Gentlemen:

I have just learned that your organization, after further study and consideration, has decided that the 1980 Idaho legislative bill to reduce the dissolved oxygen standard in the states water below dams and reservoirs from 6ppm to 5ppm was a mistake. On behalf of the many members of The Idaho Chapter, I want to thank you for taking this position.

It seems that our environment and quality of life here in Idaho is assaulted continually and from all sides. Enlightened action on your part is certainly appreciated.

Thank you.

James F. Gore
President, Idaho Chapter
