

Jeff,

Just a note per your request.

Tentative dates for sampling:

May 18-25 - 2 people

and

June 29 - July 6 3 people

Early July depends on temps and degree-days

accumulated. Also if you observe any

spawning activity earlier (1st week of May) can

you radio phone that to Fish/WLD office

or to me 208-882-6287.

Many Thanks

Gene S.
