Dear Dave,

Here is one copy of the report on the potential natural vegetation of the Taylor Ranch. I enjoyed working on the vegetation. You have a unique research station that could be used as a basis for wilderness management research.

I intended to submit proposals for vegetation studies at the high lake basins around the Taylor Ranch. These are the only lakes that I have found in the western U.S. that meet the definition of being "untrammled by man" as defined in the 1964 wilderness act. However, at the present time I do not want to take on additional research studies until I finish my backlog of uncompleted projects.

Sincerely yours,

Dale A. Thornburgh
Professor, Forestry
