Roger L. Guernsey, Chairman	Boise,	Idaho
Jack Mead	Juliaetta,	Idaho
George Rauch	Lewiston,	Idaho

Woods foreman, foresters and industry people meet with Association protection leaders to discuss the problems of fire protection each spring. This Industry-Association conference has paid big dividends in recent years in working out much detail to provide smooth action and cooperation in the work of fire protection. In 1964 nearly 150 persons turned out for the conference.

COMINED ANNUAL REPORT - 1963-64

## 1963-1964 Report of the Chief Fire Warden

Orofino, Idaho November 30, 1964

### Officers and Directors:

## POTLATCH TIMBER PROTECTIVE ASSOCIATION

I respectfully submit my annual reports for the period of November 30, 1962, to November 30, 1963 for the 1963 season and the period of November 30, 1963, to November 30, 1964, for the 1964 season.

LAND BOARD SPEAKERS—In 1963 the CTPA-PTPA sponsored a forest tour to show resource values both public and private, the matters of interest. The program during the 1963 tour featured outstanding persons shown above. Left to right: Bud Merriman, Manager, NP Railway Land Dept.; Colonel James Beddow, Army Corp of Engineers; Elton McQuery, Counsel, States Governments, San Francisco; Roger Guernsey, State Forester; John Carver, Asst. Secty. of the Interior; Eugene Taylor, County Assessor, Latah County Idaho; Ernie Woletz, Dean, College of Forestry, U of I; William Johnston, Managing Editor, Lewiston Tribune; and A. B. Martin, Pacific Northwest Power Co. (not shown).

## FIRE SEASON

The 1964 fire season followed a winter of above normal snowfall with more than average precipitation throughout the fire season. Records taken at the Elk River weather station show 8.26 inches of rainfall during June, July and August, as compared to the 37-year average of 4.08 inches for the same period. September precipitation was 1.76 inches, very near the 37-year average of 1.72 inches. During the usual critical fire season months there was 100% more precipitation than The longest period without rainfall occurred duraverage. ing a 10-day period in the latter part of June and the first part of July. During the last 37-year period only one other year, 1948, exceeded this year in the amount of precipitation for the three month period where 10.81 inches was recorded as compared to 8.26 inches this year. With this well distributed rainfall in above normal amounts the fire season for 1964 was well below normal in length and severity than preceding fire seasons. Vegetation remained green, throughout the fire season.

The first fire of the season was on June 26 in the Boehl's Cabin area. Only two definite storm periods occurred during the fire season. The first was in mid-July and started ten fires on the Association area. All were quickly contained and resulted in no merchantable timber loss. The second storm period occurred in mid-August and lightning started ten fires, all but one of which were limited to less than  $\frac{1}{4}$  acre. The Gold Butte No. 2 fire was set by lightning near the top of a ridge and quickly spread to several acres before protection crews arrived. This fire burned in a cut-over area and part of a recently used log landing but there was no damage to merchantable timber. The last fire of the season occcrred on September 29 as a result of debris burning. During the 1964 season 29 fires occurred, with 25 started from lightning and 4 from other sources. Our annual average acres burned for the past twenty years is 98.45, as compared to  $21/_{2}$  acres this season. The average number of fires expected is 62, as compared with 29 fires this year. The two distinct lightning storm periods accounted for 69% of all fires, while the remaining 31% were generally scattered throughout the month of July.

In summarizing the 1964 season, it was one of the wetter seasons with less storm activity than normal.

## COMMUNICATIONS

Our communications continue to improve with additions of new equipment and improvements in the use of existing equipment. Radio has generally replaced ground line telephones. Only two main telephone lines were maintained and operated during fire season. These are as follows: (1) Elk River-Boehl's Cabin line which also serves our main observation tower, Elk Butte, and (2) Boehl's Cabin-Freezeout Lookout line. Having two detection points with radio and telephone service increases our efficiency in advent of radio failure. Many miles of our abandoned telephone lines were removed this year.

In the operation of modern radio communication equipment. electrical power at our major detection points is all important. This year a light duty power line was constructed to Mason Butte Lookout. Through a cooperative arrangement, power was made available at McGary Butte Lookout. Elk Butte, our main radio relay station, has had electrical power and a stand-by power plant for several years.

With our communications radio link with industry we are continuing to inform operators of weather forecasts and other information pertaining to forest protection.

## **IMPROVEMENTS**

The 1964 fire season, being generally easier than normal, gave an opportunity to accomplish several improvements. When crews were not on fires they were kept busy on improvement projects as follows: (1) Construction of an addition to the main shop at Elk River. This will facilitate the consolidation of buildings, as the removal of several buildings is

FIRE SCHOOL—New employees of the CTPA-PTPA are gatheerd for fire training, tool use, safety and other subjects to develop our new employees into their greatest potential. A week training program is usually planned. This also helps to better know the ability of our new workers and tends to help them in the work they are best adapted for.

planned for the future. (2) Construction of a winter-time entrance way into the Radio Relay Station at Elk Butte. A cement block building was constructed on top of the existing underground radio facility, giving additional room and an easier winter access. (3) Fire protection roads were constructed in the Mary Mix-Pinchot Butte area and in the area west of McGary Butte. (4) A power line was constructed to Mason Butte Lookout.

## SLASH DISPOSAL

Slash Disposal operations were carried on by the Potlatch Forest Protective District as provided in House Bill 80, Chapter 74, of the 1945 Idaho Legislature.

With generally an easier than normal fire season slash disposal work progressed rapidly this season. Slash disposal work and forest protection crews are housed and fed in the same camps. The following gives some information as to the slash operations by areas within the Association:

(1) Elk River area operates with one 8-man crew, with one foreman and one D-6 dozer, which was shared with the Bovill-East Fork operation.

(2) Boehl's area had one 6-man crew with one foreman and one D-6 dozer on slash disposal.

(3) Mason Butte-Park area operated with one 2-man dozer crew, one foreman and a part-time 5-man slash crew.

(4) Bovill-East Fork area used one 5-man slash crew with one foreman and one D-6 dozer, the dozer being shared with the Elk River operation.

Personnel in the Bovill-East Fork area and in the Mason Butte-Park area were hired locally. In the Boehl's and Elk River areas slash personnel were boarded in the Association camps.

## **DWORSHAK DAM PROJECT**

The 87th United States Congress authorized construction of the Dworshak Dam, formerly named Bruce's Eddy Dam. Congress changed the project name to Dworshak Dam, honoring the late Senator Henry Dworshak, who was instrumental in securing the project.

The Dworshak dam will create a 16,970-acre lake between the Potlatch and Clearwater Timber Protective Associations areas and will inundate several miles of forest protection roads, bridges, the Boehl's Cabin camp protection facility and two air strips along the river. Negotiations with the Army Engineers are in progress to protect the interests of the Association in these facilities. All these items are vital to protec-

tion, management and care of the forests in this area. Negotiations will continue with the Army Engineers to insure the best possible transportation routes, air strips, bridges and camp facilities that can be provided.

## CONCLUSION

The 1963 legislature amended the fire laws to provide a closed fire season May 10 to October 20. This change from May 1 to October 31 came about as a result of cattlemen and other interests who wished liberalization of free burning time. Forestry interests concurred in the desire for more satisfactory dates and in the interest of greater cooperation and greater harmony. I hope that Idaho now has a more satisfactory fire season and I am sure it has if all interests will work together and consider the best interests of all.

We have worked very hard to provide a high degree of inspection and aid to those who desire burning permits. I am pleased to report that no incidents of careless burning occurred the past two years. There were 27 burning permits issued during the 1964 season. This number is less than in previous years. This is primarily because most of the land clearing and cleaning up of old logging areas has now been completed on this Association. No permits were refused because of unsafe conditions but the Association cooperated with one

DWORSHAK DAM CLEARING—Early stages of construction at the Dworshak Dam site in 1964 included the clearing work. Above can be seen the first clearing project. Many miles of up-stream forested hill sides remain and it will take several years for completion. The Association has entered into a contract with the Army Engineers to assist them in some of the work and with fire regulations.

rancher by furnishing a tanker truck as stand-by. Burning permits were issued as follows:

Through the years as more machines are uesd in the woods for logging, construction and other purposes we have more fire in and around the areas of equipment use. Many of these fires are hard to put out and are very costly. As more gasoline powered machinery is used, such as power saws, tractors, loaders, trucks, etc., it is only natural that more fires will occur.

We must improve spark arrestor equipment and be sure that it is in good condition at all times while in the forests. Increased exposures increases the incidence of fires. During the past year a greater effort was made to improve spark arrestor equipment and the cooperation was gratifying. We have weakness, however, on the part of some who are not prone to fully comply and in my opinion, stronger teeth are needed in our spark arrestor laws.

I wish to thank our many cooperators for making 1964 a very successful season.

BENTON CREEK BRIDGE—This 200 feet span across the North Fork of the Clearwater river near the mouth of Benton creek was built by the Clearwater Timber Protective Association in 1934. It is an important river crossing connecting many thousands of acres of forest land. The bridge will be 100 feet under water when the Dworshak Dam is completed. Army Corps of Engineers have a crossing planned at a higher location to keep this important facility.

## REPORT ON BLISTER RUST CONTROL OPERATIONS ON THE POTLATCH TIMBER PROTECTIVE ASSOCIATION

#### 1963 - 1964

by

## U. S. F. S.

Blister rust control work on state and private lands within and adjacent to the Potlatch Timber Protective Association during 1963 and 1964 included the eradication of ribes, hand antibiotic treatment of immature white pine, and the aerial antibiotic treatment of pole and mature white pine stands.

A 30-man ribes eradication camp was located on the East Fork Potlatch Creek near the mouth of Bob's Creek during the last two field seasons. Crewmen eradicated ribes from high value white pine lands near Badger Meadows and Mallory Creek. The ribes eradication work was necessary on the recently logged lands to protect the white pine seedlings from severe blister rust infection until the stand becomes old enough (at least 10 years) for effective antibiotic treatment.

Antibiotic treatment crews used the antibiotic, Actidione, to hand treat immature white pine on state and private lands in Moose Creek, Feather-Porcupine, Nat Brown-Purdue, and Clarkia units during 1963 and 1964.

Helicopters were used to apply the antibiotic, Phytoactin, to high value white pine pole stands on state and private land in the following units: North Fork Palouse, South Fork Palouse, Big Sand, Little Sand, Strychnine, Cedar-Blair, West Fork Merry Creek, Clarkia, Keeler, Anthony, Flewsie-Gramp, Big Creek, Feather-Porcupine, West Fork Potlatch, Moose Creek, Nat Brown-Purdue, and Breakfast Creek.

An aerial antibiotic spray unit located at Clarkia used helicopters to treat 2,037 acres of white pine pole stands on private land in the Cedar-Blair unit during June, 1964. The financing of this project included \$10,000 from the State of Idaho pest control fund and \$10,000 Federal matching money.

During September, 1964, two helicopters were used to apply Phytoactin to 1,200 acres of state owned mature white pine on Breakfast Creek near the mouth of the Floodwood drainage. The mature white pine is about 120 years old and only moderately infected with blister rust. The aerial antibiotic treatment of this selected stand is expected to control most of the present blister rust infection and may also provide some immunity against early re-infection.

### 12 POTLATCH TIMBER PROTECTIVE ASSOCIATION

The planned 1965 blister rust control program on state and private lands will be concentrated in the Elk River area. Both hand and aerial antibiotic treatment will be used to control blister rust on white pine reproduction and pole stands in the Butterfield, Cameron, Elk River, Lone Meadow, Oviatt, Bull Run, and Burnt Creek units.

The blister rust control workers in the Cooperative camps were trained in fire suppression work in 1963 and 1964. Although 1963 had a high fire frequency, a few blister rust control man-days were spent on actual fire suppression. The cool and wet summer of 1964 also resulted in a minimum amount of blister rust control fire activity.

**PRESENT BOEHL'S CABIN CAMP**—Protection headquarters at Boehl's Cabin will be under 100 feet of water with the completion of the Dworshak Dam in 1971. This forest headquarters has been in existence since 1905 and its re-location to high ground is planned. The new location is placed at approximately one mile up Breakfast creek at an elevation of approximately 25 feet above the lake that will be created. (See below.)

New Boehl's Cabin site.

STRING RESEARCH — In an effort to speed men over rough terrain from any location to a fire, this simple string dispenser was devised this year. The string released from an airplane flying at low elevations across timber lands can easily be followed. An airplane can lay string to a fire in two or three minutes and thus provide guidance aid to many fires which otherwise would take much more time to lead ground crews. This simple innovation was used in 1964 with good results. In heavier timber stands with dense canopy a colored plastic tape can be used which gives better visibility to ground crews.

HELIPORT ON SMITH RIDGE—Wide spots on ridges in the back country are sometimes developed into ports. This port is on Smith Ridge, elevation about 5,000 feet, and in an area with considerable lightning fire occurence. This development is a big assist in handling fires that occur near by.

COMBINED ANNUAL REPORT - 1963-64

## 1963 Annual Report

## **1963 FIRE SEASON**

The 1963 fire season on the Potlatch Timber Protective Association was characterized by the largest number of fires in any one year since 1929. The average season, for a period of over 50 years, indicates a fire occurrence of about 63 fires per year. This year 133 fires occurred, or 202% of the average, and resulted in 69.62 acres burned as compared to the long-time average of 107 acres burned per year. During the 1963 season 91% of the fires were caused by lightning, while the 41-year average indicates 69% have been caused by lightning.

Fire weather conditions were generally more favorable in 1963 than for some time past. The most critical portion of the fire season occurred in late September and the first few days of October. In July there were 3 days with measurable precipitation for a total of .33 of an inch and in August there were three days with a total of .43 of an inch of rain. The longest period without precipitation was 20 days, from August 12th to September 2nd. June precipitation was 106% of the 36-year average. while July precipitation was only 46% of the long-time average and in August 61% of the average for the month was recorded.

During the 1963 fire season there were three lightning storm periods. The first period occurred on August 4th, setting 35 fires and resulting in 11.25 acres burned. Following this storm, on August 7th a fire started on cedar operations and resulted in 43.12 acres burned and was the most costly fire during the 1963 season. This case of a man-caused fire is being prepared for the courts in order to obtain the expenses of the Association from the operator. On August 12th lightning storms started 63 fires on the Association area, resulting in 2 acres of burned area. Eleven fires were started by a storm on September 1 and these fires burned  $31/_{2}$  acres.

In summation of the 1963 fire season, better fire weather conditions existed during the usually critical months. Storms were generally accompanied with precipitation. Lightning fires accounted for 38% of the acreage burned while mancaused fires resulted in 62% of burned area. The number of lightning sets was far above normal with less than normal acreage burned.

During the 1963 season a total of 46 burning permits were issued by the Association. The Association personnel have cooperated very well with land owners to assist in obtaining better burns without endangering adjacent property. Burning permits were issued as follows:

1963	Logging Slash	Land Clearing	Stubble & Grass	Debris Burning	Total
Spring	2	15	1	3	21
Fall	6	18	1	0	25
					_
Total	8	33	2	3	46

#### COMBINED ANNUAL REPORT — 1963-64

### **IMPROVEMENTS**

In spite of a very active fire season improvement work was continued on the Association. Construction of low standard fire access roads were the main projects and are listed as follows: (1) Approximately <sup>3</sup>/<sub>4</sub> of a mile of jeep road constructed south of the Freezeout lookout. (2) One mile of road built on the Mary Mix area of the Floodwood creek drainage. (3) Approximately two miles of jeep road constructed on the ridge extending west from the McGary lookout. This road will connect with the Boulder creek road system.

#### COMMUNICATIONS

Our communications system continues to improve with addition of new equipment and improvement in the use of existing equipment. A new base station was purchased for the Elk River dispatch office.

The number of miles of telephone lines has greatly diminished due to continued improvement on the Association radio system. During the 1963 fire season the following telephone lines were maintained: Boehl's Cabin to Elk River; Elk River to Big Island; Elk River to Mason Butte.

### LEGISLATION

Five years ago the state legislation changed the closed fire season dates from June 1 through September 30, to May 1 through October 31. During the past session of the legislature the extended fire season was shortened to May 10 through October 20. Some groups in the state have been opposed to the longer season, but those concerned with fire protection considered the longer season a wise piece of legislation.

### BRUCE'S EDDY

The 87th Congress of the United States authorized the construction of the Bruce's Eddy project. A 673-foot high dam will create a 16,970-acre lake at high level during the summer along the south east boundaries of the Association.

The contract for the first phase of clearing the pool area will be awarded prior to the 1964 fire season. Association personnel have cooperated with the Army Engineers in rec-

#### 30 POTLATCH TIMBER PROTECTIVE ASSOCIATION

ommendations concerning slash disposal and debris removal with emphasis on the protection of adjacent timber lands to the pool area.

The first phase of the pool clearing will extend approximately 5 miles upstream from the dam site. The contractor will be allowed to burn slash and debris in the pool area during the closed fire season with precautionary measures. The main concern of Association personnel is to assure holding of all fires inside the pool area. The planning and cooperation of all parties will be very important and will be the key to protection of adjacent timber stands.

BUS GROUP—The Association Directors toured parts of the Association with Army Corp of Engineers during the summer of 1964 to consider re-location sites for the new Boehl's Cabin camp and a relocated airfield, which will also be needed as the present Larson Bar airstrip will also be inundated.
