DATE: October 11, 1988

TO: Jim and Holly

SUBJECT: Middle Fork reports

I got copies of those reports that were provided me by the Salmon National Forest. They contain historical information on game counts and habitat studies which should be filed at the Taylor Ranch. I understand there are no files available for the Challi's efforts any more and I haven't tried the Payette but doubt they have anything. However, when you are out in McCall sometime, check this all out with them.

I'm trying to work on the vegetation information I got last summer and when I get it into some semblance of order will provide you with a report of some sort.

Had a good September checking out the bighorn habitat in the Selway. The mule has turned into an excellent pack animal and now it is up to me to convince her she is also an excellent riding mule!!

Hope all's well in God's Country.

*Best regards,
Jim*

Hi!

Sure enjoyed your visit. Have driven the horses a couple of times since your visit. They seem to be doing okay.

Judy told me that the instructions for collecting Surber samples that are in the booklet I gave you, just don't cut it. So, I have prepared the attached guidelines. I hope they are helpful. You should take 5 such samples at random points along the study reach. Collect one set ASAP and another after spring runoff. Mail me the samples as soon as you have them and I'll try to get them processed.

ISU Is An Equal Opportunity Employer

Best wishes

Wayne
