

September 1982

Research Ideas for Taylor Ranch

Wildlife

- Bighorn sheep movements
- Stream fluctuations
- Bird list
- (Small) Mammal list
- Mortality of 1/2 curl rams (1yr old)
- Sheep summer & winter range
- Sheep herd size determinant
- Sheep - social organization (prey ecol)
- Raptors - fall migration
- Wood supply vs cavity nesters inventory
- * Wolf transplant & preliminary studies (Bart O'Gara, UM)
- Cutthroat trout migration
- Deer migration
- * Snag mortality in burns
- Bear ecology
- Cutthroat trout - rainbow cross
- Limiting factors of population of ungulates (elk)
- Big game (Sheep) age profiles
- BG - population limitations - forage Winter/Summer
- BG reproductive rates
- Amino acid analysis - Epidemiology - Nutrition (Bill)
- Recreation
- On & off trail use by hunters
- * RONRW Comprehensive LM Plan, USES
- Wilderness use - purpose & method of entry

Botany

- Habitat types/plant comm plotted on aerial photos
- * Plant reference collection (herbarium)
- Plant list of species
- Spruce budworm/Tussock
- Moth in natural ecosystem
- Mistletoe - managed vs unman.
- Fire succession/ecology

Physical

- * Weather station
- Geologic?
- Solar panels

Cultural/Historical

- Indian camps & use on Big Cr.
- Outfitting in modern times

Cavity nests - band & populi long term marked
 Long term Pop of Big Game

~~Suggestions from Faculty Survey~~

Faculty survey

Genetic Variation - trees & bugs ; gene pool

Soils

blue grouse ecol.

overgrazing by pack animals -? controversial
species diversity

historical use - anthro

succession - plant/animal

historical aerial photography - ^{veg.} changes overtime

human perceptions of natural environments

role of outfitters in wilderness

riparian plant community study } Steve

Plant community study } Brunnsfeld

aquatic insects - also all limnology

ecology of mountain meadows

natural sediment loads of streams

ecology of boreal owls

population dynamics of lightly harvested ^{or seminatural} mammal popul.
kinds, interactions, rates, impacts of tree problems as related to ^{disturb} areas

nutrient cycling in undisturbed forest setting

plant & plant comm. survey for changes in existing classifications

plants indicating strange habitats } Fred Johnson

Inter-Office Memorandum

Date 9-27-82

As new director of the Wilderness Research Center, one of my first tasks is to identify a research program that the Center should address. To do this, I would like your help in identifying research topics or any individuals interested in pursuing research relative to wilderness or natural ecosystems, either at the Taylor Ranch or in other wildland settings. Probably the simplest way to do this is to ask each of you to please take just a few moments to answer the five short questions below:

Are you interested in doing research in a wilderness setting? YES NO
If so, on what topic(s)?

—sounds like alot of fun, but none of my current research interests seem appropriate for such a setting.

Are you particularly interested in doing research based at the Taylor Ranch? YES NO

If you are not interested in pursuing research confined to a wilderness setting, could any of your research projects benefit by conducting some portion of it in a wildland setting to make comparisons to baseline natural conditions? YES NO

Even if you are not interested in wilderness research at this time, are there any research topics you believe the Center should address?

Please list them. Benefits of wilderness besides recreational and aesthetic type values, such as ecosystem FUNCTIONS,

i.e., climatic balance, watershed, air cleansing, etc., and attempts should be made to quantify these. Also we need some urban based programs to educate society about the value of wilderness for the

Finally, would you please recommend any researchers or faculty outside the College of FWR that you think might be interested in wilderness-related research. Marvin Henburg in Philosophy might be.

Thank you! I realize you may be too busy to give detailed answers right now, but please feel free to give me a call or stop by and discuss this topic if you would like to have some input.

Ed

Edwin E. Krump, Director
885-7911 Room 19H

EEK:ps

Small relative cost that our society spends on wilderness. I know there have been other such attempts but there must be some new approach that could be taken.

As new director of the Wilderness Research Center, one of my first tasks is to identify a research program that the Center should address. To do this, I would like your help in identifying research topics or any individuals interested in pursuing research relative to wilderness or natural ecosystems, either at the Taylor Ranch or in other wildland settings. Probably the simplest way to do this is to ask each of you to please take just a few moments to answer the five short questions below:

Are you interested in doing research in a wilderness setting? YES NO
If so, on what topic(s)? Plant checklist needed for area (Region unknown little known botanically); Riparian and other plant community studies; Any PLANT-oriented research.

Are you particularly interested in doing research based at the Taylor Ranch? YES NO

If you are not interested in pursuing research confined to a wilderness setting, could any of your research projects benefit by conducting some portion of it in a wildland setting to make comparisons to baseline natural conditions? YES NO

Even if you are not interested in wilderness research at this time, are there any research topics you believe the Center should address? Please list them. _____

Finally, would you please recommend any researchers or faculty outside the College of FWR that you think might be interested in wilderness-related research. _____

Thank you! I realize you may be too busy to give detailed answers right now, but please feel free to give me a call or stop by and discuss this topic if you would like to have some input.

Ed
Edwin E. Krumpé, Director
