Dear Dr. Sowles:

Enclosed is a copy of the P. m. serratus paper for your files on research at the Taylor Ranch. Unfortunately the publisher somehow lost the reprints so here is a xeroxed copy. The two summers I had the opportunity to work in the Idaho Primitive Area were truly enjoyable and provided an unforgettable experience.

I am now enjoying a rest at home after having completed my master's thesis at BYU and finished my summers work in southern Idaho where I worked again with Dr. Clayton White on the Ferruginous Hawks and other raptors of the area. It was certainly a very productive summer. We banded over 300 raptors and found over 80 nests of various raptors in Raft River Valley alone. I have since been busy writing up this data. I am currently hoping to find a job and trust that if I keep trying I will find one sooner or later.

(over)

An Ecological and Taxonomic Investigation of Peromyscus
maniculatus serratus in Idaho

I hope that all is going well at the University of Idaho. Have a nice autumn.

Sincerely,
Tom

P.S. I hope congratulations are in order and that you have experienced no delay in getting your Ph.D.
