Hello Wayne:

Enclosed are the invertebrate samples from Cliff Creek. You'll certainly find ash in this year's samples! The stream bed also seemed more imbedded this year, as if scouring had occurred to some degree. After some heavy rains this summer our lower pasture irrigation ditch ran black with ash. We've also noticed a lot of slope erosion up in the burn. I've hope you're able to make it back with a crew next summer! By the way, the fire was called the Golden Tree and it occurred Sept. of 1988.

Hope everything is going well. Say hello to Judy & Jennie for us. I'll send you a more personal letter soon.

Regards,
Jim A.
