

# Using GIS tools to track Sagebrush plant community resiliency

Georgia Harrison  
Plant Sciences, University of Idaho  
[gharrison@uidaho.edu](mailto:gharrison@uidaho.edu)

# Ecosystem resiliency

- The ability to maintain structure and function following alteration
- **Resistance:** retain structure and function
- **Stability:** maintain successional trajectory

Helpful or unhelpful

# Sagebrush plant communities

- Invasive plant disturbance
  - Soil moisture
  - Temperature regime

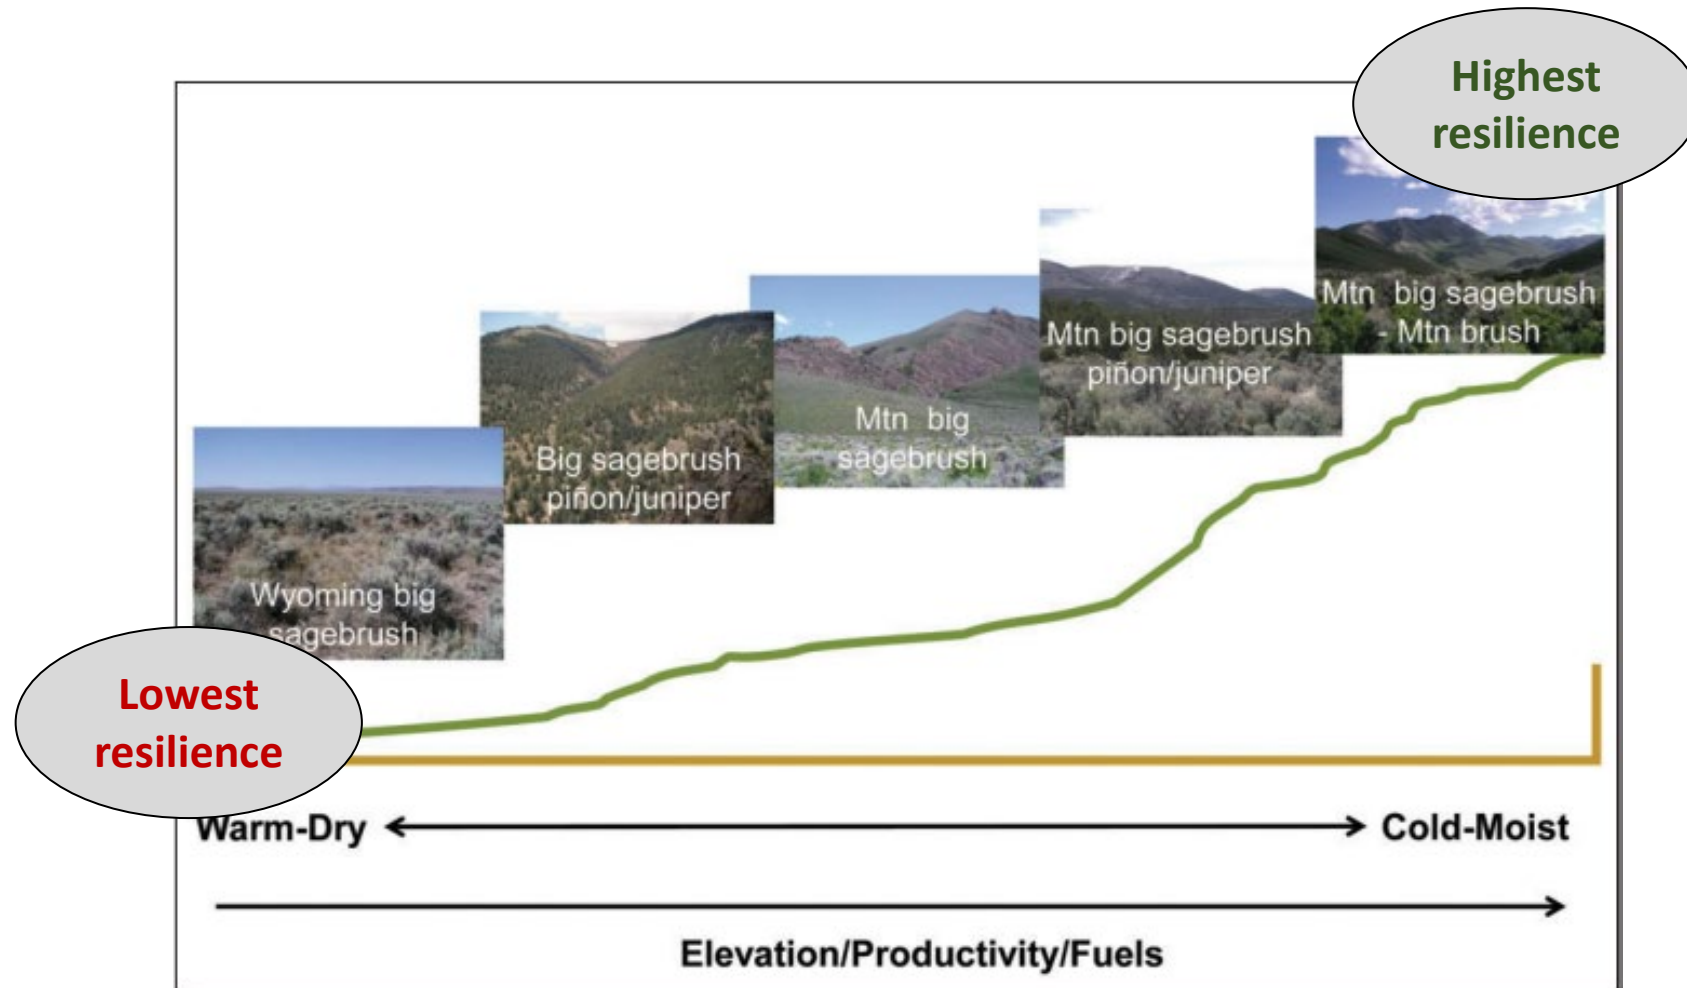

Fig. 6 from  
Chambers et al. (2014)

## Tracking plant cover & assessing change over time

---

- Summer 2021 sampling locations
- Plant community type based on shrub and perennial herbaceous cover

# Google earth engine + python

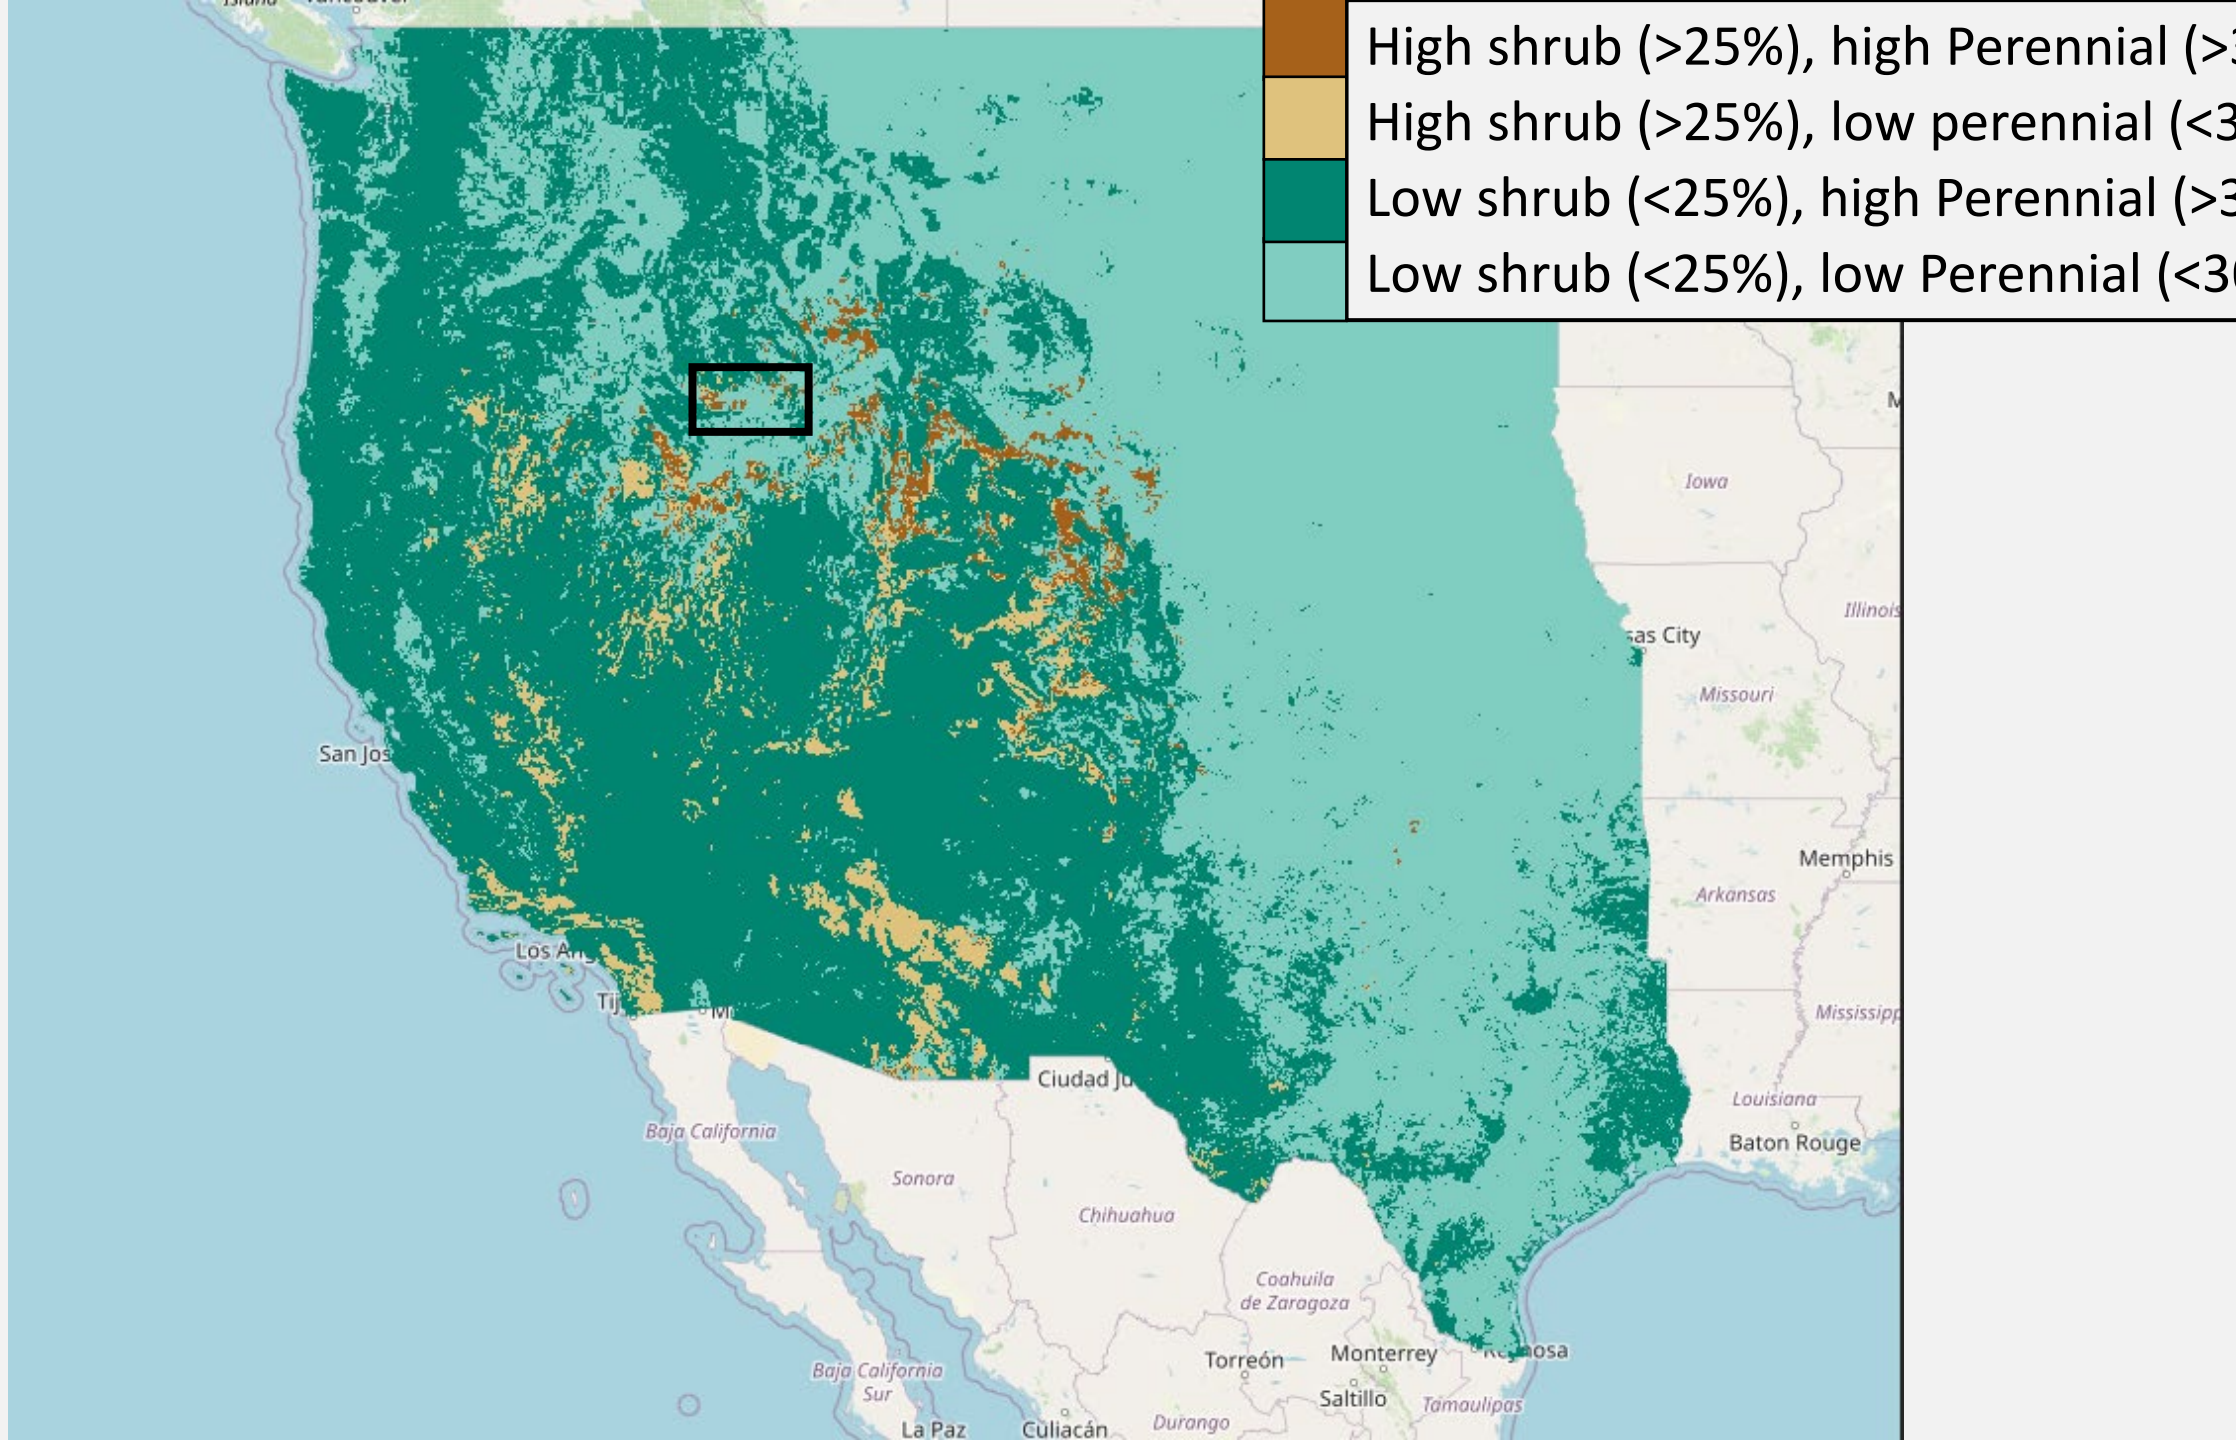

- Google Earth Engine
  - Satellite imagery
  - Climate & weather
  - Geophysical (i.e. Terrain, Land Cover)
  - + Others uploaded for specific projects
- Earth Engine API in Python (also available in JavaScript)

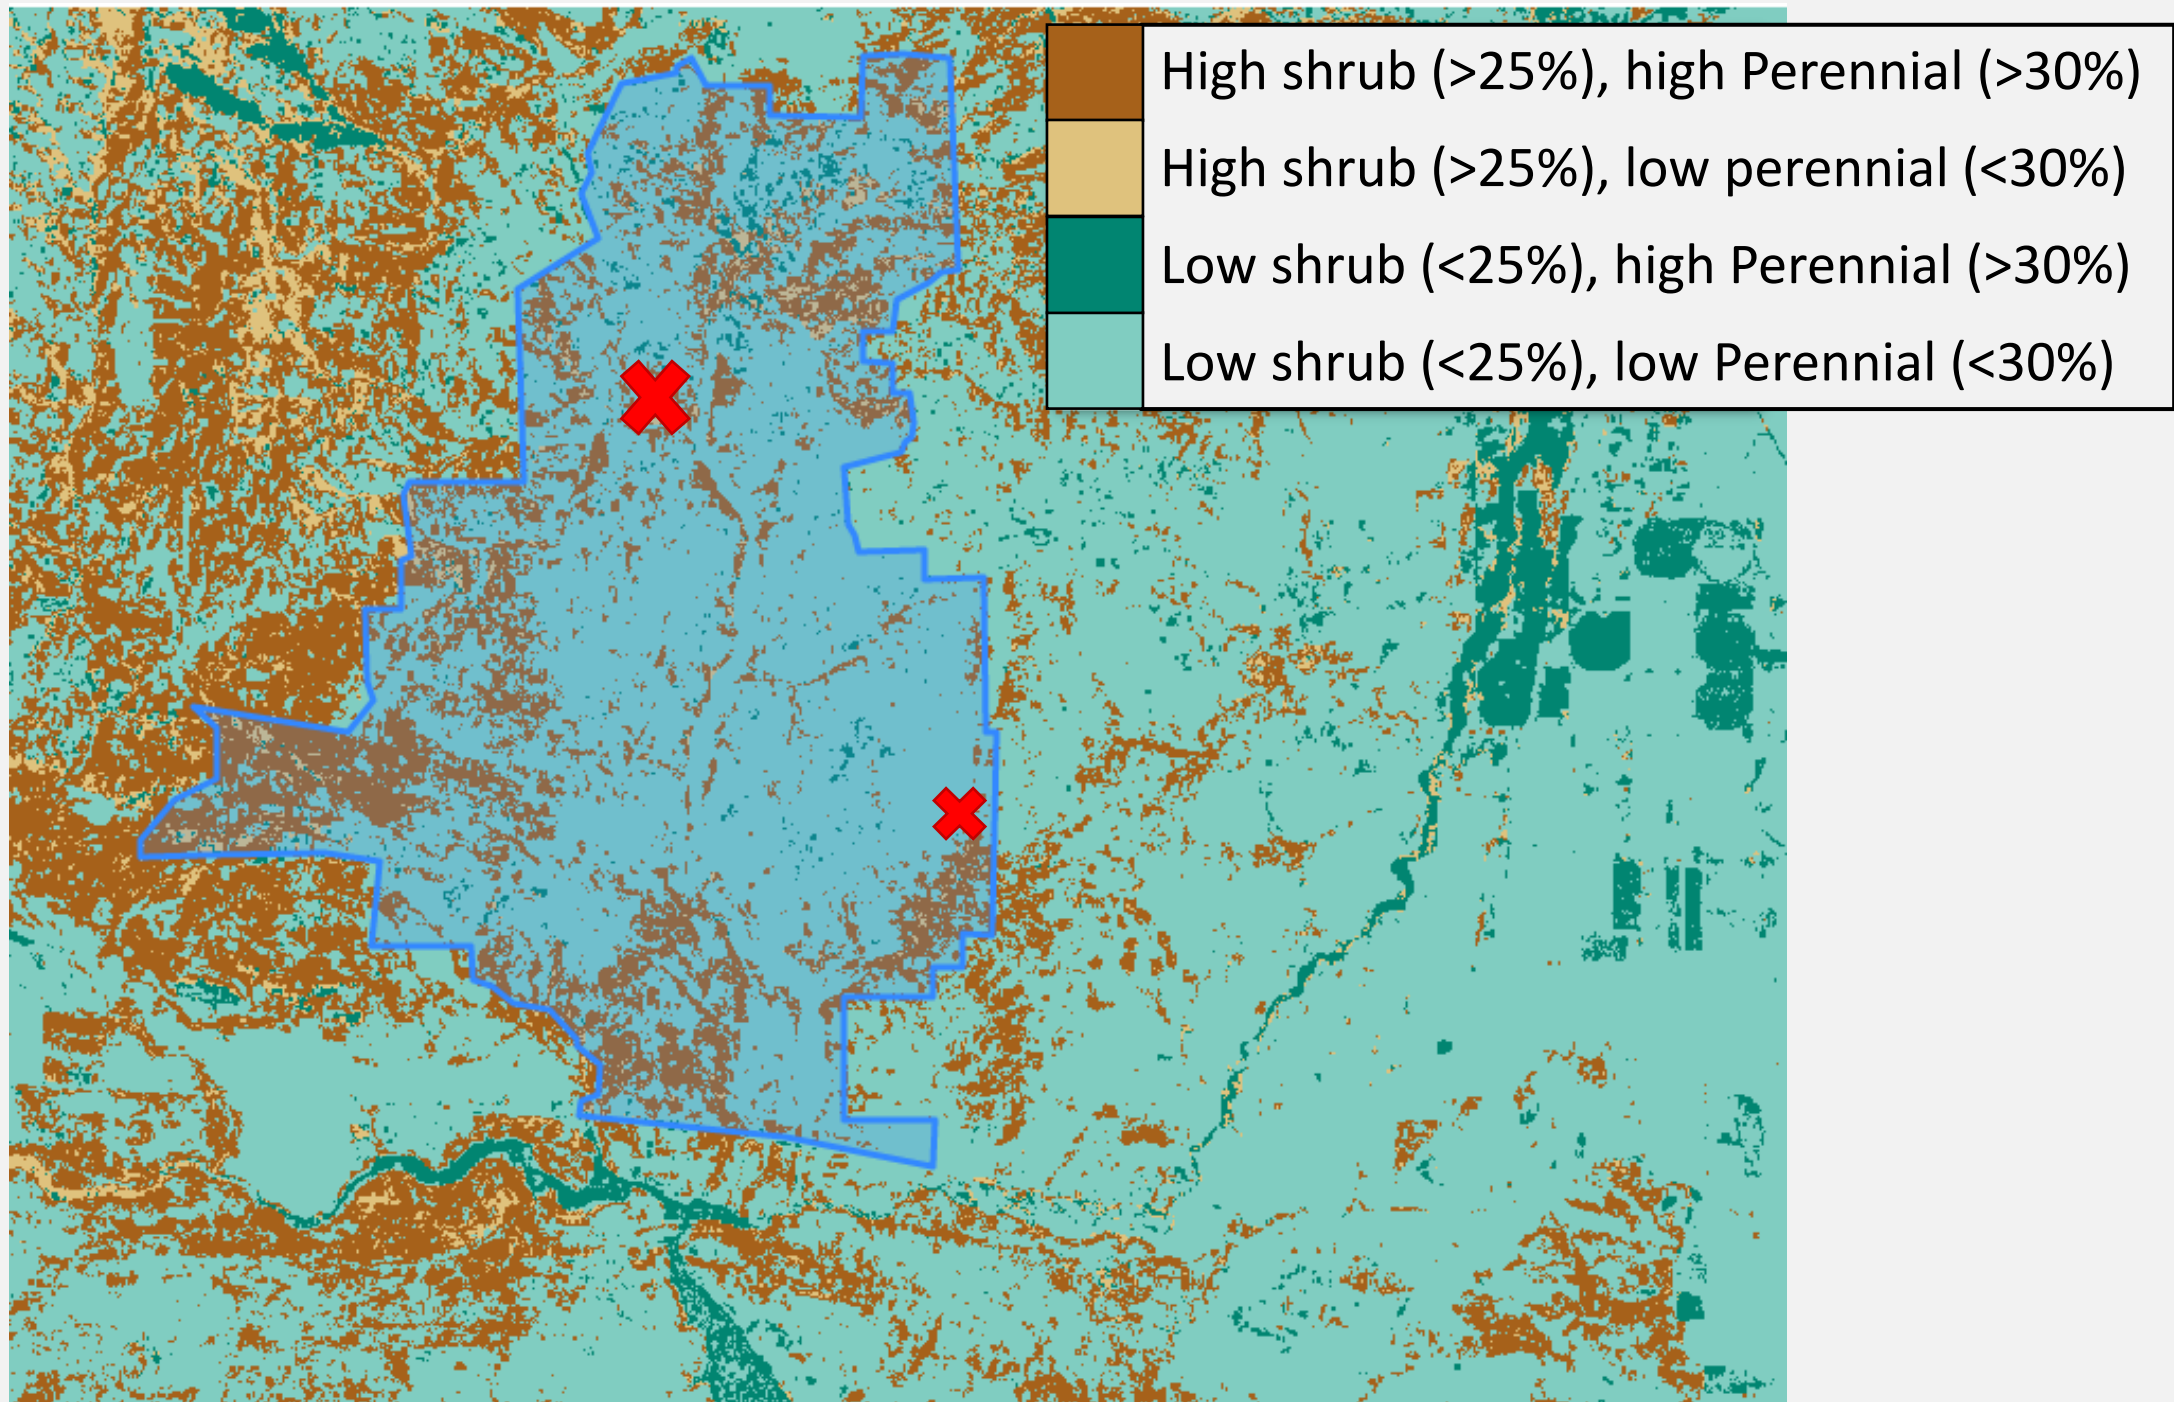

- Percent cover estimates of plant functional groups for western US
- 60,000 field plots + Landsat
- Methods & error estimates: Allred et. al (2021)

Explore the data yourself and use the app  
[rangelands.app](https://rangelands.app)

## Processing steps

Gather plot names and locations

## Corresponding code

```
plot_lats = list(summer2021[summer2021.geometry.x])  
plot_longs = list(summer2021[summer2021.geometry.x])
```

# Result

<b>year</b>	<b>plot_name</b>	<b>PFC</b>	<b>cover</b>
1984	HSHG_C_1	AFGC	15.56
1985	HSHG_C_1	AFGC	2.33
....	....	...	...
2018	HSHG_C_1	AFGC	19.08
2019	HSHG_C_1	AFGC	10.34
2020	HSHG_C_1	AFGC	5.61
1984	HSHG_C_1	BG	4.48
1985	HSHG_C_1	BG	5.55
....	....	...	...
2018	HSHG_C_1	BG	2.78
2019	HSHG_C_1	BG	3.76

- 1984 – 2020
- 30 sampling locations
- Each plant functional group & their uncertainty

# Let's plot functional group cover with plant community strata

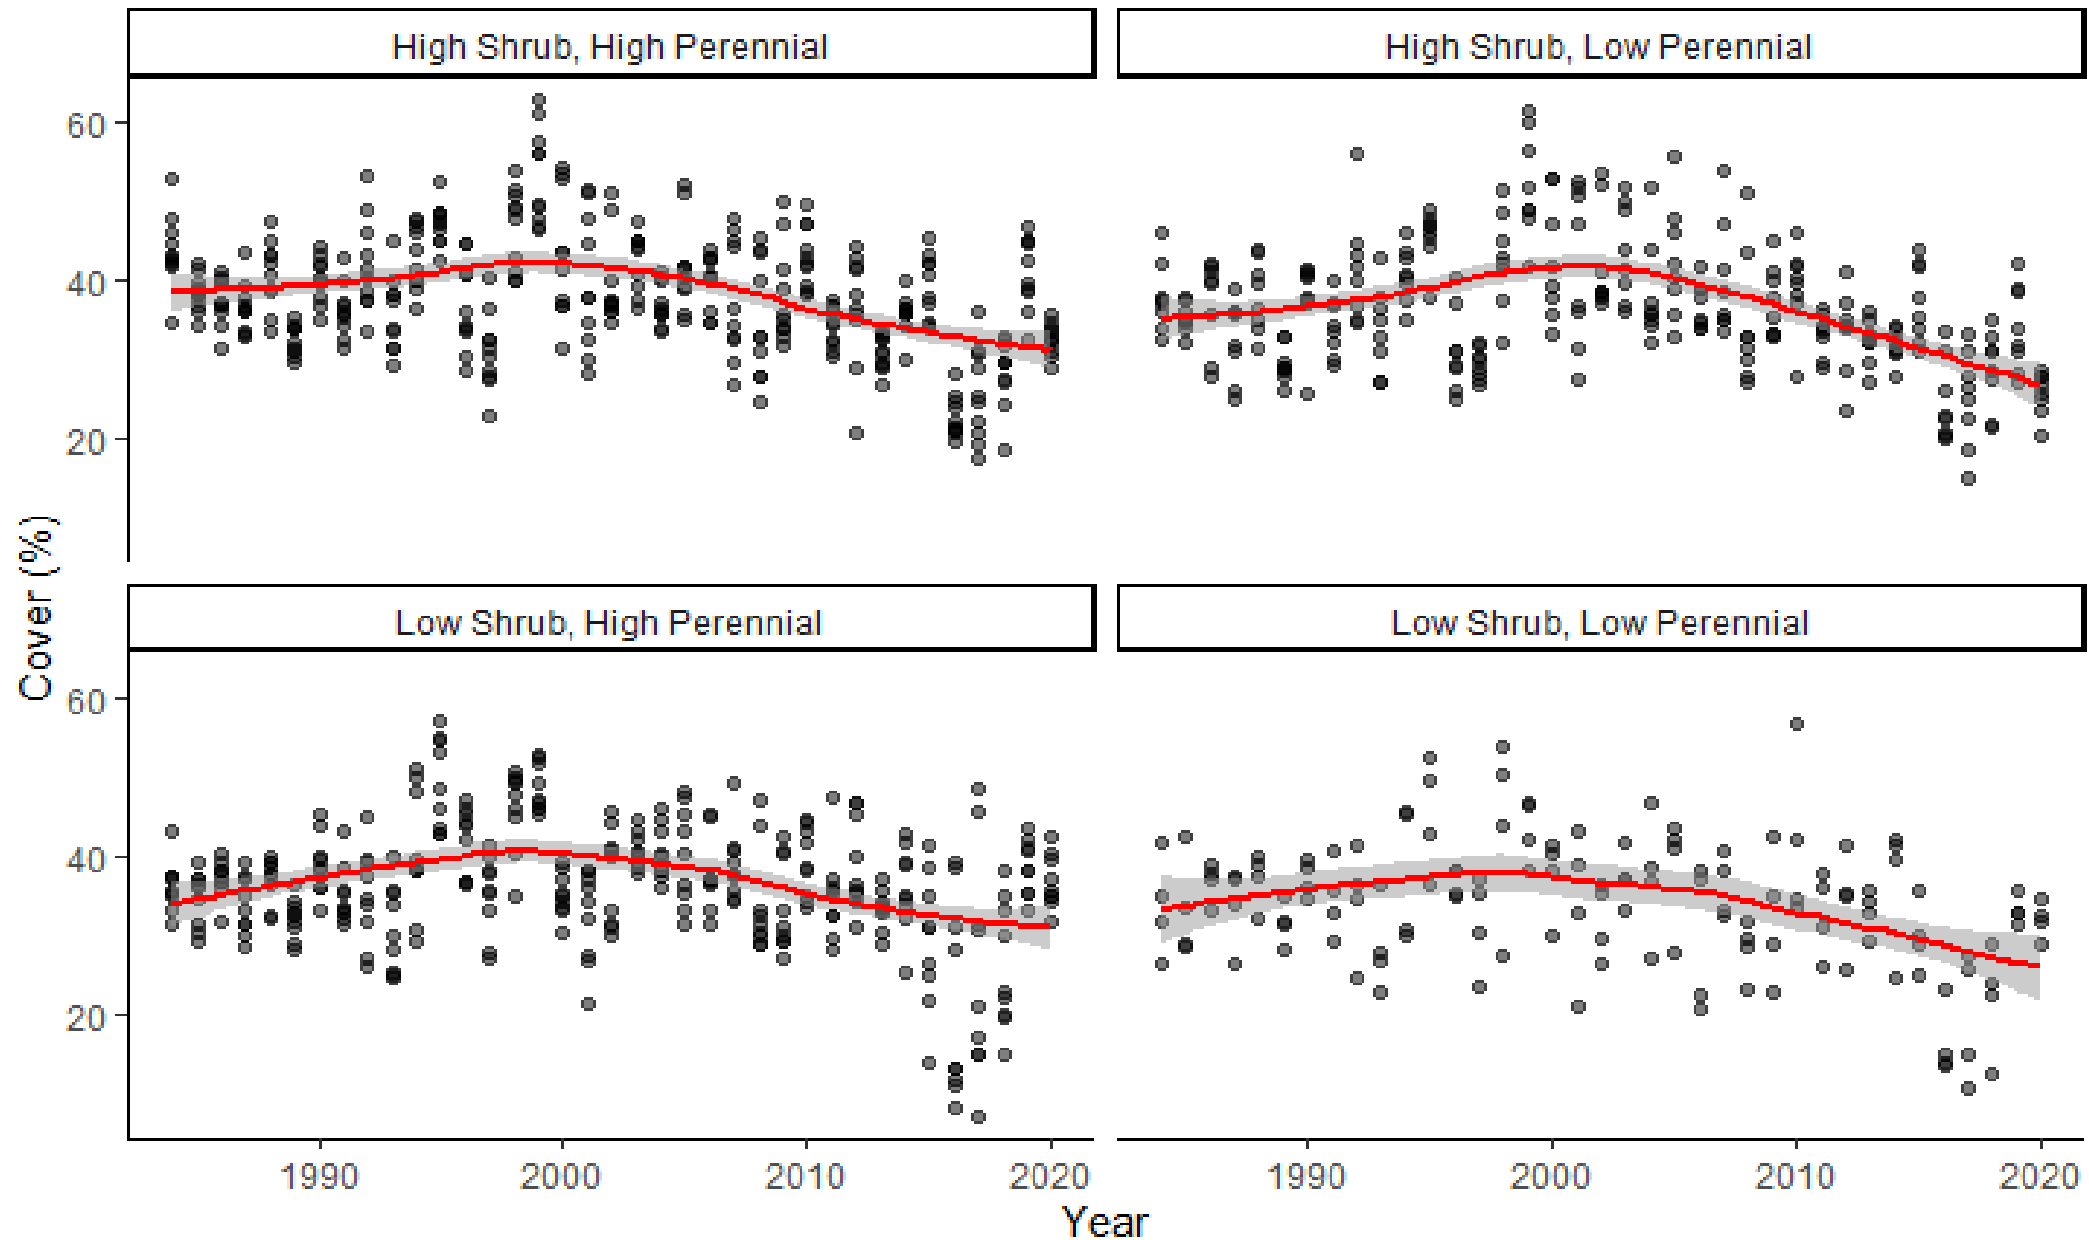

**Where has annual grass cover increased?**

**Which areas exhibit a variable response to disturbance?**

## Perennial forbs & grasses

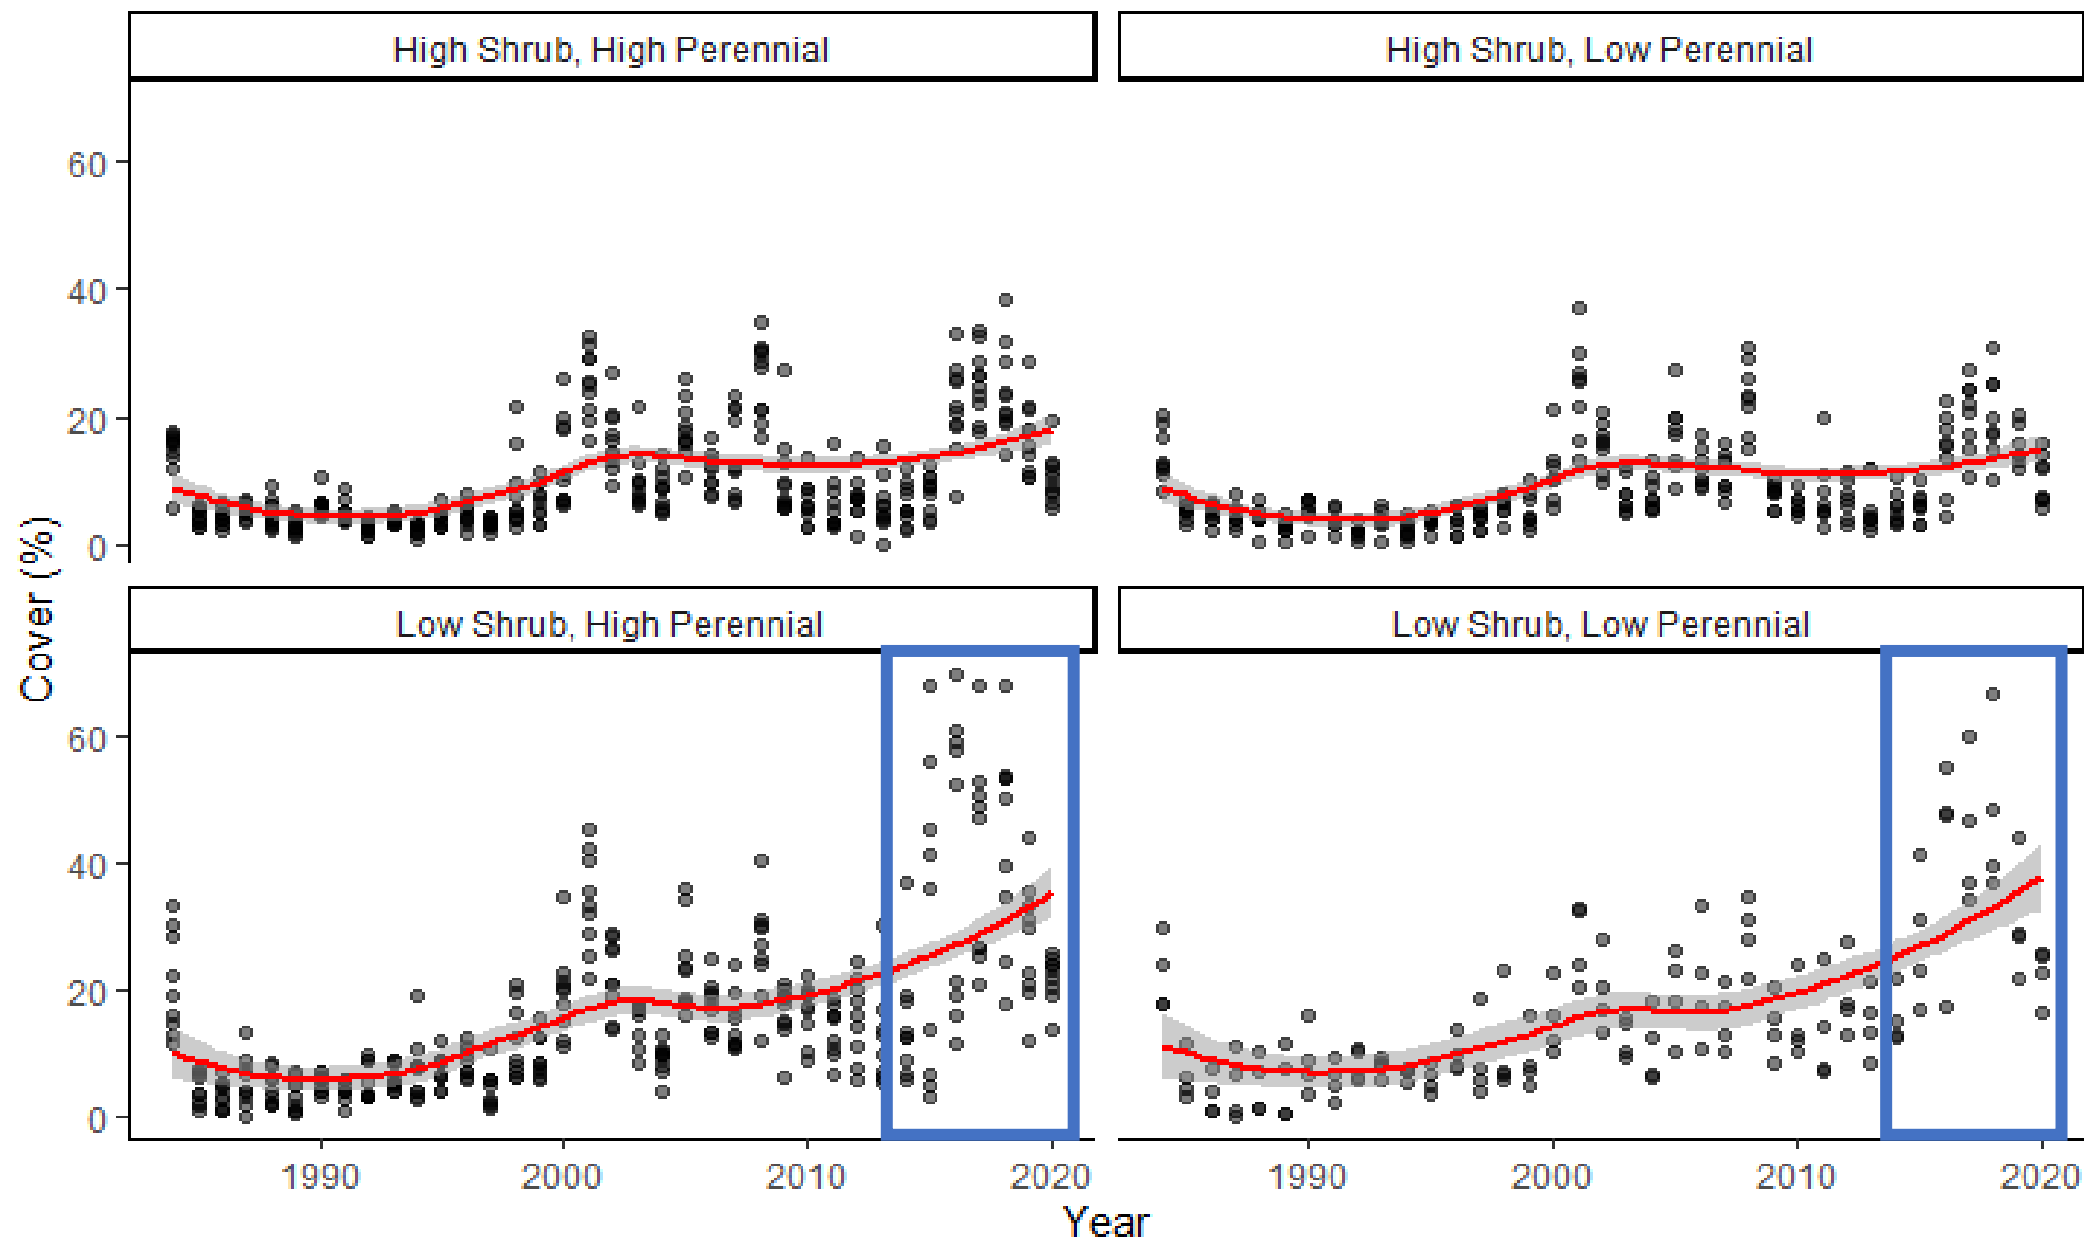

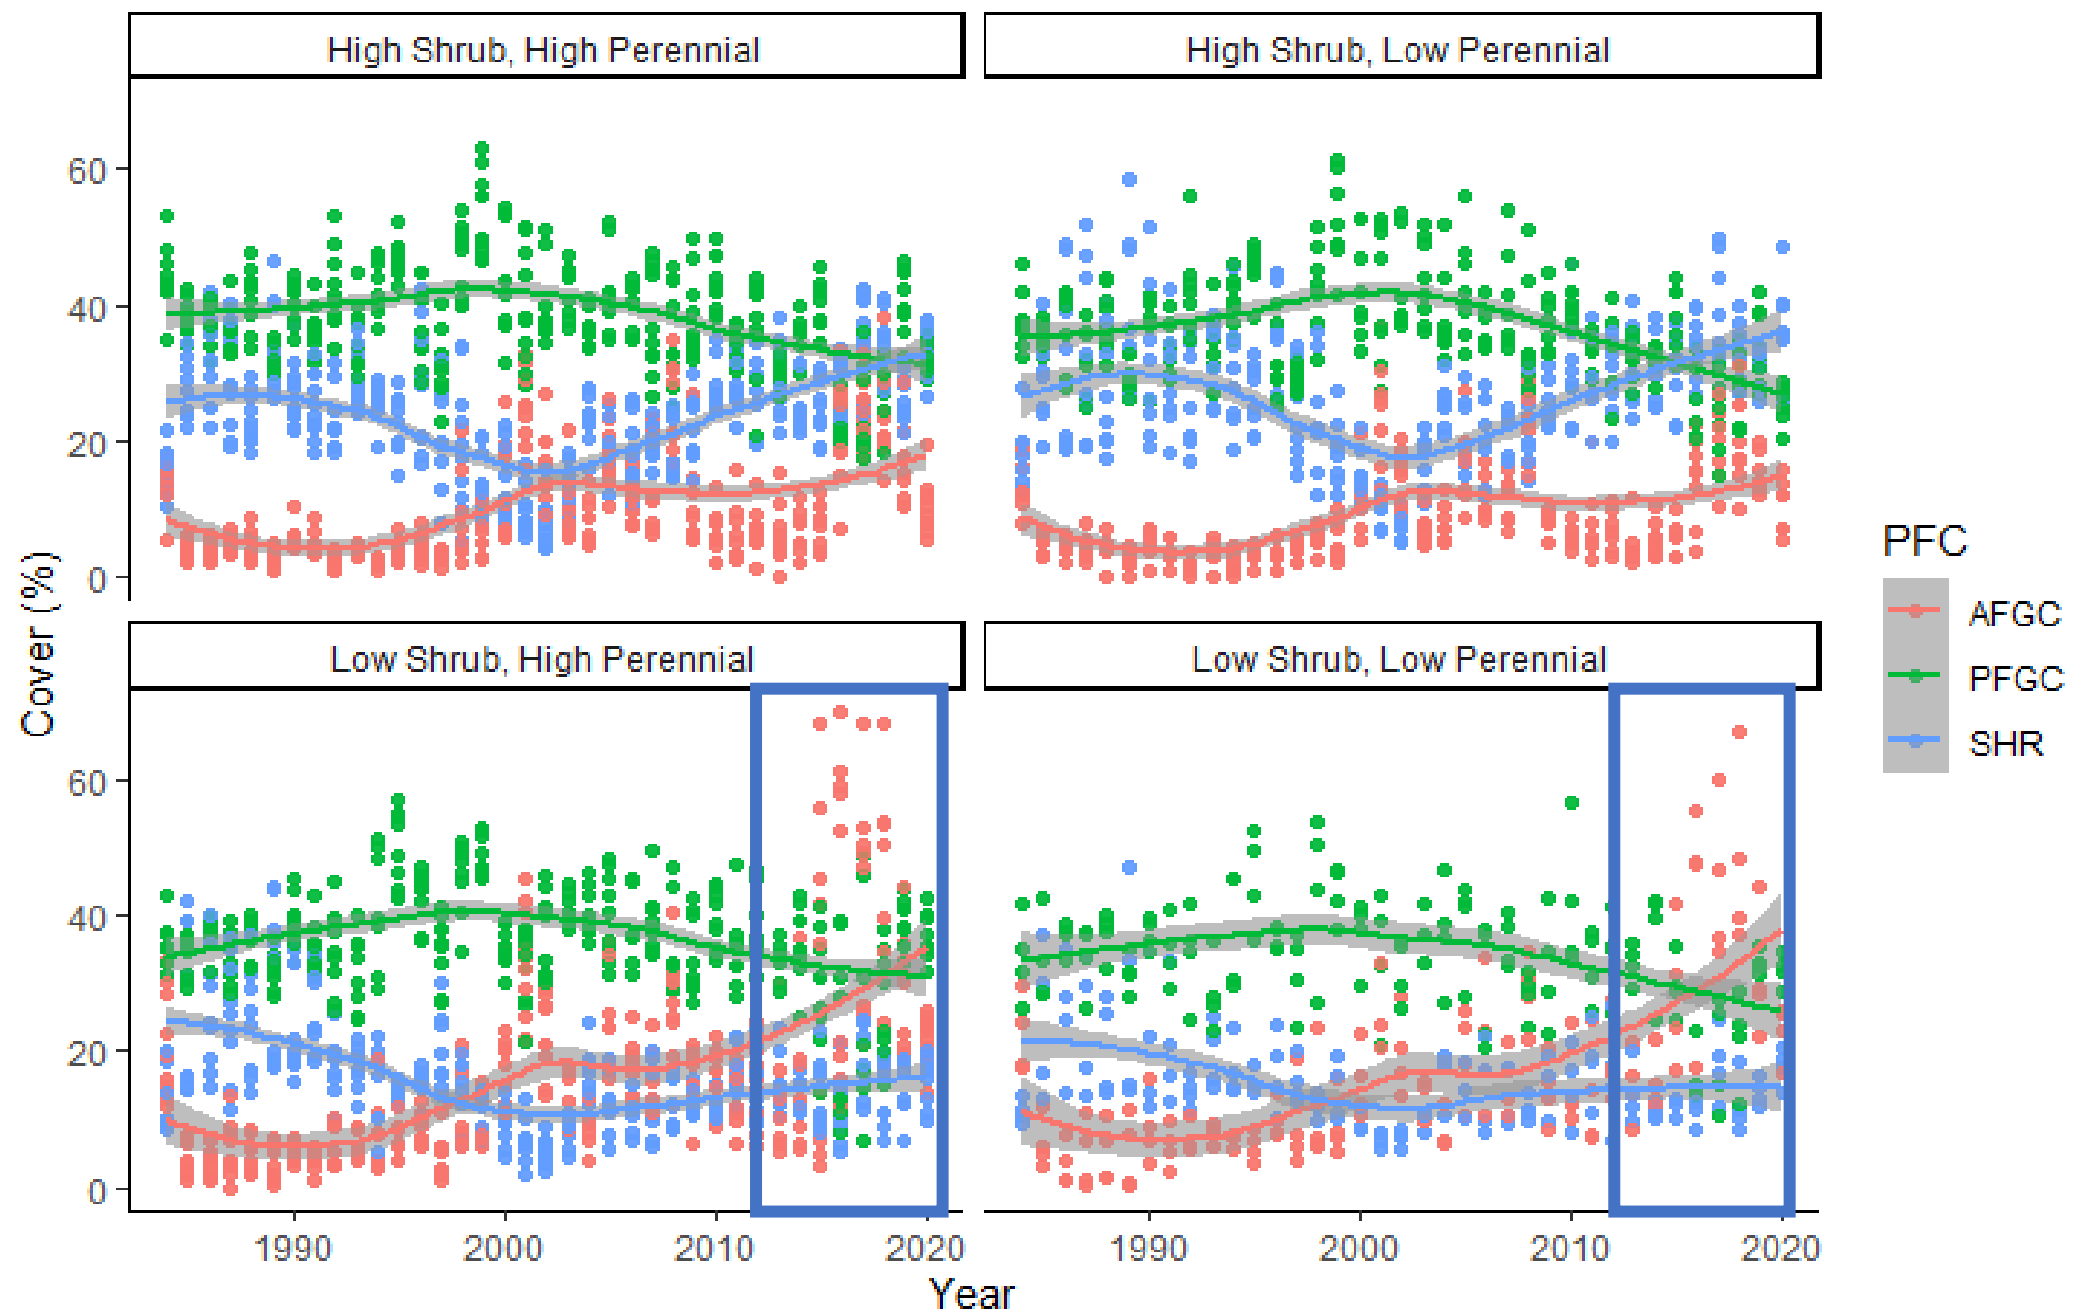

## Shrubs

## Annual forbs & grasses

# Implications

---

- Identifying locations for management activities based on goals
- Understand how this year's data fit into a larger trend
- No need to reinvent the wheel – use existing datasets!
