taubman Men's Bible class was organized eight years ago with a nucleus of about 25 men. The class grew so rapidly that they had to build an annex for themselves out in the corner of the yard, a brick building which seated a hundred and forty men. In a year they were hunting new quarters and found them in the old Congregational chapel, which they refitted. After which in incredibly short time they found they had to move over to a theater with a seating capacity of 800. But they had no sooner got settled in their secular retreat than they had to find a theater which seated a few more. And this theater shrank to such a size that they had to move into the municipal auditorium, where they have been quartered the last two years.

In the eight years of its existence 20,000 men have been enrolled in the organization. It has a president and four vice-presidents, a secretary and a treasurer of the benevolent fund, and a male chorus, an orchestra, a song leader, and it keeps a paid secretary busy.

A Going Concern

The Taubman Men's Bible class is a live concern. The men register every Sunday. There are no dead records dragged along to make a good showing. The average attendance for every Sunday in the year is 1,500, and the total yearly attendance 80,000. Last year the class spent $7,000 out of its benevolent fund, and George estimates that this is a small part of the money spent in other forms of benevolence by the men in their daily lives.

The Bible class studies the Bible. The International Sunday School lessons form the basis of study, supplemented with the Scriptures. It has been George's observation that adult Bible classes which go in for politics, sociology, for culture and isms and fads generally die out. So he teaches the Bible straight.

From 9 o'clock to 9:30 every Sunday morning, hundreds of men may be seen tramping across the pier to the auditorium. The early ones lounge about like a lot of school boys waiting for the bell to ring. New men are being met more than half way and welcomed. The secretary is handing out their enrollment cards.

They have answered the roll call by signing a card giving personal data for the records.

The song leader appears on the platform, and the pianist, the only woman ever permitted to be present, with three members of the municipal band, all of whom give their services. They begin to sing out of their own song books, a little yellow-backed mongrel done in big type and half full of paid advertising. There's no telling what they'll decide to sing, but they very likely begin with "Smile, Smile, Smile," and switch to "Rock of Ages," or "Hold the Fort."

A Real Welcome to New Members

After the song service the presiding vice-president asks for "first timers." And all the newcomers stand up, and the song leader starts: "Hail, Hail, the gang's all here; but you mustn't say the naughty word; you mustn't say the naughty word!" It is related of Rear Admiral Rodman, who is a member of the class in more or less good standing when in port, that he just cannot sing the revised and expurgated edition of that last line. He's held to be the cussingest member of the class.

And "first timers" are applauded, and the men next to them grasp their hands, and they are cordially invited to join. Then may come a little joshing, and announcements, and they might introduce the new secretary of the chamber of commerce of the Rotary club, or pick on somebody who has done something during the week which the rest ought to know about. They are enjoined to go out and bring in others. Literally, "I will make you fishers of men."

THE MASTER OF BALLANTRAE

A Winter's Tale **By ROBERT LOUIS STEVENSON**

INSTALLMENT NO. 31

At last dawn began to break upon her woods and mountains, the sleepers rolled in their robes, and the boisterous river dashing among spears of ice. I stood looking about me, swaddled in my stiff coat of a bull's fur, and the breath smoking from my scorched nostrils, when, upon a sudden, a singular, eager cry rang from the borders of the wood. The sentries answered it, the sleepers sprung to their feet; one pointed, the rest followed his direction with their eyes, and there, upon the edge of the forest and betwixt two trees, we beheld the figure of a man reaching forth his hands like one in ecstasy. The next moment he ran forward, fell on his knees at the side of the camp, and burst in tears.

This was John Mountain, the trader, escaped from the most horrid perils; and his first word, when he got speech, was to ask if we had seen Secundra Dass.

"Seen what?" cried William.

"No," said I, "we have seen nothing of him. Why?"

"Nothing?" says Mountain. "Then I was right after all." With that he struck his palm upon his brow. "But what takes him back?" he cried. "What can the man back among dead bodies? There is some damned mystery here."

This was a word which highly aroused our curiosity, but I shall be more perspicacious if I narrate these incidents in their true order. Here follows a narrative which I have compiled out of three sources, not very consistent in all points:

First, a written statement by Mountain, in which everything criminal is cleverly smuggled out of view;

Second, two conversations with Secundra Dass; and,

Third, many conversations with Mountain himself, in which he was pleased to be entirely plain; for the truth is he regarded me as an accomplice.

Narrative of the Trader, Mountain.

The crew that went up the river under the joint command of Captain Harris and the master numbered in all nine persons, of whom (if I except Secundra Dass) there was not one that had not merited the gallows. From Harris downward the voyagers were notorious in that colony for desperate, blood-minded miscreants; some were reputed pirates, the most hawkers of rum; all ranters and drinkers; all fit associates, embarking together without remorse, upon this treacherous and murderous design. I could not hear there was much discipline or any set captain in the gang; but Harris and four others, Mountain himself, a Scotchmen—Pinkerton and Hastie—and a man of the name of Hicks, a drunken shoemaker, put their heads together and agreed upon the course. In a material sense, they were well enough provided; and the master in particular brought with him a tent where he might enjoy some privacy and shelter.

Even this small indulgence told against him in the minds of his companions. But indeed he was in a position so entirely false (and even ridiculous) that all his habit of command are arts of pleasing were hereby thrown away. In the eyes of all, except Secundra Dass, he figured as a common gull and designated victim: going unconsciously to death; yet he could not but suppose himself the contriver and the leader of the expedition; he could scarce help but so conduct himself; and at the least hint of authority or condescension, his deceivers would be laughing in their sleeves.

I was so used to see and to conceive him in a high, authoritative attitude, that when I had conceived his position on this journey, I was pained, and could have blushed. How soon he may have entertained a first surmise, we can not know; but it was long, and the party had advanced into the wilderness beyond the reach of any help ere he fully awakened to the truth.

Drew Into Woods.

It fell thus. Harris and some others had drawn apart into the woods for consultation, when they were startled by a rustling in the brush. They were all accustomed to the arts of Indian warfare, and Mountain had not only lived and hunted, but fought and earned some reputation with the savages. He could move in the woods without noise, and follow a trail like a hound; and upon the emergence of this alert, he was deputed by the rest to plunge into the thicket for intelligence. He was soon convinced there was a man in his close neighborhood, moving with precaution but without art among the leaves and branches; and coming shortly to a place of advantage, he was able to observe Secundra Dass crawling briskly off with many backward glances.

At this he knew not whether to laugh or cry; and his accomplices, when he had returned and reported, were in much the same dubiety. There was now no danger of an Indian onslaught; but on the other hand since Secundra Dass was at the pains to spy upon them, it was highly probable he knew English, and if he knew English it was certain the whole of their design was in the master's knowledge. There was on singularity in the position. If Secundra Dass knew and concealed his knowledge of English, Harris was a proficient in several of the tongues of India, and as his career in that part of the world had been a great deal worse than profligate, he had not thought proper to remark upon the circumstance. Each side had thus a spy-hole on the counsels of the other.

Returned to Camp.

The plotters, so soon as this advantage was explained, returned to camp; Harris, hearing the Hindoo's story was once more closeted with his master, crept to the side of the tent; and the rest, sitting about the fire with their tobacco, awaited his report with impatience. When he came at last his face was very black. He had overheard enough to confirm the worst of his suspicions. Secundra Dass was a good English scholar; he had been some days creeping and listening, the master was now fully informed of the conspiracy, and the pair proposed on the morrow to fall out of line at a carrying place and plunge at a venture in the woods; preferring the full risk of famine, savage beasts, and even man to their position in the midst of traitors.

What, then, was to be done? Some were for killing the master on the spot; but Harris assured them that would be a crime without profit, since the secret of the treasure must die along with him that buried it. Others were for desisting at once from the whole enterprise and making for New York; but the appetising name of treasure, and the thought of the long way they had already traveled, dissuaded the majority. I imagine they were dull fellows for the most part.

Harris, indeed, had some acquirements, Mountain was no fool, Hastie was an educated man; but even these had manifestly failed in life, and the rest were the dregs of colonial rascality. The conclusion they reached, at least, was more of the offspring of greed and hope than reason. It was to temporize, to be wary and watch the master, to be silent and supply no further ailment to his suspicions, and to depend entirely (as well as I make out) on the chance that their victim was as greedy, hopeful, and irrational as themselves, and might, after all, betray his life and treasure.

Twice, in the course of the next day Secundra and the master must have appeared to themselves to have escaped; and twice they were circumvented. The master, save that the second time he grew a little pale, displayed no sign of disappointment, apologized for the stupidity with which he had fallen aside, thanked his recaptureres as for a service, and rejoined the caravan with all his usual gallantry and cheerfulness of mien and bearing.

Silent Contest Began.

And now there began between the two sides a silent contest for life on the one hand, for riches on the other. They were now near the quarter of the desert in which the master himself must begin to play the part of guide; and using this for a pretext of prosecution, Harris and his men sat with him every night about the fire, and labored to entrap him into some admission. If he let slip his secret, he knew well it was the warrant for his death; on the other hand he durst not refuse their questions, and must appear to help them to the best of his capacity, or be practically published his mistrust.

And yet Mountain assures me the man's brow was never ruffled. He sat in the midst of these jackals, his life depending by a thread, like some easy, witty householder at home by his fire; an answer he had for everything—as often as not, a jesting answer; avoided threats, evaded insults; talked, laughed, and listened with an open countenance; and, in short, conducted himself in such a manner as must have disarmed suspicion, and went near to stagger knowledge. Indeed, Mountain confessed to me they would soon have disbelieved the captain's story, and supposed their designated victim still quite innocent of their designs, but for the fact that he continued (however ingeniously) to give the slip to questions, and the yet stronger confirmation of his repeated efforts to escape.

The last of these, which brought things to a head, I am now to relate. And first I should say that by this time the temper of Harris' companions was utterly worn out; civility was scarce pretended; and one very significant circumstance, the master and Secundra had been (on some pretext) deprived of weapons. On their side, however, the threatened pair kept up the parade of friendship handsomely; Secundra was all bows, the master all smiles; and on the last night of the truce he had even gone so far as to sing for the diversion of the company. It was observed that he had also eaten with unusual heartiness, and drank deep; doubtless from design.

At least, about three in the morning, he came out of the tent into the open air, audibly mourning and complaining, with all the manner of a sufferer from surfeit. For some while, Secundra publicly attended on his patron, who at last became more easy, and fell asleep on the frosty ground behind the tent; the Indian returning within. Some time after, the sentry was changed; had the master pointed out to him, where he lay in what is called a robe of buffalo; and thence forth kept an eye upon him (he declared) without remission. With the first of the dawn, a draught of wine came suddenly and blew open one side side of the corner of the robe; and with the same puff, the master's hat whirled in the air and fell some yards away.

Sentry Drew Near.

The sentry, thinking it remarkable the sleeper should not awaken, thereupon drew near; and the next moment, with a great shout, informed the camp their prisoner was escaped. He had left behind his Indian, who (in the first vivacity of the surprise) came near to pay the forfeit of his life, and was, in fact, inhumanly mishandled; but Secundra, in the midst of threats and cruelties, stuck to it with extraordinary loyalty, that he was quite ignorant of his master's plans, which might indeed be true, and of the manner of his escape, which was demonstrably false. Nothing was therefore left to the conspirators but to rely entirely on the skill of Mountain. The night had been frosty, the ground quite hard; and the sun was no sooner up than a strong thaw set in. It was Mountain's boast that few men could have followed that trail, and still fewer (even of the native Indians) found it.

The master had thus a long start before his pursuers had the event, and he must have traveled with surprising energy for a pedestrian so unused, since it was near noon before Mountain had a view of him. At this conjuncture the trader was alone, all his companions following, at his own request, several hundred yards in the rear; he knew the master was unarmed; his heart was besides heated with the exercise and lust of hunting, and seeing the quarry so close, so defenseless, and seemingly so fatigued, he vain-gloriously determined to effect the capture with his single hand. A step or two further brought him to one margin of a little clearing; on the other, with his arms folded and his back to a huge stone, the master sat.

(To be continued.)

To touch the point of a boil with carbolic acid will frequently cause it to leave.

"SPEED"

By Herbert Crooker

CHAPTER V.

Fighting Mad.

On Lucy plunged through the forest while bolts of lightning seemed to all but strike her. Suddenly her foot sank into the mire—then the other one. She could not draw herself out and felt herself slowly sinking into the hidden quicksand. Her frenzied screams of help were of no avail—slowly she sank.

The anger of Pious Pedro, caused by the escape of Lucy Durant, was only surpassed at the breathless announcement he received from Enrico, his henchman, who had just rushed into the shack.

"Thees fellow, 'Speed!'" Enrico gasped. "He hav escaped!"

And then Pedro, the pious, lost his temper completely. Seizing his riding crop, he rushed at Enrico and began to give him the flogging of his life.

"Cut this out!" shouted Jim Sprague, interrupting the strenuous scene. "'Speed' Stanbury is probably on his way here to take me now—I want to get out of this and get out quick!" That seemed to cool the ire of Pedro to a certain extent. He threw the whip into the corner of the small room, then seized a paper and pencil and sat down to write.

"My man, Juan," he explained "is looking for the girl, Lucy Durant. When he returns, he must know where to follow us." He showed the note containing instructions to Sprague and after pinning it to the door of the shack the three men set out.

Meanwhile, "Speed" Stanbury had arrived at the quagmire in the nick of time. Hearing the frenzied cries of the girl he loved he urged his horse speedily, but carefully, through the storm to the dangerous spot A tree crashed directly behind him, succumbing to a bolt of lightning, but "Speed" pressed on.

Drawing cautiously nearer a feeling of icy horror seized his heart as he saw Lucy Durant up to her shoulders in the quagmire. "Speed" rushed to her horse and saw that a lariat belonging to the Spaniard was hanging over the pommel of the saddle. Seizing it hastily, he approached the girl, whirled the lasso over his head and let it go. The rope fell over her shoulders and tautened. Winding the other end of the rope around a tree, "Speed" began to slowly pull the girl from the spot of danger.

It was some tim before Lucy completely revived, and about the same time the storm cleared.

"'Speed!'" Lucy suddenly exclaimed. "Jim Sprague is hiding in Pedro's hut—I am sure you can take him!"

Young Stanbury looked at the girl in admiration—she seemed to have such a marvelous way of putting her finger on the right thing at the right moment. Yes, he must get Sprague, for as long as Sprague was free he would be unable to prove his alibi and keep his cousin, Edwin Stanbury, from defrauding him of his inheritance. Together the two young people set out for the hut where Lucy Durant had been a prisoner. When they arrived, they found the note, which read:

Juan:

"I have taken Sprague to the city. Follow with the girl.

Pedro.

After reading the message, "Speed" and Lucy decided that the best thing for them to do would be to hurry back to their hotel. They couldn't quite figure out where Sprague was being taken, but "Speed" Stanbury knew that he would be able to get a clue around the hotel. His cousin, Edwin, would probably be on hand, and, no doubt, Pedro would seek him first to tell of the new turn of events. Consequently the two young people decided to make their way to the hotel, and to keep out of the way as much as possible.

Lucy and "Speed" parted at the entrance of the hotel, the young man thinking it wiser for him to enter as best he could in the rear. And he had planned wisely, for in the lobby Hagerty was conferring with Edwin. The detective was instructed to place guards in every possible place where "Speed" might show himself. Edwin was extremely impatient, as he had not heard from the pious bandit, and he expected a message any moment.

Lucy reached her room in safety. She noticed that she had been carefully watched and that even the elevator boys had regarded her suspiciously. Edwin was sparing no pains to trump his cousin. Scarcely had the girl changed her frock when a face appeared at her window—"Speed's."

"I had a dickens of a time getting up her, Lucy," he grinned, looking out of the way of 'Speed' Stanbury."

"Sprague's right." This came from Edwin. "There's a boat for Tristol in a few hours. You get Sprague safely aboard that boat and then you can come back and pay your respects to Miss Durant."

This was too much for "Speed." Everything seemed to turn a flaring red. Besides, he figured he had only the three to face.

"Tristol—hell!" he shouted, rushing into the room. "You're coming back to the United States with me, Sprague! And you—Pedro—if you so much as lay one of your greasy fingers on Lucy Durant, I'll break your evil neck!"

The trio started in surprise. Sprague became maddened with fear. Like a bull, he rushed toward "Speed" Stanbury. Pious Pedro rushed toward the wall and pushed a small button. A blow from "Speed's" left laid Jim Sprague low and another blow felled Edwin, his cousin. But at that moment a score of the bandit's followers rushed into the room. Young Stanbury put up a splendid fight against overwhelming odds, but they were too much for him. After struggling with all his strength he was seized and made powerless. Then Pedro led the way and the young man found himself thrust into an upper room in a small tower of the house. The door was slammed and locked.

"Well, this is a pretty mess," he grinned to himself. Then his thoughts returned to Lucy. He rushed to the window in the tower. He was many feet from the ground, but a tree below him would easily break his fall. Seeing the bandit and his allies leaving the house, "Speed" again thought of the girl he loved. He sprang to the ledge of the window and made a perilous leap into the welcoming tree, with the ground many feet below.

(To Be Continued.)

LIVESTOCK

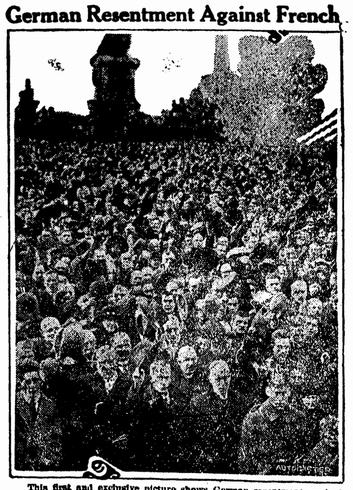
A study of the figures from 1850 o 1922, says the United States department of agriculture, shows that human population has increased at a greater rate than live stock. The number of hogs in this country varies more from year to year than the number of other domestic animals. Sheep have declined the most. There is increasing difficulty in supplying our population with sufficient meat while maintaining a surplus of meat products for export. The livestock industry acts as a great storage reservoir for surplus grains, grasses, and forage crops. No great meat-eating nation has ever suffered famine from crop failure.

"The profitable pig," says the agricultural specialist of the department of agriculture, "is the one that never stops growing from the time it is farrowed up to the time it is hauled to market." The wise hog grower stimulates growth in the pig before the litter is farrowed by keeping the sow in good condition. It is assumed that the sire and the dam are of the right type, big and growthy.

After the clock struck 11:30, the girl's mother called down and asked, "Does the young man know how to say goodnight?"

"Does he," she replied, "well, I'll say he does."—Selected.

German Resentment Against French



This first and exclusive picture shows German resentment against French invasion of the Ruhr, taken as thousands crowded the square around the Bismarck monument on King's Place in Berlin. German police could not control the crowd which was frenzied to the point of demanding war.

Modern Mechanical Progress

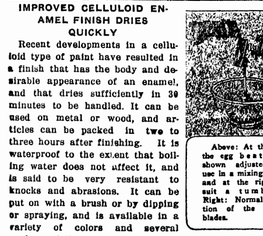
This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

IMPROVED CELLULOID ENAMEL FINISH DRIES QUICKLY

Recent developments in a celluloid type of paint have resulted in a finish that has the body and desirable appearance of an enamel, and that dries sufficiently in 30 minutes to be handled. It can be used on metal or wood, and articles can be packed in two to three hours after finishing. It is waterproof to the extent that boiling water does not affect it, and is said to be very resistant to knocks and abrasions. It can be put on with a brush or by dipping or spraying, and is available in a variety of colors and several grades, suitable to the method of application.

NEW ROAD BUILDING MACHINE ROLLS AS ITS GRADES.

A new design of road-building machine, recently completed and tested, cuts the roadbed to the desired grade, delivers the excavated material to wagons or trucks, and rolls the surface as it proceeds, or can be used as a plain roller after the grading is finished. Two small rollers, equipped with an endless tread at one end and a larger roller at the other end, support a rectangular frame of channel iron upon which is mounted the excavating and loading mechanism, as well as the 65-horsepower gasoline engine. The excavating element consists of a drum 6 feet in diameter, which is located in the center of the frame and is provided with heavy 6-inch teeth that will cut to any depth from 1-2 inch to 2 1-2 feet. It cuts a swath 6 feet 7 inches wide, making allowance for the crown of the road, and advances 6 to 10 feet a minute, depending upon the depth of cut and the nature of the roadbed.



Above: At the left the egg beater is shown adjusted for use in a mixing bowl, and at the right is suit a tumbler. Right: Normal position of the beater blades.

AUTOMATIC STEERING GEAR USED ON U. S. SHIP.

The first American passenger ship to be equipped with automatic steering gear, recently completed a successful return voyage to the West Indies, under the guidance of this apparatus, which does away with the necessity of a quartermaster continually at the steering wheel. The instrument consists of a gyroscopic compass arranged to open and close an electric circuit controlling the stopping and starting of the rudder-operating mechanism. The instrument is capable of being set for responses to different amounts of deviation from course, one case being noted where the departure from the true course was set as close as one-sixth of a degree. This ability to keep the ship so close to the central position with so few alterations of helm, contributes directly to the saving of fuel.

PRICE OF RADIUM REDUCED BY DISCOVERY OF ORES.

Due to the discovery in Katanga, Belgian Congo, of large deposits of easily worked pitchblende ores, and the erection in Belgium of a plant for producing radium from these ores, the price of that precious mineral has dropped from $120,000 to $70,000 a gram. The newly found deposits carry many times as much radium as the carnotite ores that have hitherto been the governing factor in the world's market. It is not yet certain, however, that these Congo deposits will eventually yield as much radium as the deposits in the plateau region of the United States, but for the present, lending themselves to a cheaper process of refinement they will control the market.

ADJUSTABLE EGG BEATER HAS DOUBLE DRIVE GEAR.

An egg beater that is adjustable to suit the shape of a wide range of cooking dishes, from a wide-bottom mixing bowl to a narrow tumbler, has just appeared. One of the distinctive features, which can be adapted with benefit to other devices, is the double drive, consisting of a large bevel gear that drives from opposite sides the two pinions fastened to the beater spindle. Other points in its construction are the clutch that holds the beater blades in the desired position, and the ball bearing at the bottom of the spindle that keeps it from "walking" around the beating dish.

Court Room Logic.

A young man over in our sister county when placed on trial for the murder of his father and mother pleaded fer mercy on the ground that he was an orphan.

EFFECT OF STORAGE ON GLASS BOTTLES BEING STUDIED.

Hundreds of bottles are being stored by the Bureau of Standards to determine the effects of surrounding conditions on the appearance of the glass. While the tests are not completed, at the end of six months the bureau has found that a dry room, kept at an even temperature, is more satisfactory than the outdoors or a very humid room, the latter, particularly, often resulting in "scummed" glass. This fiber boxes are said to be better than open crates.

Road-building machine, operated by one man, which cuts a swath 6 feet 7 inches wide, digging up the roadbed from ½ inch to 2½ feet and delivering the excavated material to dump wagons, as well as rolling the surface as it travels.

AUTOMOBILE NEEDS SPECIAL CARE THROUGHOUT THE ENTIRE WINTER

A series by Prof. A. R. Nottingham, State College Washington, Pullman

II. THE BRAKES, ETC.

With the ordinary lubricating appliances the steering knuckles, spring pins, etc., do not as a rule receive the proper lubrication during the winter time. In many cars the grease is forced out through a hollow pin to the pressure side of the pin through annothe ramall right angled hole. By the end of the fall driving season this is partly stopped up with a mixture of worn-out grease and dirt, which when it becomes stiff is impossible to move. It is not uncommon to find such an accumulation too hard to move even when warmed up and full pressure applied with a powerful grease gun. The desirable thing is to remove all of these pins and clean them out, back up the car to take the weight off of the pin and screw down the grease cups and make sure that these accumulations are washed out.

As a matter of fact it is a good practice for the average driver to take the weight off of the parts being greased about every month, and oftener for the person using his car considerably, so as to make sure that the grease does actually move freely around these pins.

It is very important that the brakes be in good condition, that they do not drag and that they operate equally. Dragging brakes waste power and wear out the brake lining. If they do not grip evenly, as soon as roads become icy and the brakes are applied a serious skid may be the result. If they do not hold sufficiently well, or grip with too great severity, accidents are also likely to occur.

The chains should be overhauled and put in good repair. If there is any doubt about their condition, it is desirable that they be laid aside as second chains, and a set of new chains be procured and carried with the car. These should be used on the rear wheels and the worn chains used on the front wheels when the streets are so icy that the car can not be steered well or when driving in icy ruts. If this is not done the car should not be taken out when the streets are very icy nor should it be driven when there are ruts, unless a spade is carried to dig down the side of a rut so that the person can turn out when meeting another car. In fact it is a good precaution whenever snow or mud is likely to be encountered, to carry some sort of a spade or shovel that can be used to help one out of such difficulties.

The battery is the unit that, as a rule, receives the most abuse during the winter time. There are very few cars on the market that will keep their battery properly charged when used for short drives in the average town. It is possible, of course, to get the battery charged and use a high charging rate on the car and by this means keep the battery in fair condition. However, if the same car is to be driven from one town to another at a high speed your battery may be charged at a rate that is entirely too high. For such a case the charging rate should be lowered, or the person should equip his car with a touring switch on the dash. This can be installed by any good mechanic by connecting the fields of the generator to a touring switch. This is especially easy where the generator has a fuse on it. The fuse can be removed and two wires run from the clips up to the dash switch, through a fuse block using the same size fuse as before.

If it is a single pole switch it will permit the battery to be charged at a high rate when closed and of course not at all when open. For two rates, a resistance and a three-pole switch is practical so that when thrown in the other position the charging rate will be reduced to a proper value for road driving and when the switch be left open, will be made zero. Connect one wire to the fuse block, and from thence to the center pole of the switch. Connect the other wire to one outer pole and a resistance unit across or to the outer poles. A ballast resistance from an old Remy coil will be about right. This gives fuse protection. maximum, medium and zero rate of charging. Watch your ammeter and act accordingly.

An automobile battery is operating under conditions which must necessarily make it rather short lived. A battery should be charged fully and then work down to a proper discharge and then recharged at once at a proper rate with a moderate overcharge in order to give the maximum life. These conditions are in the main impossible in connection with the average requirements for automobile service.

TIMELY HINTS TO FARMERS

By EXTENSION SERVICE SPECIALISTS

Farm Management.

Under certai nconditions, farmers have figured as a deductable expense in their income tax returns, the annual depreciation of mature orchards.

Clothing.

When choosing your spring hat, select a shape that will bring out your good points and hide the poor ones.

Dairy.

Feed your cows well during this part of the year. If feed is scarce and you can not buy, sell your lowest producing cows.

Farm Crops.

Spread some well-rooted manure on the garden and truck patches for plant food.

Agriculture.

Send rendered wax to factory now to be made into foundation. Don't wait till spring.

Home Management.

A conservative estimate on the value of housework is placed at 35 per cent per hour.

The Way of It.

"Your wife's maw, that's visiting you, came from a fine old family, didn't she?" asked an acquaintance.

"No," sourly replied Gap Johnson of Rumpus Ridge. "She brung 'em with her."—Kansas City Star.

No flies were reported in Alaska this past year.

CUT IT OUT SERIES

AMERICAN TRADITIONS.

There is a select school of long haired men and short-haired women, particularly in the eastern states, who refer to themselves as "intellectuals" and "intelligentsia," who are given to deprecating and ridiculing everything American. They aver, in their all-knowing manner that "America has no soul and no traditions," and suggest that by way of getting same we adopt those of Europe; particularly those of soviet Russia and the Balkans.

Perhaps they are right in the statement that America has no "atmosphere," at least in the European sense. America has an atmosphere all right, but it is so pure and healthful that you don't smell it or otherwise notice it. Native-born Americans and those foreign-born who come to our shores with the idea of becoming Americans prefer it to the garlic, stale-beer and limburger "atmosphere of the intelligentsia."

But let us ponder for a moment on American traditions. Names are one of the best indices of traditions, and it is possible that America has a few that have lived and will continue to live through time. For instance: In old England, if a man's initials happen to be "G. W." his name may be anything, but with those initials in America it's an even break that his name is George Washington. In England a man nicknamed "Jeff" is properly called Geoffrey, but in America it's a hundred to one shot that his name is Jefferson.

"J. Q." invariably means John Quincy, in honor of the younger Adams, while "A. J." is almost always Andrew Jackson. Then think of the thousands of men who rejoice in the nickname of "Link." No European born baby can ever hope to bear the name of the second greatest man who ever trod this earth.

There is a whole generation of young men, from 30 to 35 years of age, who bear the honored name of "Grover," but there are mighty few born before 1884 who have it. Twenty years from now many business men will rejoice in the initials "T. R." before their surnames, while the next generation will have many who sign their first name "Woodrow."

Tradition and individuality mean very nearly the same thing, in the way the intelligentsia use the word, and it can not be denied that America has individuality. Other given names for boys which are entirely confined to this country are Franklin, Webster, Madison, Clay, Perry, Dewey, and a host of others are borrowed from the surnames of American heroes.

Meanwhile, Europe goes on naming its boys James, Henry, John, Charles, Edward and the like—good enough names, but lacking in individuality and tradition because they are common as clay. Of course it varies these into their several Latin, Slavic, Teutonic and Scandinavian equivalents, but John is John whether it be spelled, Joan, Juan, Ivan or Johannes. Every other Russian is named Ivan.

Take the matter of naming our states and counties; outside of the eastern seaboard of the United States there is no name of any state that is not distinctively American and in keeping with American tradition. The same holds true with a great majority of county names in the various states. American history from the landing of Columbus to the present day is perpetuated in our nomenclature.

There are dozens of good Indian names which have crept into our system of naming, and they are also splendidly in keeping with American tradition and history. They are for the most part beautiful in the extreme, and they are something which we have borrowed from the land the earth can take from us. They belong to America just as fully as does its wonderful soil and its rugged scenic beauty.

The person who says that America has no traditions, no soul and no atmosphere is blind indeed. And if though it had none, most Americans would be highly averse to importing the hatreds and passions which would naturally come with the importation of the European variety.

MORE MILK CONSUMED; SMALL TOWNS IN LEAD

The people of the United States are using more milk and cream than they did 10 years ago. Statistics compiled by the United States department of agriculture show that seven-tenths of a pint is the average daily consumption for every man, woman, and child in the country, whereas a decade ago the consumption was six-tenths of a pint daily. This is an increase of nearly 17 per cent. These figures are based only upon milk and cream consumed as such and do not include any that enters into manufactured products.

The results are based upon figures obtained from health departments of 356 cities in all parts of the country having a combined population of more than 32,000,000.

The lowest consumption, 0.47 of a pint, is in the east south central states and highest, 0.89 of a pint, in New England. The lowest consumption in general is found in the southern states but it must be kept in mind that many family cows are kept in this section and milk from these animals was not taken into consideration.

The large cities use more milk per capita than those having less than 50,000 population, with the exception of those having less than 5,000 people, which group has the largest consumption of all the city groups.

IDAHO GROWER NEW LEADER OF WOOL MEN

Interesting Convention Ends at Spokane—New Warehouse to Handle Surplus at Yakima.

With the election of Frank J. Hagenbarth of Spencer, Idaho, as president of the National Wool Growers' association for another year, members of the association closed their 58th annual convention at the Davenport hotel at Spokane last week. F. R. Marshall of Salt Lake City was reelected national secretary of the association. The three vice-presidents named to assist President Hagenbarth were F. E. Ellenwood of California, western vice president; W. C. Coffey of Minnesota, eastern vice president, and Hugh Campbell of Arizona, southern vice president.

A large number of topics of interest to wool growers, including tariff, freight rates, etc., were discussed and action taken according to the wishes of the convention. The Spokane meeting was declared to be the most interesting held in recent years, because of the great number of questions claiming the attention of the growers. This is the first convention held outside Salt Lake City in more than 20 years.

Warehouse at Yakima.

Plans for an immense wool warehousing industry to handle 2,000,000 pounds of Yakima wool annually were announced recently. While the plan is to serve primarily wool growers in the Yakima valley, it will be at the disposal of all state wool growers on the same basis. The general plan is to make use of the numerous fruit warehouses in Yakima, which are always empty during the early summer months, when the wool clip is in need of storage prior to marketing.

Powdered borax, when scattered around, will cause ants to disappear.

Pruning the Home Orchard

By M. D. ARMSTRONG,
Assistant Extension Specialist in Horticulture

Throughout the state of Washington there are hundreds of home orchards which might be a source of much greater pleasure and profit to their owners with just a little mroe care. Often these home orchards can be made a source of small income which would more than offset the little expense of this care. However, the supply of a greater variety of better quality fruit for the home is the great est gain.

The farmer deserves the best that his orchard will produce. Many of these orchards which were set out with fond visions of luscious fruits have developed into a thick tangle of limbs and brush which returns little of the bat fruit. A little effort expended on these trees at this time will work wonders in the coming fruit crop. This season, when the farm work is as light as at any time, is the best time for the pruning.

Our trees, in order to have good fruit, must have thrifty wood and vigorous leaves all through the trees. This means that besides a fertile soil for our orchard we must admit sufficient light into the centers of our trees. Sunlight furnishes the energy which makes possible tree growth. For strong fruiting wood and good fruit. Experiments have proved that light must reach each of the different branches and even spurs for the best results. Therefore, perhaps our main object is pruning our bearing trees is to admit sufficient light.

The first thing needed in a very much neglected orchard is usually to take out a few large limbs, leaving the balance of the wood well distributed. Often a few of the very low limbs need removal. Each of these larger limbs should be removed with care in order that the bark be not broken or torn. A saw should be used and the cut made close to the main limb or trunk of the tree. This makes it possible for the wound to heal over rapidly. A mixture of about one part of creosote and three parts of coal tar makes a good wound dressing. Some prefer a Bordeaux paint or paste. After the large limbs have been sufficiently thinned there will still need to be a good deal of the smaller wood and limbs removed from the top. All interferring limbs should be taken out or cut back. When doing this, one should have in mind that the limbs when bending down with heavy fruit will interfere a great deal more than they appear to without the fullage and fruit, so that extra thinning will be needed on this account. If the trees are too high to spray well and to pick the fruit from, they should be cut back and are best cut to a good sized lateral branch in order that excess shoot growth be not produced.

The pruning will vary somewhat with the variety and some will need to have the long lateral limbs cut back to keep the shape and to increase the quality of the fruit remaining. One ought always to have in mind keeping the tree well balanced and should also avoid making cuts which will leave long stubs which will only give back and disease the heart wood of the limbs.

As a rule, where pruning is consistently practiced, it will consist chiefly of an annual thinning out of the smaller wood by removing a great many of the shoots and laterals. When pruning one should have constantly in mind a good distribution of fruiting wood, thinning the limbs to avoid scratching and rubbing of the fruit and the admission of much sunlight to all parts of each tree. The sunlight helps to form fruit buds for next year, develops large fruit and finally paints its colors for us in the fall.

The home orchard will produce a much better quality of fruit, a better rietv and do much toward furnishing the farm living it given a little more attention. Make the pruning and spraying a part of the regular program of farm work this year.

In Whatcom county last year, in a demonstration by the extension service, trees sprayed and pruned produced fruit with a value of $4.50 each, after deducting cost of pruning, above that on neglected trees.

The orchard is a part of your farm —give it a chance to improve your farm living.

CASH MILLER ON MODERN INVENTIONS

I see where seme bird has invented a simple little device consistin' of eight or nine syllables which is used for to send pitchers of the human voice by radio. Science an' invention is violatin' all speed laws these days. Next thing we know somebody'll invent a machine fer broadcastin' the taste of what y' eat fer supper.

All the guys that used to write dime novels has turned to inventin'.

In the old days when a man in New York wanted to talk to a man in Pittsburg the best he could do was ride through on a horse, an' by the time he'd went as far as Philadelphia he'd forgot what he wanted to say an' turned back. Now you can pose fer a photograph of what you gotta say an' they'll ship in through by wireless.

They ain't no distinction in bein' a good liar any more. Machinery is stranger than fiction.

It only seems like yesterday that most people thought the radio was somethin' fer to rub on the joints.

Necessity is the mother of invention, as the guy says when he invented a bath-tub.

Every time I take a ride on a train they've invented some new way of hidin' the soap in the washroom. The newspaper y'r readin' today is the shirt that the laundry held out on y' Saturday night.

I'm expectin' any day to hear that the fountain pen has begun leadin' a double life.

I can remember as well as if it was only last week the first time I was ever stepped on by a low-flyin' taxicab. Yes, this is a fast age.

Yesterday's novelty is today's nuisance. Everybody's just livin' from one push-button to the next.

The old cuckoos that rode high bicycles an' absorbed their coffee from mustache cups thought they was the cat's forefinger, but don't kid y'rself. Some day the mere mention of broadcastin' 'll be the hottest joke of the village cut-up.—From the Thrift Magazine.

Why He Didn't Sleep.

"Yesterday," said Jabson, "I refused a poor woman a request for a small sum of money, and in consequence of my act I passed a sleepless night. The tones of her voice kept ringing in my ears the whole time."

"Your softness of heart does you credit," said Mabson. "Who was the woman?"

"My wife."—Selected.

Harness Oiling

The harness oiling season has arrived and our Dipping Vat is now working. We are prepared to turn out this work at the old price of $1.00 a set.

Our method consists of dipping the harness and letting the oil soak in where it is needed. Not merely getting the outside oiled, but completely saturating all parts, the work being done in a steam heated room where the best results are obtained.

If you want to do the job yourself, we will sell you the harness oil for $1.00 a gallon, put up either in gallon cans or in bulk.

Don't use Petroleum Oil for Harness Oiling. It does more harm than good. We use a Neatsfoot Compound Harness Oil especially adapted for the work, and buy it in sufficient quantities to enable us to sell it at the low price of $1.00 a gallon.

CASEBOLT, The Harness Man

BUSINESS is a very real description for every form of activity of the citizen through which he earns his living and exchanges his services or possesions for those of others. A period of recovery always requires hard work and close economy. Above all, there must be frugality in individual business and national expenditures; self-denial is a prerequisite to its complete restoration. Progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The re-establishment of prosperity demands general acceptance of the principle that what is best for the country is best for business. Business is on the road to prosperity. It is a long, up-hill road, but business has climbed it many times before and will do so again.

CIGARETTES COST BOY HEALTH AND LIFE

"It was with great interest I read your article about cigarettes. Perhaps all people have not had my experience, but when one sees a very dear friend go to a premature grave from the result of this habit, the danger from cigarettes to young men is not lightly treated. I had a very wonderful friend. He was a fine young man and vigorous. We came to America to seek our fortunes. He learned to smoke after leaving home. He became a cigarette fiend, and for a long time I did not see him. One day a letter came saying he was going to California for his health and would try to come north and visit me. Cigarettes had him. He never made the trip north. He could not recover lost vitality. His lungs were diseased. He made an effort to return to his home in the East, but he could not come through Washington and see me and a little later he passed away, a victim of cigarette smoking. I never saw him again."

The above is given by a well known Lewiston business man who permitted its publication with the request that his name be withheld. It is printed with hope that some boy may read and accept the warning.

A young man, now in business in Lewiston, and an overseas veteran, said to the Banner: "I became a cigarette smoker during the war, but when I got home I asked myself what benefit I was to get from smoking cigarettes. Icould find no answer except that I had nothing to gain by the use of cigarettes. I quit. And I am disgusted by the false claims made by the tobacco people appearing on Lewiston billboards. It should be stopped." —Lewiston Banner.

School Notes

Wilma Casebolt

The first five grades of school celebrated St. Valentine's Day last Wednesday by having valentine boxes for the occasion.

The first, second and third grades have been making booklets containing the life of Abraham Lincoln.

The opera, "The Bohemian Girl," is postponed until February 23. This is the program planned by the Beta Literary society under the supervision of Miss Marinson. The public is invited to attend the program. It will be of interest to the parents to attend the various literary programs in order to get an idea of what their children are learning in the way of entertaining others. All parents and those interested in the school are extended an invitation for this program which, will be given on Friday afternoon, February 23, at the school building.

A high school basketball game will be played tonight at Troy.

The Parent-Teachers meeting will be held at the school building next Monday evening. All parents and others interested in the school are cordially invited to be present.

A high school dance is being planned by the Athletic association. A local orchestra will furnish the latest "jazz" to step by. The date has not yet been set—but you are expected to attend just the same—and help the Athletic association.

A Man Of His Word

"Sorry to mention it, old man" said Brown, "but it's six months since you borrowed that $5 of me, and you promised faithfully to return it in six weeks."

"I know it," said Johnson, taking a memorandum from his pocket, "That bill was series F, No. 672,945,issue of 1910. I made that note of it, then spent the money. Since that I have been trying to recover it, but haven't succeeded."

"But," said Brown, "any other $5 would do as well."

"No," responded Johnson, shaking his head. "I'm a man of my word. I said I'd return that bill to you, Brown, old friend, and I meant it. Just as soon as I come across No.672,945,series F, issue of 1910, I'll see that you get it for I'm a man of my word and won't go back on my promise, no sir."

Have fun at the minstrel show Saturday night, February 17. 33-1

Monday Bunch Eats

That may sound strange, but it seems that most of the members of that organization have the expensive habit of eating, and on Monday at noon the members took their husbands in tow and marched them up the hill to the Leon Follett residence where a splendid dinner had been prepared for the male dependents on th fair members of the "Bunch"—leastwise they depend upon them to do the cooking.

The gathering was not only for the purpose of getting something to eat, but was in the nature of a farewell dinner for Mr. and Mrs. Follett who on Tuesday shook the snow of this section from their feet and headed for sunny California for a month's or more stay. They expect to return overland later with Mr. and Mrs. F. H. Mendor, who are wintering at Los Angeles.

In addition to wishing the travelers "bon voyage" the "Bunch" very generously borrowed a leather "grub" case and packed a dandy lunch for the travelers—to be taken at necessary intervals on their journey to the land of sunshine. Their full appreciation of the unending "kindness" of their friends will probably never be known as words would undoubtedly be inadequate to express their full appreciation of such kindness.

Many Predatory Animals Destroyed

According to a tabulated statement sent out by Commissioner Miles Cannon there have been killed within the state of Idaho during the past year 44,541 coyotes, 3,579 wild cats, 676 lynx, 148 wolves and 225 cougars. Of this number 373 coyotes, 13 wild cats, 10 lynx, 5 wolves and 1 cougar were killed in Latah county.

The total amount of bounty paid by the state during the past year, on the above number of predatory animals, amounted to $136,100.00.

The total number of predatory animals destroyed was 49,169 and the pelts were valued at approximately $500,000.

The New National Party

The Manufacturer for February showed how the organization of the People's Legislative National Council, by a minority wielding a balance of power in congress, proposed to wipe out a constitutional system of government by party and majority rule.

With a socialistic program, and led by the La Follette bloc, the second step in the revolutionary process is being taken by an artificial alignment of radical elements.

The Progressive bloc is concentrating its efforts on national operation and public ownership of railroads. Along with this is planned nationalization of coal and other large industries. To bring about these steps the following reform groups are to be merged into a new Progressive National political party: La Follette's people's legislative service; conference for progressive political action; the People's Reconstruction league; the Farmers' National council; railwaymployes department of the American Federation of Labor, claiming to represent 1,600,000 railway employes; national and international labor and farm organizations; National Nonpartisan League; the socialist and single tax parties.

These organizations are to be welded into the new Progressive National political party.

If it cannot superimpose its platform on the republican or democratic party in 1924, it will function as an independent political organization and seek to gain control of the government.

Promises Big Crop

Favorable weather conditions and the $250,000 appropriation of the state legislature for seed wheat loans to Big Bend farmers will combine to give the Inland Empire a monster crop this year, in the opinion of Spokane grain men. Reports say that the moisture conditions were never better at this time of the year and unless there is a heavy freeze or thaw the winter wheat crop will be very favorable.

Twenty real-looking "niggers" will appear with the ladies' minstrel show Saturday night, February 17. 33-1

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PEDLETON, minister
(Study at the Parsonage)

Church school at 9:45 a. m.
Morning worship at 11 o'clock.
Young people's meeting at 7 p. m.

The services at the church last Sunday were enjoyed by all who attended and the Pullman boys gave us a better program than they did last year.

Tuesdays Entertained

Mrs. Glen Sampson entertained the Tuesday club on Tuesday, February 13. Pinochle was played and Mrs. R. S. Sullivan won the honors of the day. The invited guests were Mrs. Chas. W. Smith, Mrs. R. S. Sullivan, Mrs. Thomas Feeney, Mrs. F. J. Niemann, Mrs. A. E. Elver, Mrs. T H. Herman.

The next meeting will be with Mrs. F. C. Shork.

Close Highways to Trucks and Stages

All of the highways in Lincoln county, Washington, are closed to travel by trucks and auto stages for three months, according to an order recently issued by the county commissioners of that county. The order states that trucks of more than a ton carrying capacity and auto stages whose weight is more than a ton, not including passengers, shall be ruled off the highways until April 15.

Hear about the "Honolulu Blues" at the minstrel show Saturday night, and you'll never have them again. 33-

PERSONAL MENTION

F. H. Thomas was a week-end visitor at Moscow.

Fred Perkins was a Pullman passenger on Saturday.

Roy Willoughby was a Johnson passenger for a short stay.

Guvier Ehlen was a Tuesday morning for Pullman for a visit with relatives.

Mrs. A. E. Elver was a passenger for Spokane Saturday for a visit with friends.

Mrs. F. E. Lambert and daughter, Maxine, were Tuesday visitors in Moscow.

Mr. and Mrs. Loren Bumpass were Sunday passengers for Uniontown for a short visit.

G. E. Taber was a Tuesday morning passenger for Spokane for a few days' stay.

Mrs. E. E. Miller and daughter, Mrs. Peter Kries, were Thursday morning passengers for Uniontown for a short stay.

Mrs. Henry Craft returned from Pullman Sunday afternoon after a short visit there.

Louie Gunderson was a Saturday morning passenger for Pullman after a visit at the Nels Lande home.

R. C. Smith returned to his home at Palouse Sunday after spending the week-end with his son, C. W. Smith, and wife.

Mr. and Mrs. Henry Broenneke were Thursday morning passengers for Uniontown for a few days' visit with relatives.

Mrs. Joe Reil was a Saturday morning passenger for a short visit with Mr. Reil, who is at Lewiston for medical treatment.

Mr. and Mrs. Cecil Boliou arrived Sunday afternoon from Coeur d'Alene and are visiting with Mr. Boliou's mother, Mrs. Geo. Boliou.

Mrs. Maurice Ritchie and little son, Maurice, of Swansville are visiting relatives here for a few days. Mrs. Ritchie was formerly Miss Grace Mulalley, who formerly lived here.

George Schlerth arrived Tuesday morning from Crabtree, Oregon, for a short visit with relatives, leaving Wednesday morning for Spokane for a visit with his sister, Mrs. H. Schweene. who is very ill at Edgecliffe sanitarium.

35 cents will take you to the negro minstrel, Saturday, February 17. 33-

The Rimrockers Ball

The Rimrockers ball, given at the American Legion hall last Friday night, was one of the best attended dances that has ever been pulled off in Genesee, there being in the neighborhood of 350 present. Everything on the calendar was danced from the old-time quadrille to the latest jazz steps—and everything in between. Nearly everyone was there and they all had the time of their "young" lives. If they weren't young, at least they acted that way, and that is all that is necessary on an occasion of that kind. Free lunch was served and the gathering did not break up until almost breakfast time.

John Roach was floor manager, and he was some manager, too, although he sometimes had a hard time keeping the onlookers from blocking the floor. But when Johnny got that bass voice of his in action he wasn't hard to understand.

Cannery Man In Action

According to the Julianetta Record, the Julinetta cannery will have a busy season this year. F. W. Dustin of Lewiston, owner of the cannery, has been in that section making contracts for the growing of tomatoes and already more than 30 acres have been signed up and it is estimated that enough more will be signed up to make close to 40 acres in all. Contracts are being made for $12.50 per ton, but should the market advance the ruling price will be paid growers.

The cherry growers of that section have organized an association for their own protection and the betterment of local market conditions.

It is a well-known fact that Juliaetta-grown products are of the very best flavor and there is no reason why that thriving section should not become famous for its excellently flavored fruits, vegetables and melons.

A Surprise Party

A birthday surprise party was given at the home of Mr. and Mrs. Carl Erikson Saturday night in honor of Mr. Erikson's birthday anniversary. The event was planned and carried out by Mrs. Erikson, who had invited in neighbors and friends to the number of 18 to assist in the celebration. Pinochle was indulged in quite freely as was also the splendid luncheon served by the hostess at midnight.

A Small Fire

What might have proved to be a disastrous fire was averted last Saturday morning when a coal shed belonging to Mrs. L. C. Cameron caught fire about 4 o'clock in the morning and was consumed. There was little use in trying to save the shed so the energies of the firemen were devoted to saving nearby buildings. The small building was the only loss.

MOTOR TRUCKS AND STAGES SUBSIDIZED

It is claimed that motor trucks and stages have never been in any manner subsidized, while railroads and canals have had public aid.

What greater subsidy could they have as common carriers than for the taxpayers and the public to build the paved streets and highways?

The paved streets and highways are paid for by bond issues, taxation, assessmentof abuting property and taxes on gasoline used by private motor cars and trucks.

The maintainance of paved streets and highways is paid for by taxiation on all the property of the people, and when they wear out new bond issues may be necessary.

Hundreds of millions of dollars are spent in bonds and taxiation to build highways for common carrier motor vehicles to operate on in competition with railroads, electric lines, and steamboat lines, that pay hundreds of times as much taxes as the stages and trucks.

If that is not subsidization enough consider the money spent annually by upkeep of these highways and bridges and paved streets, again paid largely by the rail carriers.

Admitting that motor stages and trucks do pay some taxes, the amount they pay is infinitesmal compared to the taxes that other common carriers and the public pay to build and maintain the public highways which trucking corporations use for private gain.

Basketball Games

In the basketball games on the local floor last Friday night between the Kendrick High school team and the local ball-tossers Kendrick came out victorious, while in the preliminary game between the Uniontown Kids and the Genesee Cubs the latter were victorious.

Comerou-McLean

Miss Melvina Cameron and Edward McLean, both of Genesee, were united in marriage at Lewiston last Thursday by the pastor of the Methodist church of that city. No relatives were present at the ceremony.

The young couple will reside in Genesee for the time being.

Ice of Good Thickness

According to a report in the Cottonwood Chronicle ice was harvested there last week that had reached a thickness of 11 inches.

Farmers Union Meeting

There will be a meeting of the Farmers Union in the American Legion hall on Saturday, February 17, at 1:30 p. m. The membership cards are here and all members are asked to come and get theirs.

32-1 JESSE BORGEN, Sec.

Are You a Radio Fan?

The radio "craze' has finally hit Genesee—and with a vengeance—For receiving sets are being brought to town and country by the "several" and there is no doubt but that there will be many more before the epidemic has subsided. There is no question but that they are a fine form of amusement and many times are informative and of real value as well as a source of never-ending entertainment.

Those who have thus far put in receiving sets are Fred K. Bressler, Mike Earls, F. E. Dieus, Smoll's Confectionery, Jack Barnes, R. S. Sullivan, Gus Fickens, Chas. Ebel and Nels Lande.

Several of these outfits are capable of picking up messages from almost any part of the United States.

Chas. Ebel and Nels Lande are the only ranchers, as far as we have been able to learn, that have put in sets—both of which are capable of picking up messages from as far east as Chicago and all over the western coast.

It is expected that it will not be many years until practically all farmers will have outfits and then they will be able to pick up the latest crop reports and all other necessary information that will put them in touch with markets, etc.

The Sucker List

Lists of men and women are made up and sold as persons who are easily gullible in the matter of selling worthless stocks, bonds, etc. Promoters and stock brokers of shady reputation and unreliable performance use these lists to unload all kinds of easy money propositions, paying fabulous (?) dividends.

Even holders of government bonds are catalogued in the "sucker list" if, as occasionally occurs, their names were obtainable. The monetary help bestowed by the lists is that to the financial pirates and sharks they show who have funds or are investors. These form the pasture on which financial fakers intend to fatten themselves.

The person of ordinary prudence will consult a trustworthy banker before investing in any security.

Come to Lenville

The Pine Grove Community club will give their play at the Lenville church on Friday night, February 23. A small admission will be charged merely to defray expenses.

A NEW SHIPMENT OF GENUINE NORWAY MACKEREL—AS FINE AS YOU EVER SAW

Follett Bros. Mercantile Co.

Old Newspaper Story of Death of Abe Lincoln

The Rev. A. C. Grier of Spokane, who is an ardent admirer of Abraham Lincoln and an acknowledged authority on his life and works, is the possessor of an interesting relic of the martyr president. This consists of a copy of the New York Herald dated Saturday, April 15, 1865, which gives an account of the assassination and death of the president.

The paper is in an excellent state of preservation, although slightly yellowed with age, and Rev. Grier keeps it in a glass frame where it will be preserved indefinitely. As a token of mourning, the column rules, which make the lines between the columns of print, are turned wrong side up, and instead of a faint line the entire space between the type is a heavy black band.

The paper bears little resemblance to the newspapers of the present day. It consists of six columns of reading matter to the page, but the columns are somewhat wider than those in use at the present time. The print is about as fine as that used in modern daily newspapers, somewhat smaller than the type in which this article is set, but is very plain and legible. In those days it was necessary to set every line of the type by hand, no attempt at a typesetting machine having yet been made. It was more than a quarter of a century after the death of Lincoln that the first such machine was successfully placed on the market.

Almost the entire first column is given over to large headline announcing the assassination, and that newspaper styles in those days were different from those of today is evidenced by the fact that the largest word in the headline is "Important." Then follows in smaller type a series of minor headlines announcing the details of the tragedy.

A part of the account of the assassination as taken from the old newspaper is as follows:

"Washington was thrown into an intense excitement a few minutes before 11 o'clock this evening, by the announcement that the president and Secretary Seward had been assassinated and were dead.

"The wildest excitement prevailed in all parts of the city. Men, women and children, old and young, rushed to and fro, and the rumors were magnified until we had nearly every member of the cabinet killed. Some time elapsed before authentic data could be ascertained in regard to the affair.

"The president and Mrs. Lincoln were at Ford's theater, listening to the performance of the American Cousin, occupying a box in the second tier. At the close of the third act a person entered the box occupied by the president and shot Mr. Lincoln in the head. The shot entered the back of his head and came out above the temple.

"The assassin then jumped from the box upon the stage and ran across to the other side, exhibiting a dagger in his hand, flourishing it in a tragical manner, shouting the same words reported by the desperado at Mr. Seward's house, adding to it 'The South is avenged,' and then escaped from the back entrance to the stage, but in his passage dropped his pistol and his hat.

"Mr. Lincoln fell forward in his seat and Mrs. Lincoln fainted."

The scenes following the assassination and the removal of Lincoln to a house across the street are then described, together with the efforts taken to apprehend John Wilkes Booth, who was already suspected of the crime. The details of the attack upon the life of Secretary Seward are also described in detail, and at the conclusion of the article in question it states, that while the wound was at first believed to be fatal, the president was resting easily at a little after midnight.

In another column, however, and under an entirely different heading, the news of the death of Lincoln was given in detail, together with a further description of the events leading up to and following the assassination. By that time it was known that the booth was the assasin, and every effort was being made to effect his capture. It is a lamentable fact that to this day the exact fate of Booth is not known, but there is every reason to believe that he was shot and his body burned while trying to escape from a barn which had been surrounded and fired by a posse.

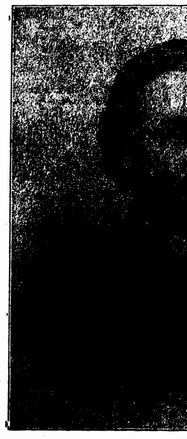
However, the fear has always persisted in the minds of the American people that some innocent person suffered the fate which they believed he so richly deserved.

The old paper is interesting in another regard, in that it gives an interesting account of the last days of the great war. Richmond had but lately fallen to the Union forces, and on the front page there is given a lengthy account of a proclamation by Jefferson Davis calling the attention of the people of the South to the fact, but stating that it was really a blessing in disguise, as it permitted the movement of a large body of troops which had hitherto been kept confined in Richmond. Davis promised the people that even if Virginia were surrendered it would be only a question of time until it would be recovered by the Confederacy.

Alas for the plans and promises of men! Just one short week after the publication of the proclamation Grant swept aside his cavalry screen from before his masses of infantry at Appomattox, and Lee ordered his men to lay down their arms rather than engage a force which would have swept them out of existence—and Jefferson Davis was a fugitive from justice instead of the president of a republic.

There are several other interesting items relative to the closing days of the Civil war, and the paper was extremely optimistic in its general attitude toward the final result—as much so as it was ironic in its headlines over the proclamation by Jefferson Davis.

Rev. Grier naturally cherishes the old newspaper very highly. He is a recognized authority on the life of Lincoln and is noted as a lecturer on this subject. He has many other interesting souvenirs and photographs pertaining to the great president.



LINCOLN'S SON SAW THREE PRESIDENTS SHOT

Here is the amazing experience of Robert T. Lincoln, son of President Lincoln, and now in his 80th year. He related it recently to a friend and, so far as I know, it has never before been published: Young Lincoln was in the army and stationed in Virginia when he received an order to report at Washington. He got into the theater just in time to see his father receive his fatal wound.

Young Lincoln was secretary of war under Garfield. He was asked by the president to meet him at the station and he reached there just as Garfield was assassinated.

Lincoln received an invitation to attend the formal opening of the Pan-American exposition at Buffalo, and accompanied by his family, got there just in time to see President McKinley shot by Czolgosz.

A friend happened to be with Mr. Lincoln when he received an invitation to attend a presidential function at Washington a few years ago. He then remarked something to the effect that, "If they only knew, they wouldn't want me there." And he related his experience as here revealed. —B. C. Forbes, in Forbes Magazine (N. Y.)

IDAHO

Workmen engaged by the Philipi Plumbing company at Lewiston recently unearthed a human skeleton on the lot at First street and Snake River avenue, where an oil station is being installed. The bones were found in a shallow grave. The skeleton was probably that of an Indian. The site of Lewiston, in the days before white settlement, was a popular burial ground with the Indians. It has not been uncommon in making excavations for buildings to find skeletons.

Professor Bartin, head of the psychology department at the University of daho, is now conducting a series of interesting tests on ways in which typewriting may be improved, and is conducting two classes through which he hopes to arrive at some definite conclusions. Each section is composed of sixteen students, who have either had or are taking courses in psychology, one section of which is learning to operate a typewriter by the standard approved method, while the other is following a course of instruction devised by Professor Barton. It is the contention of the psychologist that much of the time ordinarily spent in simple exercises is a waste of time, and that by eliminating them, a person should be able to operate a standard typewriter in a great deal shorter space of time.

The judging team from the class in agriculture at the Moscow high school took first place in the poultry judging contest at the Panhandle Poultry association show, recently. The only teams taking part in the contest were the Moscow and Genesee teams. The Moscow score was 1093 out of a possible 1800 and the Genesee score 1039. The judging included three classes—Barred Plymouthrock, males and females; Rhode Island Reds, males and females; White Leghorns, males and females.

The Bank of Juliaetta, one of the oldest banks in the Potlatch region, is to be under new management, the controlling interest having been sold to Hawkin Melgard, president of the First Trust and Savings bank of Moscow, and A. H. Oversmith, an attorney of Moscow.

Eugene C. Zachman of Emmett, a junior in the college of letters and science, has been elected associate editor of the Argonaut, semi-weekly student paper, for the second semester. Mr. Zachman, who is also a member of the University Press club, will automatically become editor at the beginning of next year. He is a member of Kappa Sigma fraternity.

Stockholders of the Boundary County Fair association held their annual meeting recently in Bonners Ferry, Idaho, according to recent reports in the city. The directors went on record favoring more farm exhibits at the fair and more racing for the entertainment feature.

A Little Known Speech, Made in Independence Hall, Feb. 22, 1861

One of the little-known speeches of Abraham Lincoln was that made in Independence Hall, Philadelphia, on the event of Washington's birthday, 1861. At this time Lincoln was the president-elect, having been elected in the November preceding, but not yet due to take his place as the nation's chief executive until March 4, following. His views as to the imminent prospect of a war with the southern states are well work noting. The speech follows:

Mr. Cuyler: I am filled with deep emotion at finding myself standing in this place, where were collected together the wisdom, the patriotism, the devotion to principle, from which sprang the institutions under which we live.

You have kindly suggested to me that in my hands is the task of restoring peace to our distracted country. I can say in return, sir, that all the political sentiments I entertain have been drawn, so far as I have been able to draw them, from the sentiments which originated in and were given to the world from this hall. I have never had a feeling, politically, and did not spring from the sentiments embodied in the Declaration of Independence.

I have often pondered over the dangers which were incurred by the men who assembled here and framed and adopted that declaration. I have pondered over the toils that were endured by the officers and soldiers of the army who achieved that independence.

I have often inquired of myself what great principle or idea it was that kept this confederacy so long together. It was not the mere matter of separation of the colonies from the motherland, but that sentiment in the Declaration of Independence which gave liberty not alone to the people of this country, but hope to all the world, for all future time.

It was that which gave promise that in due time the weights would be lifted from the shoulders of all men, and that all should have an equal chance. This is the sentiment embodied in the Declaration of Independence.

Now, my friends, can this country be saved on that basis? If it can, I will consider myself one of the happiest men in the world if I can help to save it. If it can not be saved upon that principle, it will be truly awful. But if this country can not be saved without giving up that principle, I was about to say I would rather be assassinated on this spot than surrender it.

Now, in view of the present aspect of affairs, there is no need of bloodshed and war. There is no necessity for it.

I am not in favor of such a course, and I may say in advance that there will be no bloodshed unless it is forced upon the government. The government will not use forces, unless force is used against it.

My friends, this is wholly an unprepared speech. I did not expect to be called on to say a word when I came here. I supposed I was merely to do something toward raising a flag. I may, therefore, have said something indiscreet. (Cries of "No, no.") But I have said nothing but what I am willing to live by, and, if it be the pleasure of the mighty God to die by.

Fair and Square.

Two Cornishmen starting from opposite places were to travel to different destinations past a common point. They wished to know who would arrive there first, but could not think how to decide this.

At last Jack had the solution. "There's a stump there, sin't there, Enry?"

"There is," said 'Enry. "That's where we turn and go in hopposite directions."

"I 'ave it," announced Jack. "If you get to the stump first you put a stun' on it, an' if I get there first I'll knock it off."—Successful Farming.

NORTHWEST NEWS

Apple growers of the Inland Empire welcome the coming probe into the fruit car shortage of last fall fall with a report of the remedies that will prevent a recurrence of such a shortage. The inquiry is to be made by the interstate commerce commission.

The commission was instructed by the senate to make such an investigation, in a resolution which was presented by Senator Miles Poindexter of Washington. The investigation is likely to be made immediately.

"This matter ought to be taken up now," T. T. Grant, attorney of Spokane, who is also a fruit grower at Otis Orchards, said. "I do not know what would be the best remedy, but a remedy should be sought."

Among the concrete suggestions made for prevailing recurrence of such a shortage as was felt last year in the pooling of refrigerator equipment and more adequate storage facilities.

"I believe that either through the railroads themselves or through federal legislation, railroad equipment used in transporting perishable shipments should be pooled in order to be able to distribute it where it is most needed," Edward Peirce, president of the Spokane Valley Growers' union declared.

The Spokane and northwestern apple market, echoing that of the entire United States, is extremely sluggish and unpromising. Spokane apple shippers indicated recently. Because of the huge supply all over the country the demand has not been able to keep ahead of the ripe and overripe grades, with the result that fruit shipped now reaches the east in partially damaged conditions, which will not command high prices.

Observing Ole Says.

"Yep, money is the root of all evil —and we are all rooters."

Beneficial Fruit Practices

By O. M. MORRIS.

Professor of Horticulture at the State College, an Address to the Western Washington Horticultural Association, Feb. 2.

The orchards in Western Washington can be greatly improved by a more thorough systematic tillage and the growth of cover crops in the orchards. The tillage practices should consist of a thorough plowing or deep disking of the land in the early spring and a thorough system of clean tillage until after mid-summer. A cover crop of vetch, field peas, rye, wheat, sweet clover, or even red clover, should be planted in late summer and permitted to grow throughout the winter. In the districts having a light rainfall, this cover crop, even though it is very light, should be plowed under early in the spring. In districts where the rainfall is heavy throughout the season, the cover before it is ploved under. A thorough system of tillage will maintain the water supply throughout the season.

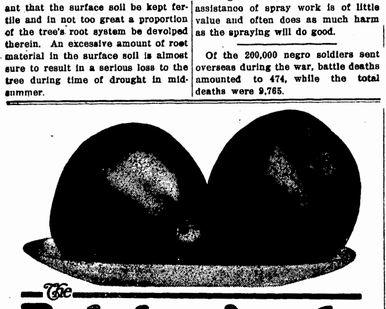
Early plowing will sometimes destroy a large number of fine feeding roots in the surface soil. This, however, is not always a serious matter, as the trees can quickly replace these feeding roots if the soil is made sufficiently fertile to justify the plant in an expenditure of energy in that direction. In fact, it is doubly important that the surface soil be kept fertile and in not too great a proportion of the tree's root system be devolped therein. An excessive amount of root material in the surface soil is almost sure to result in a serious loss to the tree during time of drought in midsummer.

Cover crops accomplish two things: They increase the soil fertility by using plant food materials at a season when the trees are not growing rapidly and improve the physical condition of the soil. n many cases, this latter value is of as great, if not greater, value than the first.

Thorough, regular pruning is necessary if the trees are to get their maximum value in fruit. The trees will grow and live as long without pruning as they will with pruning, but they will not yield a satisfactory quantity and quality of fruit and the regularity of the pruning is just as important as the type and season of pruning. Summer pruning can be done with profit in many apple orchards in Western Washington. This summer pruning, however, should be done every year and should consist of removal of the excessive growth. Best results will be obtained if it is done in June.

A good deal of pruning that is actually harmful is done in many orchards. The trees live in spite of the fact that they have been pruned rather than by the assistance of it. Careful, regular pruning is the only kind of pruning that is worth doing. Pruning that is done solely for the assistance of spray work is of little value and often does as much harm as the spraying will do good.

Of the 200,000 negro soldiers sent overseas during the war, battle deaths amounted to 474, while the total deaths were 9,765.



The Rainier Apple

The Apple to Plant for Profit

In our sincere judgment this is the finest dessert apple thus far developed. It has all the mild qualities of the Jonicuss, which commends it to the taste of those who cannot eat the more acid apples, and, in addition, it has a decidedly spicy flavor, will keep firm in ordinary storage for weeks without becoming mealy, and in cold storage the RAINIER keeps perfectly for a year.

Awarded Wilder Silver Medal 1923 American Pomological Society

UNCLE SAM'S VERDICT—"The keeping qualities of the RAINIER APPLE are unsurpassed by those of any other variety of the Pacific Northwest that has yet come to the attention of the U. S. Department of Agriculture. Its ability to retain its firmness, brightness and quality with almost no decay or skin blemish, places it above even the Arkansas Black, Winesap and Yellow Newtown. In 32 degrees Fahr. cold storage it keeps in prime condition into May or later, and instances are known where large numbers of boxes have been held in excellent condition into September of the following year."—Bulletin No. 347, United States Department of Agriculture, Page 38.

Eat a RAINIER —Send us your name and address and we will mail you one FREE.

We offer first class RAINIER trees for spring planting. Also other standard apples, peaches, pears, plums, prunes, apricots, etc., small fruits, shade trees, shrubbery and roses.

BILL TO ABOLISH ALBION NORMAL

Another Would Allow State Board Authority to Provide Housing Facilities.

BOISE—Two bills, having to do with the educational institutions of the state were introduced in the legislature Friday. Senate b.ll No. 38, by the committee on educational institutions, would authorize the state board of education and the board of regents of the state university to provide dormitory and housing facilities for students at the University of Idaho, Lewiston, and Albion Normal schools and the Idaho Technical institute. At present, the bill states, the housing facilities at these institutions are inadequate and therefore an emergency is declared. The board would be empowered to purchase, rent or lease land or buildings for such purchase and to create separate dormitory funds. Payment for the buildings, etc., is recommended on the 20-year amortization plan.

Senate joint memorial 3 by the committee on mines and mining, introduced this morning memorializes congress to pass legislation to aid the silver mining industry. It is a measure fostered by the Idaho Mining association.

Abolishment of the Albion state normal school would be provided should senate bill 88 come up. Bills which have appeared in previous legislatures have provided for the transfer of the Albion institution but the measure presented today would provide for the complete abolishment of the school, sale of the land and buildings and creation of the Albion normal property fund into which would go the proceeds of the sale.

Pledges made in the platform of the three political parties in Idaho for the abolishment of the state constabulary were carried out when senate bill 10, by Thomas, repeating chapter 67, session laws of 1921, which provides for the existence of the constabulary, passed unanimously. Only two expressions of feeling against the measure were made before the bill passed, Senators Callahan, of Shoshone, and Whitten, of Boise, both republicans, announcing that if they voted their personal convictions and the feelings of the citizens of their respective counties they would vote against the measure but that because of the pledges of their party in favor of the abolishment they would vote for it.

Read! A Sad Story.

She stood knee deep in snow. Tears dimmed her beautiful eyes. With cold numbed fingers she fumbled at the catch on her handbag. The quick eye of John Courtly seeing her distress showed him his duty. With a look of pity, tenderness and understanding he approached and inquired politely:

"Is there anything I can do for you, Miss?"

"Oh, thank you, sir—my flappers are so cold. Will you roll me a cigarette?"

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Marriage of 869 boys under 19 have been recorded in Scotland in a year. Four were 16, 52 were 17 and 313 were 18.

The keeper of the Natural History museum of London says he has in the entomological department specimens of 3,500,000 insects, including cooties.

Premier Hughes, of Australia, last of the "wartime premiers," resigned today. S. M. Bruce, secretary of the treasury in the Hughes cabinet, has been asked to form a ministry.

The German government has decided to pull the remaining allies and possibly neutrals regarding their stand on the French Ruhr occupation, it is learned on the highest authority.

An ossified calf on the farm of W. C. Rishel at White Hall, Penn., is attracting much attention, especially among veterinarians, who declare it to be the greatest animal freak they ever have seen. The calf was unusually small and was in the bony condition when born by a cow that previously had given birth to nine normal calves.

Janitors cleaned a lot of rubbish from a forgotten corner of the basement of the British museum. They found it was art treasures dating from the first century, A. D., worth thousands.

The treasury department has issued a formal order for the opening of the grave of Seaman John Jones in Brooklyn naval cemetery, said to contain Russian crown jewels valued at four million.

Mr. and Mrs. Jonathan M. Shalnlin, of Abrams, Penn., were wed 72 years ago and claim the distinction of being the only couple in the United States who have never had a quarrel—and lived together that long.

Dr. Frederick A. Cook, Arctic explorer, was arrested on a charge of having liquor in his possession and released on bail of $500 at Ft. Worth, Texas. His attorney said the charge was a frameup and that Cook's wife made the charge to tie up his wealth, as she is asking for a divorce. Cook's oil operations are being probed.

Two Ways.

Single Man—The reason why there are net more scandals and divorces is because when a woman marries men generally leave her alone.

Married Woman—Very true—ah, say, can't you run over and keep me company tonight? John has left me alone for the evening.—American Legion Weekly.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

MAKING THE HOTBED HOT

There is really nothing hard about making a hotbed, for it simply requires a little forethought in securing the right kind of horse manure, digging the pit at a time when there is no frost in the ground, securing some 1x12 inch boards and the repairing of some old sash.

Location — In choosing a location, select a well-drained spot with a southern exposure, on the south side of a building or board fence.

Frame—The frame is usually built of any available old boards, preferably 1x12. The north wall should be 24 inches high, and the south wall 12 inches high, giving the sash, when placed on the frame, a 12-inch slope toward the south. Cross pieces should be placed across the frame to cover the joint where two sashes meet. The entire frame should be made tight to conserve the heat.

Four corner posts on the inside of the frame are usually made of 2-inch material and should extend about two feet below the bottom of the frame into the pit.

Pit—The pit is made by digging out to a depth of 16 to 22 inches, all the dirt inside the hotbed frame. Make the bottom of the pit level. When the frame is in place, loose dirt can be banked around it to give it added protection.

Preparing the Manure—Fresh clean horse manure with about its own bulk of bedding or straw is the most desirable. This unheated manure should be hauled to the place where it is to be used and placed in a compact pile and moistened so that it will heat. A few buckets of warm water poured on the center of the pile will readily start heating in cold weather. When heating is nicely started, the manure should be forked over into another pile and left to heat some more. In a few days it will be ready to place in the pit.

Placing in Pit—The manure should be spread out and packed to a depth of 18 inches in the pit. When the manure warms up well, place about 4 inches of rich loam on top of it. Do not plant seeds for a few days after this time until the temperature has cooled off to about 85 degrees.

If the hotbed is covered with cheap muslin or a glass filled sash, ashes should be raised on bright days to give ventilation and covered at night or in bad weather. "Sweating," or moisture showing on the inside of the glass is a sure sign of poor ventilation.

Watering—Water the plants about twice a week well, rather than oftener and not thoroughly.

While this discussion just touches a few points on the hotbed for the family garden it will enable a person to have early lettuce and radishes and to raise their own cabbage and cauliflower plants.

Tubercular Veterans Get Another Chance to Prove Up

Tubercular war veterans of this district whose claims for compensation and hospitalization have been disallowed by the government will benefit greatly by a new federal order calling for extension of proof period following separation from service and the formation of a district tuberculosis board to consider service connection of cases after observation in the hospital, according to an announcement made by L. C. Joseph, northwest district manager of the United States Veterans' bureau. Hundreds of ex-service men of the Pacific northwest will be directly affected by this measure and every tuberculosis case will be automatically reopened for consideration. Development of tuberculosis from war service is increasing rapidly, it was stated.

The new instruction states that "active tuberculosis, minimal state, shown by competent proof as existing within 30 months from date of separation from active service, shall be considered as having been active and of 10 per cent degree within two years from discharge." The period of proof is extended three months in this instance and also to veterans suffering from tuberculosis, moderately advanced, who are allowed 33 months after discharge to show tuberculosis. The period of proof for tuberculosis with cavity formation or to the extent of two entire lobes is extended four months, giving the veteran 36 months after separation from service to show tuberculosis development.

"The cases of all war veteran of the Pacific northwest suffering from tuberculosis whose claims have been disallowed will be reconsidered and given the benefits of the new regulation," said Mr. Josseph. "The new order gives us another opportunity to help the tubercular war veterans who heretofore have not been entitled to federal aid. Where active tuberculosis of 10 per cent degree has not been diagnosed during the two-year period following separation from war service and does not come under the 30, 33 or 36 months provisions, the claimant shall be referred to a hospital for a period of observation and a report made by three medical officers.

"This special board shall report the extent and character of the pulmonary lesion as disclosed by the X-ray and physical findings and shall record a careful medical history to the length of time the disease had previously existed. A district board of three members will be named by the district medical officer within a few days to pass on those findings and make the necessary decisions. This means that every veteran suffering from tuberculosis will be given an opportunity to have his disability connected with war service regardless of the time the first examination was made."

Announcement was made that the new monsure will mean a material increase in the activities of the Veterans' bureau for many months both in awarding of compensation claims and hospitalization.

"Does your son show any athletic tendencies at college, Hiram?"

"I don't know. I expect he does. There ain't enough cloth in them gymnasium clothes to cover a skeeter."

Facts and Near Facts

Marble is softer than granite.

The fundamental idea underlying the illusion of motion pictures is the persistence of vision. That is, the image or sensation of seeing an object remains for a fraction of a second after the object is removed.

In the whole country of Iceland there are half as many people as in Spokane.

Iceland moss is imported to Ireland as food and medicine.

Jitneys first appeared in Los Angeles in 1914.

The first library was discovered in China 1035 and for fear of invasion by hostile troops was surrounded by a high wall.

To remove the skins from tomatoes, rub them all over with the back of a knife to loosen the skins before peeling. This is better than scalding them.

Ambergris, a product of the diseased condition of a whale, is very valuable for the intensification of the finest of perfumes.

Equal parts of lime water and raw linseed oil well shaken make an excellent application for severe burns.

Onions should always be boiled in water that has been salted, otherwise they lose much of their flavor.

A little turpentine upon a fever blister will kee pit from making a sore.

Association Aims to Plant Million Trees This Year

A millio ntrees planted in 1923 is the objective of the American Tree association, just organized by Charles Lathrop Pack, former president of the American Forestry association. The new association will make any one who plants a tree and registers it with the association a member. There are no cash dues and there is only one way to join the association and that is to plant a tree. The association will send a certificate of membership after the trees have been planted and will give tree planting instruction to any who ask for it.

Mr. Pack long has been indentified with public welfare work, particularly in relation to forestry, having for many years been president of the American Forestry association. During the World war, Mr. Pack organized and directed the work of the national war garden commission. Last fall, together with Secretary P. S. Ridsdale and Directors Dr. Henry S. Drinker, John Hays Hammond, Charles F. Quincy and Standish Chard, he resigned from the American Forestry association, and Mr. Pack declined to allow his name to be put up for reelection.

A statement as to the aims of the American Tree association says:

"After three years of endeavor to unite the foresters on a national forest policy Charles Lathrop Pack has organized the American Tree association which will devote all its energies to secure nation-wide planting of trees. Mr. Pack sees that the demand for a national forest policy must come from the people and not from any one group of foresters, lumbermen or timberland owners, as the people are vitally interested in having steady and permanent production of forest products. Up to now the foresters have not been able to agree upon a form of forestry policy and so Mr. Pack has determined to devote himself to arousing the public to the value of tree planting."

Response to the call for tree planters has been remarkable, P. S. Ridsdale, the secretary of the new organization, says. Every one who planted a tree in 1922 is eligible to membership. From Louisville, Ky., 2000 membership have been received from one bank that gives depositors trees to plant. The national tree voting plan has been taken up in a number of schools and this feature has proved of the highest educational service in teaching children the value of trees. The planting of memorial trees, roads of remembrance, memorial parks and memorial forests is going forward in a remarkable way, Mr. Ridsdale adds.

Sends Trees to Europe.

Mr. Pack is continuing the sending of millions of American tree seeds to England, France, Italy and Belgium to help to reforest war devastated areas in those countries. As a result of this work millions of American trees are already growing in western Europe.

Another educational campaign of the association is to "make Washington the national arboretum of the country." The nub of the idea was the planting of the Armistice elms by Mrs. Warren G. Harding a year ago. Seeds from the famous Dumont Kennedy el mat Crawfordsville, Ind., have been received for planting at the Lincoln memorial. This spring will see the planting of memorial trees by several state societies at Washington, the trees to come from the home states.

INCUBATORS

The principle of incubation has well-nigh reached perfection, and there is not any better illustration of this than is found in the

Saw Three Presidents Shot

Here is the amazing experience of Robert T. Lincoln, son of President Lincoln, and now in his eightieth year. He related it recently to a friend and, so far as I know, it has never before been published: Young Lincoln was in the army and stationed in Virginia when he received an order to report at Washington. He got there the theater just in time to see his father receive his fatal wound.

Young Lincoln was secretary of war under Garfield. He was asked by the president to meet him at the station and he reached there just as Garfield was assassinated.

Lincoln received an invitation to attend the formal opening of the Pan-American Exposition at Buffalo, and accompanied by his family, got there just in time to see President McKinley shot by Czolgosz.

A friend happened to be with Mr. Lincoln when he received an invitation to attend a presidential function at Washington a few years ago. He then remarked something to the effect that, "If they only knew, they wouldn't want me there." And he recited his experience as here revealed.—B. C. Forbes, in Forbes Magazine.

Notice to Creditors

Estate of Mary J. Wager, Deceased.

Notice is hereby given by the undersigned, executor of the estate of Mary J. Wager, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said executor at First Bank of Genesee, Genesee, Idaho, the same being the place for the transaction of the business of said estate, in Latah county, state of Idaho.

G. E. TABER,
Executor of the Estate of Mary J. Wager, Deceased.

Dated at Genesee, Idaho, Februnry 8, 1923. 32-5

Notice for Publication of Time Appointed for Proving Will, Etc.

In the Probate Court of Latah County, State of Idaho.

In the matter of the estate of Lewis Jain, deceased.

Pursuant to an order of said probate court, made on the 23rd day of January, 1923, notice is hereby given that Monday, the 19th day of February, 1923, at 11 o'clock a. m. of said day at the court room of said court, at the court house in the county of Latah, has been appointed as the time and place for proving the Will of said Lewis Jain, deceased, and for hearing the application of Walter F. Jain, Clarence L. Jain and Charles F. Jain for the issuance to them of letters testamentary, when and where any person interested may appear and contest the same.

Dated this 23rd day of January, 1923.

ADRIAN NELSON,
Probate Judge.

H. R. Smith, Moscow, Idaho.
Attorney for Petitioners. 30-3

1,500 MEN ATTEND BIBLE CLASS EVERY SUNDAY

(Continued from first page)

The lesson is read hot out of the Scriptures. With a Bible in one hand George opens it and steps to the front of the platform and begins. He deals in language understood by the people; he talks in the terms of the common man. You might think he was the manager of a branch agency talking to automobile salesmen, telling them to get acquainted with the make of car they are selling. He interprets the Bible standing, militant. There's almost no creed, but for the one word which stands three feet high at the back of the platform: "Obey."

Incalculable Asset to Community

In summing it up, George says: "No, I cannot say all the men go to church, but the most of them do. Nor do all of them go to my church; they aren't expected to. They are always urged to attend the church of their choice. Nor are all the men in my church members of this class—not by a long shot.

"If you want to know how much of a community asset the class it, you'll have to ask the mayor, the chief of police, the principals of the schools, heads of social welfare organizations. I'll say this, hundreds of men have quit their bad habits, hundreds of wives have come to me and thanked me, and talked confidentially of what has happened, and if I wanted to use the information I obtain in this way —but I never will. It is told in confidence. Let the police find it out for themselves.

"Families are taken care of, unobtrusively; hundreds of homes have been made happier in countless ways. Long Beach is a church-going city, a law-abiding city; we don't pretend to have reformed it, but I do know what people tell me."

Too Much Overhead

Overorganization is described as a prevailing flaw in American industry by Dr. Milton C. Whitaker, chemist, inventor and organizer.

"We saw many cases during the war," he said, "where there was so much organization that there was no one left to do the work. We still frequently find organizations all dressed up and no place to go.

"Many research projects are doomed to failure before they start, because of the lack of interest or misunderstanding on the part of the overhead. If research is to be a part of an organization at all, it is entitled to the full benefits of cooperative support of every man in that organization from overhead to office boy. Research men are liable to be sensitive and sometimes temperamental. They respond to encouragement and wholeheartedness, while on the other hand, a single knocker may wreck the whole works."

Beware of the knocker!

Luck!

Do I believe in luck?
I should say I do. It's a wonderful force!

I have watched the successful careers of too many lucky men, to doubt its existence and its efficacy.

You see some fellow reach out and grab an opportunity that the other fellows standing around had not realized was there.

Having grabbed it, he hangs onto it with a grip that makes the jaws of a bulldog seem like a fairy touch.

He calls into play his breadth of "vision."

He sees the possibilities of the situation, and has the "ambition" to desire them, and the "courage" to tackle them.

He intensifies his strong points, bolsters his weak ones, cultivates those personal qualities that cause other men to trust him and to cooperate with him.

He sows the seeds of sunshine, of good cheer, of optimism, of unstanted kindness. He gives freely of what he has, both spiritual and physical things.

He thinks a little straighter; works a little harder and a little longer; travels on his nerve and his enthusiasm; he gives such service as his best efforts permit.

And then "luck" does all the rest!
Success is his.

World Crop Prospects

With the exception of scattered rains in parts of Texas, Oklahoma, Kansas and Nebraska, there has been no relief in the dry sections of the winter wheat belt in the Southwest the past month. Western Kansas and Oklahoma are much in need of moisture and conditions are not promising in those districts while the prospects are generally favorable in eastern Kansas and practically all of the territory east of the Missouri river although there have been some complaints of damage from freezing and thawing.

Open weather in the eastern portion of Kansas has hurried preparation of the ground for the oats crop, and many farmers in that section have already started sowing. Continued dry and hot weather in Argentina, accompanied by an extraordinarily hot wind, has caused some anxiety as to the corn crop in that country, as the temperature was the highest in 15 years.

Prospects for the new corn crop in South Africa are reported as good, and the prospects in India continue very favorable, with every indication of a full yield of wheat on a larger acreage than last year.

Fall and winter sown grains in California have made excellent growth, and the present condition is above the average for this time of the year, while the abundance of green grass on the ranges is producing good effects upon cattle and sheep, as the present condition of the ranges is the best that has existed for years.

Income Tax Facts

Revenue officers are visiting every county in the United States to aid taxpayers in the preparation of their income tax returns for the year 1922. Information concerning the date of their arrival and the location of their offices may be obtained by writing the collector of internal revenue for the district in which the taxpayer lives.

Forms for filing returns of individual net income for the year 1922 are being sent out to taxpayers who filed returns for the year 1921. Failure to receive a form, however, does not relieve the taxpayer of his obligation to file a return and pay the tax on time, on or before March 15, 1923. The forms, 1040A for filing returns of net nicome $5,000 and less and 1040 for filing returns of net income in excess of $5,000, may be obtained from collectors of internal revenue and deputy collectors.

Returns are required of every single person whose net income for 1922 was $1,000 or more or whose gross income was $5,000 or more and of every married person whose net income was $2,000 or more or whose gross income was $5,000 or more. Careful study of the instructions on the forms will greatly aid in making a correct return.

Catholic Card Party

The card party and informal dance given by the ladies of St. Mary's church at the Knights of Columbus hall Monday evening was well attended and a splendid time was had by all present. These affairs always leave pleasant memories and this one was no exception to those that have been held before. The ladies are to be congratulated upon the success of the evening.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, FEBRUARY 23, 1923. NO. 34

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

January Business Large

The Idaho Fire Brick Company is fast becoming one of the leading institutions of industry in this part of the country. Just a few years ago the plant was not making much headway financially or otherwise, but today it has a large volume of business and is financially sound, paying dividends to the stockholders. During the month of January this factory paid out for labor, wood and various bills throughout the village, the total sum of $8190.39. Also during this month, the company shipped in the neighborhood of twenty car loads of their product. —Troy News.

More Fine Hogs

John Kinzer took the honors for the best hogs shipped from Uniontown by the Co-operative Association last Saturday. His 12 head weighed 2900 or an average of 241 2-3 pounds each. They were 202 days old and made a pork production of 1.1963 pounds per day. A good record set by P.P. Kinzer, they should have weighed 33 pounds more, or 2933 pounds to equal his. Other shippers were C.C. and R.D. Stout, Moehrle Bros, H. Schumacher, C.H. Wieber, C.A.Mueller, Fred Reif, J.J. Grassl, J.R. Warnecke, EdDahm. —Uniontown Journal.

Father Stang to Leave

The Rev. Father Stang, pastor of St. Gall's Catholic church in Colton, announced to his parishioners Sunday morning that he has been instructed by Bishop Schinner that he will have to move to another parish after Easter. The Bishop wishes an older Priest to have charge of this parish. Father Stang has been here since September, 1917, and has made many friends among his people. He does not know yet where he will be sent, but expects to remain in Colton until sometime in April. —Colton News Letter.

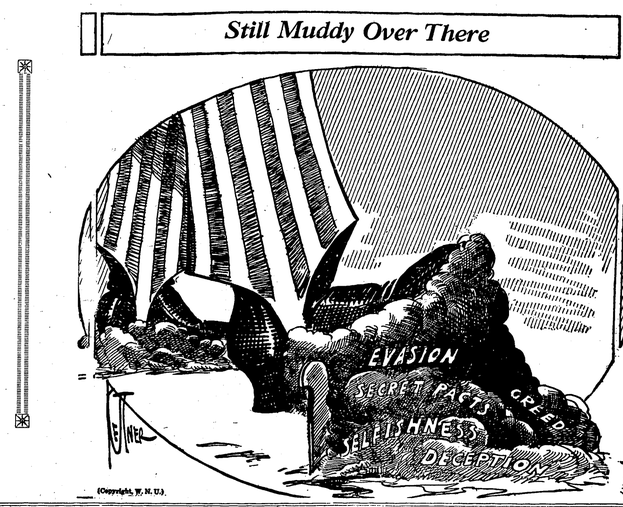
To Trap Beavers

The beavers which have been doing much damage in the park by cutting down the trees, daming up the mill race and flooding the road in the lower end of the park, are now to be trapped.

A permit to trap them has been secured from the game department and Frank Snyder, of this place, will do the work. The animals have become quite numerous as many points along the creek. Several of them have made their home along the mill race in the park for the past three years and all efforts to induce them to change their location seem to be of no avail, consequently it has been decided that the only way to prevent their further damage is to trap the last one of them. They are said to be doing considerable damage near the Leland place above town where they have dammed up a culvert across the road causing water to back up and threatening to flood the road bed. The trapping permit covers this point also. Mr. Snyder expects to start trapping them within a few days and under the permit he will get half the value of the skins and the other half will go to the state. Whether trapping of the animals will prove effective in arresting their destructive work remains to be seen, for the reason that they are said to be quite numerous all along the creek and others may soon come in and fill up the places of those trapped.—Julietta Record.

Deer Victem of Coyotes

There is no doubt that many sad tragedies occur among the big game animals at all times of the year but especially in the winter, when conditions are more favorable to their enemies, says the Clearwater Tribune. The eyes of man seldom witness the murdering and suffering of deer and elk at the hands or rather mouths of their assassins, coyotes, wolves and cougar. Walter Wendel, well known trapper and woodsman of the upper North Fork, had such an opportunity last week while enroute from John Pearson's place to Big Island. Walking along the river trail his attention was attracted by growling, and looking to the river which was frozen half way across, he beheld three coyotes eating a live buck deer while the unfortunate animal was making desperate efforts to get up and save himself. A good portion of the hind quarters was torn away and eaten. Mr Wendell was only armed with a revolver, he shot and, as he thought, killed one of the coyotes. The others dissappeared at once. As the ice would not bear his weight, it was necessary for him to get some poles to assist him in getting out to the deer. While thus employed the coyote which was only slightly wounded and stunned came to and got away. Upon examination he found that the deer was minus the lower joint of one front leg, it presumably having been shot away and was thus rendered incapable of caring for itself. Signs indicated a long and fierce battle. Walt ended the deer's life and tracked the coyote but did not get it. Coyotes are steadily getting more numerous in this county and it appears that some means will have to be devised to combat them if we are topreserve the game and domestic stock. —Kendrick Gazette.



Income Tax Facts

In making his income tax return for the year 1922, a taxpayer, if single, is allowed an exemption of $1000. A married person, or head of a family, whose net income for the year 1922 was $5,000 or less is allowed an exemption of $2,500. The exemption allowed a married person or head of a family whose net income was in excess of $5,000 is $2,000. A head of a family is a person who actually supports one or more persons living in his or her household who are closely related to him or her by blood, marriage or adoption.

An additional credit of $400 is allowed for each person (other than a husband or wife) dependent upon the taxpayer for chief support, if such person is under 18 years of age or incapable of self support because mentally or physically defective. A single man whose net income for 1922 was $2,000 and who supports in his home an aged mother would have no tax to pay, but would nevertheless be required to file a return. The fact that a person's income may be non-taxable by reason of the exemptions does not nullify the requirement to file a return if his income was within the prescribed figures—$1,000 if single and $2,000 if married.

The normal tax is four per cent on the first $4,000 of net income in excess of the exemptions, and eight per cent on the remaining net income. The tax may be paid in full at the time of filing the return, or in four installments due on or before March 15, June 15, September 15 and December 15.

Great Men But Poor Prophets

"There is a madman proposing to light London with—what do you suppose?—wax candles."

That's what Sir Walter Scott wrote to a friend when it was first planned to light London with gas. Napoleon said it was "a great folly."

Several years ago people were afraid of gas and thought it to be the work of the devil. Later when Westminster bridge was lighted with gas, people thought the pipes were filled with fire and watched the spectacle dumbfounded. When a lighting system was installed in the house of commons the members of parliament, fearful of being burned, would not touch the pipes with unglowed hands.

But that was a hundred years ago.

Today there are 1,200 uses for gas, and it takes sixty thousand miles of street mains to deliver the gas of the country to its customers. Forty-five million people in homes and factories are now served with gas.

Electrifying Trains

Electrification of American railroads is well on the way. With a total mileage of electrified roads in the world—3,567 miles—this country already has nearly one-half, or 1,607 miles, and with 375 electric locomotives. Plans are in the making for 1,20 or 1,500 miles more during 1923. It is estimated that $160,000,000 will be spent in this country during the next ten years in equipping present steam roads with electric power and it is claimed that 125,000,000 tons of coal will thereby be annually saved. The ultimate plan of electric power production contemplates the interconnection of all great generating stations, which will largely be constructed near to coal mines or at waterpower sites.

Weak and Wobbly

The league of nations has passed its third birthday but it apparently has not yet learned to take any certain steps.—Canton (Ohio) Repository.

MANY ATTEND K. OF P. ANNIVERSARY BANQUET

One of the largest crowds that has attended a similar function in many years was entertained and banqueted at the Knights of Pythias hall Tuesday evening at 7 o'clock.

As is the custom of all Knights of Pythias lodges throughout the United States, the annual banquet and general good time was given by the local lodge Tuesday evening when in the neighborhood of 175 members and their families and Pythian Sisters and invited guests sat down to the banquet tables. In addition to those residing here quite a delegation came up from Lewiston to atetnd a lodge session, not knowing that the annual banquet had been postponed from Monday, February 19, the regular date, to Tuesday evening, and were agreeably surprised to find a banquet and big time on hand. In addition to the Lewiston delegation, Mr. and Mrs. D. C. Burr came over from Moscow to be present at the feast and renew old-time acquaintances.

After the throng had been satisfied around the banquet tables they went to the lodge room on the second floor where a short program of musical numbers and songs was given—then the real fun began, for after the program card tables were hauled out and put in place and the older "young people" interested themselves with pinochle while the younger people descended to the banquet room, which had been cleared for the purpose and dancing was indulged in until midnight. Others, not caring for dancing or cards, descended to the basement and indulged in bowling, pool or billiards, as their fancy dictated.

Thus as a whole the evening was one of the most pleasant that it has ever been the good fortune of those present to enjoy.

Socialistic Experiment Costly

Losses ustained by the government from wartime operation of railroads and its aftermath of earnings, guarantees and damage settlements will to approximately $1,800,000,000, according to data now made available for the first time in a report by James C. Davis, director general of railroads, sent to congress by President Harding.

And so ends the story of government control and operation of the railroads during the war. The taxpays will settle the bill just the same as they will foot other war debts.

But with such a costly object lesson to go by, will they sanction further experiments in government ownership and operation of railroads in this nation? Already prominent politicians are trying to make the public believe that government ownership of railroads is a sure cure for all transportation problems.

Let the people think!

Newspaper Man Passes

W. A. Logue, a former newspaper man of Newport, Washington, died recently at Yacolt, Lewis county, after having been in poor health for nearly a year, according to recent reports. Mr. Logue established the Ione Record and the Metaline News (Washington).

Walla Walla to Fore

The value of Walla Walla crops in 1922 was $5,339,507, according to figures given out by John B. Wiley, district horticulturist, recently. These figures are authentia and based on warehouse reports and official information.

WHAT HAPPENED HERE TWENTY YEARS AGO

Mat Kambitsch and Peter and George Steltz left yesterday for Oregon to make proof.

The weather of the past week would lead one to believe that spring is really here. Squirrels are said to be out.

Dr. and Mrs. Conant and Mr. and Mrs. Fred K. Bressler expect to leave Sunday for Oregon to make proof on their timber claims.

Arthur Harris and his brother, Archie, have established a fruit and vegetable store at Lewiston, which is in charge of the latter.

If the advent of robins is the sign of the coming of sprng, she is certainly about here, for almost daily large flocks are seen in the orchards.

Charles Hanson has a portion of the material on the ground for the erection of his mammoth gallery. Work on same will be commenced as soon as the weather settles.

Within a very short time George Follett will begin the erection of a handsome new cottage on his lots near the city park. In size it will be 24x40 and will contain seven rooms in addition to closets, etc. It will be as modern in construcotn as the town will afford.

L. Stoltz, who a few days ago disposed of his farm east of town, Wednesday of this week purchased the Henry Meyer farm of 120 acres three miles west of town. The purchase price was $5,100, or $42.50 per acre. While Mr. Stoltz comes into immediate ownership he will not take possession until next October.

During the month of March the Genesee theater goers are promised a treat by local stars. Under the auspices of the Ladies' Aid society the four-act comedy drama, "Pearls of the Great City," will be presented. The cast includes the following: W. E. English, Willie Herman, Eli MOrgan, LeRue Tice, Thomas Keane, Leon Follett, Mabel Reed, Pearl Owen, and Rachel Biram.

Tuesday of this week W. J. Herman effected a lease on the lower floor and basement of the Conant building and will occupy the same with his furniture stock. In addition to furniture he will carry a complete line of musical merchandise and other lines. The interior of the building is now receiving the attention of the painters and he will at once take possession. By this change he will have a more suitable place to carry on his furniture business and in the present store room it will give him a chance to largely increase his hardware stock. Willie Herman will be in charge of the new store.

Weather Man Sick

There isn't the least bit of doubt in the world but that the weather man has been quite sick during the past week or more—and longer than that, too—else why would we be getting the particular brand of weather that has been handed us recently? It must be that the old man is either sick or away from home and the boys are running things. Snow, rain, cold, warm—a litle bit of everything.

A Correction

In the report of the dinner given last week by the "Monday Bunch" the statement was made that the dinner was served at the home of Mrs. Leon Follett, when in fact it was served at the home of Mrs. W. M. Herman, and we gladly make the correction only it is considerable trouble to get all that crowd and that big dinner down off the hill without spilling something.

Question of Americanism

"Americanism"—teachers preach it civic organizations inculcate it, demogogues mouth it, but who explains it? What is "Americanism?"

The very question will be hailed by some as "un-American." "Why," says the patriot, "every one knows what Americanism is." But do they? And there is not a steady tendency to bring under the banner of the word ideas which have no place there? Is there not a continuous attempt on the part of enthusiastic factions and minorities to twine into the Stars and Stripes beliefs and convictions which do not belong there?

Americanism is something more than taking off your hat when the flag goes by, going to the poles to vote and paying a tax. The real American believes in the principles upon which this nation was builded, not necessarily upon the way some people have thought these principles should be worked out. There are good Americans who believe the league of nations is anathema, and there are good Americans who believe it is the salvation of the world. There were good Americans who fought and died abroad who believed there were two sides to the world war. But there are no good Americans who refused their country's call because they personally didn't believe in the right of the call; there are no good Americans who refuse to stand by America, not in the league, but they believe in the league.

Americanism is a matter of principles, and living up to them. Americanism means freedom of conscience, freedom of speech, the rule of the majority, freedom of person, respect for law, toleration of the other fellows idea, live-and-let-live. To call a man un-American because he does not believe in law, is foolish. Call him un-American if he does not abide by it. To call him un-American because he doesn't believe in this, that or the other proposal made under the guise of its being patriotic," is unjust. It is he, not we, who has the right to decide what he shall believe is right and just and truly and patriotic. But call him-un-American if when the country decides, he does not fall in line in spite of his personal belief to the contrary.

Many who boast of their patriotism shout, "My country, right or wrong; but my country always." The good American cuples with it, "If" I think her wrong, I will yet abide by her laws but strive to make them better."

It is un-American, unjustly to call a man un-American! —Lewiston Tribune.

Takes Exception

The News is in receipt of a communication signed "Rimrock Farmer" in which the writer takes exception to the article published in last week's News regarding the retention of W. W. Skuse, Nez Perce county agent. The News would be glad to publish the article, but it is impossible to publish any communication whatsoever unless the writer's name is signed thereto, so if the author of the epistle will give us his signature we will gladly print the communication, although it is not necessary to print his name if he wishes it withheld.

It is of no personal interest to the News whether Nez Perce county retains a county agent or dispenses with his services, therefore we are not taking either side and will gladly publish any reasonable communication for or against.

It is no disgrace to try to do right, even though you don't succeed.

LADIES' MINSTREL SHOW WAS GREAT SUCCESS

One of the very best home talent shows that has ever been put on in Genesee was given by the local Rebekah lodge last Saturday night to a capacity house. It was perhaps the only home talent minstrel show that has ever been put on here and while most every one had seen a "sure 'nuff'" minstrel show, others did not know just what kind of a show it would be and were all the more anxious to see it—and everybody that attended got their money's worth—and a few got more. However, it is not believed there was one in the house who did not thoroughly enjoy the entertainment furnished.

The evening's entertainment was opened with music by an orchestra composed of Grace Jain, pianu; Elmer Stovall, trombone, and Cécil Boliou, banjo, which was much enjoyed.

The big show opened with a female ensemble, with two exceptions—of course the end "men" had to be "he" niggers,and these were in the personages of Jimmy Winegardner and Charley Smith. Mrs. Fred Shirrod as interlocutor.

The entertainment started off with a whir and a buzz, for everybody in the large audience was expectant—especially a few who had gotten an inkling that the big "he" niggers were going to unload something on them during the evening that would make other people laugh—and they did, too—but it wasn't as bad as it might have been. It is intimated that the end men got "cold feet" for fear there might be a "come-back." But it was all meant in a spirit of fun and those who got a broad-side just "laffed" with the others, just as though they enjoyed it too.

There were many original jokes, lots of good music and songs, and in the second part two more "he" niggers in the personages of Colin Wilson and Dick Green, entertained the audience with some good negro stuff, assisted by Mrs. W. W. Burr and a ladies' chorus,and Colin showed that his feet were not glued to the floor. There were also other entertaining features put on during the evening by boys.

One of the very pleasant features—and the prettiest of the evening—were the numbers put on by the "Tom-Boy Chorus," made up of twelve of about the prettiest girls in Genesee—and that is saying a lot, too. The numbers were thoroughly enjoyed and were given in a manner that showed their teacher, Mrs. Charles W. Smith, had devoted a great deal of time to their training and was equal to the undertaking and she and the girls deserve a great deal of praise. The girls' costumes were very pretty indeed.

The only thing to mar the entire evening was a bunch of novelties in the back part of the house who insisted on making remarks in a sent in order to detract from the entertainment and attract attention to themselves. Many remarks of disgust were made by those who had come to be entertained from the stage and not from the rear of the house.

Silver Wedding Anniversary

The beautiful country home of Mr. and Mrs. I. Rossebo, a few miles north of town, on Sunday was the scene of a very pleasant surprise party when friends and neighbors to the number of about 100 gathered to help them celebrate their twenty-fifth wedding anniversary. The self-invited guests brought well-filled baskets and a real banquet was served to the host of well-wishers who had gathered for the occasion.

Among the very pretty and useful gifts received by Mr. and Mrs. Rossebo was a set of Community silver knives and forks, presented by the ladies' aid of the Genesee Valley Lutheran church, and a silver set consisting of a coffee pot, sugar and creamer, set on a reflector tray, given by the Clover Leaf club of Blaine. Rev. Lee, pastor of the Norwegian Lutheran church in Moscow and of the Genesee Valley Lutheran church, in a few well chosen words made the presentation to Mr. and Mrs. Rossebo which was briefly responded to by Mr. Rossebo.

Music and singing filled in a very pleasant afternoon and all present left in the evening wishing the host and hostess many more such happy occasions.

Another Indian Coach

A third Indian coach for the Cougar football squad has been signed up for next fall by the State College of Washington, Alber A. Exendine having just accepted appointment. He is head coach at Georgetown University, outside the national capital, where he has been leading successful elevens since 1914. He is a graduate of Carlisle and of Dickinson law school, and was assistant to "Pop" Warner at Carlisle when his predecessor at Pullman, Gus Welch, was playing on the team there. Before Welch the W. S. C. eleven was coached by "Lonestar" Dietz. Prof. J. F. Bohler, director of physical training at the state college, says he is satisfied he has a very strong coach for next season now.

At any rate Germany will either come back or stay back.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT NO. 32.

It is possible Mountain may have made a rustle, it is certain, at least, the master raised his head and gazed directly at that quarter of the thicket where his hunter lay. "I could not be sure he saw me," Mountain said; "he just looked my way like a man with his mind made up, and all the courage ran out of me like rum out of a bottle." And presently, when the master looked away again, and appeared to resume those meditations in which he had sat immersed before the trader's coming, Mountain slunk stealthily back and returned to seek the help of his companions.

Surprises Started.

And now began the chapter of surprises, for the scout had scarce informed the others of his discovery, and they were yet preparing their weapons for a rush upon the fugitive, when the man himself appeared in their midst, walking openly and quietly, with his hands behind his back.

"Ah, men!" says he, on his beholding them. "Here is a fortunate encounter. Let us get back to camp."

Mountain had not mentioned his own weakness or the master's disconcerting gaze upon the thicket, so that (with all the rest) his return appeared spontaneous. For all that, a hub-bub arose; oaths flew, fists were shaken, and guns pointed.

"Let us get back to camp," and the master. "I have an explanation to make, but it must be laid before you all. And in the meanwhile I would put up these weapons, one of which might very easily go off and blow away your hopes of treasure. I would not kill," says he, smiling, "the goose with the golden eggs."

The charm of his superiority once more triumphed; and the party, in no particular order, set off on their return. By the way he found occasion to get a word or two apart with Mountain.

"You are a clever fellow and a bold," says he, "but I am not so sure that you are doing yourself justice. I would have you to consider whether you would not do better, ay, and safer, to serve me instead of serving so commonplace a rascal as Mr. Harris. Consider of it," he concluded, dealing the man a gentle tap upon the shoulder, "and don't be in haste. Dead or alive, you will find me an ill man to quarrel with."

Ran Upon the Master.

When they were come back to the camp, where Harris and Pinkerton stood guard over Secundra, these two ran upon the master like tigresses, and were amazed out of measure when they were bidden by their comrades to "stand back and hear what the gentleman had to say." The master had not flinched before their onslaught; nor, at this proof of the ground he had gained, did he betray the least sufficiency.

"Do not let us be in haste," says he. "Meat first and public speaking after."

With that they made a hasty meal; and as soon as it was done, the master, leaning on one elbow, began his speech. He spoke long, addressing himself to each except Harris, finding for each (with the same exception) some particular flattery. He called them "bold, honest blades," declared he had never seen a more lovial company, work better done, or pains more merrily supported. "Well, then," says he, "some one asks me 'Why the devil I ran away?' But that is scarce worth answer, for I think you all know pretty well. But you know only pretty well; that is a point I shall arrive at presently, and be you ready to remark it when it comes. There is a traitor here; a double traitor; I will give you his name before I am done; and let that suffice for now. But here comes some other gentleman and asks me 'Why in the devil I came back'"

"I Have One."

"Well, before I answer that question, I have one to put to you. It was this our here, this Harris, that speaks Hindoostance?" cries he, rising on one knee and pointing fair at the man's face, with a gesture indescribably menacing; and when he had been answered in the affirmative, "Ah!" says he, "then are all my suspicions verified, and I did rightly to come back. Now, men, hear the truth for the first time." Thereupon he launced forth in a long story, told with extraordinary skill how he had all along suspected Harris, how he had found confirmation of his fears, and how Harris must have misrepresented what passed between Secundra and himself. At this point he made a bold stroke with excellent effect. "I suppose," says he, "you think you are going shares with Harris, I suppose you think you will see to that yourselves; you would naturally not think so flat a rogue could cozen you.

"But have a care! These halt idiots have a sort of cunning, as the skunk has its stench; and it may be news to you that Harris has taken care of himself already. Yes, for him the treasure is all money in the bargain. You must find it or go starve. But he has been paid beforehand; my brother paid him to destroy me; look at him, if you doubt—look at him, grining and gulping, a detected thief.

Thence, having made this happy impression, he explained how he had escaped, and thought better of it, and at last concluded to come back, lay the truth before the company, and take his chance with them once more; persuaded, as he was, they would instantly depose Harris and

And now began the chapter of surprises, for the scout had scarce informed the others of his discovery, and they were yet preparing their weapons for a rush upon the fugitive, when the man himself appeared in their midst, walking openly and quietly, with his hands behind his back.

"Ah, men!" says he, on his beholding them. "Here is a fortunate encounter. Let us get back to camp."

Mountain had not mentioned his own weakness or the master's disconcerting gaze upon the thicket, so that (with all the rest) his return appeared spontaneous. For all that, a hub-bub arose; oaths flew, fists were shaken, and guns pointed.

elect some other leader. "There is the whole truth," said he; "and, with one exception, I put myself entirely in your hands. What is the exception? There he sits," he cried pointing once more to Harris; "a man that has to die! Weapons and conditions are all one to me; put me face to face with him, and if you give me nothing but a stick, in five minutes I will show you a sop of broken carrion fit for dogs to roll in."

Made End on Dark Night.

It was dark night when he made an end; they had listened in almost perfect silence; but the firelight scarce permitted any one to judge, from the look of his neighbors, with what result of persuasion or conviction. Indeed, the master had set himself in the brightest place, and kept his face there, to be the center of men's eyes; doubtless on a profound calculation.

Silence followed for a while, and presently the whole party became involved in disputation; the master lying on his back, with his hands knit under his head and one knee flung across the other, like a person unconcerned in the result. And here, I daresay, his bravado carried him too far and prejudiced his case. At least, after a cast or two backward and forward, opinion settled finally against him. It's possible he hoped to repeat the business of the pirate ship, and be himself, perhaps, on hard enough conditions, elected leader; and things went so far that way that Mountain actually threw out the proposition. But the rock he splits upon was Hastie. This fellow was not well liked, being sour and slow, with an ugly lowering disposition, but he had had studied some time for the Church at Edinburgh college, before ill conduct had destroyed his prospects, and he now remembered and applied what he had learned.

Indeed, he had not proceeded very far, when the master rolled carelessly upon one side, which was done (in Mountain's opinion) to conceal the beginning of despair upon his countenance. Hastie climbed the most of what they had heard as nothing to the matter; what they wanted was the treasure. All that was said of Harris might be true, and they would have to see to that in time. But what had that to do with the treasure? They had heard a vast of words; but the truth was just this, that Mr. Durie was damnably frightened and had several times run off. Here he was—whether caught or come back was all one to Hastie; the point was to make an end of the business. As for the talk of deposing and electing captains, he hoped they were all free men and could attend their own affairs.

"Shall Not Fight Here."

That was dust flung in their eyes, and so was the proposal to fight Harris. "He shall fight no more in my camp, I can tell him that," said Hastie. "We had trouble enough to get his arms away from him, and we should look pretty fools to give them back again. But if it's excitement the gentleman is after, I can supply him with more than perhaps he cares about. For I have no intention to spend the remainder of my life in these mountains; already I have been too long; and I propose that he shall immediately tell us where that treasure is, or else immediately be shot. And there," says he, producing his weapon, "there is the pistol that I mean to use."

"Come, I call you a man," cries the master, sitting up and looking at the speaker with an air of admiration.

"I didn't ask you to call me anything," returned Hastie; "which is it to be?"

"That's an idle question," said the master. "Needs must when the devil drives. The truth is we are within easy walk of the place, and I will show it you tomorrow."

With that, as if all were quite settled, and settled exactly to his mind, he walked off to his tent, whither Secundra had preceded him.

Early in the night, word went about the camp that he was sick; and the first thing the next morning he called Hastie to his side, and inquired most anxiously if he had any skill in medicine. As a matter of fact, this was a vanity of that fallen idol; the student's to which he had cunningly addressed himself. Haste examined him; and being flattered, ignorant, and highly suspicious, knew not in the least whether the man was sick or malingering. In this state, he went forth again to his companions; and (as the thing, which would give himself most consequence either way) announced that the patient was in a fair way to die.

"For all that," he added, with an oath, "and if he bursts by the wayside, he must bring us this morning to the treasure."

Several in the Camp.

But there were several in the camp (Mountain among the number) whom this brutality revolted. They would have seen the master pistoled, or pistoled him themselves, without the smallest sentiment of pity; but they seem to have been touched by his gallant fight and unequivocal defeat the night before; perhaps, too, they were even already beginning to oppose themselves to their new leader; at least, they now declared that (if the man was sick) he should have a day's rest in spite of Hastie's teeth.

The next morning he was manifestly worse, and Hastie himself began to display something of humane concern, so easily does even the pretense of doctoring awaken sympathy. The third, the master called Mountain and Hastie to the tent, announced himself to be dying, gave them full particulars as to the position of the cache, and begged them to set out incontinently on the quest, so that they might see if he deceived them, and if they were at first unsuccessful, he should be able to correct their error.

But here arose a difficulty on which he doubtless counted. None of these men would trust another, none would consent to stay behind. On the other hand, although the master seemed extremely low, spoke scarce above a whisper, and lay much of the time insensible, it was still possible it was a fraudulent sickness; and if all went treasure-hunting, it might prove they had gone upon a wild-goose chase, and return to find their prisoner flown. They concluded, therefore, to hang riding round the camp, alleging sympathy for their reason; and certainly, so mingled are our dispositions, several were sincerely (if not very deeply) affected by the natural peril of the man whom they callously designed to murder. In the afternoon Hastie was called to the bedside to pray; the which (incredible as it must appear) he did with unction; about eight at night, the wailing of Secundra announced that all was over, and before ten the Indian, with a link stuck in the ground, was tolling at the grave.

Master Buried at Sunrise.

Sunrise of next day beheld the master's burial, all hands attending with great decency of demeanor; and the body was laid in the earth wrapped in a fur robe, with only the face uncovered; which last was of a waxy whiteness, and had the nostrils plugged according to some oriental habit of Secundra's. No sooner was the grave filled than the lamentations of the Indian once more struck concern to every heart; and it appears this gang of murders, so far from resenting his outcries, although both distressful and (in such a country) perilous to their own safety, roughly but kindly endeavored to console him.

But if human nature is even in the worst of men occasionally kind, it is still, and before all things, greedy; and they soon turned from the mourner to their own concerns. The cache of the treasure being hard by, although yet unidentified, it was concluded not to break camp; and the day passed, on the part of the voyagers, in unavailing exploration of the woods, Secundra the while lying on his master's grave. That night they placed no sentinel, but lay all together about the fire, in the customary woodman fashion, the heads outward, like the spokes of a wheel. Morning found them in the same disposition; only Pinkerton, who lay on Mountain's right, between him and Hastie, had in the hours of darkness) been secretly butchered, and there lay, still wrapped as to his body in his mantle, but offering above that ungodly and horrific spectacle of the scalped head.

The gang were that morning as pale as a company of phantoms, for the pertinacity of Indian war (or, to speak more correctly, Indian murder) was well known to all. But they laid the chief blame on their unsentinel posture; and fired with the neighborhood of the treasure, determined to continue where they were. Pinkerton was buried hard by the master; the survivors again passed the day in exploration, and returned in a mingled humor of anxiety and hope, being partly certain they were now close on the discovery of what they sought, and on the other hand (with the return of darkness) were infected with the fear of Indians.

(To be continued.)

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

SHIP DRIVEN AGAINST WIND BY WIND-DRIVEN TURBINE.

A ship that can be propelled dead against the wind by means of an exclusively wind-driven turbine, thus making the wind an aid instead of an obstacle, has been developed by three engineers in France, and was described recently before the Academy of Science. The turbine has been tested on a light boat, equipped with a screw propeller. The turbine is driven by the velocity of the wind, and ther is such a perfect system of power transmission to the propeller that it drives the boat into the eye of the wind from which the turbine derives its motive power.

AERIAL MOSAIC MAP SHOWS MARVELOUS DETAIL.

The possibilities of aerial photography in mapping water routes have been strikingly demonstrated in mosaics prepared by the Canadian air board, showing stretches along the St. Lawrence river. These mosaics were made for the Canadian section of the international joint commission for use in connection with its report on the St. Lawrence waterway project. The marvelous detail of these mosaics is brought out by comparison with charts made by the corps of engineers of the United States army and issued by the United States lake survey office. Probably no more accurate mapping and finer reproduction could be chosen for comparison purposes.

Top: Mosaic map made up of 150 photographs taken from an airplane. Below: A hydrographic chart or standard map, of the same area, drawn to approximately the same scale. Note the accuracy of detail in the aerial Mosaic.

Above: Close-up of twine-cutting device worn on the left hand. Left: Twine cutter, showing how the worker may use both hands to tie the bundles.

BINDER-TWINE CUTTER AIDS GRAIN THRESHING.

A novel device for cutting the twine with which bundles of grain are bound, is intended to be worn on the worker's left hand. It consists of a leather sheath to which is attached a copper support for a detachable and highly tempered steel blade having a saw-tooth edge so shaped that the twine is cut with little effort. The worker thus has both hands free, and is not so likely to cut himself as with the ordinary loose knife.

SMALL WOODS ON MOUNTAINS CONSERVE THE MOISTURE

In central Tennessee, where drought more or less prevails, a simple method of conserving the moisture has been adopted. Throughout the district are many cone-shaped wooded mountains, and when these are cleared for cultivation a clump of trees is always left at the top, usually covering from 5 to 20 acres. It has been found that the moisture-conserving effect of these standing trees increases the crops of wheat on the cultivated hillsides so that the yield is more than could have been obtained by also cropping the area thus reserved, and, of course, at less cost of cultivation. The hillsides are so steep that it is impossible to cultivate them with modern machinery, and this is done with antiquated mule-drawn plows, which the crops are harvested with the scythe and cradle.

Uneducated people are very rare in Iceland. The inhabitants have a library of 10,000 volumes.

LOCOMOTIVE-TYPE CRANE IS MOUNTED ON MOTOR TRUCK.

Any five-ton motor truck, measuring approximately 9 feet from the rear of the driver's seat to the center of the rear axle, can be converted into a locomotive-type crane for service on many construction jobs, by means of equipment now available. The new attachment is built mostly of steel and has a four-cylinder gasoline engine, developing 30 horsepower, for swinging and raising the boom and for operating a hoisting hook, or any standard half-cubic yard grab bucket weighing not over 800 pounds. The crane, unmounted, weighs six tons, and outriggers with packs insure its stability when handling loads. Many motor trucks, too badly worn for most purposes, can be utilized to render satisfactory service with this additional piece of equipment.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

PRUNING THE HOME ORCHARD

The farmer deserves the best his home orchard will produce. Many of these orchards which were set out with fond visions of luscious fruits have developed into a thick tangle of limbs and brush which returns little or no fruit. A small effort expended upon these trees at this time will work wonders in the coming fruit crop.

Trees in order to bear good fruit must have thrifty wood and vigorous leaves. This means that besides a fertile soil for our orchard we must admit sufficient light into the center of the tree. Sunlight furnishes the energy which makes possible tree growth for strong fruiting wood and goo dfruit. Experiments have proved that light must reach each of the different branches and even spurs for best results. Therefore it is the contention of L. D. Armstrong, extension specialist in horticulture, that the main object in pruning bearing trees is to admit sufficient light.

The first thing needed in a much neglected orchard is to take out a few large limbs, leaving the balance of the wood well distributed. Often a few of the low limbs need removal. Each of the larger limbs should be removed with care in order that the bark be not broken or torn. A saw should be used and the cut made close to the main limb or trunk of the tree. This makes it possible for the wood to heal over rapidly.

Paint the cut with a mixture of one part creosote and three parts coal tar. Some prefer a Bordeaux paint or paste. After the large limbs have been sufficiently thinned, there will usually be a good deal of the smaller wood and limbs removed from the top. All interfering limbs should be taken out or cut back. If the tree is too high to spray well and to pick the fruit, then it should be cut back. It is best to cut to a good sized lateral branch in order that excess shoot growth will not be produced.

Pruning varies with the variety of fruit. Always keep in mind a well-balanced tree and avoid making cuts which will leave long stubs which will only die back and disease the heart wood of the limbs.

Where pruning is consistently practiced, it will consist chiefly of an annual thinning out of the smaller wood by removing a great many of the shoots and laterals.

And Maybe They Can.

One-third of the fools in the country think they can beat a lawyer expounding the laws. One-half think they can beat the doctor healing the sick. Two-thirds of them think they can put the minister in the hole expounding the gospel, and of them are dead sure they can beat the editor running a newspaper.—Exchange.

Section 681 of the new tariff law gives authority to U. S. officers to search and seize a vessel for liquor within four marine leagues of the shore. This is approximately a distance of fourteen miles, and does away with the old three-mile limit. Action has been withheld, however, pending a decision of the U. S. supreme court as to the legality of this section.

New York police department officials have opened the first police radio broadcasting station in this country. Telephones are used, and an area of thirty thousand square miles is covered. Such a station has proved of exceptional value, especially in the recovery of stolen automobiles.

The old three-mile limit was never a marine law, but was accepted as the distance a ship should be safe from attack. Three miles was at that time the limit of a gun's accurate fire.

SURVEY SHOWS VETERANS DOING WELL

War insurance service has been established in connection with the United States Veterans' bureau in three cities of the Pacific Northwest district, namely Seattle, Portland and Spokane, bureau officials have announced. Instead of sending premium payment to Washington, D. C., war veterans of Washington, Oregon and Idaho are entitled to take advantage of the branch office service. Loans on policies and other matters relative to government insurance are also handled at the three northwest offices. There are more than 25,000 ex-service people of this district carrying war insurance. Those who have allowed their war risk policies to lapse are urged to reinstate their insurance.

A survey of 100 rehabilitated World war veterans, unselected, shows that they receive an average annual wage of $1,399.56, an increase of $342.09 over their average pre-war occupation pay, Director Charles R. Forbes of the United States Veterans' bureau has announced. With an average of $306.71 a year government compensation, these disabled veterans, who have completed vocational courses at the expense of the government, have an average income of $648.32 a year over their pre-war income, he stated.

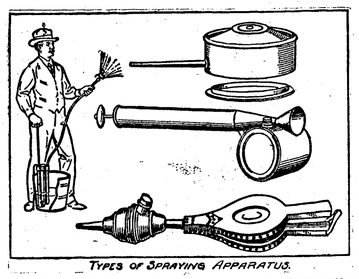
The survey shows that 43 out of the 100 cases investigated have a bank account; 14 own their homes; 23 own automobiles; 25 have established their own business; 62 are married; 24 have government insurance averaging $5,708.33 each and 35 have other form of insurance. The average cost of training these disabled veterans to "carry on" in new occupations amounted to $2,018.87.

Sanitary Chicken Houses Vital To Success in Poultry Raising

The careful poultryman must be constantly on the watch for parasites to prevent his fowls and poultry houses from being mastered by the insect vermin.

In fact to be successful in poultry raising a systematic warfare must be waged against the insects or enemies of poultry at all times, and to be successful the methods of killing these parasites must be intelligently carried out.

There are a number of kinds of insecticides used for this purpose including liquid, fume and powder insecticides. Liquid and fume insecticides may kill all kinds of parasites but the liquid insecticides are usually the most convenient to apply. Powder insecticides will kill some parasites in short order while other parasites will scamper away uninjured. Powder insecticides are usually not satisfactory when applied to poultry houses but are effective on the bodies of birds.



TYPES OF SPRAYING APPARATUS.

Not only the fowls themselves but the poultry buildings must be kept free from parasites. This may be news to a large number of poultry raisers, but it is a fact that the most serious of all poultry pests is the Red mite that hides in the cracks and crevices of the house and attacks the birds only on the roost at night.

Taking Preventative Measures.

It is always poor policy to wait until the poultry house as well as the fowls are thoroughly infested with the parasites before taking corrective measures. The presence of such pests in a poultry house means that the vitality of the fowls has been sapped to a considerable extent. No matter how thick the parasites may be in the house they can be destroyed in a short time by practicing the proper methods but the vitality of the birds can not be so easily restored. Hence, preventives taken at the proper time are much more satisfactory than attempting to kill off the parasites after they have gained a good foothold.

The first step in preventing parasites is to keep the houses clean, admit plenty of sunshine and prevent dampness in the building so far as possible. After these conditions are assured liquid insecticides should be regularly sprayed over the interior of the building.

No amount of insect powder blown into the plumage of fowls will keep them free from parasites so long as they must live in a building infested with lice or mites.

To clean thoroughly a poultry house that has become highly infested with parasites or insects like lice or mites is a problem that requires drastic measures. The first step is to remove all poultry to other quarters where they should be thoroughly dusted with insect powder and kept in a sort of quarantine by themselves while the house is being cleaned.

How to Fumigate.

The next step is to fumigate either with sulphur or tobacco. Every crack, crevice and other opening should be stopped so that no fumes will not escape. If either sulphur or tobacco is used it should be burned in an iron pot or kettle to avoid fire. If these substances are moistened with alcohol or some other inflammable material they will burn more freely. The building should be kept tightly closed for twenty-four hours after fumigation is started.

Next, the house should be dusted with dry air staked lime. To do this a person should take a bag of fine lime and start at the end of the house farthest from the door, walk slowly backwards toward the door scattering the lime against the ceiling, sidewalls, nest boxes, etc. The air should be filled with a cloud of white dust. One half bushel of lime dust will answer for a poultry house 20 feet wide and 40 or 50 feet long. A thin cloth that the poultryman can see through can be tied over the eyes, nose and mouth to prevent the lime dust from getting into them. The house should be closed again for 24 hours to allow the lime dust to settle.

The house should be brushed out and swept clean. All litter should be taken out and moistened with kerosene and burned. Any that will not burn should be buried deep in the ground.

Using Liquid Insecticides.

After it is cleaned, the house should be sprayed both inside and outside with some good liquid insecticides similar to Creosote. Purchased at different times and different places this will not always be of the same thickness or viscosity. It should be thinned, however, so that it will spray easily through an ordinary sprayer, usually with from two or four parts of kerosene. Another mixture consists of two and a half gallons of Creosote, two and a half gallons of water and one pound of washing soda.

A second application of the liquid insecticides should be made to the interior of the house and nest boxes, roosts, etc., before the fowls are allowed to return.

The fowls should be thoroughly dusted with insect powder immediately before they are put back into the house. They should be returned at dusk with the powder in their plumage so that they can rest the first night covered with the powder.

After this treatment the house should be sprayed about once a month with some good liquid insecticide and kept as clean as possible.

The insects commonly attacking chickens that will be eliminated by a campaign of this kind includes the large chicken louse, the variable chicken louse and the common chicken louse and the Red mite.

FREIGHT RATES ARE LOWERED ON IDAHO APPEALS

Idaho apples will hereafter be shipped to points east of the Mississippi and south of the Ohio at the same rate which now prevails in the state of Washington according to announcement Monday by the state utilities commission at Boise.

The rate in Washington at the present time is $1.50 per 100 pounds. From Idaho the rate heretofore has been made in combination over St. Louis, Cincinnati or some other point on the Ohio or Mississippi depending on destination which resulted in higher rates on shipments in Idaho than in Washington.

The new rate will put Idaho on the same competitive basis with Washington and open the southeastern territory to Idaho apple growers.

The matter has been pending for some time between the public utilities commission and the Oregon Short Line Railway company and the advices received Monday by the commission from the company said the new tariff would become effective on March 1.

Will's Oversight.

May—Will Shakespeare rightfully said, "All the world's a stage."

Ray—Yes, but he neglected to add "Woman make most of the scenes."

Busy Line.

Anthony—Have you see Shakespeare's telephone play?

Adele—Not that I recall. Name it.

Anthony—"O(t)hello!"

Not Listed.

Art—Do y' know any of Shakespeare's quotations?

Artful—No; I never knew he was a stock broker.

Some experts seem to think that the only active volcano in the United States may start an eruption in a short time. The craters are steaming. This volcano is Lassen Peak, in Lassen Volcanic National Park, Calif.

The first low-temperature research station in the world was recently completed at Cambridge, England. The purpose of this station is to study refrigeration of foods and the effects of low temperature upon plant life.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

General Degoutte has decided to disarm all German police in the Ruhr to avoid a repetition of the incident at Gelsenkirchen, where two French officers were shot.

A three hundred million dollar wheat stabilization board to guarantee a fair wheat price for American farmers would be set up under a bill introduced in the senate recently by Senator Gooding, Idaho, republican.

A plan whereby the department of navy and that of war would be grouped under the single portfolio of the "department of defense" is said to have been given the approval of President Harding. The plan is being prepared for submission to the joint congressional committee selected to consider the changes.

Government agents recently opened the graves of James Jones at Brooklyn naval cemetery, but failed to find the four million dollars' worth of Romanoff jewels rumored hidden in the sailor's coffin. The grave had been guarded for weeks by a squad of soldiers. When the grave was opened the guard was tripled, every entrance to the cemetery blocked by soldiers with fixed bayonets, and every precaution taken as the coffin was opened. There were no jewels inside.

Continuing their campaign of arson against property of Free State sympathizers, Irish insurgents fired and destroyed Castleboro, Lord Carew's historic residence near Enniscorthy. Damage is estimated at half a million.

A plea for an inter-church movement of all Christian churches and Jews to act together in ridding Chicago and "rotten politics, bad government and commercialized vice" was made by Bishop Charles P. Anderson Tuesday in an address at the annual convention of the Protestant Episcopal church. He said the conditions in Chicago were no worse than in other cities, but were merely a sample of nation-wide conditions.

POOLED WHEAT GETS AVERAGE OF 90 CENTS

Pool of 100,000 Bushels is Small and Closed Early—Price is Under 1921 Average.

The first pool of 1923 wheat closed through the Spokane office of the Idaho-Washington Wheat Growers' association shows a net average to the grower on all varieties and all grades of 90 cents, according to announcement made February 12 by Walter J. Robinson, general manager. This is slightly under the 1921 final average.

The 1922 early pool closed December 31 and checks have recently been mailed to the growers of the Idaho association who were interestd. The pool was small, approximately 100,000 bushels, and represented scattered wheat. Ordinarily pools in the cooperative marketing organizations do not close until June 30, but because of a peculiar situation that developed in the Idaho association last fall, this early pool was decided upon by the directors.

According to Mr. Robinson, the average in this pool represents the average on all wheat sold between July 1 and Decembr 31, although final returns on the other wheat will not be available until nearly a year from now.

Silver Production Big.

World production and consumption of silver in 1922 was the largest in many years, due to heavy demands from Far East which took approximately 218,000,000 ounces. Consumption estimated at 207,000,000 ounces and production at 207,000,000. Estimated consumption does not include many millions of old coins reminted and put back into circulation in debased pieces by British and Dutch empires. Shortage in silver expected in 1923.

Total Stranger.

He—Are you at all familiar with Shakespeare?

(She (indignantly)—I should say not! I never have been familiar with any young man in my life, and I don't even know this person you speak of.

George Graham of Toronto, Can., is the only woman food controller in the United States. She has recently accepted a position as such in one of the large New York hotels.

IDAHO

Enrollment in the tractor course given by the college of agriculture of the University of Idaho has increased 50 per cent over that reached last year, according to a statement from the office of E. J. Iddings, dean of the college. The course is conducted for two weeks and instruction is given in the adjustment, repair and operation of tractors and automobiles. Lectures and laboratory exercises are given under the direction of Professor R. B. Gray, head of the department of agricultural engineering. Experts from machinery companies are assisting the university instructors.

Frank H. Collins, a graduate of Kansas Agricultural college, has been appointed assistant chemist at the agricultural experiment station at Moscow, succeeding William C. Aitkenhead, who resigned recently to accept a position at Purdue university, Lafayette, Ind. Mr. Collins has had special training in the field of agricultural chemistry, including two years experience in analytical work dealing with various agricultural problems.

A. A. Crane purchased all assets of the Coeur d'Alene and St. Joe Transportation company, commonly known as the Red Collar Line, at the receivers' sale held in Coeur d' Alene. The property includes a number of boats, warehouses and properties at Coeur d'Alene, Harrison, St. Maries and other points.

The city council at Bonners Ferry recently passed an ordinance authorizing the purchase of a site and construction of a reservoir for the storage of water to purchase and lay down necessary new water mains for the city.

The Eagles lodge of St. Maries recently purchased ground in this city and will soon erect a modern two-story building, 50 by 100 feet to be used as a combined business block and fraternal hall. It is estimated that the cost will be approximately 660,000.

The St. Maries Colonization association, a new organization for the purpose of directing prospective settlers to Benewah county, held their first meeting in St. Maries, the first week in February. The association plans to conduct a vigorous educational advertising campaign relative to the land, its soil production and adjacent markets.

The school board of Kendrick, Idaho, recently authorized payment of $5000 on the $22,500 bond issue to build a school house in 1913. A sinking fund was started a few years ago for the purpose of obtaining the necessary money.

Mrs. W. H. Stevens of Hubbard Woods, Ills., was a special guest on a special train run in honor of the seventieth anniversary of the opening of the Rock Island railroad. As a small girl she was a passenger on the first train ever run on the road.

AUTO NEEDS SPECIAL CARE THROUGHOUT THE ENTIRE WINTER

A Series by Prof. A. R. Nottingham, State College of Washington.

Part Two.

Normally the automobile battery should be tested once a week with a hydrometer syringe and kept filled nearly to the bottom of the vents with distilled water. When making long drives, inspection should be made often to see that the plates are covered at least one half inch with the fluid or electrolyte and that the battery is not being overcharged at a high rate. Occasional overcharging at a slow rate is beneficial.

As cold weather comes on water should only be added just before taking a long drive—or when the temperature is not much below the freezing point. The pure water, being lighter than the acid, remains on top, and since the acid is both heavy and salty it mixes only after standing a long time or charging during a fairly long drive. Adding water frequently and drawing it back and forth in the hydrometer is a safer practice unless a long drive is made. Freezing, either because of poor mixture or insufficient charging will break the jars, damage the plates and make it necessary to overhaul or replace the battery with a new one.

The various freezing points are:

Condition—Distilled water, only; gravity, 1.00; freezing point, 32 degrees F.

Condition—Peorly mixed water and acid; freezing point, 32 degrees to O.

Condition — Battery discharged; gravity, 1.150; freezing point, 18 degrees above zero.

Condition—Battery one quarter charged, gravity, 1.169; freezing point, 0 degrees above zero.

Condition — Battery one half charged; gravity, 1.225; freezing point, 38 degrees below zero.

Condition—Battery three quarters charged; gravity, 1.255; freezing point, 90 degrees below zero.

Condition—Battery fully charged; gravity, 1.275.

Obviously, if a partly charged battery is operating a starter, which reduces the gravity still more, it is in danger of being frozen in cold weather unless used on long drives to charge it up again. The full charge reading will vary with its "adjusted gravity." This adjustment is made when the battery is made or rebuilt. Ask your service man for the exact value.

Cold weather reduces the capacity of the battery, as well as its activity. Cold oil in the engine may be as stiff as cup grease and the gasoline will vaporize poorly, making the mixture hard to start. With the reduced capacity discharges a battery rapidly. In winter it is well to crank the engine when it is cold, especially when starting in the morning. If much night driving is done or extra electrical equipment is used, it is better to crank the engine practically all the time until the tests show the battery to be properly maintained. Cranking an engine, with no one at the throttle is hard on the engine, as racing will result many times, while using the starter is relatively hard on the battery. As a battery is discharged the plates are covered more and more with sulphate. If it is not charged soon this becomes hard and will not disappear on charging. A battery thus "sulphated" is in bad condition.

It is also obvious that if a car is laid up for a long time the battery should be fully charged to charge off this sulphate, and not be allowed to run down, whether there is danger of freezing or not.

If a person does not own a charging outfit, or is not close to a service station, and wishes to lay up the car for a month or so, the battery should be cleaned off and charged fully just before storage by running the engine or taking it to a service station. It is well to disconnect both wires from the battery for longer periods of storage. The battery should be stored in a clean, dry place and should be filled with water at least once a month and brought to full charge. If stored for a longer time, unless it is a new battery, it should be sent into a service station or watched closely. If in the spring it is not down too much it may be used for ignition until it can be charged fully, but it is not well to use the starter until it is charged.

Cars with magnetos can be run without the battery, while the battery is in storage. No car should be run without a battery unless the generator be grounded. This usually means that the lights can not be used. If in doubt, consult your instruction book or a competent service man. See this book also for general points on laying up. ,

A person may charge his own battery during storage in the following cases:

1. If the engine be run at fairly high speed with the cables reconnected and the garage well ventilated. This is fairly expensive.

2. If a storage battery lighting plant be used, by connecting the positive pole of the battery charged to the positive pole of the plant battery by a short heavy wire, and the negative lead to the negative post of the third cell of the set during charging for a 6-volt battery, or the 6th for a 12-volt battery. If done several times the wires should be shifted down to a new set of cells as the cells embraced will be charged less fully than the others. They may be charged from a 32 or 110 volt direct current lamp socket or line provided a set of one or more lamps in parallel with each other are used in shifted down to the battery. The polarity must be known and the positive lead connected to the positive post of the battery. Instead of the lamps one may purchase and use a resistance unit made for the purpose.

3. They may be charged from alternating current mains only through a rectifier or motor generator set. These charging outfits are very desirable to give a battery first class care or for dependable service from a car in the winter.

A person using the starter much or doing much night driving, as a solicitor or a doctor, may find a small generator a good investment. This will not need to be very large if used systematically. Even if the battery is very low it will not freeze if left on charge all night.

There are such made that are compact, simple and moderate in price which may be installed in the garage and connected without disturbing anything but the cover of the battery box. A very satisfactory size costs about $15.00 or less.

If a car is laid up, and the battery is two years old or more, it is well to put it in dry storage with a reputable repair man so that it will come out overhauled if necessary, and will not fail during the driving season.

The postoffice deficiency for the past fiscal year was more than $60,000,000, and efforts are now being made to check up the various classes of mail matter to learn where the profits and losses occur. Postmasters all over the country have been asked to keep a strict account of each kind of mail going out, including special services, such as registry and special deliveries.

A very odd fish was scooped out of the waters near Patchogue, N. J., recently. It was four inches long, resembled a toad in color, had one eye, two fins and three tails. Its body was covered with little cone-shaped, pliable horns. It is new in the New York aquarium, and, in want of a better name, the experts call it a "What's-it."

Marble is softer than granite.

EVER HEAR OF A FOEHN WIND?

A chinook wind is just a plain chinook to 99 per cent of the people of the northwest.

But in seeking a definition for the chinook several kinds of chinooks can be located and proof found that the Inland Empire has probably more experienced a genuine chinook as well as proof that the vast majority of people in the Inland Empire are right when they call the warm winds of the last 10 days "chinook" winds.

The definition depends largely on whether one seeks a scientific definition or a popular definition and in what part of Webster's dictionary one seeks the definition, a chinook as defined under the word "foehn" being vastly different from one as defined under the word "chinook."

Among the 1 per cent of people who don't recognize the chinooks of last week as chinooks is E. M. Keyser, meteorologist in charge of the United States weather bureau at Spokane, whose official position carries with it the responsibility of accepting scientific definitions for all weather phenomena.

Hor's What it Is.

"A chinook or foehn wind, according to the definition laid down by the weather authorities, is a moisture-laden wind coming from the ocean and moving inland, encountering cool mountain ranges," Mr. Keyser said. "Usually they mount up the range and the air deposits its moisture and as the wind goes over the mountains it is cool and dry.

"Because of its weight it sinks and is heated by compression in descending, reaching the lower levels dry and warm, causing snow to melt rapidly in winter and withering vegetation in summer. The chinook winds coming in from the northwest, passing over Alberta and Montana, are real chinooks, but the winds coming up the Columbia river valley and over the Cascades are not real chinooks, according to our scientific definition.

"In the Wenatchee district a modified chinook wind is possible because of the rapid descent from the Cascades, but the Cascades are not high enough for typical chinook conditions."

Proof of Mr. Keyser's definition is found not only in scientific books dealing with weather conditions, one instance of a chinook raising the temperature 43 degrees in 15 minutes, from 6 below to 37 above zero in Canada being mentioned, but in the dictionary, under "foehn," a warm, dry wind blowing off the northern Alps, gaining its warmth by compression in descending, Webster says "any similar wind, as the chinook, in other parts of the world."

Early Origin.

"Chinook," is, however, defined differently, for it is given moisture instead of dryness besides its warmth and is given as being purely local in character, blowing off the Washington and Oregon coasts from the southwest to the west and off the coast of some parts of Canada.

Historically the name "Chinook" was given to these warm, moisture-laden southwest winds by the early settlers of Astoria, who characterized them in this manner because they came from the direction of camps of the Chinook Indians.

The definition of "chinook" recognizes the scientific definition "hy extension" as a "a warm, dry, foehn-like wind blowing off the Rocky mountains.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account. Many of the richest men in this country began their careers with nothing but energy and a determination to succeed. They saved their money until it could be turned to good account. Why not you, young man? A savings account is the first step.

First Bank of Genesee

F. J. NIEMANN, Cashier

Christian Endeavor Notes
(By Irene Hall)

The Christian Endeavor meeting held on February 11, was led by Wilma Casebolt. The topic was "Lessons from the Psalms." After the opening services and a short discussion the meeting was turned over to Marion Mayer and he and the other members of the society who attended the Pullman convention gave some very interesting reports of what happened at the various sessions of the convention.

From 8 to 9 p. m. a very interesting meeting was led by Messrs. Phillips, Freedland, Wyatt and Johnson—each giving a talk on how "Opportunities are presented to every man and how he receives them."

The meeting on February 18 was led by Fred Dicus. The topic was "$50,000 for improving our community; how we should spend it." Gen.4-9. A very interesting discussion was held, each member being given an opportunity to express how he thought would be the best way to improve our community.

Orland Mayer was the representative for the Whitman-Latah county C. E. union at Walla Walla last week. He reports a good meeting.

Montana to be Represented

A combined exhibit of game and fish from all sections of Montana, entered by the Montana State Game association, will comprise the state's contribution to the Fourth Annual Spokane National Sportsmen's & Tourists' Fair which will be held May 22 and 25. Thomas Marlowe, Montana State Game warden, will be in charge of the exhibit.

Linger Longers Entertained

Mrs. Jas. Magee, Mrs. Ben Jain, Mrs. Virgil Sampson, Mrs. F. H. Thomas and Mrs. Ray Edwards entertained the Linger Longer club and their husbands and a few invited guests at a Valentine party at the home of Mr. and Mrs. Frank H. Thomas. The decorations and favors were made up of cupids and hearts, characteristic of Valentine Day.

Pinochle was played at four tables and a delicious luncheon was served. The only invited guests were Mr. and Mrs. Fred Morscheck.

The regular meeting of the club was held Wednesday afternoon with Mrs. H. H. Schooler. The time was very pleasantly spent with needlework and social converse. A delicious lunch was served by the hostess. The invited guests were Mrs. Colin Wilson, Mrs. Frank Hoorman and Miss Margaret Bottjer.

The next meeting of the club will be at the home of Mrs. W. W. Burr on February 28.

School Notes
Wilma Casebolt

The parent-teachers' meeting, which was to have been held last Monday evening, has been postponed until the regular meeting time next month—the third Monday night in March.

The literary program scheduled for today (Friday) has been postponed until a future date, due to the large amount of illness in the high school.

The high school student body was favored by two piano solos Wednesday morning by Katherine McMahon and one by Helen Casebolt.

A high school dance will be given in the American Legion hall, under the auspices of the athletic association this (Friday) evening. The Genesee Melody Mixers will furnish the necessary jazz for the occasion.

An approximate estimate of the absentees throughout the school is 25 per cent, due to illness among the students.

Pine Grove News

The play given by the Community club last Friday night was well attended.

Mrs. Chas. Jain and Mrs. C. C. Swenson were week-end guests of Mrs. J. F. Brazier.

Mrs. Horace Hall spent a few days visiting with her sister, Mrs. Henry Whitted, and family.

Mrs. Pearl Lambert and children spent the week-end with her parents, Mr. and Mrs. C. H. Spurbeck.

Lorraine Lambert came out and spent the week-end with his grandparents, Mr. and Mrs. R. F. Lambert.

The teacher and pupils of the Union school, on Fix ridge, spent Valentine day as guests of the Pine Grove school.

Junior Sleighride

The junior class and a few invited guests enjoyed a sleighride and oyster feed at the Pine Grove school house last Friday night. They made the trip in a hayrack. They witnessed the play given by the Pine Grove school, after which the youngsters had the school house to themselves. Miss Collins chaperoned the class.

Large Grain Purchase

The Vollmer-Clearwater company of Lewiston recently purchased 7,000 bushels of Asotin county Wheat, paying $1.05 for red and $1.10 for white, thus recording the largest amount marketed during that week and at the best price of the year.

Birthday Party

A birthday party was given at the home of Mr. and Mrs. N. A. Nelson last Saturday afternoon in honor of their son, Oscar's, birthday anniversary. His schoolmates were invited and a good time is reported.

St. Patrick's Day In the Evenin'

As has been their custom for the past several years, the Pythian Sisters are making arrangements to give their annual dance on St. Patrick's day—March 17.

Missionary Society to Meet

The missionary society of the Federated churches will meet with Mrs. Carl Erikson on Wednesday of next week.

Will Build Comfort Station

Construction of a modern stone comfort station at the Highbridge (Hangman creek) tourist camp at Spokane at a cost of $4,000 was recently authorized by the Spokane park board. The new building will be constructed as soon as weather conditions will permit.

BUILDING 500-FOOT JETTY IN SNAKE RIVER AT ASOTIN

For the past seven or eight weeks the U. S. dredge boat, The Umatilla, Captain D. H. Lanker in charge, has been at work at a point directly opposite Asotin, engaged in building a jetty, for the purpose of holding a greater volume of the water to the main channel of the stream at seasons of the year when the stage of the river is at its lower points. This jetty is 500 or more feet in length and is built of heavy rock being piled in place by the dredge boat. There is a considerable crew on the boat assisting in this work, and will still be so engaged for the next few weeks. The stone is being taken from rock embankments on the north side of Snake river and a splendid job is being done. Twenty-five years ago the building of jetties in Snake river, at least in this part of the country, were unnecessary but since the whole of southeastern Idaho has been placed under irrigation and the greater amount of water used for the purpose has been taken from the Snake, the stage of water, at times in the late summer, becomes quite shallow in places. The installation of these heavy rock jetties at proper points greatly aid in keeping the main channel supplied with ample water for navigation purposes.—Asotin Sentinel.

Rainmaker Not Needed

There is more moisture in and on the ground than has been known in the Ephrata, Washington, section for 14 years. Prospects for a record wheat crop were never better, according to old-time residents in Grant county. The moisture from the December snow practically all went into the earth because there was no frost.

Entertainment Enjoyed

The entertainment and dance given at Pine Grove last Friday night was well attended and thoroughly enjoyed. Quite a number of young people went out from town and report that the house was filled to capacity.

Caldisac Citizen is Nearing 100

"Grandpa Isaak Mounce, Idaho's oldest citizen, is looking complacently to the nearer approach of April 23, for with the dawn of that day he will enter upon the last 12-month period that will bring him to the distinction of a fully-qualified centenarian, says the Spokesman Review.

"Grandpa" Mounce's poise is one of complacency, for as he is climbing the last steeps of life's pathway, he is still inspired by the Christian fortitude that marked his course from early boyhood.

Life here still has its beauties for him-he has never lost faith in his fellowmen-and his philosophy makes the life he is approaching beautiful to him also.

The nation's and the world's problems still interest him daily. At the home of his daughter, Mrs. William Ruddell, near Culdisac, with children and grandchildren and great-grandchildren greeting him or sending him greetings, he is indeed enjoying his evening of life. During the last year he has become a little feeble, but still maintains a routine of years which includes shaving himself with careful exactness.

"Grandpa" Mounce was born April 23, 1824 in Indiana. That state had a population of 147,000 then-one-third the population of Idaho. When he was 20 years old, in 1850, all the Oregon country, now embracing the northwest states, had a population of 13,294, or just about the number of people who now make their homes in the Lewiston-Clarkston valley.

When he was born there were then 10,000,000 people in the United States a less number than now live west of the Rockey mountains. He was 20 years old when the first passenger railroad—Washington to Baltimore—was begun. These facts glimpse the panorama of national development he has seen. The present day realities —the marvels of electricity— were only just myths or legends when he was young. Only the insane prated about flying and death would have been the penalty for the person whose witchery would have brouht a human voice down from the skies. —Lewis County Register.

Some people go crooked because they think that right is on the wrong side.

PERSONAL MENTION

Mrs. Henry Craft was a Pullman passenger Sunday.

A. Rach was a Wednesday morning passenger for Uniontown.

Fred Nagel was a Tuesday morning passenger for Uniontown.

Hershel Pittman was a Tuesday morning passenger for Moscow.

Joe Gunther went to Uniontown Thursday morning for a short stay.

Ralph Jackson was a Monday morning passenger for Spokane for a visit.

Mrs. Joe Reil was a Sunday morning pasenger for Lewiston for a short stay.

Mrs. John Smith was a Sunday passenger for Pulman for a visit with relatives.

Wm. Rader was a Monday morning passenger for Uniontown for a few days' stay.

Mr. and Mrs. F. E. Lambert were Tuesday morning passengers for a visit at Lewiston.

Mr. and Mrs. P. G. Kries were Saturday morning passengers for Uniontown for a short visit.

Mrs. Loren Bumpass arrived Sunday afternoon from Uniontown, at which place she had been visiting.

Miss Maxine Ehlen and Walter Casebolt came over from the U. of I. and were week-end visitors with home folks.

Mr. and Mrs. Henry Broenneke were Saturday morning passengers for Uniontown for a short visit with relatives.

J. T. Peterson returned to his home at Spokane Thursday morning after a visit at the home of Mr. and Mrs. Frank Qualey.

Bert Moersch left Tuesday morning for his home at Walla Walla after a short visit with his sister, Mrs. A. H. Potsch, and husband.

Mrs. J. F. Brown returned to her home in Kendrick Saturday after a week's visit with her brother, W. D. Woodward, and family.

Mrs. H. M. Pendry returned to her home in Pullman Saturday morning after a visit with her sister, Mrs. W. D. Woodward, and family.

Clyde Renchauser arrived Saturday morning from Spokane, from which place he was called on account of the serious illness of his little son.

A. Murphy returned to Lewiston Monday after having spent Sunday here with his family. He reports business as good in his line at Lewiston.

Mrs. C. F. Burr arrived in Genesee Saturday afternoon from Lewiston, where she had been visiting with her daughter, Mrs. Anton Halverson, and family ofr a week or more. She recently returned from an extended visit in Canada. Mr. and Mrs. Halverson and family accompanied her to Genesee, having come up by car.

The college graduate is fortunate only when capable of putting his educational knowlege to practical use.

Dog Was There All Right

A good one has just "leaked out" on Johnny Roberts and his Bullet, which seems to have occurred last fall while the hunting season was on —and just before he got his new car with a "dog-house" on each end.

It seems that a hunter was going into the wilds, or some other place—and wishing to take his dog along, loaded him onto Johnny's Bullet, to which action Johnny registered objection, saying that his train was not in the habit of hauling anything but people and he threw the dog off. The owner got off and tied "Towser" behind and he had no trouble in keeping up with the Bullet. When Johnny saw what had been done he was highly incensed at the disrespect shown his train, so he says to the owner, says he: "Just watch your old dog when we start down grade and see what happens to him. You think you are making fun of my train." A little later, when on the down-grade, Johnny approached the rear platform and, not seeing the dog, called to the owner, "Now tell me, please, what has become of your old dog!" Right here," retorted the passenger, pointing to a hole in the floor of the car. "See him under there? He just came under the car to trot along in the shade."

Returns to Rapid River

D. Scharnhorst came out from the wilds of the Rapid river country last week, where he has been spending the winter looking after the property of the Rapid River Mining & Milling Co. He left Pete Steltz in there to "keep house" during his absence. He reports everything as looking promising at the property. He returned to the mine on Tuesday.

High School Dance

The Genesee High School Athletic association will give a dance in the American Legion hall on Friday night, February 23, to which the general public is cordially invited. A good clean dance and a good time is promised. The music will be furnished by a six-piece orchestra—and it'll be good, too.

Eastern Stars Entertained

The ladies of the Eastern Star were entertained last Friday afternoon by Mrs. F. C. Shork at her home "on the hill." Needlework occupied the time of the ladies. A splendid lunch was served by the hostess.

Big Dance

There will be a big dance at Joel on Saturday night, February 24. Music will be furnished by a Moscow four-piece orchestra. Come and have a good time. Tickets $1.00, including supper. 34-1

Beautiful Flowering Plants AT HERMAN'S "Say It With Flowers"

Place your order early for *"Herman's Northern Grown Dahlias."* You can't expect to get the kind you want if you wait until planting time.

Herman's Seed Department

Among the Sick

Leo Edwards was taken seriously ill Tuesday and developed a fever of 103 degrees.

Mr. and Mrs. Felix mulalley are both on the sick list and have been in bed for the past few days.

It is stated that only about half of the public school students are in attendance, on account of sickness.

Mrs. Henry Flomer is quite ill at her home with throat trouble. She is reported as not being in any imminent danger.

The little son of Mr. and Mrs. Virgil Sampson was quite ill with pneumonia last week but is gaining rapidly at this time.

The baby of Mr. and Mrs. Renchausen has been very ill for the past week with pneumonia but is reported as out of danger.

Mrs. Geo. Bolivo, who has been confined to her home the past week with a severe cold, is still unable to be on duty at the Emmett & Boliou store.

The infant son of Mr. and Mrs. Milton Rader was taken severely ill with pneumonia on Monday. A physician and nurse was called from Lewiston to take charge of the case.

No Parent-Teachers' Meeting

On account of the large amount of sickness in town there was no parent-teachers' meeting Monday evening, as had been planned. There will be no meeting until the third Monday night in March, when the regular program will be given.

Farmers' Union Meeting

There will be a meeting of the Farmers' Union at the West End office at 1:30 o'clock n Saturday afternoon, February 24.

34-1 J. A. Borgen, Secretary.

Shipments Reaching Normal

Cars are said to be plentiful and reports show that shipments from Colville, Washington, are reaching normal. Recently 21 cars of poles, 15 cars of lumber were shipped in one week. Approximately 170 cars of ties are on the right-of-way to be shipped immediately.

MICKEY SAYS—

Follett Bros. Mercantile Co.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lansbury, Agricultural Extension Editor,
State College of Washington.

House building time will soon be here and in order to help the farm women plan a real home, it has been arranged to run a series of house plans on the convenient farm home.

These plans were secured from Miss M. Minerva Lawrence, home management specialist who, together with Professor Rudolph Weaver, head of the architects department and Professor L. J. Smith, head of the department of agricultural engineering, conducted a contest among farm

women for the best plan on farm homes.

The competition was divided into three groups, three or four room bungalows; five, six and seven room bungalows, and two-story houses of six, seven and eight rooms. Each plan was to include bath and men's wash room. Plans were sent into the college from farm women all over Washington, and from the great num-

ber received the best were picked.

House plans which will be run in this series will include, two different house plans of the best three-room bungalow, a five-room bungalow and a two-story house, giving plans made to scale.

Miss Lawrence has prepared a few points on each house plan, showing the good parts which are especially recommended for us in planning the home.

The house at the top of this article is an example of what it is possible to have on the farm. Just because you are living on the farm, is no just reason why the house should not be as good and as convenient as if it were built in the residential section of a city. This home was planned and built by J. A. Adams and is located on the west side of the state.

Next week we will run a three-room bungalow plan.

(To be continued.)

INCOME TAX FACTS

The revenue act of 1921 provides that an income tax return shall be filed by every person, married or single, whose gross income for the year 1922 was $5,000 or more. Broadly speaking, gross income includes all income received by the taxpayer during the year from salary or wages, or from "business, trade, profession or vocation," dealing in property, or the transaction of any business carried on for profit. Net income, upon which the tax is assessed, is gross income less certain specified deductions for business expenses, losses, bad debts, taxes, contributions, etc.

Income Tax Facts No. 3.

Among the most important items in the returns of many taxpayers are the deductions for business expenses. In the case of a storekeeper, they include a reasonable allowance for salaries paid employees, amounts spent for advertising, premiums for insurance against fire or other business losses, the cost of water, light, heat and fuel used in his place of business, drayage and freight bills.

A professional man, doctor or lawyer, may claim as deductions the cost of supplies used in the practice of his profession, expenses paid in the operation and repair of an automobile used in making professional calls, dues to professional societies, subscriptions to professional journals, office rent, and the cost of fuel, light, heat and water used in his office, and the hire of assistants.

The farmer may deduct all amounts paid in the production, harvesting and marketing of crops, including labor, cost of seed and fertilizer purchased, cost of minor repairs to farm buildings (other than the dwelling, which is personal expense) and cost of small tools used up in the course of a year or two. Rent paid for a farm also is an allowable deduction.

Deduction of personal or living expenses such as rent paid for a dwelling, hire of domestic servants, education of children, etc., is expressly disallowed by the revenue act.

Income Tax Facts No. 4.

In making out his income tax return for the year 1922, the taxpayer is required to include all items of gross income. In the case of a storekeeper the gross income consists usually of the gross profits on sales, together with income from other sources. The returns must show the gross sales, purchases, and cost of goods sold. To reflect net income correctly, and to ascertain gross income, inventories are ordinarily required as of the beginning and end of each taxable year. The professional man, doctor, lawyer, dentist, must include all fees and other compensation for professional services.

The farmer is required to report as gross income all profits derived from the sale or exchange of farm products, including crops and livestock, whether raised on the farm or purchased and resold. A farmer who rents his farm on the crop-sharing basis must report such income for the years in which the crops are sold. Profit obtained from the sale or rental of farm lands also must be reported.

In order that they may obtain full advantage of the deductions from gross income to which they are entitled, taxpayers are advised by collectors of internal revenue to study carefully the instructions on the forms for making returns under the head "Income from Business or Profession."

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Apiculture.

Strong colonies begin to breed at this time. Make sure they have plenty of stores. Feed candy is necessary.

Clothing.

Stand before a full length mirror when selecting your spring hat.

Dairy.

Shelter dairy cows and growing stock well. It is cheaper to provide them with shelter than feed.

Farm Crops.

Disc the garden and truck patches several times before plowing, it helps to mix the manure and soil.

Farm Management.

Poultrymen should now carefully figure the profits or loss of their enterprise. It is not too late to change methods.

Horticulture.

(West side).—Go over the berry harvesting equipment and put it in shape. (East side).—Cut all acions now when dormant and keep in a cool place with just moisture enough to keep from withering, until ready for use.

Livestock.

Do not let pregnant livestock become too thin. The offspring may be normal, but the milk flow may be inadequate.

Plant Pathology.

Bordeaux or Burgundy mixture will control apple anthracnose.

Poultry.

After gathering hatching eggs several times a day, turn the egg container where they are kept, daily.

Wool Suitings to Go Up.

Duties imposed on wool by the Fordney-McCumber tariff measure will make the costs of woolen suitings higher, declared Charles F. Manning of Newark, N. J., president of the International Association of Clothing Designers, in semi-annual session at Cincinnati the latter part of last week.

Growing Sugar Beets on West Side.

At a meeting of the farmers of Skagit county, interested in the growing of sugar beets, fifty acres were pledged for a trial during the coming year. County Agent C. H. Bergstrom reported that each farmer signing up acreage agreed to keep cost accounts in cooperation with the agent's office.

FORD'S 21-DAY FARM WORK PLAN MAY WORK OUT

Henry Ford owns and operates one of the largest farms in the United States, more than 9,000 acres. All work on the farm is done in twenty-one days a year. There are no farm animals except saddle horses, for Ford believes in the elimination of laborproducing animals with which the average farm is encumbered. Farmers today, he says, waste most of their time taking care of animals and doing things by hand that should be quickly done with machinery. He believes tractors are better than horses and cost less; that better milk can be and has been made out of vegetable products than any cow can give; that the cattle needed for food and the sheep for wool should be raised on great ranges in the West; that the heavy work farmers now do should be done by machinery; that all farm fences should be torn down, for they interfere with the operation of machinery and prevent some of the land from being tilled.

Ford's idea centers about the emancipation of the farmer from his slavery to his livestock, the reorganization of farm labor so that the work which now takes a year is concentrated in one month, and the establishment of local village industries in which the farmers of the surrounding country can be employed when they are not at work upon their farms; of farmers pooling their land, working together and dividing the product on the basis of the amount of land put into the pool and the number of workers engaged. He expects to see farming corporations in which one may buy shares of stock just as people now buy shares in manufacturing corporations.

CUT IT OUT SERIES

INDIAN NAMES.

While traveling through Minnesota a few years ago the writer noticed on the railway time table that the next station was Winona. The beauty of the name struck him as something out of the ordinary, and while he was thus meditating on the matter the brakeman came through announcing the stopping of the train.

He stuck his head through the door and shouted "Wi-I-no-o-ny! Next stop Winony!" pronouncing the "i" in the first syllable as if it were "eye."

It simply ruined the effect of the meditation and led to the conclusion that the Indians themselves were not the only sufferers from the taking up of the white man's burden. Their nomenclature, beautiful in the extreme in some parts of the country, has also suffered somewhat.

Winona is a beautiful word if pronounced correctly, as are many other Indian names. "Wee-no-nah!" with the accent on the second syllable is the correct pronunciation.

There is an interesting study in the differences in the Indian tongues of the east, middle west and Pacific states. The Indian languages of the United States may be roughly grouped into three general classes by these divisions, and while not entirely accurate this classification will serve for our purposes.

In the New England states and particularly Maine and Massachusetts we find such names as Pawtucket, Connecticut, Skowhegan, Saugatuck, Poquonock, Ponaganset, etc. These words are from the harsh gutturals of the Indian tribes comprising the old Iroquois nation, and we find traces of them extending westward across northern Ohio and even into Michigan. Aside from these, however, the Indian nomenclature is not well preserved in the northwestern part of the United States. The Pilgrim fathers brought with them their nomenclature of old England, and we find most of the names of the states, cities and counties of New England and the surrounding states bearing a distinct English flavor, oft times with no other change or qualification than the word "New" attached to the name of an old English town or county.

The Seminole language of the southeastern United States has many points of beauty over the Iroquois, although it is not entirely free from harshness. But the Seminole tongue has not been well preserved in names in that part of the country, the early Spanish settlers having ideas of their own along that line, and we again find an importation of names from Europe predominating; this time from Spain.

It is in the middle west that Indian names reach the summit of euphony. The Sioux were addicted to the use of the guttural "k" in their language, but instead of emphasizing it by the use of other gutturals as did the Iroquois, the Sioux generally used doubled vowels and consonants of the labial and lingual type. "Oskaloosa" is a typical word of the middle western Indians, while Kankakee, Allamakee, Dakota, Iowa, Nebraska and Minnesota are others, each fraught with some rather poetic meaning.

Of all the Indian tribes which inhabited the American continent the Sioux were the most poetic in their natures, and their poetry is reflected in their language. They produced the greatest Indian orators, many of whom eclipsed most white men in the beauty of their thought and speech. In addition to this, they have given us the beautiful legend of Hiawatha, which Longfellow loved and perpetuated in English for all mankind.

Our state of Minnesota is a veritable land of romance in its Indian nomenclature, and perhaps nowhere else in the United States is the language of the Indians more aptly or beautifully preserved.

The Indians of the northwest present a new phase on the subject of language, most of their names being too well known to the people of Washington and Idaho to need special mention here. In its general makeup it resembles the language of the eastern Indians more than that of the middle western tribes. It partakes more of the guttural harshness of the former, although it is not so abrupt in its terminations nor so essentially ugly as the Iroquois tongue.

Whatever tongues may have existed in the Pacific southwest have been pretty well lost in the successive rush of Spanish and Anglo-Saxon immigration. Spanish names seem to have the predominance in central and southern California, and such as are not of that origin in that state, as well as Arizona, Nevada and New Mexico, come from the Anglo-Saxon. The Spaniard gave no credit to the aborigine in naming his territories and towns, while the Anglo-Saxon who succeeded him in the days of the gold rush was too busy creating new history and traditions to give much attention to those of the past.

But on the whole America has done well in the preservation of the history, language and traditions of the red men, and it is well that this is so. It has given this country a set of traditions and an atmosphere that can not be duplicated elsewhere on this earth, and which will become more valuable as the centuries roll by.

Boys' and Girls' Farm Club Work

Many boys in the cities often wonder what boys on the farm do when they are not working for their dads. I have heard young fellows say: "Me for the city where there is something doing all the time. No farm for yours truly."

These boys don't realize the fun the members of the boys' and girls' clubs have during the year in raising their animals, meeting together in social ways and competing at the different fairs.

The Extension Service of the State College of Washington through the county agents, club agents and home demonstration agents are helping the country boy help himself, when they organize the boys' and girls' clubs.

Last year 1563 boys on the farms of Washington, joined livestock clubs and raised pigs, dairy cows, beef cattle, sheep, rabbits and poultry. These same boys went to the county fairs and the state fair and the big livestock bank in the city and borrowed the shows and met many of the best livestock breeders of the country. Many of the club members went to the money to buy the stock and then went home to the farm and made enough from the stock to pay back the note at the bank and have a profit besides.

Let us see for a moment how well these livestock clubs paid the boys in dollars and cents. The value of their business amounted to $105,810, which their profits rolled up to $35,794, or an average of $131.60 for each of the club members reporting to the extension service.

Beef club boys did a business of $5,787.14, and made a profit of $1,993.

Dairy club boys had stock valued at $33,321.55 and made $6,714 on their venture.

The boys who fed their pigs every morning did a business of $36,740 or more then the fellow who milked the cow, and made $14,461.

When it came to raising little chicks till they became laying pullets these fellows had poultry on hand worth $24,782 and made $11,909.28.

Rabbits worth $602.16 brought a profit of $219.15 to their owners, while the sheep club members valued their stock at $4,576.74 and made a profit of $1,400.

We can't help but wonder if the boy in the city will not have to keep pretty busy if he is going to match the profit made by the livestock club boys and girls on the farms.

Fighting the Fan Weed.

The fan weed which is appearing on some farms in this state is one of the hardiest of the plants and is therefore one that is hard to combat as a weed. The plant which he exhibited was in bloom and was in an excellent condition to produce thousands of seeds as soon as the weather gets warm in the spring. He has made a study of the plant and finds that it will mature seeds in about two months. It grows as an annual, the plant dying at the end of the season. It produces a seed enclosed in a light, leaf-like film shaped very much like a palm leaf fan and about a half inch in diameter. On account of their lightness, the seeds are easily carried by a breeze or by clinging to anything they come in contact with when wet. The young plants have a three-pointed leaf about an inch long which grows in clusters. The blossom is a very small white flower which also grows in clusters among the leaves. It is said that once the plant gains a foothold it is hard to eradicate and in some sections farm land has been abandoned on account of it.

Onions should always be boiled in water that has been salted, otherwise they lose much of their flavor.

Last of American Troops Home From Europe

Sweet land of Liberty hummed khaki-clad American doughboys of the regular army as they smilingly sailed into Savannah (Ga.) harbor last week aboard the U. S. Transport *Leo Mishel*. The insert picture shows the American troops leaving Coblenz, Germany marching to the train past the French Guard of Honor. Sad at parting where a sincere friendship had grown with German civilians—the Yanks.

IS RADIUM HEATING UP THE EARTH?

Is the earth growing hotter or colder? Old-timers often say we don't have the hard winters that we used to have. Scientists a few years ago believed the earth was a big heated sphere that is gradually cooling off, and that some time it would become too cold for man to inhabit. The discovery of the properties of radium threw new light on this question. Professor Joly, of the Dublin university, believes the earth may be actually growing warmer under the influence of radioactive forces. R. J. Strutt, F. R. S., of London, England, who is equally famous in his researches on radium, does not agree. But believes the amount of radium in the earth is insufficient to produce this effect. A middle view is that the heat produced by radium may balance the heat the earth loses, consequently keeping the temperature of the earth constant.

The span of life of an individual is, of course, insignificant in comparison with the age of the earth, and so judgments based on individual experience are worthless. Indeed, for as long a period of time as accurate observations of weather and climate have been made, there is no positive evidence of any change in the average temperature of the earth one way or another. Over long periods of time the averages are uniformly constant. Mild winters for the past two or three years have provoked some discussion of this point, which can only be settled by averages made over a longer period. Scientists have calculated that a regular and continuous decline of a single degree in the average temperature of the earth, no matter whether this decline took a century or a thousand years, would, in time, bring a return of the glacial period.

Radium will boil its own weight of water every hour. That is, an ounce of radium will raise the temperature of an ounce of water from the freezing point to the boiling point in an hour. It would raise the same amount of earth to five times the same temperature.

Very little is actually known of the interior of the earth. Man has pretty well explored the earth's surface, but he has penetrated little over a mile into the earth's interior. The deepest shaft in the world, at Morro Velho, Brazil, is about 6,400 feet deep. It has been suggested many times that a shaft five miles, or even 10 miles or 12 miles, in depth, might be sunk in the interests of science. But with the most improved machinery it would take 25 years to sink a shaft 10 miles deep. Such a shaft, moreover, would only give information concerning the percentage of radium at that particular point. It would give interesting data concerning the earth's structure and internal temperature, but many difficulties would have to be overcome. Ventilation would be difficult; and the temperature of the air at the bottom of the shaft due to compression alone would be raised higher than that of boiling water.

Rutherford calculates that the heat of the earth would be fully balanced by the heat gain resulting from the disintegration of radium if there as little as one ton of radium for every 20,000,000,000,000 (twenty million millions) tons of earth.—Roger D. Rusk, in the February Popular Mechanics Magazine.

NORTHWEST NEWS

May 23 to 25 has been selected for the date of the fourth annual Spokane National Sportsmen's and Tourists' fair, which promoters say promises to become national in scope. The fair this year will no doubt occupy twice the space used last year and one block beneath the Spokane Union station tracks will be used.

Calls for farm hands for spring work already have been received by the Spokane labor agents. The demand has so far been chiefly from Lewiston, Idaho, and the southeastern Washington section. Farmers are now offering $30 to $40 per month and board. Agents say that there will be a demand for unskilled help this year in more numbers than in the previous years.

A fund of $100,000 has been set aside by the Northern Pacific railway to advertise the northwest and encourage travel of tourists to Pacific coast points, according to F. J. Berry, general agent. This fund is in addition to the Northern Pacific's share in the big advertising combine of the three railways. The objective this year will be Washington and not the Yellowstone National park as in previous years.

Colonization Project Proposed for the St. Maries District

Announcement was made recently that plans had been completed for the organizing of the St. Maries Colonization association and that money was rapidly being subscribed to carry on an extensive educational and sales campaign among home seekers of the middle west.

The unusual advantages offered prospective settlers by the fertile valley and bench lands of Benewah county are to be fully set forth in attractive literature and this dissemination of information will be followed by a vigorous personal sales campaign.

Thousands of families in the Pacific coast states are now making a much better living from five and ten acre tracts than they ever made from 80-acre or even 160-acre farms on the prairies of the middle western states. Their initial investment in land, machinery and equipment is small compared with the requirements of farming in the country they abandoned, and the overhead expense represented by hired help is reduced to the minimum.

The valley lands of the coast states are being largely worked by Japs and these localities have become undesirable, from a standpoint of settlement, to educated and up-to-date homesteaders who insist on suitable associations for their children; and they will sacrifice other advantages and purchase relatively poor land in localities protected by restrictive covenants excepting undesirable social conditions and environment.

Benewah county has no Japanese land hogs, and the valley lands of this section, unsurpassed in any section of the United States, are destined to furnish homes for progressive American citizens who will maintain a high standard of living and citizenship while they are developing a new empire, replete with good roads, splendid schools, modern homes and all the accessories of higher civilization—a thinking, planning, working citizenry that will be a source of pride to the entire region and one which will serve as a model for other sections to emulate.

Through the St. Maries Colonization association Benewah county will become known to homeseekers everywhere as that "fertile country way out west," where only a selected number may obtain homesites—a place where the character of the prospective settler and his qualifications for achieving success count for more than his ability to make an initial payment on a land contract.

It is the sincere desire of people of the mid-west to obtain an opportunity to locate in and live under conditions prevailing in Benewah county. The price of land represents only a fraction of what is asked in the coast states, where the best soil already has been selected and improved.

The price of improved lands in those states has reached a prohibitive figure to the man of moderate means, and the result is, consisting for the most part of clay and gravelly soil, interspersed with heavy fir stumpage, commands a price of from $3000 to $500 per acre.

The land-buying public is in a receptive mood and an exodus to the northwest is impending which will be stimulated by the million dollar advertising campaign about to be inaugurated by the great transcontinental railroads tapping the northwest, to be supplemented by the activities of the various commercial organizations which are planning to divert a portion of the tide of immigration to their respective localities.

The trustees of the new association are: A. B. Annis, George O'Dwyer, Court M. Sargent, A. C. Wunderlich, C. W. Leaf, E. W. Trueman and A. Ruric Todd.

Roy C. Andrews, famous Asiatic scholar, has returned from Mongolia with twenty thousand feet of film pictures taken in that vast and almost unknown country. This will be one of the most remarkable tests of scientific photography that have been made for years, as without doubt many theories concerning Mongolia will be turned upside down when the pictures are shown.

The first year any record was ever taken of postage stamps sold in this country, the total was 1,540,545. This was in 1850. The last statistics, those of 1920, show a total of 13,212,720,033.

CHAPTER VI.
Panic

"Speed" Stanbury's leap from the tower window had been successful—only he arrived on terra firma too late to seize Pious Pedro. Not too late, however, to be seen by a number of the bandit's followers. In a body they rushed the Americano, but young Stanbury leaped to the saddle of a horse standing nearby and dashed from the estate before he could be taken. The brigands were filled with consternation.

"It will go hard with us if Pedro learns what has happened," one said. "Remember — unless our brothers bring back that white devil, we must profess to know nothing of his escape. Understand?"

Inside the same house, Edwin was greeting Detective Hagerty, who had just arrived on the scene. Triumphantly, Edwin told him, "We've got 'Speed' a captive up in the tower room."

Hardly had he spoken when a pean rushed in and announced breathlessly that "Speed" Stanbury had escaped. Edwin and Hagerty rushed to the tower room to assure themselves that the servant was right.

"He's probably gone back to the hotel to Lucy Durant," Hagerty surmised. "If we hurry, we might catch him there."

And Hagerty was right, for "Speed" Stanbury was hastening to reach the girl he loved. A thought was running through his mind that he must get Lucy sweetheart out of the country and away from the covetous Pedro. He wondered how Lucy would take it. Finally he reached the hotel and succeeded in reaching the girl's room without being apprehended.

"You must return to the United States," he blurted to her. "You're in grave danger here."

"It may be dangerous," Lucy smiled, "but I'd like to stay. You're here."

"You'll just have to go, Lucy," the young man implored, "because I ask it, and I know best." After a half hour of careful explanations, and an outline of his own plans, "Speed" convinced the girl that he was right. Lucy immediately started packing while Stanbury sought Gaston, his valet, and gave further instructions.

"Listen," "Speed" told the surprised little Frenchman, "I'm going to the American pier to see Miss Lucy off—she's going home. After that I'm going to catch that boat for Tristol. Jim Sprague's on it. So I want you to get a fast motor boat and meet me at the American pier. From there I'll make a fast run and get the boat for Tristol before it sails."

Young Stanbury then returned to Lucy and managed to get her out of the hotel and into an unnoticed vehicle. However, surmised what had happened, and with Pedro's men, started to overtake the young people. "Speed's" car was slower than that of his pursuers, but he had a good start on them. When Edwin and Vera Harper entered the hotel they received a message from Pedro and also took up the chase.

The rush and bustle at the American pier seemed peace and quiet to "Speed" Stanbury and Lucy—especially to "Speed"—after some of the strenuous and trying incidents of the past few days. A uniformed man on the wharf directed the young people to the gangway of the vessel which was bound for the States. When they reached the top of the gangway, "Speed" was overjoyed to find that the officer of the deck was a former brother officer of his in the Navy during the war. Together they had stood on the bridge of a Destroyer in the North Sea and the Bay of Biscay and watched for Bosch "subs."

"Hello, Jamieson, you old salt!" "Speed" greeted.

"Great guns!" came the explosive answer, "if it isn't old 'Speed' Stanbury!"

"I haven't time for conversation, old topper," "Speed" hastily said, "this is Miss Lucy Durant, an American citizen—and my fiancee, by the way," he added with a grin. "There's dirty work at the cross roads and I'm delivering her into your charge from this moment for safe return from this country to the United States."

Jamieson was about to answer when there was a considerable disturbance at the bottom of the gangway. Stanbury peered downward and saw Pious Pedro, Hagerty, and a few of Pedro's Spaniards. Pedro attempted to climb the gangway, but the purser blocked his way.

"The police!" he demanded. "Call the police—this girl has been kidnapped from me! I demand—"

"Speed" was about to make a chaffing reply when Jamieson stepped forward, the spirit of fight on his face.

"If you want her," he shouted back, "you'll have to take me and the entire crew of this ship—plus a few of my country's battle ships."

At that moment the blowing of many whistles and the creaking of chains announced that the vessel was about to sail. "Speed" kissed Lucy a tender farewell, shook hands with Jamieson and rushed to the outboard side of the ship. Then, with a grin of goodbye he leaped into the rail into the water. The girl and Jamieson rushed to that side of the vessel and saw him lustily swimming toward the next dock.

When he reached the end of the pier he was met by the faithful Gaston, anxiously awaiting his arrival in the chartered motorboat. Gaston was fearful of "Speed's" safety—he was wet to the skin—but young Stanbury bellowed back that he was all right, all he wanted was action.

"We will have to go extremely sweet to catch ze Tristol boat," Gaston told him, "she has already sailed. And I have also noticed zat Jean Sprague is aboard."

As the little motorboat began to speed toward the open sea, "Speed" saw the Tristol boat almost indiscernible by the trail of black smoke that followed in its wake. Darkness was beginning to fall, which would aid greatly in the young man's plans.

"We'd better not get any closer until it gets a bit darker," he cautioned the little Frenchman. "I don't want Sprague to get suspicious."

However, when the time came, "Speed" Stanbury managed to board the vessel without anyone seeing the wiser. The ship was in readiness save for the lights which blinked along the promenade decks and from the tiny portholes.

After a hasty search to make a careful examination of the ship, as he wanted to know his ground, "Speed" found the forward part of the vessel, he passed a number of the crew but they were entirely without suspicions, assuming him to be only a passenger and not a stowaway. He had chosen the lower promenade deck, as he knew he would see fewer people than on the deck above him. Several footfalls overhead told him that a few of the passengers were remaining on deck, preferring the cool sea air to the hot and stuffy staterooms, warmed by the heat of the engines.

When he reached the forward well-deck a strange odor seemed to hit the air. "Speed" sniffed and sniffed again. He wondered what it could be. Then walking to the nearest hatch, he threw back the tarpaulin. A column of smoke rose in his face and set him gasping for breath. The ship was on fire below decks! But a few passengers had noted the black cloud of smoke and the alarm of fire was spread.

And then a terrible realization came to "Speed" Stanbury. The realization that Jim Sprague—the only man who could clear his name from disgrace—was in danger of his life. He must rush to the promenade deck and get his man. "Speed" sprung up one of the ladders to the next deck with the agility of a monkey. Then he rushed madly down one deck and up another.

"Fire! Fire!"

The air was filled with cries of alarm and warning shouts of the ship's crew attempting to avert a panic. Lifeboats were lowered and excited passengers held back until their turn came to abandon the burning vessel. On the forward deck the deck-force were manning the hoses with a gallant effort to stop the flames.

"Speed" was running about frantically. He had as yet been unable to find his quarry. Then, as he dashed past a lifeboat he heard something splash in the water — some object that seemed to have been knocked from a place on the deck. He glanced hastily over the rail into the water—it was Jim Sprague. Without a moment's hesitation, "Speed" dropped over the rail. At the same time, he heard a voice from the bridge shouting:

"Fire's under full control—everything O. K.—return to quarters!"

The engines began to churn and the ship began to slowly get under way, while "Speed" Stanbury swam back to the spot where Jim Sprague had disappeared.

(To be continued.)

DAIRY

At a recent Holstein consignment sale, conducted by the Lewis County Holstein Friesian club, 40 head were sold at an average price of $138.

The Clallam County Guernsey club is arranging to foster a boys' and girls' calf club. Mr. J. L. Keeler offered $20 as prizes for members of the calf club while the Guernsey club has agreed to duplicate the offer.

It was shown by a report received from County Agent A. W. Holland's office that the Clallam County Cow Testing association cows averaged 341 pounds of butterfat per cow for the past year. This is 161 pounds of butterfat more than the yearly average of the entire state.

County Agent Robert Cowan of Grays Harbor county, reports the placing of a purebred Jersey sire and a purebred Holstein sire. This was accomplished as a part of the campaign being conducted by the dairymen and the extension service to eliminate the scrub sire.

Farmers in the Thrift district of Pierce county finished a survey of all livestock and have agreed to form a purebred bull club. Three of the local dairymen decided to use the Holstein breed and will purchase a sire cooperatively.

The Skagit Valley Cow Testing association of Skagit county began work last month with 500 cows signed up for testing.

Guy Anderson, a graduate of the State College of Washington has been appointed tester of the new Whatcom County Cow Testing association. This association differs from the regular associations by reason of the fact that the farmers take samples from their own herd and these are collected by the tester and tests run at a central station.

If you can not carry an undertaking through to completion do not begin. The world is full of wrecks that found a place to stop.

A safe way to get good public officials is to select men whom we concede to be better than ourselves—if there be any.

Try a Classified Adlet in The News If you have anything to sell or trade or exchange. You will get results. And the cost is small.

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend for the things we need and save money reasonably, we display the right sort of faith. Put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

NEWS NOTES AND COMMENT FROM PAPERS OVER U. S.

No Starving Farmers Here

A Sioux City speaker recently informed his audience that the farmers of South Dakota were in a deplorable condition, practically on the verge of starvation and forced to burn corn for fuel. The truth of this statement was evident in Iroquois Saturday. A goodly portion of the large number of farmers who were in town were forced to bring the family in one automobile, only a small percentage owning two cars, and they were compelled to pack their purchases in the same car the family rode in, uncomfortable as this crowded condition made things. It was also noticeable that many who attended the matinee at the picture show passed up the evening show, while those who attended the evening show were not present at the matinee. Other evidences of near-starvation were apparent although none of them use 50-cent corn for fuel.—Iroquois (S. D.) Chief.

It's Always So

The bitterest thing about Debs' recent speech in Chicago is not the venom of his words but the fact that he is free to utter them.

When Debs was pardoned eleven months ago Attorney General Daugherty issued a statement in which he expressed the hope that Debs would "devote his talent to some useful purpose."

The only purpose to which Debs devotes his talent is the purpose of the anarchist, the bolshevist and the common garden crook.

"I despise and defy their laws!" screams the beneficiary of the president's mercy. Criminal or deluded followers will echo Debs' lawless words.—New York Herald.

Postal Service Improves

The United States has a postoffice for every 2,124 inhabitants, according to figures just compiled at the post office department. Ten years ago there was a post office for every 1,702 persons living in this country, while 20 years ago there was a post office for every 1,039 citizens. Density of population and extension of rural mail service is responsible for the fact that less post offices are required every year to give postal service to the people of America.

$34,500,000 for Forest Roads

A total of $34,542,062 has been appropriated by the government to the states for roads and trails within or adjacent to the national forests. Total expenditures of federal and cooperative funds amounting to $22,-216,724 have already been disbursed. To date, 4,786 miles of road and 6,711 miles of trail have been constructed and 8,744 miles of road and trail have been repaired and improved.

G. O. P. Hard Times

"The poor, down-trodden, bankrupt people of this tax-ridden nation could only buy 2,500,000 new automobiles last year, which, added to those they already had, runs the grand total up to nearly 12,000,000, or about one to every nine people, or nearly enough to give all the people a ride at the same time. Times are awful hard in the good old U. S.—Marion (Kansas) Herald.

Didn't Risk Their Skins

The Americans who are afraid America will lose its soul if she does not go back and save Europe are usually, we have observed, the Americans who did not hazard their skins in France or Flanders in 1918. Vicarious sacrifice, inverted, was prevalent in this country after 1914, and it thrives today in comfortable quarters. —Chicago Tribune.

Another Wilson Fable

"Thus the war comes to an end," President Wilson told congress in November, 1918, anticipating the event for years and years.—Beatrice (Nebr.) Express.

Expensive and Dangerous

Cheap labor from Europe is never cheap when it turns against the government and breaks up the furniture. —Toledo Blade.

Uncovered Buried Forest

What looks like a partially formed coal deposit has been opened at the Lewiston brick plant, east of town. This week while digging a well, the men encountered, at 18 feet below the surface, a deposit of material that burns well and produces good fire. The entire shaft, some five feet square, is in the vein and at quitting time last evening had sunk 24 inches without going through the vein. In appearance the material is brownish black and looks like an old buried forest, the bark and grain of the wood being plainly visible at places. Some pieces resemble coal, and it all burns. When the thermometer dropped Wednesday night the boys, sleeping in a tent, kept a hot fire going all morning by filling the stove from excavations from the well.

At a point some 200 feet south and 20 feet higher, above the river level, at a place where the dirt has been dug away, leaving a bank with a 20-foot face, the same material is again exposed. This second deposit is buried 20 feet below the surface and how such a mass of forest could have been buried there even ages ago, is a mystery. These deposits are about 50 feet above the Clearwater river bed and at the foot of the mountain more than half a mile from the river as it now runs.—Lewiston Banner.

How George Did It

The courting of Martha Curtis, the handsome and wealthy Virginia widow, was not the least of the many accomplishments of George Washington.

Washington went about his sparking arrangements with the same determination that he displayed in the Revolutionary War and as President of the United States. He made up his mind to win and win he did.

It was not the custom at that time to litter up the girls home with five and ten pound boxes of choclates and yard-long boxes of hot-house flowers. They didn't "say it" in that way when George was bridily inclined. Washington wanted to do something handsome and different. He did. It dawned upon him that the name of his sweetheart—Martha Curtis—contained exactly twelve letters, one for each hour on the face of the watch. Fine! He purchased the most beautiful watch that money could buy, and had the jewler place over the figure 1 the letter M, and over the 2 the letter A, and so on around the dial until the name of the fair one was produced. It was presented to the lady a short time before they marched down the middle aisle.

Who says there was not sentiment in George Washington's young life?

Will Retain County Agent

Bonner county commissioners have decided to continue county agent work for another year and a contract was signed with R. A. Pluharty of the University extension department, whereby the county will appropriate $1800 and the state and federal government $1200 toward the county agent's salary and expenses.

Farmers' stationery at News office.

Meditations of a Scrub Rooster.

They call me a scrub rooster! Yet I have a pedigree. I was sired by a scrub, dam'd by a scrub and am treated like a scrub. My tribe outnumbers good roosters five to one. Just why I exist is a mystery even to me. Yet, I am not responsible for it. I was brought into this world without my consent and I shall probably leave it against my will. In the meantime I am getting the most vicious publicity, principally through the poultry and farm press. They say I am a renegade and an abomination, and should be exterminated. Poultrymen passing my owner's farm look at me with contempt; even the hens show me no respect. My own daughters seem to hold a grudge against me, saying that I am responsible for their low egg production. I cannot argue that point, because it is true. But what can I do? My owner must think a lot of me personally, or he would not continue to support me, knowing that I can never improve the flock or be a source of profit to him. Trapnest records are certainly showing me up, and I can see the handwriting on the wall. My tribe is doomed! Under the keen competition and reasonable prices of pedigreed roosters there is no place on the farm for me. So, good-by. I may be gone but not forgotten, for I have retarded the decelopment of the Poultry Industry, for lo, these many years. —Ex.

It Sure Treated Bill Rough

Bryan indorses the proposal to abolish the Electoral college. Considering his experience we are not astonished at his position.—Pittsburgh Gazette-Times.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MARCH 2, 1923. NO. 35

GOV. MOORE GIVES REASON FOR VETOING PRIMARY BILL

The following are the principal reasons for Gov. C. C. Moore's veto of the direct primary bill, which will be of interest to all, whether he be a democrat or republican:

"I have many reasons for withholding my approval to this bill. My principal and most vital objection is that it is based upon an unsound theory and tends to destroy our representative form of government. Primary elections are largely determined by the personality of the candidate rather than for the things for which he stands, and we must not forget that this government waxed great because it has been a government of law and not of men, or principles and not of individuals. I also object to this bill on account of its form, on account of the great expense of its operation, because it centers power and patronage in populous centers, because it permits manipulation by multiplying candidates to defeat the real desires of the voters and in practice limits the people to a choice of officials from among men of wealth or wide reputation.

Even if it is assured that any primary election law would be workable, this bill contains many errors and omissions which make me question its successful operation and there are some features of the bill that are particularly objectionable, such as the attempt to combine party control with official power by permitting only sucessful candidates and campaign managers to direct the policy and exercise the control of political parties.

"The practical operation of this bill would lay a heavy expense upon the people of the state. The dominant note of the campaign was the necessity for economy. In my message to the legislature and in my contact with its committees and individual members, I have repeatedly urged that no legislation be enacted which would lay new burdens on the taxpayers. This bill would increase the cost of elections more than $100,000 to the taxpayers and an equal amount to the acndidates for office. Neither as taxpayers nor as citizens can we afford to assume this new expense.

"Again, this law would apply most inequitably in Idaho. We had a primary law in this state for a number of years which was the same as this bill in principle. The peculiar geographic divisions of the state, with but few centers of population, resulted in a great majority of the office holders during the period being nominated and elected from the immediate neighborhood of the largest city of our state where the largest vote is cast. Remote districts and proportionately nor adequately represented in our state government. The man from the farm, the village or from the county with but few votes, started out in the campaign with the almost unsurmountable handicap of the larger votes of the city. The poor man, for all practical purposes, was excluded from aspiring for office.

"The expenses of two campaigns confined office seeking almost entirely to two classes of citizens, the well-to-do and the well-known. Candidates and their friends possessed of means and influence induced dummy candidates to enter the primaries, thus dividing the vote and defeating the real wishes of the people. These inequalities of opportunity, of distribution of office and manipulation of candidates, should not be fostered nor permitted. The man of ability from country districts should have equal opportunity with the man of ability from the town and the potential statesman of little means is entitled to the same chance to rise as his wealthy brother.

"A few years ago, under the direct primary law, one of the great political parties of this state had a most bitter experience and at the urgent solicitation of its leaders Idaho abandoned the statewide direct primary, after a thorough trial. Nothing has intervened since that time to warrant any one in thinking that another statewide primary law would be free from the pernicious effects which followed the operation of the one which was repealed.

"I do not believe the thoughtful taxpaying portion of our people desire this class of legislation. The political party of which I am proud to belong spoke overwhelmingly in its convention and in the election against a statewide primary. Promises made by political parties are solemn pledges which should be kept sacred. A majority of the members of the legislature representing my party, with an honest and sincere desire to keep faith with the people, voted against this bill, and I am of the opinion—in fact, it is a matter of common knowledge—that a considerable number of those who voted for it did so in spite of their own personal convictions and against their better judgment.

"The history of the world has demonstrated that organized efforts is essential to success. The combined efforts of individuals agreeing upon a policy or plan can be successfully applied. We organize in our religion and our charities. We organize in our business. We organize in our recreations. Our Chambers of Com-

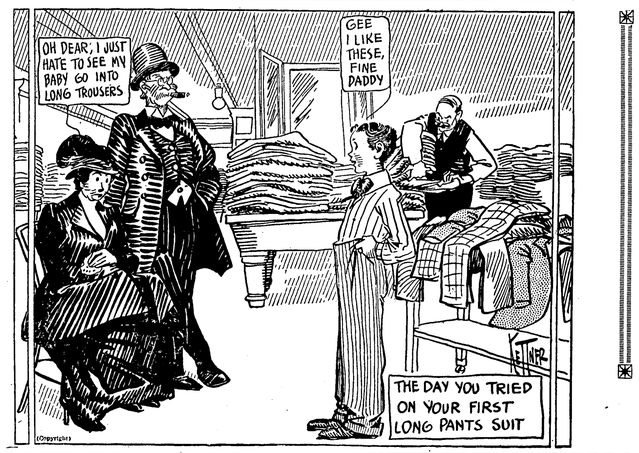
Big Events in the Lives of Little Men



Attend K. of C. Initiation

A large delegation of Genesee Knights of Columbus journeyed to Lewiston Sunday to witness the initiation of a large class of candidates into the order. The Lewiston Tribune has the following to say regarding the ceremony:

More than three hundred members of the Knights of Columbus gathered in Lewiston Sunday for the initiation of 35 candidates, the day beginning with candidates and members partaking of holy communion in a body, and closing with a banquet during the evening at the Lewis-Clark hotel.

The entire afternoon was taken up with the exemplification of work at the Knights of Columbus hall. The work was put on by a team from Spokane composed of M. J. Luby, past state deputy; John Egan, P. J. McLaughlin, Arthur Proulx, Frank J. Rooner, Michael Pecaravich, Joseph Lugler, Robert Langdon, F. V. Brown, these being in charge of District Deputy T. T. Grant.

At the banquet last night, presided over by Toastmaster Leo McCarty, impromptu talks were made by Father Conrad Brustein, pastor of St. Stanislaus' church, Lewiston; Prof. Dahm of the University of Idaho; Louis Cherrier, Lewiston; T. T. Grant, district deputy, Spokane; E. R. Flickinger, district deputy, Lewiston. The address of the evening was made by M. J. Luby, past state deputy of Spokane.

Music was furnished during the banquet by Edwards' orchestra, and solos were offered by Prof. W. G. Allen, Whitman Barton, Wm. Cherrier and Joe Baideck.

Designs Actors' Garb

The San Francisco Chronicle of Sunday, February 18, carries a two-colmun eight-inch picture of Miss Idah Schooler, with the above caption. The many friends of Miss Schooler and of the family will be more than delighted to learn of her successful work at the University of California, Berkley.

The Chronicle has this to say regarding the play for which the costumes are being designed:

A blaze of Assyrian color against the green of Faculty Glade, and a cast of 400 girl students, are the outstanding features of "The Thing of Dust," the 1923 Parthenia to be presented at the University of California early in April.

The masque was written by Miss Natalie Lowenthal and Miss Claire Jones, both prominent in the literary life of the campus.

"The Thing of Dust" immortalizes the sense of humor which is chosen by young womanhood about to enter the world of business and pleasure as her companion in preference to love, fame, and beauty.

Irving Pichel will coach the play and the costumes are being designed under the direction of Miss Idah Schooler and Miss Lois Wang.

Two-Cent Gas Tax Sure

The Idaho assembly the other day passed a measure providing for a two-cent tax on gasoline. The measure was sent to the senate and there is little reason to doubt but that it will become a law as such a bill had practically been agreed upon by representatives of the Northewestern states at a conference long before the legislature met.

There is at least one consolation—it will make stage and truck lines pay at least a small portion of their just dues toward keeping up the roads.

MOVE TO DISBAND WHEAT GROWERS ASSN.

Swan Olson, an extensive wheat farmer in the Palouse district, over in Whitman county, and a member of the Washington Wheat Growers' association, was a Moscow visitor Thursday and informed a Star-Mirror representative that he has started the circulation of a petition to be presented to the board of directors of the association, asking that a referendum vote of members, which number up into the thousands in the three northwest states of Washington, Oregon, and Idaho, be taken by mail to determine whether the association shall carry on for another three years, to the termination of the period for which the farmer members signed, or shall retire from business now.

Mr. Olson states that a majority of the members in his district express themselves as dissatisfied with the result of marketing through the organization and he believes that it would be well to determine future action through the referendum of all members.

Mr. Olson states that members received 81¼ cents per bushel for their 1922 crop and that he is of the opinion that a majority of members will express themselves in favor of disorganizing. The association got its first black eye in the fall of 1920, the first year it was in operation, when many member farmers had their wheat ready for market before the sensational break in the market which characterized that memorable fall. The farmers, unable to sell, naturally felt dissatisfied and expressed their dissatisfaction, when they saw the price drop from day to day and were unable to sell. Since then there has been spasmodic outbreaks of dissatisfaction.

While hundreds of farmers of Whitman county joined the association, the membership in Latah county is comparatively small. Farmers generally, however, will watch with interest the developments of the move to disband the association.—Moscow Star-Mirror.

Is This Good Leadership?

A large part of the labor press contains bitter attacks on the railroads, their management and their policies. These criticisms are not confined to matters of direct controversy between the railways and the employes, but they cover every ground of attack. Nothing is left unsaid that seems to be calculated to stir up hatred among the employes and distrust and hostility among the people.

It is quite remarkable to see the employes of an industry waging war upon that industry with the unquestioned purpose of destroying it. That this policy reacts detrimentally to the public service and detracts from the successful operation, is beyond dispute. It has its origin in the fact that the labor leaders are conducting a political campaign for government ownership, inconsistent with their loyalty to employers or public.

Opposition of the labor press accounts for the opposition of many of the employes to the transportation act of 1920, and the railroad labor board. They realize that successful adjustment of wages and working conditions and gradual but certain reduction of freight rates under that law will postpone or prevent government ownership of railroads.

American automobiles predominate in Japan, and now the little brown man wants to predominate in American. We accept the compliment both ways.

WHAT HAPPENED HERE TWENTY YEARS AGO

Ed. Miller and wife will occupy the Larrabee residence.

Chas. Hanson, Chas. Swenson and Mike Glover left the first of the week for the upper Clearwater to file on timber claims.

John Lockridge, a brother of Mrs. Fred Follett, reached Genesee Saturday from Ornilla, Iowa, and in all probability will remain permanently.

Sheriff Keane and wife were visitors from Moscow Saturday. They returned home Sunday accompanied by Mrs. T. Keane, who visited with them from Ornilla, Iowa, and in all probability will remain permanently.

Mochel Bros. have added to their livery outfit a nobby hearse and are now prepared to assist at funerals. They expect by making reasonable charge for its use to have it out on nearly all occasions.

Miss Brant, Miss Pickering and Miss Owens entertained their Sunday school classes in honor of the Larrabee children Thursday afternoon in the church basement.

Cora Hodgins, Mabel Reed, Myrtle Day, Molly Keane, Orman Patterson, Will Platt and Arthur Morgan left Wednesday morning for Moscow where they will take the teachers' examination.

Yesterday John Swank completed a sale of his Genesee residence property to Mrs. Mary Cunningham for $1,500. We understand Mr. Swank will move out on the Rimrock to engage in farming.

Wm. Rosenau and daughter, Emma, arrived here Friday from Blue Earth, Minnesota, and expect to buy a farm and remain permanently. Mr. Rosenau was a visitor here last summer and became so favorably impressed with this section that he decided to remain with us. He is a brother of Gustav Rosenau who purchased the Snyder farm.

John Larrabee and family expect to leave for California in the morning. Mr. Larrabee informs us that their destination will be Sacramento, at which place he has a brother. Mrs. Larrabee and the children will remain there while he will tour the state and in all probability will visit Nevada, Arizona and possibly Mexico. Should he fail to find anything which thoroughly suits him, we may look for them to return to Genesee, where they still retain their home.

Just as soon as weather will permit work of putting the baseball park in condition for the season's games will be begun. It is proposed to make them equal to any in this section and some interesting battles may be looked for. The free list will be suspended. It takes money to conduct ball games as well as anything else, and an admission fee will be charged for all games. The local team has secured sufficient funds to purchase new uniforms and they expect soon to begin active practice.

Columbia Basin Bill

The Columbia basin bill, with amendments, recently passed the national house of representatives and was signed by the president. The bill as amended and passed by the house carried an appropriation of $150,000 for investigation, with the feasibility of the Columbia basin and Umatilla project. The Colorado project is eliminated. The Washington State legislature will doubtless make a small provision for the Columbia Basin survey, to aid in the work of the Federal Government.

No community is sucessful unless it has a civic leader with whoom it can find fault.

Income Tax Facts

The revenue act of 1921 provides that an income tax return shall be filed by every person, married or single whose gross income for the year 1922 was $5,000 or more. Brodly speaking, gross income includes all income received by the taxpayer during the year from salary or wages, or from "business, trade, profession or vocation," dealing in property, or the transaction of any business carried on for profit. Net income, upon which the tax is assessed, is gross income less certain specified deductions for business expenses, losses, bad debts, taxes, contributions, etc.

Among the most important items in the returns of many taxpayers are the deductions for business expenses. In the case of a storekeeper, they include a reasonable allowance for salaries paid employes, amounts paid for advertising, premiums for insurance against fire or other business losses, the cost of water, light, heat and fuel used in the place of business, drayage and freight bills.

A professional man, doctor or lawyer, may claim as deductions the cost of supplies used in the practice of his profession, expenses paid in the operation and repair of an 'automobile used in making professional calls, dues to professional societies, subscriptionto professional journals, office rent, and the cost of fuel, light, heat and water used in his office, and the hire of assistants.

The farmer may deduct all amounts paid in the production, harvesting and marketing of his crops.

Roads In Horrible Condition

Not only are the country dirt roads in bad condition, but the state road from Moscow to the Washington state line is in a deplorable condition. The ruts are so deep in places that the "pan"of a car will almost drag on the ground.

There is but one solution for the prevention of this destruction of hundreds of thousands of dollars' worth of gravel roads, and that is to put all heavy cars off while they are soft. It seems a shame that the state road should be in its present condition.

It is stated by the highway commissioners that Gov. C. C. Moore has issued orders through the state highway department that no more maintenance work be done and that all road equipment be stored. This would seem to be a huge piece of false economy—no matter who issued the order. It doesn't look reasonable that upkeep work should be stopped when a few dollars spent in properly dragging the roads would save many times the amount expended.

However, the assertion is made that this section of the state highway will positively receive four inches of surface gravel this coming spring. That being the case it is hoped that the present legislature will pass a law allowing the commissioners to protect the road to the extent of ruling off heavy stages and trucks during the wet season, which action would save the tax payers thousands of dollars annually—as well as save the roads.

Will Go to Russia

Accordig to news dispatches Bill Borah, Idaho's senior U. S. senator, will go to Russia to tell them how to run the soviet government.

Since Bill Haywood has already been there for some time it is hoped they may be able to make a working agreement of some kind.

It's too bad that LaFolette isn't going along—he might be an inspiration to the two Bills.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Morgan-Dresher

Isam Morgan and Miss Martha Dreshor were united in marriage at Lewiston Tuesday, the ceremony being preformed by Rev. Christenson. The bride is the daughter of Mr. and Mrs. John Dreshor of Genesee. The groom has been a resident of Juliaetta for some time and owns an acreage tract in the western part of town where the couple have gone to house keeping.—Juliaetta Record.

A Sign of the Times

The Kendrick Hardware sold 26 cream separators last year. This is the most favorable indication that the farmers of the Potlatch are going more extensively into the dairy business. It is to be hoped that the local firm will sell twice that many this year and thus show an even greater interest on the part of the farmers to increase the dairy products of the Potlatch. —Kendrick Gazette.

A Successful Sale

Cold weather and snow did not keep the interested buyers away from the Dorce sale at the Frank P. Bunch farm near Johnson Thursday afternoon of last week.

The weather conditions probably kept down the attendance, but those who did go were anxious to build up herds of swine for the betterment of the market.

The prices were generally good, some of the animals bringing from $75 to $100 each, while others sold from $30 to $50 each. It is estimated that the average price for the sale was about $40 per animal.

Mr Busch has made a success of hog raising in the thoroughbred class and will continue the sales at regular intervals in the future.—Colton News Letter.

At Liberty Again

After remaining in jail for several weeks, laying out a portion of their fine that was assessed against them at the time the raid was made on a dance in the Alpowa section, Geo. Weeks and Red Pruitt were released Monday from the county jail by Ben Reeves, a well-known Idaho live stock man connected with the company, the amounts remaining against each of the parties, which amounted to about $73 each. Some time ago an effort was made to have the sum remitted, but this they refused to do, and kept stalling off the bread and water diet by assuring almost from day to day that the money would be forthcoming the next day. Finally when the money did come, the price of their meals was figured in against the prisoners from the time they refused to work. This amounted to $15 each.—Asotin Sentinel.

Rockwell-Coleman

The home of Mrs. F. E. Warren, Spokane, was the scene of a very pretty home wedding on Saturday afternoon, February 23, at 3 o'clock, when Miss Hortense Rockwell of Genesee and Mr. Gerald Coleman of Spokane were united in marriage, the Rev. Mr. Driver, pastor of the Hillyard Congregational church performing the ceremony, the beautiful ring service being used. Miss Anita Stimson acted as bridesmaid while Wayne Bevis was best man. The bride wore a blue crepe gown trimmed in gray, with shoes to match and wore a corsage bouquet of pink bride's roses and sweet peas.

The bride, whose home is at Lewiston, has been a teacher in the Genesee school for the past three years and has made a host of friends during that time. The groom is an employe of the Alexander Film company and whose headquarters have been in Spokane but who has been transferred to fill the position of manager of the service department at Denver, Colorado, for which place he intends leaving about March 16. Mrs. Coleman will finish the school year here and expects to go to Denver about the first of June.

The News joins the bride's host of friends here in wishing her the very best of everything through life.

Pacific Coast Superpower

Could a kilowat be isolated at Yuma, Arizona, equipped for travel with a through ticket and a clear line, it would be possible to transfer it to Albany, Oregon, over approximately 1,200 miles of copper, comprising the backbone of a superpower system whose annual kilowatt-hour output is almost one-tenth the total annual consumption of electrical energy in the United States, and whose network of transmission and distribution lines exceeds the total railway mileage of America. While the East has been talking and agitating a superpower system in the Boston-Washington district, western public service companies have gone quietly about the business of interlinking their lines until at the present time there has been built up an interconected network which covers three states and which, within the next eighteen months, will cover the entire Pacific coast from the Mexican boarder to Puget Sound.

Move lively. You can't keep in touch with the world while lagging behind.

FARMER MUST BE BUSINESS MAN

Only Man Left Willing to Work for Nothing and Board Board Himself.

"The farmer is the only man that is willing to work for nothing and board himself" is the way R. N. Miller, farm management demonstration of the extension service, sizes up the farming condition of today.

When the farmer of today will commence to follow the methods of the business man he will begin to make money. How many dairymen figure whether they can buy hay, grain and pasture, either from others or from themselves and remain in business? How many dairymen pay the other fellow a small profit for growing, pay haulage from his farm to train, freight to local station, commission of local hay merchant, cartage charge from station to the dairy farm and make money?

There is one way open for farmers to make money on farms, and that is by becoming business men. No man can afford to make farming his business and fail to measure the results of his efforts, except through well kept records. If after due and fair trial a man finds that he can not make farming pay it is good business for him to quit and do something else.

Size, quality and diversity of the farm and personality of the farmer are important factors upon which success in farming depend so the importance of home grown feeds, good stock and business methods throughout are the most vital for success.

MORE COMPENSATION FOR DISABLED VETS

Many beneficiaries of the U. S. Veterans' bureau will be paid additional compensation as a result of a new ruling announced by L. C. Jesseph, Pacific northwest manager of the bureau.

The act of congress, under which benefits are disbursed, prevents awards on account of dependent relatives of veterans from being made effective more than one year prior to the date when claim for additional compensation for such dependents was made. Mr. Jesseph stated many veterans who had, while in training under the federal board for vocational education, claimed additional training pay for dependents, failed until long afterwards to file with the Veterans' bureau or the Bureau of War Risk Insurance, any claim for additional compensation on account of dependents.

Mr. Jesseph stated that the new ruling permits a claim for additional training pay to be construed as a claim for additional compensation also, and, if presented on or before August 9, 1921, to be considered filed with the Veterans' bureau as of that date, because the vocational training records were then placed under the jurisdiction of the bureau. As a consequence, Mr. Jesseph explaind, additional compensation for dependent relatives may, in a considerable number of cases, be extended back to August 9, 1920, and where that can legally be done the beneficiaries affected will be mailed checks to cover the additional amounts accrued under this new interpretation of the law.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Agriculture.

Arrange no wfor bees to be placed in your orchards for better pollination means greater production.

Clothing.

A hat which is becoming to a person when seated is not always the best for that person when standing.

Dairy.

If you have no silage or roots, buy best pulp or chop and soak part of roughage.

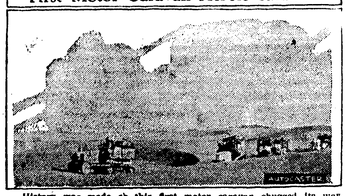
Farm Management.

Study the effects of longer crop yields, better livestock, and a greater diversity of product.

Horticulture.

(Berry Growers.)—Find out now, if you are planning on planting more berries, where you can get strong, healthy plants and engage them. (Orchardists)—Clean up all the brush and prunings and burn them.

First Motor Caravan Across Sahara



History was made as this first motor caravan chugged its way across the burning sands of the Sahara desert. This picture was taken in the very heart of the desert, between In-salah and Hoggar It was a French expedition

Five motor cars, all equipped with special endless-tread drives of rubber to ploy through the deep sand, and some mounted with machine guns to repel anticipated attacks from desert robber bands, recently completed a journey across the Sahara Desert of approximately 2000 miles from Tuggurt, in Algeria, to Timbuktu, in French West Africa.

The caravan left Tuggurt on December 18, last year, but first, in order to insure a proper supply of fuel water and food, other cars were sent ahead as far as Insala to establish depots, while a similar outfit left Dakar in the south and approached north to a military station at Kidal. The expedition proper then set forth, arriving at Timbuktu on January 7, just 20 days later, the time being several months faster than average camel time for the same distance.

The cars had, in addition to the endless-tread arrangement, a platform at the back for hobbling two gasoline storage tanks. These tanks each had a capacity of 35 gallons. Water tanks containing 13 gallons, and aluminum chests filled with ammunition, food, tools, and other necessities, were also carried. A tent for each car, and a motion-picture camera outfit completed the equipment. The drive itself consisted of two wheels, several feet apart around which was stretched the rubber belt, with smaller intermediate wheels between the two helping to distribute the load.

While no part of the journey could be considered devoid of hardship, it was from the Ahaggar mountains to Tit and Kidal that travel was especially difficult. This region is practically unknown, and the route had to be determined by compass.

One of the principal reasons for the trip was to determine whether or not the cars would be practicable for desert travel, though data of a scientific nature were also collected.

FARMERS INCREASE LIVE STOCK INTEREST

Many Considering Dairy Cows, Hogs or Small Flocks of Sheep Over the State.

Many farmers are definitely planning to purchase more dairy cows, a few hogs and in some instances a small band of sheep, in various sections of the state. This is particularly so through the Yakima valley, according to A. E. Lovett, county agent of Yakima county.

Large profits can not be safely figured in any phase of farming, but small profits on several crops or classes of livestock mean money in the pocket of the farmers.

"Money can be lost on livestock as easily as it can on crops. Only good livestock pays and poor livestock will inevitably bring a loss," says Mr. Lovett. "A good herd of good dairy animals will turn a profit continually. One or two poor animals in the herd may easily counteract the profitable production of the rest of the herd. Good livestock on the farm may help but a small profit at times, but the improved condition of the land for crop production will place the balance on the profit side."

Many farmers would purchase livestock if they had the cash or funds at this time. A careful study of the possibilities of success with livestock on each farm should be made before any further debts are incurred. A united effort on the part of farmers, bankers and others interested in the development of agriculture should be made to obtain good animals and to place them where they will return maximum profit.

Possibly the best method of procedure would be to plan now for the livestock which might be placed on each farm this fall. Definite plans for feed for these animals could be made and feed be ready for the animals when placed on the farms.

"Daughters of the Sea"

For the purpose of making more comfortable and pleasant the hours spent in their home ports by the masters, mates, and pilots of the Pacific and developing radio broadcasting to their ships while at sea, wives, daughters, and sweethearts of mariners living at Seattle have formed an organization called the "Daughters of the Sea."

The Daughters of the Sea plan to bring the home closer to the ship, and the radio will be their chief means toward that end. The club has undertaken the fitting up of quarters on the top floor of one of the city's tall buildings, and is furnishing them with a library, comfortable chairs, smoking accessories, and marine glasses, so that seafarers may watch from the windows the ships making and leaving port.

A powerful radio sending and receiving apparatus is to be installed on the roof of the building, and entertainments, concerts, etc., held in the club rooms will be broadcast to the ships at sea. The personnel of vessels in any storm area will be cheered by the voices of loved ones at home. A practical service also will be maintained; the location of all ships from the home port will be recorded from day to day. The plans also include the entertainment of visiting captains from other ports of the world. There will be a committee supplying all arriving ships with flowers, and seamen strangers will be provided with comfort and entertainment.

Eventually, it is expected the Daughters of the Sea will extend their work to all countries by establishing branch chapters.

INCOME TAX FACTS

Income Tax Facts No. 5

Liability to file an income tax return for the year 1922 is determined by a person's status on the last day of the taxable year, December 31, if the return is made on the calendar year basis, as most are. If on that date he was single he must file a return if his net income for 1922 was $1000 or more, and he is allowed only an exemption of $1000. If he was married on December 31 he granted the exemption allowed a married person for the full year, $2500 if his net income was $5000 or less, and $2000 if his net income exceeded $5000. The bride's income, however, must be considered with that of her husband. The larger exemptions being allowed married couples living together. A widow or widower whose spouse died before the end of the year is classed as a single person. Divorcees and persons separated by mutual consent also are classed as a single person.

Similar conditions exist with respect to the head of a family. If, during the year, his support of relatives ceased he is entitled only to the $1000 exemption. A man who has a dependent child, not mentally or physically defective, that attains the age of 18 years just before the close of the taxable year, can not claim the $400 credit for a dependent.

Income Tax Facts No. 6

To avoid penalty, income tax returns must be filed with the collector of internal revenue for the district in which the taxpayer lives or has principal place of business on or before midnight of March 15, 1923.

Where additional time is required because of illness or absence of the taxpayer from home, the collector may grant, upon application before the return is due, March 15, an extension of not to exceed 30 days. If an accurate return can not be made within the 30 days extension period, a request for a further extension must be made to the commissioner of internal revenue, Washington, D. C. Collectors are not authorized to grant an extension exceeding 30 days.

Failure to make a return on time subjects the delinquent to a penalty of $1000 and an additional penalty of 25 per cent of the amount of tax due. If the failure is wilful, however, or an attempt is made to evade the tax by filing a false return, the offender is liable to imprisonment and to a fine of not more than $10,000 and costs, in addition to a penalty of 50 per cent of the amount of tax evaded.

Considerable unrest is felt among the people of Hawaii because of the fact that the volcanoes are uneasy and show signs of eruption. Some of the ones famous enough to be visited annually by thousands of tourists are now being deserted, as people are afraid of them, and this means the removal of many thousands of dollars in business. Hence the main worry of the natives.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

The bureau of mines announced recently that gasoline production for 1922 increased approximately 20 per cent over the 1921 output.

Ruhr communists are arming and forming military organizations. A strong force already has been raised at the Krupp works at Essen.

North Dakota objects to exploitation of her frog crop. The game and fish commission has a bill in the present legislature asking a closed season during April, May and June on transportation or sale of frogs.

The Riga correspondent of the Times quotes a Russian soviet government announcement to the effect that Senator Borah has accepted the invitation extended by Maxim Litvinoff to visit Moscow during the senator's projected Russian tour.

Estimated cost of a new canal from the Atlantic to the Pacific via the Nicaraguan route places the figure roughly at $1,000,000,000, according to army engineers, and makes the project prohibitive for the present, in the view of the president and his cabinet.

An explosives factory was seized in a woman's home in a well-to-do residential quarter of Dublin recently. A large number of mines, bombs and arms were found in addition to quantities of gunpowder and other explosives. Some documents also were discovered and seized. A man in the house was arrested.

Scientists for many years have told us that sunshine was the best remedy for people who are run down and exhausted; but a series of interesting experiments, carried on by some of the leading medical schools, show that many of the children's diseases can actually be cured by naked exposure to the sun's' rays, and it is predicted that in the near future many diseases of adult people can be cured in the same way.

Jay Bruce, state lion killer of California, is the only man in the world who kills lions for a profession. He was appointed four years ago, and in that time has shot 153 mountain lions.

The great need of the non-Christian nations is Christianity. Still, you can say that much about the Christian nations.

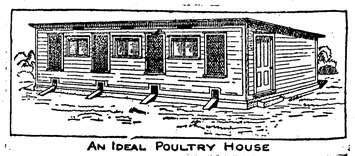
When the book agent confesses that few families have sufficient culture to appreciate the work, the set is sold.

Ventilation Most Difficult Problem in Building Poultry Houses

Many varying opinions are expressed on poultry house construction and all extremes are indulged in from the coop that has no ventilation and is almost air tight to the extreme open type that is ventilated as much as possible.

After experimenting with various types of construction the poultryman usually selects a type of building that is midway between these two.

The most serious difficulty is usually to secure satisfactory ventilation. Far too many poultry houses are built to take care of 80 to 100 hens and are used for three or four times that number.



An Ideal Poultry House

Although it is not always possible or advisable to build a poultry house to fit all future requirements, care should be taken to provide for increases or decreases in the flock. Over-crowding of the flock in the winter time often brings unsatisfactory results and means considerable loss.

Most farms can support a flock of 300 to 400 hens economically. Poultry houses, however, are often based on a 100-hen unit, which is an economical unit to use, as it takes very little more to care for that many hens than for half that number.

Square Feet Per Fowl.

The number of square feet floor space necessary for fowls is a matter of considerable argument. The best results are usually obtained, however, in a house where there are at least four square feet floor space for each fowl; three square feet will answer for Leghorns and other varieties of the Mediterranean fowls provided the house is kept perfectly clean, except perhaps the Minorcas, which will need as much space as the American varieties. Large fowls like the Asiatics have about five square feet of floor space per head. Where the house is especially well ventilated the fowls may be crowded somewhat more with safety.

The smaller the unit is made, the more space proportionately will have to be allowed for each fowl, that is, a house with 400 square feet floor space will provide ample room for 100 fowls, yet only 200 square feet floor space will not be as satisfactory for 50 fowls.

When the house is too small for the flock, special care must be taken to keep the walls and floor exceptionally clean.

Poultry houses are made of all kinds of material, but more are made of frame construction than any other kind, partly because such a house can be easily erected by the average person and partly because wood provides a good insulation against the weather. Dryness in a poultry house is essential and freedom from moisture depends considerably on ventilation.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

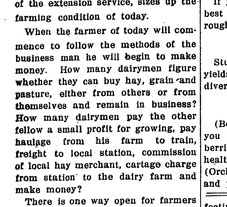
ZINC AND BRASS MAIL BOXES TO BE TRIED IN EAST

Because the steel of the standard letter box deteriorates rapidly upon exposure to the elements, necessitating frequent repainting, the postoffice department has decided to try boxes made of zinc and brass. It is believed they will prove more resistant to the action of the salt air than those made of steel, and 1,000 of brass and 100 of zinc will soon be placed in service along the seacoast. In order that the effects of atmospheric conditions on the brass design may be determined, some of the boxes made of this metal will be left unpainted. While the general practice of painting mail-boxes will probably be continued, it is expected that the new types will require attention less frequently.

SCHEME TO PREVENT WASHOUT OF PAVEMENT GRADES

Having proved its efficiency in preventing the accumulation of water at the base of new concrete pavement grades, a scheme tried by the Illinois division of highways has now been made a standard practice for work of this kind. The essentials of the practice include the sloping of the road, at given points on the grade toward the curb, in which holes are let for the passage of rain water through it and into the drains at the side. Most of the water is thus taken off the pavement before it reaches the bottom of the incline, where its accumulated force might cause damage. Another phase of the idea is the planting of grain along the embankments at each side of the highway, the roots of this growth helping to hold the fresh dirt in place against the destructive effect of heavy rains.

Left: Section of new pavement grade, showing the drainage scheme whereby holes are left in the curb so that the rain water may run off before it reaches the bottom of the incline. Right: Side view of pavement showing more clearly, the construction of the curb and concrete drain.



Left: Section of a Household Heating Stove, showing how the flames are spread by means of the attachment on top. Right: Stove for use by railroads.

HEATING STOVE MADE HOTTER WITH COOLER SMOKE PIPE

In the ordinary base-burning heating stove the flames from the coal assume a conical shape in the center of the stove and remain at some distance from its side walls. It is obvious that if the flames could be spread so as to come directly into contact with the sides of the stove, much more of the heat would be imparted to them, and much less would be drawn directly into the smoke pipe and the flue. This is now made possible by an attachment in the form of a drum placed on top of the stove. The drum contains a means of so directing the draft that the flames and hot gases assume a cylindrical form and remain in direct contact with the entire surface of the walls of the stove. With this attachment the stove itself absorbs much more of the heat from the flames, while the smoke pipe and flue remain much cooler. These stoves are particularly suitable for use by railroads where they can also be used to advantage in the home.

SAFETY STARTER PROTECTS MOTOR AND OPERATOR

Protection is provided for the operator as well as for the motor, in a safety starter which is so arranged that the door of the starting box can not be opened while the switch is in a "live" position. The appliance is manufactured for alternating-current motors up to 15 horsepower, containing special thermal cutouts or relays, which automatically open the circuit when damaging ovrloads are experienced, and also no-voltage release coils as a safeguard against voltage failure.

HIGHWAYS 360 FEET WIDE FOR NEW YORK

Tearing down row after row of buildings and opening combined "slow-moving" and "express" highways, 360 feet wide, is suggested as a solution of New York's traffic problem, by Dr. John A. Harriss, special deputy policy commissioner. One of the first great cross-town boulevards, under this plan, would run from the Hudson to East River, somewhere in the district between 42d street and 59th street, and would cost the city about $70,000,000. New York, in the year 2222, will have a population estimated at approximately 45,000,000 based on the present rate of increase.

TAR EXTRACTED FROM COAL IN COMBINED PROCESS

A combination distillation and burning process in which the tar products are driven off from coal before being burned under boilers, is now being introduced in Germany. Coal from the bunker is fed to the boiler furnace through a retort, at the bottom of which is a distilling chamber facing the glowing fire on the grate. The gases are driven off from the coal discharge into an extraction apparatus alongside the boilers, and the tar, ammoniacal liquors, and other products recovered. This method is esaid to be more efficient than the separate gas and coking plants.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 33.

Mountain was the first sentry; he declares he neither slept nor yet sat down, but kept his watch with a perpetual and straining vigilance, and it was even with unconcern that (when he saw by the stars his time was up) he drew near the fire to waken his successor. This man (it was Hicks the shoemaker) slept on the lee-side of the circle, somewhat further off in consequence than those to windward, and in a place darkened by the blowing smoke. Mountain stooped and took him by the shoulder; his hand was at once smeared by some adhesive wetness; and (the wind at the moment veering) the firelight shone upon the sleeper and showed him, like Pinkerton, dead and scalped.

It was clear they had fallen in the hands of one of those matchless Indian braves, that will sometimes follow a party for days, and, in spite of indefatigable travel and unsleeping watch, continue to keep up with their advance and steal a scalp at every resting place. Upon this discovery, the treasure-seekers, already reduced to a poor half-dozen, fell into mere dismay, seized a few necessaries, and deserting the remainder of their goods, fled outright into the forest. Their fire they still left burning, and their dead comrade unburied.

All day they ceased not to flee, eating by the way, from hand to mouth; and since they feared to sleep, continued to advance at random even in the hours of darkness. But the limit of man's endurance is soon reached; when they rested at last, it was to sleep profoundly; and when they woke, it was to find that the enemy was still upon their heels, and death and mutilation had once more lessened and deformed their company.

The mercy the trader extended to Secundra explains on the ground that the East Indian was thought to be insane, partly from the fact that, through all the horrors of the flight and while others were casting away their very food and weapons, Secundra continued to stagger forward with a mattock on his shoulder; and partly because, in the last days and with a great degree of heat and fluency, he perpetually spoke with himself in his own language. But he was sane enough when it came to English.

"You think he will be gone quite away?" he asked, upon their blessed awakening in safety.

"I pray God so, I believe so, I dare to believe so," Mountain had replied almost with incoherence as he described the scene to me.

And indeed he was so much distempered that until he met us, the next morning, he could scare be certain whether he had dreamed, or whether it was a fact, that Secundra had thereupon turned directly about and returned without a word upon their footprints, setting his face ofr these wintry and huigry solitudes, along a path whose every stage was milestoned with a mutilated corpse.

THE JOURNEY IN THE WILDERNESS.

(Continued)

Mountain's story, as it was laid before Sir William Johnson and my lord, was shorn, of course, of all the earlier particulars, and the expedition described to have proceeded uneventfully, until the master sickened. But the latter part was very forcibly related, the speaker visibly thrilling to his recollections; and our situation then on the fringe of the same desert, and the perils and ardours of each, gave him an audience prepared to share in his emotions. For Mountain's intelligence not only changed the world for my Lord Durrisdeer, but materially affected the designs of Sir William Johnson.

These I find I must lay more at length before the reader. Word had reached Albany of dubious import; it had been rumored soem hostility was to be put in act; and the Indian diplomatist had, thereupon, sped into the wilderness, even at the approch of winter, to nip that mischief in the bud. Here, on the borders, he learned that he was come too late; and a difficult choice was thus presented to a man (upon the whole) not any more bold than prudent.

"I have come too late," he said more than once, and would fall into a deep consideration, and myself, sitting close round a small fire, which had been made for privacy in one corner of the camp.

"My lord, to be quite frank with you, I find myself in two minds," said he. "I think it very needful I should go on, but not at all proper I should any longer enjoy the pleasure of your company. We are here still upon the waterside; and I think the risk to southward no great matter. Will not yourself and Mr. Mackellar take a single boat's crew and return to Albany?"

My lord, I should say, had listened to Mountain's narrative, regarding him throughout with a painful intensity of gaze; and since the tale concluded, had stat as in a dream. There was something very daunting in his look; something to my eyes not rightly human; the face, lean, and dark, and aged, the mouth painful, the teeth disclosed in a perpetual rictus; the eyeball swimming clear of the lids upon a field of blood-shot white.

I could not behold him myself without a jarring irritation, such as (I believe) is too frequently the uppermost feeling on the sickness of those dear to us. Others, I could not but remark, were scarce able to support his neighborhood—Sir William reviting to be near him, Mountain dodging his eye, and, when he met it blanching and halting in his story. At this appeal, however, my lord appeared to recover his command upon himself.

"To Albany?" said he, with a good voice.

"Not short of it, at least," replied Sir William, with a long face. Mountain forgot his wounds, staring and gaping.

"My lord," said I, "I wish you would collect your spirits." But my throat was so dry and my own wits so scattered, I could add no more.

"No," says my lord, "it's not to be supposed that he would understand me. Mackellar does, for he kens all, and has seen him buried before now. This is a very good servant to me, Sir William, this man Mackellar; he buried him with his own hands—he and my father—by the light of two siller candlesticks. The other man is a familiar spirit; he brought him from Coromandel. I would have told ye this long syne, Sir William, only it was in the family."

These last remarks he made with a kind of melancholy composure, and his time of aberration seemed to pass away. "You can ask yourself what it all means," he proceeded. "My brother falls sick, and dies, and is buried, as so they say; and all seems very plain. But why did the familiar go back? I think ye must see for yourself it's a point that wants some clearing."

"Half a Minute."

"I will be at your service, my lord, in half a minute," said Sir William, rising. "Mr. Mackellar, two words with you," and he led me without the camp, the frost crunching in our steps, the trees standing at our elbow hoar with frost, even as on that night in the Long Shrubbery. "Of course, this is midsummer madness?" said Sir William, so soon as we were gotten out of hearing.

"I will never believe that," returned my lord, painfully trembling. "I'll never believe it!" he cried again, and jumped to his feet. "Did he look dead!" he asked of Mountain.

"Look dead?" repeated the trader. "He looked white. Why, what would he be at? I tell you, I put the sods upon him."

My lord caught Sir William by the coat with a hooked hand. "This man has the name of my brother," says he, "but it's well understood that he was never canny."

"Canny?" says Sir William. "What is that?"

"He's not of this world," whispered my lord, "neither him nor the black devil that serves him. I have struck my sword throughout his vitals," he cried, "I have felt the hilt dirl on his breast-bone, and the hot blood spurt in my very face, time and again, time and again!" he repeated, with a gesture indescribable. "But he was never dead for that," said he; and I sighed aloud. "Why should I think he was dead now? No, not till I see him rotting," says he.

Sir William. "There is no safety nearer at hand."

"Shall I seize and bind him?" says my lord. "I am not afraid—of Indians," he added, with a jerk.

"I wish that I could say so much," returned Sir William, smiling; "although, if any man durst say it, it should be myself. But you are to keep in view my responsibility, and that as the voyage has now become highly dangerous, and your business—if you ever had any," says he," brought quite to a conclusion by the distressing family intelligence you have received, I should be hardly justified if I even suffered yo tuo proceed, and run the risk of some obloquy if anything regrettable should follow."

My lord turned to Mountain. "What did he pretend he died of?" he asked.

"I don't think I understood your honor," said the trader, pausing like a man very much affected in the dressing of some cruel frost-bites.

For a moment my lord seemed at a full stop, and then, with some irritation, "I ask you what he died of. Surely that's a plain question," said he.

"Oh, I don't know," said Mountain. "Hastie even never knew. He seemed to sicken natural, and just pass away."

"There it is, you see!" concluded my lord, turning to Sir William.

"Your lordship is too deep for me," replied Sir William.

"Why," says my lord, "this is a matter of succession; my son's title may be called in doubt; and the man being supposed to be dead, of nobody can tell what, a great deal of suspicion would be naturally roused."

"But, God damn me, the man's buried!" cried Sir William.

"I Will Never Believe That,"

"I will never believe that," returned my lord, painfully trembling. "I'll never believe it!" he cried again, and jumped to his feet. "Did he look dead!" he asked of Mountain.

"Look dead?" repeated the trader. "He looked white. Why, what would he be at? I tell you, I put the sods upon him."

My lord caught Sir William by the coat with a hooked hand. "This man has the name of my brother," says he, "but it's well understood that he was never canny."

"Canny?" says Sir William. "What is that?"

"He's not of this world," whispered my lord, "neither him nor the black devil that serves him. I have struck my sword throughout his vitals," he cried, "I have felt the hilt dirl on his breast-bone, and the hot blood spurt in my very face, time and again, time and again!" he repeated, with a gesture indescribable. "But he was never dead for that," said he; and I sighed aloud. "Why should I think he was dead now? No, not till I see him rotting," says he.

"Why, certainly," said I. "The man is mad. I think that manifest."

"Shall I seize and bind him?" asked Sir William. "I will upon your authority. If these are all ravings, that should certainly be done."

I looked down upon the ground, back at the camp with its bright fires and the folk watching us, and about me on the woods and mountains; there was just the one way that I could not look, and that was in Sir William's face.

"Sir William," said I, at last, "I think my lord not sane, and have long thought him so. But there are degrees in madness; and whether he should be brought under restraint—Sir William, I am no fit judge," I concluded.

"I will be the judge," said he. "I ask for facts. Was there, in all that jargon, any word of truth or sanity? Do you hearken?" he asked. "Am I to understand you have buried this gentleman before?"

"Not buried," said I; and then, taking up courage at last, "Sir William," said I, "unless I were to tell you a long story, which much concerns a whole family (and myself not in the least, it would be impossible to make this matter clear to you. Say the word, and I will do it, right or wrong. And, at any rate, I will say so much, that my lord is so crazy as he seems. This is a strange matter, into the tail of which you are unhappily drifted."

Didn't Want Secrets.

"I desire none of your secrets," replied Sir William; "but I will be plain, at the risk of incivility, and confess that I take little pleasure in my present company."

"I would be the last to blame you," said I, "for that."

"I have not asked either for your censure or your praise, sir," returned Sir William. "I desire simply to be quit of you; and to that effect, I put a bold and complement of men at your disposal."

"This is fairly offered," said I, after reflection. "But you must suffer me to say a word upon the other side. We have a natural curiosity to learn the truth of this affair; I have some of it myself; m ylord (it is very plain) has but too much. The matter of the Indian's return is enigmatical."

"I think so myself," Sir Willima interupted, "and I proopse (since I go in that direction) to probe it to the bottom, whether or not the man has gone like a dog to die upon his master's grave, his life, at least, is in great danger, and I proopse, if I can, to save it. There is nothing against his character?"

"Nothing, Sir William," I replied.

"And the other?" he said. "I have heard my lord of course; but, from the circumstances of his servant's loyalty, I must suppose he had some noble qualities."

(To Be Continued)

IDAHO STUDENTS TO GIVE SPOKANE PLAY

Select List to Present "If" at the Teachers' Convention in Spokane, April 4 to 6.

A University of Idaho all-college cast has been selected to present a play at the annual convention of the Inland Empire Teachers' association at Spokane, April 4 to 6, according to a statement by James A. Burke, secretary of the association. Lord Dunsays "If" has been selected as the vehicle by Professor J. R. Cushman, director of dramatics, and work is already going forward. Several of the leading members of the cast have been chosen.

Preliminary tryouts have resulted in Pearl Stalker of Boise and Abe Goff of Walla Walla, Wash., being chosen for the leading parts. Other important roles will be played by Maxwell Sholes of Moscow, Rex Kimmel of Kicco, Fla., Marie Gauer of Payette and Mary Kelly of Denver, Colo. With the exception of Miss Gauer and Miss Kelly, other members selected so far have appeared in several other university productions.

Being selected to present the main entertainment at the teachers' convention is considered a high tribute to the efforts of the actors developed at the university. The play chosen is considered unusually difficult for college students, but Professor Cushman believes that he has a cast which will give a pleasing interpretation.

IDAHO

It is reported that 50,000 acres of beets in the Idaho Falls country have been signed up by growers for this season.

Among new bills introduced in the Idaho legislature is one to appropriate $20,000 to establish a manufacturing plant at the state penitentiary.

During the year 1922 there were destroyed in Kootenai county 313 wild coyotes, 3 wild cats, 8 lynx, 1 wolf, 3 cougars. The bounty paid was $982.50.

G. H. Martin, Sandpoint attorney, is a candidate for U. S. district attorney at Panama and is gathering indorsements from friends here for the position. He ran for governor of Idaho in 1914 on the Bull Moose ticket.

A bill in the legislature would require all marriage license applicants to file a medical certificate before receiving their license. The certificate would show that they were not common drunkards, feeble-minded, insane, epileptics, consumptive and not afflicted with any social disease.

Enrollment in the tractor course given by the college of agriculture has increased 50 per cent over that reached last year, according to a statement from the office of E. J. Iddings, dean of the college. The course is conducted tor two weeks and instruction is given in the adjustment, repair and operation of tractors and automobiles. Lectures and laboratory exercises are given under the direction of Professor R. B. Gray, head of the department of agricultural engineering. Experts from machinery companies are assisting the university instructors.

Following a probe of the affairs of the defunct First National bank of Burley, the federal grand jury has returned eight indictments containing sereval counts against Curtis E. Warren, president; Arnold E. Smith, cashier, and Assistant cashiers Richard W. Waltermire and Edmond McGuire.

The annual Idaho state inter-scholastic basketball tournament will be held at the University of Idaho, March 16 and 17, according to announcement from the athletic department. This program to determine the state high school hoop champions is fostered by the state interscholastic association.

Some idea of recent growth of Boise, Idaho, can be obtained from showing of banks and wholesale business. Capital stock in 1922, $1,050,000 as against $600,000 in 1911; deposits $12,501,033.33 in 1922 as against $4,861,747.93 in 1911; loans, $11,398,659.68 in 1922 as against $2,428,244.41 in 1911. Wholesale business in 1922 shows capital investment of $3,920,000 as against $661,000 in 1911; annual business 1922 $16,011,934 as against $3,091,794 in 1911.

Lincoln county commissioners voted recently to devote a portion of $30,000 in the permanent highway fund of the county, to construct a road beginning at the North Central highway south of Davenport and extending east through Bluestem.

"SPEED"

By Herbert Crocker

CHAPTER VII.

Jaws of Death.

After swimming around for what seemed hours but what actually was about four minutes, "Speed" Stanbury located his quarry, Jim Sprague. Sprague was splashing helplessly about when young Stanbury reached him, and was about to give up. The rescuer then saw a hatch cover which had been thrown from the burning ship, and seizing Sprague by one arm he swam towards it.

Climbing aboard the raft-like object, "Speed" pulled Sprague after him and attempted to revive the man. After this was accomplished, the two sat silently, waiting until morning when the next move would be made. "Speed" hummed a tune to himself. He was extremely happy, for had he not finally captured the man who could prove his alibi and save him from disgrace?

When rosy dawn came, both men uttered an ejaculation of surprise. Land was only a few miles away —on their starboard side. To reach the beach they would only have to keep the raft headed in the right direction, as the wind was blowing strongly toward the inland.

After about an hour, shore was reached. Both men were exhausted, but there was a score to be settled. "Seed" looked steadily at Jim Sprague and the latter returned his glance with a look of amusement.

"Well," he smiled, "now that you've got me, what are you going to do with me? The joke's on you. We'll probably spend the rest of our lives here."

"Oh, no," "Speed" returned, "help will come—some day—and then I'm going to take you back to the States and make you prove my alibi."

Jim Sprague rose to his feet and stretched his tired limbs. His eyes sought the inland and he took several steps in that direction.

"Look here, Sprague," "Speed" said, "you're going to stay right here with me. Understand?"

"Try and make me!"

The challenge was accepted and the next moment found the two men in a struggle for supremacy. Blows were exchanged and both men staggered under them. Each endeavoring to make his tired body respond to its normal strength after the harassing night on the sea. Jim Sprague finally decided to risk everything in a final rush. He lunged toward young Stanbury, but the latter was ready and waiting for this chance. His right and then his left he landed squarely on Sprague's jaw. With a moan the missing cashier sank to the sandy beach.

"Speed" Stanbury was dead tired himself. Another glance at Sprague made him think that this would be a good time for him to make up for lost sleep. But he would take no chances. Finding a bit of wiry vine lying on the beach, he tied one end of it around Sprague's leg and the other around his own, so that any movement on the part of Sprague would awaken him. "Speed" then sank back in a deep sleep of exhaustion.

But he had been mistaken. Jim Sprague had been waiting for this very thing to happen. The knockout blow he had received was just what he desired. Raising himself cautiously on his elbow, he saw that his captor was in the domain of King Morpheus. He saw a stout stick lying in the sand nearby and seizing it he pushed it into the sand beside his leg. Then he carefully unfastened the vine which secured him and tied it around the stick. Assuring himself that "Speed" continued to sleep, Sprague started inland.

On and on the fugitive wandered. A short distance ahead he thought he could see a clearing, and a number of figures moving about. He moved onward cautiously, when suddenly a black native darted out from behind a tree, seized him and dragged him before the multitude. A strange jargon of mutterings filled the air, then one savage, who seemed to be the chieftain, stepped forward, a fatuous grin spreading over his face.

"Bal-ech be praised," the leader cried. "The white man's promise to the Herontos is fulfilled! The great White Doctor has sent his son to care for us and keep us powerful and strong!"

Sprague gasped in amazement. He was about to speak when the chief began again.

"Welcome to the people of the Herontos," continued the chieftain. "You are a White Doctor and the son of the Great White Doctor—his promise has been fulfilled."

Slowly the truth dawned upon Jim Sprague. The natives had taken him for the son of a doctor—a doctor who had administered aid and who had promised to send his son back to carry on his work. Sprague suddenly thought of "Speed" Stanbury and like an inspiration it flashed upon him that he now had the power to pay back the young man in his own coin. Sprague was led to a seat of honor and the leaders of the different tribes came forward and paid their respects. The ceremony had just finished when "Speed" Stanbury appeared on the scene. He watched amused and fearlessly, then spoke.

"Thought you'd give me the slip, eh?" he said, not heeding the presence of the natives. "Well, you better toddle along back, if you intend to come with me right now."

"Don't make me laugh, Speed," remarked Sprague. Stanbury stepped forward angrily, intending to take his man, but the chieftain stopped him.

"Beware!" the native roared. "He is our friend. He is a devil and the son of a great god." [illegible]

"That's me, kid — look me over," Sprague grinned, then turning to the natives he said, "This man is an enemy of all of us. His family has suffered at the hands of tribesmen. He comes now to seek revenge."

The boldness of Jim Sprague almost made "Speed" burst into laughter. "By Jove, Jim," he smiled, "I'll give you credit for putting something over for once in your life. I didn't think you had it in you."

He was interrupted by the chieftain, who drew nearer to him and said: "We know you. You are bad. Our friend has spoken. You will first show your prowess as a wrestler; then you will race our fleetest runner; and then you will fight Niam-Niam with knives. If you do not overcome all three, you will suffer death. It is the final test."

"This is going to be a pretty little tea party, isn't it?" "Speed" coolly answered. "Who is Niam-Niam?"

A tall Black, gaudily decorated, stepped forward.

"My word!" "Speed" exclaimed, turning to Sprague, "he's the biggest Indian cigar sign I ever saw."

The natives hastily gathered around a ring in the center of the clearing and chattered and laughed while. "Speed" prepared to take the first test. He knew his prowess as a wrestler and did not fear the black man. The thought did not occur to him that his opponent might prove to be a second Siki. The signal was finally given and both men faced each other. "Speed" studied his man carefully—he figured it would be wisest to take the offensive. With a rush he plunged into the native and threw him to the ground with a thud. Shrill cries greeted his act.

The Black rose to his feet and returned the compliment. And then the match began in earnest. "Speed" was easily the better of the two men and in spite of the Black's savage training, he was no match for the white man. "Speed" used all the tricks known to the skilled wrestler and it was not long before he triumphed in his first test.

Sprague was getting a trifle uneasy. He feared that "Speed's" prowess as an athlete might make him the favorite of the natives. His only hope was the fight with knives—for here was where the savage would excel. "Speed" was aware of this fact himself. He thought fast.

The next event was the race with the fleetest runner of the tribe. Stanbury figured that here was his chance. He crouched by the side of the native and awaited the signal. They were off! "Speed" let the Black take the lead, then, when he saw that he was a fairly good distance from the [illegible] he turned sharply to the right and disappeared through the brush. But this was not enough. He wanted to get a good distance away from his captors. He kept up the pace until he came to a stream of water.

"Speed" hesitated and looked around. He hardly knew which way to turn. He suddenly heard footsteps behind him and saw two of the natives running towards him. Without hesitating, he dove into the stream. When he came up, he faced the shore and saw that the Blacks were gesticulating wildly and pointing behind him. He turned about and saw a giant alligator swimming towards him—its huge jaws wide open.

(To be continued.)

Farm Crops.

Plow the truck patch or garden as deeply as the soil permits and make the seed bed perfectly fine.

New Hilden says that the only difference between privateer and profiteer is one of time.

THE GENESEE NEWS

Genesee, Idaho

ENTERED AT THE POST OFFICE AT GENESEE AS SECOND-CLASS MAIL MATTER

P. C. McCREARY, Publisher

Subscription price, strictly in advance, $2.00

FRIDAY, MARCH 2, 1923

Basketball Game

The Genesee High school basketball team will play the Lewiston High school team on the local floor tonight—Friday. Every one is urged to be present to help the boys.

Basketball Game

The Genesee High school basketball team will play the Lewiston high on the local floor tonight (Friday), Every one is urged to be present and encourage the boys.

Basket Social, Dance, Etc.

The Knights of Pythias will give a basket social, entertainment and dance at their hall on Friday night, March 9, to which the general public is cordially invited.

It is stated that the ladies' basket bringing the highest price the owner will be awarded a two-pound-box of candy. If that isn't any inducement, we'd like to know just what is?

Bazaar and Ice Cream

The missionary society of the Federated churches will hold a bazaar and ice cream social on Saturday, March 31. Everything to eat and wear will be on sale. 35-1

May Electrify

In the near future the Northern Pacific railroad train will probably be operated with electric power produced from coal at a lower cost than is possible to produce electricity thru hydro- electric projects, according to a dispatch in the city of St. Paul. The officials of the railroad have been studying electrification and a new coal supply in the Rosebud section of southeastern Montana together with the projected building of a branch line at a cost of $2,000,000 to tap the coal fields indicate that a huge power department project will be started.

Teacher's Association Will Meet

The 25th annual session of the Inland Empires Teacher's association will be held in this city April 4,5 and 6 in the Lewis and Clark High school. The association will consist of five general sections where there is touched practically every phrase of education. It is believed the association will attract a larger attendance than ever before and great care was taken in selecting the members on the general program. The principal speaker will be Dr. E.B. Bryan president of the Ohio University.

Livestock Conference

One of the main features of the sixth annual livestock conference which will be held in Spokane March 12, will be the talks and discussions on subjects of immediate interest to livestock men by leading Northwest livestock authorities. O.M. Plumber manager of the Pacific International Livestock exhibition of Portland will be the principal speaker.

"STAGNATION" IS NOT "CONSERVATION"

Political agitation is again coming to the front regarding the natural resources of the West, and an attempt is being made to block their development by the cry of "conservation."

Under the present oil and mineral leasing bill and the federal water power act, both of which were passed less than three years ago as constructive measures in the public interest, more development has taken place in the West than would ever have been possible under the stagnation policy, misnamed "conservation," which previously prevailed. The best act ever drawn may need amendment and while these acts may not be perfect it would be folly to tamper with them in such a manner as to cripple the progressive industrial policy they have made possible under government cooperation and supervision.

A program allowing development of the great latent resources of the West does not mean a policy that turns over to private interests, without restriction, the heritage of either the states in question or the rights of future generations. A constructive national policy toward these resources does mean, however, that it is possible to draft legislation which will allow development so much needed by the present generation, while at the same time government rights are fully protected, as well as the interests of future generations.

The East has been misled by the cry of politicians who know little or nothing of the West, but who think the word "conservation" sounds good and will get them votes. Why don't they tell the people that the government owns 85 per cent of all the undeveloped water power of the West? Why don't they tell the people that no private interests can gain title to this other than for a lease period of 50 years, at the end of which time the government may take the development over itself or extend the lease, as it sees fit?

Why don't they tell the people that government oil lands are so protected that leases granted return to the government millions of dollars annually when oil is discovered, and when dry holes are sunk the government stands none of the loss?

Why don't the politicians tell you that the greatest hydro-electric development in the world today is taking place in the West, with the result that in a few short years there is every probability that all the transportation lines west of the Rockies will be operated by electricity?

Why don't the so-called "conservationists" tell of the wonderful saving this will mean in railroad equipment now tied up in coal cars; why don't they tell you the vast quantities of coal this will save and the labor that will thus be released for other useful occupations? Why don't they tell you the benefits the farmer will derive that can only come with electrical equipment? Why dont' they tell you the advantages that will come from the proposed harnessing of the Colorado river, which will irrigate and make habietable millions of acres of farm land that now lies waste in a half dozen states?

Why do the politicians tell you this is merely a western problem? Why don't they tell you that this is a national problem in which the East has more at stake than the West, for the simple reason that from the West come food and raw materials that make possible living and employment in the East? Why don't the politicians tell the people that the West must be developed in order to furnish an outlet in the future for the overflow population of the East? Why don't they tell you that every second water flows by a given point without being used, that it wastes to the sea?

Instead of "political conservation" this nation must have real conservation, which means utilization, which means utilization of our resources under legislation which permits private development by American citizens on the one hand, with proper protection of not only present but future government interests, on the other.

Any other policy than this is one of waste, not conservation.

Christian Endeavor Notes
(By Irene Hall)

A very interesting meeting was held Sunday evening, February 25. the subject was, "Some temptations to lie, and how to overcome them." The meeting was led by Jessie Cox, this being the first meeting she has led since entering the society and it was quite a success.

Walter Thomas will lead the meeting next Sunday evening. The topic will be "The Refuge Psalm,"—Psalm 91:1-16.

School Notes
Wilma Casebolt

Mabel Comnick has entered school in Genesee. Her former home was at Leland, Idaho.

The sixth grade has been awarded the Theodore Roosevelt picture for the highest attendance during the past month.

The opera, "The Bohemian Girl," will be given this (Friday) afternoon at the school building. Every one is cordially invited to attend. The opera will be given in simplified form by the Beta Literary society, in place of the usual program.

The high school dance given at the American Legion hall last Friday night furnished a good time for all. A five-pieve orchestra furnished the music for the occasion. It was a good, clean dance from beginning to end.

The last basketball game of the season will be played on the local floor this (Friday) evening, at 7:30 with the Lewiston team. The last game with Lewiston scored 13 to 11 in their favor. Most of the score was made by foul goals. It will be a long time before the next basketball season so let's have everybody turn out to this game and support the team.

E. E. Kennel of Colfax, Washington, visited our school this week to sell the students the year-book for which group pictures were taken a short time ago.

A student body meeting was held last Wednesday noon. A discussion of the emblems to be awarded the girls that played a required number of games was carried on. The discussion was that the presentation of these letters should be postponed until the high school constitution—in preparation at this time by a committee appointed by the student body president, Jesse Gray—is passed by the student body of the Genesee High school. Three pictures representing some of the high school activities were purchased by a majority vote of the high school.

Among the Sick

Walter Jain has been confined to his home by sciatic rheumatism for the past several days.

Ed. Vanoucek, one of Genesee's popular draymen, has been on the sick list for the past several days.

Verna and Ronald Geltz have been among the sick during the past week.

Mrs. Henry Craft and four children have been indisposed for the past several days but are convalescent at this time.

Those reported as ill last week are all making satisfactory progress toward recovery.

Seed Potato Demonstration

E. R. Bennett, who has charge of the certification of seed potatoes in the state of Idaho, will give a demonstration on sorting of potatoes for certification at the Washburn & Wilson seed store in Moscow on Saturday, March 3, at 1 p. m. This demonstration will be conducted under the auspices of the extension division of the University of Idaho and under the direction of County Agent O. S. Fletcher. Mr. Bennett will show what types will be accepted for final certification and what will be rejected.

It is necessary that all farmers who have grown potatoes for certification during the past season be present at this demonstration so that they may learn what types to select for final certification of the crop. Farmers who expect to grow certified seed during the coming season and other interested parties are invited to attend.

Farmers' Meeting In Legion Hall

There will be a special meeting of the farmers of the Genesee community at the American Legion hall in Genesee on Tuesday, March 6, at 1 p. m.

County Agent Fletcher will be present and deliver poisoning supplies that have been ordered by the farmers of the community.

Supplies will be sold to those who did not get to order in advance, and plans will be made for a concerted attack on the ground squirrels.

Other matters of interest will be taken up at the meeting. Lines of work for the coming year will be selected and project leaders and community chairmen elected.

Missionary Society Met

The missionary society of the Federated churches met with Mrs. Carl Erikson Wednesday afternoon. The meeting was planned in honor of Mrs. G. A. Bumpass and Mrs. Henry Hansen, both of whom have birthdays this week. It was also in the nature of a farewell for Mrs. J. H. Brakebill who is soon to leave for Portland to reside. Mrs. Brakebill was presented a handsome luncheon set by the ladies of the society.

Any husband can easily be bossed if he is cajoled into thinking he is being coddled.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. H. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Morning worship at 11 o'clock. Sermon subject, "Finding God in Everyday Tasks." Special music by the choir. Anthem, "My Recompense." Solo by Mrs. Niemann, "The Lord Is My Light."

Junior C. E. meeting at 2:30 Sunday afternoon. Young People's meeting at 7.

Church school workers meeting Monday evening at 7:30 at the home of Mrs. Casebolt.

The ladies' aid will meet Wednesday afternoon.

The regular communion service will be held Sunday morning.

Rimrock Highway District Call for Rock Crushing Bids

Sealed bids will be received by the board of Rimrock Highway Commissioners of Nez Perce county, Idaho, up to 2 o'clock p. m., March 10, for crushing 1,000 or more yards of surface rock. Equipment and rock to be furnished by highway district. Each bid to be accompanied by certified check of $50 as a guarantee that successful bidder will enter into contract.

The board reserves the right to reject any or all bids.

E. M. BECKER, Secretary,
35-2 Rimrock Highway District.

Force of necessity, it seems, is making the flapper a flopper.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account.

Many of the richest men in this country began their careers with nothing but energy and a determination to succeed. They saved their money until it could be turned to good account.

Why not you, young man? A savings account is the first step.

PERSONAL MENTION

Gerald Masman of Uniontwn was a Genesee visitor on Saturday.

Mr. and Mrs. Cecil Boliou were Lewiston visitors on Thursday.

H. J. Schwenne returned to Spokane Tuesday morning after a short visit at the John Geselchen home.

Mr. and Mrs. Joe Reil left Sunday afternoon for Missoula, Montana, where Mr. Reil is to take medical treatment.

Mr. and Mrs. Ed. Lillyrose and children returned Sunday from Johnson where they had spent the week-end with relatives.

Esther Clark returned to her school work at Colton Tuesday morning after a few days' visit with her parents, Mr. and Mrs. Grant Clark.

Geo. Boliou arived home from Kansas City, Missouri last Thursday afternoon after a six-months visit in that city. He is looking fine and says he is feeling fit. Kansas City was his home in his youthful days.

Linger Longer Club

The Linger Longer club met at the home of Mrs. W. W. Burr on Wednesday afternoon, February 28. The time was spent with fancy work. A delicious two-course luncheon was served by the hostess. The invited guests were Mrs. Chas. W. Smith and Mrs. Fred Morscheck.

The next meeting of the club will be with Mrs. Mahlon Follett on Wednesday, March 14.

MICKIE SAYS—

Collector Will Assist

Deputy Collector of Internal Revenue Charles N. Brearley has received the following communication from D. H. Blair, commissioner of internal revenue, Washington, D. C., granting an extension of time for the filing of income tax returns. The instructions follow:

To the colectors of internal revenue and others concerned:

Under the authority of Section 227 of the revenue act of 1921, a general extension of time is hereby granted domestic corporations up to and including June 15, 1923, for completing returns of income for the calendar year, 1922, the fiscal year ending January 31, and the fiscal year ending February 28, 1923, conditional upon the filing of tentative returns with the proper collector of internal revenue on or before March 15, April 15, and May 15, 1923, respectively, accompanied with at least one-fourth of the estimated amount of tax due together with a statement setting forth the reason why the report cannot be completed within the prescribed time, and a formal request for the extension.

"Tentative returns submitted in accordance with the foregoing should be on form 1120, on which should be written plainly across the face 'tentative return,' Only the name and address of the tax-payer and the estimated amount, if any, of the tax due need be stated.

"Any deficiency in the first installment as determined upon submission of the final return will bear interest at the rate of six per cent per annum from March 15, April 15, or May 15, 1923, respectively."

Idaho Legion Leads

The local post of the American Legion has received advices that the Idaho department of the Legion leads the entire country in percentage of membership renewals. Georgia, which has been leading, has dropped behind the Gem state within the last two weeks.

Idaho, if it holds its advantage, will be awarded the cup offered by Hanford McNider, post national commander, to the department with the highest average. The cup will be presented some time during the spring.

With this signal honor within our grasp a wave of enthusiasm has spread throughout the entire Legion membership in the state and reports show that in every city and hamlet an organized effort is being made to secure renewal of memberships.

Library Open Regularly

The public library is to be opened regularly on each Saturday afternoon and evening; also on each Tuesday afternoon after school hours, and in the evening. Chess and checker tournaments are being started, which everyone is invited to enter.

Progressives Meet

The Progressives met with Mrs. F. E. Dicus on Thursday, February 22. The afternoon was spent with needlework and social converse. The invited guests were Mrs. F. C. Shork, Mrs. R. I. Witty, Mrs. Nell Haymond, Mrs. Geo. Follett, Mrs. Chas. W. Smith, Mrs. J. H. Jackson, the Misses Ruth and Esther Martinson, Frances Vaughn, Edith Winegardner, Lela Patch, Irma Russell, Lindy Collins, Hortense Rockwell.

Miss Esther Martinson, Miss Edith Winegardner and Pearl Perkins assisted Mrs. Dicus in serving.

A vote of thanks was extended Mr. and Mrs. Bressler for their radio entertainment on the night of the Valentine party.

The next meeting will be with Mrs. Geo. Follett on Thursday, March 8. Mrs. W. E. English will assist Mrs. Follett in entertaining.

Bluebirds on the Job

Bluebirds have arrived in this section of the country, evidently looking for a place to locate. Whether this is a harbinger of spring or not remains to be seen as all the rest of the "harbingers" have been badly frostbitten thus far.

On Way Home

Word has been received by the News from Mr. and Mrs. Chas. Scharnhorst to send their paper to Clarkston in future as they would leave Los Angeles on Tuesday, February 27, for their home at Clarkston.

Federated Ladies' Aid

The Federated ladies' aid will meet with Mrs. G. A. Bumpass on Wednesday afternoon, March 7. All members are asked to be present.

Tuesdays Entertain Husbands

The members of the Tuesday club very pleasantly entertained their husbands last Tuesday evening at the home of Mr. and Mrs. W. W. Burr, with a 6:30 dinner, after which pinochle was played during the evening. The ladies' honors were won by Mrs. G. E. Sampson while those of the gentlemen were captured by W. E. English. The hostesses of the evening were Mrs. W. W. Burr, Mrs. Nell Haymond, Mrs. F. C. Shork, Mrs. W. M. Herman, Mrs. F S Casebolt, Mrs. Fred Nagel, Mrs. J. H. Jackson and R. I. Witty.

Progressives Meet

The Progressive Needleworkers' club met with Mrs. F. E. Dicus last Thursday afternoon, February 22. The time was spent with needlework and social converse and a very pleasant time was had.

The invited guests were Mrs. F. C. Shork, Mrs. R. I. Witty, Mrs. Nell Haymond, Mrs. George Follett, Mrs. Chas. W. Smith, Mrs. J. H. Jackson, Misses Ruth and Esther Martinson, Vaughn, Winegardner, Patch, Russell, Collins and Rockwell.

Federated Ladies' Aid

The ladies' aid of the Federated churches will meet at the home of G. A. Bumpass on Wednesday, March 7. Mrs. Chas. Herman and Mrs. Carl Erikson will assist in the entertaining.

A New Arrival

Mr. and Mrs. Ellis Odberg are the proud parents of a son, born at St. Joseph's hospital, Lewiston, on Sunday, February 25. Mother and babe are reported as doing nicely.

They Bring Honor to State College

Practical experience in the breeding, feeding and judging of live stock is a part of the education offered by the State College of Washington to the young men who are taking animal husbandry courses. These young men study text books, to be sure, but it is the experience with the animals themselves under scientific direction that makes the studies most worth while.

The young men in this picture comprise the State college judging team that won at the Western Royal at Spokane in November. From left to right they are: Cecil Compou of Walla Walla county, Leonard LeGrant of Spokane county, Warren T. Love of Whitman county, G. O. Baker of Asotin county and Frank Rupert of Yakima county.

The three steers shown in the layout were a part of the college farm live stock equipment that enabled

the young men to perfect themselves in the art of judging. The steers were fed and exhibited by the animal husbandry department under the supervision of Professor Howard Hackedorn, head of the department, though other members of the animal husbandry staff, especially Herdsman Richard Hanna, deserve credit for their accomplishment.

Their Shorthorn steer in the picture is Topsman's Type, sired by Hercules Topsman of the Day & Rothrock herd. His dam is Cumberland Maid of the college Shorthorn herd. This steer was not only grand champion at the Western Royal, but won honors at the Pacific International and later went to the Chicago International where he defeated all but one of the awarded first place in the college steer competition at Chicago, in which animals from 14 colleges competed. He, therefore, automatically was made champion college steer at the show.

Incidentally, there is a story going the rounds that the college owes to Herdsman Hanna the credit for the honor the steer brought it at Chicago. Topsman's Type did not win first place at the Pacific International at Portland, and, says the story, the college authorities could not justify themselves in sending him to Chicago to compete with the select steers from all over the country. But Mr. Hanna knew that steer, and Hanna is a judge hard to beat. Confident that the youngster was worthy of the hardest competition, he himself shouldered the responsibility of taking him back to Chicago as a personal venture, though when he was given class of 39 fat steers in open competition with the world. He was first place in the college steer class and second in the class open to the world. Mr. Hanna properly and graciously gave the college the credit.

The white-faced steer shown in the layout is Washington Model, sired by Rupert's Model 14th of the Henry Thiessen herd of Sweetwater, Idaho. The black steer is Queenman of Washington, an Aberdeen Angus sired by Queenman C. B. 3d of Congdon & Battles breeding of Yakima. Both were winners in class at the Western Royal.

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

THE STRAWBERRY PATCH

Where so many varieties of berries can be grown in nearly all parts of the state, few farm families or suburban homes should be without their berry patch. What a wealth of tasty variety is added to our tables by the jellies, jams and preserves made from our berries to say nothing of fresh strawberries, raspberries, blackberries and the other bush fruits in their season.

Strawberries fit into a wider range of soil and climate than any of the other berries and are quicker to serve the grower with fruit. Rich sandy loam is the best soil for this berry, but there are varieties which thrive in a light sandy location. Some varieties do quite well under all conditions.

None of the berries will thrive in a soil which is not well drained. Frosty locations should also be avoided. A fair amount of humus is desirable as such ground is more fertile, works easier and retains its moisture well in dry periods. If the soil is either very light or of a heavy clay nature, the application of a considerable amount of well-rotted manure will be profitable.

Either fall or early spring plowing will prepare the ground, but a sod is best if plowed in the fall. The plants should not be put out until the top soil is in a good state of tilth, which can be obtained with the disc and harrow on the farm or with the spade and rake for the home patch.

Plants can be set in many parts of the state either in the spring or fall, but under most conditions not enough is gained by fall setting to give it much advantage over spring setting.

Good healthy young plants should be obtained. Runner plants from young plantations are usually best. The roots should be vigorous and of a light brown color. Black roots should not be set. Plants from the same locality are usually best though they can be shipped long distances and there are many reliable nurseries that sell them.

In the western part of the state the berries will be best planted in hills, one plant in a place. Rows should be about 30 inches apart with the plants spaced 12 to 18 inches apart. Plants in hills produce well and are more easily kept free from weeds. In eastern Washington, plants are set both in the matted row and in the hill system. When the matted row is used the rows should be about 42 inches apart and the plants spaced about 8 inches apart. In the hill system the runners are kept cut off while they are allowed to root in the matted row.

It will pay to make the rows straight whichever way they are set.

The cultivation should be thorough during the early part of the season, especially where water cannot be obtained for irrigation. In western Washington the weeds and grass are a serious pest and the berry patch should be kept clean during the fall in order that the expense of cleaning them out in the spring may be lessened. It is often difficult to get the grass out of the hills at all, where it gets a good start in the fall.

There are many good varieties of strawberries which do well in Washington, but the following lists have been grown successfully in their respective districts:

Western Washington — Marshall, Gold Dollar, Goodell, New Oregon, Etersburg 121, Wilson, Clark's Seedling, Magoon, Progressive. (Everbearing), Superb (Everbearing).

Eastern Washington—Gold Dollar, Clark's Seedling, Glen Mary, Wilson, Marshall, Progressive (Everbearing), Superb (Everbearing).

Black—See that chap coming out of the chemistry lab? That's Jay. The poor boy likes girls, but he's so bashful, he acts like his own litmus paper.

White—Howzat?

Black—Why, when he's with a girl he turns pink, and when he's alone he gets blue.

How the Camp Fire Girls Are Building Citizens

The Camp Fire Girls' movement has spread in the state of Washington until now its members number approximately six thousand. Northern Idaho, although Camp Fires were only recently organized there, has nearly a thousand, and the state of Oregon several thousand more. These numbers are being rapidly increased and the girls' organization is attracting more and more attention in the northwest each year.

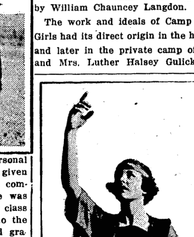
The organization of Camp Fire strives to find for its members romance, beauty and adventure in everyday life; to foster the personal relation of the mother to her daughter, to cultivate intimacy between them, and the integrity of the home as the center of their relations; to promote the health and general happiness of the girl; and to teach her, not only in useful occupations, but in the spirit of cooperation and team-work. Camp Fire training is character building, to a high degree.

Camp Fire Girls are encouraged in earning and doing worth-while things by a system of awarding honors. The honors listed in the Camp Fire Girls' Manual are divided into the Seven Crafts: Home Craft, Health Craft, Camp Craft, Hand Craft, Nature Craft, Business Craft, and Citizenship or Patriotism. Honor beads are won in each craft.

Work and Ideals.

The initial steps looking to the formation of a national organization for girls were taken by Mrs. Charles H. Farnsworth; the name of Camp Fire Girls and the ranks were suggested by William Chauncey Langdon.

The work and ideals of Camp Fire Girls had its direct origin in the home, and later in the private camp of Dr. and Mrs. Luther Halsey Gulick, on



Camp Fire Girl, in Ceremonial Gown, Making Hand Sign.

Lake Sebago, Maine. Here, for a number of years, Dr. and Mrs. Gulick, with the desire to meet the needs of their own daughters and their daughters' friends, worked out the beginnings of what was later, with some modifications, accepted as the ritual and form of the Camp Fire Girls.

The name of Dr. and Mrs. Gulick's camp, "Wohelo," which had been formed from the first two letters of each of the three words, "Work, Health and Love," became the watchword for the new organization, while the words "Give Service" became the slogan.

Organized in 1911.

Preliminary work of forming the Camp Fire Girls as an organization was done during the summer and fall of 1911. During the winter the manual was prepared, funds secured, and an organization created and offices opened. On March 17, 1912, it was given to the public; hence that date may be said to be the birthday of the Camp Fire Girls' movement.

National headquarters of the Camp Fire Girls was established in New York city and consists of officers, a board of directors and a national advisory council. This national headquarters has general supervision over the district organizations, which are located at the natural centers of big fields of camp fire activities. Spokane and Seattle have two of the district headquarters of the Northwest.

The camp fire activities of a district are actively supervised by the district executive secretary. She organizes new camp fires, works in the field to increase membership, is in charge of the summer camps, and carries on the routine business of the headquarters' office.

The General Organization.

District organizations are governed by a general district council, composed of representatives of every religion, making it nonsectarian, and of representatives of all civic organizations. This general council elects a board of directors, who select the executive secretary, subject to the approval of national headquarters. Miss Ruth Brown is the executive secretary in charge of the Seattle office of the Camp Fire Girls, and Miss Annette Francisco is the Spokane secretary.

Each separate group is called a Camp Fire, and must have an adult guardian and at least six members and not more than twenty. Only girls over twelve years of age are eligible for membership in a regular camp fire.

Ceremonial meeting of a Camp Fire are held monthly, and at summer camps they are usually held weekly. At these meetings a ritual is used, honors awarded, ranks are conferred and new members are received.

Although the Camp Fire Girls recently put on a campaign in the Spokane district to raise $10,000 to carry on their work, and enlarge and improve their summer camp at Coeur d'Alene lake, they are largely self-supporting. Each girl pays dues of a dollar a year, and at summer camp each girl pays her share of the expenses of the camp.

Three Ranks of Girls.

Camp Fire Girls are divided into three ranks: Wood Gatherer, Fire Maker and Torch Bearer. These ranks mark the stages in development in Camp Fire work. The Junior Camp Fire Girls are composed of the girls under twelve years of age and are called "Bluebirds." They are divided into the ranks of "Nestling," "Fledgling," and "Flyer."

While in the summer camp the girls spend their days according to a set schedule, which insures that they have plenty of healthful exercise, plenty of work and study, and plenty of rest and sleep. Reveille is at 6:45. Then they begin the day with a setting-up exercises on the beach in bathing suits. A brief period of brisk exercise is followed by the morning dip in the lake, which lasts only a moment.

After the dip the flag-raising and salute to the flag is held, and the national anthem is sung. At breakfast the girls sing their grace. From breakfast they return to their tents and clean the tents up for the inspection which follows immediately. After this the morning sing is held on the beach and the announcements for the day are made. Then the girls have their choice of half an hour at either playing games or taking rowing lessons.

First Aid Work.

Classes in bandaging and other first aid work begin at 10 o'clock. At eleven the girls go on a hike to study nature lore. This is followed by swimming and a free period before dinner at noon. The mail is distributed at the dinner table. During the rest hour from one to two o'clock the girls are required to lie on their cots to rest and sleep. From two to three they are free to rest or play. From three to four there are classes in basketry, batik work, and the decorating of the Camp Fire Girls' robes.

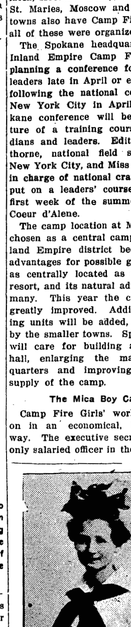
The girls go in for another swim at five o'clock and eat supper at six, usually outdoors, under the trees or on the beach. Taps is sounded at nine o'clock. After that all must be asleep and not a sound is heard in camp.

The average summer camp has a program every evening. Sometimes it is a "Stunt Night," when the girls organize Camp Fires in their towns. This was done last October.

New Camps Organized.

In November organization work was done at Sandpoint for Sandpoint, Bonners Ferry and Bonner county, Dover, Laclede, Wrenco, Hope, Spirit Lake, Coeur d'Alene, Plummer, Montevlow, Sagle, Priest River and St. Joe. Potlatch, Kootenai Deary, Coeur d'Alene, St. Maries, Moscow and some other program every evening. Sometimes program every evening. Sometimes

Here are shown two "Torchbearers." Camp Fire Girls are divided into three ranks the members of the highest rank being called Torchbearers. In order to reach this rank the girl must meet many requirements. Among other things she must lead a group of younger girls for three months, at the same time continuing her work with her own group. Before the rank of Torchbearer is awarded to her she must receive the unanimous vote of the girls of her group, recommending her to the honor.



Typical "Bluebird," Junior Camp Fire Girl, Under 12 Years of Age.

HOMEMAKERS' CORNER

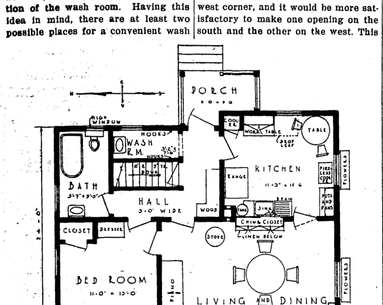
Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

This floor plan offers many interesting and practical features. The most outstanding points of interest include: A house built from this plan would be found to be a practical size for a family of four; a man, his wife and one or two small children.

A second bedroom can easily be added to the northeast corner of the house by making a change in the location of the wash room. Having this idea in mind, there are at least two possible places for a convenient wash room. The first and most probable place is offered by the south end of the porch.

The floor space in every room is sufficiently large to care for the needed furniture. Every room, even the bathroom, is provided with cross ventilation. The windows are well arranged and sufficient in number to light the entire house. Doors are well lighted. Any part of the house may be reached through the hall without the necessity of passing through any one room.

The bathroom is private, yet convenient to every other room in the provision for cross ventilation and give greater satisfaction during the summer days.



PLAN OF A THREE-ROOM BUNGALOW

Arrangement of the working surfaces in the kitchen will be found convenient by the average housewife. It is not ideal, as that would necessitate an arrangement places the sink between the range and the work table with a comfortable space intervening. A change might be suggested in the hot water tank—to place it in the bath room, thus helping to heat that room and giving more work surface to the left of the sink.

Next week we will give another Three-Room Bungalow.

American financiers are negotiating with the French government for a monopoly on the manufacture and distribution of tobacco in France.

The Pacific Northwest Products exposition at the Bon Marche, Seattle, which has been open for the past two weeks, will close on Wednesday evening, after almost successful season. The attendance has run into the thousands and hundreds of people from various sections of the United States have registered and requested literature for themselves and friends. In connection with this, club women of the state will launch an intensive educational campaign of home products during the week of February 19, to be known as Washington Products week.

The A.B.C. of Good Tea

THIS diagram shows clearly one reason for the superior flavor, strength and aroma of RIDGWAYS TEA.

In order to get the very choicest pickings, only those leaves marked "A," "B" and "C" are gathered for Ridgways. These tender, young tip-leaves give to Ridgways Tea that rare quality of flavor which distinguishes the famous Ridgway blends.

The leaves marked "D," "E," "F" and "G" are coarser and less flavory and therefore *are never used by Ridgways.*

This carefully guarded Ridgway quality also assures more cups to the pound. When you buy Ridgways Tea you not only get the best tea, but actually more of it than is possible from inferior tea. As an example of rare good tea we suggest that you order Ridgways (GOLD LABEL) the *Genuine* Orange Pekoe.

"The Finest Tea the World Produces"

Ridgways Tea

If your grocer cannot supply you write: Ridgways Inc., 60 Warren St., New York

WASHINGTON NEWS

A new company has secured possession of the Epsom salts deposits near Oroville and will refine and put up the salts at Oroville

---

Enrollment of the graduate school at the University of Washington is nine times as large as it was in 1911, when the school was established.

Irrigation of 5300 acres adjoining Hanford by water from artesian wells is to be undertaken by the Columbia Valley Land and Development company, a charter for which has just been applied for, with a capitalization of $350,000.

John D. Rockefeller Jr. has donated $10,000 to the University of Washington Y. M. C. A., to be used in the completion of its new $100,000 building near the campus. When finished, the new building will equal any college Y. M. C. A. building in the country, according to Charles L. Maxfield, university secretary, and is being taken as a model for similar buildings in other collegiate institutions.

Clay resources of the state of Washington were described to clay products manufacturers from all over the United States by Prof. Hewitt Wilson, of the University of Washington College of Mines, at the annual meeting of the American Ceramics society at Washington, D. C., February 12-16. Professor Wilson went to the national capital to read a paper before the association on the subject, "Some Calculations and Investigations in the Drying of Clay Wares," which is the result of extensive study by him on the clay resources of this state.

Seattle is to become the only rabbit canning city in the United States. Capt. H. S. Throckmorton of the Frontier and Fur company, has established a rabbit farm at Port Madison where rabbits will be grown for the particular purpose of being canned and shipped all over America. Australia last year shipped nearly $4,500,000 worth of canned rabbit to Great Britain alone.

More than $60,000 of the $240,000 capital and surplus of the Brotherhood National bank of Spokane has been paid in, according to announcement of W. R. Coyle, treasurer of the organization committee. The bank is being organized by the Brotherhood of Railway Trainmen and allied crafts and is to be capitalized at $200,000, with a surplus of $40,000. Half of this amount must be actually paid in before the final granting of the charter.

Owing to heavy competition from the Gulf of Mexico, the shrimp industry has not thrived in the northwest, according to Dean John N. Cobb, directors of the College of Fisheries.

Through the use of the new process, Dean Cobb says, the shrimp industry eventually will establish itself here, adding many thousands of dollars annually to the resources of the state. Several thousand cases already have been packed by this method.

WASHINGTON COMPETES WITH GULF OF MEXICO

Process for canning shrimps in hermetically sealed cans which eventually will build up a thriving shrimp industry in this state, has been worked out in the laboratory of the College of Fisheries of the University of Washington.

Boys' and Girls' Farm Club Work

Under the community plan of organization, 67 boys and girls' club members of Sunset, Spokane county, made over $3000 above cost, won three state championships and staged a fair during the past year. These figures and facts were compiled by the club members and given at a recent meeting of the club.

Three purebred sows were shipped to club members at Waterville under the financing plan of the Spokane & Eastern Trust company. One purebred sire was secured through the efforts of the county agent, while orders for a large number of purebred hogs have been received and will be handled during the month.

Twenty-six members of boys and girls' clubs in Pend Oreille county reported a net profit of $822 from a total business of $1366 for 1922. These included clubs in canning, dairying, gardening, pigs and sewing. Through the pig clubs, conducted under the extension department of Washington State college, the quality of swine in the county has been much improved, according to extension service officials.

LIVESTOCK

Purebred breeding sows should be fed on a good ration. C. M. Hubbard, livestock extension specialist of the state college, recommends either of the two rations: Ground oats, 30 pounds; ground barley or corn, 30 pounds; millrun or shorts, 30 pounds; and tankage or fish meal, 10 pounds. Or the feed may be mixed in the following proportions: Ground oats, 45 pounds; ground wheat, 45 pounds, and tankage or fish meal, 10 pounds. Skim milk replaces tankage or fish meal; peas may replace oats; wheat may replace corn or barley if cheaper. A good legume pasture should be available at all times in season, in sections where they can be grown.

Can you beat it? George Spray, a farmer living in Big Potlatch canyon below Juliaetta, Idaho, has a young cow that on her fourth birthday gave birth to twin calves. This cow a year before gave birth to another pair of twins which gives her a record of production of one calf a year for each year the mother has lived.

There were approximately 30 per cent more sheep and lambs on feed on January 1, 1923, than in January, 1922, according to the estimate issued by the division of crop and live stock estimates of the United States bureau of agricultural economies. This compares with an estimated increase of 20 per cent on December 1, 1922, above December 1, 1921—an increase due to enlarged feeding operations in Colorado and western Nebraska and to increased supplies at feeding stations adjacent to Chicago. Of the two principal feeding areas the corn belt states and the western irrigated region, the largest increase was in the latter 40 per cent above January 1, 1922, as against 25 per cent increase on December 1, 1922, above December 1, 1921.

SEEDS

Planting time will soon be here. Be prepared and have a supply of seeds that you can depend upon to produce results. Our seeds are specially selected for their adaptability to Northwest conditions, and are giving satisfaction to thousands of planters. Ask for our free catalogue.

J. F. BARNES, Local Agent

Sir A. Conan Doyle asserts that he can talk to spirits in the other world, but we doubt their ability to hear him warble.

A good way to kill off a windbag is to encourage him to talk himself to death. Even physical endurance has an end.

Try a Classified Adlet in The News If you have anything to sell or trade or exchange. You will get results. And the cost is small.

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend for the things we need and save money reasonably, we display the right sort of faith. We put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

NEWS NOTES AND COMMENT FROM PAPERS OVER U. S.

"When the Devil's Sick, Etc."

The party that is out of power has the most ideals.—Washington (D. C.) Post.

Maybe He Hasn't Heard of Herrin

Samuel Gompers can speak plainly about mob outrages in Arkansas, but he has been strangely silent about the Herrin (Ill.) massacre,—Pittsburg Gazette-Times.

When W. J. B. Got Out

William J. Bryan is beginning to talk about foreign policies, about his first reference to that subject since he confided to the Austrian ambassador that the president didn't mean a thing by his war talk.—Portland (Me.) Express.

League Works Wonders

Don't let anybody tell you the league of nations has done nothing. It has ordered the stenographers attending the present council not to appear in brilliant colors, low necks and short sleeves. An organization that can boss a bevy of stenographers and exact compliance with its demands is not quite dead in the shell.—Toledo Blade.

Let 'Em Fight It Out

Now that our soldier boys are well out of range of their guns, let the Old World nations fight and continue to fight until they get enough of the fool fighting business, say we.

After they get their fill of fighting maybe they'll settle down, go to work and at least start to settle up.—Springfield (Mo.) Republican.

Soviets Drop All Masks

The monstrous blasphemy of the demonstrations by which the Russian bolsheviki attempted to satirize the Christian festival of Christmas may well horrify even those calloused persons who heard with cynical indifference of their orgies of massacre and plunder.

This is the first time since they have been in power that the bolsheviki have ventured in so open a manner to reveal their purpose to destroy religion. While they felt less sure of their power, they allowed the people to continue the usual forms of worship with little interference. Last year the famine was seized upon as an excuse for plundering the churches, but the treasures thus confiscated appear not to have been used to relieve the suffering of the starving citizens.

For protesting against such pillage, many of the clergy, including the Patriarch and principal bishops, were imprisoned as "counter-revolutionists" and some of them have been executed.—Buffalo Express.

Pan-America

The Pan-American Union is the most hopeful and helpful association of nations the world has seen. It aims at nothing but the voluntary cooperation of the sovereign states in this hemisphere on terms of full equality and for their common good. No associated states or inner ring of states or majority of states has the remotest idea of coercing another or constraining it in any way. Each retains full freedom to manage its own affairs, to settle its relations with its neighbors or even to fight out its disputes. The end sought is that the nations shall befriend one another, promote their welfare in proper ways and use their influence for peace.

Our state department sees no reason why the Old World league of nations should inject itself into New World affairs, but excellent and compelling reasons why it should leave this half of earth alone. The Paris league is only a futile instrument, built on wrong principles and impotent, as has been proved, for good. Our citizens saw that, and by a majority of seven millions decided to keep out of it and keep it out of American affairs. Some Spanish-American states joined it, but they would be the first to resent any coercive interference on its part in their affairs. Its influence is negligible even in Europe and nil on our side of the sea; but the All-American Union has a future of the greatest promise.—Rochester (N. Y.) Post Express.

DAIRYING AT NAMPA ADDS MILLIONS TO COMMUNITY

Approximately 84 carloads of butter, valued at about $840,000, were shipped from Nampa creameries during 1922, according to the reliable figures secured yesterday. In addition to this approximately 80,000 gallons of ice cream, worth in round numbers $120,000, was expected.

From these figures it is quickly seen that Nampa's two big modern creameries and ice cream plants shipped out during 1922 a cool million dollars worth of finished products. The big bulk of this money was returned to dairy farmers of the Owyhee valley and probably will more eloquently than in any other way why Nampa has not felt the business depression to the extent that other sections have. The cow has kept a steady stream of cash money coming into the valley.

Big Milk Shipments

But the above encouraging statistics are only little more than half of a good story. Over and above the output of the local creameries, the big local plant of the Carnation Milk Products company has shipped 250 cars of milk, worth about $800,000.

So, by and large, Nampa has sent to outside markets about $2,000,000 worth of dairy products during 1922.

Local consumption of butter, ice cream, raw and evaporated milk is not reconed in any of the figures quoted.

Price Has Been High

Throughout the war good prices have prevailed for butter fat and milk. Butter fat has brought from 40 to 50 cents per pound. Raw milk has sold from $1.65 to $2.40 per hundred. At the present time it is bringing the producer $2.40 per hundred.

Another indication of the growth of the dairy industry in the valley is the fact that there will be about 25 per cent more dairy cows in the Nampa valley during 1923 than at the beginning of 1922. This is partly due to the natural increase and to the importation of high grade dairy animals from the middle west states.

Poultry Big Item

The Poultry industry, which goes hand in hand with the dairy industry, for skim milk is the greatest egg producing food known, has also had a big year during 1922. Accurate figures place the number of carloads of eggs shipped from Nampa during the last twelve months as 65 carloads. The value of a car has been varied from $3,600 to $5,000.

Working in Reverse

"Gosh, old man, you actually are getting fat! What have you been doing to get all that flesh on your bones?" exclaimed his friend.

"Oh," said the former thin man, "I began to taking the reduction dope, diet and exercise they prescribed for my wife and I began to pick up right away. And she started in on the tonics and diets I had been taking for to make me fat and she has already lost twenty pounds."

GOV. MOORE GIVES REASON FOR VETOING PRIMARY BILL

(Continued from first page)

merce, our business clubs, our lodges the primary league which the instigators of this bill found necessary to promote to further their purposes, all testify to the necessity and power of united effort. What is true of our everyday activities is no less true of affairs of state. Political parties are but associations formed by citizens holding similar ideas as to principles of government. Such associations insure order in the administration of our political affairs—without them there would be chaos."

Missing Manners

A feminine voice was heard from the steps of a crowded car: "Oh, get in dear; some one will give you a seat."

The next moment two young women entered. The men in the car were on their mettle. They read papers sternly. Those who had no papers closed their eyes and pretended to slumber. The two certain women glared down the car in vain. The car went on for half a mile, and then a man alighted.

"Theres a seat for one," said the conductor.

"Don't take it, dear," said one of the young women; "some man will want it."

In the moment of defeat she triumphed.

Judges should adopt a new rule. When granting divorces they should remarry the principles and tell them to start all over again.

THE GENESEE NEWS

VOL. XXXIV — GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MARCH 9, 1923. — NO. 36

WHAT HAPPENED HERE TWENTY YEARS AGO

Dan Burr returned to Pullman Monday to resume his studies at the W. A. C.

Stephen Broemmeling and bride arrived home Sunday from Seattle. They will take up residence on one of the Broemmeling places northwest of town.

A. Scroggin completed a sale Tuesday of this week of his 160-acre farm east of town, known as the Ezra Follett farm, to Sherm Wahl, for $4,000. This gives Mr. Wahl a farm of 505 acres.

Victor Hasfurther has purchased the "green house" formerly owned by O. V. Porter, in the western part of town, and the coming fall expects to move in from the country to give his children the advantages of the town schools.

E. T. Platt and son, John, took back to Salmon river range last week 140 head of young cattle which they had been caring for here during the winter. Mr. Platt says that cattle they wintered up there are in excellent condition and that nothing was gained by bringing a portion of them out.

A deal which has been on for some time was closed the first of the week whereby Mrs. Caroline Bressler becomes the owner of the Harris block, now occupied by George Hobson, T. Driscoll and the I. O. O. F. lodge, having bought the same from the Exchange National Bank of Spokane.

Joe Kambitsch returned Monday from Redlands, California, where he went some months ago accompanied by Mrs. Kambitsch in the hopes that her health would be improved. He reports her doing nicely. He will remain here long enough to put in his crop and will then return to California.

W. J. Herman has solved the problem of ridding his greenhouse of aphis. During the past two or three weeks of warm weather the little pests had become quite troublesome. He gathered up a large number of lady-bugs and turned them loose among the plants and in a few days not an aphis was to be seen.

Saturday evening a number of Miss Lulu Brennan's friends gathered at her home for a surprise party in honor of her birthday. The surprise was complete, the young people finding Miss Lulu sitting demurely in a rocker doing fancy work. We were requested to say that her age is "sweet sixteen." Those present were: Misses Kate Kennedy, Mae Keane, Rachel Biram, Lulu Spears, Mae Herman, Mabel Reed, Lulu Fowler, Pearl Owen, Belle Brant, Edna Borg and Clara Hobson; Messrs. George McMahon, Will Herman, Eli Morgan, Le Rue Iler, Reed Klapp, Charley Stamps and Artie Keane.

Fred Hampton and three children, after an absence of three months at his old home in Asheville, N. C., returned home Tuesday evening. They were accompanied by a large party of home-seekers, among them being J. B. Halland, wife and two daughters and a son; C. B. Clark, wife and four children, and Will Sharp and Carson Moffett. One family in their party went on to Moscow. Mr. Hampton states that during the present month another party numbering 35 will leave Asheville and be headed for this section. On the same train that he came out on was a party of 15 from Arkansas who were headed for Stites. He states that all trains are crowded and a great number have resolved to change locations. Mr. Hampton states that while it is hes been a pleasure for him to visit his old home, yet to reside there after his residence in this country would be impossible.

Radio Nuts

In nearly every community throughout the United States they have what has become to be termed a "Radio Nut Club"—and Genesee is no exception to the rule, for more and more people are becoming interested in the radio game. There are at least eight or ten sets in Genesee and community and many pleasant evenings are spent listening to concerts and programs of various kinds from all sections of the United States and Canada.

It is a common occurrence to hear one Nut say to another Nut, "Well, I had so and so last night, did you get anything good?" "Yes, I heard a wonderful concert at Kansas City, Chicago, Los Angeles, San Francisco," or some other place—and its real fun, too.

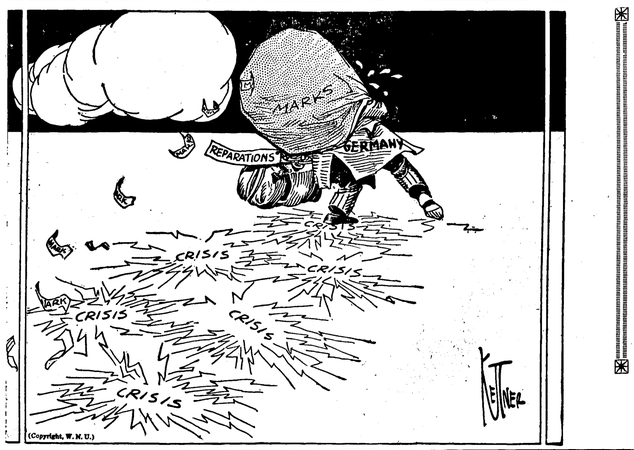
Members of the Genesee Radio company, who have receiving sets of all kinds for sale, went out to the Shafer school house last Saturday night and gave the people of that community an evening's entertainment which was said to have been very good.

Eastern Stars Entertain

The Eastern Stars entertained at their hall last Thrusday evening in honor of Mrs. John Smith and Mrs. J. H. Brakehill who are soon to leave for new locations. A delicious supper was served after which a program was given. Both ladies were presented a piece of silverware.

Merchants' Convention

August 14-16 were chosen as the dates for the merchants' convention and market week in Spokane, according to the decision of the management committee who are in charge.



Thatcher-Jones Nuptials

Mr. and Mrs. Harry A. Thacher announce the marriage of their daughter, Miss Elizabeth Thatcher, to Eugene C. Jones of Atlanta, Georgia. The wedding was solemnized Thursday, March 1, in Seattle, where the young people will reside.

The bride is the daughter of Mr. and Mrs. Harry A. Thatcher of Moscow. She graduated from the Moscow high school in the class of 1920 and attended the University of Idaho for two years, where she was a member of the Gamma Phi Beta sorority and prominent in social circles. For the past year she had been stenographer in President Upham's office. The groom came west from Atlanta, Georgia, and attended Washington State College at Pullman for three years, leaving in January to accept a position at the D. Ehmer Veterinary hospital in Seattle. He is a member of Kappa Sigma fraternity. At the beginning of the World war he left school and enlisted in the United States navy, where he served for four years, returning after the war to complete his course in college.

The best wishes of a host of friends will follow the young couple as they go on life's journey.—Star-Mirror.

The Thatcher family for many years were residents of Genesee and Miss Elizabeth was born here and resided here with her parents until they removed to Moscow several years ago.

The Genesee friends of the young lady wish her everything that is good through life.

More Western Hogs Needed

According to dependable records at our livestock killing centers—Portland, Tacoma, Seattle and Spokane—it has been shown that 448,332 live hogs were brought to slaughtering plants in these cities in 1922, from the Dakotas and Nebraska.

The average value of these hogs was $20 per head. Therefore, in 1922 $8,966,640 was sent out of our territory to make the farmers of the Mississippi valley more prosperous.

The reason these hogs were brought from so far outside of our territory is simply that the farms of Oregon, Washington and Idaho are not producing enough hogs to take care of the local demand.

A few more hogs per farm will keep about $9,000,000 here at home in 1923. Can your section use any of that money? If so, get busy and raise a few hogs for the market.

Weather and Roads

The weather during the past week has been varied enough to suit the most exacting—anything from five inches of snow, which fell Sunday and Monday, to plenty of sunshine, mixed with other weather ingredients, but no severe cold.

In speaking of roads—all who travel either the state road or ordinary dirt ronds say there is no difference coming from Moscow until one reaches the head of the Lewiston grade, which is always good.

Basketball Game

The Genesee high school basketball team won by a score of 23 to 19 in a hard-fought game with Uniontown on the local floor last Friday night. The game was the last of the season and also the last for some of the high school boys who will graduate this year.

The game was interesting from start to finish and was considered one of the best games played by the local team this season.

We do all kinds of printing.

GENESEE HAS "RINKY DINK" CLUB—NOT GOSSIP SOCIETY

The home of Mrs. C. N. Herman was the meeting place for the newly-organized ladies' club, which goes under the name of "The Rinkey Dinks" for the present. The gathering was held last Friday. The reporter for the new club handed in the following report of the meeting:

The ladies spent the time in doing fancy work and in pleasant conversation. A lunch was served by the hostess, Mrs. Chas. Herman, which certainly was a feast and was greatly enjoyed by all present, as we all know the quality of Mrs. Herman's kitchen art.

This ladies' club claims the distinction of having two gentlemen members, of which they are very proud. Said club also claims to be something new and a little out of the ordinary in that they want people to distinctly understand that they do not gather for the purpose of gossop—not at all.

The previous Friday the ladies met at the home of Jas. Hansen, their star members, where a dandy luncheon was served and very enjoyable music listened to. Officers were elected for the coming year or, rather, the remainder of this year. As the ladies were just at the point of beginning the business session of the meeting nearly all the members became very much interested in Mrs. Anna Hanson's splendid assortment of house plants and promptly proceeded to her residence, with the exception of Mrs. Chas. Herman, H. Rees and Mrs. Joe Reil, whereupon they decided it was up to them to uphold the dignity of the club and attend to the business on hand without further delay. Mrs. Herman was nominated for president without any opposition from those present. At this time the ladies who had deserted the meeting returned and were highly indignant because of the high-handed way the meeting had been conducted—but as time waits for no man, they had to bow to the inevitable and proceeded to finish the election of officers, Mrs. Joe Trautman being made treasurer and Mrs. Reil secretary.

Then came the discussion of what to name the club. Each of the ladies had a special name of her own, among some of those mentioned being "The Rinky Dinks," "Elder Bloom," "Friday Club,"—and "Old Hen Party"—which brought down the wrath of all upon the head of the one mentioning such an impossible name, as they all claimed to be chickens. As the ladies failed to agree on a name the club is destined to remain, for the present, at least, "The Rinky Dinks," or the club without a name.

Those present at the Herman home were Mrs. Norman Nelson, Mrs. John Lawson, Mrs. H. Rees, Mrs. Joe Trautman and daughter, Dorothy, Mrs. Henry Hanson, Mrs. Ira Hanson, Mrs. W. D. Woodward, Mrs. Joe Reil, Mrs. C. C. Swenson, Mrs. Dick Green and son, Mrs. Frank Qualey, Mrs. Al. Mayer and son, Mrs. Virgil Sampson, Mrs. Fred Perkins, Mrs. Otto Johnson and son, Mrs. Frank Hoorman, Miss Mary Schlueter, Mrs. Chas. Ingle and daughters, Jas. Hanson and Ira Hanson.

The next meeting will be held this (Friday) afternoon at the home of Mrs. Martin Foster.

The Aftermath

"When I looked out of the window, Johnny, I was glad to see you playing marbles with Billy Simpkins"

"We wuzzn't playin' marbles, ma. We just had a fight and I wuz helpin' him pick up his teeth."

ENTHUSIASTIC FARMERS MEETING HELD TUESDAY

Fifty-five farmers attended the special meeting of farmers of the Latah county side of the Genesee community held at the American Legion hall on Tuesday, March 6. The meeting was called by County Agent O. S. Fletcher to distribute the poisoning supplies that had been ordered through the Latah County Farm bureau by farmers of this section and to plan a squirrel control campaign for the com ing season.

Mr. Fletcher addressed the meeting and told of the plans that have been made for a general county-wide squirrel control campaign for the year. He also outlined work that was taken up in other projects last year and discussed plans for the county for this year. During the past season work has been carried forward on the following lines by one or more communities of the county: Pest control, livestock improvement, wheat improvement, weed control, poultry improvement, potatoes, beans, and crop reporting. A considerable amount of work has been done on miscellaneous projects, one of which has been the home demonstration work for women.

The farmers of the Genesee community selected projects and elected leaders as follows for 1923: Pest control, Wm. Schlueter; wheat improvement, T. Driscoll; weed control, Chas. Spurbeck, and poultry improvement, Mrs. Wm. Schlueter.

Those attending the meeting voted to have the state rodent control law enforced in the community during the coming season and elected the following men to act as assistants to Mr. Schlueter: R. E. Nordby, Chas. Schooler, Henry Odberg, Thos. Anderson, Cecil Wood, J. A. Borgen and A. C. Linehan. These men will be appointed by the county commissioners at the April meeting and will be authorized to enforce the rodent control law in their respective school districts. Henry Flomer and Chas. Schooler were elected as assistants in the wheat improvement project to work with the community leader, Mr. Driscoll, and the county agent. John Lorang and Oscar Nordby were elected assistants to the local leader of the weed control project.

With the exception of the poultry work, the projects adopted are ones that have been worked on in this community for several seasons, and the leaders were all re-elected. R. E. Nordby, who has been community chairman since county agent work was started in this community, was unanimously reelected.

The men present voted to endorse the demonstration work for women and recommended that the women of the community take advantage of the services offered by the district home demonstration agent of the extension division of the University of Idaho. Miss Adda Mathews is taking the lead in making arrangements to get this work started in the community. A project leader for this work will be selected at the first demonstration conducted.

At the proper time a resolution was read and unanimously adopted by the meeting commending the splendid work of County Agent O. S. Fletcher during the past three years. There are few, if any, farmers in this section who do not feel that Mr. Fletcher has done a wonderful work and has been instrumental in the accomplishment of much good for the farmers of Latah county. He is an untiring worker and the farmers undoubtedly showed rare good judgment in their endorsement.

LATAH COUNTY TO CARE FOR FORTY-SIX ORPHANS

Forty-six among America's huge forster family of orphan children in Bible lands and neighboring countries,—children who have been robbed of their parents by war, massacres, or by sickness and starvation during deportations—have been thrown the mercies of Latah county residents.

This number from among more than a quarter of a million homeless and destitute little boys and girls who have thus been left stranded by the hideous tragedies of Asia Minor, have been assigned to this county for a year's help as Latah county's share in the national child-saving program of Near East relief.

Under the leadership of a local committee headed by Rev. James N. Pendleton as chairman, Genesee and vicinity this week began an effort to produce their share of $240 in the county fund for the care of these children. Mrs. F. S. Casebolt, Mrs. F. C. Shork, Mrs. Geo. Boliou, Rev. A. W. Wolff and Dr. R. I. Witty are working with Rev. Pendleton upon the committee, which was appointed by E. C. Newberry, field director of the Near East relief, who arrived in Genesee a few days ago from the northwestern headquarters of the society at Spokane. The Latah county campaign is to be under the general leadership of Tim Sullivan, well-known automobile man of Moscow,, who is county cairman.

Moscow has accepted responsibility for 23 of the orphans—one-half of the entire county allotment—as its part in the benevolent enterprise. Potlatch comes next, with five of the orphans to care for. Troy and Genesee have each been asked to raise a sufficient fund for four of the orphans, while Julisetta and Kendrick have three orphans each, as their quotas. The people of Bovill are asked to finance the care of two orphans and Deary, Harvard and Princeton have quotas of one orphan each.

Sixty dollars is required for the care of one orphan for one year in an orphanage of the Near East relief. Through a rigid enforcement of a self-help program, under which all but the very smallest children of the relief orphanages are required to assist in caring for themselves, this $5 per month, or $60 per year, for each child not only provides food, shelter and clothes, but every child is given teaching and training in trades and various occupations in order that they will become entirely self-supporting.

Legionaires Will Entertain

The American Legion at its meeting Wednesday night laid plans for what promises to be the social event of the season.

On St. Patrick's night the Legionaires will entertain at a dancing party. Invitations are being issued and in addition each member of the organization will be furnished with a supply in order that no friends of the Legion, through error of mailing list or addressing, shall be missed.

The grand march is scheduled to start promptly at 8:30 and dancing will be continued until midnight. This dance is complimentary tp the guests of the ex-service men.

Death of Father

Miss Cora E. Holee, teach at Pine Grove, has returned and again taken up her school work after having attended the funeral of her father at Clarkston. She has the sympathy of the entire community in her bereavement.

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Epidemic of Influenza

A sever epidemic of influenza among horses is reported in various parts of this locality. Saturday Albert and George Bauer lost two big work horses from this disease. It is hoped that the spread of this epidemic will be checked soon. Horses will be needed for spring work in a few weeks and the loss is a heavy one at this time.—Colton News-Letter.

Some Large Egg

J. M. Wisdom brought to the Record office a large egg layed by one of his hens. The egg measured 6½ inches one way by 7½ inches the other, and weighed four ounces. The egg is perfectly formed and there is not a flaw in the sheil. Mr. Wisdom intends to keep the egg and put it under one of his hens and see what it will hatch out.—Juliaetta Record.

Has Twenty Saw Mills

It is said that Clearwater county now has 20 saw mills, most of them of about 25,000 to 50,000 feet per day capacity, but of a combined capacity of many million feet per year. These manufacturing plants give steady employment to a great many men, and are making times good. Farmers are finding employment and many will be able to get through where they would have been compelled to give up and quit because of the low price of wheat and farm products. However, Clearwater county is quite prosperous.—Lewiston Banner.

Two Lawsuits Filed

Two lawsuits were filed by the Idaho Wheat Growers association, with headquarters in Spokane, at Grangeville last Friday, one against Frank Foresman and the other against A. E. Terhaar, both of Cottonwood. Similar actions were filed in other counties in the state.

The history of the cases is as follows: Both Mr. Foresman and Mr. Terhaar joined the wheat growers' association and in 1921 when they delivered their wheat tickets to the association they were advanced money on their crops and when the final settlement was made they were overpaid, according to officials of the association, and this is the money they are now attempting to regain by the law suits filed.

At the time the defendants turned over their wheat tickets to the association the price of wheat was very high but the bulk of the grain held by the association was sold for much less in price than when Mr. Foresman and Mr. Terhaar turned over their tickets.

Both cases are being watched with great interest, not only in this state but in Washington and Montana as well.

Mr. Foresman was overpaid approximately $1400 and Mr. Terhaar $2000.

The suits will probably be heard at the spring term of the district court at Grangeville. — Cottonwood Chronicle.

Girl Dissappears from Campus

Mr. and Mrs. E. F. Parks, teachers in the Viola school, together with relatives and friends, have instituted a search for Miss Zelma Parks, daughter of Mr. and Mrs. Parks, and a senior at Washington State College. Miss Parks left the campus at Pullman Friday the 19 and has been traced as far as Spokane, but there all clews seem to end.

The young lady is 22 years old, has bobbed hair and dark eyes. It was supposed when she left the college that she had gone to the family home at Viola. Instead she took a train for Spokane. A member of the faculty was on the train and asked the girl where she was going. She informed him that she had not been feeling well and was going home. He was not aware that she was going in the opposite direction from her home, so gave the matter no further thought. The girl is said to have been a good student. She was majoring in English and will graduate this year if she returns to school. She was known to have $70 in money with her and her suitcase filled with clothing. Her parents and relatives are unable to give any reason for her sudden disappearance, but feel sure she will return, or make known her whereabouts. She has a married sister in Seattle, and Viola people who were in Moscow Friday express the opinion that she is in that city. Her mother left for Seattle Friday to see if she could locate her.

The authorities at the college are joining in the effort to locate the young lady.—Star-Mirror.

Genesee to Have New Doctor

Dr. F. B. Evans of Spokane has taken over the Tuomy hospital building and will open an office there for the general practice of medicine.

Dr. Evans is a man of wide experience in his profession and will be welcomed by the people of Genesee as at times it is impossible for one physician to look after as large a territory as surrounds Genesee.

The doctor's family and household goods are expected to arrive this week.

The Master of Ballantrae

By ROBERT LOUIS STEVENSON

INSTALLMENT 34.

"You must not ask me that!" I cried. "Hell may have noble flames. I have known him a score of years, and always hated, and always admired, and always slavishly feared him."

Wants to See Grave.

"I appear to intrude again upon your secrets," said Sir William, "believe me, inadvertently. Enough that I will see the grave, and (if possible), rescue the Indian. Upon these terms can you persuade your master to return to Albany?"

"Sir William," said I, "I will tell you how it is. You do not see my lord to advantage; it will seem even strange to you that I should love him: but I do, and I am not alone. If he goes back to Albany, it must be by force, and it will be the death-warrant of his reason, and perhaps his life. That is my sincere belief; but I am in your hands, and ready to obey, if you will assume so much respons'bility as to command."

"I will have no shred of responsibility; it is my single endeavor to avoid the same," cried Sir William. "You insist upon following this journey up, and be it so! I wash my hands of the whole matter."

With which word, he turned upon his heel and gave the order to break camp; and my lord, who had been hovering near by, came instantly to my side.

"Which is it to be?" said he.

"You are to have your way," I answered. "You shall see the grave."

Grave Easily Described.

The situation of the master's grave was, between guides, easily described; it lay, indeed, besides a chief landmark of the wilderness, a certain range of peaks, conspicuous by their design and altitude, and the source of many brawling tributaries to that inland sea, Lake Champlain. It was therefore possible to strike for it direct, instead of following back the blood-stained trail of the fugitives, and to cover, in some sixteen hours of march, a distance which their perturbed wanderings had extended over more than sixty. Our boats we left under a guard upon the river, it was, indeed, probable we should return to find them frozen fast; and the small equipment with which we set forth upon the expedition included not only an infinity of furs to protect us from the cold, but an arsenal of snowshoes to render travel possible, when the inevitable snow shall fall.

Considerable alarm was manifested at our departure, the march was conducted with soldierly precaution, the camp at night sedulously chosen and patroled; and it was a consideration of this sort that arrested us, the second day, within not many hundred yards of our destination—the night being already imminent, the spot in which we stood well qualified to be a strong camp for a party of our numbers; and Sir William, therefore, on a sudden thought, arresting our advance.

Before us was the high range of mountains toward which we had been all day deviously drawing near. From the first light of the dawn, their silver peaks had been the goal of our advance across a tumbled lowland forest, third with rough streams, and strewn with monstrous bowlders; the peaks (as I say) silver, for already at the higher altitudes the snow fell nightly; but the woods and the low ground only breathed upon with frost.

All day heaven had been charged with ugly vapors, in the which the sun swam and glimmered like a shilling piece; all day the wind blew on our left cheek, barbarous cold, but very pure to breathe. With the end of the afternoon, however, the wind fell; the clouds, being no longer reenforced, were scattered or drunk up; the sun set behind us with some wintry splendor, and the white brow of the mountains shared its dying glow.

All in Silence.

It was dark ere we had supper; we ate in silence, and the meal was scarce dispatched before my lord slunk from the fireside to the margin of the camp, whither I made haste to follow him. The camp was on high ground, overlooking a frozen lake, perhaps a mile in its longest measurement; all about us the forest lay in heights and hollows; above rose the white mountains; and higher yet, the moon rode in a fair sky. There was no breath of air; nowhere a twig creaked; and the sounds of our own camp were hushed and swallowed up in the surrounding stillness.

Now that the sun and the wind were both gone down, it appeared almost warm, like a night of July; a singular illusion of the sense when earth, air, and water were strained to burning with the extremity of frost.

My lord (or what I still continued to call by his loved name) stood with his elbow in one hand and his chin sunk in the other, gazing before him on the surface of the wood. My eyes followed his, and rested almost pleasantly upon the frosted contexture of the pines, rising in moonlit hillocks, or sinking in the shadow of small glens. Hard by, I told myself, was the grave of our enemy, now gone where the wicked cease from troubling, the earth heaped forever on his once so active limbs. I could not but think of him as somehow fortunate, to be thus done with man's anxiety and weariness, the daily expense of spirit, and the daily river of circumstance to be swum through, at any hazard, under the penalty of shame or death. I could not but think how good was the end of that long cast the main part of his raiment travel; and with that, my mind swung by, yet his frail arms and shoulders

And yet it was not that which struck us into pillars of stone; but the sight (which yet we had been half expecting) of Secundra, ankle deep in the grave of his late master. He had cast the main part of his raiment by, yet his frail arms and shoulders glistened in the moonlight with a copious sweat; his face was contracted with anxiety and expectation; his blows resounded on the grave, as thick sobs; and behind him, strangely deformed and ink black upon the frosty ground, the creature's shadow repeated and parodied his swift gesticulations. Some night-birds arose from the boughs upon our coming, and then settled back; but Secundra, absorbed in his toil, heard or heeded not at all.

I heard Mountain whisper to Sir William: "Good God, it's the grave! He's digging him up!" It was what we had all guessed, and yet to hear it put in language thrilled me.

Sir William violently started.

"You damned scarlegious hound!" he cried. "What's this?"

Secundra leaped in the air, a little breathless cry escaped him, the tool flew from his grasp, and he stood one instant staring at the speaker. The next, swift as an arrow, he sped for the woods upon the further side; and the next again, throwing up his hands with a violent gesture of resolution, he had begun already to retrace his steps.

"Well, then, you come, you help—" he was saying. But by now my lord had stepped beside Sir William; the moon shone fair upon his face, and the words were still upon Secundra's lips when he beheld and recognized his master's enemy. "Him!" he screamed, clasping his hands and shrinking on himself.

"Come, Come."

"Come, come," said Sir William, "there is none here to do you harm. If you be innocent; and if you be guilty, your escape is quite cut off. Speak, what do yo uhere among the graves of the dead and the remains of the unburied?"

(To be continued.)

GROW MORE TREES

"If you have some rough, rocky, dry waste land on your farm, let it grow timber for you," says Prof. E. H. Steffens of the forestry department of the State college. "If you have no trees around your farm buildings plant some and see how they improve the looks of your place in a few years. If the wind makes life uncomfortable for you and your stock plant a shelterbelt of trees which will grow up and keep the wind away from your buildings and feedlots. If soil from the fields is being blown away a windbreak of trees will not only prevent the wind erosion of soil from your fields, but the windbreak will help catch the soil blowing from your neighbor's fields.

"If you live in town a few well located trees along the street and around the house will provide shade to help beautify your place. Of course trees grow slowly, but future generations will reap the benefit and enjoyment from the trees if you do not.

"If you have a place where trees should be growing or you think they would grow or where you would like to have them grow you may obtain information as to what, where, why and how to plant from the forestry department of the State College of Washington."

at a tangent to my lord.

Prayed He Should Be Released.

For was not my lord dead also; a maimed soldier, looking vainly for discharge, lingering derided in the line of battle? A kind man, I remembered him; wise, with a decent pride, a son perhaps too dutiful, a husband only too loving, one that could suffer and be silent, one whose hand I loved to press. Of a sudden, pity caught in my wind-pipe with a sob; I could have wept aloud to remember and behold him; and standing thus by his elbow under the broad moon, I prayed fervently either that he should be released or I strengthened to persist in my affection.

"O God," said I, "this was the best man to me and to himself, and now I shrink from him. He did no wrong, or not till he was broke with sorrows; these are but his honorable wounds that we begin to shrink from. Oh, cover them up, oh, take him away, before we hate him!"

I was still so engaged in my own bosom, when a sound broke suddenly upon the night. It was neither very loud nor very near; yet, bursting as it did from so profound and so prolonged a silence, it startled the camp like an alarm of trumpets. Ere I had taken breath, Sir William was beside me, the main part of the voyagers clustered at his back, intently giving ear.

Methought, as I glanced at them across my shoulder, there was a whiteness, other than moonlight, on their cheeks; and the rays of the moon reflected with a sparkle on the eyes of some, and its shadows lying black under the brows of others (according as they raised or bowed the head to listen) gave to the group a strange air of animation. My lord was to the front, crouching a little forth, his hand raised as for silence; a man turned to stone. And still the sounds continued, breathlessly renewed, with a precipitate rhythm.

Indians Knew.

Suddenly Mountain spoke in a loud, broken whisper, as of a man relieved. "I have it now," he said; and, as we all turned to hear him, "the Indian must have known the cache," he added. "That is he—he is digging out the treasure."

"Why, to be sure!" exclaimed Sir William. "We were geese not to have supposed so much."

"The only thing is," Mountain resumed, "the sound is very close to our old camp. And, again, I do not see how he is there before us, unless the man had wings!"

"Greed and fear are wings," remarked Sir William. "But this rogue has given us an alert, and I have a notion to return the compliment. What say you, gentlemen, shall we have a moonlight hunt?"

It was so agreed; dispositions were made to suround Secundra at his task, some of Sir William's Indians hastened in advance; and a strong guard being left at our handquarters, we set forth along the uneven bottom of the forest frost crackling, ice sometimes loudly splitting underfoot; and overhead the blackness of pine woods and the broken brightness of the moon.

A narrow plateau, overlooked by the white mountains, and encompassed nearer hand by woods, lay bare to the strong radiance of the moon. Rough goods, such as make the wealth of foresters, were sprinkled here and there upon the ground in meaningless disarray. About the midst, a tent stood, silvered with frost; the door open, gaping on the black interior. At the one end of this small stage lay what seemed the tattered remnants of a man.

Without doubt we had arrived upon the scene of Harris' encampment; there were the goods scattered in the panic of flight; it was in yon tent the master breathed his last; and the frozen carrion that lay before us was the body of the drunken shoemaker. It was always moving to come upon the theater of any tragic incident; to come upon it after so many days, and to find it (in the seclusion of a desert) still unchanged, must have impressed the mind of the most careless.

It Was This Sight.

And yet it was not that which struck us into pillars of stone; but the sight (which yet we had been half expecting) of Secundra, ankle deep in the grave of his late master. He had cast the main part of his raiment by, yet his frail arms and shoulders glistened in the moonlight with a copious sweat; his face was contracted with anxiety and expectation; his blows resounded on the grave, as thick sobs; and behind him, strangely deformed and ink black upon the frosty ground, the creature's shadow repeated and parodied his swift gesticulations. Some night-birds arose from the boughs upon our coming, and then settled back; but Secundra, absorbed in his toil, heard or heeded not at all.

I heard Mountain whisper to Sir William: "Good God, it's the grave! He's digging him up!" It was what we had all guessed, and yet to hear it put in language thrilled me. Sir William violently started.

"You damned scarlegious hound!" he cried. "What's this?"

Secundra leaped in the air, a little breathless cry escaped him, the tool flew from his grasp, and he stood one instant staring at the speaker. The next, swift as an arrow, he sped for the woods upon the further side; and the next again, throwing up his hands with a violent gesture of resolution, he had begun already to retrace his steps.

"Well, then, you come, you help—" he was saying. But by now my lord had stepped beside Sir William; the moon shone fair upon his face, and the words were still upon Secundra's lips when he beheld and recognized his master's enemy. "Him!" he screamed, clasping his hands and shrinking on himself.

"Come, Come."

"Come, come," said Sir William, "there is none here to do you harm. If you be innocent; and if you be guilty, your escape is quite cut off. Speak, what do yo uhere among the graves of the dead and the remains of the unburied?"

(To be continued.)

GROW MORE TREES

"If you have some rough, rocky, dry waste land on your farm, let it grow timber for you," says Prof. E. H. Steffens of the forestry department of the State college. "If you have no trees around your farm buildings plant some and see how they improve the looks of your place in a few years. If the wind makes life uncomfortable for you and your stock plant a shelterbelt of trees which will grow up and keep the wind away from your buildings and feedlots. If soil from the fields is being blown away a windbreak of trees will not only prevent the wind erosion of soil from your fields, but the windbreak will help catch the soil blowing from your neighbor's fields.

"If you live in town a few well located trees along the street and around the house will provide shade to help beautify your place. Of course trees grow slowly, but future generations will reap the benefit and enjoyment from the trees if you do not.

"If you have a place where trees should be growing or you think they would grow or where you would like to have them grow you may obtain information as to what, where, why and how to plant from the forestry department of the State College of Washington."

Unearthing $15,000,000 Treasure

World wide interest is focused upon the valley of the Nile in Egypt—where Howard Carter, an American, discovered the tomb of King Tutankhamen for Lord Carnarvon of England. This is part of the tombs of Egyptian kings who ruled four thousand years ago. The treasure is valued at $15,000,000. Native troops are on guard night and day. Upper photo shows natives emerging from the outer tomb with a large blue cabinet containing valuable fabrics. On it were names of king and queen lettered in gold. Lower photo shows wonderful chair being carried from the tomb under guard. All treasures show little effect of time.

IDAHO

Construction of the Lowell sector of the Lewis and Clark highway is progressing satisfactorily, except that it is difficult to obtain men. No delay has been experienced because of bad weather or snow. The contractors received another carload of explosives for the project recently.

Undeniable evidence exists that the Morning and Hercules mine fire in north Idaho were incendiary, according to Ravanel Macbeth, secretary-treasurer of the Idaho Mining association, who will ask the state legislature to provide capital punishment for the commission of the crime of underground arson.

The University of Idaho is planning on giving short courses to boy and girl club members of northern Idaho from June 10 to 16, when instruction will be given in fitting, feeding, care, judging and showing of all classes of livestock and also the judging of farm crops. A side course will also be given girls in canning, baking and sewing during these days.

During the year 1922 jack rabbit killing in Idaho was carried on extensively. A systematic campaign against the rodent pest was prosecuted under the general direction of the biological survey. In 10 counties of the state 32,235 pounds of bait treated with 2159 ounces of strychnine were used on 312,350 acres of land. By poisoning and by drives, 640,050 jack rabbits, by actual count, were destroyed in the course of the year.

The annual tri-state debate between men's teams representing the Universities of Utah, Montana, and Idaho will be held Friday, April 13, according to announcement by Philip Buck, debate manager. The subject will be the feasibility of adopting the cabinet parliamentary form of government in the United States. Tryouts for positions on the Idaho teams will be held soon under the direction of Professor L. G. Harding of the English department, debate coach.

The sale of 4720 acres of state timber of an appraised value of $427,000 in Clearwater county has been authorized by the state board of land commissioners, and while no definite date has been fixed, the sale will probably be held some time in March, according to announcement of I. H. Nash, state land commissioner. Land board officials declare that if this sale is consummated it will mean that there will be considerable development in the Clearwater district in the next few years.

Some women are like the weather —changeable and talked about.

IDAHO LIVE STOCK MAKES BIG GAINS

Six Million Dollars Increase in Past Year Is Shown by Recent Survey.

A gain of 211,000 head in Idaho's livestock population and an increase in total value of $6,050,000 over last year, are the encouraging features of the annual livestock survey made January 1, 1923. At the beginning of the year there were 3,862,000 head of animals on Idaho's farms and ranges with a value of $65,717,000, compared with 3,651,000 head valued at $59,667,000 January 1, 1922.

Swine registered the largest percentage gain in numbers of the different classes of livestock, with an increase of 20 per cent over a year ago. There are 235,000, valued at $2,702,000 compared with 196,000 valued at $2,156,000 January 1, 1922.

The increasing importations of high class dairy stock from eastern and also western dairy states, and intelligent building up of local herds, accounts for a 6 per cent increase in the number of milk cows. There are 162,000 valued at $10,206,000, against 153,000 last year worth $9,945,000.

Of the different classes of livestock sheep rank first in both value and number. The total value of $21,268,000 is an increase of 46 per cent over last year's total of $14,952,000. There are 2,642,000 sheep, valued at $8.30 per head, compared with 2,492,000 valued at $6.00 per head a year ago.

Cattle other than dairy, increased from 521,000 to 542,000, or 4 per cent.

Marble is softer than granite.

Summary of Official Testing for Washington for January

The summary of official testing for January includes the records of four new state leaders in their respective classes. One of these is also a world record cow. Edna of Mountain View qualified for the leadership of all Guernsey senior four-year-olds by producing 933.05 pounds of fat in 365 days from 16,151.6 pounds of milk. She is owned by Wallace and Fordyce of Sunnyside. This is one of the first records to be completed at their farm.

One of the other state leaders listed is Lurn of Chicona, a junior two-year-old Guernsey, owned by A. L. Gile of Chinook. Hers is a 365-day record. Nooksack Cynthia Segis now holds first place among all Holsteins in the senior three-year-old class for the 305-day division. She is owned by H. J. Evans of Ferndale.

Carnation Farms of Seattle have just completed a seven-day record with Bella Veeman Segis Matador which places her first among the senior three-year-olds in that division.

One hundred and eighty breeders have done official testing in Washington during the past four years. Two or three new breeders take up the work each month. These men have found official testing to be profitable. A good record increases the value of the cow herself, her offspring and other near relatives. Testing provides a basis for proper selection of breeding stock. It stimulates personal pride in the development of good dairy cows.

Official testing is a test for milk and butter fat production under the supervision of a qualified representative of the State colege.

WASHINGTON NEWS

The Pullman Chamber of commerce has voted in favor of the Good bill providing for a set price of $1.75 a bushel for No. 1 Northern wheat. The bill is strongly favored in Whitman county.

The agricultural bureau, Spokane Chamber of Commerce, went on record recently in favor of the Gooding bill for fixed wheat prices. The final vote was 12 to 10. The basis of price will be $1.75 for northern spring

There is such demand for Washington vegetables and fruit in the orient that all of the big passenger lines operated by the U. S. shipping board from Seattle to the orient are having their refrigerating space substantially enlarged.

Construction of a new line of railroad in Cowlitz county, Washington, a lumber region near Olequa, 30 miles distant, was proposed to the Interstate commerce commission recently by the Longview, Portland & Northern Railway company.

The promise of a fruit crop this year is 10 to 15 times as good as usual, according to John Wiley, district horticulturist, of Walla Walla. He bases his estimate on the fruit spurs showing on the trees. The snow has been of incalculable benefit to fruit and grain crops, he said.

Work on the upper Columbia river company's irrigation project at Marble where about 448 acres of orchard land will be brought into the water zone will be undertaken as soon as the weather breaks and construction is feasible, according to Jos. R. Reed, manager of the company, who spent some time recently in Spokane waiting to open bids on the pipe distribution system. The company already has 250 acres irrigated by the gravity system. The present plan calls for irrigation through the installation of an electric line to bring in power from an outside point. Pipe system requires a line of 5790 feet of concrete pipe, 5250 feet of wood pipe and 11,300 feet of concrete line ditching.

Some of the Philippine justices take peculiar methods of dealing out punishment. Recently a man who had committed burglary in the night was sentenced to go back and try to rob the same house by daylight, and the judge left it to the householder to administer the punishment. A man who was found guilty of polygamy was sentenced to spend three days with all three of his wives in the same room.

California lawmakers have a busy season this year, as there are twenty proposed amendments to the state constitution to be considered, and Los Angeles and San Francisco have twenty-three proposed city-charter amendments to vote upon. This is the record for the country, and is due mostly to the growth and modern improvements of all kinds, not thought of when the constitution and charters were first adopted.

Commercial radio communication between China and the United States has been established. A station at Hillsboro, Ore., working on 8,400 meters, is being heard regularly at Shanghai where the federal telegraph company has erected an experimental station.

A New Jersey farmer has received $5,000 for one apple tree branch. He produced a new, deep-red apple on it, and a Missouri nursery bought it.

Each year, Oakland, Cal., holds a festival in honor of the returning ducks. In the heart of the city is a

Your Car in the Spring Months

A Series by Prof. A. R. Nottingham, State College of Washington.

PART I. THE RUNNING GEAR.

What you should do to your car at this time depends on what you have done with it this winter. If you have neglected it, try and put it in good shape before using it. If you have given it proper care the procedure will vary somewhat with conditions.

This article will assume that the car has been stored, and that you have some systematic leisure to put it in condition. It is to your advantage to improve every opportunity when it is warm enough to work comfortably, as is will be harder to find time in the spring. If you do this, the car will always be ready for the road.

If the car has been laid up for some time the battery is in storage but charged, and the tires are in a cool, dark place, such as the basement, to reduce deterioration and likelihood of theft.

Begin on the tires first if you have the time to overhaul them before using the car. If you want your car at once just see that you have plenty of air to reach the nearest station and then overhaul the rims later one at a time.

Put the poorest tire on the spare tire-carrier, then the others chosen, with the poorest on the left front, then the right front, and left rear wheel. Note any rim bolts or lugs that should be replaced. Turn up all the grease cups and paint the edges of the springs with oil discarded from the crank case.

Examine the rear end and the transmission to see that they have enough grease to operate. They need not be full, yet the leakage of grease is no safe indication. Run a piece of wire down to the bottom of the case as an indicator. If you need grease in the rear end and have no gun, a tomato can may be cut off with one side high and trimmed to a broad point which will make a pouring spout. Warm the grease and pour it in.

By the means of the cocks, a wire, or the test rod on the engine, take a sample of the oil on the fingers. If it feels oily, that is, has a fair body, and does not have a bad smell of burned oil and kerosene, the car may be run. Otherwise, and preferably in any case, drain the case and wash it out with flushing oil or filtered oil from a previous draining. This cleans out the dipper troughs better, but imperfectly at best, as they always retain a mixture of the oil used and the carbon on their bottom surface.

After filling with oil, put about a teaspoonful in each cylinder and turn the engine over a few times by hand. This insures good lubrication, compression, and is good for rusty spots or sticking rims.

If the battery is in and the spark plugs have given no trouble the preceding season, test for a good spark and the car will likely run; otherwise clean the plugs.

Fill the radiator with warm water, unless you have an anti-freezing solution in it, and crank by hand—preferably with another person at the throttle to prevent racing. If you have trouble starting prime with fresh gasoline.

After driving the car go over it to correct any of the obvious defects and tighten all the rim nuts.

Take off the spare rim to keep it dry and wash the car when the weather permits so you will not be ashamed of it and so you will feel encouraged to finish the maintenance job.

Begin with the spare tire and go over them all systematically. They can be taken to the basement where it will be warm enough to work comfortably. Deflate and take the tires off. Clean the rims with a stiff wire brush to remove the rust from the tire seat. Examine the flanges for bands or rough places caused by striking rocks. Remove these and paint them with a prepared rim paint, aluminum paint or a similar graphite mixture containing no oil.

Go over the tubes and see that no place has been pinched. Vulcanize down all gasoline patches, some are almost sure to loosen up on a hot day next summer. Test under water to make sure the tubes do not leak.

If the casing is stiff block it apart with sticks so it can be examined for fabric breaks. A small break, such as that caused by a large nail, can be filled with plastic rubber and covered on the inside with a fabric patch. If on denting it in it shows up as a break extending in one or more straight lines a vulcanized repair should be made. If in doubt take it to the tire shop for advice. Fill all cuts in the tread with tire dough, clean out and repair all sand blisters. In making the tire waterproof from the outside.

Put the poorest overhauled tire on the left front wheel, etc., as given above. This method of using the tires gives the maximum service from them. Insures a dependable one for a spare and wears out the old ones, which will not stand a long trip, when near home. When the tire is put on the right wheel finally be sure all bolts, etc., that are defective have been replaced. Put graphite on the rim bolts so they will not rust. Use a wrench that fits the nuts and keep them in good condition.

and Elmer Weick are registered in the school of practical agriculture.

UNION PACIFIC GIVES IDAHO SCHOLARSHIPS

Eighteen Boys and Girls' Club Leaders Awarded Prizes by Railroad for Work.

Announcement of final awards of Union Pacific scholarships in the counties in which boys' and girls' club work is conducted has been made through the office of Dean E. J. Iddings of the college of agriculture, University of Idaho. These awards carry $75 scholarships in the college of agriculture or school of practical agriculture and include reimbursement of railroad fare over the company's lines from the winner's home to Moscow and return. The scholarship plan, originated last year by the Union Pacific to stimulate interest in club work, carries provisions for an annual award for each county. Of the 18 awarded scholarships for 1922, five are now being used at the institution. The scholarships are to be used the year following the award unless the winner has not completed his high school work, in which case he may elect to finish before entering his course at the university.

The winners are announced as follows: Cecil R. Tulley of Worley, Kootenai county; Frank Schuetz of Idaho Falls, Bonneville; Calvin Pease of Weiser, Washington; John Storer of Dubois, Clark; Cyril Allen of Grace, Bannock; Virgil Thompson of Palouse, Wash., Latah; George H. Merrick of Ashton, Fremont; Wendell Fuhriman of Franklin, Franklin; Elmer D. Belnap of Rexburg, Madison; Dee Young of Shelley, Bingham; Elmer Dowdy of Fruitland, Payette; Fed Warren of Boise, Ada; Melin Bowman of Rupert, Minidoka; Milo Davis of Twin Falls, Twin Falls; Elmer Weick of Notus, Canyon; Chester L. Mink of Gooding, Gooding; La Verne Diefendorf of Jerome, Jerome; Martin Thorsen of Nez Perce, Lewis.

Cecil Tulley and John Storer are freshmen in the college of agriculture while Frank Schuetz, Calvin Pease

More Color Rules in New Spring Styles

Spring styles will be "a riot of colors," according to Miss Edna Avery, home economics expert.

Navy blue has gone out, she says, except for the most practical uses. Black will be better than blue for the early spring things, followed by browns and tans which, all the gayest colors of the rainbow, as an aftermath to Easter. Grays and tans will be worn under all sorts of names; a popular gray, for instance, will be known as "kit fox." Then there will be Lanvanne green, for, robin's egg blue, meadow lark, cocoa, cinnamon, and daffodil.

"Color? Yes, but no strong contrasts. See that the hues are carefully blended. There are no new trimmings, for trimmings are entirely 'out.' To be really dressy, a gown must be self-trimmed, with straps, panels, kerchief drapes, new folds in stair formations (the old cascade idea under a new name.

Trimmings Inexpensive.

"One late model in gray organdie with ankle length full skirt shows four gray valvet bands several inches wide between the waist and hem. Rows of pin tucks or dainty cordings will adorn bodices and skirts and give them that much desired emphasis of self-decoration. It is a satisfaction to remember that this style of trimming is inexpensive.

"Cabachons—the new name for rosettes or round bunch trimmings—made from self-tone ribbons or the material of the dress itself caught up in a draped fold, will continue in fashion, hard pressed by the lovely metal buckles and clasps that are trying to nose their way into popularity. These, by the way, are not so expensive as one might imagine. If you buy one, do not discard it when the fashion passes, for it will return in the course of time.

ASK EMPLOYERS TO TAKE DISABLED VETS

Veterans Bureau Seeks Employment for Men Restored to Usefulness By Training.

An appeal to employers of the Pacific northwest to hire rehabilitated war veterans when vacancies occur or new jobs are created is being made by Seattle district office of the the United States Veterans' bureau and branch offices at Portland, Tacoma, Spokane and Pocatello. Several hundred ex-service men taking vocational training under the direction of the government are scheduled to complete their courses this spring and an earnest effort is being made by the employment service of the bureau to line up jobs for these men to step into upon their graduation, it was announced.

A. B. McCabe, district head of the employment service, stated that a special campaign has been started among lumber and logging employers to give rehabilitated veterans preference in hiring of men when lumber activities begin this spring. The bureau is in position to furnish scores of workers along office and clerical lines as well as machinists, saw filers, electricians, steam engineers, cooks, timekeepers and commissary men.

War risk insurance cashiers have been placed at Portland and Spokane offices of the Veterans' bureau, it was announced. This means that government insurance premiums, loans and reinstatements may be handled largely at the local offices instead of at Washington, D. C. The local service is to be given war veterans in order to stimulate insurance renewals.

Bluntly to Point.

Speedo (stout chap with foot trouble)—No! No!! No!! These shoes are too narrow.

Salesman—Yes? Why you know they are wearing narrow pointed shoes this season.

Speedo (bluntly)—That may be true but I am still wearing last season's feet.

Some Tough.

Colored Rookie—I'd lahk to have a new pair o' shoes, suh!

Sergeant—Are your shoes worn out?

Colored Rookie—Worn out! Man, the bottom of mah shoes are so thin ah can step on a dime and tell whether it's heads or tails!

Fox farming in Alaska utilizes material from salmon canneries that would otherwise be waste, according to the biological survey, United States department of agriculture. The heads and tails of salmon, of which the flesh is canned, are fed to blue foxes and is much relished by them. Much of this food is salted for preservation and some of it is smoked. Many fox farmers believe that the foxes prefer the raw fish, after the sale has been taken out of it by soaking. The fox-farming industry which is being fostered by the biological survey, is thriving along the coast.

The mayor of Boston, Mass., is trying to secure the services of the famous animal trainer, Hagenbach, from Berlin, to be curator of Franklin park zoo in Boston. Such are financial conditions in Berlin that the famous zoo there may be discontinued and the animals sold, as there are no funds for supporting it.

The shipping board steamer "President Madison" recently brought into Seattle, Wash., the largest cargo of raw silk received from the east in more than a dozen years. There were 5,432 bales; and will go a long way toward relieving a threatened silk shortage.

Occupational-Therapy for Shell-Shocked Veterans

The terrific concussion of a high explosive shell, the horror of seeing his sergeant who had been a chum since boyhood torn to pieces by flying fragments, the continuing hardships of 22 days trench warfare without relief, under daily and nightly shell fire and gas hazards—these are contributing factors appearing in the medical history in the case of a former member of the American Expeditionary Forces who is now a beneficiary of the U. S. Veterans' bureau.

After coming through four major engagements in France, unscathed, and apparently a hale specimen of manhood physically, this unfortunate youth has been confined to neuropsychiatric hospitals during the past four years due to a shattered nervous system.

His morbidity had reached a stage of secretiveness. Veterans' bureau specialists had pronounced the case of grave outcome, although at no time was it thought to be incurable. Close observation disclosed that this shell-shocked veteran was evincing a love for tender objects. Experimenting during one of his violent spells, the doctor had given him a small kitten, with the result that the patient fondled the pet and became at once submissive.

An occupational-therapy teacher in the hospital set the veteran at a task of raising poultry and the results were prompt. His interest was quickened, his mind was occupied, improvement in his mental condition was immediate, and he was soon discharged from the hospital. Subsequent success in the poultry work has made him financially independent. He is now raising poultry for market purposes, but his particular hobby is building up pure bred flocks.

TIMELY HINTS TO FARMERS

By EXTENSION SERVICE SPECIALISTS

Agricultural Engineering.

Inspect your water supply reservoir to see that the winter freshets have not carried in a lot of sticks and rubbish.

Dairy.

Wash and scald once each day the pails in which milk is fed to calves and rinse out with water after each feeding.

Farm Crops.

Disc all fields that have been very wet during the winter and have been tramped down by livestock. This prevents clods.

Farm Management.

Study your crops before seeding time and determine which is most likely to return a profit.

Horticulture.

Fix up the frame and glass for the hot bed. Plan for a well-balanced garden this year.

Livestock.

Constipated sows eat their pigs Furnish them bran and small amount of Epsom salts in the stop. Tankage is helpful.

Plant Pathology.

Seed potatoes should be treated at least from six to eight weeks before planting time. Early June is a good time to plant.

Poultry.

Move your brooder houses, or renew the soil by taking off two or three inches of top soil and replacing with clean new soil. This helps prevent disease.

Drug Store Shows Farmers.

RITZVILLE—A local drug store conducted a demonstration in one of their show windows on the use of the seed treatment for wheat. One hundred kernels of wheat were treated with formaldehyde, another hundred with bluestone and another set with Copper Carbonate. The wheat samples were planted in cigar boxes and allowed to grow. The result showed that 54 per cent of the bluestone treatment germinated; 58 per cent of the formaldehyde, 86 per cent of the Copper Carbonate and 87 per cent of the untreated. As a result of the demonstration conducted through the efforts of County Agent Donaldson, over a ton of Copper Carbonate was sold by the store.

Farm Loan Bank Helps 25,040.

The 12th district federal farm loan bank at Spokane, which serves Oregon, Washington, Idaho and Montana, accommodates 25,040 borrows from the time of its organization, May, 1917, to October 31, 1922.

In net earnings this bank in 1922 stood second only to Omaha, which shows $767,903 in profits, as compared with Spokane's $675,367.

In the year ended November 20, 1922, 626 farms in the seventh district, on which the bank had mortgages, were sold, distributed as follows:

Idaho, 146 of an appraised value of $1,326,447 on which $519,469 had been loaned. The total sal pric was $1,412,120.

Few people realize what the automobile means to this country. In 1900 only 14,000 cars were registered in this country, and this year it is estimated that the total will exceed 11 million. The nearest approach to this total is found in Great Britain's registration of about half a million cars.

May—Will Shakespeare rightfully said "All the world's a stage."

Ray—Yes, but he neglected to add "Woman make most of the scenes."—"Topics of the Day" Films.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER VIII.

Caught.

To the natives of the mysterious island, the alligator was a symbol of the Evil Spirit. "Speed" Stanbury did not know this, but he soon found out. Standing up to his waist in the tropical stream, he awaited the approach of the creature, then, as it lunged towards him, he sprung out of the way, seized it from behind and hurled it toward the shore. "Speed" did not actually intend to frighten the natives, but that is exactly what he did. Both took to their heels, leaving young Stanbury to himself.

"And now," he said, "the main thing to do is to keep out of the way of this minstrel troup and try to hail a passing ship for the States."

Meanwhile, in America, Edwin Stanbury, "Speed's" unscrupulous cousin, and Vera Harper, received startling news. The news came in the form of a cablegram from Tristol, and read as follows:

AM ON WAY HOME SPEED DETAINED IN THE SOUTH WILL GET IN TOUCH WITH YOU IMMEDIATELY ON ARRIVAL. SPRAGUE.

Vera and Edwin exhibited great consternation after perusing the cablegram. Both had supposed Sprague to be dead and both thought that "Speed" had perished in the sea, as well. All their plans for the future were upset.

"If Sprague is safe and on his way here," Edwin conjectured, "what do you suppose has happened to my elusive cousin. I'd give a hat to know."

"If anyone would know of 'Speed's' movements," Vera suggested, "it would be Lucy Durant, his sweetheart. Suppose I take a run up there and see what I can learn?"

"Good!" Edwin ejaculated, "and I'll see if I can't get her out of your way."

Lucy Durant was indeed worried about "Speed." The young man meant everything to her, and she had received no word from him since he had put her on the boat at South America. Lucy was sitting in front of a large portrait she was painting of young Stanbury when there was a ring at her doorbell. She opened the door and found herself face to face with Mrs. Sprague, wife of the missing cashier—the one man who could clear 'Speed' 'of the charges against him.

"I know I shouldn't have come here, Miss Durant," the young woman began, "because I am constantly watched by detectives—but Jim's coming back. I want you to know in the first place that my Jim isn't a thief. It's Edwin Stanbury and I'm going to make a clean breast of the whole affair. Meanwhile the children and myself are in desperate need of money. [—1—"

"Yes?" encouraged the girl.

"Oh, you are the only one I can trust, Miss Durant," she pleaded, "and I thought that perhaps—"

"Please, Mrs. Sprague," Lucy interrupted, "please don't let that worry you. You can surely count on me to help you." At that moment the telephone rang and the girl excused herself to answer it.

"Miss Durant?" came a voice. "This is Mr. Stanbury's valet, Gaston, speaking from Mr. 'Speed's' apartment. There's a cablegram here for you and I can't leave because I am sick. Would you mind calling for it, Miss Durant?"

Lucy assured the little Frenchman that she would be right over.

Then, at the other end of the wire, Edwin Stanbury turned to Vera Harper and said. "She'll be out when you get there and you can browse around to your heart's content and pick up that information."

Lucy Durant returned to the side of her visitor. The girl was extremely excited to think that news of the man she loved awaited her. All aflutter, she said to Mrs. Sprague, "Won't you please wait here for me—there's a message from 'Speed!' I'll only be a few moments." Mrs. Sprague nodded smilingly and promised to wait. With that, Lucy was gone.

Left alone, Mrs. Sprague became apprehensive of the detectives who were constantly watching her. She tried to become interested in a book, but could not concentrate. Getting up, she started to gaze out of the window when a noise at the door startled her. It seemed to be slowly opening. With fear in her heart, she entered the next room and concealed herself behind the large painting of "Speed."

Vera Harper cautiously entered Lucy's studio and looked about her. She walked swiftly to the writing desk—then hesitated. She wanted to assure herself that no one was about. Giving the room a quick glance, she turned and walked into the next room. Her eyes immediately fell upon the painting of "Speed" Stanbury, the man she still loved. An emotion of malicious hatred immediately filled her. She walked closer to the painting, a sneer on her lips. Suddenly seeing a palette knife lying on a small stool, she seized it and plunged it into the painted canvas.

A smothered cry came from behind the painting and the form of Mrs. Sprague swayed and fell to the floor. Vera stepped back in horror. She became terror-stricken, maddened, and looked about for a quick escape. At the end of the room she saw a door leading to a fire-escape. Through this she made an exit. But as she departed a new plan came to her.

Lucy Durant was about to enter her apartment. She could not understand the strange phone message. Gaston was not at "Speed's" apartment nor was anyone else. She entered her studio and then went back into the next room. The sight which met her eyes caused her to recoil in horror. Rushing to the phone she quickly summoned a doctor. When she had finished, there was a knock at the door and Vera Harper appeared. The girl could hardly speak, but led the woman into the next room. Vera acted extremely well.

"Come. Lucy, dear" she said, "this promises to be a nasty mess. Let me take care of you." The girl promised, but she would not leave until the arrival of the doctor.

Before leaving with Lucy, Vera Harper managed to get into communication with Edwin Stanbury. He was overjoyed at the turn of affairs and hastened to instruct her to take the girl to his place up the Hudson where they could hold her as a club over "Speed's" head and force him to stop his chase for Jim Sprague.

When Jim Sprague had succeeded in boarding the vessel bound for New York he had no idea that "Speed" Stanbury was also a passenger. Indeed, the young man was watching every move of his quarry. Sprague was keeping well under cover on the ship, but "Speed" was waiting until the arrival of the vessel in Charleston, as he knew he could not take the fugitive until that time.

When the ship docked, Stanbury was the first ashore. He concealed himself behind some baggage to await his man, first buying a New York paper. While he was watching the passengers and gl

Christian Endeavor Notes

(By Grace Willoughby)

The meeting Sunday evening was led by Irene Hall and the topic was Psalm 91. Special music was rendered by Jesse Gray. Orland Mayer, who had just returned from a convention at Walla Walla, gave a very interesting talk. A convention will also be held at Walla Walla in June and plans are now in progress to make it the best convention that has ever been held around here. Genesee expects to send a large delegation—just to let them know that we are on the map.

Junior Christian Endeavor was led by Rev. Pendleton. Special music was given by Katherine Casebolt. The next meeting will be led by Katherine Casebolt and all Endeavorers are asked to be present.

Underwent Operation

Arthur Springer went to Lewiston Sunday and on Tuesday morning at 9 o'clock was operated on at St. Joseph's hospital for double rupture which he sustained last fall while working at the west end warehouse of the Farmers' union. At last reports he was getting along nicely.

Parents of Daughter

A daughter was born to Mr. and Mrs. William Rader at St. Joseph's hospital, Lewiston, Monday. Mother and babe are reported as doing nicely.

FEDERATED CHURCHES
REV. JAS. PENDLETON, Minister
(Study at the Parsonage)

Church school at 9:45 a. m.
Morning worship at 11 o'clock.
Junior C. E. at 2:30 and Young People's meting at 7 p. m.
The church board meets Sunday afternoon.
Young people's election of officers Friday evening.

FOR SALE OR TRADE—One of the best building lots in Genesee. It must go at some price. Inquire at News office. 34

H-L-F SILOS

How about that silo you have been going to install for the last two or three years? You can't afford to put it off another year, certainly, as silos will be higher priced and you will be without ensilage for another winter. Order a "H-L-F" double wall before April 15 and get a silo that will give the best satisfaction, at a very low cost —with roof free. 36-4x

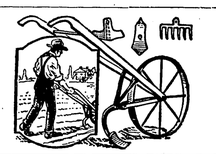
A FULL LINE OF GARDEN TOOLS



Dahlia

Abbreviation of Types
"C"—Cactus "H. C."—Hybrid Cactus

ALABASTER—C—One of the largest and best white cactus to date—Long curved petals give the flower great depth; each ..... Each $1.00
MRS. HERBERT BLACKMAN—C—Soft mallow pink; very free bloomer. A beauty for garden decoration ..... $ .75
MRS. CHAS. COOPER—C—True cactus with long narrow petals. Color, creamy yellow with flush of salmon in center ..... $ .50
CAMBRIAN—C—Clear salmon, lightening to yellow at tips of petals, which are hooked and irregular. An old stand-by, always good ..... $ .30
WODEN—C—Large flower of beautiful salmon rose, shading to old gold in center ..... $ .35
COUNTESS OF LONSDALE—C—Rich salmon, shaded apricot—always good ..... $ .30
CHAS. CLAYTON—C—Flowers large, with loosly arranged narrow petals that are twisted artistically. Color, rich scarlet ..... $ .30
GOLDEN WEST—H. C.—Bright orange, shaded to buff. A vogorous grower, producing a great number of splendid blooms above foiliage ..... $ .40
BASALISK—C—Orange scarlet, long twisted petals, free bloomer ..... $ .30
RUTH GLEADELL—H. C.—A grand flower of soft yellow shading to apricot, bronze on outer petals. extra fine ..... $ .50
TOM LUNDY—H. C.—A California variety of immense size; color, bright velvety red. We place this as one of the best of its color ..... $ .75
YELLOW KING—H. C.—No garden is complete without this beautiful lemon-yellow dahlia. The long, narrow petals standing straight out from the center of flower give it great depth. The finest keeping bloom in our dahla garden...$ .60
ISAQUAH—(Paeony)—Vigorous plants bear quantities of immense lavendar-pink flowers on good stems ..... $ .25
MME. VON EYSTEIN—(Paeony)—Lovely lilac blue large size, good stem ..... $ .25
MRS. ROWENA FAIRCHILD—(Paeony)—New beautiful soft lavendar pink of great size. Specially priced at ..... $ 1.00
PIERROT—C—Color, deep amber boldly tipped white. The striking blossoms are very large and the florets are incurved ..... $ .50
GLADYS SHERWOOD—H C—The largest white cactus ever introduced $1.50
(If disbupdden, the blooms are as large as dinner plates.)
KALIFF—C—Color, rich scarlet. The large flowers are born with profusion. Good stems ..... $ .50

SPECIAL INTRODUCTORY OFFER

6 beautiful dahlias—all different—our selection—only ..... $1.50.

Gladioli

AMERICA—Exquisite shade of flesh pink, tinted lavender, first size—each ..... 5c, dozen $ .50
PANAMA—A new seedling of America, much deeper pink ..... each, 10c, dozen $1.00
BARON HULOT—A rich purple; one of the best of this color ..... each, 10c; dozen $1.00
HALLEY—Salmon pink with creamy white blotch; large flower and and early bloomer. A fine sort ..... each, 5c; dozen, $ .50
MRS. DR. NORTON—Cream and pink. The judge in one of the big eastern shows last year gave this first place ..... each, 40c; dozen, $4.00
SCHWABEN—Soft, pure yellow, little red stripe on lower petals ..... each, 10c; dozen, $1.00
ANGOLA—A beautiful salmon pink (new) each ..... each, 15c; dozen, $1.50
BUTTERFLY—One of the new ruffled flowers; pale salmon ..... each, 15c; dozen, $1.50
YOUELL'S FAVORITE—A large plant with immense flowers (ruffled); striking rosy lavender pink ..... each, 20c; dozen, $2.10
IDA VAN—A most beautiful flaming orange pink; new ..... each, 15c; dozen $1.50

Perennials

We are working up a wide range of stock in perennials for next year. However, we can supply you this spring with the following:

PERENNIALS—Hardy field-grown, each 30c, doz, $3
GOLDENROD.
HOLLYHOCK—Allegheny, Mixed (the finest double and singles grown).
ORIENTAL POPPY — Orange scarlet. Plant some of these.
GYPSOPHILA — (Baby Breath) — A mist-like white flower that has no equal for maxing with other flowers in a bouquet.
TRITOMA—(Torch Lilly)—An odd, tropical-looking flower of brilliant orange scarlet that shoots up from grass-like foliage.
SHASTA DAISY—Needs no description. A fine cut flower.
AQUILEGIA or Columbine—The beautiful, dainty, long-spurred flowers rise above fine cut foliage. Our strain is the Mrs. Scott Elliott's Long Spurred.

Annuals

We can supply you with good, strong, transplanted bedding plants—in season:

ASTERS—Crego Giant—In separate colors—purple, lavender, pink, white.
ZENNIAS—Giant, dahlia-flowered. Mixed.
CARNATIONS—Red, pink, white.
KOCHIA ((Fire Bush)—Childsii.
AGERATUM—(Blue).
We make a specialty of Spencer Sweet Peas and other flower seeds.

FLOWER POTS

Four-inch pots	5c; saucers, 5c
Five-inch pots,	10c; saucers, 5c
Six-inch pots,	20c; saucers, 10c
Seven-inch pots,	30c; saucers, 15c
Eight-inch pots,	40c; saucers, 20c
Ten-inch pots,	75c; saucers, 40c
Twelve-inch pots,	$1.25

33⅓ Per Cent Special Discount

Dry, warm feet are essential to health. Don't endanger yours by trying to make your old Hi-Tops last through the season. To reduce our stock of Hi-Tops to the minimum we will sell any Hi-Top rubber in stock (one to six buckles) at a 33 1-3 per cent reduction from regular prices. The cost of practically all commodities is increasing. You'll be saving money if you buy now, even though you do not need rubbers until next fall---33 1-3 per cent off.

Chewing and Smoking Tobaccos

AS A MATTER OF CONVENIENCE to our patrons we are handling staple tobaccos in both chewing and smoking. We propose to sell these on as close a margin as possible *for cash, and CASH ONLY.* Please do not ask us to make a charge for tobacco under any circumstances.

Special Blue Bell Cornflakes, per package 10c
Kerr's Rolled Oats, 3 packages 85c

Emmett & Boliou

School Notes

Wilma Casebolt

The girls representing the girls' basketball team of the high school gave a very pretty little banquet at the Lambert hotel last Saturday evening. Each girl invited a partner, which made a party of 24. The banquet consisted of three courses and was served very daintily. After Katherine McMahon was elected captain of the team for next year she called upon several members of the team and the coach for impromptu speeches. The evening was enjoyably spent in dancing and playing cards.

A simplified opera was given last Friday afternoon at the school building entitled "The Bohemian Girl." We were glad to have so many visitors.

The last basketball game of the season was played on the local floor last Friday night with the Uniontown high school. It was a fast and interesting game from start to finish. The last half excited many of the spectators when a close score was maintained until Genesee rolled in two field goals that made her victorious, the score being 22 to 18.

We wish to correct the mistake made in last week's school notes in which it was stated that presentation of the girls' basket ball letters would be made. The student body decided to postpone the presentation of the letters until the remainder of the team were given theirs.

A large number of the high school students attended the "all west" basket ball games at Moscow on Monday and Tuesday nights of this week. Those who witnessed the games reported that they saw "real basket ball." In defeating California Idaho is now the basket ball champion of the West since she played to a score of 28 to 20 on Monday night and 29 to 25 on Tuesday night.

The seniors will give a play this (Friday) afternoon at the school building. Practice has been held under the supervision of Miss Patch. The title of the play is "The Neighbors" and is of one act. The public is cordially invited.

It seems that we are in danger of losing the vocational education department of our school. Our present state legislature has failed to take favorable action on the appropriation for this work and unless funds can be raised in some other way it may be necessary to drop this work in our school.

Hoosgow Redecorated

Marshal Martin Foster has informed the society editor of the News that he has just completed the redecoration of the hoosgow, put in a new spring bed and otherwise done spring housecleaning at that hostelry. He says it is all ready for the reception of occupants.

PERSONAL MENTION

Dal Rogers was a visitor in town last week from Lewiston.

Jas. Edwards spent the week-end with his family at Lewiston.

H. H. Manderfeld went to Spokane Tuesday morning for a short visit.

Clayton Keane and N. Williamson of Moscow were Genesee visitors on Wednesday.

Henry Odberg returned home Friday from Spokane where he had been on business.

George Moersch was a Saturday morning pasesnger for Uniontown for a short visit.

Mrs. J. Coleman was a Saturday morning passenger for Spokane to spend the week-end.

Rev. L. C. Godschalx was a Monday morning passenger for Moscow for a few days' stay.

Miss Dennis, teacher at the Gray Eagle school, left Saturday morning for Moscow for a few days' stay.

Mrs. M. J. Schei was a Wednesday morning passenger for Lewiston after a few days' visit with Mr. Schei.

Mrs. A. R. Newcomb and three children left Thursday morning for Spokane for a visit with relatives.

Mrs. Miller, who had been a guest of Mrs. W. J. Herman, returned to her home at Portland Saturday, via Lewiston.

J. C. Hamil was a Wednesday morning pasenger for his home at Juliaetta after having been here on business.

Miss Florence Bielenberg was a Sunday passenger for Colton for a few days' visit with her sister, Mrs. A. J. Reisenauer.

Mr. and Mrs. Cecil Boliou returned to their home at Coeur d'Alene Thursday morning after an extended visit with Mr. Boliou's parents, Mr. and Mrs. Geo. Boliou.

Mr. and Mrs. Fred Hampton returned last week from a few weeks' visit at Seattle, Portland and other coast points and with their daughter, Mrs. Floyd Pinkerton, and family, at Athena, Oregon. Mr. Hampton said that they encountered much disagreeable weather on their trip and that had he known of the "fine" weather we had been having here he might have come home sooner.

Among the Sick

Mrs. Sim Currin is convalescing after an illness of two weeks.

Mrs. Joe Hasfurther has been quite ill for the past week, but is improving nicely.

Mr. and Mrs. Amand Kern, sr., have been quite ill for the past week but are improving at present.

Clarence Aheirn, who recently underwent an operation for appendicitis, is able to be up and around.

Ellis Odburg, who has been seriously ill at Lewiston for the past several weeks, is reported as improving.

OATS AS POULTRY RATION AND HOW TO SPROUT THEM

Oats Have Have Food Value—Proper Size of Sprouting Trays.

FEED OATS "GERMINATED"

Time Required for Sprouting Depends Upon Many Conditions—Attention Needed.

R. V. MITCHELL,
State College of Washington.

Oats should be a part of the ration for young as well as for old birds. Oats compare favorably with wheat in regard to per cent of protein; it is lower in carbohydrates than either wheat or corn, but is about two and a half times higher in fat than wheat and equals corn in this respect.

Oats are high in fiber, 9.5 per cent, while corn is 2.3 per cent and wheat 1.8 per cent. Oats are used as a feed for egg production and for growing birds to a much greater extent here in the northwest than is the practice in other sections of the United States. One of the reasons for this is that oats are a home grown product rather than one which must be imported.

Owing to the high percentage of fiber, dry oats are not readily relished by birds; this being particularly the case unless it is a very heavy weight oats.

"Germinated" Oats Best.

The oats should be fed as "germinated" oats, or when the sprout is about one-eighth to one-quarter inches long. These are fed in the litter as scratch feed and are not considered green or succulent feed; but form part of the scratch ration. When sprouted to this extent the oats contain the maximum food materials which are there, in an easily assimilated form.

The length of time necessary for sprouting oats will depend on temperature, moisture, and method of handling. The oats used should be of a good grade and free from dirt. It will require one pound of dry oats to furnish a sufficient amount of sprouted oats for 16 to 20 birds. The oats should be soaked in water for about 24 hours. In cold weather it is a good plan to use warm water. This will cause the oats to sprout sooner. Then empty the oats into the tray of the oat sprouter and allow the water to drain out. Rank the oats up in one end of the tray in order that the sprouting process will be hastened.

Before the tray is pushed into place care must be taken to allow the water to drain out well, as the water dripping fro mone tray into the next below, will cause oats to sour. The oats should be left in this tray for 24 hours without stirring; usually they will not need sprinkling during this time. Then pull out the tray and stir the oats thoroughly, sprinkle and allow the water to drain off, then put the tray back to place.

From now on stir the oats twice a day. This will insure even sprouting. The oats should be wet down once a day. It is sometimes necessary to sprinkle twice a day—this is especially advisable during cold or hot weather. Oats handled according to these directions will be free from molds. Remember that poor ventilation in sprouter, moutst or uneven stirring of the oats will furnish the proper conditions for mold growth and uneven sprouting.

Don't Use Sour Water.

The water in which the oats were soaked is sour and should not come in contact with oats in other trays; this is also true when the oats are sprinkled each day—the water should be allowed to drip thoroughly before the tray is put back to place.

The sprouter, used by the poultry department for several years past, is similar to a case or cabinet with drawers, one above another; except there is a couple of inches space between each tray, to permit fresh air to circulate between the trays and permit easy removal of the trays. The case or frame which holds the trays is made out of 2x4's for the sides, boarded on the outside and with a door at one end, the other end closed. The top is removable to allow more ventilation. The cleats for the drawers to slide on are one inch by one inche pieces nailed t othe inside of the 2x4's which form the frame for the sides.

Have Plenty of Room.

When this is operated on a board floor it is necessary to have a space as wide as the sprouter and twice its length blocked off on the floor by putting a 2-inch by 6-inch on edge along the sides and across the ends. Then covering the floor and 2x6's with a heavy building paper and allowing a 2-inch opening at the lowest corner for a pipe to drain off the water. The sprouter occupies one-half of this space and the other part serves as a drainage place for the drip from the trays when the oats are put in or are sprinkled.

The size of trays are 4 feet long, 2 feet 10 inches wide and 5 inches deep, with 1-8-inch galvanized hardware cloth for bottoms. In cold weather it will be necessary to supply some heat to the room where sprouter is located. Oil heaters or lamps are often used for this but the oil is sometimes a fire risk.

CLEANING WHEAT REPAYS FARMERS FOR EXTRA WORK

Enough coarse foreign material, or dockage, to feed 10 cows and 30 horses for seven months was removed from the wheat grown on a North Dakota farm in 1921, according to information received by the United States department of agriculture. The foreign material was removed from the wheat at the time of threshing with an experimental grain reicleaner tested by R. H. Black, in charge of grain-cleaning investigations for the partment. The foreign material was finely ground before feeding so as to kill the germs of the weed seeds.

The owner of the farm had previously sold his wheat "in the dirt" at his local elevator and had received nothing for the foreign material in the grain. Moreover he had been compelled to use high-priced oats and other grains for feed for his live stock. By cleaning his grain and grinding the dockage in 1921, eh obtained fairly good feed at practically no cost.

"Another inducement to clean grain on the farm is that clean grain will usually bring a higher price in the market than grain which contains dockage," Mr. Black says.

Various types of cleaning machines and methods of cleaning grain on the farm are described in Farmers' Bulletin 1287, Foreign Material in Spring Wheat, copies of which may be obtained upon request of the United States department of agriculture, Washington, D. C.

POULTRY

S. O. Watson, a Bonner's Ferry, Idaho, poultryman reports a return of $27,000 from his flock of 340 pullets and 240 hens for the month of November. Of this amount $136.02 is claimed by Mr. Watson to be net profit.

Whatcom county, one of the big egg-producing counties of the United States, last year disposed of 86 carloads of eggs and four carloads of dressed poultry, through the Washington Cooperative Egg and Poultry association, representing a cash value of more than $500,000.

The Washington Cooperative Egg and Poultry association, has increased its capital stock from $250,000 to $500,000. Like the large cooperative dairy associations of western Washington, the Cooperative Egg and Poultry has proved a great success, demonstrating beyond a doubt that producers can successfully cooperate to market their products. This poultry organization returned to its members over $3,000,000 during 1922.

Touching on the subject of the marvelous development of the poultry industry in western Washington during the last few years, J. W. Maxman, president of Puget Sound Poultry association, is responsible for the statement that "in 1917 we imported into western Washington 123 to 130 carloads of eggs. The first 11 months of 1922 we exported from the same territiy approximately 450 cars."

A flock of 212 hens on a St. Charles, Idaho, farm laid 1518 eggs in 14 days, January 30 to February 12, after 44 "boarders" had been culled out by County Agent Chase Kearl. The 44 boarders in the same period laid only 56 eggs. The layers averaged seven eggs per hen; the boarders not by with one egg each.

Like the pure bred dairy cow, the pure bred hen is now being "run" on official tests, and like the results obtained in record-making of milk and butter production with the cow, the hen is from year to year increasing her record for annual egg production. In 1920 the world's record for the hen was 312 eggs; in 1921, 313 eggs, and in 1922, Lady Jewel made a decided increase in the record by laying 335 eggs in 365 consecutive days.

Washington and the Pacific Northwest will be advertised to the world as never before beginning this month. The Outlook, American, Saturday Evening Post, Literary Digest, Country Gentlemen, Farm and Fireside and other publications will be used by the Great Northern, Northern Pacific and Burlington lines in connection with the "million dollar" advertising campaign during the next three years.

wheat. (

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

LARGEST MOTOR SHIPS BUILT FOR ORE CARRYING

Two motor-driven ore-carrying ships of over 20,000 tons, deadweight, are about to be built in Germany to carry out a freight contract with an American steel corporation. The engine room will be located aft, and forward from it will extend the ore hold, which will be divided into three sections by cross bulkheads. The hold will be only 30 feet wide, although the ship will have a width of 72 feet. In the space on either side will be large water-ballast tanks with a total capacity of 24,000 tons. Fuel oil will be carried forward and aft in deep tanks holding 3,600 tons. The ships will be propelled by two 3,000-horsepower Diesel engines, but the auxiliary machinery will be steam-driven. The overall length of the ships is to be 571.6 feet, and they are expected to be placed in commission next summer.

ARMY PLANE FLIES 90 MILES WITHOUT A PILOT.

The pilotless airplane, with which the Army Air Service has been experimenting for some months, recently made a number of successful flights of more than 90 miles. The automatic control, consisting of a gyroscope and an arrangement of bellows similar to those used in piano players, is said to be more accurate and dependable than a human pilot. The tests proved it was possible to drop bombs from this plane, on targets on or off the ground, with great accuracy.

Joshua Crabapple says: "A dangerous demagog is anybody who threatens to disturb nests that are feathered."

Left: Close-up of new Ventilating Fan which drives its power from a kerosene lamp. Right: General view of odd appliance.

VENTILATING FAN RUN BY KEROSENE LAMP.

The latest thing in ventilating fans is one that can be operated in places where electric current is not available. Except for the lower part, which supports the kerosene lamp that runs it, the fan has the outward appearance of the familiar type of electric fan. Heat rising from the flame of the lamp works a piston in an eccentric cylinder, which in turn operates two other pistons that turn the fan shaft at the top o fthe stand.

Portion of ribbon from speed recorder, indicating the speed of some automobile at any time during a 24-hour period.

Combination Speedometer and clock device that keeps a continuous yearly record of speed of automobile to which it may be attached.

ELECTRIC STEEL REFINED BY NEW PROCESS.

A new plan has been put into operation in England, using electric furnaces for refining steel by a process somewhat analogous to the duplex process of making steel with a combination of the Bessemer converter and open-hearth furnace. Scrap steel is electrically melted and refined in a continuous manner in a large primary furnace, from which, at intervals, about a th.rd of the molten bath is drawn off into a smaller secondary furnace for finishing. Metallurgically, this arrangement combines the advantages of operating continuously a plant of large output, with the ability to produce small quantities of steel of varying composition. Electrically, the power factor is improved by the maintenance of molten baths, and the load factor increased by the continuous working.

Mercury Cleans Rifle Barrels.

It has been found that mercury can be used very effectively to clean rifle barrels. The end of the barrel is tightly corked, and about 1-2 fluid oz. of mercury is poured in. Then, after the other end is corked, the barrel is slowly tipped from end to end a number of times. The mercury amalgamates with the lead adhering to the inside of the rifle barrel.

NEW AUTO DEVICE TO KEEP YEARLY SPEED RECORD.

A new automobile device that is a combination of a clock and a speedometer, has been worked out so as to keep a permanent and continuous record of the speed of an automobile to which it may be attached. The record is made by a stylus on a ribbon of paper unwound from a roll sufficient to last one year, and which is marked with the units of speed along one edge and with units of time along the length of the ribbon. It is put up in a box with a transparent face so that the record covering several days can be seen, and the box is provided with lock and key and arranged to be sealed. The object of the inventor is the elimination of reckless driving and the reduction of accidents.

LIVESTOCK

Hampshire sheep breeders of Kittitas county met with County Agent W. A. Davis and decided to form a permanent breeders' association. It was decided to pool the wool belonging to the members and probably ship to the State Wool Growers' association. Another important matter was decided, when they agreed upon a ram sale to be held in the fall.

William Maxwell of Stehekin has purchased a carload of thoroughbred Morgan horses including one of the finest stallions in the United States and has also bought a carload of English thoroughbreds from Kentucky. Mr. Maxwell intends to establish a stock farm at Maxwell lodge near the head of Lake Chelan for the breeding of choice saddle and driving animals.

An Eatonville man has lost a second milch cow because the animal ate nails and wire in her hay. This is a common cause of the loss of cattle, the remedy for which is to keep the nails in a box where they can not be spilled in the hay and when feeding baled hay carefully remove every piece of wire when opening bales. It is the short pieces that are dangerous.

Cull and low priced potatoes may be fed with profit to pigs as a partial substitute for the grain of the ration. Best results are secured when 1-2 to 3-4 of a full ration of grain is fed together with all the cooked potatoes the pigs will consume. All investigations so far have indicated that cooking much improves the value of potatoes for pigs. Raw potatoes are not eaten with relish and may cause scours. Frozen potatoes may be fed to pigs, even after they have thawed out, if not too hogly spoiled, provided, they are first cooked.

David Nisbet, a member of the Holstein Calf club of Chehalis sold his calf at the recent Holstein sale at Portland for $305. David bought the calf at the beginning of the year for $200. He won first place in the boys and girls' calf club class as well as first in the open class at the Southwest Washington fair. Not satisfied with these winnings, David showed at the Pacific International Livestock show and won first place in the open class. County Agent R. C. Fowler reports that young Nisbet made a profit of $126 on his dairy venture.

IS SILK PRODUCTION A COMING INDUSTRY?

The reason why the silk from the many species of native moths which spin cocoons can not be used commercially, is that the threads fuse together so that they can not be unwound, according to Dr. A. L. Melander, entomologist at the State College of Washington.

Recently a farmer near Sunnyside was reported to have found a native silk worm which produces three broods a year, from which he hopes to obtain a merchantable silk. As yet the college has not had sufficient detail on the discovery to draw conclusions as to the factory value of these worms, but Dr. Melander said, when consulted:

"Many species of moths spin a cocoon in which to pupate. This cocoon is made of soft silk, and with a great many species contains enough silk to warrant rearing caterpillars, if it were not for the impossibility of unreeling the silk from these cocoons.

"The silk worm that is cultivated produces a light colored cocoon from which the silk can be easily unrolled by softening in hot water. Our native silk worm moths have a darker silk, but the threads fuse together in the making of the cocoon and so the silk can not be utilized.

"It may be that some future chemist will discover a means of softening the silk threads, in which case the production of a low grade of silk would be easily possible in many places.

"Just what species Mr. Seaman is working with is not known to us; it is particularly difficult to guess if his statement that there are three broods a year is correct."

Use Dry Treatment for Smut.

EPHRATA.—As a result of demonstrations in the new dry treatment of seed wheat for smut, 4000 acres of wheat will be treated in this manner near Ephrata. County Agent A. R. Chase, reports that 10,000 acres of seed wheat will be treated with Copper Carbonate in the county this year.

Boys' and Girls' Farm Club Work

Thirty-six former members of boys' and girls' clubs have been found among students at the university. In their present work they range all the way from seniors to students in the agricultural short course.

Eight members of the Moscow Garden club have made arrangements with the county agent and district club leader for a meeting to study hotbed and cold frame construction and to discuss plans for gardens.

The Ritzville pig club was organized with Will Buscher, president, Laurence Gillespie, vice president, and Walter Thom, secretary. Dean Scheel was selected as local leader. Seven registered bred gilts were furbished by the members of last year's club to other club members, besides nine registered bred gilts were brought into the county during the month.

Starting with a Monday visit by County Agent O. S. Pletcher, a new pig club was formed at Rock Creek, Idaho, and by Saturday eight purebred gilts and a sow had been obtained and were distributed to the youngsters by lot. John McNee, Rock Creek teacher, assisted in forming the club, and J. H. Botjer, cashier of the Potlatch State bank, conferred with the club members and agreed to lend the mnoney at 8 per cent until Nov. the money at 8 per cent until Nov. Leader H. A. Stone bought the pigs at sales across the line in Washington on the two following days.

Every year makes the forest problem of the United States more clear, says Col. William B. Greeley, chief of the forest service, United States department of agriculture. The problem has two main features. The first feature is the rising cost of timber products, which is due primarily to heavier transportation charges from more and more distant sources of supply. The second feature is the unproductive conditions of immense areas of land which are not adopted to agriculture.

FIXED WHEAT PRICE WANTED BY FARMERS

Contend Emergency Exists and Must Have More Money to Get on Their Feet.

Keen interest is being manifested by wheat farmers concerning the various federal price guarantee proposals though no associations have taken official action on the guaranteed prices, but are awaiting further information regarding proposed relief measures.

Growers heretofore have not favored a fixed price, according to Walter J. Robinson of Spokane, but they consider a nemergency now exists and favor any plan that will bring them more money for their wheat.

The Gooding bill, roughly, provides for a fixed price of $1.75 a bushel, on a northern spring basis, and would have a federal corporation to buy the wheat. The Sinclair bill in a general way is the same with the difference that the federal corporation would not buy any wheat at $1.75 until after July 1, 1924. The theory is that such knowledge would automatically move the wheat at about $1.75 and the grain corporation would actually have to buy little if any wheat after July 1, 1924.

A coast price of $1.75 would mean about $1.50 to the farmer in the interior, it is estimated, or about $1.30 if he actually held his wheat until July 1, 1924.

The democratic state committee in session at Spokane Monday, February 12, after much spirited debate passed a resolution urging representatives in congress to favor the bill now pending which would provide a minimum price on wheat.

DAIRY

That Clallam county is winning a reputation as a dairy county is indicated by the fact that a telegram was received from Conrad, Montana, asking for 75 head of dairy calves to be used by boys and girls' club members in Pondera county. A circular letter was mailed to the farmers of that county giving the plan of selling calves from high testing cows belonging to members of the cow testing association, which resulted in this sale. A uniform price was placed upon the stock in accordance with the production of the dam.

A special cow testing association has been organized at Forks and 200 cows signed up for a year's milk test. The purpose of the association is to provide a cheap and efficient means for dairymen to determine the merits of their cows and compute costs of feed. Each farmer will take samples of milk and furnish them to the Forks Cooperative Creamery once a month where the butterfat tests will be determined. County Agent A. W. Holland of Clallam county assisted in the organization of the new testing group.

The average farmer has the choice of two methods to secure 400 pound butterfat cows. One is to buy them, the other is breed them up from the cows he now has in his herd through the use of sires whose dams have proven their ability to produce 500 pounds of fat a year or more. He might, too, use a combination of the two methods. As an illustration of what can be done through the use of good sires the state experiment station at Ames, Iowa, increased production 280 pounds in two crosses through the use of well bred sires. The farmers of almost any community can gain the use of the best bred sires in the west through the co-operative bull association. The co-operative bull association is a farmers' organization whose purpose it is to co-operatively own, use and exchange meritorious bulls. Many farmers are now raising calves that are poorer in quality and will undoubtedly be poorer in production than their dams. The fault is due to the inferior bulls they have used. They must use sires bred for production if they hope to breed up their herds to the point where each cow will make a profit of over $100 per year. This will allow the calf, skimmed milk and manure to pay for the farmer's time and labor.

Pageants written by Seattle writers, a colorful spectacle featuring northwest history, and an open-air concert by a famous grand opera singer are being considered for next summer's program at the University of Washington stadium, to take the place of "The Wayfarer," which has been presented the last two summers.

Casting sheeps' eyes at a man is one way a girl has of pulling the wool over his eyes.

According to recent discovery the old Egyptian kings used tailor models or dress forms.

TOURIST TRAVEL HELPS BUILD UP RURAL SECTIONS

From Tourists Come Our Future Farmers, Manufacturers and Business Men.

EXPECT ONE MILLION IN 1923

They Buy In Passing Thousands of Dollars' Worth of Farm Products.

Tourist travel will greatly help in making the farmer more prosperous, stated Mr. Herbert Cuthbert in an address recently in Tacoma. In the first place he said, it must help the farmer by creating a greater demand for what he produces. It is estimated that there will be not fewer than one million people, transient visitors, in the Pacific northwest in 1923, which must create a greater demand for thousands of dollars worth of farm products, especially in dairying, poultry raising, all kinds of meats, truck gardening and the growing of fruit.

If these were the only benefits, Mr. Cuthbert argues, the development of tourist travel should be worth while, but the bringing of a million people into the Pacific northwest will have a much greater effect on rural upbuilding in many other ways.

He is a Colonizer.

"We have referred to the tourist as the colonizer. This is especially true of the man who travels by automobile. A very large percentage of them are looking for new lands upon which to settle, for new homes or for new farms and ranches. They may be dissatisfied with the climate and conditions under which they live in the east. They may have some sons who wish to secure places of their own and prefer to locate in the west. They may desire to partially retire and instead of cultivating from 200 to 1000 acres of land at home to secure smaller areas that will not entail so much arduous work and yet bring them in a fair living.

Get 'Em Here to Sell 'Em.

"To these men our cut-over and logged off lands, our fruit growing areas, irrigated or non-irrigated, our poultry ranches and our berry growing districts will particularly appeal, but you can not sell to these people if they remain in Iowa, Illinois, Michigan or New York. You can not sell them homes by mail, or ranches by literature. They must see what you have to sell personally and, therefore, the very best thing you can do for Washington and the Pacific northwest is to induce them to make a tour of the state and of this western country.

That this is the most effective way of getting a new population is brought out by the fact that 60 per cent of the new residents of California came first as tourists.

Tourist is the New Manufacturer.

"But the advent of the tourist has a still greater influence on rural upbuilding by creating, in a different sense to what we have already referred to, a local market for the products of the farm. Many of these men who make a tour are looking for new opportunities in business and in manufacturing enterprises. They can not learn of the natural advantages and resources of our country unless they visit us. They can not realize that, say, in the state of Washington there is one-fifth of the water power of the United States for hydro-electrical energy. They can not realize the immensity of our areas, of our deposits in copper, in lead, in zinc and other minerals. They can not know of our great fisheries, of our immense lumber assets, unless they see them, because no amount of literature will give them a proper and comprehensive estimate of these things, and so the capitalists, the captains of industry, officers of great corporations who are anxious to start out for themselves in the industries with which they have been familiar, can not be given opportunities that are available to them unless they visit us, and in inducing these men to tour this and adjoining states we are creating the possibility of vast industrial expansion.

AMERICA'S FARMERS AND EUROPE'S BUYERS

There are broad indications that the current annual balance of indebtedness of the rest of the world to the United States which must be covered by American investments in foreign countries will be in the neighborhood of one billion dollars for the year 1923.

In 1922, according to the United States department of commerce, American investors purchased 769 million dollars of new capital foreign securities, 589 million the first six months of the year and only 180 million the last six months of the year. The fact that only 23 per cent of the total loans were made in the second half of the year is overwhelming evidence that this source of funds for the purchase of American exports is drying up and that the exports of the 1923 crops are likely to be seriously handicapped. Inasmuch as about 50 per cent of the cotton has been finding a market abroad, over 25 per cent of the wheat, and over 15 per cent of pork products, and inasmuch as more than one-half of the total exports are agricultural exports, American agriculture has a vital interest in the clearing up of European affairs.

How are we to arrive at sound judgments and concete proposals for profitable economic cooperation between the United States and Europe?

The nation's lumber shipment in 1920 was about 2,070,000 carloads, and the average haul for each carload 485 miles. According to the best estimate of the forest service, United States department of agriculture, the freight bill on lumber for that year was $276,000,000. A fraction of this sum, says the forest service, wisely invested each year in forest protection and rehabilitation would grow timber where it is needed, reduce the nation's freight bill, cheapen lumber, and release vast amounts of railroad equipment and labor for unavoidable transport. Coal and iron can not be grown, but timber can be.

Farm Bureau President At Home

President O. E. Bradfute, of the American Farm Bureau Federation, is a real dirt farmer. This is a picture of his farm in Green County, Ohio, from which he was called to lead the biggest farmers' organization in the world. Mr. Bradfute specializes in Black Angus purebreds—as he is shown in the foreground holding one of his prize winners.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Unable to sleep because of the crying of her three-year-old daughter, Mrs. Mary Hann of Sheffield, Eng., killed the child with a razor.

Because he stole $30, William L. Veitch, of Scotland, England, a government clerk, has forfeited $7500 in pensions and gratuities due in eight months.

More than 10,000 Russians were exiled from Russia and Siberia without trial from the beginning of the bolshevist regime to December 1, last, according to information from soviet sources.

Thieves have stolen priceless bells from 10 or more missions in southern Texas. The bells were supposedly stolen as relics. They are products of old masters. Some are over three centuries old.

Thieves entered the cathedral of Granada, Splain, and stole a forged iron screen surrounding the tomb of Queen Isabelle, friend of Columbus, and her consort, King Ferdinand. They sold the grating as old iron.

Daily commercial air service between Prague and London soon will be opened, following conclusion of an agreement between the British and Czecho-Bolshevik governments. Mail from Prague will reach London in eight hours.

North Dakotans will not be compelled to wash their feet once a week. The legislators refused to make mandatory weekly ablutions of the pedal extremities. One over-zealous lawmaker sought to attach such a rider to a chiropody regulation bill.

Six Japanese stowaways who arrived at Vancouver, B. C., on the steamer Taibu Maru escaped recently by breaking through the bars in the immigration shed. Twenty-three others reaching here on the same steamer were deported and sailed for Japan. They had stowed away at Kobe.

Japers (with air of puzzlement) —What would you do if you were in my shoes?

Bubba—(bluntly)—Get 'em shined.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

How to Start the Home Flock.

In starting the home flock of chickens, decide first of all what you want. If you want eggs, and very little meat, start with Leghorns, Anconas or Minorcas. Where you want meat and eggs, start with Rocks, Reds or Wyandottes. If you want principally meat, start with Brahams, Langshans or Cochins.

Where you have one of these breeds already, and it suits your purpose, select the most vigorous hens, preferably one or two years old, for breeders. Next, secure a cockerel not related to these hens and mate them. One cockerel to 18 hens for Leghorns, 1 cockerel to 12 hens for the Rocks, Reds or Wyandottes, and 1 cockerel to 10 hens for the heavy breeds. In selecting a cockerel get one that is 100 per cent vigorous. If you want lots of eggs, get a cockerel from a dam with high trap nest record.

In case you have chickens that you do not want, or if any of them have tuberculosis, sell the entire flock and start over. It is always possible to get good stock. A dozen hens and a rooster can be bought for $25.00 to $30.00. You can start with four hens and 60 hatching eggs at a cost of $15.00 to $20.00; but you will not have many eggs to eat till the pullets start laying in the fall. You can buy 100 day-old chicks at a cost of $25.00 to $30.00, and raise 40 pullets that will cost you at laying age about $60.00. You can start in any one of these ways at half the cost by buying poor stock; but they will cost you ten times as much in the end.

There is nothing so palatable as a fresh laid egg. A dozen good hens, well cared for, will give a family of five an egg each and every day in the year. Twenty-five hens, with half of them used as breeders, will furnish the family with three dozen eggs a week, a chicken every Sunday and enough left over to buy Christmas presents.

"Where does the shoe pinch?" asked the clerk.

"In the price," replied the fair customer gazing fondly at the $18 kicks on her feet.

Need Right Variety for Good Wheat Crop

"Every spring someone makes the mistake of sowing the wrong variety of wheat," says E. F. Gaines, cerealist of the State College of Washington. "Often reports come in during June and July from farmers complaining that their spring wheat will not head out. They have made the mistake of sowing winter wheat in spring. A true winter wheat will not produce grain until it has gone through the short days and cold weather of winter.

"Often the farmer who complains that his fall wheat winter-kills badly has made a similar mistake, sowing the spring variety in the fall. Spring wheats generally will not stand the freezing and thawing an \ smothering by ice and snow as well as will the true winter wheats.

Two Standbys.

"The two principal spring wheats, Bluestem and Baart, are selling at such a premium on the market that it may be difficult to get seed for spring planting. It will be unfortunate if that is the case, for Baart is by far the best suited to the areas of light rainfall in Big Bend country.

"At the dry-land station at Lind, where rainfall is less than 8 inches, Baart has produced over 30 per cent more than either Bluestem or Marquis, in a 6-year average. Bluestem, on the other hand, has produced almost 8 per cent more wheat than Baart during the past seven years, at the Pullman experiment station where the rainfall is over 20 inches. In the intermediate region between these two stations, Marquis wheat has found favor, although it yields slightly less than Bluestem and Baart at both stations. The seed of Marquis is plentiful and may be substituted without great loss where the rainfall ranges from 15 to 20 inches.

Jenkin's Club for Palouse.

"Nearer the mountains and in the more fertile areas of the Palouse country, Jenkin or Jenkin's Club as it is commonly called, may be substituted for Bluestem to good advantage.

"Both Marquis and Baart have a shorter growing period than Jenkin and Bluestem, and therefore mature earlier. If the spring is late so that planting is delayed, Baart might yield more than Bluestem in the Palouse country, although at Pullman in a 7-year average Bluestem has yielded 2.6 bushels the most. Certain varieties do better than others on poor soil.

Cats Like It

The heir to the family fortunes and misfortunes, under the supposition that "we must stick together," is unswervingly loyal to Dad, even when that loyalty involves attributes not usually belonging to that side of the household.

Mother was considering a vacation trip, and some one asked Son if he and Dad could manage the cooking during her absence.

"Oh," was the reply. "Dad's a good cook. We can't eat his cooking, but the cats can."

Call for Farm Hands

Calls for farm hands for spring work already have been received by the Spokane labor agents. The demand has so far been chiefly from Lewiston, Idaho, and the southeastern Washington section. Farmers are now offering $30 to $40 per month and board. Agents say that there will be a demand for unskilled help this year in more numbers than in previous years.

The fellow with a straight back does not always have a straight mind.

Isn't It Funny?

Isn't it funny?
That a man who thinks
He is a business man
Will get up in the morning
From an advertised mattress,
Shave with an advertised razor,
And put on advertised underwear,
Advertised hose, shirt, collar, tie, and shoes,
Seat himself at an advertised table and
Eat advertised breakfast food,
Drink advertised coffee or substitute,
Put on an advertised hat,
Light an advertised cigar,
Get in an advertised automobile,
Go to his place of business and
Turn down advertising
On the ground that
Advertising doesn't pay.

When a man achieves greatness he likes to cover up his smallness.

PUBLIC SALE

We, the undersigned, will sell at public auction, all the following described property, having concluded to quit farming:

THURSDAY. MAR. 15, 1923

At the Jesse Raidall lower farm, on the Little Potlatch, about five (5) miles southeast from Moscow and about six (6) miles northeast from Genesee, and about four (4) miles south from Joel, and about two (2) miles east from Blaine, in Latah county, Idaho.

LIVESTOCK

One grey mare, 5 years old, weight 1550 pounds.
One grey mare, 6 years old, weight 1600 pounds.
One grey gelding, 4 years old, weight 1375 pounds.
One grey gelding, 5 years old, weight 1400 pounds.
One black mare, 8 years old, weight 1600 pounds.
One grey mare, 8 years old, weight 1600 pounds.
One bay gelding, 7 years old, weight 1575 pounds.
One bay gelding, 8 years old, weight 1500 pounds.
One bay gelding, 8 years old, weight 1500 pounds.
One bay mare, 10 years old, weight 1425 pounds.
One bay mare, 9 years old, weight 1550 pounds.
One grey gelding, 11 years old, weight 1375 pounds.
One black gelding, 9 years old, weight 1375 pounds.
One bay gelding, 9 years old, weight 1375 pounds.
One black gelding, 6 years old, weight 1350 pounds.
One bay gelding, 8 years old, weight 1125 pounds.
One bay gelding, 10 years old, weight 1375 pounds.
One grey mare, 8 years old, weight 1375 pounds.
One bay mare, 3 years old, weight 1325 pounds.

CLIFFORD OLSON and FLOYD OLSON, Owners.
Norman W. Cairns, Auctioneer. J. G. Vinnigerholz, Clerk.

War Risk Branch at Spokane

War risk insurance has been established in connection with the United States Veterans' Bureau in Spokane, bureau officials have announced. Miss Bertha Cooper has been named insurance cashier. Instead of sending premium payment to Washington, D. C., war veterans of eastern Washington and Idaho are entitled to take advantage of the branch office service.

Loans on policies and other matters relative to government insurance are also handled at the Spokane office in the Realty building. There are several thousand ex-service people of this sub-district carrying war insurance. Those who have allowed their war risk policies to lapse are urged to reinstate their insurance. If in good health, only two months back premiums need be paid.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the the County of Latah.

Izora M. Sides, Plaintiff, vs. Wayne Sides, Defendant.

The State of Idaho sends greetings, to the above named defendant, Wayne Sides.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the county of Latah, by the above-named plaintiff of the nature in general terms as follows:

The said action is brought to obtain a decree of divorce dissolving the bonds of matrimony heretofore and now existing between plaintiff and defendant, as will more fully appear in the complaint on file herein and to which reference is here made and for the care, custody and control of Elvin Edward Sides, the minor child of the parties, and

You are hereby directed to appear and answer said complaint within 20 days of the service of this summons if served within the judicial district and within forty (40) days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah.

HARRY A. THATCHER, Clerk.
By ADRIAN NELSON, Deputy.
THOMAS A. FEENEY,
Attorney for Plaintiff.
Residence and Postoffice Genesee, Idaho. 36-6

Notice of Time Appointed for Proving Will

In the Probate Court of Latah County, State of Idaho.

In the matter of the estate of Dennis Sweeney, Deceased.

Pursuant to an order of the said probate court, made on the 2nd day of March, 1923, notice is hereby given that the 26th day of March, 1923, at 2 p. m., at the court room of said court, at the court house in Moscow, county of Latah, state of Idaho, has been appointed as the time and place for proving the Will of the said Dennis Sweeney, deceased, and for hearing the application of Mary Sweeney for issuance to her of letters testamentary, when and where any person interested may appear and contest same.

Dated this 2nd day of March, 1923.
ADRIAN NELSON,
Probate Judge, ex-Officio Clerk.
THOMAS A. FEENEY,
Attorney for Petitioner. 36-3

COMING TO
PALOUSE
SPECIALISTS

United Doctors

DO NOT USE SURGERY

WILL BE AT
PALOUSE HOTEL, PALOUSE
SATURDAY, MARCH 17, 1923
ONE DAY ONLY
Office Hours, 9 a. m. to 3 p. m.

No Charge for Examination

The doctor in charge is a regular graduate in medicine and surgery and is licensed by the state of Washington. He visits professionally the more important towns and cities and offers to all who call on this trip consultation and examination free, except the expense of treatment when desired.

According to his method of treatment he does not operate for chronic appendicitis, gall stones, ulcers of stomach, tonsils or adenoids.

He has to his credit many wonderful results in diseases of the stomach, liver bowels, blood, skin, nerves, heart, kidneys, bladder, bedwetting, catarrh, weak lungs, rheumatism, sciatica, leg ulcers, and rectal ailments.

If you have been ailing for any length of time and do not get any better, do not fail to call, as improper measures rather than disease are often the cause of your long standing trouble.

Remember above date, that examination on this trip is free and that his treatment is different.

Address: 336 Boston Block, Minneapolis, Minn.

Rimrock Highway District Call for Rock Crushing Bids

Sealed bids will be received by the board of Rimrock Highway Commissioners of Nez Perce county, Idaho, up to 2 o'clock p. m., March 10, for crushing 1,000 or more yards of surface rock. Equipment and rock to be furnished by highway district. Each bid to be accompanied by certified check of $50 as a guarantee that successful bidder will enter into contract.

The board reserves the right to reject any or all bids.

E. M. BECKER, Secretary,
Rimrock Highway District. 35-2

Sportsmen's and Tourists' Fair

May 23 to 25 has been selected for the date of the fourth annual Spokane National Sportsmen's and Tourists' fair, which promoters say promises to become national in scope. The fair this year will no doubt occupy twice the space used last year and one block beneath the Union station tracks will be used.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MARCH 16, 1923. NO. 37

OLD CLTHES WANTED FOR NEAR EAST RELIEF

Next Monday, March 19, will be old clothes "Bundle Day" here and in nearly every other town of Latah county. On that day wearing apparel and bedding of every description which has served out its usefulness here is to be turned in at local receiving stations to be rushed by the Near East relief into the old Bible lands and neighboring areas to replace the flimsy rags now serving unknown thousands in that death-haunted country for clothes.

The cast-off garments and old shoes to be gathered next Monday are wanted to help supply the desperate needs of adult refugees from the Turkish Nationalist terror zone, as well as to help clothe the little orphan children of Armenia, Syria and Greece, whom people through Latah county are right now helping to feed and shelter with financial aid being gathered next Near East relief.

At Moscow, Troy, Genesee, Juliaetta and Kendrick arrangements are already completed for the distribution of tags through the public schools calling attention to the needs for clothing as well as funds, and asking for gifts of clothing to be turned in at receiving stations in the different places next Monday.

The Methodist, Baptist and Catholic churches, as well as the Butterfield-Elder implement store, are to be the receiving stations at Moscow. Bundles may be sent to the school rooms or to Myklebust Brothers' department store in Troy. The Methodist Episcopal church has been granted the use as a bundle station in Kendrick. Bundles from Juliaetta and vicinity are to be turned in at the Juliaetta school and the public school and St. Joseph's school will join in the clothing collection here in Genesee. Bundles may be turned in at either place.

This gift clothing need not be cleaned or repaired, it is announced by Rev. James N. Pendleton, who is directing the local appeals for Near East relief. Repairing, cleaning and alterations of garments and the remaking of shoes constitute only a small part of the self-help and industrial training work which all who receive aid from the Near East relief are required to do toward the solution of their distressing problems.

"The Bachelor Daddy"

The feature film at the opera house Saturday night will be Thomas Meighan in "The Bachelor Daddy." It is a picture which radiates happiness and which will undoubtedly help many to see the finer and truer side of life. It is a picture which demonstrates the power of child love and no better selection for the starring role could have been made than Thomas Meighan, famous as the "Good Luck Star."

The story is of a man who unselfishly adopts the motherless children of her dying pal, despite the fact that his own wedding day is but a week distant. He does not know it at the time, but the little ones bring him to the realization of a greater love than he thought was possible.

The work of the star is wonderful, while Leatrice Joy as leading woman acts her part with warmth and charm.

This is said to be Mr. Meighan's very best pictures and is said to be one of the very best of its kind on the screen. There is enough variation in it to satisfy the most exacting.

There will also be plenty of comedy to keep you in a good humor: Bob and Bill in "A Day in the Wilds," and a Lloyd comedy entitled "Hear 'Em Roar."

Federated Ladies Aid

The ladies aid of the Federated church will meet with Mrs. W. D. Woodward on Wednesday, March 21. All members are requested to be present.

Rinkey Dinks Hold High Carnival

The Rinkey Dink club met at the home of Mrs. Martin Foster last Friday and a very enjoyable time was spent and plenty of eats were set before the members by the hostess.

The party was visited by old Mother Goose and her broomstick—but the goose was absent; otherwise she was as natural as in the olden days when she rode her broomstick serenely among the stars, and we sincerely hope she will call again as it is an emblem of good luck.

Martin Foster and Norman Nelson were initiated into the mysteries of the Rinkey Dink club and are now full-fledged members of that organization. The ladies could not show any partiality as they had already accepted two gentlemen as members. The initiation of the two candidates was a complicated affair. As there was no goat to be had, the nearest thing to a goat the ladies could get was a broomstick, which they borrowed from Mother Goose. One lady whose name we will not mention, and who had just put in an application for membership, promptly withdrew the application and walked out.

One lady, sitting nearest the door, reported that dill pickles were being served in the dining room. The matter was investigated and it was found that these delicacies were the special treat for the new members. Some shared the treat but the majority said they did not see how it was possible after all the goodies that had been before. The men did not get the point and declared they were glad to have joined the Rinkey Dinks.

Those present at the Foster home were Mrs. H. Rees, Mrs. John Lawson, Mrs. Norman Nelson, Mrs. H. Hanson, Mrs. Joe Reil, Mrs. Frank Hoorman, Miss Ethel Nelson, Mrs. G. A. Bumpass, Mrs. Chas. Ingle and daughters, Mrs. Martin Foster, Mrs. R. S. Sullivan, Mrs. Chas. Herman, Miss Blanche Herman, Rowena Hanson.

The next meeting will be held this (Friday) afternoon at the home of Mrs. Chas. Ingle.

Rinkey Dink Correspondent.

Our "Bill" Lauds Soviet

According to a news dispatch sent out from Jersey City, N. J., the other day, where "our own Bill Borah" was very evidently "tuned in" with the soviet broadcasting station: The dispatch says:

Praise for the present government in Russia was heard from United States Senator Borah at the annual chamber of commerce dinner. The form of government, he said, had nothing to do with the situation and he demanded to know what right the government or the people of the United States had to question the form chosen by the Russian people.

"Do you believe that world peace can be established," he asked, "until Russia has been given the right to come back into the council chamber of the world?

"I'm not as red as you think, however," he went on. "Tonight I say, I wish well of the Russians. No people ever had greater cause to rebel."

It is probable that Bill will be able to straighten things out after he gets over there and meets Big Bill Haywood, but if he doesn't have any better luck than he did trying to put over a direct primary in Idaho he will be sadly disappointed.

When Dr. Healy and Paddy Ryan Met

As I was crossing th' bridge th' ither day," said an Irishman, "Oi met Pat O'Brien. 'O'Brien,' says Oi, 'how are you?' 'Pretty well, thank ye, Brady,' says he. 'Brady,' says Oi, 'Oi's not me name,' 'Faith,' says he, 'an' mine's not O'Brien.'

"With thot we again looked at aich other, an' sure 'nuff it was nayther of us."

Parent-Teachers' Meeting

Thet following program will be given at the public school building on Monday evening, March 19, which had been postponed from the April meeting. All parents and those interested in the welfare of our school should be present:

Community singing.
Recitation by little Miss Violet.
Duet by Mrs. W. W. Burr and Mrs. R. I. Witty.
Paper—"How Genesee May Become a Better Rural Community"—read by Victor Casebolt.
Piano solo by Jesse Gray.
Quartet—Jesse Gray, Lester Bumpass, Grace Jain and Olive Mulalley.
Twenty-minute talk by Rev. James N. Pendleton.
Piano duet by Thelma Woodward and Rowena Hanson.
Song by pupils of 20 years ago—more or less.
Rogers.

There is to be a question box, in which you will deposit any question on any matter pertaining to the school, which will be taken up and discussed at the meeting.

Genesee Hogs Bring Top Price

The following article appeared on the front page of the Spokesman-Review of Thursday, March 7, under the following head:

"Hog Sales Set Top Price Here.—$9.25 Paid to Farmers' Union for Genesee Shipment.

"George S. Downer, manager of the farmers' union live stock commission, operating at the Spokane union stock yards, reports his association sold its initial carload of live stock on the Spokane market yesterday at a satisfactory price.

The consignment was a mixed shipment from the Genesee union of Genesee, Idaho, containing cattle and hogs. The swine sales at $9.25 per hundred weight put a new top on the Spokane market, while steers at $7.25 per hundred and heifers at $6.50 per hundred were considerably in advance of any recent transactions in beef cattle trading on the local market.

Commenting on future business Mr. Downer said: "We have a clientele embodying a great number of farmers and stockmen in the northwest territory, and judging from information at hand relative to stock that is about to move we anticipate shipping of considerable volume to our agency through March."

Death of Mrs. Anna Dahl

Mrs. Anna Dahl of Moscow passed away Thursday March 8, 1923, at the home of her daughter, Mrs. Oscar Nordby, a few miles northeast of Genesee, after an illness of two weeks, following the flu.

Mrs. Dahl was born in Norway, October 3, 1844. She came with her family to the United States in the fall of 1893. In October, 1903, the family moved to Moscow, where they have since resided. The husband, P. P. Dahl, sr., passed away at the family home in Moscow on May 7, 1911.

Five children survive, P. P. Dahl, jr., A. P. Dahl, and Mrs. B. P. Luvaas of Moscw; Mrs. Oscar H. Nordby of Genesee, and Mrs. A. P. Hegge of Spirit Lake. The funeral was held Saturday afternoon at 3 o'clock from the Norwegian Lutheran church, conducted by Rev. J. E. Lee.—Star-Mirror.

Has Larged-Sized Egg

F. J. Niemann, cashier of the First Bank of Genesee, brought to the News office the other day an egg that was of pretty fair size itself. While not so large as the one reported last week from Juliaetta, it is plenty large for all ordinary purposes. The measurements were 7⅝x6¼ inches and weighed 3¼ ounces. Mr. Neimann declares he has no goose in his henery but that the egg was laid by one of his White Leghorn hens.

Should Call Later

One of Genesee's gay young Beou Brummel's, who has allowed the hair to grow rather far down in front of his ears, went into one of the local general merchandise stores the other day and said: "I would like to see the nicest thing you have in silk hose." Whereupon the man behind the counter ,replied: "Young man, you will have to call later; the nicest thing we have in silk hose has just gone out to lunch."

Six Weeks Are Up

According to our local fence-rail weather forecaster, th. groundhog has had his fling at the weather for the past six weeks—and has given us his own particular brand—but now that the six weeks are up, we move that the matter be laid before Senator Bill Borah before he leaves for Russia to consult with Big Bill Haywood.

A Surprise Party

A very pleasant surprise party was held at the home of Mr. and Mrs. A. E. Elver on Monday, March 12, in honor of Mrs. Elver's birthday anniversary. The afternoon was informally spent in card playing and needlework. The self-invited guests took lots of eats with them and a very plesant time is reported.

The wise man knows many things, but the urchin of the streets can give him an ear full a day.

School Notes

Wilma Casebolt

Theo. Parks has returned to school after six weeks absence due to illness.

The soils aid crops class are going to Moscow today (Friday) to enter a grain and grass seed contest. Coeur d'Alene, Lapwai, Moscow, and Genesee are the entrants.

The next literary program will be given by the Beta Literary society on Friday, March 30. The following debate will be given: Resolved, "That the allied war debt should be cancelled by the United States."

The school attendance is now back to normal since the attact of the influenza.

A track meeting was held last Tuesday. It was planned that training would be started as soon as the weather permits. Cecil Gray is the track captain. He won second place in the state meet at Moscow last year, but if we want him to win the state championship in the pole vault he will have to be supplied with a pole two feet longer.

Semester reports of February 24, 1923, of the Genesee students attending the University of Idaho were received last Tuesday. An excellent grade of work was shown, recording no failing grades. The average was a B grade.

The play given by the seniors on Friday afternoon proved quite a success.

Four new students have been enrolled in school this week. Charles Sargent entered the fourth grade, Dorthy and Harriet Evans, the seventh grade, and Ida Evans entered as a freshman in high school.

"There Are No Roads"

Chas. Monroe, deputy sheriff of Nez Perce county, stopped in Genesee a few minutes Monday afternoon as he was on his way home to Moscow. When asked about the roads he said: "There are no roads; nothing but deep ruts and chuck-holes. There are several places to the north of Genesee on the Moscow road where the pan of a car drags the ground, and it is almost as bad in places to the south of Genesee, this side of the Nez Perce county line."

And yet the lawmakers that were sent to Boise to look after the interests of the people and reduce taxes failed to pass necessary legislation allowing the protection of hundreds of thousands of dollars' worth of highways within the state, but wasted 45 days of good time trying to put through a political primary law that would have been one of the most expensive pieces of legislation possible, and which came to naught. And thus does the P. T. Barnum saying ring true: "The people be damned."

St. Maries Gets Factory

The Manning-Wyman company, manufacturers of overalls, of Butte, Montana, are moving their plant to St. Maries, according to word received from that city. It is a 20-machine factory and has a capacity of 100 dozen overalls weekly. Through the chamber of commerce the manufacturers have been donated a block of ground and money for the erection of a modern factory building. The overall manufacturing company will increase the capacity of this plant as fast as possible and before the end of the year expects to be producing 250 dozen garments weekly.

Will Build More Lines

Seventy-nine miles of new telephone construction, to cost approximately $222,000, has been started by the Pacific Telephone & Telegraph company, with a small crew of men now working between Dayton and Colfax, Washington. This is a distance of 67 miles and is the main Spokane-Portland toll line. In addition, a new branch from the main line will be built 12 miles into Pomeroy. Several months will be required for the completion of the work.

Order Many New Locomotives

The purchase of 58 new locomotives has been ordered by the Great Northern railroad, at a price of $4,500,000, according to a dispatch from railroad headquarters. The locomotives will be built by the Baldwin locomotive works. The order consists of 28 mountain type passenger locomotives and 30 Santa Fe type freight engines, both of which will be the largest in the Northwest.

Elevator Destroyed by Fire

The Farmers' elevator at Cashup, on the road between here and Spokane, was destroyed by fire of unknown origin recently. From 10,000 to 15,000 bushels of wheat, most of which was not insured, were burned. The loss of the building is estimated at from $30,000 to $35,000, partly covered by insurance, and the grain loss will be more than $15,000.

Road Building Continues

Construction of the Lowell sector of the Lewis & Clark highway is progressing satisfactorily, according to word received from Kooskia. No delay has been experienced because of bad weather or snow. The contractors recently received another carload of explosives for the project and will continue clearing the right of way.

We do all kinds of printing.

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend for the things we need and save money reasonably, we display the right sort of faith. We put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

Bielenberg-Schooler Post The American Legion Meets Each First and Third Wednesday of the Month

Invitations have been mailed for the St. Patrick's Day dancing party to be given by the Bielenberg-Scholer Post. The committee in charge wishes through the columns of the News, to say that all ex-service men were not included in the mailing list for the reason that they are expected to be present by reason of the fact that they are ex-service men. It developed into a tremendous task to secure a complete mailing list in the time allotted. If any friend of the Legion wishing to attend has been overlooked, the committee would appreciate the fact being called to their attention.

The committee in charge consists of D.L. Bressler, invitations; George Post, decorations; Nels Liberg, music; James Winegardner, punch bowl; Chas. Smith, program; Thomas A. Feeney, Dewy Wardrobe, Harry Emerson, Chas. Smith, and D.L. Bressler, mailing list.

Steps are being taken by the ceremonial committee of the local post to secure marble grave markers from the government, to be placed above the graves of the veterans of all wars in local cemetaries. These markers are furnished free by the government and it is hoped that they can be secured in time to be placed by Decoration Day of this year.

The ceremonial committee is also arranging to get obsolete rifles from the government, to be used on occasion of ceremony such as funeral and salutes over the graves of war veterans.

Legion Closes Deal For Lot

The Dudley Loomis post of the American Legion here has closed a deal for the purchase of a piece of real estate located at the corner of Seventh and Main streets, the first step in the anoounced intention of the legion post to own its own home. The deal was consumated through Attorney A.H. Oversmith, acting for Fred S. Norton, former owner of the property.

The lot which is centrally located, is fifty by one hundred and twenty-five feet. No purchase price was given, but it was stated at the legion headquarters that a note for the balance still due on the property had been given for $200, which will fall due in one year. It is hoped that the amount due on the note can be raised by the organization in the near future after which it is the hope of the legion to raise funds with which to start their permanent home.

The commitee on the purchase of the lot consisted of C. E. Behre, J. W. Parkhurst, and W.R. Meigard. Mr. Norton, to whom the lot formerly belonged, is now living in Iowa.—Star-Mirror.

The Coyote Club Has Trouble

And now the word is given out by Captain Cody (alias Buffalo Bill) Rader that he has severed his connection with the Coyote club and that the whole thing has gone to the bowwows; that since they have no leader they don't even know which way to go to hunt, to say nothing about knowing anything about shooting. He claims that his gas-pipe gun was the only one in the whole outfit that could bring down a coyote anyhow. Capt. Cody says, "I'm done with that bunch for good and all; I don't care if they never kill another coyote; I can get all I want of them." So there, now!

Some people have a hankering for richess, while others have only the richess.

COMMISSIONER CANNON FLAYS CREAM TRUST

The following statement from Miles Canno, commissioner of agriculture for Idaho, has sent out the following statement regarding the "dairy legislative committee":

The insidious propaganda now being circulated by a few gentlemen who style themselves the "Dairy Legislative Committee," and who claim to have been "selected at the state dairy conference," and who have of late extended their field of activity to include the well-being of all the people of the state, entitles them to a little more detailed information relative to their origin and purposes.

The state dairy conference mentioned in their advertisements was called by the commissioner of agriculture, December 5, 1922. When the conference convened there were present some 20 to 25 producers, but when these men observed that the conference was being controlled wholly by a few cream buyers, these producers, with perhaps two or three exceptions, left the conference and refused to have anything more to do with it. W. G. Scholtz then assumed a dictatorial control and caused to be appointed a committee composed of a few cream buyers with himself at the head.

No report of this meeting was ever made to the department of agriculture but instead this committee rushed to the newspapers and started a vigorous campaign as a legislative committee (without revealing their names) representing the dairy farmers of Idaho. From the newspapers we reproduce as a part of their program the following:

"Resolved, That we urge upon Governor-elect Moore and the incoming legislature the divorcing of the farmers' marketing department from the present department of agriculture."

The cause of the strenuous activity of these cream buyers seems to have been based upon a general discontent of the producers who have been selling them sweet cream on a sour cream basis. At the request of the producers, this department prepared and is now ready to promulgate dairy standards as proposed by the dairy department of the state university designed to give the farmer a premium of five to six cents per pound on sweet cream, a revenue which, as claimed by the producers, the cream trust operating around Boise have heretofore appropriated to themselves.

To prevent this movement and make secure their hold upon the producers, this "dairy legislative committee" caused to be prepared Senate Bill 207, and incorporated therein a standard for sweet cream that not one farmer in a hundred can meet. There being no grades it naturally follows that by the provisions of this act the farmers would be compelled by law to sell all their sweet cream on a sour basis, or No. 2 basis as long as time lasts and allow at the same time the Boise milk trust to gather in the sweet cream on a sour cream basis and dispose of it as sweet cream. All other matter contained in Senate Bill 207 is merely camaflage intended to deceive the legislature as to the true purpose of the bill.

As soon as the personnel and purposes of this self-appointed committee was brought to the attention of the department, it was promptly repudiated. Its activities at this time, moreover, are looked upon as a menace to the wellfare of the state.

Weaver-Stucker

Mrs. Bertha Weaver and Otto Stucker were married in Lewiston on Wednesday of last week at the Methodist parsonage by Rev. Mark Pike.

The newly-weds will live in the Esser property in the north part of town.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account. Many of the richest men in this country began their careers with nothing but energy and a determination to succeed. They saved their money until it could be turned to good account.
Why not you, young man? A savings account is the first step.

Idaho Woman Has Interesting Letter From Wife of Anton Lang, Christus of the Oberammergau Passion Play

An interesting letter has been received by Mrs. M. L. Sargent, professor of modern languages at the University of Idaho, from Anton Lang, Christus at the famous Oberammergau Passion Play, and his wife, Mrs. Sargent spent the summer in Europe and saw the play this year. Upon her return she told the Faculty Women's club about the financial conditions existing at Oberammergau and how the people had preferred poverty to breaking the vows made centuries before by their forefathers, and so had refused to commercialize the play by accepting an offer of a million dollars for the exclusive film rights. As a result of her talk a collection of $20 was sent to Mr. Lang for use as he saw fit. Excerpts from the letter, which was written by Mrs. Lang, thanking the club for its interest in the welfare of the people of Oberammergau, follow:

"Owing to the fact that my dear husband has been very ill with the grippe since Christmas it has been impossible to respond to your very kind and generous gift sooner than this late date. May God's richest blessings rest upon you and all the kind contributors to the gift sent us and may you be assured of our lasting gratefulness.

"It was indeed a great temptation in these terrible times not to accept the one million dollar offer for the filming of the Oberammergau Passion Play, but we could not sell our ideals. The spiritual uplift through the play, however, has been greater than ever before, particularly to those who had suffered severely through the war in both body and soul. Many letters to my husband bear testimony as to that.

"Through the frightful depreciation of the mark there has been a loss instead of material gain from the performance this year. This is particularly sad since there was nothing left for charity this time when it is needed more than ever. Through the war all sources had been exhausted and there is want everywhere—in the hospital, in the schools, and in the church. My husband and I are now working for a small addition to the hospital which is to be used as a home for the aged. There are so many old people who have labored for 60 or 70 years who are now reduced to abject poverty. Many dear friends from abroad, particularly from America, have helped us in this undertaking, and I think it will please you and the other ladies that your names have been embodied in the ground work for this good undertaking.

"It may interest you to know that we gave 69 performances this summer with an attendance of almost 350,000 visitors. The salaries of the main actors such as Christus, Prologue, the choir leader, Caiphas and the music director amounted each to 2700 marks for the summer's work, with 4000 marks added for the rehearsals. This sum sufficed just for the purchase of one pair of shoes. The salary of the other actors amounted to 2000 marks apiece.

"At the suggestion of two friends from New York we are contemplating an exhibition of our wood carving industry in New York for the coming winter. The Germans themselves can no longer afford articles of luxury, such as wood carving, because the prices of necessities have risen to a giddy height since the French are in the Ruhr. Besides that, the taxes are so high that they stifle us. The future seems very dark for us and our fatherland."

The letter required 300 marks postage which in pre-war times would have amounted to $75. Each of the contributors received an autographed photograph of Mr. Lang as he appeared in his role of Christus.

King Tutankhamen Beats Washington Women to It 3000 Years on Dress Form

Washington women thinking they had something new in the dressform have received a sudden jolt, for word has just been received that the dress form is over 3000 years old. Among the removals from the tomb of King Tutkanhamen there was included a tailor's dummy, lifesize with a head of the king attached and used in trying on the royal robes.

However, there is a difference between 3000 years ago and today. Only kings had dress forms then, while today few rural women in the state are without their paper tape form. Since the introduction of the paper tape dress form by the clothing specialist of the extension service of the State college, four years ago, 10,032 forms have been made by rural women.

Another difference between the tailor's model of the king and the "Betty" of Mrs. Modern Housewife is that the former one was carved and gilded with gold, costing a large sum of money, while the brown-hued likeness of milady costs but $1.00 though it is valued at nearly $10. These 10,000 women who have made the forms, place a total value on their work of $105,790.

Dress form making has developed into a very popular phase of extension work, for as one woman who had helped train 50 other women in the process of construction put it, "I would rather make dress forms than eat."

The whole business of developing a process which was carried on among the kingly 3000 years ago, was started in 1919 in Washington, and has been conducted by local leaders who were shown the method of making the forms by the county home demonstration agents or the state extension clothing specialist, and in turn became responsible for training groups in their own community. Each woman making a form promised to help four others.

A single local leader in King, Snohomish and Pierce counties helped as many as 50 women in this work, while Mrs. B. B. Thornton of Cheney probably leads the state in helping instruct 83 women in the making of the paper tape dress forms. The work has given the women confidence in themselves, developed friendly community spirit and cooperation and has given universal satisfaction.

Radio Market News Shown by Recent Survey

Nation-wide, practical use of the radio market reports broadcast by the United States department of agriculture is indicated in a survey just completed. Nearly 50 per cent of the hundreds of returns to an inquiry sent out by radio were from farmers who had radio receiving equipment. The remainder of the returns were from grain dealers, mills, elevators, banks telephone companies, cooperative organizations, farm bureaus, and other agencies which disseminate the reports among large groups of farmers.

Greatest interest was shown in the grain market reports, which inform farmers of wheat, corn and oats prices at the leading grain markets. Next in importance came the livestock reports of prices and movements at the principal live-stock markets of the country. The weather reports came next, followed by reports on poultry products, fruits and vegetables, dairy products, hay, cotton and other farm crops.

Radio had developed more rapidly in the middle west in the corn, wheat and live stock growing regions than in other farm sections of the country, the survey shows. Missouri, Illinois, and Iowa lead in number of responses to the survey. Many farmers in this territory own radio equipment and praise the practical value of the service. In other sections farmers congregate at central points to get the radio reports, but an increasing disposition toward installation of sets for private use is indicated.

This is the first survey made by the department to determine how wide-spread radio market reports are being received and used by farmers, and affords much valuable information for developing the service to the maximum of efficiency. It has been of value to producers and other agricultural interests in the marketing of crops and to consumers through the regulating of market supplies, but definite data were not available until developed by the present survey.

The department practically covers the country with its radio market news and farmers everywhere are using the service to aid them in conducting the business end of their industry. In the replies numerous farmers gave instances o fspecific savings resulting from use of the information, one farmer declaring that he regarded radio as a "direct gift from God." Numerous general stores and banks in small towns say that establishment of their places of business as a central point for receiving the reports had resulted in tremendously increased business in many directions. The service has had far-reaching results other than removing the isolation which surrounds rural dwellers by reason of their location from centers of activity, and the bringing of vital market data to farmers with almost immeasurable speed.

The survey shows that there are now few places in rural districts where people congregate even in small groups that are without the benefits of radio. Agricultural leaders see in this the development of a true community spirit which forms a large part of the base of agricultural prosperity. The department of agriculture is much gratified at the popularity and practical value of the radio market news and is now making plans for the further development and utilization of the service.

Getting a Stand-in.

First Collectian—Why did you sit in the peanut gallery to witness Shakespeare's "Merchant of Venice?"

Second Collectian—So my dramatic professor would see me.—Punch Bowl.

It worries mother for son to treat his young wife the way mother has always argued that a wife ought to be treated

IDAHO

Work on the bridge across Sand creek near Sandpoint, will be pushed to completion at once. The work was stopped early in the winter, but the change in the weather has permitted its resumption. The completion of this bridge, over four miles of surfacing, will complete the state road from Sandpoint to Bonners Ferry.

O. S. Fletcher, Latah county agricultural agent, is working out a plan for a community pig club fair at Potlatch the first week in September. The National Duroc Jersey Record association has offered 50 for premiums for Duroc Jersey classes, and the community has offered an equal amount. There are two boys and girls' pig clubs in the Potlatch territory, one having just been organized on Rock creek.

The Manning-Wyman company, manufacturers of overalls of Butte, Mont., are moving their plant to St. Maries, according to word received from the Idaho city. It is a 20-machine factory and has a capacity of 100 dozen overalls weekly. Through the chamber of commerce, the manufacturers have been donated a block of ground and money for the erection of a modern factory building. The overalls manufacturing company will increase the capacity of this plant as fast as possible and before the end of the year expects to be producing 250 dozen garments weekly.

Juliaetta is to have new laurels added to her crown by attracting eastern buyers here for the unsurpassed cherries that are being grown in the Potlatch section. Preliminary steps have been made for a local organization of cherry growers as a co-operative unit for the purpose of better facilities in the growing and marketing of their fruit. No section of the northwest produces cherries of a better quality than does the Potlatch section, and this fact is just now being ascertained by eastern buyers as is evidenced by the New York firm of fruit distributors having sent their representative from Wenatchee to make personal investigation of the cherry industry of this district.

Work is already well under way on the historical pageant depicting important events in northwest and Idaho history which will be presented by University of Idaho students during commencement week this spring. President A. H. Upham is chairman of the general pageant committee while Dr. G. M. Miller, head of the English department; Professor C. J. Brosnan of the history department; Permenl J. French, dean of women, and Professor J. . Cushman, director of dramtics, will represent the faculty in the production. The student committee which is taking active charge is composed of Vanford Peterson of Boise, Rex Kimmel of Kicco, Fla., Stanley Siegfus of Salt Lake City, Margaret Blackinger of Boise, and Pauline Pence of Payette.

Adele—Not that I recall. Name it.

Anthony—"O (t) hello!"—"Topics of the Day" Films.

Many a young woman who would not worship a graven image worships a reflected one.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

This plan is based upon the one used in the construction of the first demonstration house to be built in this state. The plan has been very popular. It has, to date, been copied at least five times. The original house cost in the neighborhood of $1000.

The special features include:

A work porch, screened the year around and protected with canvas curtains during the winter. This porch serves as the laundry room. The laundry tubs are convenient to the plumbing for the bathroom.

A hall serves as a passage way from the work porch to the bathroom, the bedroom and living room, thus making the entire house accessible from the back door without passing through the kitchen.

The bathroom is convenient to all parts of the house, yet private. It is sufficiently large to hold all of the standard pieces of bathroom fixtures.

The medicine cabinet in the bath in the wall space above the lavatory is a convenience.

Every house should have a storeroom in connection with the kitchen to care for the extra supplies and the extra supplies and the various pieces of equipment which are necessary in every household, yet not in daily use.

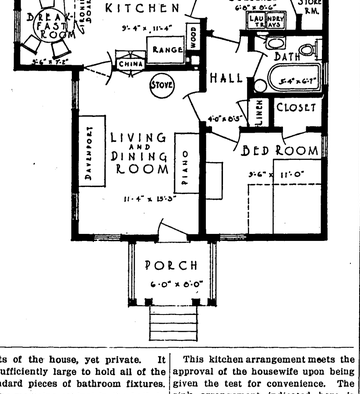
In the bedroom note that the arrangement of windows is such as to allow placing the bed in at least rhee positions, with wall space for a dresser, and a chiffonier or a child's bed. At least one window in a bedroom may be set high, thus allowing for a dresser, dressing table or chiffonier against the wall space.

In this particular plan the front window would be the logical one to be placed high on account of the privacy thus afforded.

The entire space set aside for the linen from floor to ceiling can be utilized, the upper portion serving as a storage space for winter bedding in the summer time, and summer supplies during the winter.

Windows in the living room admit good light, and also allow wall space for a piano and davenport, the places being interchangeable. In the event that the breakfast room is not included in the original plan, the window near the door into the kitchen will furnish light over the dining table.

The addition of the breakfast room serves a two-fold purpose. Firstly, it is more convenient and practical place to serve the majority of meals, and secondly it breaks the monotonous appearance of the four straight exterior walls.



This kitchen arrangement meets the approval of the housewife upon being given the test for convenience. The sink arrangement indicated here is not the original one, but it is suggested here since it is found to be more satisfactory, especially if this wall is set toward the east, south or west. This plan has been carried out by several housewives in this state to their satisfaction. The reader will note that the sink is placed between two windows. The wall space above the sink is utilized as a place to keep the supplies and equipment needed around the sink. The housewife as she stands before the sink can enjoy a good view, good ventilation, sufficient light, and yet she does not need to face the bright light or sunshine, or even draw the shades.

The plan is easily adaptable to the addition of a second bedroom.

A five-room bungalow plan will be shown next week.

Color in Egg Yolks Determined by Feed

Why the golden yellow of the egg yolk, and why is it sometimes faded to a pale lemon and sometimes almost to white?

This question has worried poultrymen for a long time, especially those making a fancy grade of eggs because the consumer has always associated a deep yellow in the yolk with good quality in the egg. Many people will argue that eggs with a deep colored yolk will taste better than those with a pale colored yolk.

Be that as it may, the poultryman wants to meet the demands of his customers and is more interested in this than in any academic discussion of the matter.

Careful experiments have shown that the color of the yolk of an egg is determined largely by the particular kind of feed the bird is receiving. Fowls will make dark colored yolks when they are receiving an abundance of green food.

Controlling Color in Yolks.

On the other hand, poultrymen who wish to make the yolk fade out a pale lemon color can do so by taking away the green food from their diet or gradually reducing the amount they receive and feeding the birds a grain ration consisting of such grains as oats and barley. By the careful practice of such methods for a period of several months yolks that could be called white have been produced.

The same condition is found in the milk of dairy cows. Cows produce cream and butter which is much more deeply colored in summer when eating green feeds than in winter. Also, cows like Guernseys and Jerseys usually produce a yellower product than other breeds because they have the ability to take more of the coloring matter out of the feeds and put it in the milk.

Many experiments have been conducted to discover what it is that makes the yellow color in the egg yolk and in butterfat. It has been found that this color is due to a substance called carotin, so named because it is the coloring matter found in carrots.

This compound, carotin, is commonly found in the leaves and stems of plants along with the green chlorophyll, which masks its color. It has been proved that poultry given feeds poor in this carotin material for long periods invariably produce whitish and washed-out colored yolks, regardless of the breed, and the same applies to the color of the milk of dairy cattle.

Feeds Rich in Carotin.

Green feeds in general are found to be rich in carotin, as well as hay of a dark green color and new corn silage.

Carrots and other yellow roots also contain a large amount of this coloring matter.

"Green feeds that have been aged for some time seem to lose this material carotin. Hay that has been bleached out, dried corn fodder or fodder straw, old corn silage in which the carotin has been destroyed by fermentation, corn both yellow and white, and all common concentrate byproduct feeds, such as wheat bran, linseed oil meal, gluten and hominy feed, were found to be poor in carotin.

The color of yellow corn is due to a coloring other than carotin which does not have as strong an influence on the yolk of the egg or on milk.

While yellow is a very desirable color in the yolk of an egg, green is just the reverse, and a green tinge may be given to the white and sometimes to the yolk of an egg if an extra large quantity of rape is fed to chickens.

The green coloring matter of chlorophyll in rape seems to have the equality of getting into the interior of the egg and staining the white a green. For this reason, rape should be fed sparingly to chickens.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

The high cost of living makes a revolution imminent in Portugal. Feeling is running so high that police and militia will not be able to suppress general food riots should they break out.

Miles Poindexter will defer sailing for Peru, where he is to take charge of the American embassy, for several weeks, or until the pile of accumulated business and correspondence has been cleared up.

American soldiers were not executed in France without courtmartial or other fair trial, as charged by the late Senator Tom Watson, the senate investigating committee reported last week. Senator Brandege headed the committee, which reported Watson's charges without foundation.

The new president of Poland with the unpronounceable name is a millionaire today, thanks to his nephew, a soldier stationed at the presidio in San Francisco. Private Wojciechowski sent his illustrious uncle a $10 greenback for a Christmas present. Recently he received a letter of thanks.

The Swiss government has subsidized the potato growing industry, according to reports from the Geneva consulate, by contracting to purchase potatoes from the producers at from 9 to 10 francs ($1.71 to $1.90) for 220 pounds, delivered at the station of shipment. The government stands all transportation costs.

It costs less to be burned than to be buried in Germany—hence 35 per cent of the dead of Berlin are now being cremated. Already the bodies of more than 200,000 Germans have been reduced to ashes in the various crematories. The bigger crematories of Berlin today are working 24 hours daily, in eight-hour shifts.

President Harding will be the republican nominee for reelection in 1924 beyond a doubt, R. B. Creager, state committeeman for Texas and close personal friend of the president, declared recently. "Ninety per cent of the republican party agreed that the party must stand or fall in 1924 on the Harding record and they believe we can win," Creager asserted.

Indiana Boy Scout One in a Million

Clymer Jones, age 13, of Fairmont, Ind., is one of the three boys in the United States to pass senior Red Cross test for lifesaving—for which he was decorated by Boy Scouts. His feats have attracted attention throughout the Middle West.

Washington Leads All in All-American Show Herd

Washington was given a lead over all the other states in Holstein cows when Judge W. S. Moscrip, the foremost Holstein judge, picked six cows owned by Washington breeders for his "All American Show Herd."

The fact, that among all the Holstein cattle he has seen on the American continent, he selected 12 as the ideal type and six of these come from this state, is a most remarkable incident.

Carnation Stock farm of Seattle owns four of the six Holsteins. They include Matador Segis Walker 6th, Carnation Matador Queen, Tillamook Daisy Butter King De Kol and May Walker Skylark. John L. Smith, of Hazelwood farm, Spokane, owns the other two Hazelwood Leda Hello Korndyke and Hazelwood Bessie Pauline Hello.

"That Washington should secure half the places in this All American Show herd is remarkable when it is considered that Judge Moscrip had the entire continent to choose from," said F. W. Kohrli, assistant dairy specialist of the extension service of the State college. "It only goes to show that Washington is a leading state in quality of stock and production, and is coming to be nationally recognized.

"With such foundation stock in our state and the pushing forward of the better sires campaign, many of the big dairy centers of the east and middle west are looking to us for breeding herds. Foundation stock has been sent from this state all over the United States and to Australia.

"During the past year, dairymen of Washington were assisted by the extension service in obtaining 220 pure bred sires and 320 registered dairy cows or a total of 540 head of pure bred stock. In the majority of the cases where purebred sires were placed, they replaced scrub stock."

Your Car In the Spring Months

A series by Prof. A. R. Nottingham, State College Washington, Pullman

One of the important things to do before the car is used regularly is to see that every part of the car is really securing lubrication. If the spring pins have not been taken out within a year take them out systematically. On a second grade car take the weight off the pin with the jack and force grease in until it washes out the dirt fully. For a better or a final job measure the size of these pins, over the threads ,and get from the junk pile an old piston pin for each size to be removed. They both are sized in even sixteenths of an inch. One end can be ground tapered slightly, but it matters little. An old discarded paint brush—say one inch to three inches wide and an old basin for washing the parts is convenient. If the brush is hard soak it in gasoline and break it down with a hammer. Kerosene is excellent for washing.

Remove the pins systematically and see that they are in good condition and all the caked grease is cleaned out of the oil holes and grooves. If not drill out with a nail or flattened wire and then wash clean. Align with any convenient tool and slip in the same sized piston pin. If the jack is placed just right the bolt may be tapped into place with the bare hand. The bolt may be driven lightly as long as the grease cup is not hit, and the pilot pin will align the parts and will be pushed out the other side without injury to the threads. The easier it moves the more perfect the alignment. The pins being case-hardened they can be driven or rapped sidewise until they move easily.

The springs may be painted with the oil discarded from the engine. It is very penetrating and has enough of the kerosene properties to cut rust quite well. This makes a good quick job. The excess may be wiped off, although if the car is going into the mud it makes no difference. Mud is hard on lubrication and after a drive in the sand or mud the chassis should be gone over.

A better job for a long trip, of course, is to open the springs or take them down and clean from them the rust. Grease with graphite grease, especially toward the ends.

Study your lubrication chart and follow it—using the mileage basis. After a car has stood a long time, before and after a long trip or a trip in heavy mud or sand, extra lubrication should be given. Otherwise attend to it religiously.

Electric System, Etc.

You have put your car in operating condition, but there is more yet to do if you wish uninterrupted service from it. It is one extreme to keep tampering with all the adjustments so that the car never runs right, the other is to leave it alone until it breaks down on the road. Most road failures are preventable. If you go over your car to see if every part is in good condition.

One thing often neglected is the electric system. A large portion of the petty, or even serious troubles, are traceable to it.

Begin with the batteries. If the main cables can not be examined perfectly at all points remove them. See that all contact surfaces are clean, the battery cables have been cleaned, washed with soda-water or ammonia and piled with vaseline, and **that all connections are made tight.** See that the battery is properly fastened in its carrie and filled. Clean the grease off all wires and wipe up all places where the cables chafe or fasten them so they can not chafe. The chafing of these cables against metal has been the cause of many automobile fires. Small wires can be run through loom to advantage. Loom can be split and put on over wires in position or having large terminals. It is held by tape, wire or the staples used to anchor it in place. A stirrup or loop of leather is good also. All wires should have terminal clips or soldered loops in their ends. When a wire becomes defective replace it.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Agricultural Engineering.

Watch your drain tile outlets and make sure they are flowing freely.

Farm Crops.

Start now to seed pastures where there is low rainfall, by sowing from eight to ten pounds of sweet clover.

Dairy.

Feed grain dry after calf has taken his milk and keep him tied until he forgets to suck the ears of other calves.

Farm Management.

This is the last call for income tax returns. Use your farm account book in figuring these returns.

Plant Pathology.

Seed treatment is only one means of controlling disease while the selection of disease free seed is another important method.

Poultry.

Set eggs which are uniform in size, shape and color. A small egg produces a small chick. A rough, limy, or porous shelled egg will probably not hatch a chick at all.

Horticulture—(West Side).

Paint over the large pruning wounds to prevent heart rot.

Finish training the berry canes before the buds swell. Prune the gooseberies.

Outa Luck.

"I owe a lot of money to my shoemaker."

"Can't even say your sole is your own, eh?"

LIVESTOCK

About 30 farmers met at the farm bureau office at Colfax recently and made plans to bring in a carload of high grade dairy cows. An expert will be sent to purchase the animals, farmers agreeing that maintenance of purebred stock is one way of solving their problems. Secretary Brick Burford reports that difficulty is being experienced in providing good stock for four recently organized swine clubs.

Realizing the need of more profitable dairy cows and the importance of purebred bulls, articles of agreement for the Idaho County Bull association have been filed for record. Under the terms the several blocks pay their pro rata of cost of keeping the animals, none of which is to cost more than $300. One bull goes to each block for two years and is then to be transferred to other blocks in rotation for a like period.

Good Price Prospect.

The chances are good for a fair potato price the coming fall. The acreage will be reduced for lack of good ground and mainly home grown seed will be used, insuring a crop that can be consumed in the west. Potatoes, like any other perishable crop, must be grown for a period of years and the price averaged up to learn whether or not it is a profitable crop to raise. Take it the last five years and averaging it up, the price is better than $40 per ton.

Look at your bees and make sure they have at least 25 pounds of stores, for brood rearing is heavy.

COMING LAND BOOM IS THE FORECAST

Although Day Is Not Here Yet, It Will Arrive Directly Real Normalcy Has Returned.

A writer in the National Farmer and Stockgrower makes the following interesting predictions:

Some of the days some of us will be knocked down with a land boom. Markets have no sense and booms no limits. Although the day of the land boom is not yet here, it will come directly normalcy has returned. Normalcy is a time when foreign countries have money to buy the surplus products of our farms. Normalcy is a time when the strikes which afflict the country are few and far between. Normalcy is the time when the government only governs and business interests attends to their own business. Normalcy is the time when there is no disturbance. We knew the time when the population of this country was fifty millions of people. Then we had land booms. We knew the time when the population could not eat half the farmers could raise. Then we had land booms. We knew the time when farm products did not bring half the money they do now. We knew the time when every year brought on millions of acres of new land. And then occasionally there were land booms. But now normalcy means 120,000,000 people. It means very few acres of new land to come in. It means a daily progression to the time when even with abundant crops available farm crops will all sell for a profit. And then the crazy boom will begin. Right now wise men are buying land; fools are selling it. When the boom comes land will sell for more than ever it will be worth. People who flocked to the non-productive cities will go back to the soil, and they will add to the land booms. We are not there yet, for many disturbances are in front of us, but gradually and surely the increase in population in this country will cause the rush for country homes on which people can make a living and insure to themselves their daily bread.

DAIRY

Raising the Dairy Calf.

1. There is no substitute for milk.

2. The calf should be given a good start on milk before making it depend upon hay, grain, grass and other mature-animal feeds.

3. The calf should receive an average of from eight to ten pounds of milk daily for the first 50 to 70 days of its life. After that, little risk is incurred by quickly weaning it.

4. The vigor of the individual calf determines how early after 50 days of milk feeding it can be successfully weaned.

5. When whole milk alone is used, the total allowance may be as small as 400 pounds per calf.

6. When both whole milk and skim milk are used, about 150 pounds of whole milk followed by about 600 pounds of skim milk will suffice for the average vigorous calf.

7. A grain mixture made of four parts by weight of ground corn, one part of bran or mill run and one part of linseed oil meal is about as good as can be devised for calves.

8. Five pounds of grain per day is about the highest daily allowance the calf should have during the first six months of its life. If allowed more than this it will not eat enough hay and succulent feeds such as silage or roots.

9. The calf should be taught to eat grain and hay while it is quite young.

10. No slops should be fed. The milk, grain, hay, etc., should be fed separately, and the grain should be fed dry or nearly so.

11. Cleanliness of pails, troughs and pens is very important.

12. Changes of feed should always be made gradually instead of suddenly. From a week to ten days are needed to complete a change.

13. A good Holstein calf can be raised to six months of age on 450 pounds of whole milk, 530 pounds of grain, and 250 pounds of hay. This will cost at current prices about $22. This is an average figure. Some calves may cost a little less, while others will cost a little more.

14. Nothing will take the place of good judgment. All calves are not alike.

Since it has been so universally recognized that there is no real substitute for milk, it seems like false economy to attempt a substitution of something cheaper for part of the minimum requirement. Little or no economy is gained, when the risk and bother are considered.

The farmer who plans ahead gets ahead.

WASHINGTON NEWS

Oakesdale's 1923 fair is to be held October 5 and 6. Definite dates were set Saturday at a luncheon and business meeting of the fair association at the Hotel Oakesdale.

The Farmers' elevator at Cashup was destroyed by fire of unknown origin recently. From 10,000 to 15,000 bushels of wheat, most of which was not insured, were burned. The loss of the building is estimated at from $30,000 to $35,000, partly insured, and the grain loss will be more than $15,000.

At a special election recently in the Outlook irrigation district, a $61,000 bond issue, to bear 6 per cent interest, carried 31 to 19. The money will be used to retire a former bond issue, bearing 8 per cent interest, and to finance repairs in the irrigating system, according to word received from Sunnyside.

The appropriations committee of the federal house of representatives will inspect the Columbia basin project during the summer months, according to word received from the capitol. The committee's trip over the basin project will be made between the last of June and the middle of July. The committee will be in Seattle June 16, according to present plans.

The Washington Water Power company is opening a new construction camp at Coulee City, with a view of beginning work on the Douglas county end of its new 60,000-volt line to Okanogan county. Two other camps are in operation on the same improvement, and the fourth camp will be opened later at Withrow. These construction camps will employ 250 to 275 men.

Seventy-nine miles of new telephone construction, to cost approximately $222,000, has been started by the Pacific Telephone & Telegraph company, with a small crew of men now working between Dayton and Colfax. This is a distance of 67 miles and is the main Spokane-Portland toll line. In addition, a new branch from the main line will be built 12 miles into Pomeroy. Several months will be required for the completion of the work.

Dr. E. B. Bryan of Athens, Ohio, president of the Ohio university, who will be the principal speaker of the Inland Empire Teachers' convention in Spokane April 4-6, is one of the most widely known educational writers and platform men in America. The management has arranged with Dr. Bryan to give three addresses—"The Unfinished Task," "The Way Out," and "The Coming Citizens of a New World."

To spend $100,000 annually for the next five years to improve the Yellowstone trail and establish seventeen free tourist information bureaus between the termini of the trail, Plymouth Rock, Mass., and Seattle, was the program outlined by H. O. Cooley, general manager for the Yellowstone Trail association before the tourist committee of the Chamber of Commerce. The Seattle Chamber will do its share in the proposed work.

It takes feeding, breeding and selection to make the dairy herd.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER IX.

For an answer the aviator put on more speed. Faster and faster they went. The train now was directly under them. A swoop downward told the young man that he had better get ready. Rising to his feet he threw off his coat and climbed to the right wing of the plane. The pilot was putting all his efforts now into low flying, keeping up his speed at the same rate as the express. Down lower they went.

"Now!" shouted "Speed." And taking the chance of his life, he fairly flew through the air toward the fast express train.

Hit or Miss.

"Speed" Stanbury searched through the train, but there were no traces of Jim Sprague. As a matter of fact, the wily cashier had observed the pursuing aeroplane, and putting two and two together, surmised it was "Speed" and concealed himself from view for the rest of the journey.

When he arrived in New York the next morning the first thing young Stanbury did was to buy a newspaper. He knew that the press would furnish him all the details necessary to find Lucy Durant, his missing sweetheart. Hastily glancing through the columns he found the following headlines:

LUCY DURANT STILL MISSING AND MYSTERY IS UNSOLVED.

Girl Artist Sought In Studio Tragedy Leaves No Trace.

Detectives Are Carefully Watching Her Familiar Haunts for Clues.

The paper told him nothing that he did not know already. Therefore, "Speed" decided that Lucy's studio was the only logical place for starting his search. He immediately sprang into a taxi and was on the way. Realizing that the place was carefully watched, he dismissed the cab and reconnoitered. A laugh passed his lips as he saw his old friend, Hagerty, with an assistant, on guard.

Stanbury doubled around and made his way to the rear of the building. Hagerty had been so careless as to leave the spot unguarded. "Speed" sprang up to the fire-escape and started climbing. Finally he reached Lucy's floor. He climbed over the railing and made his way to a window by standing on a pipe. In another moment he entered. The place was in utter darkness, and "Speed" walked to a window and threw up the shade to admit some light.

That was his only mistake. In the street below, Hagerty saw the motion. "Somebody's up there," he told his companion, "we'd better see what's doing."

"Speed" had just finished his search in one room when he heard a hammering on the door. Realizing that he must not be caught, he rushed to the window to make his escape. He looked below. It was too step to drop, and he had no time to waste. His quick eye saw a cable running along more than 20 feet below and a few yards to his left. Getting out on the ledge of the window he started over to the window ledge on his left. He was very high up and the space between the windows was dangerously wide. He made the adjoining window ledge safely, then the next, and the next, until he stood on a ledge directly over the cable.

"Speed" was still too high to drop down to the cable, so he evolved a new plan. Hanging by his feet to the ledge, he let himself down head foremost, until his fingers touched the window top below. Opening this, so that he could get a good grip, he slowly let his body down—a feat calling for almost super-human strength—until he stood once more upright on the lower ledge. Swinging below to the cable, he descended hand over hand. In a few moments, "Speed" was able to drop to the ground, making his getaway without Hagerty and his man being any the wiser.

Later in the afternoon, young Stanbury reached his apartment without being apprehended by any of the many sleuths on the lookout for him. Gaston, his valet, was overjoyed to see him. The little Frenchman fairly bubbled with words of greeting.

"I—I have news of the most importance," Gaston finally managed to say. "I have discovered where Miss Lucy is! She is the prisoner of your cousin Edwin in his great house on the Hudson. But, Monsieur, there ees a heavy guard outside and inside—eet ees almost impossible to reach her."

"Gaston," "Speed" smiled, "no house is so great, and no enemy so strong, that they can keep me from trying to reach Miss Lucy."

"But——"

(To Be Continued)

"Listen to me, Gaston," Stanbury interrupted, "I'm going to get to her! You meet me in my cottage at Marston late this evening. Meanwhile, I want to try to find out just what my cousin is going to do with Jim Sprague or where that worthy is. I've got to get him to prove my alibi or I'm liable to be thrown in jail."

The young man then decided to reach Edwin's country home by motorcycle. After about an hour's hard riding, "Speed" reached his destination. He hid his motorcycle carefully behind a clump of bushes while he looked over the lay of the land.

On the side of the mansion nearest him, "Speed" saw a guard pacing up and down. On the ledge of the window on the second story, he fancied he could see a tray with a napkin over it. "Ah, ha!" he thought, "food on a tray points to someone confined in a room." Putting two and two together, he decided to reach that window. He could easily climb the wall, as heavy vines ran up the side of the old home nearly to the roof.

"Speed" sneaked carefully up to the house, keeping a bush between himself and the guard. Then, when the guard's back was turned, he rushed upon him and knocked him to the earth. The man lay like a sack of flour. "Speed" ran for the vines and hastily scrambled upwards. Three minutes later, he swung himself into the window and faced the most surprised and delighted girl in the world.

* * * * *

The six asterisks stand for six fervent kisses—and now we can let the action go on, as there is much to do.

"Now, sweetheart," "Speed" began, "I'll stay here and watch you while you run for my motorcycle behind that clump of bushes outside the wall on the road. Get to my house at Marston early. I told Gaston to meet me there. Hurry—— or wait! Give me another kiss and you can go!"

"Speed" waited long enough to assure himself that the girl had gotten away safely. No one suspected that he was in the home of his unscrupulous cousin. Glancing cautiously out of the window again, he saw that the guard was still lying prostrate and that no one else was in sight. The next moment found him descending quickly the same way as he had come.

A short time later "Speed" Stanbury rejoined his sweetheart, Lucy Durant, at his cottage at Marston. There was much to talk over and the lovers lost no time as Gaston was expected any moment with news of Jim Sprague.

"I can hardly wait for the moment when you will be mine, dearest," "Speed" whispered.

"Yes," the girl smiled, "once you get Jim Sprague in court and clear yourself of this nonsensical charge we will be free to do as we choose; and then——"

Her words were interrupted by the sudden entrance of Gaston, wreathed in smiles. He approached the two young people his hands fluttering with gestures.

"Your cousin, Edwin," he informed "Speed," "he send Sprague away to Oreville to be boss of the mines—also to get him out of your reach. Sprague, he take 4:05 for Oreville. Eet have already left. You must go soon much to get at to Gap."

"Lucy, darling," "Speed" cried, "when I come back, Sprague will be with me, and our waiting will be over." He ran towards his motorcycle.

"But that's a two-seater," the girl protested, following him, "and you need balance. I'm going along." Despite "Speed's" protestations that she remain at the house, Lucy insisted upon accompanying him in his mad dash to catch Sprague at the Gap.

Down the road the speeded; Stanbury had no regard for the limit. On they went, leaving the little village far behind. Soon they reached the straight raod which ran parallel with the railroad track.

"Speed" gave his engines more gas and laughed like a boy, glancing at Lucy by his side, her dark tresses blowing in the wind.

On and on they went. Soon a faint whistle ahead told them that they were fast approaching the train with Jim Sprague aboard. A few moments later and they could see the last car. Five minutes later they were almost up to it.

"Lucy, dear," "Speed" shouted, "if I run alongside the track, you spring aboard. I'll follow you." He saw the courageous girl nod. Again he gave his motors gas and left the road to run alongside the track. Lucy waited a moment and then sprung to the platform of the last car, swinging herself up by means of the railing.

Christian Endeavor Notes

By Grace Willoughby

The last meeting was led by Hope Michelsen and special music was rendered by Grace Willoughby.

Last Friday a business meeting was held and officers elected for our reorganized society. The officers are: President, Jesse Gray; vice-president, Marion Mayer; secretary, Fren Cann; treasurer, Le Roy Harris; chairman of missionary committee, Grace Jain; chairman of lookout committee, Fred Dicus; chairman of social committee, Katherine McMahon; chairman of prayer meeting committee, Irene Hall.

Junior Endeavor was led by Katherine Casebolt and a very interesting meeting was had. Special music was rendered by Helen Casebolt.

Frequent additions have helped materially in advancing the public library. Remember the days when it is open—Tuesdays, after school hours and in the evening. Each Saturday afternoon and evening and each Sunday afternoon.

A Correction

In giving a report of the silver wedding anniversary of Mr. and Mrs. I. Rossebo a mistake was made in announcing the names of some of the donors. The tea set and knives and forks were given by the ladies aid of the Genesee Valley church and the tray and spoons were given by the Clover leaf club.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
MRS. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

FEDERATED CHURCHES
REV. JAS. PENDLETON, minister
(Study at the Parsonage)

Church school at 9:45 a. m.

Morning worship at 11 o'clock.

Junior C. E. at 2:30 and Young People's meting at 7 p. m.

We have had a small attendance at church these stormy Sundays, but now that the weather is better and folks are getting well, let us make these Lenten days help us in our appreciation of God and his love.

The Federated churches welcome all who have no church home elsewhere to join us for worship and work.

"Let us seek to produce with our time, influence, and money those qualities and other things which will make the world truly healthier, happier, and more prosperous. Then and then only shall we make the most enduring investments for ourselves, our families, and our communities."—Roger W. Babson.

Is Now a Pedagogue

Carl Nagel of Genesee has accepted a position in the Cascade, Idaho, high school as teacher of mathematics and Latin.

Carl's many Genesee friends extend congratulations.

Our Spring Line of Wall Paper Has Arrived

We are now putting in the rack our spring stock of Wall Paper. We have some very fine patterns and the price is less than last year. Do your papering early while our stock is complete and selection easy.

W. J. Herman Company

The Progressive Club

Mrs. George Follett and Mrs. W. E. English entertained the Progressives on Thursday, March 8, at the home of Mrs. Follett. The afternoon was spent with needlework after which a delicious luncheon was served by the hostesses, assisted by Wilma English and Pearl Perkins. The visitors were Mrs. F. C. Shork, Mrs. J. H. Jackson, Mrs. Jack Barnes, Mrs. Nell Haymond, Mrs. C. P. Whalen and Mrs. Mahlon Follett.

The next meeting of the club will be with Mrs. W. M. Herman.

A "For Sale" ad. will sell your stuff.

Linger Longers Entertained

Mrs. Mahlon Follett delightfully entertained the Linger Longers on Wednesday, March 14. Gathered around the fire with needlework the afternoon was informally spent. At 5 o'clock a delicious two-course luncheon was served by the hostess, assisted by Mrs. Harry Schooler and Mrs. Frank H. Thomas. The invited guests were Mrs. R. I. Witty, Mrs. A. Murphy, Mrs. Milton Rader and Mrs. Chas. W. Smith.

The next meeting of the club will be held with Mrs. Ray Edwards on Wednesday, March 28.

Will Give Card Party

The Pythian Sisters will give a card party in the K. of P. hall on Friday night, March 23, to which the general public is cordially invited. 37-1

Millinery Opening

The first millinery opening at the Ready-Made Shop will be held on Saturday, March 17. Easter opening will be on Saturday, March 31. 37-

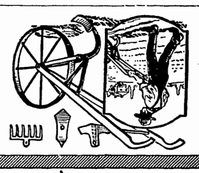
A FULL LINE OF GARDEN TOOLS



Dahlia

Abbreviation of Types
"C"—Cactus "H. C."—Hybrid Cactus

Each

ALABASTER—C—One of the largest and best white cactus to date—Long curved petals give the flower great depth; each $1.00
MRS. HERBERT BLACKMAN—C—Soft mallow pink; very free bloomer. A beauty for garden decoration ..... $ .75
MRS. CHAS. COOPER—C—True cactus with long narrow petals. Color, creamy yellow with flush of salmon in center ..... $ .50
CAMBRIAN—C—Clear salmon, lightening to yellow at tips of petals, which are hooked and irregular. An old stand-by, always good ..... $ .30
WODEN—C—Large flower of beautiful salmon rose, shading to old gold in center ..... $ .35
COUNTESS OF LONSDALE—C—Rich salmon, shaded apricot—always good ..... $ .30
CHAS. CLAYTON—C—Flowers large, with loosly arranged narrow petals that are twisted artistically. Color, rich scarlet ..... $ .30
GOLDEN WEST—H. C.—Bright orange, shaded to buff. A vogorous grower, producing a great number of splendid blooms above foliage ..... $ .40
BASALISK—C—Orange scarlet, long twisted petals, free bloomer ..... $ .30
RUTH GLEADELL—H. C.—A grand flower of soift yellow shading to apricot, bronze on outer petals. extra fine ..... $ .50
TOM LUNDY—H. C.—A California variety of immense size; color, bright velvety red. We place this as one of the best of its color ..... $ .75
YELLOW KING—H. C.—No garden is complete without this beautiful lemon-yellow dahlia. The long, narrow petals standing straight out from the center of flower give it great depth. The finest keeping bloom in our dahla garden....$ .60
ISAQUAH—(Paeony)—Vigorous plants bear quantities of immense lavendar-pink flowers on good stems ..... $ .25
MME. VON BYSTEIN—(Paeony)—Lovely lilac blue large size, good stem ..... $ .25
MRS. ROWENA FAIRCHILD—(Paeony)—New beautiful soft lavendar pink of great size. Specially priced at ..... $ 1.00
PIERROT—C—Color, deep amber boldly tipped white. The striking blossoms are very large and the florets are incurved ..... $ .50
GLADYS SHERWOOD—H C—The largest white cactus ever introduced $1.50
(If disbupdden, the blooms are as large as dinner plates.)
KALIFF—C—Color, rich scarlet. The large flowers are born with profusion. Good stems ..... $ .50

SPECIAL INTRODUCTORY OFFER

6 beautiful dahlias—all different—our selection—only $1.50

Gladioli

AMERICA—Exquisite shade of flesh pink, tinted lavender, first size—each ..... 5c, dozen $ .50
PANAMA—A new seedling of America, much deeper pink ..... each, 10c, dozen $1.00

HALLEY—Salmon pink with creamy white blotch; large flower and and early bloomer. A fine sort ..... each, 5c; dozen, $ .50
MRS. DR. NORTON—Cream and pink. The judge in one of the big eastern shows last year gave this first place ..... each, 40c; dozen, $4.00
SCHWABEN—Soft, pure yellow, little red stripe on lower petals ..... each, 10c; dozen, $1.00
ANGOLA—A beautiful salmon pink (new) each ..... each, 15c; dozen, $1.50
BUTTERFLY—One of the new ruffled flowers; pale salmon ..... each, 15c; dozen, $1.50
YOUELL'S FAVORITE—A large plant with immense flowers (ruffled); striking rosy lavender pink ..... each, 20c; dozen, $2.10
IDA VAN—A most beautiful flaming orange pink; new ..... each, 15c; dozen $1.50

Perennials

We are working up a wide range of stock in perennials for next year. However, we can supply you this spring with the following:

PERENNIALS—Hardy field-grown, each 30c, doz, $3
GOLDENROD.
HOLLYHOCK—Allegheny, Mixed (the finest double and singles grown).
ORIENTAL POPPY — Orange scarlet. Plant some of these.
GYPSOPHILA — (Baby Breath) — A mist-like white flower that has no equal for maxing with other flowers in a bouquet.
TRITOMA—(Torch Lilly)—An odd, tropical-looking flower of brilliant orange scarlet that shoots up from grass-like foliage.
SHASTA DAISY—Needs no description. A fine cut flower.
AQUILEGIA or Columbine—The beautiful, dainty, long-spurred flowers rise above fine cut foliage. Our strain is the Mrs. Scott Elliott's Long Spurred.

Annuals

We can supply you with good, strong, transplanted bedding plants—in season:

ASTERS—Crego Giant—In separate colors—purple, lavender, pink, white.
ZENNIAS—Giant, dahlia-flowered. Mixed.
CARNATIONS—Red, pink, white.
KOCHIA ((Fire Bush)—Childsii.
AGERATUM—(Blue).
We make a specialty of Spencer Sweet Peas and other flower seeds.

SPRING OPENING

I wish to announce to the ladies of Genesee and vicinity that I have a line of the very best up-to-date Millinery and Millinery Goods and will guarantee that my prices are right.

All light and dark percale aprons on sale at $1.00 and $1.25.

Wear the very latest panel back hosiery.

The Ready-Made Shop

PERSONAL MENTION

George Moresch was a Uniontown visitor on Wednesday.

Nels Flamoe was a Genesee visitor from Clarkston last week.

A. Rach was a Uniontown passenger Wednesday on business.

Mrs. P. H. Thomas went to Lewiston Saturday to spend the day.

Johnnie Hagan left Friday for Lewiston where he intends to work.

Henry Martinson was a Wednesday morning passenger for Thorncreek.

Elmer Johnson was a Friday morning passenger for Spokane for a short stay.

Carl Flamer was a Thursday morning passenger for Palouse for a short stay.

D. T. Thomas was a Saturday morning passenger for Lewiston for a short visit with his daughter, Miss Grace.

Miss Martha Grieser was a Tuesday morning passenger for Colton, after a week's visit with relatives and friends.

Mrs. Ernest Cameron and son arrived Friday afternoon from Troy, for a visit with her mother-in-law, Mrs. L. C. Cameron.

Mrs. John A. Smith left Saturday morning for Pullman for a short visit with her mother before going to her new home in Canada.

The Misses Isabelle Hasfurther and Wilma Broemmeling returned Wednesday from Colton after a short visit with friends and relatives.

Mrs. H. L. Meader and baby are visiting with Mrs. Meader's parents, Mr. and Mrs. G. A. Bumpass.

John A. Smith left Wednesday morning for Pullman for a short stay before going on to Moose Jaw, Canada, where they will make their home.

Mrs. Joe Reil was a Saturday morning passenger for Missoula, Montana, for a visit with Mr. Reil, who is in a hospital there receiving medical attention.

Mr. and Mrs. Wm. Esser arrived Friday afternoon from Kootenai on a short business visit, returning home Suday. Mr. Esser is section foreman at Kootenai yard.

Mrs. J. H. Kidwell left Tuesday morning for Wapato, Washington, to attend the funeral of her brother, William A. Metsker, whose death accurred Monday evening, caused by appendicitis.

Will Need Socks

Virgil Post, son of Mr. and Mrs. Wm. Post, brought the startling news to the News office on Thursday morning that there was an old Plymouth Rock hen at their house who had become industrious early in the season and had brought forth four small chicks. It is apparent that they will need socks unless the weather man mends his ways very materially.

The Sick List

Mrs. Joe N. Hasfurther, who has been quite ill, is convalescent.

Mrs. Leo Edwards has been on the sick list for the past few days.

Mrs. Chas. Geltz has been quite ill for the past week, but is improving.

Andrew Rekdal, who has been ill for the past two weeks, is somewhat improved.

Amand Kern, sr., is somewhat improved, after several weeks of illness.

Elmer Stovall has been quite ill for the past week, but is able to be up again.

Mrs. Victor Hasfurther has been confined to her home for the past few weeks with the flu, is somewhat better.

Mrs. Sim Currin, who has been quite sick for the past few weeks, was somewhat improved Thursday morning.

Arthur Springer, who underwent an operation at Lewiston recently for a double rupture, and who has been quite ill, is reported as getting along nicely at present.

Card Club Meets

The Card club met with Mrs. G. E. Taber on Tuesday, March 13. The afternoon was spent in card playing and social converse. Mrs. J. H. Jackson won the honors of the day. The invited guests were Mrs. Charles W. Smith, Mrs. John Meyer, Mrs. Nell Haymond, Mrs. Johanna Christenson, and Miss Mary Stooler.

Some people are like peacocks. They attract most attention when strutting.

THE MASTER OF BALLANTRAE

A Winter's Tale **By ROBERT LOUIS STEVENSON**

INSTALLMENT 35.

"You no murderer?" inquired Secundra. "You true man? You see me safe?"

"I will see you safe, if you be innocent," returned Sir William. "I have said the thing, and I see not wherefore you should doubt it."

"There all murderers," cried Secundra, "that is why. He kill—murderer," pointing to Mountain; "there two hire murderers"—pointing to my lord and myself—"all gallow-murderers! Ah, I see you all swing in a rope. Now I go save the sahib; he see you swing in a rope. The sahib," he continued, pointing to the grave, "he not dead. He bury, he not dead."

My lord uttered a little noise, moved nearer to the grave, and stood and stared in it.

"Buried and not dead?" exclaimed Sir William. "What kind of rant is this?"

The frost was not yet very deep, and presently the Indian threw aside his tool and began to scoop the dirt by handfuls.

Then he disengaged a corner of a buffalo robe; and then I saw hair catch among his fingers; yet a moment more and the moon shone on something white.

A while Secundra crouched upon his knees, scraping with delicate fingers, breathing with puffed lips; and when he moved aside I beheld the face of the master wholly disengaged. It was deadly white, the eyes closed, the ears and nostrils plugged, the cheeks fallen, the nose sharp as in death; but for all that I had lain so many days under the sod, corruption had not approached him and (what strangely affected all of us) his lips and chin were mantled with a swarthy beard.

"See, sahib!" said Secundra. "The sahib and I alone with murderers; try all way to escape, no way good. Then try this way; good way in warm climate, good way in India; here in this damn cold place, who can tell? I tell you pretty good hurry; you help, you light a fire, help rub."

"What is the creature talking of?" cried Sir William. "My head goes round."

"Teach Him."

"I tell you I bury him alive," said Secundra. "I teach him swallow his tongue. Now dig him up pretty good hurry, and he not much worse. You light a fire."

Sir William turned to the nearest of his men. "Light a fire," said he. "My lot seems to be cast with the insane."

"You good man,' returned Secundra. "Now I go dig the sahib up."

He returned as he spoke to the grave and resumed his former toil. My lord stood rooted, and I at my lord's side, fearing I know not what.

The frost was not yet very deep, and presently the Indian threw aside his tool and began to scoop the dirt by handfuls.

Then he disengaged a corner of a buffalo robe; and then I saw hair catch among his fingers; yet a moment more and the moon shone on something white. A while Secundra crouched upon his knees, scraping with delicate fingers, breathing with puffed lips; and when he moved aside I beheld the face of the master wholly disengaged. It was deadly white, the eyes closed, the ears and nostrils plugged, the cheeks fallen, the nose sharp as in death; but for all that I had lain so many days under the sod, corruption had not approached him and (what strangely affected all of us) his lips and chin were mantled with a swarthy beard.

"My God!" cried Mountain, "he was as much as a baby when we laid him there!"

"They say hair grows upon the dead," observed Sir William, but his voice was thick and weak.

Secundra paid no heed to our remarks, digging swift as a terrier in the loose earth; every moment, the form of the master, swathed in his buffalo robe, grew more distinct in the bottom of that shallow trough; the moon shining strong, and the shadows of the standers-by, as they drew forward and back, falling and flitting over his emergent countenance. The sight held us with a horror not before experienced; I dared not look my lord in the face, but for as long as it lasted I never observed him to draw breath; and a little in the background one of the men (I know not whom) burst into a kind of sobbing.

"Now," said Secundra, "you help me to lift him out."

Labored to Reanimate Body.

Of the flight of time I have no idea; it may have been three hours, and it may have been five, that the Indian labored to reanimate his master's body. One thing only I know, that it was still night, and the moon was not yet set, although it had sunk low, and now barred the plateau with long shadows, when Secundra uttered a small cry of satisfaction; and, leaning swiftly forth, I thought I could myself perceive a change upon that icy countenance of the unburied. The next moment I beheld his eyelids flutter; the next they rose entirely, and the week-old corpse looked me for a moment in the face.

So much display of life I can myself swear to. I have heard from others that he visibly strove to speak, that his teeth showed in his beard, and that his brow was contorted as with an agony of pain and effort. And this may have been; I know not, I was otherwise engaged. For, at that first disclosure of he dead man's eyes, my Lord Durrisdeer fell to the ground, and when I raised him up he was a corpse.

Day Came.

Day came, and still Secundra could not be persuaded to desist from his unavailing efforts. Sir William, leaving a small party under my command, proceeded on his embassy, with the first light, and still the Indian rubbed the limbs and breathed in the mouth of the dead body. You would think such labors might have vitalized stone but, except for that one moment (which was my lord's death), the black spirit of the master held aloof from its discarded clay; and by about the hour of noon, even the faithful servant was at length convinced. He took it with unbroken quietude.

"Too cold," said he, "good way in India, no good here." And, asking for some food, which he ravenously devoured as soon as it was set before him, he drew near to the fire and took his place at my elbow. In the same spot, as soon as he had eaten, he stretched himself out, and fell into a child-like slumber, from which I must arouse him, some hours afterward, to take his part as one of the mourners at the double funeral. It was the same throughout; he seemed to have outlived at once and with the same effort, his grift for his master and his terror of myself and Mountain.

One of the men left with me was skilled in stone-cutting; and before Sir William returned to pick us up, I had chiselled on a boulder this inscription, with a copy of which I may fitly bring my narrative to a close:

J. D.,
HEIR TO A SCOTTISH TITLE,
A MASTER OF THE ARTS AND GRACES,
ADMIRED IN EUROPE, ASIA, AMERICA,
IN WAR AND PEACE,
IN THE TENTS OF SAVAGE HUNTERS AND THE CITADELS OF KINGS, AFTER SO MUCH ACQUIRED, ACCOMPLISHED AND ENDURED, LIES HERE FORGOTTEN.

H. D.,
HIS BROTHER,
AFTER A LIFE OF UNMERITED DISTRESS, BRAVELY SUPPORTED,
DIED ALMOST IN THE SAME HOUR, AND SLEEPS IN THE SAME GRAVE WITH
HIS FRATERNAL ENEMY.

THE PIETY OF HIS WIFE AND ONE OLD SERVANT RAISED THIS STONE TO BOTH.

(THE END)

Just Missed It.

Pat—I came near selling my boots yesterday.

Mike—You did, sir. Well, it's lucky you didn't sell 'em. How did you come near doing it?

Pat—I had 'em half-soled.

Garget and blue bag follows if a heavy milking ewe lies on the cold damp ground over night.

Will & Way.

Little Louise—Mamma, got me a pair of nice red shoes?

Mamma—Ridiculous. No indeed!

Little Louis (threateningly)—If you don't, I'll get shoe trees and grow 'em myself.

The health and appearance of your family are a good indication of the howlesomeness of their diet.

ESTABLISH CONTACT WITH DISABLED MEN

Veterans' Bureau Puts Men in Field to Look After Cases Personally.

In order that every World War veteran of the Pacific northwest entitled to government compensation because of war injuries or disabilities may have a fair opportunity to take advantage of such relief, the Seattle district office of the United States Veterans' bureau is increasing its field contact activities. The bureau aims to bring information relative to federal compensation relief measures into the very homes of ex-service people. The disabled war veteran has five years after discharge from service to file his claim with the Veterans' bureau. Five contact representatives are now in the field in this district.

Hospitalization activities of the bureau in this district are neither increasing or decreasing during the winter months, remaining at an average of 850 patients in the district. It is expected that the number will decrease when the warm weather begins.

More war risk insurance was reinstated by veterans in the Pacific northwest district of the bureau than in the New York district, which has a military population of several times that of the local district, during the month of January. Government insurance totalling $159,000 was reinstated in this district during the first month of this year. In the New York district reinstatements amounting to $121,000 were made. This district was second of the 14 districts of the United States in the amount of war insurance converted into permanent forms of government insurance with a total of $134,000.

WOMEN BACK OF BILL TO SAVE THE BABIES

The Association of University Women, composed of graduates of universities and colleges all over the country, is backing the Sheppard-Towner bill to save babies.

"Life insurance company investigations have proved that one mother dies in every 185 confinements," said Mrs. W. C. Kruegel, president of the chapter of the association at the State College of Washington.

"The terrible thing about it is that this death rate is not on the decrease. The hazard begins to look larger. If 165 men contemplating a trip to Panama were told that, according to the prevailing average, one of the group would die on the trip, some of the crowd would elect to stay at home.

"Women now have their rights, and they demand that the vocation of motherhood be made safe, just as men have demanded that certain vocations of death be made safe. When good care is given before and at time of birth the death rate is reduced 60 per cent among the mothers, and the number of stillborn babies is reduced from 45 to 12, the death rate of babies under a month old reduced from 40 to 12.

"The Sheppard-Towner Maternity bill authorizes appropriations for investigations by the children's bureau as to infant and maternal mortality and plan of work, to be originated in each state and carried out there, the plans to be approved by a federal board of maternity and infancy, composed of the chief of the children's bureau and the U. S. surgeon general, the U. S. commissioner of education.

"Up to this time 42 states have accepted the terms of the act—all but Main, Massachusetts, Rhode Island, New ork, Louisiana and Washington. A number of the eastern papers misrepresented this bill in editorials, letters, etc. The bill specifically provides that no official or agent shall have a right to enter a home or take charge of a child against the protest of either of the parents, nor shall the power of the parent or guardian be in any way limited, so the objections raised by those misrepresenting the bill are met by the bill itself.

"Why has Washington not accepted the provisions of this act? We can't discover the motives for the opposition. It does not provide for the expenditure of enough money to provide coffins for the mothers and babies who are now needlessly dying."

What Tree Pest Eats.

"The orchard leaf roller is known to feed upon the following: Alfalfa, apple, apicot, cherry, current, elm, gooseberry, locust, onion, pear, plum, poplar, prune, quince, raspberry, and rose," says Anthony Spuler of the agricultural experiment station of the State College of Washington, discussing this destructive orchard pest. Those interested in methods of controlling such injury may write for Bulletin 172 published by the state college.

March is like some people; it never leaves in the same frame of mind in which it came.

Modern Mechanical Progress

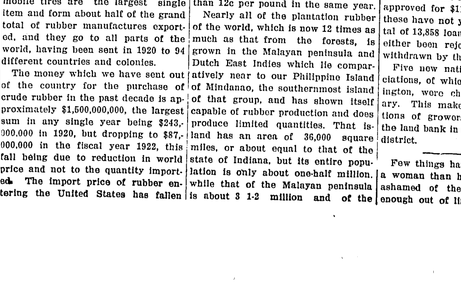
This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

AUTOMOBILE RADIATORS MADE FROM CARTRIDGE TUBES

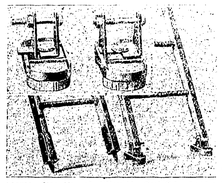
Automobile radiators are now being made from copper cartridge tubes, as the result of a process developed during the war for the rapid extrusion of copper tubes used in the manufacture of cartridges. A radiator composed of a number of cells made from these copper tubes is easy to assemble and repair, and is not liable to serious damage from freezing, owing to the absence of troublesome joints. Copper transmits heat readily and is practically immune to corrosion.

ITALIAN WAR TRACTORS SERVE PEACEFUL PURSUITS

An Italian tractor, originally developed during the World war for carrying ammunition and hauling field guns over rough, mountainous country, is being redesigned here so as to meet the agricultural and industrial requirements of American users of tractors. The war machine, equipped with tractor wheels, had a speed of about 6 1-4 miles an hour and a capacity of 2 1-2 tons. As adapted to peaceful purposes, it is equipped with solid-rubber tires and has a speed of 10 miles an hour. The most pronounced feature is the freedom with which the two axles tilt in independent planes so as to permit all four wheels to have good traction regardless of the contour of the ground.



Italian War Tractors of This Type Are Being Converted Into Truck Tractors for Agricultural Purposes. Note the Angle of the Front Axle as Compared With the Rear Axle, Made Possible by the Swiveled Action Between the Two Frame Sections.



Above: Close-Up of Adjustable Cork-Grip Ladder Shoes. Below: Ladder Equipped With Points at Shoes. Below: Ladder Equipped With Points

ADJUSTABLE LADDER SHOES THAT PREVENT SLIPPAGE

To prevent a ladder from slipping when in use, shoes have been devised which are capable of adjustment for bolting onto the bottom of ladders of any size. On the bottom of the shoes are two circular cork pads which, when worn out, may be replaced by unscrewing a nut and putting on new pads. The cork prevents slippage on smooth surfaces, such as metal, concrete, wood, marble, or similar floors, and also on soft ground outdoors.

A typewriter company, which has been featuring an interchangeable type arrangement as one of the advantages of its machine, now has added to it a new impovement in a device that makes it possible to vary the spacing of letters or words on the same line.

MODERN LAUNDRY EQUIPMENT EFFICIENT AND SANITARY

Modern laundry equipment includes a number of efficient appliances which aid in the rapid and thorough cleansing of soiled clothing in a sanitary manner. For instance, in the "family washings," each particular batch of clothes is placed in an individual metal compartment of a machine which may contain as many as eight of these compartments or pockets. By this method, no two washings come in contact, nor is the water from any pocket intermixed wit hthat of another. During their entire journey through the washers, froners, or other accessories of the laundry, the clothes are always handled in separate baskets.

INVENTION ADDS TO SAFETY OF SHIPS AT SEA

By means of an apparatus for producing extra-sonorous waves, it is hoped to reduce the danger of collision and of ships running aground at sea. A spark emitted from an ordinary radio-broadcasting outfit is transformed by the new apparatus into sound waves that travel through the water at a speed of nearly 5,000 feet a second. The same device registers the echo returned from an obstacle and transforms it into electrical oscillations which are also recorded by the instrument.

AMERICAN-MADE AUTOMOBILES POPULAR IN ARGENTINA

American-made automobiles, which found appreciation in Argentina during the late war, have retained their popularity to such an extent that the percentage of European cars formerly sold there, is relatively small. Although many higher priced cars are sold, the heaviest demand is for those of medium price, and it is reported that popular priced American cars are being imported at the rate of 1,200 a month. Improved highways, now being urged, will further stimulate the use of automobiles in that country.

RUBBER UNDER THE AMERICAN FLAG

Suggestions in Washington that the United States ought to be growing its own India rubber in its own tropical islands lend interest to the latest figures of our enormous and rapidly increasing rubber importation and consumption. Not only is the United States the consumer of 75 per cent of the rubber grown in the entire world—for we produce no crude rubber in continental United States—but it has actually quadrupled its consumption since the beginning of the war, while world production has trebled in the same period. Our imports of crude rubber in the fiscal year 1914, all of which preceded the war, were 131,000,000 pounds and in the fiscal year 1922 565,000,000. Meantime world production advanced from 120,000 tons in 1914 to 344,000 in the high record year 1920, dropping to 309,000 in 1921, this reduction in outturn being due to concerted action by the rubber growers of the world.

The total quantity of rubber imported into the United States in the decade ending with 1922 was, in round terms, 3 1-2 billion pounds against less than 1,000,000 in the decade ending with 1912. That this enormous increase in importation meant a corresponding increase in actual use, is evidenced by the fact that the value of rubber manufacturers produced in the United States was recorded by the census of 1920 at $1,342,000,000 against $203,000,000 a decade earlier. Meantime the exportation of rubber manufactures increased with equal rapidity, the total value of rubber manufactures exported aggregating $85,000,000 in the calendar year 1920 against $10,000,000 in 1910. Automobile tires are the largest single item and form about half of the grand total of rubber manufactures exported, and they go to all parts of the world, having been sent in 1920 to 94 different countries and colonies.

The money which we have sent out of the country for the purchase of crude rubber in the past decade is approximately $1,500,000,000, the largest sum in any single year being $243,300,000 in 1920, but dropping to $87,000,000 in the fiscal year 1922, this fall being due to reduction in world price and not to the quantity imported. The import price of rubber entering the United States has fallen from an annual average of $1.06 per pound in 1911 to 64c in 1918, 46c in 1919, 18c in 1921, and 15c in the fiscal year 1922, these average prices being those of the rubber in the countries from which it is imported.

The tremendous increase in the production of rubber occurs exclusively in rubber plantations and not in the natural forests. Prior to 1900 the world relied exclusively on the rubber trees of the forests, especially those of Brazil and West Africa. With the growing demand for rubber it became apparent that it could be produced more cheaply and of a better quality by trees grown on plantations, especially if the plantations were established in the tropical countries having a plentiful and cheap labor supply. As a result of these enterprises the production of plantation rubber advanced from 4 tons in 1900 to 5000 tons in 1910, 107,000 in 1915, 210,000 in 1918, and 304,000 in 1920. Meantime the fall in price reduced the activity of those obtaining rubber from the forests and the output of Brazil, the chief source of forest rubber, fell from 42,000 tons in 1912 to 20,000 in 1921, and that of the other rubber forests from 28,000 tons in 1912 to 8000 in 1921. That the plantation rubber does bring higher prices than that obtained in the forests is evidenced by the fact that the average import price of the rubber entering the United States from the British and Dutch East Indies combined, the seat of the principal rubber plantations, was a little more than 15c per pound in the fiscal year 1922, while that from Brazil, the chief source of forest rubber, averaged slightly less than 12c per pound in the same year.

Nearly all of the plantation rubber of the world, which is now 12 times as much as that from the forests, is grown in the Malayan peninsula and Dutch East Indies which lie comparatively near to our Philippine Island of Mindanao, the southernmost island of that group, and has shown itself capable of rubber production and does produce limited quantities. That island has an area of 36,000 square miles, or about equal to that of the state of Indiana, but its entire population is only about one-half million, while that of the Malayan peninsula and of the Dutch East Indies approximately 50,000,000. Lieutenant-Colonel H. F. Cameron of the Engineer Corps of the United States army, who has made a thorough study of the Mindanao rubber area, calls attention to the fact that successful rubber production requires large areas of land, large supplies of cheap labor and big investments of capital and that the present limitations of land ownership and labor supply in the Philippine Islands are the chief obstacle to the development in those islands of the production of rubber, for which we have sent nearly 1 1-2 million dollars to foreign countries during the past decade, and for which our demands are constantly increasing.

FEDERAL LAND BANK AT SPOKANE IS BUSY

Five hundred seventy-six farm loans for a total of $2,016,400 were closed by the federal land bank of Spokane during January, according to figures announced in Spokane recently.

Months passing the $2,000,000 mark are record months, in the estimation of officials of the bank.

During the month 565 applications for loans were received from farmers in Washington, Idaho, Montana and Oregon, aggregating $1,986,084. Five hundred ninety-seven loans for a total of $1,960,900 were approved. There were 348 cancellations totaling $1,195,800. Total loans closed since the bank opened for business in May, 1917, numbered 27,141, for a grand total of $80,885,635, which now represents long term mortgages on as many farms in the four northwestern states.

Total applications since the bank was started number 3,711 for $180,227,163. In all 37,541 loans have been approved for $110,183,305, but part of these have not yet been closed. A total of 13,858 loans for $41,755,405 have either been rejected by the bank or withdrawn by the applicants.

Five new national farm loan associations, of which two were in Washington, were chartered during January. This makes 493 such associations of growers borrowing through the land bank in the twelfth land bank district.

Few things have more influence on a woman than her dishes. If she is ashamed of them she isn't getting enough out of life.

Total Stranger.

He—Are you at all familiar with Shakespeare?

She—(Indignantly) I should say not! I never have been familiar with any young man in my life, and I don't even know this person you speak of. —"Topics of the Day" Filme.

HAMPSHIRES 1-2-3-4-5

FOR 5 YEARS IN SUCCESSION Hampshires have won grand championship over all breeds, all ages, and all weights of hogs in the carload lots, at the International livestock Shows, 1918-1919-1920-1921-1922.

FOR 5 YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this Show.

HAMPSHIRES ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their meat type—their grazing qualities—their activity, health and vigor—their highly developed mother instinct and milking qualities—their early maturity and economical gains—AND BECAUSE THEY ARE RECOGNIZED MARKET TOPPERS.

For information about Hampshires or for names and addresses of breeders near you address,

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

RAISING THE FAMILY PORK

(Prepared for West Side and Irrigated Sections.)

Every farmer should raise his own pork if the amount of land he owns is large enough to be called a "farm." The definition of a farm in the judgment of C. M. Hubbard, extension livestock specialist, is "a place where you raise most of what you eat."

Most West Side and irrigated farms have by-products such as skim milk, cull apples and potatoes and a certain amount of stubble to clean up. Alfalfa, clover, rape (Dwarf Essex), vetch, etc., are available for pasture. Not that grain can be eliminated, for such is not the case as every farmer knows, but rather that the intelligent use of these by-products and pastures greatly lowers the cost of the home pork production.

At this season of the year let the sow have the run of the orchard, feed her, if possible, a ration containing ground oats, ground barley (or corn) and shorts or millrun, equal parts by weight, in connection with the skim milk. Do not feed shorts or millrun alone with skim milk, on account of the fact that each is strong in muscle building ability and not balanced otherwise. A mixture of the three feeds suggested, or ground barley, corn or wheat, whichever is cheaper, and ground oats with the milk results in better growth and development. Clover or other legume hay is furnished in a rack or ground fine replacing 20 per cent of the grain mixture. Charcoal or wood ashes, together with salt is kept before the sow at all times.

The orchard or hog lot should be made use of at this time of the year to give exercise to the mother sow carrying young. Exercise helps produce normal, healthy, vigorous young. The sow may be fed her grain ration in one corner, sheltered in another corner of the lot and furnished her roughage in still another. This insures the necessary exercise.

Practically the same ration should be fed after farrowing and the pigs may be given this ration in their creep at from 15 to 20 days of age.

Sunshine energizes little pigs, in fact all young animals. It is cheaper than feed and should be given a chance to shine into the farrowing pen and over the little pigs in their bed.

The sow and litter should have access to pasture as mentioned above as soon as the pigs are sufficiently strong and weather permits. The boar pigs may be altered at six weeks and the litter weaned at ten weeks.

After weaning, the bulk of the ration should be of a fat forming nature, using corn, ground barley or ground wheat in connection with skim milk. Anyone of the above feeds 90 per cent by weight with 10 per cent tankage, where skim milk is not available, either with or without pasture is an efficient ration. With cheap oats this grain may replace one-third the wheat, barley or corn which is fed. When tankage is fed in place of skim milk it should be reduced from 10 per cent to 5 per cent during the latter half of the fattening period.

(The next article will be Housing the Family Flock.)

HOTBED CONSTRUCTION

By C. L. Vincent, Instructor in Horticulture, State College of Washington

No country or suburban home is complete without its home garden, and no garden is complete without its hotbed and cold frame. Considering the small expense necessary to construct either or both of these, it is surprising that so few farmers enjoy their benefits.

The hotbed is a valuable asset to vegetable gardening operations. The commercial gardener finds it a necessary part of his equipment. He starts his early cabbage, cauliflower, tomatoes, peppers and other plants very early in the spring in the hot bed, transplanting them to his garden when the soil is in condition and the weather safe from frosts.

The home gardener, provided with a hotbed, may enjoy radishes and lettuce several weeks in advance of the normal times. A good hotbed can supply a family with these vegetables even in the dead of winter, if properly handled.

Of the various types of hotbeds, the most common is the manure hotbed. In this case, heat is furnished by fermenting horse manure underneath the seed bed. The preparation of manure for the hotbed should begin at least three weeks before the hotbed is to be used. Fresh horse manure from grain fed animals should be placed in a compact pile. The manure should contain a fair amount of litter, but should not be too strong. If it is dry it should be moistened with water as it is being piled. As soon as fermentation has become well started, the manure should be thoroughly forked over and replied to insure uniform fermentation of the entire mass. As soon as the whole pile is steaming, the manure may be placed in a pit, which should be about two feet deep. As the manure is being put in the pit, it should be thoroughly tamped, so that it will not settle unevenly and let the soil sink in spots after the bed is in operation. A good plan is to put the manure on in layers six inches deep and tamp each layer thoroughly before putting on the next. When the bed is completed, the pit should be full or the manure should be about two feet deep. The pit should be about six feet wide and as long as necessary.

A frame should be built around this pit. This can best be started by securing the sashes or covering for the top. For the ordinary farm garden four or five sashes are required. The sashes are three feet by six feet outside dimensions. They can be purchased from almost any seed house or planing mill, containing three runs of glass ten inches wide.

After these are purchased the frame can be made to fit. The frame is usually built of lumber and should be 12 inches high in front and 18 inches high at the rear, and six feet wide. It should face the south to get the full benefit of the sun. The ends of the frame are securely built and cut so as to fit close up along the sash. Cross pieces of 2x4 material should be fastened to the north and south walls of the frame every three feet apart as needed to close the openings between sashes.

After the frame is built, four to six inches of good rich garden loam soil should be evenly spread over the manure. The sashes are then put on and no seeds are planted until after the bed has passed through its violent heating period which may not become evident for three, four or even more days after the bed is made. After the bed has heated up and cooled down to 85 degrees F. the seeds may safely be planted.

For further information regarding hotbeds, write the State College of Washington, Horticulture department, Pullman, Washington.

Marble is softer than granite.

MANY STUDENTS COME FROM FARM FAMILIES

Farming, labor, the professions, and business, are the occupations which lead in numbers among the fathers of students at the University of Washington according to data compiled recently.

These occupations are followed by 86.59 per cent of the fathers of Washington students.

Business, including manufacturing, contracting and building, leads the list with 36.94 per cent. The professions are represented by 19.35 per cent, labor by 18.71 per cent, and agriculture by 11.59 per cent.

The remaining groups shown are retired men, 6.21 per cent, and government service 5.07 per cent. Fathers of 2.13 per cent of the students are listed as deceased. The figures are based on a total of 3,607 students reporting the occupation of their parents.

Mrs. William Carr, of New York, weighing but 97 pounds, is the mother of the first triplets born in Bronx hospital.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the the County of Latah.

Izora M. Sides, Plaintiff, vs. Wayne Sides, Defendant.

The State of Idaho sends greetings, to the above named defendant, Wayne Sides.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the county of Latah, by the above-named plaintiff of the nature in general terms as follows:

The said action is brought to obtain a decree of divorce dissolving the bonds of matrimony heretofore and now existing between plaintiff and defendant, as will more fully appear in the complaint on file herein and to which reference is here made and for the care, custody and control of Elvin Edward Sides, the minor child of the parties, and

You are hereby directed to appear and answer said complaint within 20 days of the service of this summons if served within the judicial district and within forty (40) days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in the count yof Latah, this 7th day of March, 1923.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MARCH 23, 1923. NO. 38

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Rush Work On Bridge

Within a few days placing the concrete for the main channel pier at Spalding over the Clearwater river will be completed, F.W. Straw manager of the Security Bridge company, the contractors, announced Saturday.

Installation of the pier before the spring highwater has been a gratifying development. The steel for the main channel span is expected by April and if this can be installed before flood waters develops Mr. Straw believes that the structure can be opened by June.—Lewis County Register.

Roads Near Colton

With the continued freezing and thawing, mingled with snow, rain and sleet, the dirt roads in this locality are becoming more and more unfit for travel. It is estimated that it takes the farmer living over four miles from town from an hour to an hour and an half to drive to town, and an equal length of time to get home again. Those living on the highway, or in touch with it, are beginning to realize the benefits to be derived from a paved or hard-surfaced road.—Colton News-Letter.

Beaver Hard To Trap

Frank Snyder, who is given a permit to trap the beaver which have been doing damage in the city park and near the Leland place above town has captured two of the animals, one a young one and the other full grown. They are very hard to trap. Mr. Snyder says, and manage to spring the traps frequently without getting caught. He has had a number of traps set lately but so far has only been able to capture two of the animals, though he has found the traps sprung a number of times. —Juliaetta Record.

Demand For Hay Shoves Price Up

The increase in the daily herds in the Palouse country, coupled with the short crop last season, has brought the price of hay up to a figure considerably above normal, with the supply somewhat limited. Bailed alfalfa is now selling at $21 on the local market and timothy from one to two dollars more. There is still some hay on the upper Palouse, in Latah county and some over in the Viola district but most of the farmers in the Moscow district have fed up their supply.

Dealers have been shipping more or less hay from south Idaho and from the Yakima valley to supply the local demand. Most of the hay shipped in is alfalfa.—Star-Mirror.

Oil Tools Fast in Well

Mr. and Mrs. F.E. Fryer were visitors to Asotin last Saturday, spending several hours in town. Mr. Fryer is doing the drilling in the prospective oil well over inTammany. He is down 550 feet, and shortly after starting work last Friday his drill became lodged in the bottom of the well and he was waiting the arrival of tools so that he could extricate them. In fact, Mr. Fryer reported that all three drilling ossrts were experiencing similar trouble as the well at the Swallows'Nest, had broken a drill. The latter was gotten out and had to be sent to Spokane to be repaired. Mr. Fryer says the outlook in Tammany is considered very hopeful and drilling will be resumed just as quickly as tools can be gotten loose, which has probably been done before now.—Asotin Sentinel.

Got Wrong Girl

Somewhere in Lewiston is a girl who is sure an attempt was recently made to abduct her from the Lewiston Normal grounds as the crowd was leaving after the Friday evening game. A certain gentleman, accompanied by his wife, attended the contest, driving to the Normal in a car. A neighbor girl of some sixteen years accompanied them. When the game was over the party became separated and as the man reached the campus outside he saw,so he thought, the young lady he had brought along, and not wanting to return without her, and fearing he was going to lose her in the darkness, rushed up to his supposed guest, grabbed her by the arm and said: "Here, come on and ride home." Without warning the girl, aroused to anger and fright, became a fighting bundle of female attire, and the fight she started to put up it is safe to say that the man who gets her will never succeed by primeval methods.—Lewiston Banner.

A Little More Snow

Thursday, March 22, was the second day of spring—according to the calendar—but that didn't seem to make any difference to the weather man what the calendar said for when Genesee awoke to go about her business for the day there were two good inches of snow on the ground. It didn't last long, though.

The Sick List

Mrs. Sim Currin, who has been very ill for some time, was somewhat improved on Thursday.

Frank Doyle is quite ill and confined to his home.

GENESEE SECTION VISITED BY FIERCE DUST STORM

The Genesee section was on last Friday afternoon visited by one of the worst dust and rain storms that has ever been known in this vicinity, according to old-timer residents who have resided here for 40 years and more. The worst part of the storm occurred about 3 o'clock in the afternon, when the sky suddenly became overcast with what appeared to be a huge grey cloud—and it was, but it happened to be of dust instead of the dangerous part of the elements that it looked to be. In addition to the immense cloud of Big Bend dust a heavy shower came right in the midst of it and within a few minutes great gobs of mud wre falling instead of water and the buildings of the town were covered with a cheap-looking grey layer on the windward side. The storm lasted from about 3 o'clock to 4:30. Many people thought the phenomena might be accompanied by an eclipse of the sun and many remarks were made to that effect. To add to the weirdness of the storm the electric lights went out, causing many women in their homes to become quite badly frightened.

A heavy fall of hail was experienced at Uniontown about 3:30 o'clock but no damage was reported. Hail was also reported from the Nezperce section and a garage was wrecked at Culdesac, showing that the storm was quite general over this section of the country.

Another dust storm of lesser proportions visited this section Monday afternoon. While everything was covered deep with dust, the rainfall was slight and only a small amount of mud was added to what already covered the sides of the buildings.

If the Big Bend country wants to keep any of their soil they had better lay a rock on it, else it will all be deposited over this section of the country. However, while it is very disagreeable to have it handed to us in the way it is, it is said to be very productive soil if it has water on it, and it is probable that there will be plenty of water on what has been deposited here to grow almost anything.

School Notes

Wilma Casebolt

The high school girls went on a hike last Thursday evening after school. Miss Martinson planned this recreation as a means of bringing about cooperation among the girls.

The Glee club is practicing songs for a concert which is being planned for spring. The date has not as yet been decided.

The Genesee soils and crops class won first place in the grain and grass seed contest held in Moscow last Friday. Six classes of grains were entered. Marion Mayer was high man in the entire contest. His score was 1020; Kenneth Platt, 892; George Erickson, 859. Genesee's grand total was 2771. Moscow's grand total was 2633; Lapwai's grand total was 2360.

Project work is going to be resumsed and the utilization of vacant lots is going to be carried on. Garden club work will be started on any vacant property that is available. The entrants were announced Friday evening by complimentary tickets presented them for the Interscholastic basketball game at Moscow.

Prof. James O'Gorman visited the school on Tuesday of this week in the interest of the Northwest Association of Secondary High schools. If he returns in a favorable report of our school, graduates of this high school will be admitted to any university in the Northwest without taking entrance examinations. Prof. O'Gorman complimented our school on its splendid work.

A Parent-Teachers' meeting was held in the school building Monday evening of this week. The program as printed in The News of last Friday was carried out, with one exception. A program committee for the next meeting was appointed during the business meeting which followed the program. The discussion concerned recent state legislation, which, if it goes into effect, will mean the elimination of some of the departments now exisiting in our school and this district will be forced to confine the attendance of the school to this district. We, the students and faculty, are hoping that this will be unnecessary.

Masquerade a Success

The Rebekah masquerade given on Wednesday evening, proved to be one of the very pleasant "female" affairs of the season. There were some 60 in attendance and all bent on having a good time. Mrs. George Boliou and Mrs. W. W. Burr won the prize for being the most characteristic and Mrs. John G. Meyer for being the most artistic. A delicious luncheon was served and everyone reported a good time.

Kill Many Cougars

A dispatch from Sandpoint, dated March 14, to the Spokesman-Review says: Three cougars were killed in the Hunt creek neighborhood east of Priest lake by Frank Jones of Genesee and Roy Carer and John Murphy of Couer d'Alene who were with the Fred Herrick party. They remained in the Priest lake country after Mr. Herrick left with seven "varmits."

WHAT HAPPENED HERE TWENTY YEARS AGO

Primaries tonight.

Real Idaho weather.

Miss Pearl Owen is the possessor of a new piano.

Ed. Kempf and family are now permanently located at Hammet, Calif.

Dr. W. H. Ehlen expects to occupy for office purposes the rooms vacated by Clarence Jain in the Elliot building.

Peter Steltz raised a windmill to the breezes at his home Tuesday. He now has a system of water works of his own.

Messrs. Biram, Davies and Schanhorst report themselves as being well satisfied with the timber claims they found in the Heppner country last week.

There is considerable sickness at the present time, the greater part of which is in the country and our doctors are moderatly busy.

Edwin Peterson has deeded to J. E. Moore, who recently bought the Stoltz place, sufficient land to enable the latter to construct a road from his farm to connect with the main road.

Sanford Evans says the man who told us that spring had sprung in the Rimrock section last week must have been a little previous, at any rate gentle Annie has not been in evidence in his neighborhood to any great extent as yet.

During the past week or ten days Wm. Smith has been seriously ill with pneumonia. For a portion of the time his condition was serious. His many friends will be glad to learn that he is now rapidly improving and will soon be out.

During last week some 12 to 14 inches of snow fell in the Nezperce country. A correspondent to the Lewiston Teller from there says it equals the big snow storm of six years ago, when on the fifteenth of April a snow storm covered the ground to a depth of 12 inches, but it is unlike it in the other weather conditions. Six years ago the storm was followed by a weather 20 degrees below zero.

Will Give Cantata

A cantata, "The Resurrection Story," will be rendered at the Federated church on Easter Sunday, commencing at 7:30 p. m. This will be an exceptionally fine musical program, consisting of 21 voices, accompanied by Mrs. W. M. Herman, piano, F. W. Loncosty, violin. W. E. English, director.

The Resurrection Story

Part I

Rejoice, the Lord Is Risen—Chorus.

There Is a Green Hill—Soprano solo, Mrs. W. W. Burr.

Oh, Come and Mourn—Solo, Mrs. Bressler, tenor solo, W. E. English, and chorus.

Near the Cross Was Mary Weeping—Contralto solo, Mrs. Arthur Spigner.

Late On the Sabbath Day—Baritone, Jas. Winegardner, and chorus.

Thou Son Oppressed—Tenor, F. C. Shork, Contralto, Mrs. Springer.

Part II

Awake, Glad Soul, Awake—Duet and trio—Martinson, Wilson and Winegardner.

Christ the Lord Is Risen Again—Solo, Mrs. Niemann.

Morn's Roseate Hues—Women's double quartet.

I Believe Believeth Shall Live—Alto solo, Mrs. Emmett, and chorus.

All Hail—Men's chorus.

Come Ye Faithful—Tenor solo, Mr. Shork, soprano, Mrs. Burr, and chorus.

Have Sticky Fingers

If you have occasion to leave your car on the streets of Lewiston, especially at night, you had better take with you about all movable things, else you are apt to find them missing when you return for your car. A fine auto robe was taken from a Genesee car last Sunday evening while standing in front of one of the picture houses in that city. Lewiston is no worse than any other city of its kind, as they all have a certain number of light fingered-gentry who are always on the look-out for a good pick-up. When they see the owner of a car go into a show, they know they will be perfectly safe in going through the car and that no one will be any the wiser until the owner misses his stuff.

This is merely a warning to those who still have their robes, motor-meters and other accesories on hand.

Must Have Felt "Spoony"

A news dispatch from Parsons, Kansas, states that a man in a state institution there has been relieved of 27 spoons when a operation was performed on his stomach. Several small pieces of wood were also found among the "junk" taken from his internal improvements.

A New Arrival

Mr. and Mrs. Henry Broenneke are entertaining a little miss who arrived at their home on Sunday, March 18. Mother and babe are doing nicely.

And Loan 'Em Some More

We won the war for the allies for nothing, but some of them seem disappointed because we didn't tell them to keep the change.—Toledo Blade.

NEAR EAST RELIEF DRIVE IN FULL SWING

A double emergency of such magnitude as to challenge the charity of the world is declared to confront the people of Latah county in their attempt, now in full swing, to raise their share in a national mercy fund to alleviate suffering among the war-afflicted refugees of the Near East. Latah county's part in the life-saving work is being headed by Tim Sullivan. The saving of 46 orphan children. The saving of 46 orphan chilhren from starvation is the goal.

"When hundreds of thousands of innocent, non-combatant people were made homeless and destitute by the recent massacres and destruction of Christian homes at Smyrna, the Near East relief was forced into a position of being compelled to 'rob Peter to pay Paul'," explains E. C. Newberry, field director of the Near East relief, who has helped to get the work under way here.

"Our orphanages and hospitals in which we are caring for the victims of former tragedies that have befallen the Near East countries, had to be drained of food and medical supplies in order to meet the new emergency of hunger and human suffering. These hundreds of tons of provisions, which were started to the rescue of the Smyrna disaster victims saved the lives of unknown thousands who have since been carried to safety outside the Turkish country, but it has placed our orphan wards in new peril.

Close to 100,000 of our little orphan boys and girls, who share almost their last crumb of food and their last ounce of medical supplies with the sufferers from the Smyrna horror, and the great exodus of Christians from the interior, which followed, are now facing starvation, themselves. Their provisions are gone. We have been unable to replace them with the meager funds we have on hand. It is imperative that we raise additional funds for their care.

"At the same time want is becoming decidedly acute among the adult refugees. Only a small dole of food can be given them each day. Few have anything but rags for clothes. It will be months yet before they can do anything for themselves. We are thus confronted by a double emergency of need, which challenges the charity of the world. Let us do our full share."

Nordby Bros. Sell Fine Cattle

Nordby Bros., of the Genesee Valley Stock Farm, were well represented at the Shorthairn cattle sale held at Spokane last week. They shipped seven young animals to the sale, the shipment comprising two bulls and five females, all of which were sold at fair prices, one of the bulls bringing $810, sold to McCormick of Lewiston. One female was purchased by F. M. Rothrock for $165. This latter animal was grand champion female of the show and sale.

The Nordbys were also awarded first, second and third places for females under one year old, which in itself is no small recommendation for the quality of their stock.

All animals were shown and judged during the morning by C. W. Hickman of the U. of I. and A. E. Lawson, Northwest representative of the American Shorthorn Breeders' association.

The sale was for strictly cash, which, of course, caused prices to be lower than they otherwise might have been.

Trees for Spring Planting

The University of Idaho wishes to announce that the list of trees for spring planting is ready for distribution, giving the names and price of each variety. There are some 25 or 30 varieties and the price ranges from six cents to 75 cents each, owing to the size and variety.

You can get a list by writing to F. G. Miller, School of Forestry, University of Idaho, Moscow.

Wanted a Receipt

An Oklahoma editor tells of an old Indian that came into his office to pay for his paper. The editor took the money, then the Indian wanted a receipt. The editor tried to talk him out of it. Mr. Indian insisted on getting the receipt. After insking it the editor wanted to know why he was so nersistent about wanting a receipt. The Indian said: "Me die some time. Go to big gate and St. Peter ask if I been good Indian. I say yes. He say did you pay your debts? I say yes. He say, did you pay editor for paper? I say yes. He say, where is receipt? I no have it. I have to run all over hell to find you and get receipt."

Glory Be

An old darkey got up one night at a revival meeting and said:"Brudders and sisters, you knows and I knows dat I ain't been what I oughter been. I'se robbed hen roosts, and stole hawgs an' tole lies, an' got drunk, an' slashed folks wi' mah razzah, and shot crvars, an' cussed an' swore; but I thank the Lord der's one thing fain't nebber done; I ain't nebber lost sight of mah religion"—Ex.

Got anything to sell? Tray a want ad. if you have.

CITY BOWLING LEAGUE IN ACTION ON K. P. ALLEYS

The City Bowling league is in full swing, with four teams battling for supremacy and are nightly going after each other's scalps and the sound of falling pins may be heard until far in the night.

The make-up of the teams of the league is as follows: Cougars—F. W. Loncosty, captain; Martin Foster, Mahlon Follett, R. L. Vandenburg, Pete Hall; Coyotes—T. A. Feeney, captain; George Morscheck, Cody Rader, Glenn Sampson; Nights Hawks—D. L. Bressler, captain; Chas. Geltz, George Post, Henry Morscheck, T. H. Herman; Owls—W. W. Burr, captain; Ray Edwards, Nels Liberg, Jas. Winegardner, Chas. Smith.

Monday evening the Cougars clawed the Coyotes slightly, as shown by the score:

Cougars—	1	2	3
Vandenburg	134	174	149
Loncosty	154	143	133
Foster	136	158	154
Follett	131	162	102
	555	637	538
Coyotes—	1	2	3
Feeney	168	134	194
Morscheck, G.	147	116	110
Rader, C.	129	121	126
Sampson, G.	104	96	116
	548	467	546

The Night Hawks took the Owls into camp for three games Tuesday night:

Night Hawks—	1	2	3
Bressler	162	158	114
Geltz	174	158	146
Post	122	163	144
Morscheck, H.	128	150	166
	586	589	570
Owls—	1	2	3
Burr	161	103	111
Edwards	142	128	156
Liberg	135	115	129
Winegardner	122	136	109
	560	482	505

The schedule contemplates 27 games, with the final game to be rolled Tuesday night, April 17. The complete schedule follows:

Monday, March 19, Cougars vs. Coyotes; Tuesday, March 20, Night Hawks vs. Owls; Wednesday, March 21, Cougars vs. Night Hawks; Thursday, March 22, Owls vs. Coyotes; Monday, March 26, Cougars vs. Owls; Tuesday, March 27, Coyotes vs. Night Hawks; Wednesday, March 28, Cougars vs. Coyotes; Thursday, March 29, Night Hawks vs. Owls; Monday, April 2, Cougars vs. Night Hawks; Tuesday, April 3, Owls vs. Coyotes; Wednesday, April 4, Cougars vs. Owls; Thursday, April 5, Coyotes vs. Night Hawks; Monday, April 9, Night Hawks vs. Owls; Tuesday, April 10, Cougars vs. Coyotes; Wednesday, April 11, Owls vs. Coyotes; Thursday, April 12, Cougars vs. Owls; Monday, April 16, Coyotes vs. Night Hawks; Tuesday, April 17, Cougars vs. Night Hawks.

Standing of Teams—	W	L	Pct.
Night Hawks	3	0	1000
Cougars	2	1	666 2-3
Coyotes	1	2	333 1-3
Owls	0	3	000

Birthday Party

A very pretty birthday party was planned and carried out Wednesday evening at the home of Miss Dorothy Trautman in honor of her eleventh birthday anniversary. Those invited were Pearl Perkins, Madeline Herman, Eleanor Broemmeling, Rose Broemmeling, Marian Allen, Alma Nelson, Wilma Ingle and Mary Schlueter. The little miss received many useful presents.

Games were played, after which a splendid supper was served by her mother, Mrs. Joe Trautman. The little guests departed wishing her many more happy birthdays.

Ground Squirrels Plentiful

Regardless of the "thousands of pounds" of squirrel poison placed over this section of the country last season there seems to be plenty of the Columbian ground squirrels left and within a short time the "great national sport" of the Genesee section will be on in earnest. A few local would-be squirrel exterminators went out last Sunday and blew the rust out of their old fowling pieces and some even claim to have killed a few of the wary little fellows—for they are wary at this season of the year.

City Election Next Month

Your attention is called to the fact that the local city election will be held on Tuesday, April 24, when it will be necessary to elect a mayor and councilmen. It is none to soon to begin to figure out whom you want for these responsible places—responsible is the word, for there will be many things to be looked after that will require men of ability and business experience.

Another Large Egg

Mrs. J. W. Lawson brought to the News office the other day an egg that was just a little larger than the one brought in last week by Mr. Niemann. It was 6 5-16x7 5-8 in size and weighed 3½ ounces. Mrs. Lawson also declared there were no geese in her hennery and that the egg was laid by a White Leghorn pullet.

STATE REPRESENTATIVE HAGAN VISITS GENESEE

C. A. Hagan of Moscow was a Genesee visitor Tuesday forenoon, his first visit here since having been exiled to Boise many weeks ago as a representative from this district.

Mr. Hagan, in speaking of what had been accomplished at Boise, said that he was fairly well satisfied with results. He stated that there were four political factions that had to be dealt with, otherwise the necessary work might have been accomplished within a week and the legislators returned to their homes to look after their private affairs.

When asked regarding road legislation he stated that while no law had been passed allowing commissioners to eliminate heavy traffic from the highways during the spring of the year, or at other seasons when the roads would be damaged, a law was passed whereby heavy trucks, stages and private passenger cars will in future pay according to weight, the tax going as high as $65. While this, with the new gasoline tax, will relieve the situation some, it still remains a fact that heavy traffic will be allowed to use the highways regardless of weather conditions—and the taxpayers of the districts through which these gravel roads pass, will have to carry the heavy load for rebuilding.

The new gasoline tax of two cents a gallon, which becomes effective April 1, it is estimated, will, with the motor vehicle tax, permit an average of $175 per mile for maintenance of roads already constructed, but should the road fund receive the $175 per mile for maintenance, will it be sufficient to rebuild the roads that are damaged almost beyond repair each spring? The News is decided skeptical on this point and will venture the assertion that it will not do it in this road district if the ronds are allowed to lapse into their present condition each spring. Of course the local commissioners were powerless to even drag the road after they had received notice from Boise to put away the tools and allow the road to go to the bow-wows—which it did in many places.

Among other things mentioned by Mr. Hagan was the fact that while the last session of the state legislature had placed a restriction upon school districts levying taxes, he was of the opinion that it would not affect the Genesee district, in fact, very few districts in the northern part of the state, the law being passed primarily to curtail such levies in the southern part of the state where many districts had abused their levying power.

Asked regarding the appropriation for the Smith-Hughes vocational work in public schools, Mr. Hagan stated that the appropriation had been passed and had been given to Governor Moore for his signature, and that Wednesday was the last day for receiving the governor's signature or veto, or failing either, the bill would become a law without his signature.

Mr. Hagan appeared in good form, having actually taken on a little more flesh while at the state capital. The people of the Genesee section are well satisfied with his part in the affairs of the state and he is always a welcome visitor in Genesee.

Pioneer Association of North Idaho

Mr. James J. Keane, vice president for Latah county of the Pioneer's Society of North Idaho, has issued a call for a meeting of all Latah county citizens who are eligible to become members of the association, said meeting to be held at the courthouse, in Moscow, Idaho, Saturday the 24th day of March, 1923.

This organization is doing a great work in preserving for future generations the splendid history of Idaho's pioneer days by bringing together those living men and women of the early days and the collection and preservation of matcrials historically important to our state.

Who may become members:

1. All white citizens of the United States of America who have resided continuously in Idaho for a period of 30 years or more.

2. All persons who have rendered a distinct service to the state because of historical materials collected or writings on subjects connected with the history of Idaho.

3. Any person may become an honorary member who has held territorial or state office in Idaho.

Latah county should have a large membership in this society and may do a great amount of good by becoming active in the organization.

Do this at once. Attend the meeting.

Bridge Work Progressing

Placing the concrete for the main channel pier of the bridge at Spalding, over the Clearwater river, will be completed soon, according to the contractor. The steel for the main channel span is expected by April and it is hoped to get it installed before flood water develops.

Baseball Work-out at Lewiston

The baseball men of the State College of Washington and the University of Idaho will go to Lewiston for a pre-season work-out April 2, 3 and 4, because of the earlier warm weather there.

THE DANGEROUS AGE

FICTIONIZED BY CONRAD GIBSON

From John M. Stahl's Photoplay of France Irene Reels' Screen Story Released by Louis B. Mayer through Associated First National Pictures.

INSTALLMENT NO. 1.

CHAPTER 1

A gentle breeze stirred the fragrance of orange blossoms and the soft murmur of wild doves came with the first morning rays of the southern California sunshine, revealing to the outsider the ample home of the Emersons as a Rendesvous of Peace. Had one of a romantic turn chanced to stand on the grassy slopes of the rolling hills to the south and gaze over the tops of the great eucalyptus trees surrounding the attractive white stone and red tile house as it lay quiet on this particular spring morning, he might, perchance, have sighed for the art of the painter or poet.

The spacious green grounds, with its flourishing rosebeds and a small fountain whose misty spray reflected the colors of the rainbow, were as yet undotted by any living being. The two-story house, shutters closed and curtains drawn, stood silent so far as its exterior was concerned.

But inside there was life.

In one of its airiest rooms on an upper floor, Mary Emerson, raised on one elbow, hesitated a moment lest she awaken her husband, then pressed her hands slowly beneath the pillow

"But, Mary, please! I just can't go it any more. I don't need it."

and extracted a watch. It was eleven o'clock. When John Emerson, her husband, breathed heavily, emitted a sort of boyishly lazy groan and turned heavily to the other side as if in appeal for 10 minutes more of slumber, Mary looked down upon a forehead across which there was a trace of a wrinkle and upon a temple which was now covered with a ruffled streak of graying hair. She slid quietly out of her quilts, walked to a window and lowered it to prevent the morning noises from penetrating and disturbing him, and to make certain that the chilly morning breeze would not reach him.

Tenderly she placed his wraps more securely about his shoulders. Mary was one of those combinations, of wife-mother. To her there was the same satisfaction in seeing to it that her husband was comfortable as there was in seeing that Ruth, their pretty daughter, was well cared for. John, at forty, had come to be coddled and mothered at the hands of his wife quite as thoroughly as a nurse would see to her doddering patient of eighty-five. Mary was thirty-eight, but she had long since abandoned the "frivolities" of youth, and had settled definitely upon her own conception of what should be the proper duties of a loving wife to a well-providing husband. They were happy, contented and more than thirty well supplied with money. Their lives were well ordered, almost mechanically so, which was the state of affairs in which John and Mary Emerson and daughter Ruth found themselves until this particular morning.

Proudly as most things happen which set hearts wringing and mark a detour from the steady course of happiness, there was a change in this husband as he arose and approached the open window of his sleeping room. Something about him attracted Mary and caused her to gaze steadily after him as he stood there. Inhaling long deep breaths of the fresh, cool air, the man, handsome, yet slightly aged, looked long and steadily out across the distant hills, and his expression changed visibly from moment to moment. She noticed this, but said nothing, standing unconcernedly at her dresser as he began to bend vigorously to one side, then to the other.

"John, dear,' at last she protested, "I'm so afraid you're going to catch your death of cold there. These damp mornings are treacherous. Do be careful."

As she spoke, she busied herself tying up little stray tufts of hair that fell over her forehead.

"Mary," he replied, aftr as minute's silence, "I wish you would put away your everlasting watching out for me. It's old fashioned. You're always afraid of this, afraid of that. Do stop it, please, dear."

This was the first actual evidence to prove to her that John was changed. Now he had spoken. She could no longer doubt. She noticed that he frowned. He meant what he had said very deeply.

And then John sneezed. He sneezed twice. Mary smiled. Her husband only clinched his fists and turned away.

Now, to the casual observer it would be quite clear that John Emerson, like his daughter Ruth, found in the first glowing breath of spring the essence of romance. Love came rushing back into his somewhat narrowed soul, and it was the craving for that which had flown and left him that caused him this morning to conduct himself as he had. John was forty! The age when men's minds turn back to valentines and moonlight strolls. The dangerous age! John had arrived. But trudging onward in the same narrow, listless path which she had traveled these eighten years of their twenty-three of married life, Mary had forgotten. Do wives forget? They do, it seems. But, why? The question must be admitted as pertinent and vital when one beholds a John Emerson as we behold him there in his sleeping room window.

To John, springtime meant youth and the return of romance; to Mary it suggested mothballs, sulphur and molasses and housecleaning.

"John, dear," she was saying, as father, mother and Ruth seated themselves in the bright breakfast room, and Annie, the large and awkward negro maid, trundled about placing their food before them, "John, dear, you must take your sulphur and molasses this morning. Here, Annie, a spoon and—

"But, Mary, please," he was protesting again, "I just can't go it any more. I don't need it." He screwed up his face in a childlike grimace, and Ruth giggled.

His wife, who had arisen to administer the dose, stood silently, her eyes shifting plaintively from him to the waiting maid. She was plainly affected by his refusal.

"Please, John, take it and get it over. And a little water afterward."

Without replying, he accepted the large spoonful of medicine for which he felt he had not the remotest need, swallowed it at one huge gulp, and clamored for water.

Then the three sat more easily in their places, and Ruth leaned toward her father, chatting merrily with him, while Mary carefully brushed from the tablecloth a slight spot, using a corner of her napkin and a dip of two of water which Annie brought at her command.

There were many things that morning to disturb, John Emerson's thoughts of mating birds, of budding trees, of shady fishing nooks.

For example:

"Oh, no, my dear John," from Mary. "You mustn't have grape fruit after taking your sulphur and molasses. It doesn't mix. Mother always warned me against it. Might as well eat lobster and drink milk. Torbido for your stomach."

"Let it be terrible," John had protested. "I'll take a chance, Mary. On a morning like this, what can harm you? Just look out there." And he waved a long arm toward the golden brilliance of the morning sunshine.

"But, you shan't, John," she insisted. "I simply can't let you be ill."

And so he handed over his grape fruit, and once more took up a spoon.

"Let me see those eggs, John," Mary began anew. And then:

"Annie! Oh, Annie, come here at once. Don't you know Mr. Emerson doesn't take hard boiled eggs?"

"No'm," replied the old servant. "I doan know nothin' 'bout what he takes in de way of eggs. I jes puts 'em in and cooks 'em, dat's all. I didn't know there was no diff'rence, anyway."

"There isn't, Annie," cut in John. "It's only a state of mind." This he had said jokingly, but there was a sincerity beneath the half laugh which he voiced.

"Take them back," Mary directed. "Boil them one and one-half minutes, Annie."

And again the husband accepted, if under mental protest, the will of the wife. And again he set free his roving mind, and over his cup of coffee he saw many things. Forty! And Mary had forgotten the days of youth, days of love, days of romance when the heart raced and the gods of happiness ruled the earth.

The first definite flare of deep resentment reflected itself, although unnoticed, in the slight curl of his lip and the nervous toss of his head. He smiled across the table into the dancing eyes of Ruth, who returned the favor with a girlish giggle and a warm clasp of a frail hand over his own.

The child (for although she was seventeen, to her father she was only a baby) told him of the glories that lay in the wood beyond the creek which skirted the bank meadow, and he sighed with her and told her a story of how he in his boyhood had loved to rove and romp when warm winds came and robins returned. Almost poetically, he returned to remote yet cherished incidents of the long ago. And there was something in his eyes which Ruth detected and which caused her, too, to feel that in some way all was not well in his heart.

Detached from things about her, Mary sat reading. She read from a book that professed to teach house wives how to best occupy their spare moments.

"That book, Mary," John inquired finally. "Do you really enjoy it? I can't go it—such stuff! Why do you?"

"It is helpful to me, John," she returned. "And it means saving of time and eventually money for all of us. I know we don't really have to be careful about those things. But I am so interested in them. That's why I read it."

The husband arose, lifted his hands over his head as if in surrender, and made his way toward the sunlit porch, his arm close about the waist of his daughter.

(To be continued.)

THE CITY MAN DOES SOME FIGURING

By THOMAS B. HILL,

Director Research, Washington State Chamber of Commerce.

The city man, who did not think he had much interest in the farmers' problem until after he had analyezd it, and then found himself convinced that it was more a problem of the city man than of the farmer, has been doing some more thinking and analyzing. The more he thinks and analyzes the more uneasy and disturbed he becomes. It is true that he thinks he sees the problem more clearly, but the more clearly he sees it the more difficult appears its early solution.

The first impulse of life is for the preservation of life. The desire for the preservation of life finds a two-fold expression—one material, the other spiritual. The latter is indicated by the longing which it struggles in every human breast for immortality. But it is with the material impulse that we are now concerned.

There are three prime essentials for the preservation of human life—air, water and food. Air is universally easily accessible. It is not only easily accessible, but it overwhelms, surrounds and presses in upon every human being. It can only be denied to one by special effort. Water, equally as important, is almost as universal as air, and almost as easily accessible. No one may be denied free access to water, and it is one of the first and most important obligations of organized society to provide an abundant supply of pure water to its units.

An adequate supply of sustaining food is as essential to the preservance of human life, as a supply of air or water. The earth and the waters thereof offers abundant resources for the supply of food for all the millions who may people the globe. But food is not ready made, but must be produced from the natural resources by the application of the labor and the intelligence of man.

Air and water being free and easily accessible man is required to give little thought providing methods for obtaining these essentials to the preservation of human life. But it is to obtain an adequate supply of food that man consciously or unconsciously, directs his energies from the cradle to the grave. If the sum of the energies directed toward this end were subtracted from the total human energy expended, what remained would be found of little consequence. Millions of men are engaged in producing food products; other millions in transporting and manufacturing them; other millions in redistributing them; other multitudes in manufacturing and distributing the tools, implements and clothing needed by the food producers, manufacturers, transporters and distributors; financial systems are developed to aid in food production, and the entire structure of commerce, industry and finance—the whole social fabric—is developed around and is dependent upon the production of food.

Those facts appear to the city man to be so obvious, as to need merely to be stated. Any arguments in their support would appear to be but an insult to intelligence.

The city man then draws this conclusion, which is equally obvious to him—that the entire social and economic structure should be based upon the production of food. In other words agriculture must become the base upon which the pyramid rests. Values of every kind must have their beginning in agriculture. The price of food must be based upon the cost of production, with the actual costs of labor and service added. The price of labor everywhere must be based upon the price of labor in food production. If agriculture is the basic industry, which is at once conceded by every man who thinks, then agriculture must fix the standards of every other industry which rests upon it.

The city man has not yet developed a formula for bringing about this readjustment, but he feels that such readjustment must be brought about. We know that the high costs of distribution and selling are throttling agriculture. How absurd that an incidental to food production should be the means of stopping that production. How absurd that the success of the basic industry should be dependent upon the incidentals of that industry.

These are some of the things your city man is thinking about, and in view of the fact that he is farthest away from actual food production, do you wonder that he is somewhat concerned about an adequate supply of food? Do you wonder that he feels that this is his problem, a good deal more than it is the farmers' problem.

TRACTOR MUST SHOW RESULTS TO BE PROFITABLE ON FARM

If the tractor is to be profitable on the farm, says the United States department of agriculture, it should make possible the accomplishment of at least one of the following things: A reduction of the number of work stock on the farm; a reduction of the amount of hired help required; the farming of an increased acreage; or an increase in the amount of crops produced.

With the addition of a tractor to the farm equipment there will necessarily be some changes in the methods of operating the farm, and perhaps a reorganization of the type of farming will be possible. Some surveys of a number of farms where tractors have been owned and operated have been made by the department and show what changes take place on the average farm under tractor conditions. Farmers' Bulletin 1296, Changes Effected by Tractors on Corn-Belt Farms, has just been issued. With the information set forth in this bulletin, the man who is trying to decide whether to buy a machine will be enabled to determine approximately what influence the tractor may have on his farm, and the man who already owns one will be able to compare the results which he has obtained with those obtained by others.

Alabama has the largest acreage in peanuts of any state, according to reports of the United States department of agriculture. In 1922 about 200,000 acres were devoted to this crop.

All the cow records in the world will be of little value if you don't take the time to analyze them.

IDAHO UNIVERSITY WILL FURNISH TREES

Encourage Planting of Windbreaks, Etc., by Planning to Distribute 100,000 at Cost.

In pursuance of its policy to encourage the planting of trees for shelter belts, woodlots, and ornament in Idaho, by supplying the stock in limited quantities to the people of the state at cost, the school of forestry of the University of Idaho is prepared to supply all demand for young trees this spring. About 100,000 trees are distributed each year, according to F. G. Miller dean of the forestry school, and since the plan was started considerably more than a million trees have been supplied.

To enable people to make proper selection Dean Miller has issued a bulletin which also includes the price list for 1923 and the number which will be available to any one purchaser. According to the bulletin blue spruce, Scotch pine, honey locust, Norway maple, black locust, and Norway spruce, are the more popular species.

The school invites questions from those in doubt as to the proper trees to select for their localities, for studies have been made of the various conditions in the state and the forestry department is in a position to recommend species which will prove most satisfactory. A copy of the bulletin, which also includes planting instructions, may be had by addressing the school of forestry, Moscow, Idaho.

IDAHO

Idaho grows 70 per cent of the Grimm alfalfa seed of the United State and 65 per cent of the seed peas.

Plans have been submitted for improvement and extension of the municipal water system of Lewiston, at a cost of $380,000.

More than $19,000,000 has been expended on roads in Idaho during the past four years and it is probable that $5,000,000 will be spent on road construction in the state during the present year.

The Weyerhaeuser syndicate plans to install a big mill at Lewiston, Idaho and construct a railroad from Orofino into the section of the Clearwater timber belt where the syndicate has large holdings of white pine.

J. E. Smith announces that he will put the Benewah Creamery at St. Maries in first class condition and will have it in operation by March 15. The creamery has been idle for two months since the owner, P. E. Newport, purchased a creamery at Spokane.

Placing the concrete for the main channel pier of the bridge at Spalding over the Clearwater river, will be completed soon, according to F. W. Straw, contractor. The steel for the main channel span is expected by April and installed before the floor water develops.

With the filing in Coeur d'Alene recently of incorporation articles for the Red Collar Steamboat Transportation company, the capital stock is set at $200,000 the name of Fred Herrick, well known mill man of St. Maries is introduced into the transportation limelight. The articles state that in addition to the passenger business, the concern intends to do a general towing in log booming business on the lake and St. Joe river.

To an operator in the Wallace exchange a man owes his life. Viola Hough, night operator, plugged in on a line running from Wallace to Avery in response to a ring. "I'm shot," a voice said faintly, and then all was quiet. By ringing all the other stations on the line the operator was able to determine that the voice was that of a forest ranger in a lookout station a few miles from Avery. Calling Avery she secured volunteers to investigate, who found the ranger weak from loss of blood, the victim of an "unloaded" revolver. He was rushed to the hospital at St. Maries, and there recovered.

A squirrel at the Augusta Country club near Manchester, Me., collected 31 golf balls, and securely hid them for winter use, evidently thinking them a new kind of nut. The nest was discovered by accident, and the balls recovered, most of them in good condition. Three showed teeth-marks, and, in return for her efforts, the squirrel was given a good nestful of nuts.

TIMELY HINTS

By EXTENSION SERVICE SPECIALISTS

Agricultural Engineering.

Go over your drained fields and note if they are draining out freely and evenly. Mark places where water stands.

Apiculture.

In sections which do not have an early source of polien, substitute rye or graham flour. Be sure the bees have water within easy reach.

Dairy.

Weigh and measure the calf feed accurately. Feed regularly. Change from whole milk to skim milk gradually, taking about ten days to make the change.

Farm Management.

Combine two teams, where larger equipment can be used and save the time of one man.

Horticulture.

Get the grafting wax ready if you have trees to work over or bridge graft. Four pounds resin, 2 pounds beeswax and 1 pound tallow makes a good wax.

Farm Crops.

Where spring wheat is to be used, secure seed at once. Reclean, grade, and treat for smut.

Alterations made in a cold-storage plant at Zillah, Wash., revealed a forgotten lot of three boxes of apples that had been placed there five years ago. They were in good condition, and readily found a market.

The slender woman should select a hat with trimming near the edge to give a feeling of width, but not overweighted.

"Problems of the Washington Potato Growers"

By O. W. ECKMAN,
Tacoma, Wash.

In a few weeks now, the farmer will be seen busily engaged, preparing the soil for the future crop.

To many, no doubt the question of whether or not, it would be advisable to plant potatoes this season, is uppermost in the minds of most growers, whom in the past have made it a practice to grow a certain acreage of potatoes.

This past season has been one of extreme worry and financial loss to the potato grower in practically every potato growing section throughout the entire United States and especially here in the northwest, where we are strongly handicapped, due to the extreme high freight rates to the eastern markets and the limited local demand.

Many potato growing sections throughout the entire country are limiting their potato acreage this season and as is usually the case where we have had a few years of over production and low prices, many growers becoming discouraged and drop out. This season one will find that this custom will run true to form.

Many suggestions are offered by growers and different authorities regarding the prevention of over production, but in agricultural lines, this is much easier said than done, as climatic conditions and elements enter into the matter and are the leading factors in the production and yields of all growing crops.

The farmer gambles with conditions and elements at all times and regardless of the many remarks and criticisms one hears as to his easy life and near to nature stuff, his problems are plentiful and as a rule a man's job to solve them all and get away with it.

The farmer puts in 365 days a year "trusting to luck" and they are not all 8-hour days.

As this article deals specifically with potatoes, I will center my attention on this one subject and endeavor to offer suggestions that may prove profitable to the grower, also ways and means of preventing over production and waste.

Organization.

Lack of organization and cooperation among the growers in the different potato growing counties in this state, has placed our potatoes in a rather embarrassing position and this lack of organization has permitted outside stock being shipped into our markets and our own goes begging.

One of the main reasons for this condition is due to the growing of too many different varieties. We must do a lot of pruning on the farm and I think the first and best place to start in on, is our potatoes, the fruit and berry bushes coming later in the season will not interfere with this procedure.

If we all get together and decide to eliminate the many undesirable non-standard varieties that we are now growing and trying to market, we have solved one of the problems that has had much to do with present conditions and will keep us in this condition unless we do decide on elimination.

This is absolutely essential to the successful growing and marketing of our crop at a profit.

With the many desirable standard varieties that we can now growing in this state, surely we could easily get together in each and every county and decide on varieties suitable and attractive to the trade.

I might mention that the big majority desire and favor the rather long white potato, of the Burbank, Prince of Multnomah or Netted Gem type, for their late or main crop potato, rather than a deep-eyed and irregular shaped tuber.

There are several varieties of this this type that are very suitable and of good cooking qualities and are also of the best high producing strains, and near to nature stuff, his problems are plentiful and as a rule a man's job to solve them all and get away with it.

It isn't a question of what we ourselves like and think is best, the public in this case is the buyer and judge and paying the bill, they must be satisfied, or we don't get the business.

Service and action is what counts, other lines of business found this out years ago and the sooner the farmer finds it out, the sooner can this game be made to pay. Actions speak louder then words, the public has showed us all where they stand, now let us get busy and do as Mason county has done this last month.

They organized a Potato Growers' association and have gone on record to grow one standard late potato, which in their case was the Pride of Multnomah. They will advertise this potato and absolutely guarantee it to the trade. The grading and pack as well as the quality must meet with the approval of the buyer and consumer, or theirs is refunded. No ifs and ands about it with them and I certainly appreciate the stand those growers down there have taken.

Some might say that after refunding money on comebacks a few times, they will tire of this method. I'm here to tell you that there is no chance for any comebacks in a game when played this way.

Their grades and pack will be perfect and all number twos will be sold for what they are and nothing else, the culls will be left on the farm and fed to the stock or disposed of in such a way or manner, that they will not put out to the trade.

Many growers will say that they can grow and produce more potatoes of certain varieties, such as Million Dollars, Mortgage Lifters, Farmer's Friend, etc. per acre, then they can of some of the standard varieties mentioned.

They feel that they are justified in so doing, owing to the increased yields, but to me this appears rather a poor argument, as the trade prefers a medium size potato in preference to a large irregular, deep-eyed and hollow centered potato. The best way to reason this out, is to Stop, Look and Listen.

The large yields won't bring you far if the trade refuses to buy this class of stock and furthermore if pains are taken in seed selection and proper cultural methods practiced, the standard varieties I have mentioned are all heavy producing varieties. Surely you will find some of them suitable to your soil and climatic conditions.

Soils.

This year we should decide on the best possible sod land we have for our potatoes, land that has been pastured if possible and well drained.

In place of planting a large acreage of questionable seed on land that you find no other use for and take chances on its getting the proper care and attention, plant only the acreage that you are sure you can properly care for and give the best care and tilling.

Bear in mind, that no crop needs as deep tilling or as careful preparation then does the potato. Poorly drained land has a tendency to be sour and the potatoes grown in this class of soil, do not present a favorable impression on the buyer.

Limit your potato acreage to the amount of time you think you can put into it, during the growing and harvest season. Your returns on a small acreage properly cared for, will bring larger returns then a large acreage grown under the hit and skip method.

The expense of growing a poor crop is practically the same as a good one, calling for the same expense in every department outside of the expense of sacking. Your well kept acreage will naturally require more sacks, twine and labor in picking, but this is well worth while.

Seed.

The best seed you can get is none too good and is the cheapest and most economical in the long run, so let's get away from the practice of selling the best, eating the best and what we can not sell and eat, plant.

Like produces like and as you sow so shall you reap, and this certainly holds good in potatoes, as well as in every thing else.

The time to get your seed for future planting, is at digging time, as you can then select those hills showing strength and vitality, with the maximum amount of well shaped tubers under each and every plant.

Do not use seed showing diseased conditions, thinking that treatment will remedy this evil. The very best seed treatment that I know of, is clean, healthy potatoes. The Corrosive Sublimate is the only material we know of at present that is effective in checking some of the skin diseases, it is not a cure all by any means, but will, if properly used according to instructions, prove very beneficial and profitable to the grower in assisting him in building up his seed and crop.

The Formaldhyde treatment is much easier and cheaper, but in my experience and experiments have found it very unsatisfactory for this purpose.

Formaldhyde used in the so-called hot form has been subject to considerable discussion among some growers and authorities, but I find the Corrosive Sublimate very satisfactory for the purpose intended.

Information.

The state department of agriculture, state extension service at Pullman, experimental station at Puyallup, your county agent and county horticulturist are willing to help you and are at your service at all times regarding information and advice along the lines mentioned and this information is free, merely for the asking.

Write or call on them, unless you make your wants known, they have no means of knowing your problems.

I have a paper on "Selection and Treatment of Seed Potatoes," also one on potato soils and their preparation that are yours for the asking and will be mailed you free on request.

We can grow as good potatoes here in this state as any place in the United States. It's up to us to get busy. Let's go.

Business Woman Rules Dress Standard Changes

That the American business women is responsible for many present fashions, an unconsciousness means of forwarding the dress standardization movmnt, was dclard by Miss Edna Avery of the State College of Washington home economics department in a radio talk over K. F. A. E. on "Dress Standardization."

She does not think standardization will come to a general adoption of bloomers or men's clothing, but that already it has gone a long way in the matter of making women's clothing suitable, serviceable, appropriate.

"At those seasons when one is engrossed with the day's routine, the best dressed woman and the cultivated and refined lady will adopt for her self a standardized dress conforming to the following principles," she said: "it will be appropriate to the work she has to do, hygienic in fit and texture, durable and hence economical, inconspicuous and hence no extreme in cut or transparency of material, simple in fashion and hence beautiful in line.

"Year by year the movement to make woman less a slave to her dress has grown. A dress designer returning from her annual trip to Europe remarked that American business women are responsible for many of the fashions of the day. For instance, the disappearance of the separate collar and cuff sets and fichu and jabot, was caused by the recognition by the business woman of the fact that they must be immaculate, and she has no time after busy hours of work to go home and wash and iron and sew in any dress adornment that soils with one day's wear.

"Women in business have become sane, sensible, practical. They do not look less well, less femine, but they select their clothes to meet the occasion, stand strain, and choose those requiring least care and attention. She has to go out in rain or shine six days a week and meet the general public of strangers in shop or office. The recognized standard for her is thus the tailor-made suit or one-piece dress with a mannish coat made of materials comfortable as to warmth and dark enough to escape soil. Wearing out old finery at work is deplorably bad taste. Wearing short sleeves, thin transparent hose on the street or in view of strangers is not a sign of refinement or common sense.

"The duites of the housekeeper, active within a warm home, require a simple garment of cool, washable material easily laundered. Hence there is now in the shops the standardized bungalow apron and its modifications. While conforming to certain lines cut it has sufficient variety to appeal to the taste of many different women.

"Special garments are made for recreation—sports clothes that in texture, comfort and appropriateness are suitable for motoring, golfing, and other exercise."

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER X.

"Speed" was about to follow when he came to the beginning of a trestle over a small stream. Before he could make a move, he was plunged headlong downward.

Buried Alive.

As "Speed" Stanbury's motorcycle plunged into the water, the young man succeeded in extricating himself without being injured. The stream of water was a narrow one and with very little difficulty he climbed to the other side and up the embankment in time to wave reassuringly to Lucy Durant, who was watching anxiously from the rear of the departing train. The girl knew that "Speed" would follow her as swiftly as possible.

The young man saw a freight train approaching, but its rate of speed was a trifle too fast for him to attempt to jump aboard. He saw that there was a railroad shed standing close to the track where the freight would pass. Without hesitating he scrambled to the roof of the shed and waited. As the train thundered by, "Speed" took a running leap and landed safely on the top of one of the cars.

The young man sat down to catch his breath. He seemed dissatisfied over something—the train was not making enough speed to suit him. He looked back and saw a passenger train coming at a great rate of speed on a parallel track. And then "Speed" decided to take a desperate chance. As the passenger express came up swiftly behind the freight train and started to pass it, "Speed" ran along the tops of the freight cars to get a good running start. Then, as the two trains were running neck and neck, he made another flying jump, landing on the express and almost falling off the other side, so great was the speed of the cars moving under him.

"And now for Oreville," he said to himself.

Meanwhile, "Speed's" quarry, Jim Sprague, arrived at the mining town closely shadowed by Lucy Durant. His first move was to look up Edwin Stanbury, "Speed's" unscrupulous cousin. Edwin had arranged to give Sprague employment in the mines and thusly keep him out of reach of "Speed."

"Before night we'll have Jim Sprague safely hidden and "Speed" Stanbury can whistle for his alibi," Edwin told Vera Harper.

"Which means," the lady smiled, "'Speed' will be convicted of the crime, disgrace his name, lose his inheritance, and the Stanbury fortune will be yours—that is, ours, dear Edwin." Shortly after this, Sprague put in his appearance. Edwin unfolded his plans and Jim Sprague heartily agreed to anything his crafty partner suggested.

In the meantime, "Speed" was nearing the town of Oreville. His place of destination was so small that he did not count on the express train stopping there. The question was; how would he get off? Young Stanbury looked anxiously ahead to see if there was a flagman, or any kind of a warning station. He saw nothing—only a small shed. But a short distance up the track he saw sandbanks on each side of where the train would pass. It was enough for him. When the train whizzed past these banks, "Speed" leaped from the train, landed on the soft earth and rolled head over heels down to solid earth. A number of men working on the tracks saw his act and rushed up anxiously.

"No bones broken," he smiled, picking himself up from the ground, "I do that daily just to keep supple. Where can I get a car to take me to the Stanbury mines?"

He was guided to a small garage, and 20 minutes later arrived in the vicinity of the mines. "Speed" jumped from the car, paid the man, and reconnoitred. He was about to proceed cautiously when he fancied he heard his name called out. Looking around, he beheld Lucy Durant signaling to him from her hiding place. With a glad cry he ran towards the girl.

"Oh, I'm so glad to see you, dear," she whispered. "You can't imagine how worried I've been, 'Speed.' Were you hurt in your fall?"

"Not at all, sweetheart," he answered, "and I've had a free ride all the way up here on somebody's express train."

"I was just one my way to the station to try and locate you," Lucy declared. "I've found Edwin and Sprague. We'd better go to the mines on foot so they won't be able to see us.

Half an hour later they arrived at the mines. The young people had proceeded with the greatest of caution. Both of them stopped in their tracks suddenly. They had almost walked into the arms of Edwin and Sprague.

"Shh!" "Speed" cautioned the girl. "Let's stay here and see if we can learn something of their plans."

Edwin was introducing Jim Sprague to the mine foreman. "Mr. Smith here," he said, "will act as general supervisor for me. Please conduct him over the works and introduce him to the proper people."

"Crafty old Edwin," "Speed" whispered to the girl, "introducing Sprague as Smith. Now," he added, "there isn't any chance of getting Sprague with Edwin's men about. The only way is to follow him, get him alone and truss him up for the police."

"Look," returned the girl, "they are separating."

"I'll tell you," "Speed" whispered, "you follow Edwin and keep him in sight. I'm going to follow Sprague if I have to go into the mines. I'll meet you here in a couple of hours. Good luck!" With that they parted—Lucy on the trail of Edwin Stanbury and "Speed" following Sprague.

Edwin walked slowly away from the mines with Lucy keeping a safe distance behind. She had been following him for about half a mile when he stopped suddenly to light a cigar and saw her dodge behind a piece of machinery.

"Ah, ha!" he thought, "our friends are on the scene already." A new plan entered his head and he started in a different direction—out through the woods where he had a hunting lodge.

The girl was wholly unaware of the fact that Edwin had seen her, and continued following him. From a distance she saw him enter the hunting lodge, then, after waiting about five minutes, she stole up cautiously and tried the front door. It was unlocked—she entered.

But before the girl had gained entrance, Edwin had locked all possible exits. Then, as soon as he was sure that she had entered, he ran around to the back corner pay for the front and locked the door from the outside. Lucy was trapped!

Meanwhile, "Speed" Stanbury had followed Sprague and the foreman down one of the shafts. Sprague was learning all the details from his expert instructor.

On the level, "Speed" heard the foreman telling Sprague, "leads into the bottom of the big excavation outside. The walls are unsafe here, so its been condemned. We're drilling now to set a blast off and blow it up."

This was not pleasant news to young Stanbury, but he decided if it was safe enough for Sprague and the foreman. It was safe enough for him. He continued to follow the two men, listening all the while, and only waiting for a chance to get Sprague by himself.

Finally the foreman finished his explanations and told Sprague that he had work to do above.

"I'd like to nose around a bit and familiarize myself with these pits," Sprague stated. "Can I get out that way?"

"Sure," came the reply, "there's an exit there, only it's a long way. If you're going that way don't lose any time. We're setting this blast off in 10 or 15 minutes. That's loads of time, however," he added, glancing at his watch. With that, he left.

"Speed" waited for a few moments and then walked slowly after Jim Sprague. He saw what he was alone with the man—the man he had been trying to "get" for the last few months. He hastily overtook his quarry.

"Good morning, Merry Sunshine!" was "Speed's" greeting.

(To be continued.)

POULTRY

Here is a good stunt for some of our prairie poultrymen to try out: Concur Brothers of the Big Horn basin have started a new industry in Wyoming. They are purchasing grasshoppers and feeding them to their large flock of hens on their poultry ranch, which they operate in connection with their other ranch interests. In addition to the regular price per pound for hoppers purchased they are offering a bonus of $5 for the finest hundred pounds brought in. The grasshopper pest was very troublesome last year and literally thousands of pounds of the insects were poisoned. Grasshoppers are fine meat in the diet of fowls and the poison which kills them is not injurious to the poultry.

A person needs one-sixty-fifth of a grain of iodine daily as a preventative for goiter.

WESTERN INTERESTS IN WASHINGTON

Ladd Declares for Forest Nationalization.

Senator Ladd of North Dakota is the mildest-mannered bit of political dynamite in congress. La Follette is political rage incarnate; Brookhart is like a bull, but the North Dakota senator is suave, soft-voiced and patient—just a dear, good professor who happened to be taken away from his chemical laboratory and hoisted into congress by the non-partizans, who, as he admits, are about the best partisans we have with us at the present time. Every once in a while the blond North Dakotan springs something that is utterly opposed to all the political economy that he acquired in the classic shades of the University of Maine. He is worrying his own farm bloc with a scheme for congress to stabilize the prices of wheat, corn and cotton, and now he has caused the Pacific coast lumbermen to sit up and take notice by his declaration that the forests must be nationalized. Nothing could be more unfair than to deprive the west coast men of their chance at the forests just when they are about the only ones left. Fifty years hence, when the forestry problem is exclusively one of replanting or regrowing, would be about the right time for nationalization of timber lands, they opine. Still, they needn't worry too much; the senator admits that first we must have better government. That preliminary job may be done when today's redwood saplings are mature.

A Little Boost for Western Lumber.

The Pacific coast invasion of the Atlantic coast via the Panama canal got a big boost the other day when the Panama canal commission made its peace with the west coast lumbermen and agreed not to count lumber deck-loads as part of the tonnage that must pay dues for the use of the canal. Other commodity deckloads are counted. This distinction is attributed to one of those unsung deals by which the wheels of government are kept turning. The commission has been trying to get a bill through congress to end the scheme of tonnage charges, but the lumbermen could always pull more legislative strings than the commission. Now they have made a pact, and the commission will take it out of the less adroit shipping interests. They say the same will be done by coast lumbermen are responsible for the excision of the paragraph of the shipping bill which gave the shipping board power to regulate maritime freight rates. The argument was that it would never do to leave foreign vessels free and United States vessels regulated. Something in it, too. Remember how the Interstate Commerce commission regulated the late J. J. Hill out of the Pacific shipping trade, through its control of railway rates?

The same Panama canal works both ways. Owing to lack of adequate service between Canadian Pacific ports and Vancouver, B. C., eastern Canadian manufacturers find themselves in a fair way to be ousted from the British Columbia markets because low freight rates via the canal are enabling eastern American producers to overcome the Canadian tariff.

How Long is an Inch?

Mr. Hoover's industrial simplification plan has got the whole lumber world into a lively row. One of the stumbling blocks is the question: how thick is an inch board? The Pacific coast lumbermen, with an eye to long distance freight rates (computed by the pound and not by the board foot), hold that an inch-board is one that is thick enough, say about three-fourths of an inch. The North Carolina Pine association looks heavenward and protests—not forgetting that its markets are nearby—that an inch is an inch, historically, mathematically and morally. An ill-mannered New York lumber dealer said that the devotion of the west coast lumbermen to the scant board was due to a sagacious desire to make the circumference pay for the sawdust. Other New York lumbermen are fervently declaiming for a shaded inch in the lumber trade.

Seriously, though, thoughtful lumbermen believe that the industry can save about $250,000,000 a year by standardizing in manufacture of lumber. The Pacific coast share would be about $80,000,000, and that the same amount of stumpage can be made to go 10 per cent further, with corresponding forest economy. If other industries will follow the example of the lumbermen, Mr. Hoover calculates that enough will be saved annually to offset the three billions additional that taxation annually abstracts from American industry since the war.

Borah's Stickless Tanglefoot.

Borah has done it again. Just when Hiram Johnson had got us all disentangled from European entanglements the man from Idaho, who has won considerable fame himself as an anti-entangler, comes out for entanglement to the nock in the European economic mess. When asked if a careless public might not dislike Borah a trifle inconsistent, he lucidly explained the situation by saying that he had never been opposed to economic international relations, tangle or no tangle, and that he was able easily to draw a well-defined line between economic and political relations. As for Hiram, he budges not and changes not, but affirms that it were better to be involved in the unspeakable iniquity of the League of Nations as a regular thing instead of free-lancing into and out of every European question that bobs up.—March Sunset.

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend for the things we need and save money reasonably, we display the right sort of faith. We put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

Y. P. S. C. E. CONVENTION TO BE HELD AT WALLA WALLA

That the Christian Endeavor state convention which is to be held in Walla Walla, this coming June will be, including northern Idaho, one of the biggest and best meetings of its kind ever held in the Northwest is no uncertain fact. Already 110 consecrated members of the Christian Endeavor organization are working out thorough plans for its success. The convention will be held in Walla Walla immediately following the commencement exercises of Whitman College, thereby making it possible for many more young people to attend. The meetings will begin Wednesday, June 20, and continue until Sunday evening, June 24, when a hugh mass meeting will be held which will signify the climax in the devotional and inspirational elements of the whole convention.

The house committee of the convention announces that since there is no available building in Walla Walla large enough to accomodate the crowds which will attend, services throughout the convention will be held in the Central Christian Church, First Presbyterian church and the state Armory building, with the possibility of another church being added.

The entertainment committee is planning upon 1000 or 1200 guests from outside points who will be entertained in the homes of Walla Walla people for lodging and breakfast for the five days.

Registration cards for 2000 delegates have been ordered. The committee urges advance registration for funds will be needed before the delegations convene to carry on the work. To those who register by mail, a receipt will be sent to be presented by the applicant upon his arrival in Walla Walla in June. The registration fee has been set at $1, for members of the senior and intermediate organizations, and $.50 for junior Endeavorers.

It is probable that announcements of the convention will be made by radio sometime during the months of May and June, besides letters and posters which will be distributed throughout the state to aid in the publicity work.

Young people of the state are most cordially urged to attend the meetings during the entire five days.

Parent-Teachers' Meeting

The parent-teachers' meeting held in the assembly room of the public school building on Monday evening was well attended and much interest was manifested in the proceedings.

The program as published was carried out with the exception of a paper to be read by Victor Casebolt.

An interesting talk on "Cooperation was made by Rev. James N. Pendleton which was well received.

A song by the graduating class of 20 years ago was one of the main features of the meeting so far as real entertainment was concerned. It was the only number on the program that called for an encore. The "quartet" consisted of Mrs. W. R. Hickman, Mrs. B. B. Caldwell, Mrs. Chas. Ingle, Mrs. Fred Shirrod, Mrs. Edith Smylie, Mr. and Mrs. John Platt, Mr. and Mrs. Ira Hanson, W. M. Herman, Lee Rogers, Mrs. Geo. Boliou and Margaret Botjer.

The next meeting will be held on April 16.

The Rinkey Dinks

The Rinkey Dinks met at the home of Mrs. Chas. Ingle last Friday afternoon and spent the time with fancy work and social converse—not gossip, according to reports. However, the ladies claim to have had a good time as well as plenty of good things to eat, served by the hostess. It was said that the only thing that marred the pleasure of the afternoon was the severe "mud" storm that came over from the Big Bend country, which caused many of the disciples of "Perry Winkle" to become quite badly frightened.

Those present were Mrs. John Lawson, Mrs. H. Rees, Mrs. Henry Hanson, Mrs. A. Kern, Mrs. Frank Qualey, Mrs. Dick Green and son, Mrs. Joe Trautman and daughters, Mrs. Chas. Herman and children, Mrs. Ira Hanson, Mrs. Al. Mayer and son, Mrs. John G. Meyer, Mrs. Ingel Halverson and children.

The next meeting of the ladies will be with Mrs. John G. Meyer on the first Friday after Easter.

Beating the Gas Tax

It was very evident that a great many people of this part of the great and glorious old U. S. A. were out Sunday in their cars taking a ride before the two-cent gas tax goes into effect, which is April 1, for many were going in every direction, just the same as if the roads were really good. It is sincerely to be hoped that after the gas tax has been in operation for a sufficient length of time that the roads will be kept "good" all winter.

The gas tax is the only way to "get" everybody who runs a car—and is just alike to rich and poor. Placing the tax on gasoline is one of the very sensible things our recent legislature did.

G. E. Taber left Wednesday morning for Spokane where he will be employed for the present in the farm loan department of the Western Union Life Insurance company.

Mr. and Mrs. G. E. Taber returned Tuesday evening from a few days' stay in Spokane. They report the roads as in splendid condition after one gets onto the Lewiston-Spokane road.

BRIGHT OUTLOOK FOR LIVESTOCK

C. M. HUBBARD,
Extension Specialist in Livestock, State College.

Speaking generally livestock conditions and prices show a very considerable improvement over two years ago and a reasonable improvement over a year ago. Growers of market stock and purebred breeders alike are optimistic, this being especially the case with the sheep and hog men. Beef cattle, on the other hand, have been slower in returning to the normal because of a longer production cycle, and other conditions, but an upward trend may well be looked forward to during the coming year in beef prices and, of course, this will naturally strengthen purebred beef cattle prices. Interest in good heavy draft horses is also on the increase. On the whole, then, market stock producers and breeders alike have become instilled with a spirit of confidence and are looking ahead toward several years of prosperity.

Need More Brood Sows.

The state as a whole had only 6-10 of a brood sow per farm, according to the 1920 census, and this lack of brood sows together with similar conditions prevailing in Idaho and Oregon, necessitated the shipping into the northwest of over $6,800,000 worth of hogs last year. In 1921 around $5,900,000 worth of hogs was brought into this section. One brood sow to the farm on the average, last year, could have cared for nearly a third of this deficit and put around $2,000,000 into the pockets of our farmers.

A recent talk with a large land owner of eastern Washington brought out the point that he was encouraging his renters to carry several brood sows. "Then they will be able to pay their rent," he said. Again he is encouraging them to use purebred stock, both brood sows and boars, because they are "more efficient producers of market meat than are ordinary grade and scrub farm hogs." United States department of agriculture figures also show good purebreds to be around 40 per cent more efficient.

Will Increase Profits.

There is no doubt that a reasonable increase of good brood sows will increase the farm profits. Splendid opening for the purchase, at farmers' prices, of such high class sows were furnished through the annual consignment sales of registered bred sows and gilts in various counties of eastern Washington. Farmers purchasing sows in these sales will be well pleased with their ability to turn feed and farm by-products into pork.

To the farmer or smaller breeder, who is a lover of cattle, now is the opportune time to start a herd or add to the herd, whether grade or purebred. All indications point toward a rise in cattle values during this year. One should not wait until prices actually rise before investing in more cattle or making the contemplated initial purchase. Of course this applies to purebred bulls as well. Good purebred bulls, bred to ordinary low grade or scrub, farm cows will increase the value of the resulting steers from $18 to $30 per head when ready for the market.

Profits in Sheep.

"Swift and Company paid 3 cents more per pound for lamb in 1922 than they did in 1921," said their head lamb buyer, Mr. Mathewson, at the National Wool Growers' convention at Spokane. "Wool and lamb prospects look brighter than they have in years," according to several nationally prominent sheep men at this convention.

Two years ago good grade yearling Rambouillet range ewes, in several instances sold for less than $4.00 per head. However, due to the wool tariff, higher priced wool and lambs, an immediate rise in prices occurred. Last fall ewes of the same quality were round $11.00. Naturally the breeder of purebred sheep has also enjoyed higher prices for his surplus rams and ewes.

Compare the 48,000,000 sheep in the country at this time when we have a population of around 115,000,000 with 70,000,000 sheep at the time we had around 75,000,000 people and we understand why lambs are selling at a profitable figure, why wool is expected to be higher by considerable than was the case last year and why the farm flock is again one of the most profitable side lines of progressive farmers.

Short on Draft Horses.

The shortage of good draft horses is becoming acute over the entire country. However, there is a surplus of the lightboned pony built type not suitable for heavy farm or city work. Only a very small number of mares have raised colts during the last five years and, as a result, the work stock of the country is from eight years of age up with little or no young stock coming on for replacement purposes.

The better class of farm mares should be bred this spring where good, sound, heavy draft stallions are available. The tractor will never replace the farm work horse, because, among other reasons, they can not have colts, can not utilize farm grown roughage and are not self reparing (as are the horses), neither do they assist in stabilizing hay and grain prices or help maintain soil fertility. Good drafters have sold and will continue to sell at reasonable figures.

From every angle 1923 will be a more profitable livestock year than was 1922.

Poultry.

Keep the chicks in a dry, warm, well ventilated room, but do not keep them hot all the time.

Your Car in the Spring Months

A Series by Prof. A. R. Nottingham, State College of Washington.

The entire wiring should be replaced on the average car during its life, and on some popular cars the primary wires should be replaced once a year, varying either way according to the amount the car is driven. Remember that every place the wire vibrates against a surface, especially a metallic surface, abrasion will result and the resulting ground means a short circuit that may do anything from blowing a fuse to setting fire to the car. Ignition wires and often the loom wires do not pass through fuses, so that they will be always available. This means that one can take no chances on these circuits, nor with the main cables. Serious accidents also are constantly occurring due to headlights failing. Overhaul all circuits and carry extra fuses and bulbs in the carrier or packed properly in a metallic box. The more presence of these will go a long way at times with a traffic officer when one is held up when his tail light has burned out while driving.

Go over all connections and make sure all are clean and tight. If one must make a splice temporarily without solder, clean the wires, lap them past each other and wrap each end on the other wire in the opposite direction. Twist tight and wrap with tinfoil, then with tape. Solder this as soon as possible.

See that the breaker points are clean and separate the amount given in your instruction book. If they are not clean do not file them. Draw fine sand-paper between them when closed. Examine the distributor and try the shaft for side shake. Turn the engine so that moving the spark lever will cause the breaker to operate. Remove the spark plug wire opposite the distributor arm. Put on the head and lay the wire so the terminal is near the engine. Move the spark lever, with the ignition on, and a good fat spark, at least one-fourth inch long should result. It may be easier to disconnect the control rod to do this. If there is no safety gap on the coil do not test with the distributor head removed—it may ruin your condenser.

A dead condenser will kill a car as completely as though the gasoline were shut off. One that has been damaged will give trouble on the road but may test good in the shop. If the trouble dies when you slow down for a corner or railroad track, even though the throttle is opened and the clutch released, have the condenser tested. For persistent trouble try another or a new coil. When buying a new coil for battery ignition systems buy one with a removable condenser and a spark gap or put one on. They cost no more and are very desirable.

Clean the spark plugs, set the gaps to the gage, and test for leaks by applying oil and watching when the engine is running.

Clean the strainers in the gasoline line and drain the vacuum tank. Drain cocks at every point where water or sediment can collect are very convenient. A tin can with the top cut off is handy to clean these and to test the flow through the line. In testing at the carburetor drain until you are sure the carburetor is empty and a good flow continues. If you are expert the vacuum tank can be cleaned and examined advantageously; if not you can fill it with your tin can to get home if it does fail. It is well to clean out the gasoline tank and blow out the line with air.

Examine the tank internally if convenient with a good electric light or sunlight thrown in by a mirror. Soap is the proper thing to use in making up leaky joints or liquid gasket cement, applied after the joint has been made up. If put in a coupling it is very hard to break it, and there is no excuse for needing to do so.

Do not bring a match or a lamp with an open flame near a tank that has been used for gasoline.

Protect the gasoline line as you did the wiring from vibrating against metal. Split electric loom wired in place also is excellent to use where the tubing passes the battery box or past the sills. If it crosses over above the exhaust pipe put in a kink upward at this point so that leaking gasoline will run along the tube to the lowest point and drip off and not fall on the pipe. If this is impractical insure your car against fire or put a metal trough or guard under the tube to shield the exhaust pipe.

HOUSING THE HOME FLOCK.

The first consideration in building a new poultry house is its location. If it is a family flock, and the housewife is supposed to take care of it, it should be close to the residence. It should face south unless where the high prevailing winds are from the southwest, when it should face east. It should be so located that the chickens will have access to open yards or free range. If young stock is to be raised in part of the house, there should be special yards for their use. It is not wise to raise large flocks of chickens two years in succession on the same ground.

The size and shape of the house will depend on the size of the flock that it is to house. A flock of less than 30 will need 5 square feet per bird. A flock of 100 or less will need 4 square feet. A flock of 500 or over can get along with 3 square feet per bird. A house 20x20 would be just right for 100 hens.

An ideal arrangement for a farm flock of 100 pullets and 20 breeders, would be a laying house 20x20, with a comparatively small yard, for the pullet flock, and a separate house 16x20 for the breeders and for the growing young stock. Make a pen 6x16 for the breeders, and use the remainder 14x16, for growing young stock. This part can be used for storage when not growing chicks.

It should be remembered that it is not necessary to make the entire flock in order to keep it up to its capacity. One good Leghorn cockerel and 20 selected hens, or one good Barred Rock cockerel and 15 selected hens will keep the flock up to its maximum. You can afford one good cockerel, and he is worth a houseful of poor ones. Besides, it requires less room for your breeders.

The kind of house you build will depend on the location and the extremes of heat and cold. It is a mistake in any climate to build a house too close or with too much glass in it. Glass conducts both heat and cold, and it does not admit fresh air. An open front house, that is a house with one square foot of opening to every 20 square feet of floor space, is always desirable. It can be used with a roller or lift curtain, in almost any climate. Thus, a house 20x20 should have an opening at least 2 feet wide by 10 feet long.

If it is in a cool climate, the rest of the building should be built warm and close. It may even be necessary to double wall the back and one or both ends. In climates having excessive heat and cold a ceiling of boards or straw is desirable. There should always be a ventilator, a place for the foul air to escape. If an open front is used to admit fresh air, all that is necessary is an opening of some sort at the high point of the roof. Use just enough windows to give good light on the floor. Some people are using glass cloth, which admits light, but does not readily conduct heat and cold. This "cloth" costs about 35 cents a yard in small lots.

In houses not over 20 feet wide the gable roof is ideal. It does not catch so much wind as the shed roof, and a long eave on one side protects the open front. The door should be at least 3 feet wide. In very long houses it is wise to have a door in each end.

The floor may be dirt, wood or concrete. The dirt floor is hard to keep clean, and the board floor sometimes makes a breeding place for rats. Almost any building can be made rat proof by sinking a foundation 18 inches below the surface of the ground and letting the concrete flange out at the bottom of the forms. This is done by keeping the outside of the form an inch or two above the bottom of the ditch. If a concrete floor is used it should have a 2-inch base of coarse concrete and a 1-2 inch coat of a 1 to 1 1-2 mixture smoothly troweled.

In any house, or any construction, the air must be kept pure, the temperature never excessibly hot or cold, and everything in and out of the building clean and sanitary. The litter should be from 4 to 6 inches deep and should be kept dry and fluffy. If it is dry and clean, but getting too short, add fresh straw.

(The next article will be planting potatoes.)

MENTION THIS PAPER WHEN WRITING

Where Is the Next Generation of Farmers to Come From?

There are other things besides profit needed to keep the young people on the farm, and it is a serious question, according to Mr. Herbert Cuthbert.

"On a recent trip east," says Mr. Cuthbert, "I heard one speaker make the statement that 90 years ago the population of the United States in the largest cities was 4 1-2 per cent of the whole, and 95 1-2 per cent in the smaller cities and rural districts. Twenty years ago the largest cities had grown to 33 per cent, while today they have 50 per cent.

"It is estimated that if this rate of exodus from the country districts into the larger cities is maintained, in 20 years 80 per cent of the entire population will be in the larger cities, leaving the rural towns and districts almost without population.

Small Number Stay on Farm.

"He also stated that in a public school in one of the smaller cities all the boys and girls who contemplated remaining there always were asked to put up their hands. Fifteen per cent of them did. He asked those who contemplated at some future time leaving their home town and district to live in the larger cities to raise their hands, and 85 per cent of them raised their hands.

"There is the nation's most serious problem. Who are to be the producers if this state of things continues? Who will feed the population in the larger cities? Therefore, it is self-evident that the country population should keep pace with that of our cities."

There are a few things which may be enumerated that will help a farmer to remain on his land and to keep his children at home, says Mr. Cuthbert. First is to make farming more profitable. This subject, I believe, will be taken hold of by various organizations who will attempt to solve the question of reduction in cost of production, greater efficiency in farm labor, stoppage of leaks between the producer and the customer, improved systems of marketing and better accounting. When you have solved the question of how to make farming more profitable you have gone a long way towards keeping the farmer on the land and giving him an incentive to keep his children at home.

Farming No Exception.

It is questionable, however, as to whether there are more failures in the business of agriculture than there are in any other class of business. It is well known that a very large percentage of people who engage in any business fail, but even if the farmer does become more prosperous it does not follow that he will be able to keep his children at home, because of their viewpoint that they can find a more congenial life and more amusements in the cities than on the farm and in the rural communities.

In these days of electricity when every farmer may have electric light in his home and buildings, when the phonograph provides the orchestra for the dance of the family and neighbors, when the radio can be installed to bring the news of the world and the music from the best vocalists and instrumentalists to the fireside, many of the drawbacks of country life have been removed.

Children Need Recreation.

If, added to this, the farmer will provide his children with ponies for their own individual use, tennis courts for outdoor sociable recreation and will give them some remuneration for their work, with fairly reasonable hours, he will have removed one other cause of a desire on the part of the young people to leave home. Many children have left the farm because they were compelled to work from daylight to dark, practically without remuneration.

There is no country on earth in which country life ought to be so attractive as in the Pacific northwest, but the farmer has been so busy in studying his other problems that he has in most cases overlooked these matters which are especially in this present day of great importance to his children.

NORTHWEST NEWS

A bill providing $100,000 for a study of the Columbia basin project and $50,000 for the study of the Umatilla rapids project has been passed by congress and is ready for the signature of the president.

There has been gradual stabilization of the milling industry in the Pacific northwest after the hardships gone through the last few years. The gradual resumption of trade is noted in the fact that several milling companies have, since the first of the year, notified their stockholders that regular dividends will be paid, something that has been missing for three years in some instances. Two milling concerns this past week have resumed regular dividend payments.

Idaho, Washington, Montana, Oregon and British Columbia will be officially represented with displays at the Fourth Annual Spokane National Sportsmen's and Tourists' fair, which will be held in Spokane, May 22-25. Twenty-four exhibits already have been signed and six tentatively reserved. Two government departments will be represented — the United States department of forestry and the United States bureau of biology, which directs the fight on predatory animals. Sixteen communities of British Columbia will unite in on elarge exhibit this year.

Modern Mechanical Progress

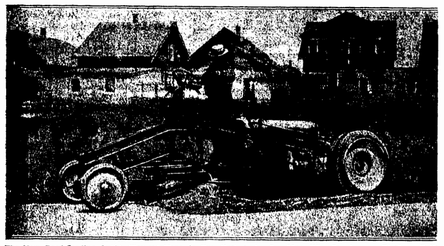
This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

RUBBER "GLASS" ONE OF NEW LINE OF PRODUCTS

Rubber "glass," or transparent rubber, is one of an interesting number of new products that have recently been developed as the result of a discovery of a compound which permits ordinary commercial solutions of rubber and celluloid to form a permanent mixture. About 10 per cent of rubber in celluloid results in a very resilient product, and about 10 per cent of celluloid in rubber produces a substance having relatively high tensile strength and waterproof qualities. The rubber in the mixture can be treated, by a special process, to any degree of vulcanization without impairing the transparency of the product. Any dead color can be had by the aid of coal-tar dyes. Great possibilities are suggested in the way of surgical rubber goods, hot-water bottles, bathing caps, windows for motor vehicles, and the like.

ONE MAN OPERATES MOTOR-DRIVEN ROAD GRADER

A road-grading outfit operated entirely by one man is one of the latest improvements in road-building machinery. The frame of the grader rises and runs pyramid-fashion from an axle joining two small front wheels to two larger wheels in the rear. Just ahead of those wheels is placed a gasoline motor, while in front of the motor is the operator's platform and, within easy reach, controls for steering the outfit and for adjusting the blade.



The New Road-Grading Outfit, Pictured Here, Is Run Entirely by One Man, Who Stands on a Platform Built in Front of the Gasoline Engine. Within Easy Reach of the Operator Are Controls for Steering the Machine, and for Raising, Lowering, or Turning the Blade.

Top: Mattress Removed From, and Placed on Top of the Trunk, Showing Bedding Drawers. Bottom: Outfit Packed for Traveling.

MATTRESS CARRIED IN TRUNK UNFOLDS INTO BED

A trunk and a bed have been combined in a large, lockable container, capable of holding a folded mattress and a number of drawers. When traveling, the mattress fits against and keeps the drawers closed. In preparing the combination for a bed, the trunk is placed on its side and the mattress taken from the end, thus giving access to the bedding in the drawers. A comfortable bed may then be made up on the top of the trunk, providing a convenient means for accommodating a guest.

A motion picture showing the advantages of Philadelphia as a seaport has been prepared by that city and will be distributed throughout the country.

WELD SPECIAL STEEL SURFACE TO MACHINE PARTS

Encouraging results have been obtained from experiments conducted to determine the practicability of welding special steel to ordinary machine-steel working parts. This is was shown in the case of some internal-combustion motor valves to which was welded a thin layer of chrome-steel alloy, the valve being finished in the usual way. Tests made under actual operating conditions failed to show any defects, and a microgrophic examination disclosed no weakening of the joint. This corresponds to the practice of welding special steel bits to shanks of ordinary steel.

CONSERVATION OF RESOURCES TO BE TAUGHT IN SCHOOLS

The conservation of natural resources is soon to be taught in all the schools of Pennsylvania. The textbook for this course has been prepared by the Smithsonian institution and covers conditions in that state only. It is to be used in connection with the work in the geography courses, and gives many concrete examples of waste. On the subject of coal, it states that, in 200 tests recently made, the average ash can was found to contain 50 per cent of coal. In an effective manner are also discussed water resources and flood prevention, and the conservation of oil, forests, iron, lime, glass, cement, stone, and clay.

FEDERAL-AID ROAD SYSTEM NEARLY OUTLINED

In outlining the 187,000 miles of road comprising the federal-aid system of highways, it has been arranged that not more than seven per cent of the total road mileage of any one state be included. Not to exceed three-sevenths of this will be designated as primary or interstate highways, and the remainder secondary or intercounty highways. The plans cover a 15 to 20-year construction program, with provision for enlargement at the end of that time.

CARE IS NECESSARY TO RAISING OF COLTS

College Veterinarian Tells of Safety First Methods to Bring Foal Through Infancy.

As a rule, colts are harder to raise than any of the other farm animals, says Dr. B. L. Taylor, state college veterinarian. This is shown each season by the fact that a larger percentage of them die in proportion to the number foaled, than any of the other domesticated animals.

To begin with, the mare should have the best of care previous to the time of foaling. Her digestive tract should be kept in proper condition by the use of green feeds. She may be kept at light work up to the time of foaling, but best results are obtained by letting her rest a short time before foaling, providing one has plenty of other horses available for work. The best place for foaling is a large, roomy box stall, supplied with plenty of fresh bedding.

After the foal has been dropped its first duty is to examine the navel. As soon as it has stopped bleeding the base should be smeared with vaseline and then the whole cord immersed in tincture of iodine. This precaution is a preventative against the disease known as "navel ill" and has saved the lives of many foals. Once this infection starts there is little hope for the foal, as the disease is rarely curable.

Foals that are only a few hours old often suffer from severe colicky pains. These are caused by the first fecal matter, which is composed of small hard balls, lodging in the rear bowel. Rectal injections of rather copious amounts of warm soap suds and water are of great value at this time. Such injections can often be repeated with good results.

Providing the trouble is not due to constipation and the cramps continue, some oil of peppermint may be given. If this is not at hand castor oil or some mineral oil may be substituted. Occasionally an animal will not respond to this treatment. In this case alcoholic stimulant may be found of value.

There are cases of indigestion which develop as soon as the foal starts eating succulent feed. This usually happens when it is about two weeks old. Typical symptoms of indigestion are shown and unless treated usually terminate in the loss of the colt. Probably the best home remedy that can be administered is raw linseed oil to which a small amount of oil of peppermint and turpentine are added. Occasionally, one would be warranted in giving a little ginger. If one is sure that the trouble is due to something the colt has eaten that day, rectal injections are of no value. If the trouble can be traced to the feed of the previous day, these injections are of considerable value.

Willing Pupil.

Minister—Would you care to join us in a new missionary movement.

May—I am crazy to try it; is it anything like the fox trot?

The Cat's.

May—That couple is dancing the cat step.

Ray—Well, they ought to dance it on the back fence.

Boys' and Girls' Farm Club Work

At the annual banquet during farmers' week at Iowa State college former Governor Lowden of Illinois had the following to say about boys and girls' club work: "There is no more hopeful movement in agriculture today than the boys' and girls club work. The trouble has been that we have never begun the teaching of important subjects to the farm people soon enough. Farming is like any other occupation, nothing but hard work and knowledge will win in it."

One of the recent market-topping patrons of the Omaha stockyards was a 14-year-old boy, Albert Shalow, of Adair, Iowa, who had learned methods of feeding and care of baby beef in the calf club conducted by agricultural extension workers of Guthrie county, Iowa. According to reports to the United States department of agriculture Albert's consignment was an Angus heifer weighing 850 pounds, which sold at the top of the day's market on yearlings, $10.25.

County Farm Bureau Secretary B Burford of Whitman county, addressed the high school agricultural club recently on club work progress.

Boys' National Swine and Beef clubs of 12 and seven members, respectively, were recently organized.

The members of the swine club are: William Batty, Ralph Cole, Veryl Farly, Anton arms, John Hinrichs, Lloyd Haynes, Lloyd Howard, Herbert Hice, Joe Kincaid, Elmore Lyle and Roy Wiley.

The members of the beef club are: Ralph Cole, Paul Clark, Veryl Farley, Eugene Harms, Anton Harms, Cecil Hatley and John Hinrichs.

The officers of the clubs are: Ralph Cole, president; Lloyd Haynes, vice president; Anton arms, secretary-treasurer-reporter.

The members of the clubs are enrolled in Smith-Hughes agriculture L. S. Tromanhauser, instructor in agriculture, was elected local leader for all clubs.

LIVESTOCK

For fattening hogs a self feeder is more successful than the best method of hand feeding.

Figure bases on the 1920 census show that about 200,000 fewer colts were raised in the United States in 1919 than were needed for replacements of horses and mules on farms alone.

Extensive plans of increasing live stock raising, especially sheep, were made recently by Wool Growers' Finance corporation, who will loan money to stockmen to bring in sheep for increasing their herds and for feeders to be finished off for eastern markets.

Thirty head of dairy cattle were sold to Idaho buyers recently by the farmers of Island county. County Agent W. W. Henry reports the significant fact that all the cows were backed by cow testing records with but one exception, and that all were sired by purebred bulls.

Cull potatoes are selling in Fremont county at 15 cents a hundred and are being used with good results for the fattening of hogs. The usual ration consists of five pounds of potatoes to one pound of barley. One feeder is using a ration of three-fourths of a pound of oats, six pounds of potatoes and alfalfa hay, and the pigs are doing nicely.

Many farmers who make live stock part of their operations are awakening to the fact that good females are just as essential as good sires. Often the remark is heard that the sire is half the herd, and with many this is a deliberate attempt to overcome the shortcomings of the females in the herd. The sire may have the same defects as the female and the mating of the two only tends to intensify the defects. There is no question that a good sire will improve an herd, but the better the females the greater the improvement.

The value of the peanut crop in 1923 is estimated at $29,222,000 by the United States department of agriculture. In 1921 the value was estimated at $33,097,000 and in 1920 at $44,256,000.

A girl will gladly listen to soft nothings when she thinks they mean something.

DAIRY

Bert W. Ralstin of Mohler, Idaho, a well-known raiser of registered Duroc hogs has recently purchased a registered Holstein sire from the Hazelwood Holstein Farm in Spokane, with the intent to improve the grade of his cattle. The sire, Hazelwood Armsby Alta-Bosch, is from a cow with a record of 24.9 pounds of butter in seven days, receiving second prize at the National Dairy show at Chicago. It's pedigree all along the line is of the highest degree.

George Witt of Harrington is in high glee over the fact that twin calves were born out at his farm last week. He has named the calves "Roosevelt" and "Pedro." George is sure that this is a sign of good times again.

There are a number of openings in the cow testing association work in Washington for young men qualified to take up this work. At present the demand for properly trained men is greater than the supply. To make a success of this work requires a man who in addition to having a heart interest in dairying, must be apt, accurate, and neat with figures, and should have some knowledge of dairy feeds and balancing of rations, and a personality that will win the confidence of the dairymen with whom he comes in contact. The pay ranges from $75 to $100 per month and expenses, depending on the experience and qualifications of the men employed. Anyone wishing to take up work along this line should get in touch with the extension service, State College, Pullman, Wash.

Under the date of January 24, G. S. Ray, agricultural statistician, U. S. department of agriculture, reports that there were 283,000 dairy cows in the state on January 1st, valued at $61 a head, totaling $17,263,000. This is 6,000 fewer than reported a year ago, with a shrinkage in valuation of $9 per head. For the United States, this same authority gives the number of milk cows at 24,429,000, an increase of nearly 3500,000 over the year before, and a decrease in value of but 14 cents a head. The decreasing in number of dairy cows in Washington can readily be accounted for by the large demand for cows in an adjoining state, which drew largely on the herds of western Washington to fill the demand.

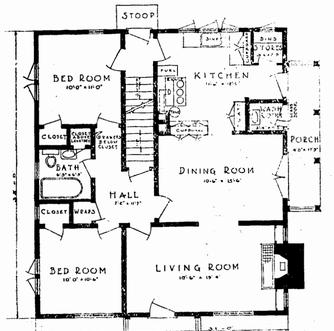
Give the young lambs all possible access to sunshine.

HOMEMAKERS' CORNER

Conducted by
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

This floor plan presents several practical features. The floor space utilized for this five-room house does not offer any waste space, yet the rooms are sufficiently large to nicely accommodate the needed pieces of furniture.

The French doors as a side entrance into the dining room could be omitted and this opening replaced by double windows.



A FIVE-ROOM BUNGALOW PLAN

If the stove is provided with a right hand fire box the fuel receptacle, wood box, or coal scuttle, is convenient; but if the fire box is on the left side the fuel supply should be changed to the left side of the stove.

The hot water tank is more satisfactory to the housewife if not placed in the kitchen. The heat from the tank is not needed in the kitchen while if that same heat could be utilized in the bathroom it would add comfort for the entire family, unless, of course, the house if furnace heated, then this additional heat would not be needed.

One nice feature found in this plan is presented in the hall leading into the kitchen, bedroom, down to the basement and out of doors. This passage way offers an ideal arrangement on cleaning days, in case of sickness, and as a practical connection between the housewife's work shop and her own sleeping quarters.

The central hall idea is gaining in repute through the length and breadth of the land.

The closet for the outer garments and, in case of visitors' wraps, is always a convenience. The upper portion of this closet provides a handy place for storage of bedding.

This plan offers cross ventilation in all of the rooms outside of the bathroom, and it is also well provided with closets. The coat closet in the kitchen would make a convenient storage for cleaning supplies and equipment.

The storeroom off of the kitchen is never for want of use. I take it that the bins are simply storage bins and that the bin for the flour, and sugar from which the daily supply issued is included in the cupboard space near the sink.

The arrangement of the range, sink, and mixing surface, without a doubt will be found a practical and satisfactory one.

If the back of the house faces the east, south or west, the window above the sink could be replaced by a sink cupboard, a real convenience, and yet there would be plenty of light in the kitchen.

If you should choose to take this plan as a foundation one for your new home, be sure to keep in mind the need of finding a place for an open-air food cooler.

Bielenberg-Schooler Post The American Legion Meets Each First and Third Wednesday of the Month

Bielenberg-Schooler Post, at its regular meeting Wednesday night, planned on an enthusiastic membership campaign, in concert with other posts throughout the state, in an effort to wrest from the Georgia department first honors in the national membership campaign.

Pertaining to membership, an exchange recently carried the following:

"Yes, buddy, when they handed you the old discharge and you put on your 'civies,' the war was over for you, but how about those comrades you left behind? How about those buddies who lost their legs, their arms, their eyes?

"Are they being cared for, are they receiving just compensation, are they being taught a trade so they can earn a living, are you interested enough to care? Do you know what the American legion stands for? Do you know its purpose and its aims?

"Well, boys, attention! If you are an ex-service man, even though you got no further than fatigue duty in an army camp on this side, you owe it to your buddies to join the American legion.

"Do you want a bonus? Do you want to see the war profiteer punished? Do you want adequate hospital facilities for ex-service men? These are just a few of the hundreds of questions that are before the American Legion. You weren't a slacker in 1917-18; are you going to hang back now and let your buddies do all the work? Join up, buddy. The American Legion wants and needs you."

The St. Patrick's dancing party given by the Legion last Saturday evening was voted by those present as one of the prettiest social affairs in recent years. The decorations were carried out in green and white. The lights were draped with fringed crepe paper, the sidewalls were decorated with large shamrocks surmounting crossed pipes.

Byers' orchestra furnished delightful music. The punch bowl was presided over by little Misses Lela Castle and Viola Blume, the little misses wore green sashes and "40 and 8" caps. A green canopy was arranged over the serving window, lending a decided Irish hue to the surroundings.

At 10 o'clock the following young ladies delightfully entertained those present with two selections and fancy dances: Misses Carrie Mae Hickman, Oma Castle, Rowena Hanson, Wilma Casebolt, Helen Casebolt, Grace Willoughby, Esther Danielson and Olive Mulalley.

Mrs. F. J. Niemann rendered vocal solos which were enthusiastically encored.

Sidestepping Mrs. Grundy

"Why do you go on the balcony when I sing? Don't you like to hear me?"

"It isn't that. I want the neighbors to see that I'm not beating my wife."

Read the want eds. this week.

Didn't Practice His Preaching

"Then you don't think I practice what I preach, eh?" queried the minister, in talking with one of the deacons at a meeting.

"No, sir, I don't," replied the deacon. "You've been preachin' on the subject of resignation for two years, an' ye haven't resigned yet."

Notice of Time Appointed for Proving Will

In the Probate Court of Latah County, State of Idaho.

In the matter of the estate of Dennis Sweeney, Deceased.

Pursuant to an order of the said probate court, made on the 2nd day of March, 1923, notice is hereby given that the 26th day of March, 1923, at 2 p. m., at the court room of said court, at the court house in Moscow, county of Latah, state of Idaho, has been appointed as the time and place for proving the Will of the said Dennis Sweeney, deceased, and for hearing the application of Mary Sweeney for issuance to her of letters testamentary, when and where any person interested may appear and contest same.

Dated this 2nd day of March, 1923.

ADRIAN NELSON,
Probate Judge, ex-Officio Clerk.

THOMAS A. FEENEY,
Attorney for Petitioner. 36-3

Notice to Creditors

Estate of Lewis Jain, Deceased.

Notice is hereby given by the undersigned, executors of the will and of the estate of Lewis Jain, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within ten (10) months after the first publication of this notice, to the said executors at either Moscow or at Genesee, Idaho, the same being the places for the transaction of the business of said estate, in Latah county, state of Idaho.

WALTER F. JAIN,
CHARLES F. JAIN,
CLARENCE L. JAIN,
Executors of the Will and of the Estate of Deceased.

Dated at Moscow, Idaho, February 19th, 1923.

H. R. Smith, Moscow, Idaho,
Attorney for Executors. 34-5

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the the County of Latah.

Izora M. Sides, Plaintiff, vs. Wayne Sides, Defendant.

The State of Idaho sends greetings, to the above named defendant, Wayne Sides.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the county of Latah, by the above-named plaintiff of the nature in general terms as follows:

That said action is brought to obtain a decree of divorce dissolving the bonds of matrimony heretofore and now existing between plaintiff and defendant, as will more fully appear in the complaint on file herein and to which reference is here made and for the care, custody and control of Elvin Edward Sides, the minor child of the parties, and

You are hereby directed to appear and answer said complaint within 20 days of the service of this summons if served within the judicial district and within forty (40) days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in the count yof Latah, this 7th day of March, 1923.

HARRY A. THATCHER, Clerk.
By ADRIAN NELSON, Deputy.
THOMAS A. FEENEY,
Attorney for Plaintiff.
Residence and Postoffice Genesee, Idaho. 36-6

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, MARCH 30, 1923. NO. 39

SMITH-HUGHES BILL SIGNED BY GOVERNOR C. C. MOORE

What will undoubtedly be good news for all who are interested in our public school is the fact that Governor Moore on Thursday of last week signed the appropriation bill for vocational work in public schools, which will insure the continuation of agricultural work in our public school.

The following letter, from William Kerr, state supervisor for agriculture, has been received by Chas. W. Smith, of the Genesee school, which will be of interest to all:

"I suppose that you have heard by this time that the Governor finally signed the bill for a appropriation of $25,000 for vocational education. The only reason that he finally took this action was due to the strong support that we received from the places where Smith-Hughes work had been conducted. As a large part of the appropriation will go to reimburse schools, we will probably have as much money from state and federal sources combined as we have had during the last biennium. This is due to the increase in the federal funds for vocational education.

We appreciate very much the work that the Genesee people have done in assisting to put across this work. The action taken by your community was put before the senate by Senator Lewis the evening that the bill passed and was one of the strong arguments for taking such action.

What U. S. Was to Furnish

The excuse for the failure of the League of Nations to function in France is found at the doors of the United States. If the United States had been a member of the league, things would have been different, according to the apologists for its failures.

Wars that have devastated Europe and committed unspeakable cruelties upon the innocent, almost from the day the league was organized, would not have occurred if our country had joined it.

If these excuses are valid there is one obvious conclusion that may be drawn: we are counted upon, in the formation of the league to be the force that would make it work; we were to protect the nations that would have vitalized its edicts and orders; it would have been our money and troops that would have restored economic equilibrium and enforced peace at the point of the bayonet. That the league has failed to enforce peace in Europe, is confessed; but to blame that failure on the absence of the United States from its membership is a frank admission that our nation was expected to furnish the force to compel peace.—Illinois State Journal.

A Birthday Surprise

A very pretty surprise party was given Mrs. Ingle Halverson on Tuesday, when a number of her neighbors and friends gathered at her home to help her celebrate her birthday anniversary. The self-invited guests took well-filled baskets and spent the day, the eats being served at the noon hour. The time was very pleasantly spent in singing old-time songs, taking pictures, and having a general good time.

Those present at the party were: Mr. and Mrs. D. Nebelsieck, Mr. and Mrs. Ed. Gehrke, Mr. and Mrs. Gus Rosenau and sons, Mr. and Mrs. Hugo Gehrke and children, Mr. and Mrs. Fred Taylor and children, Mr. and Mrs. Chas. Ingle and children, Mr. and Mrs. John Plomer and children, Mrs. Wm. Rosenau and son, Wm. Wm. Rosenau, sr., Geo. Gehrke, Mrs. Herman Morscheck.

If you are looking for something for nothing trouble is easy to find.

School Notes

Wilma Casebolt

Mrs Gerald Coleman will accompany Angie Castle, representing group II, and Howard Brakebill, representing group I, to Moscow on morrow (Saturday) to enter a Latah county spelling contest.

The eighth grade girls went on a hike last Tuesday evening to pick buttercups.

The high school girls hiked down the "track" Thursday of this week and took their lunches. A good time was shared by all and the girls are planning on a series of hikes for this spring.

The boys and girls of our high school who represented the basket ball phase of H. S. athletics, were awarded the blue and gold letters for their loyalty to the teams during the last season. A few of the boys of the team have played their last game in G. H. S., but we sincerely hope that our newly-elected basket ball captain, Jack Whitted, will plan for a winning team for the coming year. The following girls were presented basket ball letters by the student body president, Jesse Gray : Olive Mulalley, (captain); Katherine McMahon,(next year's captain); Gladys tovall, (business manager); Grace Willoughby; Margaret Spurbeck; and Esther Danielson.

The following boys received basket ball letters: Hartzel Edwards;(Captain); Jack Whitted, (next year's captain); Victor Casebolt, Fred Cann, Clarence Doyle, Tom Plath; George Miller; and Lester Bumpus.

The following program will be given this (Friday) afternoon by the Beta Literary society: Oma Castle, piano solo, Rowena Hanson, piano solo, Eva Hampton, piano solo, Helen Grieser, piano solo, Eugene Tupker, recitation. Tattler by Hartzel Edwards and Albert Anderson.

Debate Debating Society:Resolved, "That the allied war debt should be cancelled by the United States." Affirmative- Ethel Nelson, LeRoy Harris, Fred Dicus. Negative- Wilma Casebolt, Conrad Caldwell, Theadore Parks.

The program will commence at 2:10. Everyone is cordially invited.

Seven agricultural college students are going to work under the directions of Mr. Smith next week for practice in scientific methods of teaching.

664 Miles of Road Constructed

During the year 1922 the forest service, United States department of agriculture, made allotments of $448,308 for the construction of 664.19 miles of roads in the North Pacific district, comprising the states of Oregon and Washington, according to a report just issued at the district forestry office at Spokane.

The report shows that during the year $43,648 was allotted for road maintenance, $158,732 for trail construction and $59,674 for trail maintenance in the district. Figures just received from Washington, D. C., show that during 1921 the forest service constructed 724 miles of minor roads at a cost of $540,868 and 2959 miles of trails at a cost of $519,429.

Federated Ladies Aid

The ladies of the federated church will meet at the home of Mrs. Leon Follett on Wednesday afternoon, April 4. Mrs. Follett will be assisted in entertaining by Mrs. A. L. Etter, and Mrs. Cecil Bumpass.

Is Gaining Rapidly

The many friends of Mr. and Mrs. Sim Currin will be very much pleased to learn that Mrs. Currin is getting along nicely and if she continues to improve she will be able to sit up within the next few days.

A "For Sale" ad. will sell your stuff.

Let Your Money Work for You

MONEY deposited in a savings account in this bank is not idle. It is working day and night, piling up interest, earning more money, swelling your bank account. Many of the richest men in this country began their careers with nothing but energy and a determination to succeed. They saved their money until it could be turned to good account. Why not you, young man? A savings account is the first step.

COUGARS AND NIGHT HAWKS HEAD BOWLING LEAGUE

The City Bowling league is about half way through its schedule and many upsets and surprises have so far developed. There is uncertainty enough in the final outcome to keep all four teams keyed up to the highest enthusiasm.

On March 21 the Night Hawks and Cougars staged one of the hardest fought set of games in the series. One game resulting in a tie necessitated the playing of a fourth to decide the issue. The scores follow:

Night Hawks—	1	2	3	4
Bressler	136	137	92	104
Morscheck, H.	134	143	150	134
Post	149	139	130	103
Geltz	135	108	107	119
	554	528	479	460
Cougars—	1	2	3	4
Vandenburg	142	121	98	159
Foster	148	143	131	133
Follett	109	144	102	133
Loncosty	154	129	148	164
	553	537	479	565

The Coyotes were plunged into the cellar position by the Owls, who took three games Thursday, March 22:

Owls—	1	2	3	
Liberg	117	110	122	
Edwards	137	149	121	
Winegardner	103	125	115	
Burr	159	154	156	
	516	538	518	
Coyotes—	1	2	3	
Feeney	156	189	117	
Rader, C.	136	116	131	
Morscheck, G.	110	116	109	
Sampson	101	102	125	
	503	532	483	

Saturday the Cougars and Owls met, with the Cougars taking all three games. Foster for the Cougars starred.

Cougars	1	2	3	
Foster	178	212	190	
Loncosty	132	133	160	
Follett	167	91	160	
Vandenburg	133	138	131	
	610	574	645	
Owls—	1	2	3	
Burr	139	171	165	
Smith	120	109	135	
Liberg	125	98	120	
Edwards	147	118	137	
	531	496	557	

March 25 the Night Hawks and Coyotes divided to the tune of two to one in favor of the Hawks.

Night Hawks—	1	2	3	
Geltz	140	138	190	
Herman	144			
Post		104	146	
Bressler	121	136	147	
Morscheck, H.	152	166	115	
	557	544	598	
Coyotes—	1	2	3	
Feeney	150	180	154	
Wilson	130	141	132	
Morscheck, G.	86	163	146	
Rader, C.	151	144	116	
	517	628	547	

Immediately following the preceding game the Night Hawks and Owls clashed for their second meeting of the season. The honors went to the Owls.

Owls—	1	2	3	
Edwards	136	168	188	
Winegardner	120	114	135	
Burr	166	134	136	
Liberg	123	132	116	
	545	548	575	
Night Hawks—	1	3	3	
Geltz	173	110	128	
Bressler	167	133	156	
Post	138	133	99	
Morscheck, H.	160	153	172	
	638	529	555	

The Coyotes shaded the Cougars on Monday evening, March 26.

Coyotes—	1	2	3	
Feeney	122	159	163	
Rader, C.	90	144	144	
Wilson	116	156	115	
Morscock, G.	128	157	150	
	456	616	572	
Cougars—	1	2	3	
Foster	121	127	136	
Vandenburg	156	118	136	
Loncosty	146	163	139	
Follett	126	150	91	
	549	558	502	

The Night Hawks and Cougars staged their second session of the series with the Hawks winning two games Tuesday night.

Night Hawks—	1	2	3	
Morscheck, H.	149	177	156	
Post	152	87		
Herman			124	
Bressler	113	150	172	
Geltz	132	139	137	
	546	553	589	
Cougars—	1	2	3	
Foster	134	149	171	
Vendenburg	136	163		
Hall			100	
Loncosty	145	136	144	
Follett	130	138	141	
	545	576	556	

The standing of the league teams on March 27, was as follows:

	W	L	Pct.
Cougars	9	6	600
Night Hawks	9	6	600
Owls	5	7	416
Coyotes	4	8	333

WHAT HAPPENED HERE TWENTY YEARS AGO

Gardening is now in progress.

The addition to the Leon Follett residence is about ready for occupancy.

Mrs. Thalia L. Owen was by the senate last week confirmed as Postmistress of the Genesee Office. Her term of office will be four years from date of confirmation.

Agent W. E. Smith wears a No. 10 hat since the advent of a son into the Smith household. The youngster was born Wednesday at Uniontown and mother and child are reported as doing nicely.

Nathan Edwards' four-horse team, which was driven by one of the boys made a break for liberty Tuesday morning. Opposite the News office they collided with a telephone pole making an exciting mixup. The boy driving, narrowly escaped being hurt. The hayrack was somewhat disfigured and the harness badly broken.

Wm. Roseneau, who arrived here some weeks ago from Minnesota, Wednesday of this week bought the E. F. Burdic ranch of 100 acres paying $6,400 for the same. Mr. Roseneau may not take up immediate residence here but made the purchase with that end in view. He is still the owner of a large farm in Minnesota which he wishes to dispose of before claiming a permanent residence here.

Thursday of last week W. H. Pase shipped from this place five cars of fat beef cattle to Seattle. Three of the cars were purchased from E. T. Platt and son John and the other two from Nagel and Bomberg. They were stall fed and were in excellent condition. The purchase price did not net the sellers much of a profit. Wednesday of this week E. J. Hardison shipped to Seattle a car of fat hogs purchased from Dan Healey.

Friday morning of last week when Postmaster Owen entered the office to his great surprise he found that during the night burglars had entered the place and rifled the safe. Entrance was made through the back door. With the aid of a chisel and sledge the combination on the safe had been broken off and in the opening nitroglycerine had been placed and as a result of the explosion the safe was completely wrecked. For their trouble the robbers were successful in getting away with something over $300 of the office funds and in their haste overlooked about $60 which was in one of the compartments in a small box. It is evident that they made quick work of gathering up their booty as a number of valuable registered packages were left untouched. The same night Dr. Smith's dental parlors were broken into and about $20 worth of gold for plating, etc., was taken and in all probabilities by the same parties who robbed the post office.

Tuesdays Entertained

Mrs. F. J. Niemann very delightfully entertained the card club Tuesday afternoon. Pinochle was played and Mrs. A. E. Elver won the honors. The room decorations were symbolic of the Easter time and little Easter favors were given.

The invited guests were Mrs. A. E. Elver, Mrs. R. S. Sullivan, Mrs. Jack Barnes, Mrs. T. H. Herman, Mrs. Chas. W. Smith, Mrs. Nell Haymond, Mrs. F. E. Lambert, Mrs. Wm. Smoltz, Mrs Mahlon Follett, Mrs. Fred Morscheck, Mrs. F. H. Thomas.

Linger Longers Meet

The Linger Longer club was very delightfully entertained Wednesday afternoon at the home of Mrs. Ray Edwards. The time was spent with needlework, and a good social afternoon was spent. A delicious luncheon was served by the hostess.

The invited guests were Mrs. Fred Morscheck, Mrs. F. J. Niemann, Mrs. R. I. Witty, Mrs. Arthur Mayer, Mrs. Chas. Geltz, Mrs. Frank Hoorman and Mrs. Henry Morscheck.

Held First Meeting

The F. A. C.'s held their first meeting Wednesday night.

This is all the information that could be obtained regarding the name of the gathering or its object. There is deep mystery surrounding this new organization. Some say it is an auxiliary to the Ku Kluxers. What's your guess?

Beautiful Weather

It would be hard to imagine finer weather than we have been having for the past several days—and California hasn't anything on us just now. However, a good soaking rain would have been very welcome—and still would be very accepable, although the ground has stored "oodles" of moisture for the summer.

Confined In Hospital

County Auditor Harry A. Thatcher, who has been confined to the Gritman hospital for the past two weeks, is improving rapidly and hopes to be able to leave that institution this week, says the Daily Star-Mirror.

Sweeney Will Filed for Probate

The will of the late Dennis Sweeney was filed for probate on Monday and the widow, Mrs. Mary Sweeney, was appointed administratrix. The estate is estimated to be worth $5,000.

Big Bill Hart Again

One of the most unusual, original and thrilling incidents in "White Oak," William S. Hart's new photoplay, which will be shown at the opera house Saturday night, is that in which Mr. Hart in the character of Oak Miller, a gambler saves a wagon train from Indians single handed, by changing his base of operations from point to point and shooting first with a pistol and then with a rifle.

Attacted from the rear, the savages suppose that this is the fire of a considerable body of attacters, and also the deadly aim of the marksman disconcerts them and they draw off, thus giving the imigrants a chance to rally and turn defeat into victory.

The date of the play is in the fighting fifties. It is a graphic story of the hardships of the pioneers and the dastardly work of a smooth villain. It tells a charming love story as well, Vola Vale and Mr. Hart being the principals. The story is an original by Wm. S. Hart and Bennet Musson did the continuity.

All who have read the early history of the emigrant trains of prairy schooners, or who have marveled at the bravery of the men and women of those days, will appreciate this screen romance, and the thrills with which it was possible to invest it. The material was at hand and Mr. Hart made excellent use of it.

Means Agricultural Commissioner

Mark A. Means, of Lewiston has been appointed by Governor C. C. Moore as commissioner of agriculture to succeed Miles Cannon. Mr. Means, who served as senator for Nes Perce county in the past session of the legislature, is a practical farmer from the famous agricultural section in the Lewiston country. He has given special study to the development of the seed industry and marketing methods. Announcement of his appointment has met with wide-spread approval because of his practical experience with the problems of the Idaho farmer.

It is Governor Moore's desire that the department of agriculture use every means at the disposal of the state to aid the farmers in returning to prosperity. In selecting a commissioner of agriculture he made a careful survey of the state in order to secure a man thoroughly familiar with farming conditions and whom he felt would be best fitted to work with the producer in solving their problems.

Mr. Means will take up his new duties on April first.

Another Pullet Egg

And now comes Ed. Taylor into town with a four-horse team, which seemed to be laboring rather hard—and when he finally pulled up in front of The News office and called for help it was found that he had a very large pullet egg he had brought in to enter in competition with other would -be large pullett eggs. The "cackle berry" measured 6¾x7¾ inches and weighed a big 3½ ounces. The pullet that brought forth the big egg is a White Leghorn, 10 months old.

Ed. said they had one some three or four weeks ago that would make the one brought in look like a bantam egg; that it must have been fully a fourth larger and had three full-grown yolks.

Will Be Opened June 1

The tourist camp will be officially opened in Spokane, June 1, according to a statement made recently by John W. Duncan, city superintendent of parks.

The park board will start early in April to construct a new central building, this building will cost approximately $4,000.

TIME TO PLAN FOR POTATO TREATMENT AND PLANTING

(By Chas. W. Smith)

Spring is here! Now is the time to prepare for the rush season. Potatoes must be treated to kill the skin diseases. The following directions may help you:

Select as clean seed as possible and treat 10 days to two weeks before planting. Wetting the potatoes with water and covering 12 to 24 hours before treating will make the treatment more effective than where the wetting is not done. Treat loose, if possible, as the fiber in sacks absorb the chemicals and weakens your solution. Treating loose can be accomplished very easily by taking a large barrel as a container for the solution and a smaller one that will just go inside the larger one. Drill holes in the smaller one so that the solution may reach the potatoes and drain off readily. Then attach a rope wire stretcher above the barrel to aid in raising and lowering the small barrel. This equipment has proven very satisfactory where small amounts are to be treated, but where several hundred sacks are to be treated a larger wooden vat and boxes about the size of a common apple box are used.

Use four ounces of corrosive sublimate and dissolve in one-half gallon of hot water, dilute to make 30 gallons. Leave uncut potatoes in this solution for 90 minutes, remove and spread out in a dry room to dry. Add one-half ounce of corrosive sublimate to a statement made recently by John W. Duncan, city superintendent of parks.

The park board will start early in April to construct a new central building, this building will cost approximately $4,000.

Progressives Meet

Mrs. W. M. Herman entertained the Progressives on Thursday of last week. The afternoon was spent with needlework and social converse. During the afternoon Mrs. F. J. Niemann entertained the group with a vocal solo. Pearl Perkins, Emma Lou Sullivan, Katherine Casebolt, and Rowena Hanson assisted in serving. The invited guests were.- the Misses Frances Vaughn, Lela Patch, Edith Winegardner, Irma Russel, Lindy Collins Esther Martenson, Mrs. Gerald Coleman, Mrs. F. J. Niemann, Mrs. W.E. English, Mrs. George Follett, Mrs. F. C. Shonk, Mrs. Chas. Smith, Mrs. A. E. Elver, Mrs. C. W. Burr, Mrs Hattie Herman, Mrs. J. H. Jackson, and Mrs. Nell Haymond.

Mrs. Nell Haymond and Mrs J.H. Jackson will entertain at the next meeting.

A Surprise Party

A very pleasant surprise party was given in honor of Mrs. Johanna Christenson's sixty-sixth birthday anniversary on Monday, March 26. The affair was planned and very successfully carried out to the smallest detail by Mrs. Christenson's daughter, Mrs. Fred Shirrod. A delicious luncheon was served and a very enjoyable time was had by the ladies present.

Those in attendance were Mrs. Fred Nagel, Mrs. A. M. Wardrobe, Mrs. Dora Etter, Mrs. Geo. Follett, Mrs. C. H. Burr, Mrs. Ed Nagel, Mrs. L. W. Vestal, Mrs. Wm. Fish, Mrs. Henry Rees, Mrs. Sarah Elliot, Mrs. J. H. Jackson, Mrs. Mary Blume, Mrs. F. C. Shonk, Mrs. Hattie Herman, Miss Stooler, and Mr. and Mrs. Fred Shirrod.

Some people object to the one piece bathing suit for women, although it is a long step in the direction of safety first. It can't droq off.

Said the Ruble to the Mark

SAID the Ruble to the Mark: "We don't amount to much, do we?" "No," said the Mark, "How can we? Our folks have gone back on us—they reckon us as of little account." "Too - bad," said the Ruble, and so it is.

When people "go back" on their money, prosperity dies and reckless spending begins; for money is, after all, an expression of confidence in our glorious country and its wonderful resources.

If we spend for the things we need and save money reasonably, we display the right sort of faith. We put value into our efforts when we manage to restrain our spending. A nation that saves reasonably gets the most for its money. So does an individual.

Think it over.

Long experience has given us some valuable information on proper saving. We are at all times ready to share our knowledge with you.

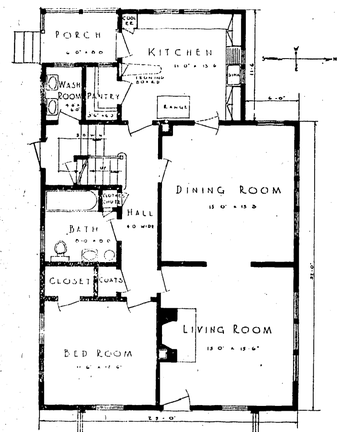
Alice Lindsey Webb, News Editor, and
Lincoln R. Lounsbury, Agricultural Extension Editor,
State College of Washington.

This floor plan si very worthy of recommendation. The most outstanding points of interest include the following:

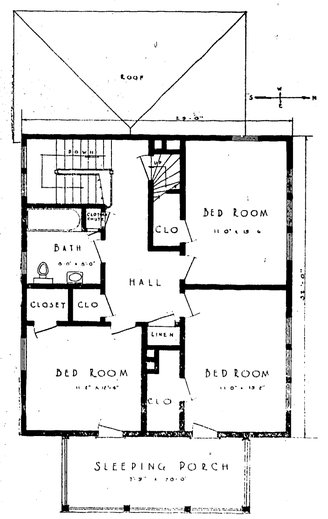
Cross ventilation in all of the rooms other than the bath.

All rooms are of a practical size. A room carrying square dimensions now presents as artistic an appearance as a rectangular shaped room. Owing to this rule, a practical suggestion would be worth while to the family who might find within this plan just the arrangement they desire. The



TWO-STORY HOUSE FLOOR PLAN.

suggestion is this: Move the entire main wall between the dining room and living room, bath and closets, over two feet, thus increasing the size of the living room and bedroom. This will improve these two rooms without any harm to the two decreased in size.



TWO-STORY HOUSE—SECOND FLOOR PLAN

The plan of entrance into the house from the back way is rather unique. The men's entrance leads directly to th ewash room then into the dining room by way of the hall. The stairway provides for reaching the second story, but not a basement. The reader may need to look twice at the plan as it may be slightly confusing.

The space so tasIde as a pantry is really a store room and not a pantry in the sense of times past where the mixing was done by the housewife in a place away from the heat of the stove.

The ironing board is well placed as also is the range, sink and mixing surface. The kitchen wall carrying the sink faces the north, so in this instance, it would be well to provide a sink cupboard near at hand on either side of the sink.

The central hall provides privacy to all rooms of the house.

A cleaning closet is not provided in this plan. One could be placed, however, in part of the space set aside for a clothes chute. More space than is needed has been reserved. That portion off from the hall would be the most satisfactory. This would necessitate putting the soiled clothes in and taking them out from the door indicated in the bathroom.

The second floor plan is quite ideal as far as arrangement of rooms, size of floor space, location of doors, and windows, and closet space is indicated.

If the suggestion is followed covering the location of the wall dividing the rooms downstairs the walls upstairs might need to be changed. This would necessitate a slight change in doors and closets upstairs.

After mother has got all the other members of the family ready, they can't understand why it takes her so long to dress.

When the boy who is at the growing age has done his growing and his eating he is almost justified in calling it a day's work.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Forty American Masonic Shriners, traveling in Greece, held services on Mars Hill, near the Acropolis, on the exact spot where St. Paul preached nineteen centuries ago.

Standard Oil is negotiating with the Russian soviet government for the restoration of the Russian oil industry. Russian oil output is now only a fraction of what it was before the World war.

The largest cigar ever manufactured was presented to Uncle Joe Cannon by the Cigar Manufacturers' association of New York. The cigar weighs five pounds, is 28 inches long and more than a foot in circumference.

Sam Diamond, 21, New York newsboy, is demonstrating a new cure for tuberculosis. Diamond recently visited San Jose, Calif., after having hiked 7000 miles in an effort to cure himself of "the bugs." Sam plans to hike on around the world.

Premier Mussolini of Italy has taken over personal control of the nation's aviation activities, thus fulfilling the promise he made prior to forming the new government. Hereafter, aviation will be entirely independent of the army and navy departments.

Evidence indicating labor leaders from Chicago and gunmen were paid $ 0,000 to attempt to bribe the jury which sat in the trial of Governor Len Small was presented to the Lake count ygrand jury meeting at Waukegan recently. The jury was called by Judge Clair Edwards, who presided in the governor's trial.

Winter is over and the big spring push is on in the Yukon. Dog teams are breaking trail north from Mayo, and are mushing along the trail from Whitehorse to Dawson. The upper Yukon river fleet is being repaired at White Pass shipyards. A ten-ton tractor is displacing dogs and packers on the trail from Whitehorse to Mayo, hauling 15 tons of freight on three trailers.

American composers and publishers represented by J. O. Rosenthal have informed Secretary Hoover's radio conference that their organization had determined to charge radio broadcasting stations for the right to use their compositions or publications and to institute suits under copyright laws of any station broadcasting without permission.

Preliminary reports from federal tax collectors indicate the American people paid slightly in excess of $400,000,000 income taxes March 15, treasury official said. The total may reach $420,000,000, which would be $27,000,000 greater than the amount received on the same date last year. Treasury officials believe that the increase in taxes in the face of reduced rates is a barometer of a healthy business revival in progress last year. Some important corporation returns received several days ago are reported as clearly showing better business conditions as compared with 1921.

Speedo—I say, Peppo! What's the difference between a dance and a dawnce?

Peppo—Just about four bucks.

Modern Mechanical Progress

This Department is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

"PICK UP" RADIO MESSAGES 100 FEET UNDERGROUND

"Picking up" radio messages with a receiving set installed 100 feet underground in a mine, from a broadcast station 18 miles away, is the latest wireless achievement. The set was located not far from the point where the light and power wires entered the mine, and when removed to some distance from these, the signals were found to diminish in force and clearness. Although the tests did not actually lead to any practical method of using wireless waves for underground communication, they did prove clearly that electromagnetic waves, contrary to the former theory, may be made to travel through solid strata. The fact that radio signals were detected below the surface of the earth, will doubtless be sufficient evidence of possible transmission through the ground, to encourage further experiments.

SIMPLE WIRE-TYING MACHINE BINDS PACKAGES RAPIDLY.

A wire-tying machine that tightens the wire around any kind of shipping case or container, twists the wire, and cuts it off neatly, is now on the market. When strapping a package, the end of

Wire-Tying Machine for Binding Packages; The Upright Handle Tightens the Wire, and the Crank Handle Ties It and Cuts It Off.

the wire is put in the slotted end of a holding post, through a latch for retaining the machine in place, and also through a second binding post. The wire is then passed around the package in any desired way, and after being brought back through the holding posts, it is slipped into a notch in a ratchet wheel with which, by means of an upright handle, all the slack in the wire is taken up. By turning a crank handle three times, the wire is tied and cut off.

Since January 1, this year, weather summaries and forecasts, together with storm, hurricane, frost, and cold-wave warnings, and advisory messages, have been broadcast from the naval radio station, known as "NAT," which is located at New Orleans, La.

isms makes the harvester very light and easy to maintain.

HALF OF WORLD'S ELECTRICITY USED IN UNITED STATES.

Recently compiled figures that of the total 11,000,000,000 kilowatt-hours of electrical energy produced in the world during 1920, the United States consumed about one-half, and that Switzerland led with a per-capita consumption of 700 kilowatt-hours. Of the amount used in the United States, about 15 per cent was for lighting purposes, and the balance for industrial activities. It is estimated that one out of every 16 person who inhabit the world, lives in an electrically lighted dwelling, and that of the nearly 500,000,000 horsepower available from the waterfalls of the world, about one-twentieth part is being utilized. Only a little more than one-third of the electric power at present produced in this country is derived from hydroelectric sources.

NEW IMPLEMENT DIGS, PICKS, AND SACKS POTATOES

A recently invented potato harvester combines simplicity with adaptability to different ways of handling the potatoes after they are dug. It can be used to dig, pick up, and load the potatoes into a wagon or into sacks as a continuous operation; as a paid digger, or just for the purpose of picking up the potatoes. It consists of a drum, 8 feet in diameter and 7 feet wide, built up of hardwood slats spaced about 1 inch apart on iron hoops, with iron spirals inside, to which are attached the digging disks. As the drum is pulled along the ground, the action of the spirals picks up the potatoes and carries them to a basket which is automatically inverted at the top of the drum. The absence of gears and other mechan-

Left: Drum-Type Harvester Picking Up and Crating Potatoes: Two orses Haul the Machine with East, as as There Are No Gears or Other Mechanisms, Upkeep Is Low. Right: Harvester Delivering Potatoes through a Can vas Chute to a Wagon Alongside.

STUMPS MADE INTO PAPER BY NEW PROCESS.

In order to utilize pine stumps on cut-over and burned-over timber lands in the south, a process has been devised that converts this material into acceptable grades of paper. The stumps are first put through a machine that removes any charcoal that may be on them, and then go to machines that cut them into small chips. The tar, turpentine, and resin are next extracted, and the residue converted into a pulp from which the paper is made.

NEW FURNACE PRODUCES FINE STEEL

A new hearth furnace, recently installed in a German foundry, is reported to turn out steel that produces castings comparable with those obtained from the crucible process. A high temperature is obtained in the furnace by the use of preheated air for mixing with the hot gas from the producers, and the molten steel is run into a large ladle heated nearly white-hot before it is poured into the molds. Such strong and accurate castings have been made, that they can be used in place of bronze forgings.

Tree Planting Suggestions From Agricultural College

By E. F. STEFFEZ,
Professor of Forestry, Pullman, Wash.

If you have places that you think would grow trees and you desire to have them do so the following hints may aid you in making a wise choice of species.

For the semi-arid regions of eastern Washington where the rainfall is about 15 inches and the trees are to be grown without irrigation the following are recommended: Scotch Pine, Western Yellow Pine, Jack Pine, Douglas Fir, (Rocky Mt. form) Black Locust, Russian Olive.

For the regions where the rainfall is 20 inches or more add to those previously listed the following: Austrian Pine, Blue Spruce, Honey Locust Norway Maple, Hackberry.

For regions within reasonable altitude (below 5000 feet) where the rainfall is 25 inches or more or where the trees are to be grown under irrigation in addition to the species already listed add: White Pine, Douglas Fir (coast), Concolor Fir, Balsam Fir, Spruces, Cedar (Arborvitae), Silver Maple, Black Walnut, Butternut, White Ash, Red Oak, Chestnut, Bassword.

For dry situations in an otherwise moist region try Austrian Pine, Western Yellow Pine, Jack Pine, Douglas Fir (Rocky Mt. form), Scotch Pine, Blue Spruce, Russian Olive.

For wet situations along streams and in similar places the willows, poplars and cottonwoods will probably do best and in some cases somesuccess may be had with the spruces.

For localities troubled with frost during the growing season the best success can be had by planting the evergreens. The Norway Maple has proved itself to be the most frost hardy of any of the broadleaved trees.

For soils of poor quality (sandy, gravelly, rocky) Jack Pine, Western Yellow Pine, Austrian Pine, Scotch Pine, Black Locust will probably give the best results.

In woodlot planting no tree is so generally adapted to eastern Washington conditions as the Black Locust. It is adapted to the soils of poorer quality as well as to the soils of good fertility, is of rapid growth under most cond itions and respond exceedingly well to irrigation. Its rapid growth and the durability of the wood in contact with the soil makes this tree one of the most valuable that can be grown for fence post purposes.

For windbreak and shelterbelt planting the evergreens are recommended because they retain their foliage during the winter. Such rapid growers as the willows, cottonwoods and poplars have their advantages. Good results are obtained by underplanting these rapid growing trees with such evergreens as the Spruces, and some of the Pines.

Additional information on the above subjects may be had by addressing the department of forestry, State college of Washington, Pullman, Washington.

In addition they have this year for distribution at a nominal price, for experimental planting a limited number of trees of some of the species mentioned. A postal card request will bring you a price list of the species available for distribution under this plan.

DISABLED VETERAN IS A GOOD FARMER

Vocational Board Says That Many Are Taking to the Land and Making Good.

The disabled war veteran is proving to be a good farmer, according to opinions expressed by federal agricultural supervisors of vocational trainers at a conference held in the Seattle district office of the U. S. Veterans' bureau for three days, ending March 12. Fifteen rehabilitation supervisors of Washington, Oregon and Idaho handling veterans preparing to become independent farmers attended the conference.

W. Homer Maris, of Washington, D. C., regional supervisor of farm training, announced that 61 disabled war veterans of this district have completed their agricultural training successfully and are now independent farmers. Approximately 200 others are training on small land projects and several hundred more are learning agriculture through placement or institutional training.

"A large percentage of disabled service men of this district who selected farming as their new vocation are making good," declared Mr. Maris.

"Hundreds of veterans are sacrificing ordinary comforts and pleasures of life to get a start on a small place of their own. The government does not expect to make big ranchers out of these trainees, but rather independent farmers on a small scale. We advise the veteran to engage in diversified farming with one specialty, such as poultry raising or dairying. There are approximately 11,000 disabled farm service men in the United States training in agriculture at the present time."

Cooperation between agricultural training supervisors of the bureau and farm instructors of Washington, Oregon and Idaho State colleges was discussed at the conference. Expert advice is given trainees through these college instructors at the veteran's land project once a week. H. L. McCoy, head of rehabilitation work in the Pacific northwest urged that special attention be given by the federal supervisors to outlining of training programs when the ex-service men take up their newly selected occupations.

The government allows vocational trainees the sum of $80.00 or $100.00 a month with additional compensation for dependents during the period of training. Trainees in agriculture in most instances use a portion of this governmental training pay for purchase of land and farm equipment.

NEW DYNAMITE AS COMMERCIAL PRODUCT

State Legislature Refuses Gift of Patent, So Inventor Will Manufacture It.

Since the legislature failed to accept the offer of Dr. William M. Dehn, of the University of Washington chemistry department, which would have given the state license to use his patents for the manufacture of dynamite out of sawdust at a low cost, plans are being made to place the powder on the market commercially.

Had Dr. Dehn's gift been accepted, it would have provided a blasting powder for Washington farmers at a cost of six cents a pound or less.

A bill was passed by a vote of 49 to 11 in the state senate, authorizing the department of conservation and development to accept the use of Dr. Dehn's powder, and providing for an appropriation of $60,000 to build factories. Dr. Dehn virtually gave the use of his patents without charge, and the state appropriation would have been refunded within three years by a charge of one-half cent a pound for amortization. The appropriation was first cut to $30,000 and finally was held in committee so that it was not enacted by the house.

The sawdust dynamite was invented by Dr. Dehn in the chemical laboratories of the university, following his studies of military explosives during the world war.

POULTRY

Take note of the cornmeal used in mash for chicks. If this is bought in large quantities there is danger of spoiling and mold.

Early morning is the most suitable time to put eggs into the incubator, according to Mr. Chas. Good, provincial poultry instructor for the Lower Mainland. When they are put in at this time the operator has the whole of the day to properly adjust the machine, while if they are put in later he is up half the night doing this work. This plan also works out well in the turning of the eggs, as about 7 a. m. and again 12 hours later are found to be the favorite times for this latter operation. Eggs that are put in in the morning usually hatch out during the night, allowing the chicks time to dry off before morning.

Spokane now claims to be the place where the biggest hen eggs in the world are produced. Confronted with a copy of the Popular Mechanics magazine containing a picture of an egg claimed to be the largest in the world, a Spokane hen belonging to Ed. R. Ennis, former county treasurer, produced one which has the pictured specimen bested by far. Mr. Ennis' hen, a Black Minorca, produced an egg 8 inches in greatest circumference, and 6.54 inches about the middle. The egg weighs four and one-half ounces. The egg which the magazine claimed to be the largest in the world weighed four and one-eighth ounces and was 7.87 inches and 6.75 inches in circumference.

Whistling, or speaking gently, or knocking on the door to let the hens know someone is coming will save the poultrymen several eggs a day, says Prof. Willard C. Thompson, poultry husbandman of the New Jersey experiment station, in a circular issued on "The Winter Time Management of the Laying Flock." Fright, he continues, is often fatal to and always interferes with normal egg production. Hence the necessity of having the poultryman move slowly so as to not cause excitement in the pens.

Every poultry raiser knows that fowls thrive best in a clean, well ventilated place. By keeping the houses, roosts, nests and runways sprayed with a concentrated lye solution you will do a great deal toward promoting good health and productiveness among your poultry.

Many of the most successful poultry raisers use this lye solution around their poultry houses at least every week. The solution is made by dissolving a small can of lye in five gallons of water. A sprinking can, hand spray, or an old whisk broom may be used to apply the solution.

Indian relics of every description, and especially those connected with colonial history. Many states along the Atlantic coast contributed, and when the collection is completed it will be the finest in the world.

To the home gardener—shine the shovel and sharpe nthe hoe for it will soon be time to go.

IDAHO

Transportation has been resumed by the Red Collar line, on Coeur d'Alene lake. The ports are now opening between Coeur d'Alene, Harrison and St. Maries.

The St. Maries Aerie Fraternal Order of Eagles recently incorporated a building association for a $50,000 temple to be erected this summer. Bonds of $10 each are being sold to care for the purchase price of the lots without drawing on other funds, which are to be used exclusively for building purposes.

C. W. Jenkins, a member of the senior class at the university, has gone to Kellogg, where he has been elected to the superintendency of the Wardur-Kellogg schools. He succeeds Mrs. Laura Butz, who is soon to leave for Boise to take up her duties as assistant state superintendent of public instruction.

Henry Piger, a Kellogg war veteran, was married to Jane Sanguinet of Bordeaux, France, in Spokane last week. The couple had kept up a steady correspondence since the war. The bride is 18 years of age and came the whole distance alone. They will live at Kellogg, where Piger is employed by a mining company.

The executive committee of the University of Idaho decided at a recent meeting to proceed at once with plans to secure the erection of a new men's dormitory at the university. The new building will be erected by the University of Idaho Building association, an organization of Moscow business men, and will be available for use at the opening of school next fall.

Engineers employed by the Grangeville Electric Light & Power company, one of the subsidiary power corporations of W. C. Sivyer & Son, of Spokane, are making surveys at Bruce's eddy, on the north fork of the Clearwater river to determine its power possibilities as an addition to the Grangeville plant. No definite action has been reached regarding the development of a site, but it will await the report of the engineers.

County Agent J. O. Ellsworth of Bonneville county reports that a cheese factory for that district is assured. Contracts have been signed for the purchase of 200 cows. The first shipment of calves has arrived from Tillamook, Oregon. Their cost was $18.35 each. Farmers in five communities in Franklin county are making a survey of the number of dairy cows, with a similar object in view.

The placing of 155,000 new ties is one of the many items of improvements to be made on the different lines of the Northern Pacific railway, in the Idaho division this season, according to word received from the general offices. The work will start as soon as the weather permits and will be done mostly by local section gangs, each of which will be augmented by additional men. Two ditchers will be used on this division, starting about May 1. Each machine will require a crew of six men.

A Dozen Good Books for Farm Women.

Do you know J. Buell's book, "One Woman's Work for Farm Women" (Whitcomb). It is the story of how one woman worked to bring farm women of her state closer together.

One of the best cook books is Fanny Farmer's "Boston Cooking School Cook Book," (Little Brown & Co., $2). Miss Farmer has tested all the recipes herself.

Another "Cook Book for Nurses," is by S. C. Hill (Whitcomb, 75c). It is the best thing of its kind. Telling about feeding babies, serving invalids and various diets.

"The Life of Ellen H. Richards," by C. L. Hunt (Whitcomb & Barrows, $1.50) tells the story of a pioneer in home economics.

A. M. Kellogg's "House Furnishing" (Stokes, $1.60), is designed to help in making home arrangements both beautiful and useful.

"Bacteria in Relation to Country Life" (Macmillan, $1.50), is by J. G. Lipman and discusses the uses of bacteria in air, water, sewage, soil fertility, manure, milk, cheese, and in food preservation and fermentation.

A manual for mothers and nurses on "Hygiene for Mother and Child," is by F. H. MacCarthy (Harper, $1.25) and covers the health of the prospective mother, the care and feeding of babies. The care of children in relation to sleep, exercise, education, illness and accidents.

Wm. MacKeever's "Farm Boys and Girls," (MacMillan, $1.50), will help rural parents.

"The Cost of Living as Modified by Sanitary Science," by Ellen H. Richards (Wiley, $1), gives a broad view of the surroundings of mind and body which help us use our powers for the progress of civilization.

Careful directions to aid the housewife are given in J. L. Shepperd's "Laundry Work for the Home and School," (Webb, 60c).

A conveniently arranged, compact book on "Human Foods and Their Nutritive Value," is by H. Snyder, (MacMillan, $1.25).

The American School of Home Economics published by B. M. Berrell's "Household," ($1.25), is helping women to solve their problems by the light of other people's experience.

Connecting Laundry Tubs With the Sewer System

A. B. CRANE,
Extension Agricultural Engineer.

Numerous septic tank sewage disposal plans have been installed at the farm homes during the past year. A question has arisen with some builders of new homes regarding the disposal of the wastes from the laundry tubs, especially when they are placed in the basement. It has been thought best to reply to this question through publication so that any who are interested may have the answer.

If the laundry tubs are on the same level with the sink and toilet the best and simplest way of disposal is to run the wastes directly into the septic tank together with the wastes from the sink, toilet and bathroom. the laundry wastes from the ordinary family will not be so great as to materially affect the bacterial action in the tank. Care should be taken, however, not to use crude lye or strong washing powders in the water, as this will kill the bacteria. Ordinary soap suds and the usual mild cleansing powders, being already partly neutralized in their manufacture, will not be harmful and the effluent, being acted upon in the septic tank, will be rendered easy to take care of by the outlet system.

Where the laundry tubs are placed in the basement and the drain pipes necessarily lowered deep enough to take of the waste by gravity flow, we have a more difficult problem. If the house is built on a hill-side where a location for the septic tank can be found low enough so that the laundry water can flow to it also, the pipes can be connected with the regular sbwer pipe and both enter the tank together.

If the ground is level, it would be necessary to dig the septic tank down into the ground deep enough or let the laundry effluent waste off in a separate pipe without going through the septic tank. In this case it frequently can be arranged so that the laundry drain pipe can receive the effluent from the septic tank and both waste away together in the same drain tile outlet. This outlet, however, is necessarily quite deep so that no aerobic bacterial action can take place, only filtration purification being effected. It is well to have a good outlet to the surface soil out in the berry patch, meadow corner or other out of the way place. It will create no nuisance in that case. One hundred feet or a little more of ordinary burnt clay drain tile, 4-inch size, running from where the two effluent pipes come together, will handle the effluent very effectively. It would be well however, to dig an extra wide and deep trench and embed the tile in coarse, gravelly sand until it begins to approach near the surface at its lower end.

Care must be taken to see that there is a good fall from the laundry tubs down to where the tank sewage enters the pipe, with good traps under the tubs, so that there will not be any back flow into the tubs when the toilet or bathtub is flushed. Start the pipe as high up as the position of the tubs will allow.

This discussion is necessarily general in its nature. Each particular installation will have to have its own details which will modify these general ideas to fit the individual case.

Snake Den Is Blown Up By Road Workers

After basking on the warm rocky slopes of the Yakima river canyon a clan of 123 rattlesnakes were suddenly sent writhing and twisting in death agony over the sliding shoal when their home was disrupted by a blast of dynamite set off February 20 in the interests of government road building. The canyon was made a snake shambles on the occasion of the grading by federal-aid roadbuilders of the road laid through the Yakima river canyon, designed to cut a shorter and better route from Yakima to Ellensburg.

The steep stony banks of the river, honeycombed with snake holes and catching the afternoon sun were an ideal spot for a snake colony, but how ideal the road men did not realize until they charged a coyote hole deep in the river bank with explosives and bumped it off. Sliding down with the loosened shoal came a population of writhing rattle-snakes, some killed outright, some merely stunned by the concussion. Nests of snakes were twined together in poisonous squirming balls.

With sticks the men picked up the snakes and strung them by the rattle tips on a wire, 123 in number, some as long as five feet, and many with over 15 rattles. Some of the stunned snakes revived and lunged, spitting poison as they hung. Biologists say this is one of the largest colonies of rattlers ever unearthed in southern Washington, where the species is gradually being thinned out.

Cat-Tail Down Prized.

Large quantities of cat-tail down are exported from the Pacific northwest to Japan, where it is used for the stuffing and padding of clothing and winter sleeping blankets. The material is many times lighter than silk floss and possesses the additional advantage of never packing.

Thirty-three dairy farmers in Pend Oreille county have signified their intentions of purchasing high grade calves from cow testing associations in other parts of the state. Three of these heifer calves have already been ordered from Chalham county according to a report given out by County Agent E. E. Hupp.

LIVESTOCK

The total number of cattle on farms in the United States on January 1, 1923, was 41,923,000, according to estimates recently issued by the United States department of agriculture. In 27 corn belt and range states there were 35,441,000 head. The beef cattle in these 27 chief cattle states were valued at $952,948,000, as compared with a cattle valuation of $866,572,000 on January 1, 1922, indicating a gain of $86,376,000. The total value of all beef cattle in the United States on January 1 of the current year was $1,076,234,000, as against $988,760,000 on January 1, 1922.

Clovers make excellent feed whether used as pasture, as hay, or as soiling crops. Because of the high protein content they are valuable for growing animals and a good supplement to corn. One ton of clover hay, says the United States department of agriculture, has a feeding value of fattening animals equal to 1 1-2 tons of timothy hay, three-fourths ton of shelled corn, or two-thirds of wheat bran.

How much feed does it take to fatten a carload of cattle, hogs or sheep? Here are some figures based on investigations by the United States department of agriculture:

Six hundred bushels of corn and 17 tons of hay will fatten 250 lambs weighing 55 pounds each and make them weigh 80 pounds. This will make 1 double-deck carload.

Four hundred and fifty bushels of corn and 2,750 pounds of tankage or fish meal will fatten 70 hogs averaging 100 pounds, to 200 pounds, making 1 carload.

One thousand one hundred bushels of corn, 10 tons of alfalfa hay, and 5 tons of straw will fatten 20 steers averaging 850 pounds making them gain 325 pounds each in 180 days. This is an average carload.

More than 9500 farmers since the last census have placed their breeding operations on a strictly pure-bred sire basis and are following methods leading to further improvement, records of the United States department of agriculture show. This has been a development of approximately three years. At the present rate of enrollment the number will pass the 10,000 mark within the next three months. This number of livestock owners represents the ownership of more than one million head of stock, all of which is improving by the use of prebred sires. An additional requirement for enrollment in the campaign is that sires must be of good quality in addition to being pure bred. The department issues an attractive emblem of recognition to livestock owners who cooperate in this activity.

DAIRY

A carload of registered Holstein cows are to be secured by the dairymen in the Eatonville section. This shipment will increase the number of high class dairy cows materially.

Dairy products in 1922, at farm prices, had a gross value of $2,000,455,000, according to estimates by the United States department of agriculture. The value of dairy products in 1921 was placed at $2,852,000,000, and in 1920, for the year in values, at $3,018,000,000. The farm price of whole milk was 19.09 cents per gallon in 1922, compared with 22.19 cents in 1921, and with 30.10 in 1920. The farm price of butter was 35.23 cents in 1922, compared with 37.16 cents in 1921, and with 54.25 cents in 1920.

J. M. Phillips of Bluestem has six Jersey grade cows that produced 8599.75 worth of butter during 1922. From these six cows 1429 pounds of butter were sold and the ranch boss was also supplied with this unexcelled spread for bread. During the year each of these cows was dry for a time and as they are all average cows the experiment indicates about how much revenue can be expected from cows kept on a ranch. The gross revenue in butter alone amounted to over $99.95 per cow for the year. Mr. Phillips grows all his own feed. He put up 6 tons of barley hay for the winter and fed each cow a gallon of chop twice a day for five months The rest of the time they ran out in the wheat stubble. He sowed 35 acres of wheat for the stock to pasture in until time to turn them into the stubble Barley hay, cut green, is the best feed for cows, Mr. Phillip says.

Cornered.

Mr. Speedo—Take dancing lessons? I guess not! There are too many other ways by which I can make a fool of myself.

Mrs. Speedo—I know, dear, but have you tried all the rest?

URGE "TON LITTER" IDEA FOR FARMERS

Plan Would Get Maximum Production, Thereby Increasing Profit Per Brood Sow.

The "ton litter" idea in the raising of hogs is urged upon farmers of the state of Washington by specialists of the State college, as a result of successful experiments by 35 Indiana farmers.

"Our farmers have a chance to study the fundamentals in pork production through the splendid demonstration put on by 36 Indiana farmers," says C. M. Hubbard, extension livestock specialist of the State college.

Litter Weighs 3040 Pounds.

"In order to win the gold medals these farmers had to produce from one litter, a ton or more of pork in six months. The heaviest litter containing 11 pigs weighed 3040 pounds.

"These 36 Hoosier farmers considered the following ten factors of outstandin gmiportance: Every litter sired by a purebred boar 28 of the 36 sows were purebreds; sow prolific and came from large litters; brood sows and litters were furnished with strong protein supplements, as meat, meal, tankage, skim milk, etc., In connection with corn and other grains; legume or other pastures were furnished; pregnant sows had exercise; all ran on clean lots; old farrowing quarters were cleaned and disinfected; shade and clean drinking water were furnished and careful attention given to details during the farrowing an dsuckling period.

All Points Important.

"Not only were these sows and their litters bred and fed correctly, but they were also managed properly, parasites kept down and the sows and litters given the opportunity to do their best. To say which of the ten points is the most important would not be possible, for they are all important in successful pork production."

Students Get Good Grades.

Every one of the 27 members of the Davenport eighth grade, class made 100 per cent in the spelling contest held last week, according to grades compiled this week. High marks were made by the other grades in the local school, and the students are hopeful that they will lead the list in the last spelling contest, as they did in the first two. A pennant is awarded to the school making the best grade in four spelling contests during the school year. Davenport has already won two contests.

Need Tax Reform.

One of the greatest drawbacks upon timber growing in the United States is the deterrent effect of the property tax levied year after year upon land bearing young trees, says the forest service, United States department of agriculture. What is needed is a system of taxing growing forests under which the principal burden will fall at the time of harvesting the matured crop but which is so adjusted as to be equitable to other classes of taxpayers and to meet the needs for public revenue.

Congress Bids Uncle Joe Cannon Good-by

Many tears were shed as Uncle Joe Cannon, after fifty years in Congress, packed his belongings for return to his home in Dansville, Ill. His years in Congress stand as a record.

Christian Endeavor Notes

By Grace Willoughby

The meeting last Sunday evening was led by Rev. Pendleton. The topic was along missionary lines, it being the last Sunday in the month.

Alfreda Hampton gave an interesting talk about the Mormons; Esther Hickman told us several things about the negroes, and Conrad Caldwell gave the ten missionary needs.

Special music was rendered by Alfreda Hampton in the form of a vocal solo.

Sunrise prayer meeting Easter morning will be led by Jesse Gray. The following program is outlined:

Topic—The Easter Psalm.
Opening piano solo—Grace Jain.
Song.
Leader's prayer.
Scripture—Psalm 16:1-11 and Acts 2:22-27.
Leader's talk.
Vocal solo—Alfreda Hampton.
Questions answered.
Song.
Sentence prayers.
Talk by Prof. Raneldo of the University of Idaho.
Quartet—Carrie Mae Hickman, Wilma Casebolt, Conrad Caldwell, Lester Bumpass.
Recitation—Irene Hall.
Song.
C. E. benediction.

Quiet hour will be held at 5:45 and everyone is urged to be present. The sunrise meeting will start promptly at 6 o'clock and everyone is welcome.

The time of the prayer meetings held every Sunday evening is changed from 7 to 7:30.

Home Demonstrator Coming

Miss Cowgill of the extension division of the University of Idaho will be in Genesee on April 16 to give a three-day course in millinery. These will be all-day meetings and will prove beneficial to the women of the community.

Don't Forget

The bazaar and ice cream social to be given by the Federated missionary society in the Sullivan building, next to the postoffice, on Saturday afternoon, March 31. 39-1

To Make a Lawn

Work the surface up fine; plant Herman's white clover and Kentucky blue grass—1 pound clover to ½ pound blue grass. Soak the ground thoroughly and never let the surface become dry until the seed is up. If you will do this you can put one of Herman's lawn mowers to work in six weeks.

Westinghouse Electric Ranges

RANGE FREE TO BEST BREAD BAKER

Complete Aluminum Clover Leaf Set FREE with Every Range Sold During this Sale

Price Reduced--Only $9.75 Down

and balance on easy monthly installments. This is the chance of a lifetime---a chance to purchase a Westinghouse Automatic Electric Range, completely installed, with an Electric Water Heater, at a greatly reduced price, and a complete "Aluminum Clover Leaf Set" *Free* with every range bought during this sale.

Also a Chance to Get Your Range Absolutely Free

For those who purchase Westinghouse Ranges during this sale, we are going to have a free bread-baking coutest. The person who bakes the best loaf oi bread (before June 8) will receive *absolutely free* the Westinghouse Range purchased by the contestant during the sale. This is not a lottery—just simply a skill contest—and the person who bakes the best loaf of bread will win the range.

In order to become eligible for the skill contest:

1 You must purchase a Westinghouse Type 2-19B or 3-19B Electric Range between April 2 and May 15, 1923.
2 The loaf of bread entered in the contest must be baked in the oven of the range purchased.
3 The loaf of bread baked must be in Spokane by June 8, 1923, where it will be judged.

(If the loaf of bread you send in wins first prize, you will receive absolutely free of charge the range purchased by you.)

We will have Westinghouse Electric Ranges on display at our office during the sale and will gladly demonstrate and explain to you the many advantage of cooking electrically.

Don't be afraid to ask questons, either regarding the ranges, the special sale, or the bread baking contest.

If there is anything you do not understand regarding this special sale, or skill contest, please call, phone or write

PERSONAL MENTION

Mrs. D. Sweeney was a business visitor in Moscow Monday.

Mr. and Mrs. F. S. Casebolt were Moscow visitors on Sunday.

Attorney Thomas H. Feeney was a business visitor in Moscow Monday.

Mrs. F. C. Shork and Mrs. W. W. Burr were Lewiston visitors on Monday.

Mr. and Mrs. Ed. McLean left for Lewiston Monday where they will reside.

Mrs. Joe Hasfurther and daughter, Bernadine, were Lewiston visitors on Monday.

Fred Willoughby was a Monday morning passenger for Spokane on business.

Jesse McMahon returned Saturday after spending a week with his father at Lewiston.

Mrs. Jerry Coleman and Miss Irma Russell were Lewiston visitors over the week-end.

Miss Grace Crossett left Wednesday for Palouse for a visit with her sister, Mrs. John Cameron.

Miss Sophia Kambitsch was a Tuesday morning passenger for Pullman for a visit with friends.

Mrs. J. H. Jackson, Miss Gladys Stovall and Harold Jackson were Lewiston visitors last Friday.

Miss Florence Bielenberg was a Thursday morning passenger for Lewiston for a short stay.

Mrs. F. H. Meader came up from Clarkston Sunday for a few days visit with relatives and friends.

Mrs. Joe Rell and Mrs. Henry Craft were Lewiston visitors on Monday.

Mrs. Ernest Cameron returned to her home at Troy Saturday after a short visit with Mrs. L. C. Cameron.

Mr. and Mrs. Phillips returned to their home at Spokane after a short visit with Mr. and Mrs. R. S. Sullivan.

Mrs. F. K. Bressler returned home Tuesday from Spokane and Pullman where she had been visiting relatives.

Mr. and Mrs. W. M. Herman spent Sunday at Moscow with Mrs. Herman's parents, Mr. and Mrs. John Dunbar.

Mrs. W. M. Herman and Mrs. Carl Osmundson attended the school for secretaries of the Rebekah lodge at Lewiston on Monday. They report an interesting meeting.

Mrs. Dale Lanphier was a Saturday passenger for Lewiston, where she joined Mr. Lanphier. They will make their home in Clarkston, where Mr. Lanphier will be employed in the Ford garage.

Mrs. L. Linehan returned home Monday from Spokane where she had spent the past several weeks with her daughter, Mrs. Helen Sanford. She brought her grand-son, little Bobby Sanford, home with her for a visit.

Pine Grove Items

Miss Cora Halee spent the week-end with her mother at Clarkston.

Mrs. Sweet and son, Clyde, are spending a few days at Lewiston.

Miss Thursey Sams and brother, Chester, left for Portland last Saturday for a visit with their sister, who resides there.

The sewing club met with Mrs. Frank Jones last Thursday. There was a large attendance and the time was very pleasantly spent in needle-work. Those who were present had the pleasure of seeing the cougar Mr. Jones brought back with him from his hunting trip. However Mr. Cougar didn't seem to appreciate the guests, which was apparent by his savage growls. A bounteous lunch was served the guests before adjournment.

Turned Over Several Times

"There is too much system in this school business!" growled Tommy. "Just because I snickered a little, the monitor turned me over to the teacher; the teacher turned me over to the principal, and the principal turned me over to pa."

"Was that all?"

"No; pa turned me over his knee."

Smoked Too Much

Passenger: "I say, driver, what is the average life of a locomotive?"

Driver: "Oh, about 30 years."

Passenger: "I should think such a tough-looking thing would last longer than that."

Driver: "Well, perhaps it would, sir, if it didn't smoke so much."

FORM RULES FOR FEDERAL FARM LOANS

Operate on Basis of Nine Month Term—Safety Is First Consideration.

ONE BILLION IS AVAILABLE

Will Issue Charters to 12 Banks—No Help for Speculative Holding of Crops.

Regulations which are to govern the operations of the federal farm loan board, charged with administration of the new government financed intermediate credit banks, have been completed, according to report from Washington, D. C.

It was indicated, following a conference between Commissioner Lobdell of the board and Secretary Mellon on March 12, that $1,000,000,000 will be turned over to each of 12 banks immediately upon the issuing of the charters. Additional funds, up to the aggregate of $600,000,000, will be supplied as needs arise.

Nine Month Basis .

The board plans, temporarily, to hold loans to a basis of nine months maturity. The first few months, or perhaps a year, will be regarded as a period of experimentation.

A construction of the law's provisions, made public by the commissioner, was agreed upon in the three-day conference last week of the board with the land bank presidents. It said:

"Direct loans can not be made to individuals. Direct advances may be made to cooperative marketing associations or live stock associations, secured by warehouse receipts for staple agricultural products or by chattel mortgage on live stock.

"Loans may be rediscounted for national and state banks, savings banks, trust companies, agricultural credit corporations and incorporated live stock companies.

"No paper can be rediscounted upon which the borrower has been charged a rate more than 1 1-2 per cent in excess of the discount rate of the intermediate credith ank of the district.

Security Must Be Good.

"In making advances on warehouse receipts the credit banks can accept only receipts from bonded government warehouses or satisfactorily bonded warehouses operating under satisfactory state supervision and regulation. This should lead to broader interest and greater activity in the development of warehouse facilities and proper regulation.

"The facilities which the banks will be able to afford to cooperative marketing concerns should lead to a greater development of such enterprises.

"Ample funds will be available for loans to facilitate ordinary marketing, but none to support speculative holding of farm products.

"No loans will be made for a longer period than nine months until the system is thoroughly tried out. Upon live stock paper, satisfactory assurance of renewal will be given in proper cases, but only in aggregate amounts equal to the bank's capital, and then the subject of the mortgage must submit to reinspection and a satisfactory condition of security provided."

STATE HAS 24,000 MILES OF IMPROVED HIGHWAYS

Washington no whas 23,924 miles of improved road not including that added during last season, according to the bureau of public roads, United States department of agriculture, which has made a complete census in the state. The improved road mileage at the beginning of 1922 was as follows:

Graded and drained	11,863
Gravel, chert, and shale	10,377
Water-bound macadam	169
Surface-treated macadam	13
Bituminous macadam	108
Sheet asphalt	20
Bituminous concrete	228
Cement concrete	920
Brick	51
Miscellaneous	175

The total road mileage of the state is 45,816 miles, as compared with 42,428 miles in 1914, and during the seven-year period from 1914 the graded and drained mileage has increased from 9,461 to 11,863, and the surfaced and paved roads from 4,922 to 12,061 miles.

The total road revenue in 1921 amounted to $23,860,219 or $357 for each square mile of area, $521 for each mile of road, or $17.59 per capita.

TIMELY HINTS TO FARMERS

By EXTENSION SERVICE SPECIALISTS

Agricultural Engineering.

Where farm drainage is to be done, stake out lateral lines now.

Apiculture.

Your bees will carry out the young if the stores fall below fifteen pounds. Play safe and give them 25 pounds.

Clothing.

The stout woman should select a hat with vertical and curved lines, but not too severe.

Dairy.

Always keep the calf's appetite so he can eat a little more.

Horticulture.

A thorough application of lime-sulphur now will clean off the scale from the fruit trees.

Farm Crops.

Select your choicest ears for this year's corn seed. They should be cylindrical, have straight rows of deep kernels of medium roughness.

Farm Management.

Don't spare labor in preparing land for spring crops. Plow, harrow, and plant carefully.

Plant Pathology.

In treating wheat or oats with copper carbonate be sure and do not inhale the dust. Use a "Dustine" respirator or wet sponge over the nose and mouth. The dust may make yo usick if it is taken into the lungs.

Poultry.

After your chicks are 48 hours old you may feed them five times a day. An ounce to the hundred chicks may be enough at one feed. Use judgment in feeding.

DEMAND FOR HORSES IS GROWING GREATER

People are waking up to the economy of horses for all short haul delivery work according to Paul Connelly, a well known Philadelphia horse dealer. He says: "Trade was better last year than in years and prospects are fully as bright for 1923.

"The increase in demand for extra good draft horses and wagon horses has shown a marked increase for two years and would increase faster if more stables were available. The practice of converting livery stable are getting extra rates for boarding and renting horses for small firms.

"About 90 per cent of all commodities in Philadelphia can be moved more economically by horses. Firms which use horses most airgely are those which deal in milk, coal, bread, ice cream, laundry, peddling, hauling goods from wharves and railroads, of others whose work involves frequent stops."

Reports from the United States department of agriculture bear out Mr. Connell's statement. Market reports just issued, covering the 67 principal markets of the United States, show that while in 1921 there were only 317,445 horses and mules sold at these markets, in 1922 the number increased to 442,646, a gain of 39.4 per cent.

The horse association of America states that reports received from the principal cities in the United States and Canada indicate a strong and growing sentiment in favor of horse use among city business men and an increasing demand for equality draft and wagon horses with prices advancing.

RELATION OF DEATH RATE TO WEATHER CONDITIONS

The low death rate in the United States in 1921 was not only due to widespread health propaganda and improvement in the food situation, but also to several other factors, including very unusual weather conditions, says the weather bureau, United States department of agriculture. Further evidence of the weather factor is presented in figures just released by the bureau of the census, which show an increase in the death rate for the first quarter of 1922 from 12.6 to 13.7 per thousand. The weather during the first three months of the year was abnormally cold in many parts of the country.

The death rate for 1921 was not only the lowest on record in the Unitedl States, but was also about the same in value for countries and cities widely separated. It would be interesting and valuable to be able to trace out the definite connection between specific diseases and the weather. Thus, in England, in 1921, when dry weather was persistent, there were severe epidemics of scarlet fever, and medical authorities had previously noted a connection between scarlet fever and dry years. A correlation study of the Binghamton, N. Y., records and those for Pennsylvania, leads to the belief that it is low relativity humidity that is the important factor, coupled, of course, with a suitable field for endemic prevalence of the bacterium.

Mrs. Harding Accompanies President South

This picture was taken at the White House last week as Mrs. Harding made her first public appearance since her serious illness 6 months ago. Accompanied by the President she went for a six week vacation in Florida. The White House automobile was loaded with flowers from admiring friends.

CO-OPERATIVE BANKS IS BROOKHART PLAN

Iowa Senator Makes Radical Proposal —May Form Own Reserve System.

A proposal to amend the national banking laws to permit the organization and operation of cooperative national banks was made in the senate by Smith W. Brookhart, senator form Iowa. According to this proposal any group, not less than 200, with a subscribed capital stock of not less than $15,000 may organize a cooperative national bank.

It is proposed that each share shall have a par value of $10 and the holder shall have one vote and no more, no proxies allowed, and no votes permitted for capital stock. All provisions of the Federal Reserve act and the national banking act are applied to the cooperative national banks according to this proposal.

It is further provided that after a thousand cooperative national banks have been organized they may establish a cooperative reserve of their own and become members thereof by subscribing for capital stock therein equal to 5 per cent of their own capital stock. Such cooperative reserve banks may also admit as members cooperative state banks organized substantially upon the same plan as cooperative national banks.

Importing Canaries

During the last fiscal year, 154,547 canaries were imported into this country under permit. The number of canaries entered for the Christmas trade, though smaller than in years prior to the war, was more nearly normal than for some seasons past. A specialized portion of the song canaries are imported from Bremen, Germany, where they are collected in the Hartz mountains from peasants who raise them. One of the functions of the biological survey of the United States department of agriculture is to inspect all entries of foreign birds and mammals into the United States to prevent the introduction of undestrirable species. Permits for as many as 17,000 canaries in different lots have been issued in a day, and single shipments of more than 3,000 birds are common.

Each canary is placed in a cage by itself at the point where the birds are gathered. These cages are set in tiers containing three cages one way and seven the other; then the tiers are placed one above the other, "packhouse fashion" about five feet high secured by strips of wood and protected by canvas. In this form the birds are shipped and are fed and watered every day during their journey. An inspector goes over the shipment when it reaches port, requiring the package to be taken apart, and the center row shown, to make sure that only healthy canaries, and nothing but canaries, are in the consignment.

It is further ascertained that each canary is a real singer, by placing the little cages in sunny windows in the importer's place of business. Those that immediately begin to sing are marked to indicate that they may be sold; the silent ones are put aside for a while, or with other singers until they, too, have been heard.

EAST ARCTIC WARMER BUT WEST IS COOLING

The Arctic seems to be warming up. Reports from fishermen, seal hunters, and explorers who sail the seas about Spitzbergen and the eastern Arctic all point to a radical change in climatic conditions, and hitherto unheard of high temperatures in that part of the earth's surface. The weather bureau of the United States department of agriculture is interested in the report made on this point by the American consul at Bergen, Norway, as conditions in the Arctic affect weather phenomena all over the earth. Arctic ice conditions are said to be exceptional to this particular region. Never before has so little ice been noted. One oceanographic expedition sailed as far north as 81 deg. 29 min. in ice-free waters. The Gulf stream was traced as a warm surface current beyond the eighty-first parallel. The warmth of the waters make it probable that the favorable ice conditions will continue for some time.

Many old landmarks are so changed as to be unrecognizable. Where formerly great masses of ice were found there are now often moraines, accumulations of earth and stones. At many points where glaciers formerly extended far into the sea they have entirely disappeared. The change in temperature has also brought great changes in the flora and fauna of this portion of the Arctic. Former great shoals of white fish have disappeared from Spitzbergen waters and the seal catch is far under the average. Herring and smelt, however, have come in great numbers.

In contrast with the mild Arctic conditions in the vicinity of Spitzbergen, present advices seem to indicate an excess of ice accumulations in the Arctic north of Alaska and North America.

CONSTANT GROWTH NEEDED TO MAKE PIGS PROFITABLE

The profitable pig is the one that never stops growing from the time it is farrowed up to the time it is hauled to market. The wise hog grower stimulates growth in the pig before the litter is farrowed by keeping the sow in good condition. It is assumed that the sire and the dam are of the right type, big and growthy.

Pasturage of good quality, shorts or middlings, fish meal or tankage to furnish protein, with sufficient corn or barley to keep them in fair flesh, make up a list of desirable feeds for breeding hogs. Alfalfa, soy bean, or clover hay are valuable additions for winter feeding and may be scattered out so as to induce the sows to take exercise daily, a great necessity for breeding hogs.

Sows must be well fed to raise good pigs, but this does not include the idea that the sows are to be fattened before farrowing. For 24 hours before and after farrowing the sow should have no feed, but tepid water should be constantly available. After this fast, feed should be given in small quantities at first, then gradually increased up to full feed within 10 days.

Even before the pigs are weaned they should have access to shelled corn in self feeders as a supplement to the milk from their mothers. As soon as they are weaned they should be kept on full feed, either on self-feeders or by hand. Pigs that are well fed and have enough exercise will reach market weights at about 8 months of age.

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

CHAPTER XI.

Jim Sprague wheeled about in amazement. He could hardly believe his eyes when he saw "Speed" Stanbury facing him. He was cornered—escape was impossible.

"Kind of surprised, aren't you?" "Speed" grinned. "Why don't you call in your cannibal kingdom this time? I tell you, Jim, you're going back with me."

Much to his amazement, Jim Sprague took the offensive and rushed him. And then the struggle was on—a struggle many feet below the face of the sun. Sprague suddenly rushed "Speed" and the latter tripped over a pipe. Before he could regain his footing, Sprague had seized a club and strick him a fierce blow over the head with it. Young Stanbury sank with a groan, while his enemy took to his heels, intent on getting out before the explosion would take place.

Into the Crusher.

"Speed" Stanbury, after a tremendous effort, managed to raise himself on one elbow in time to see Jim Sprague running through one of the corridors of the mine. He staggered to his feet, realizing that he must escape before the blast, but it was too late. At that moment there was a terrific explosion and the whole world seemed to close in on him. Enormous timbers and rocks were falling around "Speed," while he dodged back and forth to keep from being hurt.

One huge piece of timber lodged itself against the wall, another over his head, thus making a sort of protection for him from the crashing debris. Waiting until the danger was over, "Speed," covered with dirt, wandered through one of the dark passageways of the mine toward a spot where he supposed there would be an exit.

Meanwhile, "Speed's unscrupulous cousin, Edwin Stanbury, was telling Vera Harper of his latest bit of strategy. "I don't know where 'Speed' is," he was saying, "but I've got Lucy Durant locked up at the lodge in the woods. She walked into my trap very nicely."

"Where there's smoke, there's fire, and where there's Lucy, there's 'Speed,'" Vera warned. "Better watch out, Edwin. If 'Speed' lays hands on Sprague and gets him back to town to prove his alibi—bye-bye to the Stanbury fortune as far as you're concerned."

"I hate them both!" Edwin exclaimed. "I'd give half the Stanbury fortune to have them out of the way this minute."

At that moment Jim Sprague, soiled and breathless, appeared before them. He quickly told Edwin of his encounter with "Speed" in the mine and of the young man's probable death in the explosion. Edwin rubbed his hands jovially at the news, but decided that he would see for himself. He was taking no chances.

Arriving at the mine, he met one of his men and descended the shaft. The miner guided Edwin Stanbury through a passageway toward the old shaft where the explosion had taken place—and suddenly he came face to face with "Speed." The cousins both stared at one another in amazement. Then "Speed" turned and took to his heels.

"He's running to his death," the miner informed Edwin, "that corridor leads to the big open excavation."

"Speed" ran wildly on and suddenly dashed off into space as he leaped over the huge cavity. He caught on a beam some 10 or 15 feet away and started to crawl down, but slipped and fell and landed in an underground pool of water which saved him. Swimming out, he started to make his way down to a lower level of the mine, where he knew there was a hole leading out of the side of the cliff.

Edwin Stanbury returned to the hotel and told Sprague and Vera that his cousin was done for. "So," he finished, "now that you no longer have 'Speed' Stanbury to fear, you can go to my lodge in the woods and get an accounting from Lucy Durant concerning the injuries she did your wife."

A look of evil triumph appeared in Jim Sprague's eyes as he started for the hunting lodge. As he walked along he planned his vengeance, still believing that Lucy was responsible for the heartless attack. But as he came to a clearing, he started back in fear. He was face to face with "Speed."

"No, Jim," young Stanbury coolly smiled, "you're not seeing things. It's me—flesh and blood! What I want to know is this—am I going to have to give you the licking of your life to get you back to town with me, or do you know when you've had enough?"

"I know only one thing," Sprague replied, "you'll never take me back alive."

"Speed" took the offensive and rushed Sprague, but the latter was prepared and returned the blow deftly. Then, with a terrific blow, "Speed" sent his quarry sprawling. As Sprague landed on the ground his hand rested on a cudgel. He sprang to his feet and struck young Stanbury a crashing blow over the head. "Speed" sank to the ground, and Sprague, almost frantic with fear, took to his heels.

So great was his haste that he did not see "Speed" scrambling to his feet and lurching unsteadily after him. Sprague arrived at the hunting lodge and was admitted by Edwin's men who had been left to guard the girl. In the living room, he looked about—it was empty. But Lucy, hearing the sound, suddenly appeared in the doorway of a balcony at the head of the stairs. At the same moment, the door was thrust quickly open and "Speed" entered.

Taking the situation in at a glance, he dashed past Sprague and rushed up the stairs to Lucy. "I'll hold these men here," he whispered, "you get out—back to the hotel!"

Even as he spoke, Edwin's men entered and rushed up the stairs after him. "Speed" planted a good solid kick in the stomach of the first man, sending all three of them downward, headlong. At the same time, Lucy saw her chance and made her escape. As his attackers made the second rush, "Speed" dropped from the balcony, rushed to a window on the other side of the room and dropped to the ground. Before his enemies could take up the chase, he had disappeared into the woods.

Jim Sprague was in a fury. By his mismanagement he had let two very important characters in his life slip from his grasp. Sprague immediately got Edwin on the phone and acquainted him with the facts. Stanbury hastily hung up the receiver and rushed from the hotel to give the alarm to his men. He offered a large reward for the capture of Lucy and "Speed," terming them both as fugitives.

Lucy Durant was meanwhile approaching the mines near a sharp trestle from where buckets from the shafts took the ore up a structure about one hundred and fifty feet in height. At the top of this structure, the buckets automatically dumped the ore into a hopper which crushed the rocks, and the whole substance was dropped down through the crushers to the ways in time, loaded with ore, separating the iron from the stone.

As Lucy arrived in the middle of this place, she looked about her cautiously. At the same time, one of the bucket cars rapidly descended the tracks and the girl, unable to get out of the way in time, was knocked off her feet and thrown into the ore where the buckets were coming up. Before she could recover herself, she was rolled with the ore into the bucket that was going up toward the crusher.

She looked wildly about her, but there seemed no way of escape. To spring from the car meant a perilous drop of many feet and there was no other way for her to make a move. The girl watched anxiously as the car neared the top, thinking she would be able to extricate herself before the ore beneath hr was droppd into the crusher.

"Speed" Stanbury appeared on the scene suddenly and saw the girl he loved being carried up the steep incline to the top of the structure where it seemed inevitable that she would be dumped into the crusher and the life ground out of her.

After looking about, he dashed wildly for the power house and seized the cable that was moving upward toward the top of the structure. He was carried upward in midair, clinging to the cable. It was "Speed's" hope that he could get to the top of the structure before Lucy, so that he could save her from the crusher—but the cable seemed to move so slowly.

(To be continued.)

A clutch of chickens that lost control of their limbs when fed bran and cornmeal were brought back to condition by the addition of bone meal and charcoal. At first this was made into a mash with buttermilk. The soil on many farms is running out of mineral matter in quantities sufficient for farm flock.

THE DANGEROUS AGE

FICTIONIZED BY CONRAD GIBSON

From John M. Stahl's Photoplay of Frances Irene Reels' Screen Story Released by Louis B. Mayer through Associated First National Pictures Inc.

INSTALLMENT NO. 2.

As if nature herself were marshalling her forces in conspiracy against him, the night brought a silvery full moon. John Emerson walked leisurely about the gardens, a flow of scented breezes enveloped him. The man himself did not feel equal to the task of diagnosing the strange ,restless urge which had come over him. Within him there was a constant beating of the drums of revolt. He closed his lips and tightened his clenched hands and walked, and walked, and walked.

Coming finally into an open space he found Ruth, a vision of delight in white frock and bobbed brunette hair, looking steadily toward the great arched entrance to the grounds.

"Hello, there, darling," placing an arm about her shoulder. "And may I ask which one is coming tonight?"

"Both, daddy!"

And she clasped his big shoulders and placed a kiss on his cheek. And he returned the caress. Then he walked away, his eyes fixed far in the distance, and he heard the gay voices of youngsters as they flew past in high powered speedsters on the motor road below. He was about to turn into a darkened spot to rest on an old bench where once he and Mary often talked at evening. As he did so, he caught sight of still another pair of diligent wooers—old Annie, the negro maid, and her "gen'leman fren," and he passed on, unable to withstand longer the sights which were crowding themselves before him and causing his feverish brain to whirl with that strange and unexplainable feeling which had come over him.

In another home a half mile distant one of the "both" to which Ruth had referred prepared himself now for the battle of hearts into which he soon was to enter. Bob was a nice boy, but he lacked both a sufficient and an impelling wardrobe with which to properly wage his campaign. At last, aided and abetted by one of his father's silk vests, which hung from his shoulders like a great shawl of some secret society chieftain on parade, he strode forth to do or to die.

As always seems the case when a man makes love, the second aspirant to the hand of Ruth also was making ready. Ted was a young man to whom the other boys at school had refered as Tubby, but his avoirdupois had not seemed to dampen his ardor which his adored Ruth had openly expressed for him.

And the two met face to face at Ruth's front door.

"Hello, boys!" she hailed them from an upper window. "Be down in just one little minute."

The two young men below turned back-to-back and waited for the little lady of their hopes to come to them.

In the garden a lonely man was turning his steps toward the house. It was now brightly lighted and through the doors a hymn was being borne out on the evening air. It was Mary's voice. John drew back a shutter and peered inside. There sat his wife, sewing steadily, resolutely, upon a suit of his own last year's woolen underwear. He resented this drudgery, this sameness, this colorless nothingness which his wife insisted upon. He would go in and ask her to stop it. He would discuss the matter quietly, yet firmly, with her. And then as quickly as the thought had come, it vanished. No, he would not speak to her calmly and coolly. He would go in and face her and demand that she refrain from cluttering up his home, his very life, with meaningless commonplaces, with old women's pastimes and endless nothingness. And then as quickly again he remembered those other days, when they were young. He faltered, then he walked inside.

"Mary," he said, his voice trembling with emotion as he advanced toward her, placing his hand upon her drooping shoulder, "why, oh, why, do you do this?"

His wife looked up at him, half-smilingly.

"It's simply got to be done, John. You'll need them when you make your trip to New York. It's so much colder there, they say."

At the mention of the name of the city to which Emerson had made an annual pilgrimage for the last ten years in the course of his business, a faint light passed over his countenance. But he looked back upon her, stroked her hair gently, then sat down beside her. She kept steadily at her sewing, and presently, after he had found she would not be amused at the quips which he made of her work, he said, placing his lips close to her cheek:

"Mary, dearest, put away the work basket and come out into the garden with me where the moonlight is glorious and where there's rest and everything to make us happy. Will you? Please do."

"John, don't be silly. You talk like a schoolboy. You're too old to speak such nonsense." And she drew herself from him and resumed her work.

Again the fire of discomfort raged within him. He watched her snip off the thread and start to place another strand through the needle's eye.

"Mary," he said, his voice heavy with emotion, "you're growing too old fashioned. And it's just because you're allowing it. It isn't you to be this way. You mustn't permit yourself to be an old woman yet."

His voice changed and fairly rippled as he ended his appeal. He was laughing lightly, and he leaned over his wife's chair as if to loosen the high fitting neck of her waist. He began slowly turning the edges inward until her clear white throat was exposed until she finally shifted uneasily, replaced the collar, and rebuked him with:

"John, what has gotten into you? That's not dignified. You shouldn't be acting like a boy of eighteen. You're old enough to know better."

He turned and walked across the room. As he faced the long mirror on the living room wall at the doorway he stopped suddenly and glanced into it. Then he moved more closely. He was peering into it, gazing intently upon his own face. A moment passed. An emotional expression fitted. Then a slight smile. Was he so old, after all? She had called him old. But was he? No, he really wasn't so old. There were many older men. And he was at least young in mind. He would not be old! He touched his mustache proudly, then turned to find Mary looking intently at him.

Still basking in the thought which had come to him, he leaned over toward the floor and touched his finger tips to the deep rugs. He did it three times. And on the fourth dip he felt a sudden twinge. Quickly he straightened, and walked limply across the room. He picked up a newspaper, but was promptly distracted from his reading by boisterous laughs and the sounds of little girls that drifted from the veranda. Presently the four youngsters—Ruth and her girl chum from down the street, and Bob and Ted—came joyously into the living room, and instantly John Emerson was on his feet. Mary continued her sewing, paying little heed to the pranks the four were indulging in, but Ruth's father took his turn at playing in their games.

When the phonograph had been started, Mary fidgeted nervously at her work, but John Emerson thrilled with pride when Bebe asked him if he would dance with her. And a moment later ,when she glided about the floor held tightly in his arms, then suddenly leaned closer and said:

"You dance divinely," the man turned and peered toward his wife and the impulse was there to ask the girl to repeat it—to repeat it aloud!

The party ended, Ruth ran up the wide stairway to her room. John walked to a window and stood looking into the night.

In the house next door a light had been switched on, and there, outlined against the lace curtains, were the forms of a husband and wife sitting conversing. Presently the man arose and moved closely beside the woman. He placed his hand upon her shoulder and John saw her rise to the touch and sink herself deep into her husband's arms. As he stood there, Emerson saw the light extinguished, saw the lighting of another lamp on the floor above, then he turned nervously to Mary again. That was the way men ought to do! His neighbor was right! Women wanted to be mastered, anyway. He would do the same!

He moved close to his wife. He again placed a nervous hand upon her shoulder.

"Come, dear," he began in as stern a voice as he could muster. "We'll turn in now. Come along."

But it was not successful. Instead, John Emerson heard the cold, determined words:

"John, don't be silly. Go along to bed. I'll not disturb you when i come up. I've got to finish these aprons tonight."

Disgruntled, he obeyed. A moment later he heard a light rap upon his door. Opening it he found Ruth, her eyes red from weeping. She poured out to him the story of how her beloved Bob had run away with her best friend, Bebe, without even as much as a goodbye.

"Don't fret, my baby," he told her, clutching her warmly in his arms. "It always turns out all right. Bob will come back to you if he cares for you. If he doesn't, then you shouldn't worry."

He led her slowly to an easy chair. He asked her to sit down beside him, and there in the shadows, John Emerson gave to his only daughter the advice which he had so often wished had been given to her mother.

"My dear child," he began, "when some day you grow up and you fall in love with someone who loves you, don't ever lose sight of the fact that romance — understand? — romance is the very greatest thing in life. Most people lose it too soon, darling. But you'll not, for your daddy is warning you in time. When you are forty, Ruthy, dear, I want you to be as filled with romance and love for the man you marry as you were at twenty. I hope you will always remember that. Now, will you?"

She snuggled closely unto his breast, and promised him. Then as she flew from his arms at the sound of Bob's unmistakable whistle from the street, John stood a moment, sighed deeply, undressed and fell heavily into his comfortable bed.

(To be continued.)

Growing What You Eat

Prepared by the Extension Service, State College of Washington.

Planting Potatoes.

In order to secure a crop of good potatoes for family use, proper care must be exercised in planting the seed.

Proper preparation of the soil is essential. In order to produce smooth, well formed tubers it is necessary to have a seed bed free from hard clods. Deep fall plowing should be practiced and a replowing of the soil is recommended, where moisture conditions permit. It is also well to give the ground a weekly harrowing from the time of the spring plowing until time to plant the seed. A light loamy, well drained soil is best suited for potato production.

Seed selection is another essential. The best is none too good, even if it costs a little more. Secure certified or other high grade seed, experience in this state has proved that it is not safe to use any other kind.

Don't get in a hurry to plant potatoes in the early spring. If the seed is planted while the soil is yet cold there is a possibility of more disease developing. Field demonstrations conducted in various parts o fthe state show that potatoes planted in June give the largest per cent of commercial tubers.

The Oregon experiment station has lately proved that the blossom end seed pieces are the best and that their vitality is lowered if this seed piece is split. Potatoes should be cut so as to save the blossom end seed piece whole.

Seed treatment is another essential practice. Treat the uncut seed six weeks before tim to plant, using four ounces of Corrosive Sublimate to 30 gallons of water. Dip the seed for one and one-half to two hours. Immerse the potatoes in the solution either loose or in wooden crates but do not use burlap sacks.

The treating vat for Corrosive Sublimate should be made of wood or ce-

IDAHO PETITIONERS GET FOREST ADDITION

President Harding has signed a proclamation adding more than 250,000 acres to the Lemhi national forest in Idaho.

This addition, according to a report of the forest service, United States department of agriculture, is the result of petitions made by associations in the state of Idaho who asked for protection in the use of the stock ranges which were being overgrazed and denuded by nomadic bands of sheep driven in from distant points.

The petitions resulted in a special act of congress on March 21, 1921, authorizing the inclusion of certain described lands found by the secretary of agriculture to be chiefly valuable for the production of timber or the protection of stream flow.

STATE FORESTS ARE LARGE PUBLIC ASSET

Idaho Already Realized Millions From Sale of its Timber—Still Owns 700,000 Acres.

The state of Idaho owns some 700,000 acres of forest land. From this land it has already sold more than two and a half million dollars' worth of timber, the receipts going into the permanent funds of the schools and institutions of the state. During the years 1919 and 1920 alone it realized $81,466 from the sale of timber. Only about one-third of the state land has been cut over in the 30 years over which the sales have extended. Timber is now bringing more than double what it brought a few years ago. Ten thousand acres recently cruised will remain in state ownership, and under the present policy of management should be left in shape to grow another crop of timber.

Although the state has been receiving this revenue from its timber lands, it has expended less than a half million dollars in the care and protection of its forests. If protected from fires these forests can yield revenue on the present scale for years, if not indefinitely. They should provide a permanent income which would take just so much off the back of the taxpayer. They are indeed like the proverbial goose, presenting a neat golden egg to the people each year. This egg drops to a place where it will be of immeasurable benefit—in the lap of the public schools and institutions upon whose welfare depends so much of the welfare of the whole people.

Material Resembling Coal Discovered at Lewiston

What looks like a partially formed coal deposit has been opened at the Lewiston brick plant, east of town. This week while digging a well, the men encountered, at 18 feet below the surface a deposit of material that burns well and produces good fire. The entire shaft, some five feet square, is in the vein and at quitting time last evening had sunk 24 inches without going through the vein. In appearance the material is brownish black and looks like an old buried forest, the bark and grain of the wood being plainly visible at places. Some pieces resemble coal, and it all burns. When the thermometer dropped recently, the boys sleeping in a tent, kept a hot fire going till morning by filling the stove from excavation from the well.

At a point some 200 feet south and 20 feet higher, above the river level, at a place where the dirt has been dug away, leaving a bank with a 20-foot face, the same material is again exposed. This second deposit is burned 20 feet below the surface and how such a mass of forest could have been buried there even ages ago, is a mystery. These deposits are about 50 feet above the Clearwater river bed and at the foot of the mountain more than half a mile from the river as it now runs.—Lewiston Banner.

Argument

"It is charged that your car scared several horses."

"No, y'honor, everybody testified the car was going so fast you couldn't see it."

"Well?"

"If they couldn't see it, how could they be scared?"

A Disabled Veteran Carries On

Last week's issue of the American Legion Weekly had the following to say concerning the adjutant of the Idaho department:

It was at Cantigny in May, 1918, that Company C, 56th Engineers, on detached service with the First French army, got its first taste of action. Two platoons of the company were commanded by Lieut. Lester F. Albert, who had charge of field operations of the Searchlight section. Their position was under direct and heavy shell fire during the night of May 27. Next morning a shell registered a direct hit.

That shell ended Lieut. Albert's active service. It shattered both of his legs, tore off his right hand and inflicted many severe body wounds. First aid was rendered by Lieut. A. G. Byrd, company medical officer. When the French surgeons resorted to blood transfusion to save Albert's life Leut. Byrd was again on hand to furnish the blood.

Fourteen months later Lieut. Albert was discharged from the government hospital at Fort Snelling, Minnesota. He returned to his home state, Idaho, with both legs gone. Handicapped in the game of life? Albert didn't look at it that way. He resumed his work as an electrical engineer, and he became one of the pioneers in the organization of the new veterans' outfit, The American Legion, in Idaho. When the department of Idaho held its second annual convention in April, 1920, Albert was picked out for the job of department adjutant. He has held the position ever since, the fourth annual convention last July electing him for an additional term of three years.

Lieut. Byrd is also still on the job. He is Dr. A. G. Byrd of Emmett, Idaho, past commander of the Legion post of that town.

Honesty's Reward

"Yessuh, I's done proved that honesty is the best policy after all."

"How?" demanded his friend.

"You remembers dat dawg I took?"

"Shore, I remembers."

"Well, suh, I tries fo two whole days to sell dat dawg, and nobody offers mo'n a dollah. So, like an honest man, I goes to de lady dat owned him an' she give me $3.50."

When we get ready to go bankrupt we will buy a sissy for what he is worth and give him away.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for the the County of Latah.

Izora M. Sides, Plaintiff, vs. Wayne Sides, Defendant.

The State of Idaho sends greetings, to the above named defendant, Wayne Sides.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the county of Latah, by the above-named plaintiff of the nature in general terms as follows:

The said action is brought to obtain a decree of divorce dissolving the bonds of matrimony heretofore and now existing between plaintiff and defendant, as will more fully appear in the complaint on file herein and to which reference is here made and for the care, custody and control of Elvin Edward Sides, the minor child of the parties, and

You are hereby directed to appear and answer said complaint within 20 days of the service of this summons if served within the judicial district and within forty (40) days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in the count yof Latah, this 7th day of March, 1923.

HARRY A. THATCHER, Clerk.

Bielenberg-Schooler Post
The American Legion
Meets Each
First and Third
Wednesday of the Month

The Bielenberg-Schooler post, as shown by department records, occupies the unenviable forty-third place in standing among all Idaho posts, with a renewal percentage of 70. Malad is leading the state with 345 per cent. The membership committee is planning to put the local post on a better membership basis by a determined campaign for membership.

The Lewiston Voiture of the 40 and 8, will hold a business meeting at the Lewis-Clark hotel on Saturday night, March 31. There will be election of officers and plans completed for the big spring initiation. The excellence of the Lewiston wrecking crew has been recognized and they have been requested to exemplify the work at the department convention.

The local post hopes to have available for Decoration Day a supply of red poppies, the official flower of the legion. These poppies are made of silk by French war widows, children and disabled. The proceeds of the sale are used for meritorious needs.

The poppy is emblematic of our dead who remain on foreign soil and a red poppy worn by every one on Decoration Day will do much to perpetuate the memory of all who gave their lives that this country might live.

THE GENESEE NEWS

VOL. XXXIV GENESEE, LATAH COUNTY, IDAHO, FRIDAY, APRIL 6, 1923. NO. 40

SEMI-LOCAL NEWS CLIPPED FROM EXCHANGES

Beautifying Park

Cottonwood's automobile park, established last year under the direction of the Cottonwood Commercial club, and used quite extensively by tourists will be greatly improved this spring. Last fall the ground was leveled and within a few days some 20 trees will be planted about the grounds. A week ago the ground was seeded to blue grass.—Cottonwood Chronical.

Received Game Birds

The Asotin county Game Commission this week received a nice shipment of young Chinese pheasants, from the state game farm at Walla Walla, and the County Game Warden, M. C. Martin, liberated them in different parts of the county. Some were taken to the Clarkston Heights, some up to Asotin creek, some to Anatone and back of Cloverland, and a few around Asotin.—Asotin Sentinel.

Two Shifts At Potlatch Mill

The Potlatch mill is now running double shifts. This means that activity in the woods must begin in earnest very soon. The logger is now in service, and the camps are opening as fast as the timber becomes free from snow. The impression is that this is going to be the busiest year the lumbering industry has had for many years. The demand for lumber was never better than at the present time and is getting better as the season advances.—Deary Press.

Opens Ford Garage

The Clarkston Auto company opened business in the Schweiter block at Sixth and Elm streets this week, with A. A. Murphy in charge. It will be the official ford agency for Asotin county and give special service in all Ford lines.

Mr. Murphy is connected with the Jeffreys-Murphy company of Lewiston and formerly owned and managed the ford garage in Genesee. He is well and favorable known to the automobile trade. The shop will be in charge of Dale Lamphier, of Genesee. Both men will make their homes in Clarkston.—Clarkston Republic.

Some Large Egg

Mr. and Mrs. Charles V. Boggan are fanciers of the Black Minorca chickens, and they are very fine. This week in one of the nests was found a very large egg, and Mrs. Boggan asked Uncle Jimmy Boggan to take it to the Sentinel office, which he did; and we thanked him very much, because it will make the main part of the writers breakfast one of these mornings. It was certainly a mammoth egg, measuring 7¾ inches in circumferenceone way and seven inches the other. Now, if there is anyone, or any number of people who think they have eggs that will beat this one, all they have to do is to bring them to the Sentinel office. Proof is the thing that counts at any time.—Asotin Sentinel.

Death of John Tetley

John Tetley, a resident of lower Asotin road since 1904, died Tuesday morning, March 27, at his home. He was born in Norway in 1852, emigrating to America in 1870 and came to Genesee in 1891, settling on a farm on the south side of Paradise mountain, where he resided until moving to Clarkston.

Besides his widow, he is survived by two brothers, Rev. P. H. Tetley of St. Poul, Minn., and L. Tetley of Medora, S. D.; two sisters, Mrs. E. Anderson of Grayville, S. D., and Mrs. Anna Milling of Galt, California.

Funeral services were conducted Thursday morning from Our Saviour's Lutheran church, with Rev. O. P. Stensland officiating and the remains were laid to rest in the Genesee Valley Lutheran cemetery.—Clarkston Republic.

Plan to Stop Jay-Walking

Mayor Hawkin Melgard has enlisted the aid of the Boy Scouts of Moscow in reducing the danger to pedestrians at street intersections in the business district. Tomorrow afternoon, Troop 1, with the aid of the street department, will paint "safety crossing zones" on intersections on Main and Washington streets. All day Saturday Scouts will be stationed at Third and Washington to teach the public to use the guide lines in crossing the streets.

The city council feels that Moscow has long needed to conduct a campaign against jay-walking and now that the machine has arrived for painting the marking strips, will ask that the public observe these needed precautions in crossing streets.

All Boy Scouts having uniforms, who wish to secure credit for service in the safety first merit badge, should report to the Boy Scout office before Friday evening and they will be assigned a period Saturday, during which they will act as special police to see that the public carries out the wishes of the city officials. —Star-Mirror.

NEW FISH AND GAME WARDEN TAKES OFFICE APRIL 1

R. E. Thomas of Kellogg, Shoshone county has been appointed State Fish and Game Warden to succeed Otto M. Jones on April 1. Mr. Jones' resignation was requested by the governor, in line with his plans for a reorganization of the fish and game department. Terms of the local deputy wardens and other employes of the department automatically expire on April first with the change in the wardenship. Re-appointments of such employes as may be necessary will be made by the new warden when he takes office but the force will be greatly reduced in line with the governor's program of economy. The reorganization contemplates eliminating employes wherever possible without crippling the department.

Interested in game work all his life Mr. Thomas has been with the fish and game department for the past four years as assistant chief deputy, in charge of the north Idaho territory. This is one of the largest game regions in the state and "Dick", as he is familiarly known, has conducted his work here with extraordinary efficiency. He is keenly interested in game conservation and perservation and his intimate knowledge of the work of the department during the past four years enables him to carry on the program which has been so successfully inaugurated. With his experience in the game department work he also carries a knowledge of the conditions confronting the farmand sportsmen so that he will be in a position to work in harmony with all interests in the state. He was solidly endorsed by north Idaho, one of the important game regions of the state.

"It is my plan and ambition to develop and conserve our fish and game to the highest possible degree," said Governor Moore in announcing the appointment of Mr. Thomas. "I am a lover of the great outdoors and no man in Idaho is more deeply interested in preserving the great game resources of our state. Idaho is particularly fortunate in the fish and game she possesses and the state will do everything within its power to protect and develop her great resources along those lines, bearing in mind at all times the ability of the people to pay. I am in sympathy with the organizations which have been formed for that purpose and we hope to work with them to a common end.

"My home is in the proximity of Yellowstone National Park, America's playground. Hunting and fishing is at its best in that section of the country. The hills and streams in my home section abound with game and fish and I have always been actively interested in the propagation of this great resource of our state. Our sportsmen, our farmers and our livestock men will find Mr. Thomas and myself giving our sincere efforts to their best interests."

Easter Cantata

In spite of the inclement weather the Federated church would scarcely accommodate the the large audience which gathered to hear the Easter cantata, "The Resurrection Story," given by a chorus of Genesee voices. With respect to the individual singers it is hard to differentiate as each and every one delighted their hearers. The soloists—Mrs. Burr, with her smooth, rich tone, is gladly heard in Genesee people; Mrs. Bressler, with the ringing, carrying qualities of tone in the obligato was delightful; Mrs. Neimann pleased the audience with her soft, mellow soprano voice: Mrs. Springer conveyed much expression with her rich contralto voice. Messrs. Shork and English, tenors were highly commended, and the trio by Miss Martinson, soprano, Miss Winegardner, alto, and Colin Wilson, bass, was worthy the credit given them, as was the ladies' double quartet, which carried beautiful harmony.

Those in the choruses were Mrs. Burr, Mrs. Niemann, Mrs. Bressler, Miss Martinson, Mrs. A. Hampton, Miss Mathews, soprano; Mrs. Fred Hampton, Mrs. Emmett, Mrs. Springer, Miss Winegardner, alto; Messrs. Dumpass, Shork, Winegardner, Green, English, tenor; Messrs. Arthur, Gash, Follett, Wilson, bass. W. E. English was conductor and is deserving of much credit for the success of the cantata.

Many have spoken of this as the finest musical production ever given by Genesee people.

Our splendid musical talent should not be hidden under a bushel but used as a beacon light and developed for the benefit of the community.

Miss Mary Kane Married

Word has reached Genesee friends of the marriage, on February 10, of Miss Mary Kane and Earl Johnson at the Presbyterian parsonage, Great Falls, Montana. A honeymoon trip was taken to Helena and other points in the state. They are making their home at Willow Creek, Montana, where Mr. Johnson is engaged in engaged in ranching.

Have to Dodge 'Em Anyway

It's a fact tho, that we all have an overpowering interest in automobiles. If we don't all own them we have to dodge them.

NIGHT HAWKS TO FRONT IN CITY BOWLING LEAGUE

With the City Bowling league nearing the end, the Night Hawks are out in front, with the Cougars as close runners. The Cougars, having lost Foster and Vandenburg, face a gruelling finish in a rather crippled condition.

The Owls and Coyotes are eliminated from championship honors unless there are unusual upsets in the remaining games.

Following are detailed scores:

March 28

	1	2	3
Coyotes—			
Feeney	168	173	157
Rader, C.	111	119	122
Wilson	136	143	149

	584	556	625

Standing of the teams on April 3 was as follows:

	W	L	Pct.
Night Hawks	13	8	619
Cougars	12	9	571
Coyotes	9	12	428
Owls	8	13	381

Charged With Kidnaping

Some little excitement and comment was caused on the streets of Genesee the first of the week when Mrs. Meta Wagner of Portland, Oregon, and her father, Smith Printy of Genesee, were arrested for kidnaping the former's two minor children by a former marriage, Mabel and Charles Bottjer.

Mrs. Wagner was given the custody of the children in a decree of divorce a few years ago when she separated from William Bottjer. Both2 afterward married.

The children were making their home with their father when he was accidentally killed in a runaway last September. The son had been with his father continuously for the past four years and the daughter had spent the greater part of that time with him. The children, after their father's death, went temporarily to live with their grandmother, Mrs. Margarta Bottjer, at Genesee, and remained in her care until a guardian was appointed. John Bottjer of Potlatch, an uncle of the children, was named guardian and the care of the children was given to their grandmother.

After the arrest of the mother and Mr. Printy the children were taken to Moscow in custody of the sheriff and Attorney Morgan, counsel for the guardian.

No definite agreement had been announced at the time of going to press.

Ice Cream Social Success

An ice cream social was given by the ladies' missionary society of the Federated church Saturday afternoon, April 31. Cake and ice cream were served, and numerous articles were sold. The amount of the sale was $32.

RURAL MAIL BOXES TO BE PAINTED BY PATRONS

The following is taken from the Postal Bulletin, issued by the post office department at Washington, D. C.:

The special attention of postmasters at offices where rural delivery routes are in operation is invited to the need for improving the appearance of mail boxes on these routes. These boxes at the present time, as a rule, present a very unsatisfactory appearance, due to the fact that the galvanized of aluminum finish has worn off on account of exposure to the elements to such a nextent that the base metal has been exposed and in many cases has rusted. It is the purpose of the department to improve the general appearance of rural mail boxes throughout the country, so that they may be a credit not only to the postal service but to the community through which the rural delivery route operates.

It is desirable that the boxes be painted white with the name of the head of the family or families receiving mail in the box painted on both sides of the box in neat black letters one inch in height; also that the painting be done at least once each year. It is requested also that the posts or supports to which the boxes are attached be painted white. This will improve not only the appearance of the boxes but will add materially to the life of the boxes and posts.

Postmasters at the time of making the regular semi-annual inspection of rural delivery routes at their office, and postmasters at the time of subsequent semi-annual inspections, are instructed to take particular note of all rural mail boxes which do not appear to have been painted within the past one or two years, if old boxes—or within the past five or six years, if new galvanized boxes—making a memorandum of the names of the box owners; they are furthermore directed to politely request the owner in writing to paint the box and post in accordance with the above instructions and to neatly stencil or paint his name on the sides of the box. It is believed that this request in a large majority of cases will have the desired result.

It must be distinctly understood that the department will not permit the withdrawal of service from a rural mail box which the owner refuses to paint so long as the box remains weather-proof and a fit receptacle for mail. However, it is believed that the cooperation in this endeavor of all patrons of rural routes throughout the country can be secured through postmasters and the appearance of the boxes materially improved.

Boerman-Flomer Nuptials

A quiet but pretty wedding took place Wednesday evening, April 4, at 8 o'clock at St. John's Evangelical Lutheran church, when Miss Trena Boerman of Modesta, California, became the bride of Carl Flomer of Genesee, Rev. A. F. Wolff, pastor of the church, officiating.

The bride wore a beautiful dress of blue crepe de chine with blue tulle to match. She carried a beautiful bouquet of pink carnations and forgetmenots. She was attended by Miss Henrietta Blum of Cameron, Idaho, who wore a coral wandie dress and a breast bouquet. The groom was accompanied by Gustav Blum, brother of the bridesmaid.

After the ceremony a reception was held in the basement of the church, where ice cream and cake were served.

The bride came to Genesee some two weeks ago from her home at Modesta, California, and during her short stay here has made many friends. She has a very pleasing personality and Mr. Flomer is to be congratulated upon his choice of a life partner.

The groom is a son of Mr. and Mrs. Henry Flomer, highly respected pioneer residents of Genesee. He was born and reared here and has a host of friends who congratulate him sincerely.

The young couple will make their home in Genesee.

"The Man Unconquerable"

The magic spell of the long glistening beaches and swaying palms of the exotic South Seas will be wafted into the opera house Saturday evening, when Jack Holt's new picture, "The Man Unconquerable," will be the stellar attraction.

It is a story of great power, dealing as it does with a young man who has been reared with a profound respect for law and order. He inherits his uncle's pearling grounds on an island in the South Pacific, and he resolves that he will maintain his peaceful principles in his new possessions. But he has misjudged the elemental passions and cunning of the pearlers and finds that he has to discard his theories and fight. And when he does fight he is unconquerable.

The star is superb in the role and has not been seen in a part which fitted him better in a long while. Sylvia Breamer is excellent in the role of a little French girl who first stirs the man into a fighting mood with her scorn and then calms him with a smile.

The picture has been perfectly invested with the atmosphere of which the story deals, and moves with the swiftness of a machine gun.

A "For Sale" ad. will sell your stuff.

SCHOOL NOTES

Spring Time And Students

After the autumn enthusiasm in new work and the long winter months,spent by those studiously inclined in shaping their various physical beings to the mold of school seats and desks, the reaction of the spring term is inevitable. Lessons and courses are being summarized and clinched in the minds of the embryonic citizen while his body is pleading for freedom of the great outdoors. He is in tune with the long sealed buds of the willow and the poplar and pine, and like them, is about to break the bonds of the winters hibernation and exult in the ever appealing forces of sunshine and wind and rain, of tree and flowers,—of life.

We, their teachers, and you, their parents and guardians, have an additional duty to preform at this season of the year. It is our duty to guard closely these fledgings lest they escape their encasements too soon and be, like the buds, severely checked by those seasonal hinderances to growth, the frosts,-the final temperatures for the testing of the qualities of growth. Of those who emerge from their protective coverings too early we know that very few survive.

And it is so with the students. The bark of the first ground squirrel, the first bit of colored petal on the sunny bank of earth, the beckoning curves of a winding pathway, or the silent murmer of growing things may all be challenges for the tread of a student's foot, or a call for the sound of his voice. But stern duty has marked a different course and the erstwhile wanderer must pause awhile to glean a few more pages from the experiences of mankind. And while they stop let us call their attention to a few things that perhaps may have been forgotten. The courses of study of the Genesee High school require an average of at least four hours of daily preparation of lessons from the student of ordinary ability. Usually the student will be able to make one-half of the necessary preparation in the school room. This means that they should devote not less than two hours of intensive study at home. Are our spring inventories showing this effort? Pupils who are in good health, those who engage in outside occupations and those who participate extensively in social functions, will be dissappointed in the attempt to complete the course of study in two years. Parents should bear in mind that the demands of the school upon the pupil's activities make it impossible for them to devote attention to matters foreign to serious study on all evenings coming before school days. These times should be free from home study. Parents are asked to cooperate with the school in securing the prompt and regular attendance of their children. It should be remembered that the school is a place of business, and that proper reasons for absence or tardiness are few. Much of the discouragement and most of the failures of the unsuccessful student are the results of irregular attendance upon the sessions of school.

A recent ruling makes it necessary for a student to receive at least two credits in any semester to be permitted to re-enter the following semester. Allowable excuses for a failure must be ill health or some other cause beyond the control of the student.

The sophomore domestic art class has been making all dresses for the children in the home in Lewiston.

The domestic science class has started the study of dietetics.

Sim Currin Jr. has returned to school after a six weeks absence.

Don't Forget Clean-Up Day

In another part of this issue of The News appears a notice for "clean-up day—so don't fail to observe it. The city, as has been the custom in past years, takes away your cans and like rubbish free of charge, but don't expect them to rake your yard to get it. Have your rubbish on the back alley in sacks, boxes or barrels ready for the dryman. Don't expect him to pick them up off the ground—for he won't do it.

Will Complete Road

State Senator Homer L. Post of Clarkston, Washington, recently stated that the $50,000 road appropriation made by the Washington legislature would assure completion of a modern highway over the five and one-half mile stretch on Asotin hill. It is not improbable that an entirely new location will be made for portions of the hill highway, and the grade at no point will exceed five per cent.

New River Steamer

Plans for a new steamer, "Lewiston," to be built by the O.-W. R. & N. company for service on the Snake river out of Lewiston, is now under way in the company's offices, according to word given out recently. The craft will cost $50,000 and will be ready for service by July 1. It will be 160 feet long and 35-foot beam, having a carrying capacity of 300 tons.

WHAT HAPPENED HERE TWENTY YEARS AGO

Thursday of last week a baby girl put in an appearance at the Wm. Nixon home.

Marck Rosenstein, who has been taking a business course at the Portland Business College, returned home Wednesday.

Mr. Kimball has things about in readiness to start his brickyard. He can easily find sale for all he can manufacture.

W. J. Herman informed us this week that he had about made up his mind to erect a substantial building on the corner adjoining his present brick building.

We this week received a letter from our former townsman John Stadler who is now anchored at Redlands, California. He says: "Since leaving Genesee I have traveled a good many thousand miles. First south down to the Mexoco border, then north to Klondike where I remained four months and got in eighty-four days' work at $5 per day. I have wound up here for a good long stay for on March 18 I bought a small wagon shop in the beautiful city of Redlands." [Mr. Stadler is now located at Moneta, California, and is still getting the News each week.]

The gun club is a sure thing. Enough of the sports have signified their willingness to join to make the membership sufficiently large. The trap and a quantity of clay pigeons have already been received and the first shoot will take place this afternoon at the race track where they will have ideal grounds.

At a special meeting of the council held Tuesday evening an ordinance was passed authorizing the macadamizing of Chestnut street from the eastern city limits to Jackson street on the west and Fir and Pine streets between Walnut and Chestnut. The same to be 20 feet in width and 12 inches in thickness. The ordinance will appear in our next issue and tell the whole story.

Dan Healy returned home Saturday from Seattle where he delivered a car of hogs. He relates a good one on himself. For some cause his train was tied up at Ellensburg and during the delay he thought he would take a look at the city. He had not sauntered far down the street when he was approached by the marshall who informed him in a no uncertain tone of voice that to live in Ellensburg he would have to go to work and he could choose between two jobs; that of cleaning away sagebrush or working on the ditch. Dan informed him that he would consider the matter on his return from Seattle where he was going to deliver a carload of seven cent hogs of his own raising. Chances are Mr. Marshall don't know yet that he was ordering to work one of the J. P. Morgans of the Palouse, a man who has money to burn.

Hordemann Returns With Bride

Wm. Hordemann and bride arrived in Genesee on Thursday afternoon of last week from Germany. Mr. Hordemann left Genesee last November for Germany for a visit with his brother and other relatives and old-time friends and while there met Miss Tone Shesler of Koln, Germany, and during the time that elapsed he persuaded Miss Shesler that he needed a housekeeper and companion, and in due time they left for the United States and were married at a Catholic institution in New York city known as Leon House and left shortly afterward for Genesee, stopping at Frankfort, Indiana to visit with Mr. Hordemann's nephew, arriving in Genesee on March 29. Mrs. Hordemann was a school teacher in her native country and understands the English language fairly well. Mr. Hordemann is one of the early pioneers of the Genesee section and has amassed a competency of this world's goods. His many friends will wish him and his bride much happiness as they journey on together.

Conditions In Ruhr Bad

In talking to Wm. Hordemann, who returned last week from Germany, regarding conditions in that country, he stated that conditions in the Ruhr section are bad and that a man isn't safe on the streets after dark—and none too safe in the daytime. He spent much time in that section of Germany, especially at Essen, and he has many interesting things to tell of conditions there—and they are first-hand. Outside of the Ruhr sector there is not a great deal of suffering aside from the poorer class and women widowed during the world war, many of whom are in very straightened circumstances. He says it is impossible to know or understand the real conditions there without seeing them.

Blue Bird Club Meeting

The Blue Bird club met at the home of Mrs. Nels Lande Tuesday afternoon and the time was very profitably spent in tieing a quilt, which will be given to an orphans' home. A very delicious lunch was served by the hostess.

The invited guests were Mrs. Isaac Isaksen, Mrs. Annie Danielson, Mrs. J. H. Jackson and Mrs. John Hove.

Some reformers loose a lot of sleep over the manner the modern woman dresses—when she dresses.

THE DANGEROUS AGE

FICTIONIZED BY CONRAD GIBSON

From John M. Stahl's Photoplay of Frances Irene Reels' Screen Story Released by Louis B. Mayer through Associated First National Pictures Inc.

INSTALLMENT NO. 3.

CHAPTER II.

The morning of the day on which John was to start on his annual business trip to New York found Mary busily packing the articles she considered of first necessity in the traveling bags.

She did not happen to be present when a few moments later the restless husband extracted from his grip the flannel undergarments and flung them desperately beneath the bureau. Nor did she know that when the bags were finally locked they did not contain the water bag, which had been carefully and with some feeling stowed nicely behind the bathtub upstairs.

"Now, Mary," John implored when his bags were at last ready, "I've been saying it right along, and I mean it so very much now. Won't you please come with me? We could enjoy it together so hugely." There was earnestness in his tone, and he clasped her in his arms as he begged her to grant him this one wish.

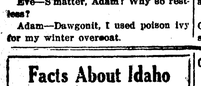
"We'll stop at the best hotel in New York, and we'll see all the shows," he told her. "Lord, I'd give the world if my dear little wife would only come with me."

But she steadfastly objected.

"There's all the housecleaning to do," she warned, "and besides, who is there to look after Ruth?"

He wanted to say that he was sure Ruth would be better alone for the short time they would be gone than to be left in the atmosphere which had so completely enshrouded the place of late, but he did not. Instead he gave up in despair. He kissed her fondly at the station, and soon was on his way.

A day passed, and John was enjoying his trip immensely. The solitude of a long tour was brightening him. He sat for hours watching the strange little villages whiz past beside him. He sang little ditties to himself and set their tempo to the clicking of the rails beneath. He was contended.



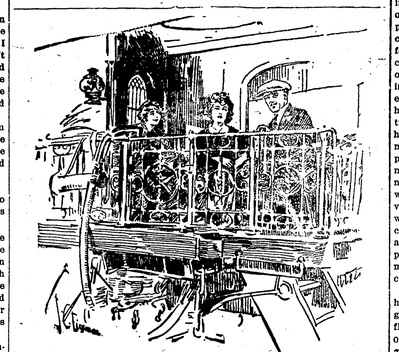
Irritating.

Eve—S'matter, Adam? Why so restless?

Adam—Dawgonit, I used poison ivy for my winter overcoat.

On the second day a very strange thing happened. He had leaned his head back against the green plush of the Pullman seat, had closed his eyes and was half dreaming when suddenly there drifted upon him the scent of violets. Violets in the desert! Quickly he awakened, straightened in his seat, turned his face toward an open window across the aisle. And there he beheld the source of the perfume.

A dainty young girl, whose profile attracted him, thrilled him, sat directly opposite him, her face buried in a corsage of violets. Her fresh, pink face and her bright blonde hair acted as a tonic to a wilted soul. She was vital—appealing—beautiful.



Train friendships are like steamer friendships. They are made in an hour, and sometimes they last a lifetime.

As their eyes met the train came to a halt. John arose from his chair and walked out of the coach. He alighted and strode along the platform of the country town where the train had stopped to change engines. He was progressing alongside the Pullman car when suddenly a tiny white handkerchief, laden with violet, fluttered across his shoulder.

He picked up the fragile bit of silk and hurriedly made his way to the rear of the car. There a woman of middle age sat quietly.

"Pardon me, madam,' he began, doffing his cap, "this came flying out the window a few seats up. I suppose its owner will be calling for help presently." He was laughing boyishly. And the woman, bending over, examined the handkerchief.

"Why," she said, surprisedly, "it's Gloria's—my daughter's. Thank you so much."

Whereupon John Emerson, keen in his sense of suspicion, leaped over the railing, sat sat squarely down beside his newly met friend, and engaged her in conversation. She was Mrs. Tuyl, of New York, and her daughter was Miss Gloria Tuyl, also of New York.

It did not require much time for John's hopes to be realized. Presently the vision of the blonde hair and the soulful eyes which he had found through the odor of violets came out to talk with her mother. And there and then he was introduced, as politely as he should liked to be introduced, to the most charming young woman he had looked upon since his senior days in college.

Train friendships are like steamer friendships. They are made in an hour, and sometimes they last a lifetime. At any rate, John Emerson breakfasted next morning with Gloria and her mother. And when Gloria ordered hard boiled eggs, John looked at her sheepishly, and said: "Me too!" He was agreeably affected when he realized at last there was to be no motherly Mary to warn him against "hard boiled eggs." He clicked his heels together beneath the table. Already he was becoming a new man. Youth had come flying back.

Three weeks after John Emerson had arrived in New York he was a new John Emerson. The average person beholding photographs of the man who boarded a train in a Southern California town for New York and of the dapper, youthful, happy-go-lucky chap who now was quartered in an elegantly appointed suite at the Biltmore would have sworn, and with reason, that the subjects were not one and the same. John Emerson blossomed forth like a rose moved from the shadows into the sunlight. Gone were all the conservative business suits, and replacing them were the smartest garments Fifth Avenue could offer. He swaggered as women turned to look at him. He spent money so lavishly that head waiters and taxicab captains now treated him as a god.

Looking in upon him as he made ready for participation in one of the most elaborate of a series of cafe parties in which he had been a leading, and, if you please, lively member in the three weeks since his arrival, one would have found a distinctly personable John Emerson. He had changed to Tuxedo and, lay comfortably back in a low, overstuffed chair in his shirt sleeves, while three obsequious servants worked over him industriously. At his feet his Japanese valet, engaged for the duration of his New York sojourn, added an extra layer of paste to his already highly polished shoes. A bobbed blonde manicurist worked feverishly at his pink nails. A masculine artist of massage rubbed and rubbed over the now flushed cheeks. And all the while John was deep-seated conviction in John's mind that the shoes were pinching his feet, that the manicurist tickled his hands unbearably, and that the massager was just a plain fool who made a livelihood in a most disgraceful and unnecessary occupation.

These thoughts were dispelled when his telephone tinkled, and the valet, grinning broadly and bowing to the floor, announced that Miss Tuyl was on the wire. John took the receiver and place it to his ear. The clear, vigorous voice of the girl came to him.

"It's to be a really wonderful time tonight," Gloria was saying. "I'm so enthusiastic over it I can scarcely wait. Will you be here early so we may join the others promptly?"

"You just bet I will," was his reply. "I'll be there with bells on tonight, Gloria. You just wait a little while."

(To Be Continued.)

Pertinent Question.

Kjerulf—Hello! What a nifty overcoat. Where did you get it?

Bjoz—I picked it up at Jacob's on Tenth street.

Kjerulf—Is that a clothing store or a restaurant?

Supply Houses.

Japers—Well, oldtimer, I've got to speed up and get myself a spring overcoat.

Bubbs—(With twinkle in his eye)—Which restaurant do you get yours from?

Facts About Idaho

Professor C. J. Brosnan of the department of history at the University of Idaho, in an address delivered before the Lewiston Commercial club set forth some facts regarding Idaho, that perhaps many did not know, and others who did know had forgotten. They are important facts, however, and are briefly as follows:

Seventy per cent of Idaho's population is rural, and history tells that civilization has been sustained by people living on land, while city life had always tended toward national destruction. This fact, the speaker pointed out, was full of meaning for the future.

The second great fact presented is that contrary to the usual condition existing in agricultural states, the 1920 census says that 82 per cent of the farmers of Idaho own the land on which they live and cultivate it. This makes Idaho one state where there is a remarkable lack of tenancy.

A third great fact which is brought out by the U. S. geological survey, and emphasized by the speaker. There is in southeastern Idaho a vast potential wealth of phosphate, the value of which is estimated at billions of dollars.

A fourth fact is that Idaho's lead-silver area in the Coeur d'Alenes is the richest lead-silver mining district in the world.

According to the U. S. geological survey, Idaho ranks fourth in potential water power resources of all the states in the United States.

Finally, the speaker called attention to the fact that Idaho possesses the finest and largest body of white pine timber in the world, which in itself has a wonderful money value as well as being the basis of a gigantic industry.

OLD WOODEN EAGLE BACK IN IDAHO HOME

The wooden eagle which for years perched above the entrance gate at old Fort Sherman, was brought to the city today, having been located in a fallen-down chicken house on the Clem King place at Hayden Lake by A. A. Crane of the First Exchange bank, after a two-years search, and has been turned over to the St Maries post of the American legion. The late Mr. M. D. Wright informed Mr. Crane a number of years ago of the probable location of the piece.

The eagle, which has a wing spread of seven feet, was carved from Idaho white pine by soldiers o the fort, and though it has been exposed to the weather for 45 years it does not show a rotten place or a check.

On the front of the eagle is a shield on which are inscribed the words, "E. Pluribus Unum," and underneath is a board on which is found "Fort Sherman, 1878."

The American legion has not made a decision as to what disposal shall be made of the piece, according to W. C. McEachern, commander of the St. Maries post.

Easiest Way.

Mr. Newlywed—Did you sew the button my overcoat, dear?

Mrs. Newlywed—No, darling I couldn't find the button, so I just sewed up the buttonhole.

It takes one woman to make a home and two to spoil it. If you read the newspapers you know this is true.

Babe and Baseball Again

Babe Ruth, symbol of baseball, is out of a sick bed and into swatting clothes again, soon to head our nation's pastimers north for opening of the 1922 pennant chase. Col. Houston, N. Y. Yank owner, visited Babe at the New Orleans training camp, as shown here.

C. E. Moore, of Coshocton, O., had a bull, and the bull had cooties. To kill them, Moore painted the bull with coal oil. The bull walked to close to a lime kiln and his hide burst into flames. Then the bull plunged under a strawstack. When last heard of the cooties were gone—so were the strawstack and the bull.

STATE CLAYS ENOUGH FOR BATHTUB MARKET

Bathtubs, window glass and milk bottles are among household articles that can be manufactured from certain products of this state, according to Professor Hewitt Wilson, of the University of Washington College of Mines.

Clays and sands of the state, Professor Wilson says, are sufficient to supply the local market with all these articles, as well as with clay kitchen wares and glass bottles, ornamental pottery wares, all of the cheaper household electrical insulators, all the plaster and cement used, and a portion of the table glass.

Professor Wilson is preparing a volume on "Clays and Shales of Washington," soon to be published by the University Press.

Nowhere is there a greater need for knowledge of timber growing than in the eastern states, says the forest service, United States department of agriculture. In this section the relatively dense population, the enormous industrial demands for timber, and the large areas of lands best fitted for forests all unite to urge timber production on a large scale.

Question: "A youth wants to know how long girls should be courted."

Answer: "Same as short ones."—Ex.

Growing What You Eat

Prepared by the Extension Service, State College of Washington

CARING FOR YOUNG CHICKS.

Caring for young chicks on a small scale is a simple matter. The hen is the brooder and furnishes the heat. In order to be a good brooder she must be free from lice and mites. She is not likely to have mites if she was set in a clean nest that had been previously sprayed with crude carbolic acid, or a mixture of crude carbolic and crank case oil. She will not have lice if she was carefully powdered with sodium fluride before she was set.

The hen is also chief caretaker. She is not infallible in wisdom and might lead the chicks through wet grass, or too far afield, before they are equal to the task. Keep her in a dry, well ventilated, or open coop for a day or two and she will make few mistakes. If you keep her cooped up too long she will overfeed the chicks, if you put the feed in reach. Feed lightly till she is at liberty to run. After that you can feed without stint. She will not stay in one place long enough to let the chicks overeat.

If you want to raise your chicks economically, set two hens on the same date. When the chicks are hatched give them all to the best hen. A nervous mother is not good for chicks. Place the other hen in an open coop for a day or two, or put her back in the hen house, and in a short time she will be back laying. Her physical condition is low, so give her plenty of grain to nourish her body, but don't force her too fast with high protein feeds. A nervous hen will come back to laying sooner than a phlegmatic one.

Young chicks raised on a farm, or on a new town lot where there are plenty of bugs and worms, can be raised successfully on a mixture of cracked wheat, corn and oat groats, or on any good commercial chick starter, provided they have plenty of water to drink. Chicks raised on a dry lot will need some animal protein. If they have all the sour milk or buttermilk they will drink, that may be enough. If there is no milk, or a limited supply of milk, they will need some animal protein. A mash carrying 16 per cent of protein is rich enough.

All chicks, even those raised on a farm, should be taught to eat mash, or ground grain in some form; because, when they grow up they must eat mash in order to balance the ration for egg production. A good mash for this purpose could be made by mixing, by measure, 15 parts bran, 1 part bone meal, one part fine granulated charcoal and 1-2 part fine sand. This mash should be fed dry, and may be kept in a protected hopper.

Green feed should be fed in abundance. If the chicks are yarded where there is not an abundant growth, it must be carried to them. Lawn clippings, if succulent and short cut are fine. So, also, is lettuce, cut chick weed, grated mangels, mixed with alfalfa meal or alfalfa leaves and blossoms. If the mixture is used, it should be mixed, by measure, 9 parts grated mangels to one part alfalfa. Otherwise, by mixing, you may induce them to eat too much crude fiber.

WORLD'S NEWS BRIEFLY RETOLD

Important News of Both Hemispheres Boiled Down to Last Analysis.

Count Cuno von Moltke, former aide to the kaiser and former governor of Berlin, died last week.

Mustapha Kemal Pasha, Turkish leader, received a dowry of $500,000 when he recently married Latife Hanoun, it has been revealed.

Coffee is the all-important crop of Guatemala and this year more than 750,000 tons will be exported. The United States is the biggest buyer.

Greece has forbidden the export of any foodstuffs and, in addition, has prohibited the sale of meat on Monday, Wednesday and Fridays and fish on Saturdays and Sundays.

"Very severe measures" will be taken by the French against the Germans, unless the latter stop attacks on French troops, the French commander at Dusseldorf proclaimed last week.

Agitation of monarchists in Germany has led the Dutch government to order the strictest guard maintained at Doorn castle, refuge of former Kaiser Wilhelm, according to dispatches.

A housewife at Felling, England, called a workman to repair her fireplace. He removed a brick and found a tin box containing $3500 in bank notes. Then he found another next to it containing $11,500.

George E. Tucker, field director of the United States farm labor bureau, after a survey of midwestern conditions, says the farmer faces a shortage of labor for spring work. Prosperous industry has drained the labor market.

Because of pressing spring work Clyde Peacock will discontinue excavations of ancient mounds on his farm near Albany, Ore., Peacock has exhumed 14 skulls, portions of 12 skeletons, 18 mortars, a pipe, three knives and a number of pestles.

President Harding will carry his fight to his policies to congressional insurgents who fought him, according to plans ascertained recently. He plans to swing through the west on an old-fashioned stump tour, lay his defense before the electorate and solidify public opinion behind the administration, rather than make a "political appeal." He is said to have expressed a desire for the public "to learn the true facts."

Field for War Vets in Alaska.

Opening of the Alaskan fishing season this spring means employment for a number of rehabilitated World war veterans of the Pacific northwest, and the Puget Sound district, officials of the Seattle district office of the United States veterans' bureau announce. Radio operators, experts in fishery, and gas engine men are being sent to Alaska by the local bureau office. A number of Alaskan firms are cooperating with the veterans' bureau by giving disabled ex-service men, who have completed vocational training courses, preference in the matter of hiring men.

One disabled war veteran trained in Deisel engineering has been placed as chief engineer of the Lincoln, fisheries tender in Alaskan waters. Another injured ex-service man of this city who completed a three years' course in fisheries at the University of Washington at the expense of the government, will be port engineer with the Meyer Fisheries company at an Alaskan station. Still another has been promised a position in Alaska with the bureau of fisheries, it was announced. These men and others will receive $100 to $150 a month with board and room. This is more than they were paid in most instances while following their pre-war occupations.

When you see a man chewing tobacco, you can gamble that he is either single or has been married a long time.

The teacher in a chemistry class was explaining that scientists do not know a great deal about vitamines.

Boy in rear of room. "Have they seen any alive yet?"

"SPEED"

By Herbert Crocker

Copyright by Pathe Exchange, Inc.

Chapter XII.

Fortunately, "Speed" Stanbury reached the top of the rock crushing structure in the nick of time. Standing astride the crusher, he seized Lucy Durant and lifted her from the bucket, while the ore was dumped below into the receiving cell. A glance downward told "Speed" that Jim Sprague and his men were running toward the structure to capture him.

"Listen, Lucy," he said, "when the next bucket comes up and dumps, get into it and ride down to the shaft. I'll take care of this bunch and then meet you at High Bridge." Lucy nodded and young Stanbury started down the rope toward the ground.

The pursuers had not observed that "Speed" had started down in their direction. They had all crowded into one of the cars and started upward. In the bottom of the descending car, Lucy crouched, keeping well out of sight of the miners and Sprague as their car passed her. Consequently, when they reached the top and found no one there, they were filld with consternation, especially Jim Sprague. Sprague was gradually becoming extremely nervous over his predicament, and was haunted with the fact that "Speed" would seize him at any moment and drag him back to justice. The fact that he was helping Edwin to keep out of the mess was not so pleasing, as Sprague considered himself the "goat" in the eyes of everyone.

Back at the hotel, Edwin and Vera Harper were anxiously awaiting word from Sprague. "Speed" had succeeded in slipping through his cousin's well-laid plans so often that Edwin Stanbury was beginning to lose all hope for the future.

"It's a hunderd to one shot that my men will get 'Speed,'" he confided to Vera, "but when I've got him, what am I going to do with him? Where am I going to hold him?"

"There are two things necessary, my dear Edwin," Vera smiled. "First get your man. Next, get Jim Sprague away out of finding distance." At that moment Jim Sprague appeared and sorrowfully told of the second instance of "Speed's" elusiveness.

"You'll have to get me out of this, Stanbury," he wailed. "He's got away again. You certainly got me in a mess. That fellow's a devil and I'm not going to have him lay his hands on me again. You know what'll happen if he gets me back to the city! I tell you, I'll not stand for being the goat any more in that affair at the bank!"

"Look here, Jim," Stanbury returned, "we've got to pull together if we expect to win. Now, I've got a little plan for 'Speed.' If you get your men together and we can put it over." The two men took leave of Vera and as they walked off Edwin Stanbury unfolded his scheme of capturing "Speed" to Sprague.

Meanwhile, "Speed" Stanbury had eluded his pursuers without much difficulty and had joined his sweetheart at the appointed place near High Bridge.

"This is gorgeous, Lucy," said he, taking in all the natural wonders of the scenery, "but it isn't catching Jim Sprague. We can never really be happy until this entire mess is cleared up."

"I know, dear," the girl answered, "but it seems so wonderful to have you to myself for a moment."

"Speed" kissed her tenderly, then: "But, Lucy, just keeping away from Edwin and Sprague and my other enemies gets me no place. What we've got to do is to lay hold of Jim Sprague and lug him back with us."

"On the other hand, dear," Lucy replied, "we must be careful that they don't get you. If they held you a prisoner up here, you'd have small chances of proving anything, and they'd whisk Jim Sprague so far away you'd never know where he was."

Something in the distance—across the gorge—seemed to catch the eye of the young man, as he watched intently. Lucy saw and followed his gaze.

"There's Sprague on the other side of the chasm!" "Speed" exclaimed joyfully. "Luck is with us! You wait here at High Bridge for me, Lucy!" And with that, young Stanbury was off, hoping that he would be able to get his man.

Determined to reach Jim Sprague at any cost, "Speed" decided to take a short cut across the chasm. He started to climb downward, but when he got about half way, his foot slipped and he fell headlong, stopping his fall, luckily, by catching hold of a small tree below. Recovering himself, he started after Sprague on the run.

"Speed" Stanbury was certain that his one opportunity had arrived. He did not know, however, that several interested spectators watched the decoy work of Sprague and were only waiting until the wily gentleman would lure "Speed" to their place of concealment.

At this moment, Sprague was standing calmly wiping his brow and looking around to see just how close his pursuer was getting. He was suddenly amazed to see the young man appear over the side of the cliff and rush toward him. Sprague had not counted on the rapidity of the young man nicknamed "Speed" in overtaking him.

"Well, how about it, Jim?" "Speed" grinned. "Are you coming along or do you want some more rough stuff?"

Sprague seemed glued to the spot and unable to speak. He looked at Stanbury inquirigly, then turned and attempted to flee, but like a tiger, "Speed" was upon him. A few blows were sufficient. Sprague had received so much punishment from the hands of young Stanbury that now he was thoroughly cowed.

After examining Sprague carefully to be sure that he was not feigning a "knockout," "Speed" looked back and saw that Edwin and two others were climbing the cliff to aid Sprague's rescue. A backward glance revealed the fact that a cave entrance offered quick refuge, and picking up Sprague he threw him over his shoulder and carried him into the new hiding place.

When "Speed's" pursuers arrived at the mouth of the cave, they saw the wet footmarks on the stones, and entered the cave after him. The young man ran for all he was worth, carrying his man. He knew deep down in his heart that he would be overpowered, as he was outnumbered, so he hid in a crevice until they passed.

After waiting for several moments "Speed" bent over to pick up Sprague again and continue toward a place of safety. But his enemy was beginning to come to, and as he was about to lift Sprague from the ground "Speed" received a sharp blow full in the face. Then Sprague seized the young man in his strong grasp and began to shout loudly for his men. "Speed," realizing he would be trapped, broke away and ran through the cave.

Meanwhile, Lucy Durant had been standing near the bridge, searching the spot below anxiously for a glimpse of "Speed." Suddenly, she saw him race out of the cavern with three men after him. Wondering how she could help the man she loved, the girl looked about for some means of assistance.

Looking toward the bridge, Lucy saw a coil of rope which had evidently been left by some workmen. She ran out on the railroad bridge and began to put a plan into effect. Tying one end of the rope around a rail, she dropped the other end over the side of the bridge and shouted to "Speed" to climb up on it.

The young man, his pursuers close behind him, saw Lucy's action and raced toward the rope. Swinging out over the water on it, he began climbing and reached a height of about sixty feet before his pursuers arrived at the spot. As he glanced down at Sprague and his men, he heard Lucy shouting something to him.

"Go back!" the girl cried. "A train is coming—quick!"

And with that Lucy climbed over the side, safe from the tracks, and hung from the bridge as the train approached. But before "Speed" Stanbury could take heed of her warning, the train came on with a roar, cut the rope and plunged him downward into the rushing waters.

(To Be Continued)

REORGANIZING TIMBER PROTECTIVE ASSOCIATION

Following the disastrous and expensive fire season of last year, and discouraged by lack of cooperation from the state and federal authorities, it appeared for a time that the Eastern Washington Timber Protective association might not function this year, but at a meeting held in Spokane recently plans were agreed upon for continuing th ework and on a more comprehensive basis than before.

At the meeting were representatives of the timber companies, of the forest service, Chief Forester Pape and Dan A. Scott, director of the state department of conservation and development.

As a result of this meeting it is expected that the various interests will be consolidated for the protection of timber and that the scope of the organization will be extended to take in Stevens county.

To keep pace with the growth of Wenatchee in population and business, the Great Northern Railway company is planning to erect a new freight depot.

Science and Religion Are Not Incompatible, Says College Speaker

STATE COLLEGE, PULLMAN, March 21.—Speaking on "The Contribution of Science to Religion," Dean Schaller Mathews of the University of Chicago reconciled the points of view of antagonistic discussion, recently at assembly at the State College of Washington. He said in part:

"The matter is a very real one. If we keep our religious thought in one compartment, so to speak, and our scientific thinking in another, we will find very soon that they get to fighting. Religiously we dare to live in this universe as though there were such a thing as personality, that we are something more than peripatetic laboratories, as some scientists would appear to think.

"The ideas of the greatness of God have been taken from men's views of the universe, the eye-perceived universe when there were no microscopes, microscopes, or spectroscopes. Now we do as men did of old, merely carry out our faith to the limit of our knowledge. Very many of our troubles come from knowing so much as we did. They had fewer troubles when they knew less about the universe.

"We say there is conflict between science and theology; not at all! There is merely conflict between men's points of view. If you have heard an old-fashioned allopathic physician argue with a chiropracter, you have learned that there is temperament even in the medical profession. One practical unity is that neither side knows what the other side is talking about.

"Talk is the salvation of democracy —and we seem to have had a great deal of salvation in congress lately!

"Science has forever put an end to the old idea of materialism, because material no longer means dead matter, but activity. The molecule, the vanishing point of reality, is activity. I used to think a molecule was something like infinitely small birdshot; but scientists tell me it is a 'charge.' When I asked what is charged, I was told, 'just charged,' activity, not a 'solid thing.'

Star a Hobo Universe.

"The second thing we get out of scientific thought is the infinity of this activity." He then told of a star in the Pleiades which was discovered to be not one star but a whole "hobo universe" of 35,000 suns. Our little sun, he said, was only a "piker" by comparison, four of these others being a thousand times as big. Light from this "hobo universe" takes 35,000 years to reach us—"but that is not very far away, when you consider the universe of which that star is only a part!" he said.

Like Prohibition Law.

"This infinite activity is reduced to law by science of course scientific law does not of itself do anything more than the prohibition law does by itself."

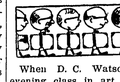
Dr. Mathews said he sometimes envied the chemist who, when he goes to bed at night, knows that the little chemical atoms will be on the job in the morning, doing exactly the same thing.

"A college president or dean does not know what his little atoms will be up to in the night!" This came subsequent to the announcement of President Holland that he would meet the freshmen and sophomores in the afternoon relative to last night's display of "college spirit" with rival paint brushes.)

"A hypothesis is not a guess, but a building from the known to unknown," continued Dean Mathews. "A tendency indicates a reason, a purpose. As a mathematical law suggests a tendency, so a tendency suggests a direction and a purpose.

Evolution Not Monkey-Men.

"Do not think that evolution means a monkey in your ancestry; it doesn't. Way back somewhere there was a life which came forward and upward, until something happened and we had man. God breathed into the clay, the animalistic matter made up of this extraordinary cosmic activity which we have learned to express as molecules, and there emerged personality. We were made to live in a personal environment; that is being religious. A man who separates himself from the personal environment and becomes a hermit, grows queer. We are made with a hunger for the personal, which is God. I think of God as I think of you, and I talk to Him as I talk to you. What are you, anyway? And what is our talk together? Our talk with God, which we call prayer, is a personal adjustment of ourselves to our environment, to the infinite personality."



When D. C. Watson opened an evening class in art for business men at Milwaukee, he didn't create much enthusiasm. But when he announced that after due preliminary training the class would draw from nude models, Art began to get popular around business circles. Now the class can be seen hard at work over their drawings—glancing at the model—correcting drawing—glancing at the model—recorrecting—and glancing at the model.

HEALTH CONFERENCE TO CONVENE IN JUNE

To stimulate interest in health education, and to give opportunity for discussion of problems in physical education, are purposes of a state physical education conference which will be held at the University of Washington, June 21, 22 and 23, in connection with the summer quarter.

Dr. Thomas D. Wood, national authority on health education, will come to Seattle from Columbia university especially to speak at this conference. He is a graduate of medicine from Columbia university, and is the head of the department of physical education in the teachers' college, Columbia.

He is vice president of the American Child and Health association and was president of the American School Hygiene association last year.

Dr. Wood is noted for numerous reports, bulletins articles and books on the subject of health and education for teachers and for children in both city and rural schools.

The accessible timber of the world is inadequate to the requirements of modern civilization, says the forest service, United States department of agriculture. We now draw one-third of our paper requirements from Canada. There is an embargo on the export of pulp wood from the crown lands of Canada, and this is likely to be extended to all forest lands in the dominion, completely shutting off the supply of raw material for the paper industry of the United States. This illustrates the hazard of becoming dependent upon foreign supplies of timber, it is pointed out.

Including burned and cut-over areas and abandoned fields that once grew timber, one-third of the soil of the Union is forest land, says the forest service, United States department of agriculture. Three-fourths of this land lies in the Mississippi Valley and eastward to the Atlantic coast in the states having the densest population and the largest consumption of timber products.

Silencer.

"So that's your new overcoat, eh? Isn't it rather loud?"

"It's all right—when I put on a muffler."

The Right Dempsey May Have to Quiet

When Luis Angel Firpo, Argentine Tiger Man, knocked Bill Brennan cold in twelve rounds (the same number it took Dempsey) at New York last week, South America made its first serious bid to fistic titles. This big dark man without a smile weighs 210 pounds and proved his fighting heart when he took all Brennan could shoot at him and still had a mighty knockout wallop left. If Firpo comes through a summer campaign with a record in keeping with his defeat of Brennan, a match with Dempsey for the title will likely be staged in the fall—if not in America, then at Buenos Ayres, S. A.

LIVESTOCK

Diversification is paying profits in the Molson district, according to G. B. Avery, vice president of the Molson State bank. Mr. Avery reports that the district also has 10,000 acres of fall wheat, considerably more than usual. It is looking well, he states, and there is still a foot of snow on some of it.

"The old cow is furnishing a regular payroll," said Mr. Avery. "Our station last year was second among shipping points of the Hazelwood company and first on the S. F. & N. The company, instead of paying twice a month or monthly, now pays the rancher when he delivers his cream at the station. The plan is working satisfactorily and paying profits.

"Live stock is thriving and the stockmen are making money. Dairy cattle are certainly increasing and cattle, hogs and sheep are doing well. The snow is going off two weeks later than usual, and that makes extra feeding. When live stock prices were low our stockmen held their stock. Most of it is sold in Spokane.

Potatoes for hogs should always be cooked and fed mixed with the concentrate or grain according to C. M. Hubbard, extension livestock specialist. From experiments conducted along this line, it has been found that 442 pounds of potatoes in the ration replaced 100 pounds of corn meal or corn.

When cooked potatoes are fed to breeding hogs it would be wise to always let oats, shorts or peas form an fatterning part of the ration and either whole or chopped alfalfa be fed in racks as well. The following sample ration will do as a suggestion: Ground barley, corn or ground wheat, 45 per cent by weight; ground oats 45 per cent by weight and tankage or fish meal 10 per cent by weight.

Feed 200 to 300 pounds, weighed before cooking of potatoes in connection with each 100 pounds of the ration suggested above, or a similar concentrate ration. Furnish alfalfa, or other legume hay in racks.

Potatoes being strong in fat forming foods and wheat, corn and barley bein gof a similar nature, it is always well to balance them with strong muscle and bone building feeds, this being especially the case in the feeding of pregnant brood sows or sows nursing litters.

NORTHWEST NEWS

Directors to be in charge of the various divisions of the Columbia Basin investigation to be made this spring by the federal reclamation service, were named recently by Francis M. Goodwin, assistant secretary of the interior. The entire Columbia basin investigation will be made under the joint direction of Mr. Goodwin and Arthur P. Davis, head of the reclamation service.

All field work will be done under the direction of H. J. Gault, of the service, as manager of the field forces. Mr. Gault's appointment was announced by the interior department recently.

Kirk Bryan, of the geographical survey, will be in direct charge of all geological work. The water supply investigation will be in charge of Glenn L. Parker, now stationed in Tacoma. Each of the directors will have an adequate force to push the work to rapid completion.

The visitors to the fourth annual Spokane National Sportsmen's and Tourists' fair, which will be held in this city, May 22-25, will be granted a fare and one-half for the round trip, according to reports received by the committee in charge. The reduced rates will be in effect from May 22 to May 23, and the final return limit will be May 28.

It is believed that the registration for the 1923 fair will undoubtedly close April 1, due to the fact that more resorts have signified their intention of making exhibits this year than ever before. It is assured that 55 resorts and dealers will make an exhibit for the 1923 show.

Absent-minded medical-school professor to class: "I will now give a practical demonstration of the fundamental principles of anatomy, by exhibiting the inner workings of a frog which I dissected this morning.

Taking a small package from his pocket, he cut the twine and folded back the paper, disclosing two ham sandwiches and a piece of cake.

"Most peculiar!" stammered the bewildered professor. "I was sure I ate my lunch!"—Ex.

Teacher: "Give the principal parts of the verb drink."

Herb Meeker: "Today I drink, yesterday I drank, and many times I have been drunk."

Father (to naughty son): "Son, I don't believe I'll see you in heaven."

Son: "What have you been doing now, pop?"—Ex.

MERCURY USED AS CONTROL FOR SMUT

Seed Not Only Safe, but in Some Cases Improved—Experiments Will Be Continued.

Limited tests made in a preliminary way by cereal investigators of the United States department of agriculture show that certain organic compounds of mercury can be used successfully to control the seed-borne smut diseases of small grains, and that the seed not only is safe from injury apparently, but in some cases actually is stimulated. Plots of barley grown on the experimental farm from treated seed have shown a remarkable increase in yield over those grown from untreated seed or from seed trated with formaldehyde or copper sulphate-lime.

Organic mercury compounds have been used in Germany since 1912 and are replacing to a considerable extent the old formaldehyde and copper sulphate-lime methods for the control of seed-borne diseases. They are known under such trade names as "Usplun" and "Germisan." Chemical companies in the Unite dStates are putting out similar compounds of mercury in small lots for experimental purposes under such names as "Chlorophol," "Semesan,' 'and "Corona" compounds. Some 25 of these commercial compounds have been tested by the department, and the ones mentioned have given excellent results in the experiments. They have not been tried sufficiently under various local conditions, however, to permit a general recommendation as yet.

If further tests substantiate the good results already secured from this method of seed treatment and no unforseen difficulties develop, the use of treatments of this type may replace some of the present methods, especially for the control of barley and oat smuts, but so far they must be regarded as being in the experimental stage. While the method of application promises to be simple, the cost probably will be as great if not greater than present methods.

Boys' and Girls' Farm Club Work

Facts About Club Work.

The following facts were taken from a bulletin published by the National committee on Boys' and Girls' club work:

Membership 1914, 23,000. Membership 1922, 600,000.

Value of products produced in 1921 over $7,000,000.

Cost of production, plus cost of leadership in 1921, $4,500,000.

Banks loaned $2,000,000 to club members in 1922.

Prize money offered from all sources to stimulate the work in 1922, $734,000.

Number of former club members attending college, 2,600.

Farmers and farm wives influenced by demonstrations annually, 550,000.

"Finish the Job."

This is the year when club members are going to demonstrate that they can make plans and carry them through to completion. "Finish the Job" might well be adopted as our slogan. We are going to raise that 52.3 percentage of completed demonstrations that we had last year. We are not proud of that figure, although it represents a little gain over other years.

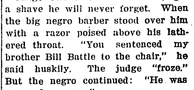
We ought surely to raise it to 75 per cent this year. Now is the time for club officers and members to begin checking up. Suppose we begin this way:

1. Have the secretary read the goals for the club at the next meeting. (If they have not been written, appoint a committee to do this).

2. If anything planned for January and February has not been done, see to it at once.

3. See that each member has sent in his enrollment card, begun work on his project and STARTED HIS RECORD BOOK.

What is your goal for reports? Talk it over at club meeting, and make your plans to have as many members as possible "Finish the Job." The way to finish with a good record for your club is to begin now.



Judge Stickel of Atlantic City got a shave he will never forget. When the big negro barber stood over him with a razor poised above his lathered throat. "You sentenced my brother Bill Battle to the chair," he said huskily. The judge "froze." But the negro continued: "He was no good, anyway."

Cooked Food Sale

The ladies of St. Mary's church will hold a cooked food sale next Saturday at the Hasfurther Hardware store, beginning at 10 o'clock. Cakes of all varieties—and cheaper than the good housewife can make them. Cream puffs, yes, seeing them is the same as buying them. Doughnuts, chickens—everything to make a good Sunday dinner. 40-1

Want to buy anything? Take a look at the want ads.

Millinery Instruction

Miss Cowgill of the extension department of the University of Idaho will give a three-days course in millinery instruction beginning April 16, in the domestic science room of the high school.

Miss Cowgill has suggested that each club select one of its members as its representative. Those who wish to register for the course will please call Miss Adda Mathews so that the work of the class will not be delayed on the first day. Only twelve will be permitted to register, but others may be observers.

Miss Cowgill is also planning to give other courses during the summer.

Improved Residence

F. W. Loncosty, contractor and builder, reports that he has just completed modernizing the kitchen at the F. E. Dicus home, where built-in features consisting of two cabinets and a disappearing ironing board had been put in.

CLASSIFIED ADS.

CHURCH SERVICES

SEVENTH DAY ADVENTIST CHURCH
ESTEL ROGERS, S. S. Supt.
Mrs. B. B. CALDWELL, M. V. leader

Sabbath school at 10 o'clock Saturday morning.

Young people's M. V. at 12 o'clock Saturday.

Prayer meeting at 7:30 Friday evening.

LUTHERAN CHURCH
A. F. WOLFF, Pastor.

English services will be held each Sunday morning at 10:30 o'clock, with the exception of the first Sunday of each month, when German services will be held at the usual hour.

Sunday school at 9:30 a. m.

Missionary Program Given

The missionary society of the Federated church met at the home of Mrs. Fred Hampton on Wednesday, March 28. A very interesting program was given, as follows:

The Birthday of Our King—Quartet—Victrola.

The Work of An Indian—Mrs. A. Hampton.

Christian Indians Contrasted with Non-Christian Indians—Rev. James N. Pendleton.

Denominational Cooperation—Mrs. Pearl Lambert.

Duet—Oone Day—Mrs. A. Hampton and Mrs. Fred Hampton.

The Work of the Marysville Institute in South Carolina for the Negro—Mrs. Carrie Brakebill.

The Rosary—Schumann Heink—Victrola.

Eight visitors were present—Mrs. A. Murphy, Mrs. Cox, Mrs. E. Gray, Mrs. Evans, Miss Club, Mrs. Halverson, Mrs. O. Woodley, Mrs. Hirselberger.

The next meeting will be held at the home of Mrs. B. J. Pleiman on April 25.

Christian Endeavor Notes
By Ted Parks

The junior Endeavor meeting last Sunday was led by Bertha Gash. A Bible contest between the senior and junior Endeavorers was quite interesting.

The sunrise prayer meeting was led by Jesse Gray and was a complete success. There was a large crowd in attendance and a fine spirit of fellowship prevailed.

A C. E. social will be given at the Community house on Friday evening, April 6, at 7:30 sharp. Everybody come and help out.

W. R. Hickman New Marshal

At the regular monthly meeting of the city council last Monday evening W. R. Hickman was appointed city marshal to succeed Martin Foster, resigned. Mr. Hickman entered upon his new position Tuesday morning.

Mr. Foster has gone to the Rapid river country where he will be employed by the Rapid River Mining & Milling company.

Little Magic

The new teacher was having a bad time of it. The class was very dull—or pretended to be—and seemed incapable of answering the easiest questions.

"What is a person called who steals?" asked the teacher, persuasively.

There was no answer.

"Now, Herbert," said the teacher, "suppose I was to put my hand in your pocket and take out a dollar, what would you call me?"

"A sure-enough conjurer," replied Herbert, with conviction.

It is charitable to judge some people by what they don't say.

Opening Snoqualmie Pass

Word has been received to the effect that snowplows are pounding their way through 25 miles of snow in the Snoqualmie pass, in the Cascade mountains. It is expected that the road will be open by May 15. The snow in this district is from three to eight feet deep, and contracts have been let for clearing the pass.

Child Quite Ill

The small child of Mr. and Mrs. Lester Hayden, living near Lenville, is quite ill of bronchial pneumonia.

PERSONAL MENTION

Dick Vandenburg left Monday for Spokane where he expects to remain.

Mrs. Mary Blume and little son were Thursday morning passengers for Lewiston.

G. E. Taber returned to Spokane Tuesday morning after a Sunday visit with his family.

Miss Esther Clark spent her Easter vacation with her parents, Mr. and Mrs. Grant Clark.

W. F. Payne arrived home Monday after an extended visit at Seattle and other coast points.

Miss Margaret Bottjer and Miss Mabel Bottjer returned Monday evening from Lewiston.

Sister Marguerite was a Monday morning passenger for Cottonwood, where she will teach.

Miss Emma Sather was a Thursday morning passenger for Spokane for a few days' visit.

Robert Post and David Hickman arrived Sunday from Kellogg for a short visit with home folks.

Mr. and Mrs. F. H. Meader and Mr. and Mrs. H. C. Hailey were Sunday visitors from Lewiston.

Mr. and Mrs. F. H. Meader and Mrs. H. L. Meader were Thursday visitors from Lewiston.

Cletus Gustafson was a Friday morning passenger for Troy for a visit with Mrs. Ellis Odberg.

Miss Mary Haymond of Moscow is spending the Easter vacation with her mother, Mrs. Nellie Haymond.

Mrs. Joe Reil was a Friday passenger for Clarkston to visit her husband who is taking treatments there.

W. J. Harlow of Lewiston was a Genesee visitor Tuesday night, going to Moscow Wednesday morning.

Miss Katherine Dwyer and sister, Cecelia, were Tuesday morning passengers for Moscow for a short stay.

Attorney and Mrs. Thomas A. Feeney were Lewiston passengers Saturday to spend Easter with relatives.

Miss Mary Wardrobe arrived Saturday from Spokane to spend Easter vacation with her mother, Mrs. A. M. Wardrobe.

Miss Sylvia Evans arrived Friday from Spokane to visit her parents, Dr. and Mrs. F. B. Evans during the Easter vacation.

Little Donald Gannon returned to his home at Pullman Saturday after a visit with his grandparents, Mr. and Mrs. Fred K. Bressler.

Mr. and Mrs. John G. Meyer and Fred Lambert went to Spokane Tuesday, Mr. Lambert returning Wednesday with a new Overland sedan.

Miss Maxine Ehlen, Miss Amalia Lawen, Orland Mayer, Walter Casebolt and Jack Hasfurther are spending Easter vacation with home folks.

Miss Lillian Luvaas arrived Saturday evening from Moscow for a short visit at the Glenn Sampson home. She returned home Sunday evening.

Dr. F. B. Evans attended the meeting of the Nez Perce County Medical association at Lewiston last Monday evening. He reports a very interesting session.

Miss Herietta Blum and brother Gustav Blum returned to their home at Cameron Thursday morning after having been here to attend the Boerman-Plomer wedding.

Miss Bertha Jacobs of Lewiston arrived the first of the week for a visit with her sister, Mrs. Sim Currin, who has been seriously ill for the past several weeks, but is rapidly improving.

Mrs. B. W. Evans and son, Robert, of American Falls arrived in Genesee Friday evening for a visit with Dr. H. B. Evans and family before joining her husband at Wilson Creek, Washington, where they will make their home.

Mr. and Mrs. Dereal Springer arrived Saturday from Weetaskiwin, Alberta, Canada, and will make their home here. Mr. Springer says conditions are very bad in Canada. Before leaving for the States he sold several good horses at $10 each.

Another Real "Cackle Berry"

Irvin Flomer brought to the News office the other evening another sample of a real "cackle berry" which was said to be the product of a Rhode Island Red biddy. The egg measured 7⅝x8⅝ inches in size and weighed 3½ ounces plus—making it the same size and weight as the one brought in by Ed. Taylor last week.

On this egg question the News man rises to a point of order. He has been accused of "grafting for eggs" by members of that Ku Klux Klan auxiliary, some of the members of which almost threatened him with personal violence and even went so far as to try to gain possession of one of the large "cackle berries" that had been given him for his breakfast. Again we rise to a point of order.

Spokane Market News

The first edition of the Spokane Market News, which is to be mailed to 10,000 retail merchants in the Inland Empire, April 10, is now being printed. The Market News is a four-pags newspaper appearing monthly for five issues until the merchants' convention August 14 to 16.

Spokane traveling salesmen are field correspondents and they have virtually swamped the committee in charge with news items of the Inland Empire retailers, picked for their regular rounds. The paper is supported by Spokane firms participating in the convention.

Sportsmens' and Tourists' Fair

Copies of the advertising folders for the Sportsmen's and Tourists' fair which will be held in Spokane, May 22-25, are now off the press and are being distributed. The management committee is having 50,000 copies printed and have made arrangements with eastern railroad officers and with all the commercial organizations in the Pacific Northwest for their distribution.

A special rate of a fare and one-half has been granted from all points in the Northwest, and it is expected that at least 100,000 people will attend the 1923 fair.

Has New Position

Miss Nora Hanson, who had been bookkeeper at the Bratton store for the past year, and until Mr. Bratton sold his business, has taken a similar position with the Moscow Telephone company.

Cows and Sugar Beets Make Ideal Combination

Beets and dairying have long been a profitable combination in our farming districts. Again in the past season of agricultural and financial stringency the combination has proven a great aid to many farmers in meeting their direct living expenses.

In one locality in the heart of an old beet-growing district, the local milk company paid 200 farm-dairymen an average of over $700 this year. A farmer who milked an average of 10 cows drew $135 monthly from the condensed milk factory.

On 63 acres of beet land this past season he harvested an average of 16½ tons of beets per acre. Beet growing fits into his farming system in two ways:

1. The manure produced is more profitably utilized by beets than any other crop, except perhaps potatoes in favorable years.

2. The cows transform the beet tops into a higher cash value than other feeding operations.

Another dairy-beet farmer whose November milk check totalled $214 had this to rely upon when his beet acreage, which was severely hailed upon twice during the past season, yielded 9 tons average as compared with his usual 17 tons in normal years.

All dairymen in this district declared that the production of the cows was markedly increased by the proper feeding of the beet tops in a mixed ration. One estimated the feeding value of a normal crop of beets to be $30 per acre through the milk bucket.

Banks have aided the farmers in this locality to obtain good cows, notwithstanding that dairy cows providing a salable surplus of milk, cream or butter enables the farmer to meet his living expenses with a minimum of borrowing.

Business is looking up for highway robbers in New York City. The two well-dressed men who held up Jack Harris, a clothing manufacturer, had a sleek seven passenger limosine and a uniformed chauffeur.

Strawberries Are Good Crop for Home Garden

Strawberries are so easily handled and require so little room that if only one of the small fruits can be grown in the home garden they should have the preference. New plants for setting out this spring can be purchased at small cost from a nurseryman, or perhaps may be obtained free from a neighbor. In either case, says the United States department of agriculture, the bed should contain some plants known as a perfect-blossom variety, otherwise the plans of the imperfect-blossom variety in the bed will not be pollinated and consequently will not bear fruit.

Strawberry blossoms are of two kinds. One kind is called perfect staminate, or male, and the other kind imperfect, pistilate, or female. Some varieties have perfect blossoms and other varieties have imperfect blossoms. Those with perfect blossoms produce pollen which will fertilize both perfect and imperfect blossoms and enable them to bear fruit. The varieties with imperfect blossoms can not set fruit without receiving pollen from perfect blossoms.

If both kinds are planted there should be at least one row of the perfect blossom variety to four rows with imperfect blossoms. The nurseryman's catalogue will specify the kind of blossoms. Set the plants early in the spring, if possible, so they will get the benefit of the spring rains and make a strong growth. Trim off the dead leaves and all but one or two live ones and cut the roots to 4 or 6 inches long. Spread the roots somewhat and set the plants the same depth in the soil as they were before they were dug. Be especially careful not to set them deeper and not to get earth over the growing crowns, for this will probably kill the plants.

The plants may be grown in hills or in narow or wide matted rows. For very small areas, plants set in hills close together will no doubt produce the most and largest fruit, but will require more care than matted rows. For hill growing, set the plants one foot apart in the row and have the rows just far enough apart to cultivate easily, say from 2 to 3 feet; or set two rows a foot apart in double rows and have a space, of 2 or 3 feet between the double rows Keep all runners cut off and give good cultivation, so as to make extra strong plants.

There is a meter in poetry,
There is a meter in tone,
But the best meter of all,
Is to meet 'er alone.

Prof.: "Why is not the average life of the locomotive longer?"

Stude: "Because it smokes so much."—Ex.

POULTRY

Because of the high death rate among young chicks, 90 poultrymen of King county have agreed with county agent, A. B. Nystrom to raise their stock on clean ground.

A survey conducted among the hotels, merchants and lumber camps shows that over $60,000 worth of eggs are consumed in Pend Oreille county each year. Approximately 12 per cent of the value of these are produced in the county and most of this in spring and summer eggs. County Agent E. E. Hupp is urging the farmers of the county to increase poultry production.

Fred E. Starkey, owner of Pulletpens Poultry farm, of Prosser, announces that he has received a radio message from a man at Honolulu ordering 5,000 pullets for July delivery. "This is the third order this man has placed with me since December 1," says Mr. Starkey. "The pullets are Hollywood strain. This customer had heretofore been buying pullets in California."

"The best way to prevent loss from rats is to have a rat-proof chicken house," asserts Leo K. Couch, biological assistant of the United States department of agriculture, who speaks of the increase of rat nuisance among poultrymen of western Washington. "It is said to be impossible to clean out rats by any one method, but the use of traps and poisoning are both effective.

"When some sly old fellow keeps coming back and you can't catch him in a trap perhaps he can be tempted by poisoned bait. Barrium carbonate is recommended as a poison rather than strychnine, because it is tasteless and is slower acting. The poisoned rat will probably leave the premises and die elsewhere.

"Rats are particularly troublesome in the spring when the young chicks are running about. The rats, however, prefer to seize their prey at nights and will gnaw through a poorly constructed board floor and cause serious loss in a brooder house. Thus will be seen the necessity for concrete floors, or other methods of making the brooder house rat-proof. Beside disease and vermin carriers the rats are said to destroy $2,000,000 worth of feed and young stock, such as chicks before they are able to roost at a safe distance from rats."

Secretary Fall Quitting Washington

Harding, accompanied by wife, daughters and grand-children, to bid good-by when this picture was taken.

First Close-up of Mrs. Harding Since Illness

Mrs. Harding posed specially for this picture on deck the McClean yacht in Florida last week, the first since her illness. Mrs. McClean is with her.

Monument to An Apple Tree

Probably the only monument ever erected to a tree stands in a field in Madison county, Iowa, where it tells all who may read the romance of the "Delicious" apple, which was born in Iowa, and is now known and grown in every quarter of the globe where the apple flourishes.

This unique monument was dedicated last summer to the parent Delicious apple tree, which is still standing and bearing after a life of fifty years, its offspring, in trees distributed and planted, number more than 7,500,000. Fully a third of these baby trees, it is estimated, have survived and grown to producing age. The same authorities estimate that the annual crop of apples from these trees brings in the markets fully $12,000,000.

The story of the Delicious apple tree is a pomological romance. In the early '50s a new settler in Iowa, Jesse Hiatt, planted an orchard . In the spring of 1872 he found that a Bellflower seedling in the orchard had died, but from the root had sprung a tiny shoot ,which showed an unusual ruggedness, and began to climb upward with surprising rapidity. A few years later the tree reached the producing point and by early autumn was covered with big red apples of an aroma and flavor such as the owner had never found in another orchard. It was a new apple altogether.

For 15 years after bearing its first crop the new tree bore annually and increasingly before its discoverer found a way of making it known beyond his neighborhood. During these 15 years he tried to interest various nurseries in his tree, but without success. Finally he sent samples of the apples to a fruit show in Missouri. The manager of the show, who was a practical nurseryman, was attracted by the appearance of aroma of the apples. He bit into one, and immediately exclaimed, "Delicious!" Thus was born the name of the new fruit.

He looked to see who had sent in the exhibit, but the tag had become lost in the shuffle and there was no way of identifying the exhibitor. There was nothing to do but wait, in the hope that the unknown exhibitor would send apples the next year. And he did. This time the manager unpacked the exhibits himself and discovered from whom the "Delicious" apples had come. The result was a contract with the owner of the tree giving the nurseryman the right to propagate and market scions from the tree. A scion, horticulturally, is a slip or cutting from a twig or shoot of a tree for grafting or planting.

Details.

Ray—I must get my overcoat at the railroad station.

May—Checked, wasn't it?

Ray—No, brown.

This Will Help Some.

Food for thought, hints to be energetically acted upon, were given by Dean Iddings in an address at the livestock convention at Spokane recently on how the farmer may increase his profits.

Not alone better marketing and lower freight rates, but a lowering of the cost of production will be a vital factor in profits in livestock in the future, he said.

Among means of reducing the cost of production he enumerated the following; increase of calf crop; reduction of labor expense; cutting down of taxes; reduction of overhead, and increase of milk production.

Here and there can be found, even in these times of depression for the farmer, a man who is making a success of farming. Carefully inquire into his methods and you will almost invariably find him attending to these factors of success. There are many things the farmer would like to do to better his condition but they lie outside his control. Here, however, is one line of endeavor to which every farmer can be ever applying himself, and if not produce an actual profit, at least materially reduce the loss.

DAIRY

The value of milk consumed on farms in 1922 was nearly equal to the value of the milk sold, according to estimates of the United States department of agriculture. The farm value of milk sold is estimated at $744,000,000 and of milk consumed on farms at $636,000,000.

Variations in the flavor and odor of milk are the result of a number of general causes, according to the United States department of agriculture. The principal factors are the internal or physical condition of the cow, absorption within the body from highly flavored feeds, absorption into the milk after it has been drawn, and the development of bacteria in the milk while standing.

It has been found that many of the objectionable feed flavors and odors in milk get into it through the body of the cow and not through absorption from the air of the stable or from other causes. This has been shown to be true of silage and, more recently, of green alfalfa and, to a slight extent, of green corn. The green alfalfa should have about the same effect whether it is cut and fed in the barn or grazed.

When the green alfalfa is fed at the rate of 30 pounds to the cow one hour before milking, very pronounced off flavors and odors are produced in the milk, says the department. Reducing the quantity fed to 15 pounds moderates the intensity of the off flavors and odors, but they are present to an objectionable degree. If either of these quantities is fed immediately after milking there will be no noticeable bad odors or flavors in the milk at the next milking.

By feeding this green feed three hours instead of one hour before milking the intensity of the odors and flavors will be reduced, but they will still be there. Five hours is sufficient time practically to eliminate the bad odors and flavors. When this crop is used for soiling it is advisable to feed it after milking. When it is used as pasture for cows they should be removed from the pasture at least four or five hours before milking if the dairyman desires to produce milk of the best quality.

It is possible to reduce relatively strong off flavors and odors caused by green alfalfa, by aeration of the milk, and slight ones may be removed entirely by this means.

IDAHO

Idaho's two-cent gasoline tax it is estimated will produce revenue estimated at approximately $350,000 a year to be used for the maintenance of the state highways. The policy of the legislature was: Let the people who use the highways pay for their upkeep.

The sawmill of the Winton-Rosenberry company of St. Joe, was the first in that district to instal a double shift for the season's run. A new camp is being established on Hughes creew to take place of the company's camp, which was formerly conducted at Bovill.

Workmen are laying the foundation for an addition to the I. O. O. F. hall at Sandpoint. The old hal is a two-story structure, built about 15 years ago, and the lodge recently decided to enlarge their quarters by making an addition 30x40 feet, two stories high, conforming to the original building.

Preliminary steps were taken recently in Moscow toward an organization of a Latah County Pioneer association. Persons who have lived in Latah county not less than 30 years are eligible for membership. The permanent organization will be perfected soon upon acceptance of the constitution and by-laws to be drawn up by a committee of Moscow citizens.

A tract of land containing 1,100 acres over fourteen inches in diameter, was recently purchased by the Ohio Match company near Orofino, for a price of $103,964. One portion of the tract, 640 acres, was brought for an average price of $120 an acre. This timber is 28 miles from the railroad. The balance of 460 acres is 37 miles fro mthe railroad and was purchased at the rate of $60 an acre.

Fair weather for the last two weeks, together with intermittent winds, has taken much of the ice out of Lake Pend Oreille and open water is now within a hundred yards of the shore, according to word received from that section. It is believed that the steamer Northern, which has been running betwen Hope and Bayview, while frozen out of the Sandpoint harbor will break its way through the remaining ice and regular service will be resumed.

Girls predominate in the birth statistics for the month of February in Idaho, according to the report of Dr. F. W. Almond, state medical adviser issued Thursday. Four hundred one births were recorded at the state bureau and of this number 213 were females and 188 males. There were five sets of twins. Thirty-nine births were of foreign born parentage. In February, 1922, there were 231 male births and 180 females, a total of 411. For February o fthis year the mortality record shows 180 deaths, of which 108 were mael and 72 female, all white.

Work was started recently at Coeur d'Alene clearing the site for the erection of a modern jail and sheriff's residence for Kootenai county, on the court house site on Garden avenue, north of the city park. The building will be two stories, with basement, of concrete with stucco finish, and will have 16 cells on the lower floor with room for an addition of 16 cells. The women's department, hospital and puvenile department will be on the second floor. The heating plant, in the basement, will be of sufficient size to heat the main courthouse building when that is built. The work will be done by day labor and the estimated cost is $20,000.

State Will Sell Grain Bags.

The Washington state prison at Walla Walla has 700,000 jute grain bags that it will try to dispose of this spring based on the market price. Heretofore the state has been required to sell the sack products of the prison jute mill at a profit, but this could not be done last year and compete with the market, so the legislature amended the law so they could be sold. The prison jute mill has shut down and may not be started again.

Early Potato Crop Small.

The early potato acreage this year will be the smallest since 1919, according to a forecast announced recently by the department of agriculture. Based on areas already planted in southern states and on the known intention of planters in northern states, an estimate of 260,380 acres has been made for the 20 early and intermediate potato states.

A groceryman says that some people who buy on time don't seem to know when time leaves off and eternity starts.

OUTLOOK IS GOOD, SAYS JOHN P. DUKE

Bank Deposits of Washington Increasing, Crop Prospects Are Most Optimistic This Year.

Deposits in Washington state banks have increased $2,733,981 since Sept. 15, figures just compiled by J. P. Duke, supervisor of banking, show. There were 211,7775 commercial accounts and 168,253 savings bank depositors at the time of the last call and the banks all report that there is a constant gain in the number of savings depositors. At present the state banks of Washington hold $132,447,643 of depositors' money.

"I have been looking for bad spots in business conditions in this state but there are none," said Supervisor Duke. "The state as a whole is in excellent condition, business is on a good solid basis and unquestionably our prosperity is assured.

"Labor is in demand, there is an improved market for agricultural products, the whole lumber market is most encouraging, retail business is good and manufacturers report an assured market for their output.

"The prospect at present in the districts that have suffered from a series of droughts is all that we could hope for. Reports indicate that every acre of land that is prepared for seeding will have crops planted this year. There is plenty of moisture in the ground now.

"We cannot predict weather conditions, but it seems to me that is all the farmers need fear. Even the mortgage companies have shown a spirit of cooperation and are aiding farmers to get in their crops. With state and other assistance I do not think anybody will lack seed it his land is ready for it. Time alone will tell whether we will get by the next stage safely, but the law of averages certainly ought to give us a good crop year now. Of course many of the farmers will need two good crops to restore them but a big improvement in farming and business conditions in the belt that has suffered for several years will follow a good crop this year. I am confident of the outcome."

MAGNESITE PLANT IS RUNNING AGAIN

Actual operations of the magnesite plant, a mile south of Chewelah, got under way recently. Thus far only two kilns have been fired, and it is likely that the output will not be increased for some time.

Since the first of November the Northwest Magnesite company has spent $200,000 in overhauling the plant and installing the new Cottrell dust collecting plant. With two kilns running there are about 90 men employed at the plant, and 75 at the quarry.

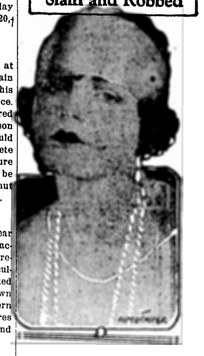
The old smokestacks are tightly capped and all gases, fumes and dust that formerly went through them are now drawn from the kilns by means of a 12-foot suction fan.

It is needless to say that the people of this section are well pleased over having this big industrial plant again under way. At present it means a payroll of about $1000 a day.

Klamet.

The boy stood in the hall,
A girlie by his side;
He was shaky 'bout his knees
For he heard a teacher cry,
"Into your session room, please!"

Beautiful Model Slain and Robbed



Dorothy King, beautiful model, was violently slain and jewelry and furs valued at $15,000 stolen from her luxurious apartment in New York. A wealthy New England manufacturer admits leaving her apartment late the night she was murdered. Police are vigorously at work trying to solve the mystery.

Modern Mechanical Progress

This Department Is Conducted with the Aid of Popular Mechanics Magazine, Chicago, Ill.

SIX-FEET-LONG TURNBUCKLE MADE WITHOUT A WELD.

Turnbuckles of great length, such as are used for tightening the guy ropes on derricks, are now being made weldless. Hitherto, the presence of welds in each head has been the cause of an element of unreliability, and possibility of failure, which in the case of a derrick in operation has often had disastrous results. The weldless turnbuckle, in lengths of 6 feet and over, is a solid forging without welds, and, therefore, exceptionally strong.

LIMESTONE BEARINGS OUTWEAR WHITE METAL BEARINGS.

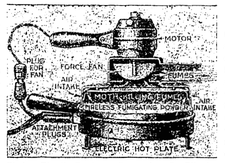
Street car bearings of limestone are reported to have had a life of 35,000 to 45,000 miles in a service where those made of white metal lasted 6,000 to 7,000 miles. White metal is poured into a mold around the limestone and the later bored out with a diamond tool. The porous stone absorbs oil, and in use quickly takes on a polished surface.

COMPRESS POWDERED GYPSUM TO MAKE BUTTONS.

Buttons are now being made of powdered gypsum, which is first compressed to the desired shapes in molds and then dampened with a fine spray of water to effect a "setting," or hardening, process. It is said that buttons are manufactured economically, rapidly, and with exceeding exactness in this manner, in addition to which they possess great duration. Buttons may also be made by this method from burnt magnesite, or from a mixture of burnt magnesite and gypsum. If burnt magnesite is used the hardening must be done with a chloride-of-magnesium solution, the result being an especially strong and durable material.

A practical standrd of night illumination for automobile license tags is being sought by the U. S. Bureau of Standards. The tests will determine the nature of light needed to make the tags visible at a reasonable distance.

As many as 50,000 persons in France have wireless outfits in their homes, according to report recently published by the post and telegraph department.



Fireless Electric Fumigator Reported to Be Effective in Destroying Insects That Infest Flour Mills

FIRELESS FUMIGATOR KILLS FLOUR MOTHS.

Fumes emanating from a noncombustible powder, are circulated by means of an electric fan in a new method of exterminating flour moths that are such a nuisance in mills where flour is processed and sjored. The powder is placed on a fireless and well-insulated electric hotplate that drives off the volatile constituents, leaving a residue to be thrown away. This method is said to assist in the eradication of other insects that have a tendency to infest flour mills, by stupefying them so that they can be easily collected.

TIN CANS MADE AT HOME WITH SIMPLE OUTFIT.

Among the interesting devices lately put on the market, is one for making tin cans at home. It consists of three small machines that are easily fastened to any work bench. A piece of tin, previously cut to size and shape, is formed by the first machine into a cylinder which is next put into the "seamer," where it is held by a glass clamp, while the one-eighth inch lap joint is sweated together with solder and a hand soldering copper.

The third machine is used for flanging the ends of the cylinder and in crimping on the circular pieces of tin that form the bottom and top of the can. This equipment is comparatively inexpensive, and was developed to meet an insistent demand from localities where the cost of a can factory is not warranted or to which the transportation charge on empty cans are excessively high.

With This Simple Device, Tin Cans May Be Made and Soldered, Saving the High Cost of Shipping. From Left to Right, the Machines Are the Crimper, That Puts on the Ends, the "Seamer," and the Shaper.

DEFIES ALL ACIDS, CLAIM FOR NEW TYPE OF INK.

An ink recently invented is said to defy all efforts of the professional forger to remove it without destroying the paper itself. In an interesting test held to demonstrate this claim, a check blank was partly covered with ordinary ink, and a name written over this section with the new ink. Acids were then used to eradicate the name, but while white could be made to show in the blotch of ordinary ink, the letters written with the new ink were not affected.

PAINT MADE WITHOUT OIL CHEAP AND DURABLE.
